Shipments are made to the West End mill and prospects are considered good.

ROUND MOUNTAIN MINING CO.**NEVADA**

Offices: 1011 First National Bank Bldg., San Francisco, and Round Mountain, Nye Co., Nev.

Officers: L. D. Gordon, pres. and gen. mgr.; J. R. Davis, v. p.; H. G. Mayer, sec.-treas.; with W. H. Weber and W. H. Eardley, directors. R. H. Ernest, supt.; E. J. Hannah, mill supt.

Inc. March, 1906, in Nev. **Cap.**, \$1,000,000; increased to \$1,500,000 in 1914; shares \$1 par; outstanding, \$1,320,630. Stock transferred in company's S. F. office. Anglo-California Trust Co., San Francisco, registrar. Annual meeting 3rd Monday in February. Listed on San Francisco and Nevada Exchanges.

Dividends: total \$363,965; the last one, 4c per share, was paid in August, 1913.

Balance sheet at end of 1916 showed assets totaling \$1,987,603, including \$1,655,384 for property, \$261,021 for plant, \$24,042 for supplies, and \$17,890 cash. Liabilities included bills payable, \$20,000; due Round Mountain Power & Water Co., \$120,000, and net realization undistributed, \$347,603.

The financial year has been changed to conform with the calendar year, and from April 1, 1915, to Dec. 31, 1916, results were as follows: revenue from mine and placer workings, \$503,508; expenditure on operations, \$298,686; depreciation, \$35,631; amount allowed under Federal Income Tax Law as depletion of ore deposits, \$23,970; making total deductions of \$358,287. The profit was \$145,221 in 21 months.

Property: 985 acres, 347 patented, at Round Mountain, 60 miles N.E. of Tonopah, the nearest railroad point. Claims show large low-grade gold-silver deposits mined both by lode and placer operations. The deposits are replacements along fissures and sheeted zones in rhyolite, with E.W. strike, dip 15°, average width of lode ore, 8'.

In 1914 company took over the Round Mountain Sphinx Mng. Co., thus ending several years of litigation involving apex rights in the Los Gazabo claim. Several properties were acquired during 1916.

Development: by 1,000' incline shaft. with about 10 miles of workings. Management reports a large tonnage of \$2 to \$7 ore blocked out in the mine. Lode operations toward the end of 1916 resulted in a loss. Extra exploration disclosed a large sulphide orebody at 900'. Selective mining was then undertaken, which raised the grade to \$7.10 per ton in 1916 from \$5.68 in 1915, \$6.57 in 1914 and \$5.28 in 1913. Four years lode mining indicated that operations were conducted at a small profit with the 180-ton mill and not less than 500 tons should be treated daily. Large low-grade deposits exist at surface and underground. They are the result of dissemination of gold throughout strongly silicified zones in the rhyolite mass of the mountain. In many places the rhyolite is much altered. Past operations in the better parts of this ore yielded \$4 per ton. Enrichments occur throughout and the mass will be profitable, so a large expenditure on its exploitation is justified. The ore is free milling and should yield 90% of the gold by simple amalgamation. Large scale tests are to be made. Costs in 1916 were \$5.56 per ton.

Company has several hundred acres of placer ground and estimates 8 years required to work it; 67 acres have been tested and show values of \$1 per yd. Two monitors are used, tearing down and sluicing 1,200 to 1,500 yds. a day; main tail race is 2,700' long with two 600' laterals. The high pressure pipe line is 45,000' long, is spiral steel, commencing with 30" and reducing to 20", 18" and 16"; head 600' with 400 miner's inches of water.

Total cost of the Jett Creek pipe line, water rights and placer equipment was \$192,888. Operations started in June, 1915.

Placer operations are restricted by the water supply; from April 1 to Dec. 31, 1916, there was hydraulicked 122,055 yds. of gravel, yielding 65.9c. per yd. at a cost of 51.7c., leaving 14.2c. net per yd. The total to date from placer work is 175,477 yds., averaging 79.7c. per yd., of which 32.6c. is profit.

Equipment: includes two 50 h. p. hoists, Imperial type compressor, elec. power, and 180 ton stamp mill.

Production: to end of 1916 was \$3,004,229 from 398,897 tons of ore, of which \$752,934 was profit. In 1915-16 the mill treated 67,452 tons of ore.

Company has an efficient management and has made a good record. The future depends on milling a large quantity of low-grade ore at low cost and profit from placer mining.

SHOSHONE POLARIS MINING CO.

NEVADA

Out of business since 1911. See Vol. XII.

SUNSET MINING & DEVELOPMENT CO.

NEVADA

Office: 265 Russ Bldg., San Francisco, Cal. **Mine office:** Rhyolite, Nye Co., Nev.

Officers: Edw. S. Van Dyck, pres.-treas.; Herman Zadig, v. p., with O. A. Newcomer, directors; Chas. D. Olney, sec.

Inc. Dec. 9, 1912, in Nevada as a reorganization of the Tramps Consolidated Mining Co., Bullfrog Sunset Mining Co. and Denver Bullfrog Annex Mining Co. **Cap.,** \$5,000,000; shares \$1 par; issued, \$1,750,000. Listed on New York Curb as a prospect. Security Transfer & Registrar Co., New York, transfer agent and registrar.

Property: 20 acres, patented, in the Bullfrog district, said to show ore occurring in fissure veins in rhyolite, with dip of 30°. Veins vary from 6' to 20' in width.

Development: by 5,000' of tunnels; total underground work about 18,000'.

Reported in August, 1917, that company was to work its Denver mine near Rhyolite, repair and sink its 600' shaft 100' deeper.

Equipment: includes an electric hoist, 6-drill compressor and a 100-ton cyanide plant, making an extraction of 93% on a consumption of 0.6 lb. of cyanide per ton of ore treated. Company claims to have treated 12,000 tons in 1915, averaging \$4.40 per ton. Mine barely paid expenses the first year, but having now doubled the milling equipment it should show better results. Total cost for mining and milling in 1915 on a 50-ton per day basis was \$3.74.

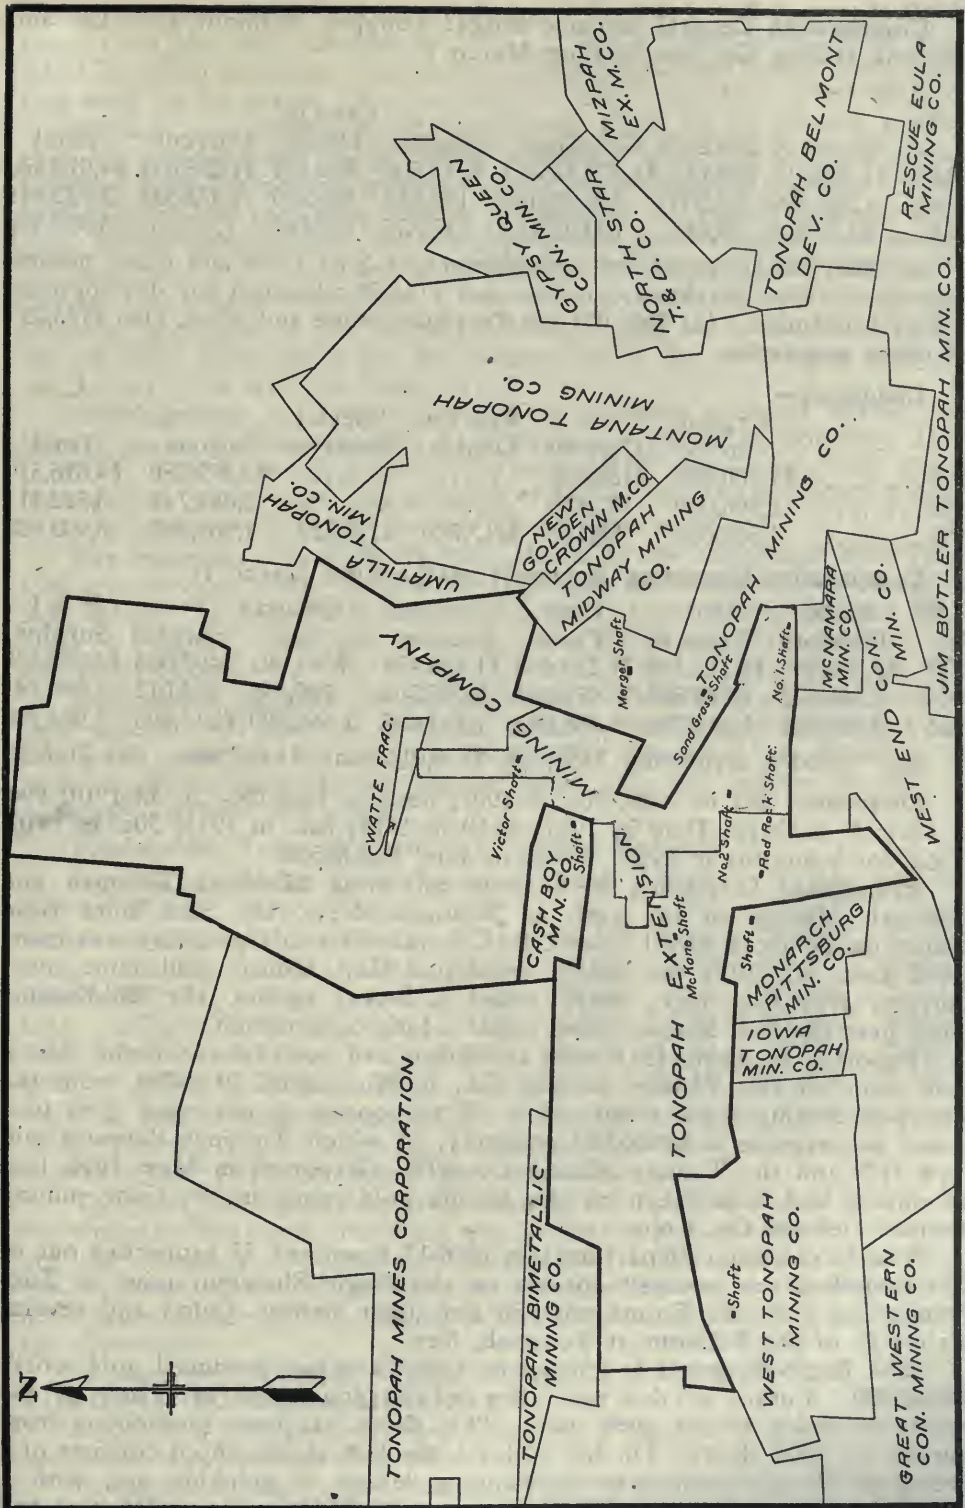

TONOPAH BELMONT DEVELOPMENT CO.

NEVADA

Office: 500 Bullitt Bldg., Philadelphia, Pa. **Mine office:** Tonopah.

Officers: C. A. Heller, pres.; W. M. Potts, v. p.; J. K. Kitto, sec.-treas.; R. G. Wilson, asst. sec.-treas.; C. Berkeley Taylor, gen. counsel; C. Ducheneau, aud.; J. C. Fraley, H. C. Brougher, M. B. Cutter, C. A. Heller, R. G. Park, W. M. Potts, S. D. Sinkler, T. W. Synnott, C. B. Taylor, directors; F. Bradshaw, gen. mgr.; G. H. Garry, cons. geol. T. F. M. Fitzgerald, supt. of mine; A. H. Jones, supt. of mills; F. W. Holler, supt. of Surf Inlet companies, Surf Inlet, B. C.; L. R. Robbins, min. eng.

Inc. 1902 in N. J. **Cap.,** \$1,000,000; shares \$1 par; increased, 1906, to \$2,000,000, but \$500,000 was later cancelled, leaving \$1,500,000 outstanding. Stock transferred at company's main office. Fourth Street Nat'l Bank, Philadelphia, registrar. Annual meeting, last Tues. in May, at Camden, N. J. Listed on Philadelphia, San Francisco and Salt Lake exchanges and traded in on New York and Boston curbs.

Comparative General Balance Sheet: Tonopah Belmont Dev. Co. and Belmont Milling Co., year ending March 1:

Assets—

	Property	Invest's	Def. Chgs.	Supplies	Ore On Hand	Current	Total
1917..	\$1,360,717	\$20,125	\$1,078,525(c)	\$212,800	\$89,159	\$1,255,044	\$4,016,370
1916..	1,563,189	27,500	360,888(a)	188,813	108,499	1,473,522	3,722,411
1915..	2,141,473	29,453	100,040(b)	157,735	139,796	1,425,441	3,993,938

(a) \$351,325 advanced for development of Surf Inlet and other mining properties, under purchase options. (b) \$74,750 advanced for development of Surf Inlet mine. (c) \$901,074 for Surf Inlet mine and plant, also \$173,254 for other properties.

Liabilities—

	Capital Stock	Current	Res. For Deprec.	Special Reserve	Surplus	Total
1917.....	\$1,500,000	\$136,820	\$2,379,550	\$4,016,370
1916.....	1,500,000	137,670	2,084,741	3,722,411
1915.....	1,500,000	96,176	\$217,749	\$216,727	1,963,286	3,993,938

Comparative Operating Account: year ending March 1:

	Metal Receipts	Oper. Expense	Oper. Profit	Total Income	Deduct's (a)	P. & L. Surplus
1917	\$2,365,991	\$1,112,349	\$1,253,642	\$1,436,474	\$941,391	\$495,083
1916	2,160,522	1,184,865	975,657	1,047,768	796,756	251,012
1915	2,806,369	1,318,306	1,488,063	1,562,695	1,568,500 (b)	5,805

(a) includes dividends; \$750,018, \$750,016, and \$1,462,504. (b) Deficit.

Dividends: 20c. in 1906; 20c. in 1907; none in 1908-09; 15c. in 1910; 90c. in 1911; \$1 in 1912; \$1.10 in 1913; \$1.10 in 1914; 50c. in 1915; 50c. in 1916; 37½c. for 9 months in 1917. Total to date, \$9,330,558.

Properties: 11 claims, 161.5 acres, adjoining Montana Tonopah and Tonopah Mining on the east, at Tonopah, Nev.; the Surf Inlet Gold Mines, on Princess Royal Island, B. C.; option on this property was exercised Dec. 31, 1915; the partly developed Bull Moose gold mine, near Carrara, Nye Co., Nev., taken under a 2-year option, the Biddlecome mine, near the Bull Moose, taken under a long-term option.

Reported in April, 1915, that an option had been taken on the Potosi gold mine of the Tunkey Mining Co., in Nicaragua, 20 miles from the Tonopah Mining Co.'s Eden mine. If the option is exercised it is proposed to organize a \$2,000,000 company, of which Tonopah-Belmont will own 51% and the Tunkey Mining Co. 49%. Reported in May, 1916, that an option had been taken on the Emma gold mine, in the Cone mining district, Dolores Co., Colo.

The Exploration Department in 1916-17 examined 53 properties out of 200 submitted and secured options on the Eagle Shawmut mine in Tuolumne Co., Cal.; the Emma mine in San Juan district. Colo.; and several claims E. of the Belmont at Tonopah, Nev.

The Eagle-Shawmut is opened to 2,300', and has produced gold worth \$4,500,000. Future of this mine lies in the downward extension of the main ore shoot of the main vein. This shoot has been continuous from surface to 2,300' depth. On No. 16 level, the lowest, the shoot consists of a series of closely jointed or overlapping lenses of sulphide ore, with a length of 490' on the vein, 10' wide and worth \$7.50 per ton. Positive and probable reserves amount to 159,000 tons. At least 400 tons daily should be treated when development warrants it. The mill is to be remodeled.

The Emma mine, at Dunton, Dolores Co., Colo., is operated through tunnels on the vein, the lowest, No. 5, being 3,285' long. This shows 1,240' of ore in 5 shoots. Future lies in ore below this tunnel and exploration must be by shaft.

Geology: (at Tonopah) the district is made up of a thick series of rhyolitic and andesitic rocks, which is faulted in a very intricate manner, together with the accompanying veins. The deposits are quartz veins, in part filled and in part replacement, intersecting the earlier andesite and to some extent entering into the underlying rhyolite. Principal ore minerals are argentite and polybasite, with small amounts of pyrite, chalcopyrite, galena, zinc blende and gold. Veins vary in width from 3' to 25'. The principal producer of the Tonopah Belmont has been the Belmont vein, cut off near 1,500' depth by the Mizpah fault; the veins now producing are not as productive as they were.

Development: at Tonopah, by 3-compartment vertical shafts. The Desert Queen workings had an 1,127' shaft and 36,758' of workings, March 1, 1917. The Belmont workings have a 1,718' main shaft and 121,116' of workings. New work amounted to 19,276' in fiscal year ending March 1, 1917, compared with 21,362' during the previous year.

Ore reserves: totaled 98,694 tons, March 1, 1917, compared with 142,164 tons the previous year. Recent developments at 800' and 1,100' have been satisfactory. In July there was treated 10,782 tons of ore, yielding \$98,738 net. In October, 10,087 tons of ore yielded 116,758 oz. silver, 1,138 oz. gold and \$51,876 profit.

Equipment: includes the old reduction mill at Millers, Nev., operated as a custom mill and the 60-stamp mill of the Belmont Milling Co., at Tonopah; operations started July, 1912. For a detailed description of this plant see Trans. A. I. M. E., August, 1915. To treat custom ore, this mill is being enlarged, Nov., 1917.

Production: Tonopah plant, year ending March 1:

	Tons Milled	Value p. Ton	Oper. Costs Mine	p. T. Extr. Mill	%	Profit p. Ton	Production—Oz.	
							Gold	Silver
1917	144,762	\$17.54	\$4.65	\$2.76	93.35	\$8.64	27,831	2,629,466
1916	165,157	13.88	3.92	2.68	92.97	6.59	31,112	2,968,565
1915	181,424	16.74	4.02	2.56	92.99	40,591	3,714,862
1914	172,398	21.08	4.35	3.05	94.45	8.83	44,465	4,251,746
1913	60,359	24.21	4.35	3.66	94.43	12.42	38,371	3,826,399
1912	87,349	20.84	4.85	3.36	14.31	45,069	4,535,762

The Millers plant treated 47,795 tons of custom ore, yielding a profit of 35c per ton to the company. This plant is being dismantled and re-erected at the Eagle Shawmut mine in California.

To offset the decreasing production of the original claims at Tonopah, the company has been branching out, acquiring new properties, thus making the company a permanent organization independent of the life of the Tonopah mines. With silver at around \$1 per oz., the Belmont can make large profits, yet it is apparent that reserves are not keeping pace with the ore milled.

Management is highly efficient and publishes results in great detail.

TONOPAH BONANZA MINING CO.

NEVADA

Control of this property was acquired, 1915, by the Greenwater Copper Mines and Smelter Co., which see.

Property: 15 unpatented claims, 380 acres, at Tonopah, Nev., increased 1916 by acquisition of the Desert King Mining Co.'s property, 40 acres, adjoining on the S.E. The claims which lie in the western section of the district, had a 2-compartment shaft, 1,100' deep, when new company took

over the property and some crosscutting had been done on the 600' level, but no commercial ore had been developed.

Latest advices state that in April, 1917, the shaft was 1,650' deep and a pump was being installed.

TONOPAH EXTENSION MINING CO.

NEVADA

Office: 30 Church St., New York. Mine office: Tonopah, Nev.

Officers: M. R. Ward, pres.; S. A. Brown, v. p.; W. G. Benham, sec.-treas.; J. G. Love, asst. sec.-treas.; John G. Kirchen, gen. mgr., Tonopah; S. A. Brown, B. H. Campbell, J. G. Kirchen, W. R. Rose, M. R. Ward, directors.

Inc. 1902, in Ariz. Cap., 2,000,000 shares; \$1 par; non-assessable; outstanding, 1,282,801. Original capital of 1,000,000 shares was increased June, 1915, to 2,000,000 and issue authorized of 156,294 shares for acquiring Tonopah Merger and 173,074 shares for Tonopah Victor Co. U. S. Corporation Co., 34 Nassau St., New York, transfer office and registrar. Annual meeting, in May. Listed on San Francisco and Nevada Stock Exchanges and on the New York Curb.

Comparative General Balance Sheet: year ending March 31:

Assets—						
	Property & Equip.	Supplies	Invest's	Bullion & Cash	Other Current	Total
1917.....	\$1,692,766	\$134,965	\$179,945	\$319,586	\$12,238	\$2,339,500
1916.....	1,636,283	97,892	209,470	206,507	156,387	2,306,539

(a) Includes dividend No. 18, payable April 1, 1916, \$127,267.40. (b) Includes dividend No. 14, payable April 1, 1915, \$70,756.54. (c) Includes dividend No. 22, paid April 2, 1917.

Comparative Profit and Loss Statement: year ending March 31:

	Receipts Metal	Total Income	Oper'g Expenses	Admin. & Gen.	Treat. & Trans.	Profit For Year
1917.....	\$1,707,174	\$1,663,918	\$963,020	\$43,863	\$673,394
1916.....	1,532,900	1,555,639	859,089	66,017	46,112	584,421
1915.....	1,289,817	1,341,620	662,269	50,140	32,319	596,892

Dividends: (calendar year) 15% in 1905; 15% in 1906; 5% in 1912; 15% in 1913; 20% in 1914; 32½% in 1915; 54% in 1916; and 15% in 1917.

Total dividends to June, 1917, \$1,877,552. Present rate, 10c. per share quarterly, increased to 15%, July 1, 1916.

During the fiscal year 1910-11 the company acquired the properties of the Red Rock Cons. Mining Co., McKane Mining Co. and Pittsburg Tonopah Extension Mining Co. and in June, 1915, properties of the Tonopah Merger Mining Co. and the Tonopah Victor Mining Co.

The Sully claims of 77 acres was bought for \$10,000 in 1916.

Property: 628 acres in the Tonopah mining district, Nye and Esmeralda counties, Nev., adjoins Tonopah Mining Co. on the W. and West End Cons. Mining Co. on the N.

Geology: ore carries silver and gold in quartz veins in rhyolite, trachyte and volcanic breccia. The ore minerals are argentite, stephanite, polybasite, some proustite and pyrargyrite. There are 3 main veins, from N. to

S., the North Merger, O. K. and Murray, of which the Murray is the most important, showing a stoping width of 14'. The veins strike N. 45° W., S. 70° W., and N. 70° W., with dip 20 to 70°, growing steeper with depth. The orebodies occur in shoots ranging in width from 3-25', with a maximum length of 450' for any single shoot.

Ore treated during year ending March 31, 1917, assayed 18.91 oz. silver and 0.18 oz. gold per ton, a decrease from previous year of 6.02 oz. silver and 0.06 oz. gold per ton.

Development: by 2 vertical main working shafts, viz., the Extension No. 2, 950', and the Victor, 1,759' deep. New work amounted to 12,017' in fiscal year ending March 31, 1917, compared with 13,967' in 1916. Total underground workings, Feb., 1917, 127,265'. Ore is extracted by overhead stoping and subsequent waste filling.

Work in 1916 proved a new 5' vein of \$20 ore, between the Merger and O. K. veins. During the past year at No. 2 shaft the Murray ore shoot was stoped out at 1,260', and at 1,350' is almost exhausted. The O. K. vein also supplied a good quantity and quality of ore. The Merger vein E. block will continue to yield ore for some time to come.

At the Victor shaft only part of the Murray has thus far been stoped at 1,440' while on 1,540' level it has produced a large amount of ore, though of low grade. Exploration work up to Sept., 1917, has developed nothing new of importance.

Ore reserves: The company has not given any estimate of blocked out ore to calculate reserves; conditions were, however, so favorable that the mill capacity was increased 25% in 1916, resulting in a saving of 85.5c. per ton in milling compared with costs for the previous year. Development in 1916-17 did not open as good ore as anticipated.

Equipment: at the mine includes a 150 h. p. Hendrie-Bolthoff hoist, 150 h. p. Nordberg hoist, Dean duplex and Aldrich quintuplex pumps, 2 Chicago Pneumatic Tool Co.'s compressors of 1,700' capacity, and tramway from mine to mill. All machinery is electrically driven. The 50-stamp mill, cyanide plant and concentrator have a daily capacity of 400 tons.

In Sept., 1917, an auxiliary 500 kw. power plant was tested. This is to generate electricity when the Nevada-California Power Co.'s supply fails.

Production: (year ending March 31)

	Tons Milled	Value Per Ton	Extr. %	Oper. Cost p. Ton	Metal Sold—Oz.	
				Mine Mill Total	Silver	Gold
1917	109,402	\$17.107	\$4.90 \$3.62	\$8.82	1,882,402 18,052
1916	91,981	18.038	92.39	4.61 4.48	9.59	2,106,519 20,576
1915	71,882	19.966	89.57	5.19 3.75	9.39	1,790,032 17,585

In July, 1917, the profit from 9,476 tons of ore was \$36,225. The July dividend was passed, owing to decrease in profits. It would appear that the mine is not in as good physical condition as 18 months ago, in spite of exploration at depth. Management is capable and careful. In October, 9,393 tons of ore yielded 82,725 oz. silver, 836 oz. gold, and \$13,228 profit.

TONOPAH MIDWAY MINING CO.

NEVADA

Office: Tonopah, Nev.

Officers: H. C. Brougher, pres.-mgr.; R. P. Stenson, v. p.; E. J. Erickson, sec.-treas.; J. M. Gregory, W. Brougher, R. B. Govan, W. J. Douglass, directors; W. J. Douglass, supt.

Inc. in Ariz.; reorganized, 1915, in Nevada. **Cap.**, 1,500,000 shares; \$1 par; assessable; outstanding, 1,132,096. On June 25, 1917, assessment No.

4, of 1c. per share, was levied. Annual meeting, in February. Listed on San Francisco and Salt Lake Stock Exchanges.

Property: 5 patented claims, 50.58 acres, in Tonopah district, said to show silver and gold ore. The quartz vein in trachyte dips 45° and pay ore occurs in shoots.

Development: by 2 shafts, 1,350' and 835' deep.

Operating expenses for year ending February, 1916, were \$25,788 and earnings \$11,088; all received as royalties. Developing.

TONOPAH MINING CO. OF NEVADA.

NEVADA

Office: 572 Bullitt Bldg., Philadelphia, Pa. **Mine office:** Tonopah, Nev.

Officers: J. S. Austin, pres.; J. Harvey Whiteman, v. p. and gen. counsel; C. A. Higbie, sec.-treas.; W. W. Charles, comptroller, with J. S. Austin, C. A. Daniel, C. R. Miller, C. A. Higbie, H. D. 1914-15..	1,628,648	925,557	124,567	1,165,234	3,860,244

Dividends: 1905, 75% of capital stock; 1906 and 1907, 120%; 1908, 50%; 1909, 130%; 1910, 150%; 1911 and 1912, 160%; 1913, 145%; 1914, 100%; 1915, 90%; 1916, 45%; total dividends paid to Oct., 1917, amounted to \$14,200,000. Present rate 60c. per share, payable quarterly.

Property: 160 acres at Tonopah, Nye Co., adjoins Tonopah Extension on the east and north and Jim Butler Tonopah Mining Co. on the north. Also owns the entire stock, \$400,000, of the Desert Power & Mill Co., and controlling interest in the Tonopah & Goldfield R. R. Co., 55% in the Eden Mining Co., and 83¼% in the Tonopah Placers Co. Acquired a 2-year option (extended to Jan., 1918) on the property of the Mizpah Extension Co., and began development work on Jan. 1, 1915. The Eden Mining Co., which see, is a Nicaragua company. Also owns \$30,000 capital stock of the Esmeralda Power Co. The company has acquired property in the

Schist and Flin Flon lake district in Ontario and is doing considerable diamond drill work there; also owns 92% of the Tonopah Canadian Mines of Manitoba, 92% of the Tonopah Nicaragua M. Co. and the Mandy Mining Co., of which Tonopah Canadian owns 85%. For descriptions see under respective titles.

For geology of the Tonopah district, see Tonopah-Belmont Mining Co. and Tonopah Extension.

Development: to a depth of 1,500', chiefly through the Mizpah, Desert Queen, Silver Top and Red Plume shafts. The Mizpah shaft is bottomed at 1,500', but lateral development has not been done at depth. Yearly development work during the past few years has been at the rate of about 17,000'. Total workings aggregate 40 miles, mainly above the 650' level.

In 1916 the Red Plume shaft was shut down and the hoist moved to the Sand Grass, which is 1,500' deep and is connected with the 1,170' level of the Merger shaft. Monthly advance about 200', Sept., 1917.

Production: for 10 months (financial year altered) ending Dec. 31, 1916, was 81,782 tons of ore averaging \$15.65 per ton. It contained 15,636 oz. gold and 1,387,557 oz. silver, of which 94.2% and 90.3% was extracted, respectively. Manganese silver compounds interfered with treatment to the extent of 0.2%.

Ore Reserves: estimated Dec. 31:

	Tonnage	Value		Tonnage	Value
1912	200,702	\$3,062,661	1915	53,493	\$ 798,789
1913	172,761	2,485,795	1916	72,100	1,206,821
1914	102,056	1,525,731			

Equipment: 100-stamp mill at Millers, Nev., 12 miles from the mine, operated under name of Desert Power & Mill Co., employs the concentrating leaching and sliming processes.

Production:

	Tons	Value	Costs Per Ton				Metal	Profit
	Treated	p. Ton	Mine	Mill	M'k't'g	Total	Loss	p. Ton
1916(b)	81,782	\$15.65	\$4.61	\$3.16	\$0.94	\$8.71	\$1.34	\$5.60
1916(a)	136,246	13.66	3.87	2.94	.97	7.78	1.11	4.77
1915	143,432	16.25	4.40	2.96	1.15	8.51	1.23	6.51
1914	163,387	17.79	3.28	2.81	1.32	7.41	1.96	8.42
1913	173,336	18.16	3.27	2.67	1.25	7.19	1.85	9.12

(a) to March 31; (b) to Dec. 31.

In July, 1917, the profit from 7,452 tons of ore was \$40,300. In October, 11,400 tons yielded bullion worth \$100,450, and \$17,075 profit.

Mine costs include cost of handling dump ore. Marketing costs include freight.

The productive life of the Tonopah property is nearing an end; to counteract this and to make a permanent dividend-paying organization, new properties have been acquired. There is no doubt that the plan will succeed as the management is thoroughly experienced and capable.

On Sept. 1, 1917, J. E. Spurr, in charge of the Exploration Department, resigned, and the department was discontinued. From Jan., 1912, to Jan., 1917, the cost was \$261,108, and total value of results, \$7,858,601.

TONOPAH NORTH STAR TUNNEL & DEV. CO.

NEVADA

Office: 265 Russ Bldg., San Francisco, Cal. Mine Office: Tonopah, Nev.

Officers: H. Zadig, pres.; C. D. Olney, sec.; A. H. Lowe, supt.

Inc. 1912, in Nev. Cap., \$1,000,000; \$1 par; assessable. Company's

San Francisco office, transfer agent and registrar. Annual meeting in April. Listed on Salt Lake Stock Exchange.

Property: 5 claims, Ivanpah, Elaine, Pyramid Fraction, Crosscut and Crosscut Extension, 46 acres in Tonopah, said to show gold and silver ore.

Development: by shaft, 1,250' deep; lateral workings total about 5,000'.

Soon after reorganization the company struck a shoot which yielded some hundreds of tons of shipping ore in 1913 and 1914, but the shoot proved of limited extent and shipments declined. In 1916 the property shipped a moderate tonnage to the West End mill.

In April, 1917, shipments assayed \$30 per ton. Stope No. 2 from the 1,059' drift showed 30 inches of ore. Owners appear optimistic at last reports.

TONOPAH 76 CONSOLIDATED MINING CO.

NEVADA

Address: R. J. Highland, Tonopah, Nev.

Officers: M. R. Averill, pres.; T. J. Lynch, v. p.; with W. S. Harris and L. L. Blumenthal, directors.

Inc. 1911, in Nev. **Cap.**, 1,500,000 shares; \$1 par; non-assessable; outstanding, 1,255,575. No annual meetings since July, 1913. Listed on San Francisco Stock Exchange.

Property: 5 patented claims and fractions, about 60 acres, ½ mile W. of Tonopah.

Development: by vertical shaft 300' deep.

Equipment: includes a 60-h. p. electric hoist. Is prospecting.

TONOPAH VICTOR MINING CO.

NEVADA

Out of business. Property acquired by Tonopah Extension Mining Co., Tonopah, Nev., which see.

UMATILLA-TONOPAH MINING CO.

NEVADA

Merged with the Montana Tonopah Mining Co. in May, 1916, as the After All Mines Co., which see.

UNION AMALGAMATED MINING CO.

NEVADA

Address: Manhattan, Nev.

Officers: C. F. Wittenberg, pres.; J. H. Forman, v. p.; Percival Nash, sec.

Inc. in Nevada. **Cap.**, 2,000,000 shares; 10c. par. C. D. Olney, 265 Russ Bldg., San Francisco, Calif., transfer agent. Company is a merger of the Manhattan Amalgamated Mining Co., Litigation Hill Merger Co., and the Manhattan Earl Mining Co. The three properties have produced 9,615 tons ore returning \$183,848, ore running from \$15 to \$21 per ton.

Property: 6 claims, 74 acres, 3 claims patented, covering Litigation Hill at Manhattan, Nye Co., said to show gold-silver ore in fissure veins, from 4-8' in width.

Development: mainly by a 600' shaft, at which depth work has lately been concentrated. Reported in Oct., 1917, that many faces of milling ore are exposed. Water and bad air have interfered with work.

Equipment: includes electric hoists, transformers, surface track, ore cars and the Manhattan Milling and Ore Co.'s 10-stamp mill, cyanide plant and sampler.

Total production: of the properties merged, about 10,000 tons; value \$15 to \$21 per ton. A large amount of mill ore, running \$7 to \$10 per ton has been developed by lessees, which will be treated in the mill, recently overhauled and repaired.

In Sept., 1917, an option for control was given a syndicate headed by Whitman Symmes.

WEST END CONSOLIDATED MINING CO.**NEVADA****Office:** Syndicate Bldg., Oakland, Cal. **Mine office:** Tonopah, Nev.

Officers: F. M. Smith, pres.; B. F. Edwards, v. p.; G. C. Ellis, sec.; preceding with R. L. Oliver, W. J. Douglas, C. P. Murdock, directors. R. C. Bowen, asst. sec.; J. W. Sherwin, gen. supt.; J. H. Blair, aud. and purch. agt.; F. C. Ninnis, mill supt.

Inc. 1906, in Ariz. **Cap.**, 2,000,000 shares; \$5 par; nonassessable; outstanding, 1,788,486. No bonded indebtedness. Listed on San Francisco Stock Exchange and New York Curb. Registrar & Transfer Co., New York, transfer agt. and registrar.

Balance sheet for 1916 shows total assets of \$1,366,819, of which \$127,009 is for plant, \$506,897 for investments, \$277,018 in escrow, \$133,058 cash, \$75,000 for litigation cost and \$247,147 bullion, loans, etc. The surplus was \$916,857. Income in 1916 was \$1,249,932, of which \$89,424 was paid in dividends. The surplus was \$8,442. Of the profits, \$200,046 was deposited in escrow pending the apex suit.

Dividends: in 1913, 5c.; in 1914, 15c.; in 1915, 10c.; in 1916, 5c.; in 1917, to May, 5c. Total dividends to May, 1917, \$715,424.

Property: 10 patented and 4 unpatented claims, 184 acres in the Tonopah district. Whether there are two veins or one, the direction and angle of the dip, strike, etc., were the subject of litigation in the suits with the Jim Butler company during 1916, in regard to apex rights of the West End MacNamara vein. This suit was decided in the lower courts in favor of the West End but is still pending in the higher courts and will probably be decided late in 1917. As ore has been mined from the disputed area, about \$340,000 is deposited in escrow pending the decision.

For geology of the district see Tonopah Bonanza.

Development: by 3 shafts, deepest 1,000' with underground workings, aggregating more than 10 miles. Ore reserves are not officially reported. While some work is done in the disputed ground, recent work has been devoted to a new vein in the Ohio section of the property. On the 500' level a wide body of \$30 to \$50 ore is being opened. This has every evidence of persistency.

Equipment: includes hoists, buildings, compressors, etc., and a stamp mill and cyanide plant. The daily capacity of the mill was originally 100 tons, but has been increased to 225 tons. Total cost of plant is more than \$170,000. Considerable ore is treated from other mines.

Production—

	Ore Treated	Extraction %	Gross Value	Silver oz.	Gold oz.
1916.....	61,535	91.22	\$1,319,651	1,351,658	14,752
1915.....	56,976	90.92	958,657	1,210,038	13,219

Recent shipments have been about 100,000 oz. of silver-gold bullion monthly.

The company's position is greatly improved by late developments and the high price of silver, and if the disputed ore is given to it further profits should accrue.

WEST END EXTENSION MINING CO.**NEVADA**

Tonopah, Nev.

Officers: (in 1912) Franz Sigel, pres.; Frank S. Harris, v. p.; with Daniel O. Hulse, M. T. Rowland and Jas. M. Satterfield, directors.

Inc. in Del. **Cap.**, \$1,000,000; issued \$600,000; shares \$1 par. U. S. Corp. Co., New York, transfer agent and registrar. Listed on New York Curb as a prospect.

Property: 4 claims, the Bank group, 70 acres, at Tonopah; adjoining West End Cons. on the north and Tonopah 76 on the west. Letters returned in May, 1917.

WHITE CAPS EXTENSION MINES CO.

NEVADA

Address: J. G. Kirchen, Reno, Nev. **Mine office:** Manhattan, Nev.

Officers: J. G. Kirchen, pres.; J. H. Miller, v. p.; A. G. Raycraft, sec-treas., with Hugh H. Brown and W. L. Mangum, directors.

Inc. 1917, in Nev. **Cap.**, \$200,000; shares 10c. par; assessable; 1,595,005 issued.

On June 30, 1917, assets amounted to \$191,074, of which \$130,384 was for property and plant and \$60,720 cash and accounts receivable. Current liabilities were \$462.

Property: 13 claims, in Manhattan district, said to show ore deposits occurring as chimneys in limestone, with 50° dip. Ore carries gold and a trace of silver.

Development: by 560' vertical shaft.

Equipment: includes 50 h. p. Hendrie-Bolthoff hoist, Chicago Pneumatic compressor, drills and pump, all motor driven.

Property: is in development stage, but is backed by strong interest and regarded as promising.

WHITE CAPS MINING CO.

NEVADA

Offices: J. G. Kirchen, Reno; J. A. Cole, supt., Manhattan, Nev.

Officers: A. G. Raycraft, pres.; C. F. Wittenberg, v. p., with H. R. Cooke, J. G. Kirchen and C. J. Blumenthal, directors. P. S. Booth, sec-treas.

Inc. June 7, 1915, in Nevada. **Cap.**, \$200,000; issued \$160,000; shares 10c. par. U. S. Corporation Co., New York, transfer office and registrar. Listed on New York Curb, in San Francisco and on the Nevada Exchanges.

Balance sheet of April 30, 1916, the last available, shows **assets:** property and equipment, \$248,069; cash, \$10,336; accounts receivable, \$5,712. Liabilities show surplus April 30, 1916, end of fiscal year, \$118,659; current liabilities, \$13,549.

Property: 2 claims, near Manhattan, Nye Co., Nev. Apex litigation has been started by the Morning Glory company adjoining.

Geology: the ore is a replacement of limestone by quartz, pyrite, arsenopyrite and stibnite. Calcite is abundant, also realgar. Faulting is common. In the upper levels ore averaged 1.02 oz. gold and 0.02 oz. silver per ton. The sulphide ore is refractory, requiring special treatment.

Development: by a 550' vertical shaft with levels at 210', 310', 435' and 500', also an old 225' incline shaft. Two ore shoots, opened in 1916, showed 10' of \$40 ore and 3' of \$124 ore, respectively. Ore below 210' level carries primary sulphides. Work in 1916 was largely on the 310' level, searching for the downward extension of orebodies opened on levels above. Late in February, 1917, the east orebody was cut on the 435' level, assaying up to \$172 per ton. On this level the lens is 195' long, 34' wide, averaging \$36 per ton. This shoot was cut at 550', where it is 24' wide and 200' long, assaying \$24.80 to \$28.40 per ton. Much water has to be pumped.

Equipment: includes hoist, compressor, drills, with sharpener, Cameron pump, all motor driven, and 125-ton mill with rolls, trommels, Wedge roasting furnace, tube-mill and cyanide plant. Extraction is said to be 85%. Treatment problem at this mine was discussed by J. G. Kirchen in the E. and M. Journal of November 24, 1917. A 90% extraction is indicated at a milling cost of \$2 per ton.

Production is said to total 19,900 tons oxidized ore, average value \$19 per ton, all from above the 210' level.

Sulphide ore treatment commenced on August 22, 1917, but it was not until late in September that the plant was working well. By 1918 profits should be made, providing the ore yields to present treatment. From February to June the shares were dealt in at San Francisco in large numbers, the price rising over \$2. Company is backed by well-known Nevada men.

WOLFTONE EXTENSION MINING CO.

NEVADA

Address: V. J. Bonaby, sec., 110 Sutter St., San Francisco, Cal.

Dividends paid in 1914 amounted to \$2,820.

Property in Manhattan district, Nye Co., Nev., is under lease. In the Sunrise and African claims are 12 parallel quartz veins, 2 to 12" wide, supposed to be feeders to the main orebody that should be found in the limestone. Ore from a shaft on the Sunrise yielded \$18 gold per ton.

ORMSBY COUNTY

UNITED MINING CO.

NEVADA

Mine office: Carson City, Nev.

Officers: H. D. Cowden, pres. and gen. mgr., Bloomington, Ill.; R. H. Hingston, treas. and gen. supt.; F. W. Boston, sec.; L. B. Perry, asst. sec.

Inc. 1905, in Nev. **Cap.**, \$3,000,000; shares \$1 par; non-assessable; 500,000 preferred and 2,500,000 common; issued \$1,876,150.

Property: 34 claims. 680 acres, in the Delaware district, 12 miles from Carson City.

Geology: country rock is granite, cutting sedimentary and intrusive rocks. Claims show 4 fissure veins in andesite and porphyry, capped by a strong iron gossan up to 200' in width. The limestone is highly crystallized and intruded by porphyry dikes. Ores developed are azurite and malachite with some copper oxides and silicates succeeded by sulphide ore at a shallow depth.

Development: by shafts of 100' and 450', numerous test pits and prospect tunnels. The veins vary greatly in width, the principal orebody said to be 7 to 12' wide, so far as developed.

Equipment: includes a 25-h. p. gasoline hoist, a 90-h. p. gas engine with air compressor of 5 drills capacity and a sinking pump, with about 8 buildings. Management reported, Jan., 1916, "property is not working now, as we are looking for some process that will enable us to handle our ores and have our own plant."

Reported in 1915 that the Nevada mine was abandoned and stockholders given shares in the Boston American Mining Co., an equally unpromising and doubtful proposition. It is evident from the misrepresenting literature sent out by these companies that the management prefers to mine the public instead of its mines.

Letters returned in May, 1917.

STOREY COUNTY

ALTA SILVER MINING CO.

NEVADA

Address: 1026 Mills Bldg., San Francisco, Cal.

Directors: Geo. S. Sturges, Edw. B. Sturges, R. B. Worthington and Chas. H. Seoy. Geo. S. Sturges, Nevada agent.

Outstanding stock, Sept., 1917, 78,383 shares. A 3c. assessment called in 1916. Assessments levied have furnished necessary capital for repairs and development work.

Property: in Gold Hill section of the Comstock, Nevada.

Development: Old workings and 2,150' shaft said to show gold-silver-lead ore. Drainage connection is made with the Sutro tunnel at 1,100'

level. Idle owing to extensive interests of owners in other mining enterprises, which require all available capital.

ANDES SILVER MINING CO.

NEVADA

Office: 381 Bush St., San Francisco, Cal., and Virginia City, Nev.

Officers: H. Zadig, pres.; Wm. Bannan, v. p.; J. W. Twiggs, sec.; Wells Fargo National Bank, treas.; W. W. Turney, Wm. Bannan and W. H. Moise, directors; Walter Techow, mgr.

Inc. Dec. 18, 1873, in Cal. Cap., authorized and outstanding, \$100,000; shares \$1 par. Registration Security Co., San Francisco, registrar. Annual meeting, December 20th, at San Francisco. Stock is listed on New York Curb and San Francisco Exchange.

Annual report for the year ending Dec. 31, 1916, showed: receipts, \$10,761, which included \$5,982 from assessments Nos. 84 (part), 85 and 86, and \$4,616 from ore sales. Disbursements amounted to \$10,529, including notes payable, \$1,000; salaries and wages, \$4,183; milling, \$1,340.

Property: 2 claims, patented, 22 acres, in the Virginia mining district, Virginia City, Nev.

BELCHER MINING CO.

NEVADA

Merged with Jacket-Crown Point-Belcher Mines Co. (which see), March 10, 1915.

COMSTOCK-PHOENIX MINING CO.

NEVADA

Office: Provo, Utah. Mine at Six Mile Canyon, Virginia City, Nev.

Officers: Jesse Knight, pres.; W. L. Mangum, sec.-treas., with L. H. Parkhurst and F. M. Manson, directors.

Inc. 1909. Cap., 1,000,000 shares, at \$1 par, non-assessable; all outstanding. Cash on hand, 1917, is given as \$23,723, with debts outstanding of \$3,860.

Property: 3 patented claims in the Silver Star District, 2 miles from a railroad.

Development: 650' of shafts, 1,000' of tunnel, 500' of raises. Ore carries silver and gold.

Equipment: electric hoist, compressor, tram and buildings. Shipments from 1909 to 1914 amounted to \$400,000, with net returns of \$250,000, having paid dividends of \$102,516. Present company, which is a reorganization in January, 1917, of the old company, has not issued any reports.

COMSTOCK TUNNEL CO.

NEVADA

Address: 25 Broad St., New York, N. Y. Franklin Leonard, pres.-gen. mgr.; Franklin Leonard, Jr., treas.

Cap., \$4,000,000; shares \$2 par; \$2,769,000 bond issue outstanding, on which no interest has been paid since 1892. Stock was traded on N. Y. Exchange in June, 1915, at 8 to 20c. per share. Company is controlled through stock ownership by the Leonard family.

Property: 7½ miles of tunnel, draining the Comstock mines to depth of 2,700'. Income of company was seriously curtailed in 1914 owing to inactivity of many mines on the Comstock lode, who pay 4% royalty on all ore extracted to the Comstock Tunnel Company for drainage and ventilation, but extensive resumption of operations in 1915-16 by the Comstock mines has restored revenues.

CONSOLIDATED VIRGINIA MINING CO.

NEVADA

Offices: 339 Bush St., San Francisco, Cal., and Virginia City, Nev.

Officers: W. W. Turney, pres.; H. Zadig, v. p.; A. W. Havens, sec.; T. F. McCormick, supt.; with W. G. Morrow, H. L. Slosson, Jr., and Wm. Bannan, directors.

Inc. Nov., 1904, in Cal. Cap., 216,000 shares; \$10 par, assessable; all outstanding. Stock transferred at company's office in San Francisco.

Registration Trust Co., San Francisco, registrar. Listed on New York Curb and in San Francisco.

Property: the Con. Virginia claim, 1,310' along the Comstock Lode at Virginia City, is being operated in conjunction with the Mexican Gold and Silver Mining Co., which see. Reported to have 14' to 15' of ore on 2,700' level, averaging from \$17 to \$34 per ton.

CROWN POINT GOLD & SILVER MINING CO. NEVADA

Succeeded by Jacket-Crown Point-Belcher Mines Co., which see.

JACKET-CROWN POINT-BELCHER MINES CO. NEVADA

Office: Mills Bldg., San Francisco, Cal. Mine near Virginia City, Nev.

Directors: M. B. Forman, C. L. Moore, J. L. Brainard, H. W. Glensor and L. M. Bliss. Wm. P. Miller, supt. Virginia City, Nev. Company is a merger of 3 of the big Comstock mines.

Inc. Feb. 11, 1915, in Cal. California Corporation Commission authorized issue of 360,000 shares common and 12,000 shares preferred to the Yellow Jacket G. & S. Mng. Co.; 208,000 common and 10,400 preferred to Belcher Mng. Co., and 150,000 common and 10,000 preferred to the Crown Point G. & S. Mng. Co. Above stock is in payment for all properties of these 3 companies subject to debts of \$80,962; 217,600 shares to be sold at par, money to be used for development.

These are the bonanza properties which made the fortunes of Flood, Mackay, Lucky Baldwin and D. O. Mills. The mines are in the southern part of the Comstock lode, a great fissure vein 4 miles long, filling a fault plane in the andesite-diorite rocks of Mt. Davidson, near Virginia City. The ore is quartz carrying silver-gold. Geology described in Monograph 3, U. S. Geological Survey.

The merger made it possible to install modern pumps, to unwater the 1,700' and 1,800' levels of the mines where good ore was formerly worked until a great influx of hot water stopped mining. A fire in Dec., 1915, interrupted operations, but a centrifugal pump now installed on the 1,600' level has successfully handled the water and deep mining can now be resumed.

Production: for 1915 and first half of 1916 has come from old stopes and workings on the 1,600' level and above, the average production from both mines being about 1,000 tons per week. No 1917 returns.

KINKEAD MILL & MINING CO. NEVADA

Address: Virginia City, Nev. W. Techow, mgr., K. K. Techow, pres. Operates a 60-ton mill.

KLAMATH MINING & MILLING CO. NEVADA

O. W. Robertson, pres., Klamath Falls, Ore. Holdings in Jumbo district, near Virginia City, said to show 12'-20' ledge under development by crosscut tunnel.

MEXICAN GOLD AND SILVER MINING CO. NEVADA

Offices: 265 Russ Bldg., San Francisco, Cal., and Virginia City, Nev.

Officers: H. L. Slosson, Jr., pres.; Herman Zadig, v. p.; with Whitman Symmes, W. G. Morrow, and G. E. Arrowsmith, directors. Chas. D. Olney, sec.

Inc. 1874, in Cal. **Cap.** \$201,600; shares \$1 par; assessable; all issued. In April, 1917, assessment No. 106, 10c. per share, was levied. Stock transferred at company's San Francisco office. Annual meeting, first Tuesday in December. Listed on New York Curb and San Francisco Exchange.

Property: 1 claim and 5 fractions, patented, on the Comstock lode, at Virginia City. During the height of the Bonanza excitement the stock sold for over \$100 per share in spite of the fact that not a ton of pay ore was found. Owing to its favorable location at the north end of the Comstock, it was always a favorite stock, and levied and collected upward of

\$4,000,000 in assessments. In 1911, the present management obtained control from the stock brokers who formerly mismanaged things so badly on the Comstock, and having resolved to prospect the hanging-wall for fractures, were rewarded by finding an orebody yielding over \$1,400,000 which enabled them to build a modern mill, equip the mine, contribute heavily toward the pumping of the Comstock lode, and pay two dividends aggregating nearly \$200,000.

The Comstock lode is a great fissure vein filling a fault plane. The main body of the lode is a belt of quartz and vein matter, 10,000' long and several hundred feet broad with a general strike N. 15° E. At each extremity of this main fissure the lode ramifies into diverging branches. The east or hanging-wall is diabase throughout the entire 10,000' of the main lode, and for some distance on the S.E. and N.E. branches. It is 1,500' or more in width, and includes numerous lenses of diorite. These are generally harder than the diabase, which, in most places, is in an extreme state of decomposition. The foot wall of the main fissure is diorite for more than $\frac{3}{4}$ of its length, but at the southern end is chiefly composed of metamorphic slates; it is much less altered than the hanging. Accompanying the vein for half its length is the narrow dike of younger diabase called the "black dike." Contents of the vein are simple, on the whole consisting of country rock in fragments varying from very small to several thousand feet in length, clay, quartz, and argentiferous minerals. With few exceptions all of the orebodies of any importance were found close to the contact of the diabase with the main fissure, or within the belt of diabase which forms the hanging wall.

The Gold Hill bonanzas rest upon metamorphic rocks. The geology is described in detail in U. S. G. S., Monograph No. 3, which, according to Whitman Symmes, requires some important corrections.

Development: the principal mining now being done is on the 5 north end mines; from north to south these mines are the Sierra Nevada, Union, Mexican, Ophir and the Cons. Virginia. At present ore is being extracted on the 2,700' level of Con. Virginia, and 2,700' level and above in Union and Sierra Nevada. The 2,900' level has been unwatered, and is being opened up. Union has recently yielded \$500,000 from stopes between the 2,300 and 2,500' levels. The lode from which this ore was mined has not yet been developed at 2,700'. After having no ore for years, Con. Virginia is opening a strong gold vein at 2,700'. Ophir is looking for an extension of the orebodies above 2,500', from which about \$4,000,000 was taken out in last 10 years, and is also exploring at 2,700'. The Mexican orebody, which yielded \$1,400,000, was worked out 3 years ago on the 2,500' level. Recently good ore has been found on the 2,700' level directly below the above-mentioned ore-shoot. In June, 1917, no ore was being shipped, all ore extracted from the North End mines being treated at the Mexican and other local plants. In 1916 the Mexican mill treated 18,920 tons of ore, yielding bullion worth \$431,569. Of this, \$417,739 was credited the Ophir, Sierra Nevada, and Union mines.

The flow of water below the 2,500' level is 1,000 gallons per minute.

In 1917, water was lowered to the 2,900' level which had been flooded for 30 years.

Equipment: includes 4 electric hoists of 25-h. p. and one of 200-h. p.; electric pumps; two compressors; 75-h. p. and 100-h. p. each; and an 80-ton all slime cyaniding plant effecting an extraction of 93.2%.

OPHIR SILVER MINING CO.

NEVADA

Offices: 265 Russ Bldg., San Francisco, and Virginia City, Nev.

Officers: H. L. Slosson, Jr., pres.; Chas. D. Olney, sec.

Inc. April 30, 1860, in Cal. **Cap.**, 201,600 shares; \$1 par; all outstanding. Listed on New York Curb and on San Francisco Exchange. Last dividend paid May 21, 1908.

Property: the Ophir claim, 675' along the Comstock lode, includes the Ophir mine, at Virginia City, being operated in conjunction with the Mexican Gold and Silver Mining Co., which see. Drifts on 2,000' and 2,700' levels reopened, 1917.

Production: to 1908, said to be \$15,514,000.

SIERRA NEVADA MINING CO.

NEVADA

Office: 339 Bush St., San Francisco.

Inc. Nov., 1904, in Cal. **Cap.**, 200,000 shares; all outstanding; shares \$1 par; assessable. Registration Trust Co., San Francisco, registrar. Listed on New York Curb and on San Francisco Exchange.

Property: 3,000' along the Comstock lode, in the Virginia mining district, at Virginia City, credited with a production of \$1,035,000 to 1908, is being operated in conjunction with the Mexican Gold and Silver Mining Co., which see. Work under way on 2,500' level.

TECHOW-WATERHOUSE LEASE

NEVADA

Address: W. Techow and F. G. Waterhouse, Virginia City, Nev. Has a lease on part of Sierra Nevada Mining Co.'s mine, Virginia City, Nev. Gold-silver ore is treated in a 30-ton mill.

THOUSAND MEMBER GOLD MNG. ASSOCIATION

NEVADA

A get-rich-quick scheme fostered, if not fathered, by the men who sell Eastern Star Mng. Co. stock.

UNION CONSOLIDATED MINING CO.

NEVADA

Offices: 265 Russ Bldg., San Francisco, Cal., and Virginia City, Nev.

Officers: H. L. Slosson, Jr., pres.; W. W. Turney, v. p.; A. P. Swain, sec., with Whitman Symmes, J. H. Goldman and H. G. Dodds, directors. Whitman Symmes, supt.

Inc. Nov., 1904, in Cal. **Cap.**, \$200,000; shares \$1 par; all outstanding; assessable.

Transfer office: 381 Bush St., San Francisco, Cal. Registration Surety Co., San Francisco, registrar. Annual meeting, third Thursday in Nov. Listed on New York Curb and San Francisco Exchange. Company is under same management as Mexican Gold & Silver Mining Co., which see.

Gross earnings for 1916 were \$378,818, less \$164,727 for operating charges.

Property: 2 claims and 6 fractions, patented, located on the Comstock lode at Virginia City, carries silver ore. See Mexican Gold & Silver Mining Co. for geology of Comstock lode. Present work is on the 2,700' level and above; ore being shipped from the 2,300' level assays \$18 to \$57 per ton; \$42 from 2,400', and \$30 from the 2,700' level. In Sept., 1917, 360 tons were milled averaging \$33.30 per ton. The old Union shaft has been retimbered and put in first-class condition to the 2,700' level; this gives better ventilation to the north end lower levels and makes a material reduction in operating costs. Greatest depth of workings, 2,700'.

Equipment: includes electric hoists, 2 air compressors of 75 and 100-h. p. each, and electric power.

Pumping is done by the United Comstock Pumping Ass'n. Ore is treated at the Mexican mill; tonnage treated in 1915 amounted to 3,117 tons, averaging \$15.60 per ton; a 92% extraction was obtained.

Production: to 1917, approximately \$3,400,000, including \$378,818 from 16,126 tons in 1916. Costs were \$10.21 per ton.

YELLOW JACKET G. & S. MNG. CO.

NEVADA

Property sold to and company merged with Jacket-Crown Point-Belcher

Mines Co., March 10, 1915, for 360,000 common and 12,000 preferred shares of the new corporation.

WASHOE COUNTY

GRANITE HILL COPPER MINE.

NEVADA

Property: 14 miles N. W. of Reno, Nev., now owned by Nixon-Nevada Mining Co., which see.

NIXON-NEVADA MINING CO.

NEVADA

Offices: 50 Congress St., Boston, Mass.; Gazette Bldg., Reno, Nev., and 27 Pine St., New York.

Officers: P. S. Jones, pres.; J. F. McDonald and R. J. Jefferson, v. p.'s; W. E. Brown, treas.; S. A. Cunningham, asst. treas.; with B. J. Dryer, W. L. Rianhard, and G. H. Allen, directors; J. A. Straussman, sec. and asst. treas.; W. H. Butler, managing director.

Inc. 1915, in Maine. **Cap.**, \$1,000,000; shares \$1 par; fully paid and non-assessable; all issued. Stock is listed on Boston and New York Curbs. 250,000 shares underwritten at 40c. in Sept., 1917.

Since Feb., 1916, improvements and mine work cost \$78,000, \$27,000 being spent early in 1917. Cash assets amounted to \$10,173 in April, less \$7,333 bills payable.

Property: 840 acres in Hartlesville Township, known as the Granite Hill mine, 14 miles N. W. of Reno, and 50 acres at Big Mouth Canyon, 50 miles N. E. of Reno, Washoe Co., Nev. The Granite Hill group of 4 claims is traversed by 4 parallel veins within a distance of 900'.

Development: by shafts, crosscuts and drifts. A vertical shaft on vein No. 1 is down over 300', and an 121' crosscut from it cut No. 2 vein, 5' wide, carrying a 14" streak of copper glance. The shoot is 270' long, with better copper and gold contents in the last 100' depth. Over 1,000' of work has been done on No. 4 vein, showing similar characteristics to No. 1. It is considered that the 4 veins will junction at depth, so a crosscut is being driven to cut them. The drift started at 300' depth on No. 1 vein and will cut No. 4 at 700' on its dip. The total length will be 800'.

Equipment: at the Granite Hill includes 100-h. p. semi-Diesel engine and generator, 525 cu. ft. compressor, 25-h. p. hoist, with smaller compressor and hoist, also necessary buildings, numbering 18.

1916 shipments: 75 tons in June aggregating about \$7,500. First class ore about $\frac{1}{3}$ of the total, carried 40% copper, \$13.80 per ton gold and 26 oz. silver per ton. Second class ore carried 10% copper, \$8.80 per ton gold and 6.96 oz. silver per ton.

Developments at the Big Mouth Canyon property consist of numerous open cuts and several hundred feet of tunneling. No production to date, but showings of gold have been reported, and it was said January, 1916, that platinum had been discovered in doing assessment work. Mine is two miles from railroad. The veins are strong, of fair width, and carry shoots of exceptionally high-grade ore. Mr. Victor C. Alderson, E.M., Pres. Colo. Sch. of Mines, has endorsed the property.

By Dec., 1917, the Western Pacific R. R. had laid its line to within two miles of the mine.

RED METALS CO.

NEVADA

Last address: 16 Washoe Bank Bldg., Reno, Nev. A. W. Holmes, pres.; Geo. T. Milner, sec. and gen. mgr.; Jas. Howell, treas.

Inc. May 12, 1910, in Nevada. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; in \$50,000 preferred and \$950,000 common stock; issued, \$1,500 preferred and \$786,200 common stock. Annual meeting, first Monday in June.

Property: 16 claims, unpatented, 300 acres, on Peavine Mountain,

Washoe Co., Nev. Claims carry lenticular deposits, between diabase and diorite, that are 1 to 12' wide, show copper carbonate and bornite ore, said to average 9% copper, 15 oz. silver and \$4.80 gold per ton.

Development: by tunnel, 1,200' long. The mine was opened 1866, for silver, closed 1877, owing to the low price of that metal, and again reopened 1908. See Copper Handbook, Vol. XI.

Geology of this district is given in U. S. Geol. Survey Bull. 594, p. 194.

ELY DISTRICT WHITE PINE COUNTY

BOSTON-ELY MINING CO.

NEVADA

Dead. Impossible to locate officers; letters unanswered. Appears as if company's officers were afraid of service in some legal proceedings. Hosmer Robinson & Co., of Boston, were formerly interested, and gave company a standing.

Reported in March, 1917, that surface equipment at mine was being sold. Over \$150,000 was spent at the property sinking a 1,200' shaft, but heavy flow of water stopped operations. Over 1,000' of drifting at 1,100' failed to find the vein, so mine was closed down and stockholders will have to take their losses.

BUTTE & ELY COPPER CO.

NEVADA

General office: 1500 Alworth Bldg., Duluth, Minn. **Principal office:** Room 302, O'Rourke Estate Bldg., Butte, Mont. **Mine P. O.:** Kimberly, White Pine Co., Nev.

Officers: Jos. B. Cotton, pres.; John D. Pope, v. p.; John W. Neukom, sec. and asst. treas.; Thos. B. Adams, treas.; H. A. Holp, asst. sec.; preceding officers are directors.

Inc. July 27, 1905, in Montana. **Cap.**, \$500,000; shares \$1 par; stock was made assessable, 1907. Is a subsidiary of the Consolidated Coppermines Co., which owns 420,000 shares. Jan. 1, 1916 had \$266,576 in cash and cash assets in treasury. Net income for 1916 was \$7,453. Stock is listed on the Butte Mining Exchange. Annual meeting first Monday in June.

Property: 12 claims, patented, 210 acres, in the Robinson district, lying between the Nevada Consolidated and Giroux, includes a valuable water right, 20 miles distant, said to be capable of supplying 2,000,000 gal. daily; also 80 acres irrigable land near water rights.

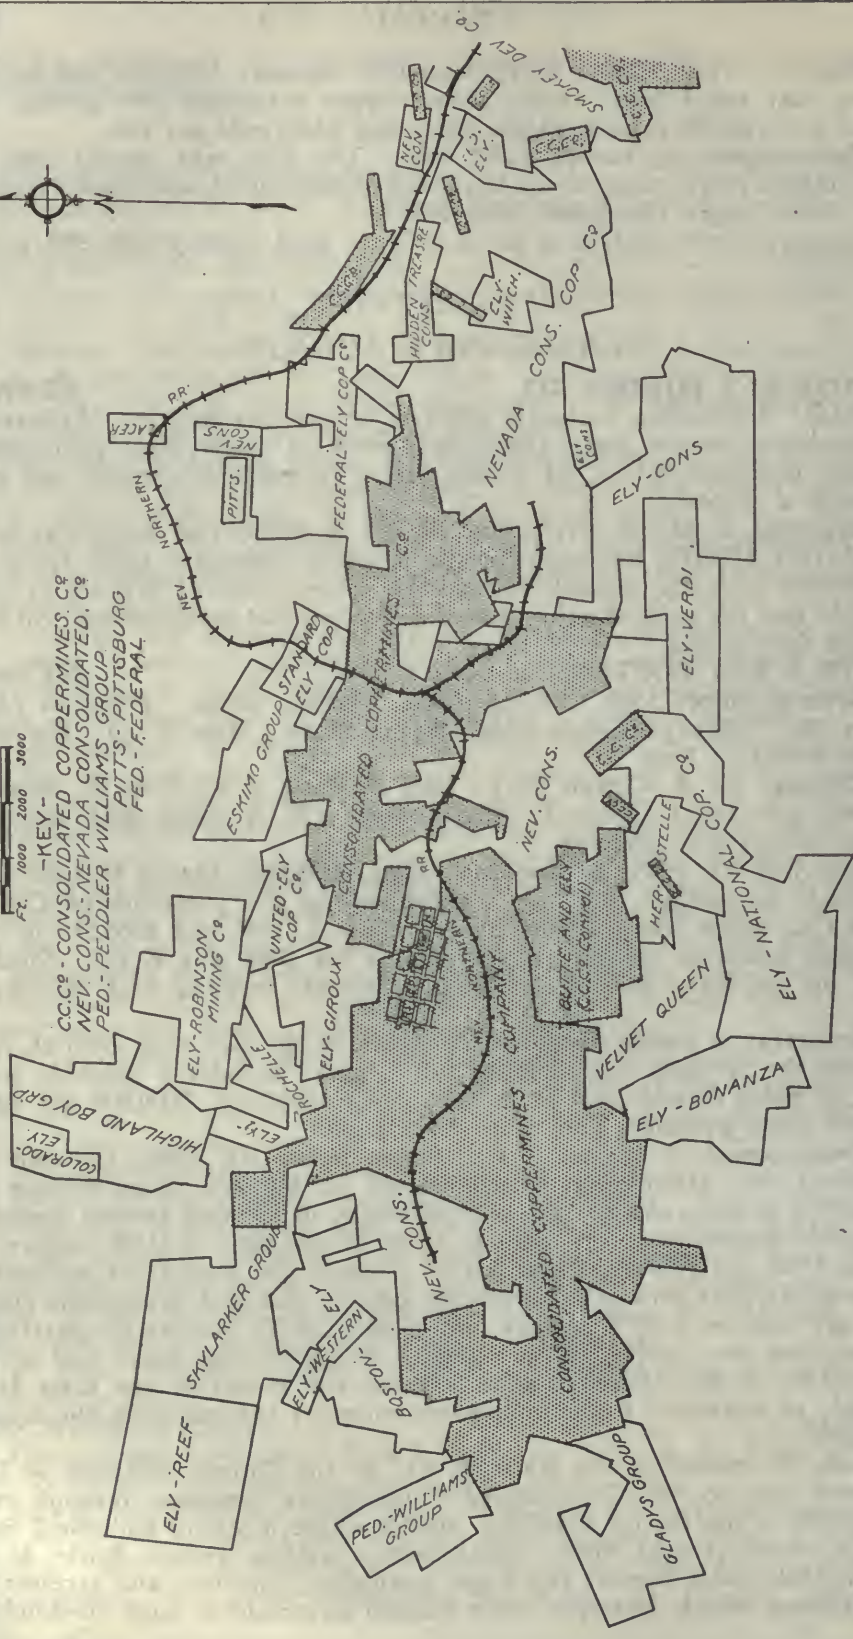

Development: 3 shafts, 1 with steam hoist, 310' deep, showing disseminated ore. Mining was suspended late in 1907, but churn drilling was carried on in succeeding years intermittently, developing several bodies of low-grade disseminated ore, said to show an average of 1½% copper.

In 1916 the Nevada Consolidated Copper Co. mined for account of Butte & Ely 2,218 tons of ore from the Liberty Bell and Westphalia claims. This ore assayed 1.375% copper and yielded 32,777 pounds of electrolytic copper. As the Liberty Pit is extended westward, the above and several other Butte & Ely claims will be stripped and mined on the same terms as apply to mining of Coppermines ore under its contract with the Nevada company.

Sale of control of the Butte & Ely to the Giroux company in 1909, acquired later by the Consolidated Coppermines company, through stock ownership in the Giroux company, and purchase direct of additional Butte & Ely stock, created bitter dissatisfaction among certain Butte & Ely stockholders, who several years ago instituted injunction and receivership proceedings, which, however, were decided adversely to such stockholders

by the court. This dissatisfaction seems now to have disappeared as the operations of the Coppermines company are on a profitable basis, and it is believed that the terms under which the Butte & Ely company sold the control may prove to be, after all, in the interests of its stockholders. The minority stockholders claim, however, that they have vainly endeavored for several years to secure an accounting and the payment of interest on money loaned by the company.

CENTENNIAL DEVELOPMENT CO.

NEVADA

Ely, White Pine Co., Nev. No report for 1917. Probably dead. See Vol. XII.

CONSOLIDATED COPPERMINES CO.

NEVADA

Office: 120 Broadway, New York. Mine office: Kimberly, White Pine Co., Nev.

Officers: Albert E. Humphreys, pres.; Joseph B. Cotton, v. p.; Thomas B. Adams, sec.-treas.; Robert Linton, cons. eng. and gen. mgr.; Henry B. Paull, auditor; with Isidore Hershman, C. Laurence Perkins, I. W. Bernheim, Ira B. Humphreys, Thomas A. Merritt, Arthur J. Selfridge, and Frederic R. Kennedy, directors.

Inc. May 20, 1913, in Delaware. **Cap.**, \$8,000,000; shares \$5 par; non-assessable; \$4,060,360 outstanding June 30, 1917. Bonds authorized \$3,500,000, 1st mortgage 7% convertible, due 1928; \$1,437,000 outstanding, redeemable by lot at 110 plus accrued interest on any interest day. Guaranty Trust Company, New York, transfer agent; Bankers Trust Company, New York, registrar. Stock listed on New York Curb.

Statement of April 30, 1917, shows cash on hand, \$183,376.03; notes and accounts receivable, \$535,359.02; inventory of copper, silver and gold, \$314,090.36; other quick assets, \$120,770.95; quick assets over current liabilities, \$807,343.21.

Property: the Coppermines company owns in fee 1,151 acres of mining properties and claims, together with 2,565 acres of ranch lands having valuable water rights. It also controls, through its stock ownership in the Giroux Consolidated Mines Co., 2,000 acres of patented mining claims and 1,800 acres of ranch lands, which have valuable water rights; and through its stock ownership in the Butte & Ely Company 209 acres of patented mining claims. The total area of claims, exclusive of the Mexican properties, is 3,360 acres of patented mining claims and 4,365 acres of ranch lands.

The Sultana mine, the Mexican property of the Giroux company, 11 claims comprising about 459 acres of mineral lands, includes the San Jose mine, about 1 mile W. of Copete, in the Sierra de Oro, 25 miles E. of Carbo and about 35 miles from Hermosillo. Property shows a contact vein of 50 to 100' width, between limestone and porphyry, opened by 3 shafts, No. 2, the main working shaft, sunk on an incline, 1,200' deep. The San Jose mine shows, in the bottom level, a vein of about 40' width, carrying oxidized ores to shallow depth, succeeded by sulphides. The Mexican property as a whole shows low-grade copper ore with fair gold value. Total production to January, 1908, was \$542,000. Mines have not been in operation recently, owing to unsettled political conditions in Mexico.

Ore: there are two classes of ore deposits occurring on the Nevada properties, (1) disseminated porphyry concentrating ore, similar to that of the Nevada Consolidated Co., lying in large continuous masses that can be mined at low cost, some by open pit steam shovel methods, others by underground methods; and (2) direct smelting ore in fissure and replacement deposits in limestone at or near limestone-porphyry contacts.

The main supply of ore mined by underground methods comes from the 380' Morris shaft, now yielding over 1,000 tons per day of ore that averages about 2%. The Bunker Hill shaft and the Brooks incline shaft are used for manways, lowering timber and supplies and for ventilation. Open pit mining is done from properties at the west end of the Liberty-Eureka Pit of the Nevada Consolidated, where mining is being done by that company for account of Coppermines Co.

The porphyry ore is very friable and readily amenable to concentration. The Morris and Brooks orebody has a proven length of over 2,000', a width of 400' and depth of 100' to 175', but drilling has not yet been extended downward to the bottom of the orebody, along the South side. A second porphyry orebody extends along Old Glory Hill from the western end of the property and a third proven orebody is the one in Copper Flat at the west end of the Liberty-Eureka Pit, above referred to. Keystone churn drills, of which the company has ten, are used for testing the porphyry ground and proving up the ore occurrence. However, the lands are so extensive that only a small part of the property has up to the present time been thoroughly drilled.

Contact and limestone replacement orebodies have been developed only on the Alpha and adjacent properties, where development work has been too limited to give definite information as to the full extent of the ore. The results shown by work thus far done are extremely encouraging. Regular shipments of these ores were commenced in the spring of 1917, and are being made at the rate of about 1,500 tons per month, of ore averaging about 10% copper.

Development: porphyry ores have been developed by 115 drill holes, totaling 47,871'; also by extensive underground work on the Morris and Brooks, Minnesota, Old Glory, and other claims. The Morris and Brooks mine has been opened up ready for stoping to the 270' level, and it is estimated that considerably over two million tons of ore is available for mining above this point. Development work is also being prosecuted on the 360' level. Mining is by the branch raise caving system, which can be done at very low cost.

The contact and replacement deposits are reached and exploited through the Giroux shaft of the Alpha mine, 1,450' deep, with considerable lateral work done on the 770', 1,000', 1,200' and 1,400' levels. The Alpha shaft, 1,200' deep, connects with the same workings, and from this shaft lateral work has also been done on the 500' and 600' levels. Work thus far has been almost entirely confined to crosscutting the formation, but more active development work was started in the spring of 1917 on the 1,000' level, and it is from this level that shipments are being made as above noted.

On the 1,000' level of the Alpha there were said to be in Nov., 1917, 35 faces from 4 to 10' wide, one being over 40'. Stoping above this level has opened rich ore.

Mine equipment: at the Giroux shaft includes a 26 x 48" Allis-Chalmers duplicate-cylinder hoist capable of handling 5-ton skips in counterbalance to depth of 2,000', at a hoisting speed of 1,500' per minute; also a 20 x 48" Allis-Chalmers hoist for the cage.

Pumping equipment consists of two pumps of 600 gallons and one of 1,200 gallons capacity per minute. The main pumping station is on the 1,200' level. The 1,200 gallon Prescott cross-compound condensing pump is one of the largest underground engines ever built, and has a 7-ton flywheel with a 16" discharge pipe.

A three-mile private railway connecting the principal shafts with the Nevada Northern Railway, has grades averaging about 1.5%. Equipment

includes several Porter locomotives of 600 tons tractive power and sufficient ore cars for the present requirements of the property.

Concentrator: in 1916 careful concentration tests were made on the porphyry ores by J. M. Callow, of Salt Lake City. Results of these investigations were used in re-modeling the old mill at Kimberly. Concentration is now principally by flotation, and extraction of 85% and better is being made on the sulphide ores. The remodeled concentrator was put into operation about March 1, 1917, the first unit having a capacity of 500 tons per day. A second unit, bringing the capacity up to 1,000 tons per day, was started in July, 1917.

Ore reserves: the report of the general manager of April 30, 1917, estimates fully and partly developed ore at 27,164,426 tons, averaging 1.19% copper. These figures deal with the concentrating porphyry ores only, and no estimates are given covering tonnages and grade of direct smelting ores known to exist in the Old Glory, Taylor, Alpha, and other claims on or near the monzonite contact.

Direct smelting ores as well as the concentrates from the Kimberly concentrator are treated at the Steptoe plant of the Nevada Consolidated Copper Co. A contract was made between the two companies in the spring of 1917, covering treatment of both these concentrates and the direct smelting ores, for a term of five years from May 1, 1917. Under terms of contract the Nevada Consolidated agrees to mine and treat for account of the Cons. Coppermines, from properties at the west end of Liberty Pit, 425,000 tons of ore during the period ending August 15, 1918, and after that date at least 75,000 tons per year, for a period of five years. Coppermines company, however, has reserved the right to cancel the contract any time after August 15, 1918, upon giving three months' notice.

Coppermines company has no floating indebtedness other than current monthly accounts, and is now earning a substantial profit on its operations. Litigation which hampered the company's operations two or three years ago has all been satisfactorily adjusted.

Improved methods of concentrating low grade porphyry ores, developed during the past few years, contribute in an important way to the value of the property. Higher recoveries obtained by the use of these methods show a great increase in yield from the Coppermines ores and make it possible to mine at a profit ore of much lower grade than could have been anticipated when these ore bodies were first opened up.

Production: in Nov., 1917, was at the rate of 1,800 tons of ore daily, yielding 1,200,000 lbs. of copper per month. The Alpha shaft is shipping 150 to 250 tons of over 9% ore daily, direct to smelter.

Management of the company is now in strong and able hands and a progressive operating policy is practiced.

DEXTERETTA MINES CO.

NEVADA

Office: Room 1007, 20 Broad St., New York, N. Y.

Officers: J. W. Barbrick, pres.; Chas. S. Witwer, v. p.; G. D. Avery, 2nd v. p.; Wm. R. Ruhl, treas.; V. M. Schmitz, sec., with Wm. E. Austin, directors. Prof. J. H. Weber, cons. eng. J. W. Walker, supt.

Inc. in Nevada. Cap., \$1,000,000; shares \$1 par; U. S. Corporation Co., New York, registrars.

Property: 14 claims, 280 acres, at Cherry Creek, White Pine Co., said to show a vein from 5' to 50' wide and traceable for about 1 mile. Management estimates average silver contents of the ores at \$26.50 per ton.

Development by 1,200' tunnel, 100' shaft, several drifts and open-cuts.

Equipment: includes compressor, drills, engines and several buildings. Plan installing 100-ton mill with proceeds from sale of 300,000 shares of treasury stock.

DOYLE MINING CO.**NEVADA**

Controlled by Atkins Kroll Co. Mine produces scheelite (tungsten) ores and company also owns a mill which was treating scheelite ore at the Bonita property on Snake Creek, near Garrison, Utah, 1916.

ELY AMALGAMATED COPPER CO.**NEVADA**

Company controlled since 1911 by Jesse Knight, pres., Provo, Utah, who owns 51% interest.

Inc. 1907, in Utah. **Cap.**, \$100,000; shares 10c. par.

Property: 6 claims, and a townsite, about 1 mile from the Steptoe smelter, of the Nevada Consolidated Copper Co., at McGill, White Pine Co., carries silver-lead ores. Several carloads of ore have been shipped and property under development.

ELY BELL MINING CO.**NEVADA**

Letters unclaimed at Ely, Nev., and Salt Lake City, Utah. Company probably dead. Stock worthless. Fully described Vol. XI, Copper Handbook.

ELY COPPER CO.**NEVADA**

Office: 815 Ernest & Cranmer Bldg., Denver, Colo. No representative at Ely, Nev. Idle since 1907. Fully described Vol. XI, Copper Handbook. Unfavorably regarded.

ELY GIROUX COPPER CO.**NEVADA**

Kimberly, White Pine Co., Nev. Windsor Trust Co., New York, trustee.

Inc. 1909, by B. W. Coleman, Graham F. Putnam, and Roswell S. Nichols. **Cap.**, \$5,000,000; shares \$5 par. In Nov., 1912, majority holdings were pooled, and \$75,000 shares treasury stock offered public, proceeds to be handled by Windsor Trust Co. as trustee, exclusively for payment of contractors sinking shaft on company's property at Ely, Nev.

Property: in Robinson mining district. Stock listed on the New York Curb, as a prospect, 1915. No returns secured, and company advertised delinquent for \$91 taxes in Jan., 1916.

ELY-MIZPAH COPPER CO.**NEVADA**

Property: the Modoc group, near Ely, Nev. Assessment work neglected and property probably forfeited. See Vol. XI, Copper Handbook.

Principal booster or promoter was A. M. Kearns, 1st Natl. Bank Bldg., Denver, Colo.

ELY REVENUE COPPER CO.**NEVADA**

Idle.

Office: 830 Equitable Bldg., Denver, Colo.

Officers: F. C. Goudy, pres.; L. F. Twitchell, v. p.; J. P. M. Humphrey, sec.-treas.; above, with C. C. Eddy and A. E. Reynolds, directors.

Inc. 1907 in Colo. **Cap.**, \$1,000,000; shares \$1 par. International Trust Co., Denver, registrar. Annual meeting 1st Tuesday in March.

Property: 132 acres, known as the Revenue group, at Ely, White Pine Co., near the Chainman and Altman mines. Operations to be resumed.

ELY VALLEY MINING & MILLING CO.**NEVADA**

Pioche, Lincoln Co., Nev.

Officers: George Weddell, pres.; W. E. Harrison, v. p.; Edward Thomarson, sec.-treas. and gen. mgr.; C. L. Warren, supt.; James W. Abbott, mg. engr.

Inc. Jan. 6, 1908, in Nevada. **Cap.**, \$1,000,000; shares \$1 par, fully paid and non-assessable; 600,000 promotion stock and 400,000 treasury; 10,196 issued. Annual meeting, second Tuesday in May.

Property: 200 acres, 16 claims, part patented and balance held by location, in Ely mining district, shows ore in vertical contact veins between limestone and quartzite. Vein reported to be 7' wide, to strike N. W. and to be proven to a depth of 500'. A vein of 10% copper ore was cut in shaft at 480' depth. Average assays claimed to have been 20% lead, 20 oz. silver and \$2 gold per ton.

Development: by 4 shafts and 400' tunnel at last accounts.

Equipment: includes gasoline hoist, air compressor, pump and air-circulating plant. S. P. L. A. & S. L. R. R. 2½ miles from property. Letters neither answered nor returned.

ELY VERDI COPPER CO.

NEVADA

Geo. Wingfield, pres., Goldfield, Nev. Mine near Ruth, via Ely, Nev.

Directors: S. R. Roberts, John Berry, of Ely; A. P. Sawyer and Leslie L. Savage, of Goldfield; M. R. Brown and H. S. Anderson, of Pierre, S. D.

Inc. May, 1912, in South Dakota. **Cap.**, \$5,000,000; shares \$5 par. Is a reorganization of company of same name that was listed on New York Curb in 1909.

Property: a large group of claims south of the Copper Flat steam-shovel pit of the Nevada Consolidated. Only assessment work being done.

ELY WITCH COPPER CO.

NEVADA

Idle. Mine near Ely, Nev.

Officers: J. E. Bamberger, pres., 163 So. Main St., Salt Lake City, Utah; D. M. Hyman, v. p.;-treas.; H. Cohen, sec.; Ernest Bamberger, gen. mgr.; preceding with H. G. McMillan and W. W. Armstrong, directors.

Inc. Nov. 22, 1906, in Maine. **Cap.**, \$5,000,000; shares \$5 par.

Property: 7 claims, 1 fractional, 54 acres, patented, bought for \$275,000, lying in the porphyry zone between the Ruth and Cumberland-Ely mines of the Nevada Consolidated, shows large blowouts of iron-stained porphyry.

Development: by 300' shaft, with levels at 100' intervals, and by tunnels of 1,200', 600' and 1,050', with 3,500' of workings. Development was disappointing, for, while claims cover the main monzonite belt of the district, the underground work on 300' level showed values too low to work. Drilling by Nevada Consolidated Co. is the logical thing to do and that company can probably work this property since it is now handling 1.6% ore at a profit. Company was a speculative promotion at time Nevada Consolidated was floated, and proving lean on development, has been idle since.

FEDERAL ELY COPPER CO.

NEVADA

Office: 26 Mining Exchange Bldg., Salt Lake City, Utah. **Mine Office:** Ely, Nev.

Officers: J. A. Cunningham, pres., at last accounts.

Inc. 1914 in Utah. **Cap.**, \$5,000,000; shares \$5 par; assessable; 12 assessments levied to March, 1915. Stockholders plan reducing company's capitalization to \$150,000 in 1916.

Property: 21 claims, 3 fractional, 400 acres, also the Huesser ranch of 600 acres, 15 miles north of Ely, in the Steptoe valley, bought 1906, and a mill-site. Mining lands are the Panama claim, bought 1909, for \$10,000, lying about one-half mile north of the Star Pointer shaft of the Nevada Consolidated; 8 claims north of the Nevada Consolidated; 3 claims between the Cumberland-Ely and Turner-Ely, and the Queen of the West group, in Robinson cañon. Company is said to have paid \$225,000 for its lands.

Geology: property north of the Nevada Consolidated shows limestone beds dipping to the east, said to be underlaid by cupriferous monzonite, and to carry 3 parallel shear zones, each about 400' in width, 600' apart, showing a little copper and lead ore. The limestone capping on the Savage claim is

said to carry lead ore. Churn-drill borings are said to have given a satisfactory showing of ore, and there also was some test-pitting and surface trenching.

Development: by tunnels aggregating about 1,600' and 4 shallow shafts, 3 said to show copper sulphides at depth of 100', the main shaft said to be near the contact of 3 ore zones, which seems peculiar, if the ore zones are parallel, as claimed.

The Queen of the West shaft shows, at depth of 110', a sulphide orebody of considerable size, averaging 3% copper, 1 to 2 oz. silver and 40 to 50 cts. gold per ton. The Kessler shaft, about 100' deep, near the tunnel, shows lead carbonates of fair tenor. Mine has a small steam plant.

Company has done little save levy assessments for several years, doing barely enough work on the claims to meet annual assessment requirements. Their claims were surveyed for patent in 1912 and reported partly patented in 1914. No recent returns.

FORT SCHELLBOURNE MINING & MILLING CO. NEVADA

Office: 521 Felt Bldg., Salt Lake City, Utah. **Mine Address:** Dan Doyle, Supt., Schellbourne, Nev.

Officers: F. W. Snyder, pres.; Hugh H. Tarbet, v. p.; E. H. Snyder, sec.-treas.; with Howard Phelps and J. E. Hepworth, directors.

Inc. Sept. 27, 1916, in Nev. **Cap.**, \$100,000; shares 10c. par. \$650,000 issued; assessable. Operating expenses, 1916, \$2,000. No income, save stock sales.

Property: McMahon mines, 7 claims, 140 acres, unpatented, in Schellbourne mining district, White Pine Co., Nev., 8 miles from Nevada Northern R. R. (Cherry Creek Station). Lands show a fissure vein on a limestone shale contact, with 15-20' orebody. Ore in streaks carries \$1 gold and 12 oz. silver per ton, in quartz calcite gangue.

Development: by 500' tunnel with 280' back and 1,000' of work. Company plans tunnel to cut ore at greater depth. No production since 1875.

GIROUX CONSOLIDATED MINES CO. NEVADA & MEXICO

Office: 1400 Alworth Bldg., Duluth, Minn. **Mine Offices:** Kimberly, Nevada, and Carbo, Sonora, Mexico.

Officers: Robert Frothingham, pres.; Henry B. Paull, 1st v. p.; Ernest R. Grochian, 2nd v. p.; Joseph B. Cotton, general counsel; Frederic R. Kennedy, sec.; Thomas B. Adams, treas.; foregoing with Samuel Brenner, Chas. H. Maddien, Albert E. Humphreys, Jr., Chas. d'Autremont, Jr., directors. Edwin F. Gray, gen. mgr.; Samuel L. Heslet, supt., Mexican mine.

Inc. April 14, 1903, in Delaware. **Cap.**, \$7,500,000; shares \$5 par; issued \$7,207,100, with \$292,900 in treasury for conversion of bonds. Bonds outstanding \$292,900. American Trust Co., Boston, transfer agents. Boston Safe Deposit & Trust Co., registrar.

The Giroux is now controlled absolutely by the Consolidated Coppermines Co., through exchange of Giroux stock for that of the Coppermines company. The latter company now owns about 97% of the total Giroux stock outstanding. For description of properties and operations see Consolidated Coppermines Co.

GLENDALE MINING, MILLING & POWER CO. NEVADA

Glendale, Calif. **Mine:** near Cherry Creek, Nev.

A jitney auto man, named Hart, of Glendale, Calif., is running property, and in our opinion, result of inexperience will be the usual one. J. H. Lishman, Templeton, Calif., was formerly president, acting merely in an advisory capacity in the early days of the corporation.

Very unfavorably regarded.

HAMILTON POWER, MINING & TRANSP. CO. NEVADA

Mine in Rocco canyon, near Hamilton, White Pine district, Nev. J. D.

Teasdale, v. p. and sec.; Wm. Harwood, mgr.; preceding, with R. G. Henke and John Blair, directors at last accounts.

Property: the Grand Prize group, 5 claims and power rights on Illipah creek. Ore is a carbonate carrying copper, lead and silver.

Development: by 235' tunnel cutting ledge at 165' with 36' winze in ore and a 125' shaft sunk on the vein, showing a 12" paystreak of shipping ore. Shipments in 1913, of 20 tons sacked, averaged \$84 a ton, assaying 6.40% copper, 20.5% lead and 107 oz. silver. Shipments averaged 60 tons a month during 1914.

Probably dead.

HUNTER MINE

NEVADA

Owned by Vulcan M., S. & R. Co., which see.

INDEPENDENT SCHEELITE CO.

NEVADA

Address: Scheelite, via Ely, Nev.

Property: tungsten producer in the Snake Range district, 26 miles from Ely. A 30-ton mill was erected in 1916.

JERSEY VALLEY MINES CO.

NEVADA

Worcester, Mass. W. Prince Catlin, mgr., Battle Mountain, Lander Co., Nev.

Property: in Kimberly or Hill Top district, 23 miles from Battle Mountain, comprises the Jersey Valley group, and the Gray Eagle claims, acquired Sept., 1913, from the Gray Eagle Mining Co. Four sets of lessees were taking out ore from the last named claims at last reports.

LEAD KING MINING & MILLING CO.

NEVADA

Office: Continental Natl. Bank Bldg., Salt Lake City, Utah.

Officers: A. P. Spitko, pres.-mgr.; Geo. F. Goodwin, sec.-treas.; A. Cigneaux, supt.

Inc. 1899. **Cap.**, 300,000 shares; 10c. par; assessable; 254,000 shares issued. Stock listed on Salt Lake Exchange.

Property: 15 claims, 8 patented, 250 acres, in Duck Creek mining district, White Pine Co., Nevada, is said to carry high-grade galena ore with small silver values, occurring in gray and blue limestone formation.

Shipments: to date total 10 carloads, netting \$20,000. Development work resumed 1917. Tunnel is 700' long.

LUCKY DEPOSIT MINING CO.

NEVADA

Officers: L. G. Hardy, pres.-gen. mgr.; J. P. Cahoon, v. p.; C. W. Knudsen, sec.-treas.; above with A. N. Olsen, directors.

Inc. March 1, 1914, in Utah.

Property: 9 unpatented claims at Aurum, White Pine Co., Nev., said to show copper ore with some silver-gold values, running \$45-\$50 per ton.

Development: by 175' crosscut tunnel cut along a porphyry dike said to measure 200' across. The tunnel is being driven to reach depth of 300'.

Production: in 1916, 65 tons were shipped. About 200 tons of ore ready for shipment May, 1917.

MCDONALD-ELY COPPER CO.

NEVADA

Idle.

Office: 918 Kearns Bldg., Salt Lake City, Utah. **Mine Address:** J. P. Turner, supt., Ely, White Pine Co., Nev.

Officers: D. C. McDonald, pres. and gen. mgr.; Col. Enos A. Wall, v. p.; Geo. W. Parks, sec.; Frank Knox, treas.; preceding, with Frank J. Westcott, Geo. W. Lamb and Hon. Thos. Kearns, directors; E. P. Jennings, cons. engr. and mgr.

Inc. Nov., 1906, in Utah. **Cap.**, \$1,000,000; shares \$5 par; non-assessable; issued, \$790,000. Debentures, \$100,000, at 6%, maturing Nov. 15, 1915. Shares are listed on the Salt Lake Stock Exchange.

Property: 28 claims, patented, 325 acres, 19 claims held under bond and lease. Property, on the lime belt, in the N. E. part of the Ely district, carries 4 contact deposits, between porphyry and limestone, showing prominent iron outcrops. Management estimates veins as 20' wide carrying oxidized ores, assaying 1 to 40% copper, and about 80 cts. gold per ton.

Development: is by the 415' Wall tunnel, showing 21' of heavy iron. The mine as a whole has about 3,000' of workings.

Equipment: includes a 25-h. p. gasoline hoist, 40-h. p. steam hoist, and a 6-drill Ingersoll-Sergeant air compressor. There are 6 buildings, including necessary shops. A pumping plant and pipe line supply water from a spring at nearby ranch.

An old 50-ton mill, with rolls and cyanide plant, remains from a former ownership. The 100-ton concentrator has a gyratory crusher and 3 trains of rolls. In May, 1914, drifting was in progress. Ten men employed. Property considered promising. No recent information obtained.

NEVADA CONSOLIDATED COPPER CO.

NEVADA

Controlled by Utah Copper Co.

Office: 120 Broadway, New York. **Operating Office:** McGill, White Pine Co., Nev. Mine near Ruth, White Pine Co., Nev.

Officers: Silas W. Eccles, pres.; Daniel C. Jackling, v. p.; W. E. Bennett, v. p. and sec.; preceding with E. A. Guggenheim, H. F. Guggenheim, Chas. Hayden, Wm. B. Thompson, Chas. M. MacNeill, W. Hinckle Smith, W. C. Potter and C. B. Lakenan, directors; C. K. Lipman, treas.; C. B. Lakenan, gen. mgr.; C. V. Jenkins, business mgr.; Robt. Marsh, Jr., mine supt.; W. S. Larsh, underground supt.; E. E. Vanderhoff, pit supt.; Geo. C. Riser, mill supt.; R. E. H. Pomeroy, smelter supt.

Inc. Nov. 7, 1904, in Maine, as a merger of the Boston & Nevada Copper Co. and White Pine Copper Co. **Cap.**, \$10,000,000; shares \$5 par; non-assessable, original cap., \$5,000,000, increased Feb. 5, 1908, to \$8,000,000, and again increased Nov., 1909, to present figure. A former issue of \$3,000,000 first-mortgage 6% convertible gold bonds, due April, 1918, has been retired. Old Colony Trust Co., Boston, and Guaranty Trust Co., New York, registrars; Boston Safe Deposit & Trust Co., Boston, and D. A. Crockett, 120 Broadway, New York transfer agents. Shares listed on the New York and Boston stock exchanges. Annual meeting, third Friday in April.

Dividends: Begun Oct., 1909, rate 37½c per share quarterly; paid \$1.50 in 1910 and 1911; \$2 in 1912; \$1.50 in 1913; \$1.12½ in 1914; \$1.50 in 1915; \$6.75 in 1916; \$4.15 in 1917.

Company absorbed the Cumberland-Ely Copper Co., paying \$7,554,084 cash therefor, Aug. 30, 1910. Shareholders of the Cumberland-Ely were given the opportunity of exchanging stock on the basis of ¾ shares for 1 share Nevada Consolidated. The Nevada Consolidated is controlled through stock ownership, amounting to 1,000,500 shares by the Utah Copper Co. The Nevada Cons. Copper Co. controls through stock ownership the Nevada Northern Railway Co.; also owns, through purchase and absorption, the physical assets of the Steptoe Valley S. & M. Co., which was dissolved Oct., 1914.

Property: 106 claims patented, 27 unpatented. Distributed as follows: Copper Flat Group—33 patented claims, covering about 355 acres; 23 unpatented. Ruth Group—57 patented, 705 acres; and 4 unpatented. Veteran Group—14 patented; and 2 outlying patents.

Geology: The geologic features of the property are somewhat similar to those of Morenci, Ariz., and Bingham, Utah. An area of Paleozoic limestones and shales is intruded by a great mass of monzonite porphyry, tilting and breaking the sedimentaries and forcing its way into them in dykes and sills. Alteration of both sedimentaries and monzonite is extensive, and inclusions of great masses of country rock in the intrusive are common.

The main orebodies are found in monzonite porphyry; all of the porphyry area however is not ore bearing. Small bodies of high-grade copper ore are encountered in the sedimentaries near the contact, and occasional occurrences of silver-lead ore are met at some distance from it. These latter are of small importance. Commercial ore occurs at depths varying from 20 to 700' below the surface, and up to 450' thick. Copper occurs as chalcocite, chalcocite coating pyrite, and some chalcopyrite, in seams and disseminated through the mass of porphyry. As the copper-content fades out gradually in depth, the bottom limits of pay ore are determined largely by commercial factors. The capping, which is leached porphyry, is for the most part barren, though there are occasional occurrences of copper carbonates, silicates, oxides, etc., in it. Sufficient carbonate ore is found in the capping of the Copper Flat orebody to supply the smelter with flux. A considerable part of the property is covered with rhyolite capping, the remains of an extensive lava flow occurring long after the

NEVADA CONSOLIDATED COPPER CO.

Our Statistical Department will furnish complete information on application.

HAYDEN, STONE & CO.

Members New York, Boston and Philadelphia Stock Exchanges.

25 Broad Street, NEW YORK

87 Milk Street, BOSTON

monzonite intrusions. To date no orebodies have been found in the rhyolite.

Development: has so far proved the existence of three main orebodies, namely: the Copper Flat, Ruth, and Veteran, and several of lesser importance;—the Kimberley, Ingersoll, Wedge and Jupiter.

The Copper Flat orebody, which is the largest and most important, is mined by steam-shovels, and was disclosed in three places known as the Eureka, Liberty, and Hecla pits. These three pits have been consolidated into one. The big pit has roughly the shape of a dumbbell, with the former Eureka and Liberty pits on the east and west end respectively, and the Hecla in the middle. Its longest dimension E.-W. is 4,100' and N.-S., 2,500'. It covers an area of 124 acres and is at its deepest point 250' below the surrounding country. Entrance for trains is had in the northerly part of the Eureka and Liberty ends. These entrances are made from an assembly yard, where ore trains are made up for the Nevada Northern R. R., which handles them from this point to the smelter, 26 miles distant.

In mining, benches are maintained at about 50' intervals. To loosen up the material ahead of the shovels, 6" holes, placed at proper intervals in the benches, are put down by churn-drills. Nine drills of the No. 5 Keystone type are kept on this work; 1½ in ore, 3½ in waste, and 4 as extras are kept in the pit to minimize the amount of moving. Holes are spaced about 35' apart, 10 or 12' back from the edge of the bank and average 50 to 55' in depth. They are sprung or chambered by light charges before they receive the blasting charge.

After blasting, the material, ore or waste as the case may be, is loaded into railroad cars by steam-shovels. In this work eight 95-ton Bucyrus shovels, having Vanderhoef 4-cu. yd. dippers, are used. A good general average is 1,200 cu. yds. per steam-shovel shift of 10 hours.

Transportation of ore from the pits to the assembly yard, and of waste to the various dumps, is taken care of by 15 saddle-back locomotives, 2 being of 85 tons, 5 of 65 tons, 7 of 45 tons, and one of 35 tons weight. In addition one 56 ton, 6 wheel yard or switch engine is employed in general service. Cars for the transportation of ore from the mines to the mill are furnished by the Nevada Northern R. R. and are of 55 ton, all steel Ingolsby type. There are about 200 of these in service. Overburden is handled with 70 wood and steel dump cars of 18 and 20 yard capacity.

About 10,000 tons of ore and 10,000 yards of overburden are handled daily.

Other pit equipment consists of one 30 ton locomotive type Industrial crane, one employes' car used to transport men to and from work; a repair car equipped with tools, compressor, and boiler; ten coaling cars of special design for the shovels; 4 flat cars for transporting drills, casing, etc.; and two powder cars, one a refrigerator used to preserve explosives at the right temperature. Adequate machine, blacksmith, carpenter, engine and car shops with full equipment are maintained.

The Ruth orebody lies about 1¼ miles east of the Copper Flat orebody. Here the capping is too thick to economically mine it by steam shovels, hence it is mined by underground methods.

The Ruth mine is served by two shafts, the Star Pointer—the main working shaft, a 4 compartment vertical, 25'-6"x5'-6" inside dimensions; and the Ingersoll, an incline, 5'x8'-6" inside dimensions. The two shafts are about 2,600' apart, 600' and 550' deep, respectively, and connected on the 500 and 600' levels. At present the 500 and 600' levels are active; the

300 and 400' levels have been finished and abandoned, and the 700 and 800' are yet to be driven. Station and pockets, 700' level, Star Pointer shaft, are completed. To date about 14½ miles of underground workings have been driven.

Ore is mined by the branch-raise caving system, which consists in driving raise series at 25' intervals at right angles to motor haulage ways. From the branch-raises, finger-raises are put up to open the orebody at 12½' intervals, both parallel and normal to the direction of the haulage ways. The orebody is undercut at the tops of the finger-raises, caved, and ore drawn off through the fingers and branches to the haulage ways.

Material is handled underground by eight 10-ton mine locomotives; 4 of Baldwin-Westinghouse and 4 of General Electric make. The former are 60 h. p. and the latter 90 h. p., of 250 volt d. c. trolley type. Fifty 88 cu. ft. saddle back steel cars, holding about 4 tons each, are used.

In the Star Pointer shaft, ore is hoisted by a 400 h. p., 550 volt a. c. Nordberg hoist in 6 ton self dumping skips running in balance. The shaft is also equipped with a 200 h. p. geared hoist handling a double deck cage capable of holding 30 men. From the tipple ore is distributed in a 3,000 ton capacity bin by means of properly arranged chutes, and loaded from the bin into Nevada Northern R. R. 55 ton cars, which pass beneath it.

The Ruth mine is producing up to 2,700 tons daily, the total in 1916 being 591,545 tons of 2.195% ore. Mining cost \$1.202 per ton. In 1918 this mine will be capable of producing 5,000 tons per day. Development in the Ruth last year amounted to 33,321', making 54,188' to 1917. Of this, 32,868' has been caved.

The **Veteran** mine, taken over from the Cumberland-Ely, west of and adjoining the Consolidated Coppermines Giroux holdings, is not producing, operations at this property having been discontinued indefinitely. Mine contains 155,800 tons of ore.

Nearly all of the waste, and some of the material for mining, is handled through the Ingersoll shaft in a 2 ton capacity skip. Equipment here consists of a 112 h. p., 550 volt a. c. Wellman-Seaver-Morgan electric hoist.

The Ruth is further equipped with 2 Ingersoll-Rand, P. R. E.-2, 3,000 cu. ft. air compressors direct connected to 550 h. p. synchronous motors, 3 phase, 600 cycle, 600 volts. About 80 air drills are in use. Direct current at 250 volts for the underground trolley system is furnished by three 150 h. p. Allis-Chalmers motor generator sets of the Bullock type. A saw-mill, equipped with timber framing machinery, and handling about a half-million foot, board measure, of timber per month; a blacksmith shop and a small machine shop are maintained.

The Kimberley orebody has been developed only by churn drills. No underground workings and no mining. Drilling has proved the existence of about 600,000 tons of commercial ore.

The Wedge and Jupiter orebodies are small. They were developed by underground workings. No mining is being done in either place at present.

Ore reserves: extensive churn-drill borings on the Copper Flat, Liberty, Veteran, Ruth and other properties, have proven a tonnage estimated Jan. 1, 1917, as 67,993,117 tons of ore, averaging 1.59% copper and representing an ore supply of about 17 years. A revision of reserves was made in 1916, the new estimate being an increase of over 17,000,000 tons. Of this, 22% is in the Ruth mine, remainder at Copper Flat.

Comparative Table of Recoverable Developed Ore:

	Tons	Copper		Tons	Copper
Sept. 30, 1907....	14,432,962	1.97%	Dec. 31, 1912....	38,853,551	1.67%
Sept. 30, 1908....	20,000,000	1.94%	Dec. 31, 1913....	39,108,590	1.65%
Sept. 30, 1909....	29,000,000	1.94%	Dec. 31, 1914....	41,020,296	1.68%
Sept. 30, 1910....	40,360,823	1.70%	Dec. 31, 1915....	50,525,289	1.65%
Dec. 31, 1911....	40,853,371	1.66%	Dec. 31, 1916....	67,993,117	1.59%

Churn-drilling in 1916 totaled 45,222'; 103' holes were drilled, 19,704' being in the Ruth. Average depth in the mine was 469', and at Copper Flat 418'.

Electric power is used throughout, current being brought from the Steptoe smelter, at 40,000 volts, and stepped down to 600 volts by seven 200-k. w. transformers in a concrete station at the Ruth mine.

Ore is shipped to the Steptoe smelter, at McGill, separately described below, over a 27-mile standard-gauge railway, equipment including 400 self-dumping ore cars. This line is a part of the Nevada Northern railway, having a standard-gauge line of 165 miles in length, running from the mines and Ely to a junction with the Southern Pacific railway at Cobre station. The Nevada Northern Railway Co., controlled through stock ownership by the Nevada Consolidated, is capitalized at \$2,000,000, with a \$1,000,000 bond issue, at 5%, the line doing a general business in addition to handling the traffic of the Nevada Consolidated Copper Co.

Tonnage carried in 1916 totaled 13,240 daily, of which nearly 12,000 was ore.

Costs: the cost of stripping overburden was given at 30.09c. per cu. yd. for the fiscal year ending Dec. 31, 1916, with actual mining costs for ore of 12.42c. per dry ton, with an additional charge of 30c. per ton made to cover stripping redemption at the various pits. There was 3,988,655 cu. yd. of capping moved in 1916. Ore mined and treated during the fiscal year 1916 averaged 1.632% copper, by assay, with an average extraction of 73.87%. The cost of production for the fiscal year 1916 was given as 8.13c. per lb. of copper and 8.86 cts., covering all charges, including depreciation charges on Steptoe plant. It is not probable, however, although the Nevada Consolidated is one of the largest and best mines in the world, that the mine can continue to produce copper, for any great length of time, at much less than 8 cts. per lb., and, when all factors are taken into consideration and due allowance is made for the cost of improvements, that ultimately must be charged against costs, a net cost of 9 cts. per lb. for finished copper laid down at the seaboard, would be a fair estimate. Production is marketed through the American Smelting & Refining Co., on a 1% commission basis.

Steptoe Smelter

The ore reduction works, concentrating mill and smelter owned by the company are at McGill, White Pine Co., Nev. Lands cover 8 square miles, with water rights. The property is on the eastern side of Steptoe valley, on the slope at the foot of the Schell Creek range, 14 miles N. E. of Ely and 22 miles from the mines, on the line of the Nevada Northern railway. The smelter site proper comprises 320 acres, 1 mile long and one-half mile wide, on a hillside with 10% grade, permitting the works to be terraced, and handling material by gravity throughout. Lands carry water rights to Duck Creek, and to the McGill ranch, estimated as capable, jointly, of furnishing water for a 15,000-ton plant.

The reduction plant is one of the largest and best in existence. The present average capacity is 12,000 tons daily, but the plant is so designed that it can be increased easily to a much greater capacity, and late in 1917

changes were under way to increase the quantity to 15,000 tons. All main buildings are of steel frame and the plant is built on the unit system, with allowance for expansion.

The mill, nearly a mile from the smelter, is 378x756' in size. There are 8 sections, treating a total of over 12,000 tons of ore daily. Each section can be operated independently, but the plant is run in 4 units of 2 sections each.

The mill handles a moderately hard silicified altered porphyry ore containing tiny specks of chalcocite, pyrite and some chalcopyrite and averaging 1.5% copper. This is concentrated 8 into 1, with a recovery of about 74% of the assay value, the product containing 9% copper.

The coarse ore bins are of timber, 15' deep, 20' wide and 288' long with a capacity of 5,000 tons. They are built about the center line of the mill and 400' behind the center line of the fine ore bins. The ore is dumped on grizzlies of railroad iron with openings of 13.5".

From the coarse ore bins the ore goes through chutes at the bottom to twenty-four 60" steel apron feeders driven at a speed of 2.2' per minute. The full capacity of each feeder is 75 tons per hour. The two feeders in each unit adjoining the center line of the plant can be run at 9' per minute, delivering 700 tons per hour. The feeders, with the exception of these two, deliver to two 60" steel pan conveyors, each 118' long, traveling at a speed of 28' per minute, and with a total capacity for the two of 1,700 tons per hour. The high speed feeders and pan conveyors deliver to two 60" traveling grizzlies of 3.5" openings and having a speed of 40' per minute. The oversize from the grizzlies is delivered to two No. 8 McCully crushers. The discharge from the McCully crushers and the undersize from the grizzlies is elevated by two 42" belt conveyors to two screens 6'x14' of $\frac{3}{8}$ " wire, 1"x1 $\frac{1}{2}$ " mesh, inclined at an angle of 36 to 48°. The oversize of these screens is reground by two Garfield rolls, 72"x20", set for a $\frac{7}{8}$ " opening. Discharge from the rolls and undersize from the screens is elevated to two horizontal conveyors which distribute to the fine ore bins by means of two trippers.

In order to avoid sliming the flow sheet is arranged for step grinding. From the fine bins the ore passes by belt feeders over automatic scales to a set of 36"x15" rolls set for an opening of $\frac{5}{8}$ " and run at 85 r. p. m. with water introduced beneath washing to a pair of bucket elevators. The buckets on these elevators are 8"x8"x18" and the elevators deliver to two trommels, 42" diam. by 8' long, having one section of $\frac{3}{16}$ " and one of $\frac{5}{16}$ " perforations. The oversize goes to another set of rolls 36"x14" set for a $\frac{5}{16}$ " opening and driven at 105 r. p. m. The undersize of $\frac{5}{16}$ " goes to a set of rolls 30"x14", set for a $\frac{1}{8}$ " opening and run at 122 r. p. m. The undersize of $\frac{3}{16}$ " goes to eight 2 m. m. trommels 36" diam. by 8' long. The oversize of the 2 m.m. screens goes to a fourth set of rolls 36"x15" with an opening of $\frac{1}{16}$ " and driven at 160 r. p. m. All of the above rolls deliver to the same elevators so that everything must finally pass 2 m.m.

The undersize of 2 m.m. passes to 10 double deck Wilfleys making final concentrates, and middlings to five Wilfleys. The five Wilfleys make final concentrates and send tailings to the regrinding system. The tailings from the ten double deck tables pass to four Steptoe classifiers, having four spigots and an overflow. The overflow is sent to a 50' Dorr thickener, delivering underflow to the slime department and overflow to the reclaimed water system. The first spigot product goes to the regrinding system after being dewatered. The second spigot delivers to four Wilfleys which make final concentrates and send tailings to the regrinding system. The third spigot delivers to eight Wilfleys, making final concentrates, middlings to

the regrinding system and tails to waste after being dewatered in Steptoe tanks. The fourth spigot delivers to Callow tanks, delivering underflow to four Wilfleys and overflow to slime department. These four Wilfleys produce final concentrates and send tailings to Callow tanks delivering underflow to Johnson vanners.

Each unit is equipped with two Hardinge mills 8'x30" direct driven through herringbone gears. The feed to these is delivered at 65 to 75% solids by means of a shovel wheel. The product is delivered by two bucket elevators to four Steptoe classifiers making four spigot products and an overflow. The overflow goes to two 17' Dorrs delivering underflow to the slime department and overflow to 75' Dorr thickeners. The first spigot delivers to two Wilfleys, making final concentrates, and sending tailings to the regrinding system. The second spigot delivers to seven Wilfleys making tailings to waste and sending middlings to six more Wilfleys, making tailings to waste. The third spigot delivers to seven Wilfleys, making tailings to waste and sending middlings to the above mentioned six Wilfleys. The fourth spigot delivers to Callow tanks whose overflow goes to the slime department and underflow to ten Wilfleys, delivering tailings to Callow tanks which in turn deliver underflow to 26 Johnson vanners and overflow to the slime department.

All concentrates except those of the real slime department are delivered to 16 steel tanks of 225 ton capacity, and having filter bottoms for suction drying. These tanks are unloaded by a Blaisdell disc excavator into cars running on a track beneath.

All overflows of Callow tanks, Steptoe tanks, and Blaisdell concentrates tanks are delivered to a series of settling ponds from which the underflow is delivered to the slime department and the overflow is pumped to the mill to be re-used.

Water is secured from Duck creek, which has an average flow of 8,000 gals. per minute, water being collected in the hills in reservoirs and brought by gravity for 9 miles through a 32" iron-banded wooden pipe line and delivered at the highest point of the works under a pressure of 10 to 20 lbs. per sq. in. An electrically-driven pumping plant in Steptoe valley, immediately below the works, has a capacity of about 5,000 gals. per minute. By means of a system of settling tanks, ponds and pumps, approximately 8,000 gal. of water per minute is recovered from mill tailings for re-use. Approximately 4½ tons of fresh water to 1 of ore are used in the process.

The smelter is about one mile from the concentrator, and is connected therewith by a standard-gauge railway line. The works have about 12 miles of railway track, equipped with 9 small locomotives, a switch engine and 100 cars, and 2 loco cranes.

The smelter includes separate buildings for calcining, reverberatory smelting, blast-furnace smelting and conversion, all of steel frame, with corrugated iron sheathing. Each department has independent flues and chimneys.

The roaster building, 328' in length, has 4 floors, with twenty-four modified McDougal roasters, set in 2 rows. Concentrates are delivered to the calcining building in 10-ton standard-gauge cars, entering over a trestle built of timbers, the feed floor being on a level with the railway trestle. All the roasters have air-cooled rabbling arms, and center columns supplied with air under a pressure of about 3" of water by a National Blower Co.'s fan of about 120 000 cu. ft. capacity. The roasters are driven by 10 h. p. electric motors. Hot calcines, carrying 6.5 to 9% sulphur, are discharged into hoppers beneath the roasters and trammed directly to the reverberatories, or to nine 150-ton calcine storage bins, built of brick and steel, which serve as a balance-wheel between the roasting and smelting

departments. Each roaster discharges gases through a 54" elbow to a brick flue running between the 2 rows. This flue discharges fumes into the main flue, which is in 2 parts, each of 312' square cross-section, permitting either to be cut out for cleaning. The flue is 1,070' long, including the dust chamber, which is 150x50x30', and leads to a brick stack 250' high and of 18' internal diameter at the top. Dust from the flue in the roaster building is piped to the ground floor, for loading into cars, and for about 500' the flue has tracks underneath, permitting the collection of dust from steel hoppers in cars, which are hauled by small locomotives.

The reverberatory building has five 600-ton furnaces, each 19' wide x 111' to 130' long, fired with California crude oil, atomized by air at 40-oz. pressure from a Connersville blower and fed through 5 burners per furnace. From 250 to 350 bbls. of oil per day are used by each furnace, varying with the nature of the charge smelted. Each furnace is connected with two 400-h. p. boilers arranged in parallel, instead of tandem, in the flue between the furnace and the dust chamber. These boilers develop about 85% of their normal rated capacity under oil firing. Each furnace has bypasses with dampers giving a direct passage for the gases from furnace to dust chamber, when boilers have to be cut out. The equivalent of about 35% of the fuel value of the oil used in the furnaces, is recovered as steam by these boilers. As the gross oil used per ton of charge is about 0.543 bbl., the net, after deducting these waste heat credits, is about 0.35 bbls. per ton of charge.

Powdered coal is to be used for the reverberatories instead of oil, on account of the high price of the latter.

The reverberatory furnaces are charged with calcines mixed with limestone, dumped through slide gates, from hoppers suspended from the charge floor. Each furnace has 2 tap holes on one side, from one of which matte is drawn off into matte cars of about 30-ton capacity. These cars are tilted and contents poured into the converters by an electrically-driven mechanism mounted on the car frame. Slag is skimmed twice every shift, the skimmings going to a cast-iron box leading to a lined launder, in which a jet of water granulates the slag and washes it to the dump. Slags carry 50 to 45% silica, 6 to 12% calcium oxide, 25 to 35% iron oxide and 8 to 14% alumina. The reverberatory building has a dust chamber of 1,000' square section, 155' long, leading to a 300' brick chimney, 15' in diameter at top.

The blast-furnace building, located between the reverberatory and converter departments, has a single blast furnace, 42x240" at the tuyeres, and 84x240" at the shaft, with a capacity of 300 to 500 tons of charge per day, the furnace being so planned that it can be enlarged if desired to 80' in length. The furnace is 13' above the ground level, with a height of 16' from the tuyeres to the charging floor, operating with a 10' column charge and 40-oz. blast pressure. There are 4 steel water jackets on each side, and 1 at each end, and each side has 24 four-inch tuyeres, 10" apart, receiving blast from a 30" bustle pipe. The water jackets each have separate blast boxes and independent air and water connections, so that any jacket may be removed by breaking 3 simple connections. Charging is done by cars dumped pneumatically, matte is tapped into ladles on cars and slags granulated and sluiced, as in the reverberatory building. Fumes discharge through a 108" downtake to a 12x15x250' brick flue, terminating in the main roaster flue. The blast furnace is not in operation.

The converter building is about 600' from the reverberatory furnaces, and receives molten matte from cars, behind and above the converters, the contents being poured into a launder, while the shells remain in position for blast. The building has two 5-motor Shaw electric cranes, each with a hoist capacity of 60 tons besides 2 auxiliaries of 25 tons each. There are 2 of the

old stalls with 96x150" shells of the barrel type built for acid linings, but now used with magnesite brick linings. There are also 2 Peirce-Smith barrel-type converters, both originally 25' 10" long by 10' diameter shell. One of these was lengthened at the smelter to 33' 11". They originally had 30 tuyeres each but these have been increased to 35 and 46, respectively. The blast pressure used is nominally 10-lb. gauge at an altitude of 6,327'. The Peirce-Smith converters produce about 60 and 50 tons of copper per day on 40% matte.

Blister copper is poured into ladles and transferred into a brick-lined steel cylindrical receiver. This is mounted on rollers and rotated on its own axis by an electrical motor, so that the molten blister copper is poured through a tilting pouring spoon into moulds on a horizontal straight-line chain and sprocket conveyor. These moulds discharge on a submerged apron conveyor which after traveling in the water horizontally for a few feet turns on an incline and raises the copper ingots out of the water and lands them on the loading platform. They contain 99.5% copper, weigh about 400 lbs., and after trimming and being weighed on accurate scales, they are shipped in box cars.

The converter's slag is taken back to the reverberatory furnaces in 10-ton side-tilting pots operated by compressed air. Flux for the converters consists of concentrator slimes and silicious carbonate ore from the Copper Flat pit, mixed and dried in 2 oil-fired rotary driers at the converter building and handled and charged by boats. The hoods from the converters lead to a balloon flue running along over the charge floor for the extent of the converter building covered by stalls. It is then connected by a circular flue 10' diam. to a brick dust chamber which in turn connects to a brick stack 100' from the ground, 10' diam. at top.

The power plant has 4 batteries of two 400-h. p. Babcock & Wilcox water-tube boilers each and one battery of two 600-h. p. Stirling water-tube boilers. Two batteries have Foster and 3 others have Babcock & Wilcox internal superheaters, and there is a separate Foster superheater for the steam supplied by the reverberatory waste heat boiler plant of ten 400-h. p. boilers. Steam is generated at 160-lbs. pressure and can be superheated 100° F. All boilers are fired by Green chain grate stokers, coal being fed from overhead bins by chutes direct to the stoker hoppers. Each double battery of boilers has a 9x40' steel stack with induced draught, furnished by 5 Sturtevant fans, each connected with a 30-h. p. Sturtevant slide-valve engine, running at 150 to 175 r. p. m.

Each battery of boilers is equipped with fuel economizers of about 3,360 sq. ft. heating surface, set between the boilers and the induced draught fan; they are dampered so that they can be cut out for cleaning while the boilers are in service. A 3,000-gal. capacity Kennicott water purifier supplies make-up water for all boilers.

The engine-room, main floor, contains the generating engines, blowers, 3 exciters and a switchboard, and the basement contains condensers, air pumps and oil filters. The electrical equipment consists of two 1,100-h. p. 22x48x48" Allis-Chalmers Corliss cross-compound engines, with 800 k. w. Bullock a. c. generators mounted on the shafts; two 2,000-h. p. 31x66x48" Nordberg Corliss cross-compound engines with 1,500-k. w. Bullock a. c. generator mounted on the shafts, and one 2,500-k. w. steam-driven Westinghouse turbo generator. Current is generated at 600 volts and carried to a concrete transformer station, equipped with 7 200-k. w. Bullock water-cooled transformers, stepping the current up to 40,000 volts, for transmission to the mines; four 750-k. w. Westinghouse water-cooled transformers, and four 1,000-k. w. General Electric water-cooled transformers, stepping

current up to 13,200 volts for transmission to the mills; 13,000 and 40,000-volt choke coils and lightning arresters.

A 3,000-k. w. turbo-generator is being added to take care of increased power consumption at the mill.

The smelter blast plant, in the engine house, includes a 350-h. p. 14x28 x36" Nordberg tandem-compound engine direct-connected to a No. 10 Connersville blower with capacity of 300 cu. ft. of air per revolution, making 120 r. p. m. This is for the blast furnace. For the converters air is supplied at 10-lbs. gauge pressure by 1 Allis-Chalmers blowing engine, 16" and 24" diam. steam, 34" and 34" diam. air by 48" stroke of 6,000 cu. ft. capacity. 1 Nordberg 25" and 54" diam. steam, 52" and 52" diam. air by 48" stroke of 12,000 cu. ft. capacity, and 1 Nordberg 26" and 56" diam. steam, 54" and 54" diam. air by 48" stroke of 18,000 cu. ft. capacity. These are all of the cross compound steam, tandem, air and steam type.

A 20,000 cu. ft. steam-driven turbo-blower was added in 1916 to supplement the blowing engine in supplying air for converters, etc.

A Laidlaw-Dunn-Gordon cross-compound air compressor with steam cylinders 11" and 21" diam. and air 21" and 12" diam. and 18" stroke of 1,080 cu. ft. displacement, compresses air to 100-lbs. gauge. This was originally for tamping converter linings but is now used for pneumatic tools of various kinds at the shops and the mill.

A 2,000 cu. ft. 2-stage, steam-driven compressor was added in 1916.

In connection with the works are a number of thoroughly appointed shops, including a boiler, machine and carpenter shop, foundry, warehouse and roundhouse.

The Steptoe works were started in April and the finished copper shipped in Aug., 1908. Nearly 1,500 men are employed at the plant.

Production: was 33,283,348 lbs. fine copper in the fiscal year ending Sept. 30, 1909; 62,772,340 lbs. in the fiscal year 1910; 78,541,270 lbs. for the 15 months ending Dec. 31, 1911; 63,063,261 lbs. for the year ended Dec. 31, 1912; 64,972,829 lbs. in 1913.

Recent Production:

	Tons Treated	Cu. %	% Rec.	Ratio Conc.	% Cu. in Cncts.	Cost per Ton Mng.	Net Prod. Lbs. Cu.	Cost per Lb. Cts.	Sell. Price Cts.
1916.....	3,922,634	1.63	73.87	8.98	12.42c	90,735,287	8.86	25.83
1915.....	3,081,520	1.54	70.18	7.18:1	7.77	15.24c	62,726,651	8.23	17.65
1914.....	2,640,294	1.48	68.48	6.05:1	6.14	15.17c	49,244,056	9.82	13.39

Production of gold and silver amounted to \$801,818 in 1916, compared with \$615,605 in 1915. Copper production for first six months in 1917 amounted to 39,669,677 lbs.

The property has been splendidly developed and is being managed with ability and success.

NEVADA UNITED MINES CO.

NEVADA

Address: 441 Equitable Bldg., Denver, Colo.

Officers: W. J. Chamberlain, pres.; H. F. Crocker, v. p.; R. J. Pitkin, sec.; E. S. Kassler, treas., with H. B. Northrop, F. N. Bancroft, J. B. Grant and A. G. Burton, directors.

Inc. Feb. 6, 1906, in Arizona. Cap., \$3,500,000; shares \$1 par; non-assessable; 2,962,952 issued.

Property: 50 claims, 38 patented, about 600 acres, 18 miles from Ely. White Pine Co., Nev., said to show "chamber" deposits of lead ore in limestone. Ore contains lead, silver and iron.

Development: by tunnels totaling 2,400' to 350' depth. Mining is by caving system.

Property worked by Berger & Platt, of Denver, the present lessees. Output in May, 1917, was 90 tons of ore daily.

NEW ELY CENTRAL COPPER CO.**NEVADA**

Main office: 907 Market St., Wilmington, Del. Business office: 16 State St., Boston, Mass.

Officers: John G. Gray, v. p.; Jonathan H. Brown, sec.; H. E. Lodge, treas., with J. Pearce Cann, directors.

Inc., Feb. 19, 1912, in Delaware. Cap., \$8,000,000; reduced to \$2,500,000; shares \$5 par; fully paid, non-assessable; issued, 500,000 shares. Bonds authorized \$500,000, 6%; \$175,000 issued. American Trust Co., registrar; Federal Trust Co., transfer agent. Annual meeting, second Monday in February.

This corporation was reorganized from the wreck of the Ely Central Copper Co., by about 1,600 of its stockholders. All the stock and bonds that have been issued are to the stockholders of the corporation which participated in the reorganization plan, except stock of the par value of \$5,550,000 which was issued in trust for treasury purposes.

At a special meeting of the stockholders held Dec. 20, 1913, it was voted to deed to the Consolidated Coppermines Co. the entire property of the New Ely Co., and in pursuance of this vote a deed was executed and delivered, the Cons. Coppermines Co. thereupon taking possession of all the property of the former company. The stock and bondholders deposited for exchange 475,464 shares of the 500,000 outstanding shares and \$167,550 of the \$175,000 outstanding bonds up to Dec. 31, 1915. The New Ely Central Copper Co. will be dissolved when all stock and bonds have been exchanged.

NORTH MOUNTAIN MINING CO.**NEVADA**

Controlled by John Dern, Box 1,418, Salt Lake City, Utah.

Property: 11 patented claims in Gold Canyon district, near Cherry Creek, White Pine Co., Nev. Idle many years.

OLD IMPERIAL MINING & MILLING CO.**NEVADA**

Cherry Creek, White Pine Co., Nev. Advertised sold for \$125 delinquent tax, Jan., 1916.

PILOT KNOB GROUP**NEVADA**

Property: 5 claims in Snake Creek range, 2½ miles S. of Osceola, White Pine Co., Nev., developed by 400' tunnel and 200' shaft.

Ore: tungsten, occurs in quartz veins in limestone formation. Equipment includes a 20-stamp mill.

Reported, June, 1916, that Uvada Tungsten Co. was to be organized by A. V. Taylor, L. Jeffs and C. H. Thompson, of Salt Lake City, to take over the property.

PITTSBURGH-ELY COPPER CO.**NEVADA**

Idle. Ely, White Pine Co., Nev.

Officers: H. P. Harder, pres.; Louis H. Bock, v. p.; J. A. Varney, sec.; Frank Straub, treas., trustee and gen. mgr.

Inc. Dec., 1916, in Arizona. Cap., \$5,000,000; shares \$5 par; non-assessable; 695,285 shares outstanding at last reports.

Property: 11 claims, unpatented, 220 acres, including the Keyboard group of 6 claims, 120 acres, near the Keystone mine of the Nevada Consolidated, and a small group near the Cumberland-Ely mine of the same company. Lands show porphyry and limestone, and company reports having copper oxides and sulphides, assaying 3 to 12% copper.

Development: by 2 shallow shafts and tunnels of 160' and 40'

Equipment: includes a 40-h. p. steam hoist. Inactive, except for annual assessment work, since 1907.

PRINCESS COPPER CO.**NEVADA**

Address: C. W. Freed, pres., 1007 First Ave., Salt Lake City, Utah.

Mine office: Ely, White Pine Co., Nev. F. J. Austin, sec.; H. P. Clark, treas.

Inc. 1911. **Cap.**, \$1,000,000; shares \$1 par.

Property: 30 claims, about 550 acres, acquired of the Ely Resurrection Copper Co., in the Robinson district, lying a little north and east of Ely.

Mine has 2 short tunnels and a 140' shaft, said to show 18' of ore assaying up to 5% copper, with gold and silver values, and some high-grade ore assaying up to 46% lead and 110 oz. silver per ton, with gold values. Management plans resumption of development work.

SALT LAKE TUNGSTONIA MINES CO.

NEVADA

Office: 212 Kearns Bldg., Salt Lake City, Utah. **Mine office:** Tungstonia, White Pine Co., Nev.

Officers: L. W. Robbins, pres. and gen. mgr.; Gustav Wissler, v. p., sec. and treas.; with G. H. Blood, S. T. Merrill and J. A. Rasmussen, directors.

Property: 15 claims adjoining the Shepherd mine, in north end of Snake range, shows a number of veins 1"-48" wide, carrying hubnerite ores said to average 2% tungstic acid. The veins occur in granite, near a limestone contact.

Company has erected a 25-ton mill, using Marcy ball mill and Wilfley tables. Concentrate is said to contain 71% tungstic oxide.

A lower tunnel was 190' long in Sept., 1917, and had cut 3 shoots of 2% ore, and within a total of 500' nine are expected to be cut.

SILVER TUNGSTEN MINING CO.

NEVADA

Office: 222 Judge Bldg., Salt Lake City. Raymond Ray, pres.; Ernest Kimball, sec.-treas.

Inc. 1916, in Utah. **Cap.**, \$50,000; shares 10c. par; assessable; outstanding 38,000 shares. Listed in Salt Lake City. Cash on hand, April, 1916, \$458; no debts except a bond of \$1,750 due May, 1917.

Property: 3 claims, unpatented, in the Cherry Creek mining district, 8 miles from a railroad, said to show an 8' vein, containing tungsten ore. Development work to May, 1916, consisted only of 24' of trenching and 20' of tunneling. Evidently one of the mushroom tungsten companies brought out when tungsten was selling high.

SMOKEY DEVELOPMENT CO.

NEVADA

Property near Ely, Nev., sold at delinquent tax sale, February, 1915. Described Vol. XI, Copper Handbook.

STEPTOE VALLEY SMELTING & MINING CO.

NEVADA

Company dissolved 1914. Property owned and operated by Nevada Cons. Copper Co., which see.

UNITED STATES TUNGSTEN CORPORATION

NEVADA

Operated a mill for concentration of tungsten ore at Tungsten, S. of Osceola, White Pine Co., Nev. The statement that this company is a subsidiary of the Tonopah Mining Co., or has any connection with it, is officially denied. The plant was advertised for sale, October, 1917. Fully described, Vol. XII.

UVADA TUNGSTEN CO.

NEVADA

Care A. V. Taylor, Dooly Block, Salt Lake City, Utah. Is reported to have taken over the Pilot Knob group near Osceola, Nevada. (See Pilot Knob.)

Property: 5 claims, Pilot Knob group, 2½ miles south of Osceola, Nevada, shows quartz veins in limestone, overlying quartzite, underlain by granite. Ore carries tungsten.

Reported in June, 1917, that owing to low price of tungsten the property had been allowed to revert to original owners.

VULCAN MINING, SMELTING & REFINING CO.**NEVADA****Address:** Cherry Creek, White Pine Co., Nev.**Officers:** H. Ornauer, pres., 708 First National Bank Bldg., Denver, Colo.**Inc. in Wyoming. Cap.,** 2,500,000 shares.**Property:** 15 patented claims, 300 acres, in the Hunter district, about 30 miles from Ely, the nearest rail point, shows copper, iron and silver-lead ores occurring in fissure veins in monzonite and limestone. Developed by 300' and 500' shafts and 2,600' tunnel, with a total of 2,000' underground workings.**Equipment:** includes hoist, compressor and steam power. Lessees produced 65 tons of ore in 1915, averaging \$38 per ton.

In 1916, lessees had 400' of ground to work and shipped fair quantities of ore to Murray, Utah.

NEW JERSEY

Companies are arranged in alphabetical order.

BALBACH SMELTING & REFINING CO.**NEW JERSEY****Office:** 580 Market St. **Works:** 111 Passaic Ave., Newark, and on Newark Bay, N. J.**Officers:** Edward Randolph, pres.-treas.; C. M. Loeb, v. p.; E. E. Diefenbach, supt.; preceding officers and Dr. Otto Sussmann, directors. F. Schmutzer, sec.**Inc.,** 1891 in New Jersey. **Cap.,** \$1,000,000, shares \$100 par, nonassessable, in \$500,000 preferred and \$500,000 common stock; 3,900 preferred and 3,900 common shares issued and outstanding. American Metal Co. is the purchasing and selling agent, but does not control the company.

Plant at Newark comprises an electrolytic refinery, a lead desilverizing plant, and a small copper smelting plant. The refinery has 444 tanks, in parallel, with two 360 k. w. generators. Plant has a capacity of 1,800 to 2,000 tons electrolytic copper per month, employing 150 men. The metallurgical practice of the works ranks deservedly high. The lead refinery, with a capacity of 4,000 tons per month, erected at Newark Bay, went into operation July, 1913. Company does a custom business in ores, bullion, residues, blister copper, etc., containing gold, silver, platinum, copper and lead.

IRVINGTON SMELTING & REFINING CO.**NEW JERSEY****Address:** Charles Engelhard, treas., 30 Church St., New York. **Works** at Irvington, N. J.**Officers:** W. L. Glorieux, pres.; C. O. Baker, v. p.; C. W. Baker, v. p.; Robert A. Knorre, sec.**Property** is an electrolytic smelter and refinery for gold, silver, platinum and copper ores.**NATIONAL LEAD CO.****NEW JERSEY****Main office:** 1 Exchange Place, Jersey City, N. J. **Executive and transfer office:** 111 Broadway, New York.**Officers:** E. J. Cornish, pres.; Geo. O. Carpenter, R. P. Rowe and E. J. Cornish, v. ps.; M. D. Cole, asst. to the pres.; Chas. Davison, sec.; Fred R. Fortmeyer, treas.; Chas. Simon, asst. treas. **Executive committee:** E. J. Cornish, chairman; E. F. Beale, R. P. Rowe, J. R. Wellstein and G. D. Dorsey.**Directors:** Edward F. Beale, Geo. O. Carpenter, Fred M. Carter, R. R. Colgate, E. J. Cornish, G. D. Dorsey, Chas. E. Field, Geo. W. Fortmeyer, E. C. Goshorn, Morris B. Gregg, R. P. Rowe, W. N. Taylor, Walter Tufts, J. R. Wettstein and G. W. Thompson, chief chemist; A. H. Sabin, cons. chemist; and A. B. Hall, mgr. metal dept.

Inc. Dec. 7, 1891, in New Jersey. Cap., \$25,000,000 common and \$25,000,000 preferred stock; shares \$100 par; \$20,655,400 common stock and \$24,367,600 preferred stock is outstanding. Listed on New York Stock Exchange. Bankers Trust Co., New York, registrar. Annual meeting, third Thursday in April. Company has 6,640 stockholders.

The National Lead Co. owns all the capital stock of the following companies:

Carter White Lead Co., Heath & Milligan Mfg. Co., Magnus Co., Inc., Matheson Lead Co., St. Louis S. & R. Co., United Lead Co. and Bass-Hueter Point Co. It is a stockholder in the following companies: U. S. Cartridge Co., Baker Castor Oil Co., River S. & Ref. Co., Williams Harvey Corporation, and Cinch Expansion Bolt & Engineering Co. Company manufactures lead in various forms for commercial uses.

On Dec. 5, 1916, company completed its 25th year, and on the 15th paid its 100th dividend on preferred stock.

NEW JERSEY METAL REFINING WORKS, LTD. NEW JERSEY

Elizabeth, N. J. See Mountain Copper Co., Ltd.

NEW JERSEY ZINC CO.

NEW JERSEY

See full description in first part of United States section.

Company not only owns the Franklin Furnace, N. J., mines, but has holdings in various states and is therefore grouped with the Am. Smelting & Refining, U. S. Smelting and other large companies with widely scattered holdings.

ORFORD NICKEL-COPPER REFINERY**NEW JERSEY**

Property of International Nickel Co., 43 Exchange Place, New York. Plant at Bayonne, N. J., treats nickel-copper matte from Sudbury smelter Robt. C. Stanley, supt. of plant; A. J. Wadham, asst. supt.

PERTH AMBOY SMELTER.**NEW JERSEY**

Owned by American Smelting & Refining Co., at Perth Amboy, which see. Has 600-ton copper-lead smelter, 200-ton lead refinery and a 300-ton electrolytic copper refinery, employing about 2,000 men.

RARITAN COPPER WORKS.**NEW JERSEY**

Owned by International Smelting & Refining Co., at Perth Amboy, N. J. A. C. Clark, supt.

UNITED STATES METALS REFINING CO.**NEW JERSEY**

Office: 120 Broadway, New York. Works office: Chrome, Middlesex Co., N. J., and East Chicago, Ind.

Officers: F. Y. Robertson, v. p. and gen. mgr.; R. W. Deacon, supt. copper smelter and refinery, Chrome, N. J. Wm. Thum, supt. lead refinery, East Chicago, Ind.

Inc. Nov., 1903, in New Jersey. Reorganized Oct. 15, 1906. Cap., \$4,000,000, shares \$100 par, half in 7% cumulative preferred and half in common shares; issued \$3,100,000, half preferred and half common stock. Is controlled through stock ownership by the United States Smelting, Refining & Mining Co. Annual meeting, second Tuesday in May.

The Chrome works, which have had to be enlarged nearly every year since they were first built, include a complete smelting and converting plant for the treatment of ores, concentrates and mattes, with smelting capacity of 15,000 to 18,000 tons a month, converting capacity of 3,500,000 to 4,000,000 lbs. of blister a month, and an electrolytic refinery with a capacity of 250,000,000 lbs. annually.

The smelter has two 42x186" blast furnaces, two converter stand using 84x120" basic-lined converters, one 60x6' rotary kiln for sintering fine material, and one Dwight-Lloyd sintering machine. The smelter is further equipped with a 500' steamship dock, with berth for 2 steamers, the most modern type of Fairbanks scales, having a sensitiveness of 10 lbs. on a load of 200,000 lbs., and a very complete automatic sampling mill equipped with Brunton samplers.

The refinery has two 225-ton and two 175-ton anode furnaces and three 225-ton wire-bar furnaces, equipped with charging cranes, casting wheels, waste heat boilers and the most modern devices for mechanical handling. The tank house has 1,228 tanks arranged on the Walker system. The weighing is done on tandem Fairbanks scales, sensitive to 1 lb. in 15,000 lbs.

The power house is steam-driven and arranged for highest economy with economizer and superheater equipment, 3 compound condensing units and 2 triple expansion units, using exhaust steam turbines for the third expansion. Current is generated at the rate of 11,000 amperes. Three circuits are carried in the tank house with a voltage of 115 volts each, 1 power unit being carried in reserve.

A new laboratory with the most modern equipment was completed in 1917.

The anode slimes are refined by the usual processes, the doré bullion produced being parted electrolytically. Some of the rarer elements are recovered as by-products.

The Grasselli plant, consisting of a 100-ton electrolytic lead refinery, was the first electrolytic lead refinery in the United States. Has annual capacity of 72,000,000 lbs. lead.

The plants of the United States Metals Refining Co. are strictly modern

in design and equipment and are noted for the technical excellence of their practice and the purity of their commercial products. The Betts process is used which permits the recovery of bismuth and other by-products.

NEW MEXICO

The active mining companies of this state are grouped by counties, which brings the Silver City, Santa Rita, Burro Mountain and Lordsburg properties all under Grant County, and the Kelly, Cooney or Mogollon and San Andreas districts under Socorro County.

COLFAX COUNTY

BLACK COPPER CO.

NEW MEXICO

Mine office: Elizabethtown, Colfax Co., N. M. Work resumed on this property May, 1914. Developed by shafts and credited with past gold production of \$200,000.

GOLD & COPPER DEEP TUNNEL M. & M. CO. NEW MEXICO

Office: Beaver Falls, Beaver Co., Pa. Mine office: Elizabethtown, Colfax Co., N. M.

Officers: A. T. McIntyre, pres.; Jas. E. Glasson, v. p.; W. H. Martin, sec.-treas.; W. P. McIntyre, gen. mgr. and supt.; preceding officers and Geo. E. Dachtler, directors.

Inc. Oct. 10, 1900, in New Mexico. Cap., \$200,000; increased 1912 to \$500,000; shares \$1 par, nonassessable; issued, \$250,000. Annual meeting third Tuesday in July.

Property: in the heart of Cimarron range, on the west slope of Baldy mountain, 12,500' high, comprises 12 claims, 260 acres, in the Moreno district, 18 miles from the St. L. R. M. & P. R. R. at Ute Park. Orebody, a contact between slate and monzonite, is developed by 2 shallow shafts and a 2,300' crosscut tunnel, planned to penetrate the mountain with a final length of 3,500', cutting 2 bodies of low-grade copper ore. Also said to carry a deposit of molybdenite. Property operated part of 1916. Total underground work, 4,400'. Proposed to let contract for 300' tunnel.

Equipment: includes a 12-h. p. gasoline air compressor and 10 buildings; 20-ton stamp mill. See U. S. Geol. Survey Prof. Paper, 68, p. 95, for geology of this district.

DONA ANA COUNTY

Including Black Mountain or Kent, Modoc, Organ and Texas creek districts.

AZTEC COPPER CO.

NEW MEXICO

Office: 707 Colorado Bldg., Washington, D. C. Mine office: Organ. Dona Ana Co. N. M.

Officers: Gen. H. H. C. Dunwoody, pres. and mgr.; C. C. Clements, v. p.; Gen. B. K. Roberts, sec.-treas.; preceding officers, Col. M. C. Wyeth, C. F. Humphrey and Admiral C. H. Davis, directors.

Inc. in Arizona. Cap., \$1,000,000; shares \$1 par; nonassessable; 600,000 shares issued.

Lands: 4 claims, 6 acres, in the Organ Mountain mining district, about 12 miles by good road southeast from Las Cruces. Claims cover the mineralized limestone porphyry contact worked by the Modoc mine. Developments are on the Orejon claim opened by a 140' 45° inclined shaft, sunk on a 12 to 18" vein, reported to carry copper, silver, lead and zinc ore, averaging \$40 per ton.

BENNETT-STEPHENSON M. & M. CO.**NEW MEXICO**

Officers: O. Jolliffe, pres.; Jas. C. White, v. p.; C. B. Gill, treas.; J. L. McCullough, sec. Annual meeting April 7th at Las Cruces. Controls through stock ownership the Organ Mountain Mining Co., which see. Fully described Vol. X.

Mines under 10-year lease to the American S. & R. Co.

BIG THREE MINES.**NEW MEXICO**

Situated 3 miles north of Organ, Dona Ana Co., N. M. Owned and operated by Capt. C. B. Gill, Geo. Luchen and Dr. J. H. Johnson.

Property: 7 claims shows copper, silver and lead deposits. Workings 116' deep, and equipped with 14-h. p. gasoline hoist. Plan sinking shaft on Rubyin mine to 200' depth and drifting. No recent information.

DONNA DORA MINING CO.**NEW MEXICO**

Organ, Dona Ana Co., N. Mex. Reorganized as Mineral Hill Mining Co., which see.

MEMPHIS MINING CO.**NEW MEXICO**

Office: 204 Mills Bldg., El Paso, Texas. **Mine office:** Organ, Dona Ana Co., N. M.

Officers: J. I. McCullough, pres.; W. N. Small, v. p.; Jas. C. White, sec.-treas., with T. S. Semple and Chas. E. Head, directors.

Inc. 1911, in Arizona. **Cap.,** \$1,000,000; shares \$1 par; 650,000 shares outstanding. Gross earnings in 1917 amounted to about \$7,500, all from ore sales.

Property: 5 claims, 100 acres, consisting of the Old Memphis mine, Contention and Copper Bow group.

Development: by 4 shafts with 2,000' of workings. Two years shipments said to have averaged 10% copper, 6 oz. silver, and \$3 gold per ton.

Property under lease to Phelps, Dodge & Co. for 5 years, from April 1, 1916. The Copper Bow shaft has been sunk to 300' and exploration work is underway.

MINERAL HILL MINING CO.**NEW MEXICO**

Office: 13 Arch St., Philadelphia, Pa. Samuel P. Hanson, pres. Is the successor of the Donna Dora Mining Co.

Property: on the eastern slope of the Organ Mts., near Organ, Dona Ana Co., N. M., is developed by 400' tunnel and shallow shaft sunk on a 5' vein containing copper, lead, silver and gold values. No recent returns received.

ORGAN MOUNTAIN MINING CO.**NEW MEXICO**

Office: 204 Mills Bldg., El Paso, Tex. **Mine Office:** Organ, N. M.

Officers: J. I. McCullough, pres.; J. H. May, v. p.; F. W. Campbell, sec.-treas.; with J. C. White and T. S. Semple, directors.

Inc. 1913, in New Mexico. **Cap.,** \$2,000,000; shares \$1 par; fully paid and nonassessable; issued, about 1,225,000.

Property: 17 claims, 2 patented, 340 acres, 12 miles N. E. of Las Cruces and the A. T. & S. F. R. R. was formerly owned by the Bennett-Stephenson M. & M. Co. It includes the Stephenson, Henderson, Page and Bennett mines, showing 6 veins in carboniferous limestone, lying near or in contact with porphyry dikes. Veins are said to be from 5'-30' wide, with ore-shoots opened up from 50'-600' in length. Ores are mainly lead, silver, copper, wulfenite, and zinc.

Development: consists of a 3-compartment shaft, 400' deep, 2,000' drainage tunnel and several thousand feet of drifting. Mine was discovered 1849, and closed 1911; is credited with a production to 1915 of about \$1,000,000.

Equipment: includes 200-h. p. plant at mine and 250-h. p. plant at mill;

together with 3 hoists, pumps and 2 air compressors of 9-drill capacity combined. Mill includes 2 Joplin jigs, 3 Wilfley tables, 1 vanner and 2 slimers.

Phelps, Dodge & Co. have a 5 years' lease on these properties, from April 1, 1916, and have spent \$100,000 in preliminary prospecting. They are now sinking shafts at the Stephenson and Bennett mines. Main development is from 3-compartment shaft 550' deep. At 500', a crosscut passed through the Bennett vein, which carried 15' of high-grade lead-zinc ore.

TEXAS CANYON MINING & MILLING CO. NEW MEXICO

Office: C. S. Cleaver, 5427 University Ave., Chicago, Ill. **Mine Office:** J. S. Dodd, supt., Organ, N. M.

Officers: E. H. Bickford, pres.; C. S. Cleaver, sec.; H. R. Gottman, treas.; also directors.

Inc. Jan. 19, 1917, in New Mexico. **Cap.**, \$100,000; shares \$100 par; non-assessable.

Property: 8 claims in Texas canyon, Organ mountains, 7 miles E. of Organ, Don Ana Co., N. M. Examined by C. M. Becker.

Development: by short tunnels. Ore averages 0.43 oz. gold, 14.05 oz. silver, and 2.3% copper. Faulting is evident through the property. Not enough work done to place any value on mine.

TORPEDO MINE NEW MEXICO

Address: N. C. Foster and E. J. Foster, Fairchilds, Wis., owners.

Property: in Organ Mountain district, N. M. Under lease to Phelps, Dodge & Co., as are the Memphis and Organ properties, which see.

Development: several thousand feet to depth of 400' in search of lead-zinc-ore.

VICTORIA MINING AND SMELTING CO. NEW MEXICO

Bankrupt. Holdings bought by C. J. Boyd of Los Angeles at sheriff's sale, Dec., 1915.

Property: 2 groups, 1,000 acres, 20 miles apart, the Southern group between Organ and San Andres Mts.; the other in Plomo district, San Andres range; 35 miles N. E. of Las Cruces. Claims which show large bodies of silver-lead ores of milling grade were to be opened and developed in 1916.

GRANT COUNTY

Includes Apache, Black Hawk, Burro Mountain, Central, Duncan, Fierro, Granite Gap, Georgetown, Hachita, Lordsburg (Pyramid), Pinos Altos, Santa Rita, San Simon, Steins Pass, Steeple Rock and Virginia districts.

Mining Companies around Tyrone

The mineral area in the Burro Mountain mining district is being developed by numerous other strong mining companies. Some of these, notably the Austin-Amazon and the Giant Copper companies, are operating on a considerable scale and are steady shippers of copper ore.

Among the other companies besides the Burro Mountain Copper company that are operating or planning to operate may be mentioned the Big Burro Copper Co., Mangus Development Co., Burros Development Co., Fidelity Copper Co., Burro Grande Copper Co., Ocala Copper Co., National Copper Co., Tyrone-El Paso Copper Co., the Tyrone-New Mexico Copperfields Co., and the Tyrone-Copperfields.

AMERICAN EXPLORATION & MG. CO. MEXICO & NEW MEXICO

Presumbaly idle. Letters remain unanswered.

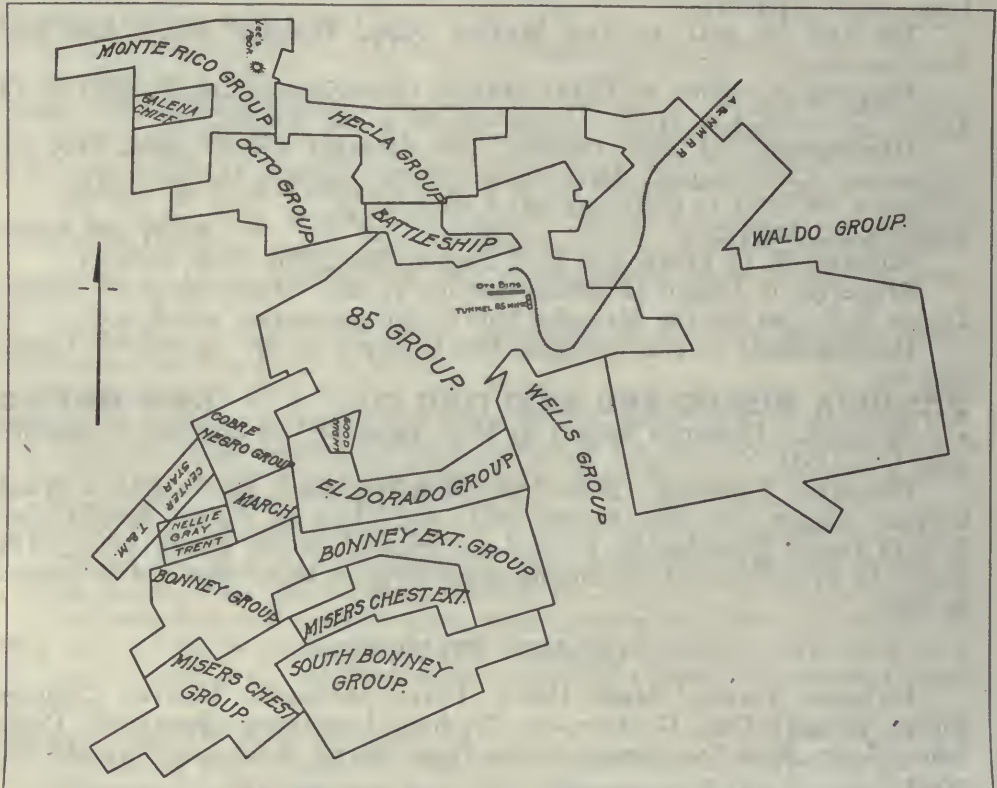

Office: 60 State St., Boston, Mass. **Mine offices:** Steeple Rock, Grant

Co., N. M.; Ahumuda, Bravos, Chihuahua, Mex., and Terrazas, Iturbide, Chihuahua, Mex.

Officers: W. Franklin Burnham, pres., sec. and gen. mgr.; Henry A. Haile, treas.; preceding officers, Jas. Duckworth, Geo. Empsall, Hinsdale Smith, Arthur Smith, Jesse W. Morton and Harry Hinckley, directors; Wm. A. Farish, cons. engr.; John A. Rice, engr.; John Searls, supt. Ahumuda mines; Frank Hickman, supt. Steeple Rock mines.

Inc. Sept. 28, 1907, in Maine. **Cap.**, \$500,000; shares \$1 par, non-assessable; issued, 275,748.

Lands: 600 acres, including 16 claims in New Mexico and 12 different properties in Mexico, also 3 mill sites at the different properties.

PROPERTY MAP NEAR LORDSBURG, NEW MEXICO

Property includes mines known as the Burnham at Terrazas, San Ignacio at Ahumuda, and Hinckley at Steeple Rock. The New Mexican property has tunnels of 100' and 313' and shafts of 100', 100' and 150', with 1,223' of workings, carrying mainly silver ore. The property at Ahumuda has shafts of 25', 100', 160' and 474', giving ore assaying about 30% lead, 6% zinc and 12 to 20 oz. silver per ton. The property at Terrazas shows contact deposits between limestone and porphyry, giving assays of about 3% copper, 24% lead, 8 to 20 oz. silver and \$2.50 to \$12 gold per ton. Development is by shafts of 187' and 200'. Equipment includes a 55-h. p. gasoline plant and necessary mine buildings.

Company planned milling about 30 tons daily at Ahumuda, concentrating 6 into 1, and continuing development work at the various properties.

ANDERSON-APACHE COPPER CO.**NEW MEXICO**

Robt. Anderson, El Paso, Tex., chief owner. Mine address: Hachita, Grant Co., N. M.

Officers: Hon. Geo. H. Neale, pres.; Harry Duey, v. p.; Chas. H. Howe, sec.-treas.; Arthur Houle, cons. engr.

Inc. June 1, 1907, in Arizona. **Cap.**, \$500,000; shares \$5 par. Held lands under a \$100,000 bond and lease, with \$20,000 paid.

Property: the Apache mine, 5 claims, 100 acres, 5 miles southeast of Hachita. Mine, opened 1883, was worked continuously until 1907, by leasers, producing approximately \$200,000. Property shows contact deposit 50'-150' wide between quartz-feldspar-hornblende-porphyry and carboniferous limestone, with ore, oxidized to present depth, and running 4 to 30% copper with one ounce silver to each unit of copper. Bornite ore occurs at the bottom of the shaft.

Development: by a 360' shaft, for a length of 400' and along the surface for 600', said to show 200,000 tons of ore, with about 40,000 tons blocked out for stoping.

Equipment: includes a 25-h. p. Fairbanks & Morse gasoline hoist. Shipments of low grade copper and silver ore with lime gangue are made intermittently to the El Paso smelter.

ATWOOD COPPER CO.**NEW MEXICO**

Morningstar & Augustine, owners, Lordsburg, N. M.

Property: the Atwood mine, near Lordsburg, Grant Co., N. M., was under option to 85 Extension Copper Co., which defaulted in payment.

Operated by leasers, 1917, who paid 10% royalty, amounting to \$2,600.

AUSTIN-AMAZON COPPER CO.**NEW MEXICO**

Offices: 116 Texas Bldg., El Paso, Texas; Room 4, Porterfield Bldg., Silver City, N. Mex. **Mine address:** Tyrone, N. Mex.

Officers: Chas. E. Davis, Mayor of El Paso, pres.; M. W. Porterfield, v. p.; C. H. Leavell, sec.-treas., with John M. Wiley and D. M. Jackson directors. J. H. Shockley, mgr.

Inc. Dec. 1, 1916, in New Mexico. **Cap.**, \$1,500,000; shares \$1 par; 1,060,000 outstanding. El Paso Bank & Trust Co., registrar and transfer agents. Annual meeting 2nd Tuesday in March.

Property: 15 claims, 500 acres, in Burro Mtns., Grant Co., N. M., 6 miles W. of Tyrone.

Ore: chalcopyrite occurs in contact and quartz veins, running N.E.-S.W. through monzonite (quartz-diorite), and said to average 6% copper. A N.-S. mineralized shear zone, in places 150' wide, is said to traverse several claims.

Development: 3,000' of shafts, drifting, etc. Over 30 shallow openings show ore.

Equipment: includes 18-h. p. gasoline hoist and compressor. Shipments to Oct. 1st, 1917, 137 cars of 6.26% copper ore. Management plans sinking to 700' level in 1917-18, opening levels every 100', and doing development work on the 83' level. J. H. Shockley reports that property can be made one of the important copper mines of the West.

AZURE MINING CO.**NEW MEXICO**

Mine office: Tyrone, Grant Co., N. M. Employs 30 men, when in full operation. Louis Kahn, pres.; M. D. Rothschild, sec.-treas., 14 Church St., New York. Wm. Rogers Wade, supt.

Inc. 1890, in New York. Is operated as a close corporation.

Lands: 110 claims, 1,800 acres, near the Burro Chief group of the Chemung Copper Co. Company sold 73½ acres, 1909, to Mangas Devel-

opment Co. Claims under option to Phelps, Dodge Corp'n, 1917. Company owns zinc-lead claims at Tres Hermanos, N. M.

Geology: the Burro Mountain property shows monzonite, quartz-porphry and granite, with fissure veins in granite and disseminated ore in porphyry, there being 7 orebodies with 2 under development. The Santa Fé vein is from 15 to 75' wide, averaging 40' and is traceable for 6,000'. This vein is developed by a 417' shaft, having 5 levels with 15,500' of workings showing gem turquoise as well as copper ore. The old turquoise mine has 2 tunnels and large open-cast workings.

Besides the Santa Fé vein, the property has disseminated ores, one orebody on the contact between granite-porphry and monzonite-porphry being 152' thick, developed for 500' in length and carrying 2½% copper present as disseminated particles of chalcocite. Property has been explored by churn drills and diamond drilling.

The mine was at one time the largest turquoise property in the world, systematic mining having begun in 1891. Gem production has practically ceased and the property is considered valuable for its copper ore alone.

Company is also developing the Tres Hermanos zinc mine in the Tres Hermanos district, 23 miles S. of Deming, Luna Co., N. Mex., said to show oxidized ores carrying zinc-lead-silver values.

Ore: occurs as blanket and chamber deposits in limestone, 2-5' wide, reported to assay from 30-35% zinc, 30-40% lead, and 6-8 oz. silver. Developed by several vertical shafts, from 30-100' deep.

Equipment: includes compressor and 20-h. p. gasoline hoist.

Production: in 1915, mainly from development work, was 720,000 lbs. zinc, 300,000 lbs. lead and 2,000 oz. silver. Further development planned.

BATTLESHIP MINING & MILLING CO. NEW MEXICO

Probably dead, as mail is returned. See Vol. XII. Former office: 412 Mack Bldg., Denver, Colo. Mine near Lordsburg, Grant Co., N. M.

Dr. O. L. Blachly, pres.; O. B. Crum, sec.-treas.

Cap., \$100,000; shares \$1 par.

Lands: 2 groups of 2 claims each, area 79 acres, in the Virginia district, 3 to 4 miles from Lordsburg, connected therewith by a good wagon road. Property has no surface improvements, but is opened by 478' of shafts, crosscuts and open cuts, showing ores that are said to have given average returns, from smelter shipments to El Paso, of 8 to 14% copper, 1 to 20% lead, 22 oz. silver, and \$10 to \$20 gold per ton. Property reported under lease to Andrew Bain of El Paso in 1915.

BETHLEHEM COPPER CO. (INC.) NEW MEXICO

Address: Steins, N. M.

Officers: J. A. Sund, pres.-mgr.; Wm. Charles, v. p.; F. P. Davy, sec.-treas.

Inc. June 1, 1917, in N. M. Cap., \$1,000,000; shares \$1 par; 537,500 issued.

Property: 12 patented claims, 240 acres, in San Simon mining district, Grant County, N. M., said to show a contact deposit between diorite and porphyry. Ore vein reported to be 100' wide, 3,500' long. Values of ore given as \$2.40 gold, 3 oz. silver and 1.4% copper per ton. Only development work to date is by open cuts.

Is a prospect.

BLACK HAWK MINING & MILLING CO. NEW MEXICO

Office: care of C. A. O'Leary, 802 Pioneer Bldg., St. Paul, Minn.

Officers: E. D. Lidstone, pres.-mgr., P. O. Box 456, Silver City, New Mexico; John P. Fetsch, v. p.-treas.; Jas. E. Liebe, sec., with Judge S. W. McCall and N. L. Watson, directors.

Inc. Oct. 27, 1915, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; 550,500 issued. Transfer office: Old South Trust Co., Boston. Registrar: Equitable Trust, Boston.

Property: 12 claims, 140 acres, 8 patented, about 6 miles N. W. of Tyrone, Grant Co., N. M. Claims show several strong fissure veins in gneiss, near monzonite stock. Veins run N.E. exposed for a distance of 2 miles carrying high grade ore with native silver and argentite with arsenides of cobalt and nickel. Geologic and mineralogic conditions said to resemble those of Cobalt, Ontario. Ore assays 66 oz. silver, 0.24% lead, 0.75% copper, 0.75% nickel, 0.19% zinc.

Management reports 50,000 tons of milling ore blocked out and 10,000 on the dumps.

Development: by incline shaft 720' deep, with about 5,462' of workings. Mine closed down in 1893 when silver was demonetized, after producing over \$750,000.

Equipment: Lidgerwood hoist. 2 Chicago pneumatic oil driven compressors, etc.

Operating expenses 1916 for pumping and development work were \$29,449. This work opened a new oreshoot, 85' long on 8th, 160' long on 9th and 220' long on the 10th levels, as the fault which cuts it off eastward has a flat eastward dip. The ore is said to average 30" wide and \$94.30 per ton.

Property good, promotion firm reputable; and with good management operations will be profitable.

BONNEY MINING CO.

NEW MEXICO

Office: Lordsburg, Grant Co., N. M.

Officers: J. B. Foster, pres.-treas.; Ed. F. Laffin, v. p.-sec.; Jas. R. Portens, supt.

Inc. 1904 in Dist. of Columbia. **Cap.**, \$500,000; shares \$1 par, non-assessable, 498,000 issued.

In January, 1917, the San Toy Mng. Co. acquired a controlling interest in a lease and option on the Bonney Mng. Co. property through purchase of thirty-five sixtieths of the stock of the Lawrence Mng. Co., to which lease and option had been assigned.

San Toy Mng. Co. paid \$50,000 for this interest and must pay \$32,000 on Oct. 1, 1917, and \$25,000 each six months thereafter, until purchase price of \$200,000 is paid, the Lawrence Mng. Co. reserving the right to abandon at any time without further liability.

Property: 7 claims, 125 acres, includes the Bonnie mine in the Virginia district, 5½ miles south of Lordsburg.

Ore: occurs as black and red oxides and chalcopryrite, carrying gold and silver values found in 5 fissure veins in andesite forming the hills at the northern end of the Pyramid mountains, at an elevation of 4,500 to 5,500'.

Development: by shafts, deepest 500', each showing commercial ore carrying copper, silver and gold values.

Geology: veins of district, according to U. S. Geological Survey, are narrow and characterized by quartz with plentiful barite, rhodochrosite and other carbonates and carry ore in bands and bunches in central part of quartz. Wide silicious zones occur but are barren. Values considered superficial by authorities.

Equipment: includes air-compressor, drills, steam hoists, pumps, dwellings, offices and mine buidings. Shipments to date amount to about 10,000 tons. Management estimates ore reserves, October, 1917, at 25,000 tons. Total costs given at \$9.50 per ton.

Leasers shipped ore during last three months of 1916 averaging \$10 per ton.

BURRO MOUNTAIN COPPER CO.

Branch of the Phelps, Dodge Corporation, which see.

BURROS DEVELOPMENT CO.

NEW MEXICO

Address: J. M. Kiner, pres., Silver City, N. M. R. W. Jackson, v. p.; C. C. Royall, sec.-treas.

Inc. 1917 in N. M. **Cap.**, \$600,000; shares \$1 par; 100,000 shares offered the public Oct., 1917, at 10c. to provide funds for patenting and development.

Property: 21 claims, 420 acres, a short distance south of Leopold, said to show a vein of 7.2% copper ore in a 75' shaft.

B. V. N. MINING CO.

NEW MEXICO

Probably defunct.

Pinos Altos, Grant Co., N. M.

Officers: at last accounts, Dr. A. M. Torello, pres.; J. W. Bettes, T. B. Fischer, Robt. Noble. Jos. Vinot, H. Bettes and S. D. Bettes, directors. Wm. Donovan, supt.

Inc. Nov., 1914, in N. M. **Cap.**, \$250,000.

Property: Silver Hill mine, in Pinos Altos district, shows gold-silver-zinc ore in vein, 1' wide, believed to be continuation of rich orebody on adjoining Lankston and Pacific No. 2 claims.

Development: 3 tunnels, 280', 300' and 400' deep and 260' stope. Little work was done in 1915.

CALUMET NEW MEXICO MINING CO.

Owens 3 claims in Pinos Altos district. See under same title, Socorro Co.

CARLISLE MINING CO.

NEW MEXICO

Mine at Steeplerock, N. M.

Officers: August Heckscher, of New Jersey Zinc Co.; G. M. Heckscher, Sumner Girard, H. K. Welch and S. Makeever, directors. M. K. Welch, mgr.

Company has applied for articles of incorporation.

Property: formerly owned by Marshall Field, L. Z. Leiter and N. K. Fairbanks. Has produced \$6,000,000 in gold ores. Ores with depth turned into complex sulphides which were not amenable to metallurgical processes of the early '80s. Property has been idle for nearly 39 years.

Development: mine has been completely unwatered to 627' in shaft. On 500' level development work is progressing and it is reported that ore has been cut for 40' and no indication of walls in sight. Reported to be 500,000 tons of ore blocked out.

Equipment: a 125-ton unit of a 500-ton mill, being built by Messrs. David Cole and Hardinge, using oil flotation, electrostatic and wet concentration. The mill feed from development work has averaged \$1.20 gold, 3 oz. silver, 4% lead, 8% zinc, 1% copper. A 35-ton car of lead-silver-gold concentrates and a 50-ton car of zinc-copper have been shipped to the smelters. Other equipment includes electric generators, motors, pumps, air compressors, etc.

An assessment of \$100,000 called Oct., 1917, to provide for further development.

CHEMUNG COPPER CO.

NEW MEXICO

Bought out, Aug. 18, 1912, by Phelps, Dodge & Co., and dissolved after paying shareholders \$1,381,072, or \$6.16 per share.

CHINO COPPER CO.

NEW MEXICO

Office: 25 Broad St., New York. **Mine office:** Hurley, Grant Co., N. M.

Officers: Charles M. MacNeill, pres.; Daniel C. Jackling, v. p. and managing dir.; Charles Hayden, v. p.; preceding and A. Chester Beatty, Sherwood Aldrich, K. R. Babbitt, gen. counsel, W. Hinckle Smith, Mark L. Sperry, John M. Sully, gen. mgr., directors; A. J. Ronaghan, asst. sec.; C. W. Peters, treas.; Horace Moses, mine supt.; W. H. Janney, mill supt.; R. C. Gemmell, cons. mng. engr. Guaranty Trust Co. of New York and Old Colony Trust Co., Boston, registrars; Bankers Trust Co., New York, and American Trust Co., Boston, transfer agents.

Inc. Aug., 1909, in Maine. **Cap.**, \$3,500,000; shares \$5 par; increased to \$4,000,000, June 30, 1911; and again increased to \$4,500,000, April 2, 1912, of which 100,000 shares are reserved for conversion of bonds and 30,000 shares remain unissued; 869,980 issued. Bond issue has been retired. Annual meeting, third Friday in April. Paid initial dividend of 75c per quarter, June, 1913, and has paid a total of \$18.50 per share to April 1, 1917. Earnings for 1st quarter 1917 were \$3.44 per share, and dividends declared were \$2.50. Dividend for 2d and 3d quarters similar, but December declaration \$2, which with 40c. Red Cross make total for 1917 of \$9.90. Listed on New York and Boston Stock Exchanges.

Statement for 1916 gave total current assets as \$11,188,343, including \$6,882,340 for copper and ore on hand; accounts receivable, \$54,764; materials and supplies, \$980,398; marketable securities, \$248,750; cash on hand and due for copper deliveries, \$3,022,091; total current liabilities were \$1,491,763. and surplus quick assets, \$9,696,579.

Income account showed: \$19,219,767 operating revenue; \$325,285 misc. income; \$6,701,891 operating expenses; \$7,177,335 dividends; \$315,213 reserve for depreciation, etc.; net undivided profit of \$5,350,613. Earned surplus of \$8,613,260 for 1915; \$13,963,873 for 1916. Net income for 1st quarter, 1917, was \$2,992,071, and dividends declared, were \$2,174,950.

Property: 131 claims, 2,412 acres, patented, at Santa Rita, title to which was derived from the Santa Rita Mining Co., since dissolved; also 23 claims, 339 acres, held by location and 160 acres, patented, agricultural land, making a total at Santa Rita of 2,921 acres. Also owns 185,701 acres at Hurley for mill site and water rights, 17,170 acres patented, and the remainder in process of patent.

The property is the old Santa Rita del Cobre mine, which is the oldest copper mine in New Mexico, and the second oldest in the United States, having been opened, 1804, by Spaniards. The property was worked by an American named Pattie, in 1822 and to 1827. It was in possession of a Frenchman from 1828 to 1834, when an American called McKnight, began operations which ceased in 1836. From 1840 to the late fifties, it was in possession of a Spaniard. In 1851 Santa Rita was the headquarters of the American Commissioners, of the Boundary Survey. Some time before 1860 four Americans attempted to operate the property. In 1862 Gen. Sibley, of the Texas Confederate force, held the mine. In 1873 M. B. Hayes, acting on behalf of Denver people, succeeded in purchasing the

87 Milk Street, BOSTON

claims, attempting to perfect the title by obtaining U. S. patents, although patents had been refused by the Commissioner of the Land Office in 1870. Hayes' application was turned down in April, 1873. Between that date and the final decision of the Secretary of the Interior in November, 1873, title was obtained by Hayes from the surviving heirs of the original Spanish estate and final U. S. patent was obtained to the claims covering the Santa Rita del Cobre Grant. Title was acquired by the Chino Copper Co. from the Santa Rita Mining Co., since dissolved.

Geology: Santa Rita is situated in the Central mining district, Grant Co., New Mexico, on a branch of the Santa Fe system which connects at Whitewater with the Deming-Rincon division of the same railroad. The orebody and town of Santa Rita are located in a distinct basin and the rocks exposed in the district may be roughly divided as follows: 1, sedimentary; 2, intrusive; 3, extrusive. The sedimentary formation, of which there is a large area in comparison with the intrusive exposures, consists of limestones of more or less purity, and belonging to the sub-carboniferous and carboniferous series, there also being some isolated exposures of Devonian rocks. These beds vary from nearly pure limestones, through cherty limes and shaly limes, to shales. Through faulting there is also exposed a considerable area of Cretaceous sandstones and shales, the former in the immediate neighborhood of the intrusives appearing as quartzites. The principal intrusive rocks in the Santa Rita basin are granodiorite, a quartz-monzonite porphyry, and another of distinct porphyritic texture which may be classed as andesite. This latter rock intrudes the two general types as also the sedimentaries, in sills, lacoliths and dikes. The boundary forming the S. E. side of the Santa Rita basin is composed of two flows, the principal one being rhyolite and rhyolite tufa overlaying an older flow which is of an andesite nature.

The granodiorite is intrusive into and across the edges of the sedimentary series, which form a syncline dipping to the south from the northerly bordering ridges toward the lowest point of the basin. The area within the basin has been strongly faulted in wide zones and in two general directions. The intersections of the numerous faults have resulted in a roughly circular shear zone that has a diameter of $\frac{3}{4}$ of a mile. This shear zone on the southeastern side of the property has a width of some $\frac{3}{4}$ of a mile. The narrowest part is in the N. W. portion where it is some 400' wide. Generally speaking, the center, or core, is of granodiorite. As a result of the conditions mentioned, there is the center of the basin of granodiorite, surrounded by shear zones which affect it at times as well as the surrounding sedimentaries, the rhyolite tufa and quartz monzonite porphyry, the two latter rocks being on the S. E., E. and S. W. This shear zone has been the depository of the valuable copper minerals, chalcocite, cuprite and native copper. Bornite, chalcopyrite and cupriferous pyrites are also found, but to a much lesser extent than the previously named. There also occurs in small restricted areas, malachite and azurite with a very limited amount of chrysocolla.

The old workings, which are very extensive, have been practically eliminated by the steam shovel operations. During the year drills were moved from Northwest orebody to Sierra section in order to secure definition of that area. Churn drilling amounted to 13,161' for the year, making a total of 227,303' drilled to January, 1917, and mine was estimated to have 95,555,843 tons of ore developed, averaging 1.656% copper. Of the above footage, some is from scout holes which indicate a considerable extension of the orebodies as now outlined.

Equipment: consists of 10 steam shovels, 21 locomotives, 140 dump

cars, of 6-20 cu. yd. capacity. Company operates about 24 miles of track, giving access to the pits. There is also a primary crushing plant, equipped with 48"x60" jay crusher, together with bins for handling and breaking up coarse material loaded by shovels.

Concentration Plant—The concentrating mill at Hurley, 9 miles from the mine, on the Santa Rita branch of the Santa Fe railway, with original capacity of 5,000 tons per day, treated on an average of 8,455 tons per day in 1916, and 9,461 tons daily for 1st quarter, 1917, due to the improved metallurgical methods. Two new sections are being added and will be completed by the end of 1917. Mill will then have a capacity of 12,500 tons. A 1,000-ton tailings retreatment plant, later to be increased to 5,000 tons, will begin operations when the new turbo-generator is completely installed. The first unit went into operation in Oct., 1911, and ore was running through the 5th and last section on Nov. 28, 1912.

Ore is delivered to bin of 18,000 tons capacity. In conjunction with this coarse ore bin is a coarse crushing plant, consisting of 2 sets gyratory crushers, 2 sets 72"x20" Garfield rolls, and to which a second unit is being added. From here material is delivered into the fine ore bins at maximum size of $\frac{3}{4}$ ". Mill is equipped with 6 sets 16"x42" rolls for preliminary grinding, 9 Garfield Chilean mills for final grinding. Roughing treatment consists of Garfield tables, followed by Wilfleys and full equipment of Richards-Janney classifiers and Isbell vanners. Concentration is 15 to 1 with recovery of 66.6%, or 28.697 lbs. copper per ton of ore.

Power plant includes twelve 445 h. p. Heine boilers, three 1,250 k. w. generators, direct-driven by Nordberg Corliss engines, and one 2,000 k. w. Allis-Chalmers turbo-generator set. Primary water is secured from the Apache Tejo Spring, $3\frac{1}{2}$ miles south of Hurley, from underflow of White-water draw, Cameron Creek draw and Whiskey Creek draw. There is also in use a storage reservoir below the mill, the dam forming this reservoir having been built out of mill tailings and having storage area of nearly 3,000 acre feet.

Settlement at Hurley includes in addition to mill and accessory buildings, office building, store, school, shops and dwellings, town having population of about 3,500 people. Town of Santa Rita, on company ground, has population of over 4,000.

Production:

Year.	Tons Treated.	Cost per Ton Ore.	Cost per Ton Waste.	Cents Mill.	% Cu.	% Rec.	Ratio Conc.	% Cu. in Cnts.	Lbs. Cu. Rec. per Ton Ore.	Net Lbs. Cu. Prod.	Net Cost per Lb.	Rec'd per Lb.

Note: net cost per pound copper includes all charges except bond interest and depreciation, but does not credit miscellaneous income, equal to 0.45c per lb. copper in 1916. Gold and silver produced in 1916 amounted to \$80,498, a credit of 11c per lb. copper.

Both property and management are regarded as exceptionally good, and the stock as a very high-grade investment.

CHINO DEL NORTE COPPER CO.

NEW MEXICO

Address: C. W. Hoyt & Co., 79 Milk St., Boston, Mass. **Mine address:** Geo. E. Cox, mgr., Hanover, N. M.

Officers: Wm. A. Ulman, pres., 233 Broadway, N. Y. City; John H. Leddy, sec.-treas.; foregoing, and Elmer E. Fox, Meshech Frost, H. O. Bursum, Geo. E. Cox, F. J. Griffiths, S. Morgan Barber, Clarence W. Hoyt, D. C. Sutton, cons. engr.; directors.

Inc. in Delaware. **Cap.**, \$3,000,000; shares \$1 par.

Owens its properties through ownership of entire capital stock of El Norte Copper Co., of New Mexico, the operating company. Properties were paid for partly in cash and partly by 110,000 shares, \$1 par, of preferred stock of the El Norte Copper Co. 1,000,000 shares Chino Del Norte stock offered at 50c in October, 1917, by Boston agents.

El Norte Copper Co.

All the common stock and all but 11,000 shares of preferred stock of this company, held by Chino Del Norte Copper. The El Norte owns the New Mexican holdings.

Property: 29 claims, 600 acres, and 17 more claims under option.

C. & O. MINING & MILLING CO.

NEW MEXICO

Pinos Altos, Grant Co., N. M.

Officers: J. L. Caddel, pres.; A. Caddel, v. p.; Jackson Agee, sec.-treas.; above, with John James and A. L. McCarty, directors; A. L. McCarty, supt.

Inc. April, 1914, in New Mexico. **Cap.**, \$100,000; shares \$1 par; outstanding, 90,000 shares. Annual meeting, Jan. 12th. Gross earnings from ore sales in 1914-1915 amounted to \$50,000 with operating expenses of \$40,000.

Property: 2 claims, patented, in the Pinos Altos mining district, 7 miles N. W. of Silver City.

Ore: lead-zinc-copper in fissure vein in diorite. Vein has a N. S. course, dips 65° and is said to have an orebody 6" to 4' wide. Ore minerals are galena, sphalerite, chalcopryrite and pyrite and average assay is said to be 2% lead, 2% copper, 8% zinc, \$4 to \$10 gold, and 10 oz. silver per ton.

Development: by 200' incline, shaft with 4,000' of underground workings said to block out 70,000 tons of ore on the 100' and 200' levels.

Equipment: includes 20 h. p. gasoline hoist, a 50-ton concentrator which is run jointly with P. A. M. & M. Co. Management states that company will shortly resume operations. In April, 1917, unwatering of shaft was only work being done.

C. O. D. LEASING CO.

NEW MEXICO

Idle. Office and mine: Lordsburg, Grant Co., N. M. Described in Vol. XII, 1916.

COPPER QUEEN & COPPER KING GROUP

NEW MEXICO

Mine near Steins, Grant Co., N. M. Dr. J. O. Hamilton, of El Paso, Texas, owner.

Property: 17 claims is reported to show a monzonite porphyry dike, 100' wide impregnated with copper sulphides and averaging about 3% copper.

Development: by shallow shafts. Mine east of the San Simon valley and 5 miles from the S. P. R. R.

DUNDEE MINE

NEW MEXICO

Messrs. Fink, Guildes and H. H. Sholly, lessees, Lordsburg, N. M.

Mine near Lordsburg, said to show high-grade ore, shipments in 1917 carrying about 14% copper, 1 oz. gold and 14 oz. silver per ton.

ECLIPSE MINING & MILLING CO.

NEW MEXICO

Address: Duncan, Ariz., and Steeplerock, New Mexico.

Officers: Geo. W. Trimble, pres.; Ben. F. Barbour, sec.-treas. and mgr., with W. C. Downey, Wm. O. Olsen, Chas. H. Lee, Morgan M. Wilson and C. R. Meyer, directors.

Inc. in Arizona. **Cap.**, \$1,000,000; shares \$5 par; 106,000 shares issued.

Annual meeting, first Wednesday in January. Is the successor to the Shamrock Mining & Milling Co., described in Vol. XII.

Property: 24 claims, 480 acres in Steeplerock mining district, Grant Co., N. M., said to show a fissure vein in andesite, from 6-8' wide with S. E.-N. W. course. Ore is silicious and reported to assay 1.16 oz. gold, 15.1 oz. silver and 6.84% copper.

Development: by several tunnels and shafts. Mine was operated 2 months during 1916, receipts from ore sales amounting to \$4,800.

Management plans extensive development and installation of necessary machinery, in 1918.

(85) EIGHTY-FIVE EXTENSION COPPER CO. NEW MEXICO

Office: Miami, Ariz. Mines at Lordsburg, N. M.

Officers: Lester B. Doane, pres.; L. D. McClure, v. p. and gen. mgr.; De Witt Murray, sec.; C. C. Faires, treas.; above, with E. K. Davis, directors.

Inc. in Arizona. **Cap.**, \$5,000,000; shares \$1 par; 2,000,000 shares paid for property are being held in escrow; 400,000 shares offered the public at 50c each, April, 1917.

Property: 400 acres adjoining the 85 Mining Co.'s ground at Lordsburg, N. M., including the Southern group. Also has a bond on the Atwood mine, formerly under option to the 85 Mining Co. Claims show several veins along a dike reported to be 75' wide and traceable for 600'. Ore is silicious and carries gold, silver and copper values.

Development: by 310' vertical shaft with many open cuts and shallow workings. The management (or perhaps we should say the promoters, the E. F. Hiatt Investment Co., Globe, Ariz.) claim to have 463,460 tons of ore in sight averaging \$13.50 per ton, giving the property a valuation of \$6,284,517. This estimate is based on a report by J. L. Wells.

Production: to date 149 cars of ore shipped in former years from the Atwood mine netted leasers \$40,965. Leasers shipping some surface ore, 1917, said to run \$25 a ton.

Property may have merit, but the statements above are in our opinion not warranted by facts.

85 (EIGHTY-FIVE) MINING CO. NEW MEXICO

Office: Lordsburg, Grant Co., N. M.

Officers: A. P. Warner, pres.; C. H. Warner, sec.; P. B. Yates, treas.; A. J. Interridan, mgr.

Inc. Sept. 23, 1909, in New Mexico. **Cap.**, \$1,000,000; shares \$1 par. Annual meeting, second Wednesday in December.

Company purchased the Superior mine of the Superior Mining Co., in 1912.

Property: 6 claims, in Shakespeare camp, about 4 miles from Lordsburg, in the Virginia district, includes a mine, in rhyolite, developed by 600' tunnel and a 700' blind shaft, with a 300' air shaft to surface, and 3,500' of drifting on each level. Vein is estimated by company to average 10' in width and to carry 3.5% copper, 6 oz. silver and 0.1 oz. gold per ton.

Equipment: includes 100 h. p. electric motor, hoist, an 85 h. p. Fairbanks-Morse crude-oil engine, as an auxiliary, two 500 h. p. Lyons-Atlas-Diesel engines and an Aldrich electric pump. Company employs about 500 men and ships 400 tons per day to the smelter at Douglas or El Paso.

Company proposes (Sept., 1917) erection of 300-ton mill with fine grinding, Wilfley table, vanners and flotation treatment.

Reserves, 463,460 tons of \$13.56 ore, with normal metal prices, besides ore between 210 and 310 levels.

A new strike on 148' level, has yielded ore averaging 7.92% copper, 6 oz. silver, \$5.20 gold.

Production: for 1916 amounted to \$1,456,587 gross as compared with \$762,921 in 1915. Shipments, 1917, average \$25.

Property considered good, and management competent.

EL CENTRO MINING & MILLING CO.

NEW MEXICO

Lordsburg, Grant Co., N. M.

Officers: E. S. Eno, pres.; Geo. M. Peck, v. p.; R. F. Fitz, sec.-treas., P. O. Box 275, Los Angeles, Cal., with Henry Muntz, Alfred Cole, D. D. Culver and J. A. Rovelstad, directors.

Inc. in Ariz. **Cap.**, \$200,000; shares \$1 par; outstanding, \$100,000. Company, in 1915, bought the Last Chance mine, owned by the Sutton Consolidated Mining Co., and claimed to have produced \$135,000 in the past.

Property: 4 claims, patented, 68 acres, in the Pyramid mining district, near Lordsburg, said to show shoots 9-30' wide of silver-copper ore in a fissure vein in andesite.

Ore reserves: claimed to be 10,000 tons of ore, assaying \$4 to \$12 per ton.

Development: 275' vertical shaft with 2,000' of underground workings. Mine idle in 1915-1916, but present management resumed operations, March, 1917.

EL NORTE COPPER CO.

NEW MEXICO

G. E. Cox, mgr., Hanover, N. M.

Has taken an option on 29 claims near Hanover. Is operating company for Chino del Norte Copper Co., which see.

EL PASO MINING & MILLING CO.

NEW MEXICO

Dr. J. E. Spencer, mgr.; J. W. Crowder, cons. engr. and sec.; A. F. Kerr, pres., El Paso, Tex.; Louis Addoo and Mrs. J. W. Crowder, directors.

Operating the Savannah Copper Co. group of 19 claims, including Pacific No. 2, at Pinos Altos, N. M., under lease. Shows gold bearing quartz in Skilacorn vein.

Has 75-ton concentration mill and flotation process, idle in summer, but operated, Sept., 1917.

EMMA MINE

NEW MEXICO

S. L. Landon, supt. Mine at Fierro, Grant Co., N. M., is owned by the Copper Queen Consolidated Mining Co. and is being operated on a small scale by lessees, 1916.

ERNESTINE MINING CO.

NEW MEXICO

Absorbed, June, 1915, by Mogollon Mines Co. Latter company wound up and holdings bought by Socorro Mining & Milling Co., which see.

GIANT COPPER CO.

NEW MEXICO

Address: J. L. Burnside, Silver City, N. M.

Officers: F. R. Jones, pres., El Paso; J. L. Burnside, v. p.; D. C. Crowell, sec.-treas.; F. P. Jones, T. L. Lowe, J. Agee, T. W. Carter, D. C. Crowell and D. T. White, directors.

Inc. 1917, in N. M. **Cap.**, \$3,500,000; shares \$1 par; 620,000 issued.

Property: 61 claims in the Burro Mountain district, N. M., including those of National Copper Co. Considerable development done to date.

GOLDEN LINK CO.

NEW MEXICO

Probably dead. See Vol. XII.

Jackson, Grant Co., N. M.

Property: 8 claims, along the Big Dry canyon, 6 miles from Jackson, in the Cooney, or Mogollon district, Socorro Co., N. M. J. G. Barnesdale, treas., Superior, Wis.

Development: by 3 tunnels, lowest 120' long, and a vertical shaft, all in ore, vein said to be 8' wide. Equipped with 100 h. p. water-power plant, 3-stamp mill and 500' tram. No returns secured. Probably idle.

GREAT EASTERN GROUP**NEW MEXICO**

Santa Rita, Grant Co., N. M. Al. Owen, owner.

Property: 8 claims, 160 acres, adjoining Chino Copper Co.'s lands on the east side of the Santa Rita basin. The S. W. side of the group shows a quartzite capping and iron gossan, with limestone covering porphyry over other parts of the claim. Veins with a N. E. course outcrop and show small percentages of copper. Developed by shallow shafts. Owner was preparing to drill property in 200' blocks, at last accounts.

HANOVER BESSEMER COPPER & IRON CO. NEW MEXICO

Address: Hanover, Grant Co., N. Mex. Is a close corporation owned by Hon. Boise Penrose and associates of Philadelphia, Pa.

HANOVER COPPER CO. NEW MEXICO

Hanover, Grant Co., N. M. Geo. A. St. Clair, pres., Duluth, Minn.; F. T. Walker, mgr.

Inc. 1909. **Cap.**, \$50,000; shares \$10 par.

Property: 18 claims, north of the Chino Copper property and near the holdings of the Philadelphia Copper Co. Mine has shafts of 70', 100' and 150', and tunnels of 40' and 60', showing copper and zinc ores. Equipped with hoist and compressor.

Shipping 20-30% zinc carbonate and sulphide ore, 1917.

HARDSCRABBLE MINING CO. NEW MEXICO

At last accounts officers were: J. E. Lundstrom, pres.; E. S. Bruning, sec.-treas., with S. H. Beach and J. T. Janes, directors; J. T. Janes, supt.

Inc. 1911, in Colo. **Cap.**, \$150,000; outstanding, \$75,000; shares \$1 par. Has a 5-year lease, dating from 1913, on the Hardscrabble mine, 1½ miles W. of Pinos Altos.

Had a lease on the Hardscrabble mine near Pinos Altos, Grant Co., New Mex., now being operated by the United States Copper Co., which see.

HECLA MINING CO., THE NEW MEXICO

Office: 652 South Spring St., Los Angeles, Calif. **Mine address:** Lordsburg, N. M.

Officers: R. E. Vandruff, pres.; John W. Wilson, v. p.; W. G. Wilbern, sec.-treas.; O. H. Reinholt, cons. engr.; Franklin Smith, geologist; E. K. Davis, gen. mgr.

Inc. Oct. 17, 1916, in Nevada. **Cap.**, \$850,000; shares \$1 par; treasury reserve, \$200,000; balance partly used in completely paying for 9 claims and new equipment and partly offered for sale (150,000), proceeds to be used for development. No indebtedness.

Property: 9 claims fully paid for, and another, the Bonnie Jean, under option, about 140 acres lying between the 85 and the Octo mines, 3 miles S. W. of Lordsburg, in Grant Co., and 2 miles from the Southern Pacific Railway.

Geology: similar to that of the 85 and Octo mines. Country rock is diorite-porphyry. General geology fully described by Lindgren in Prof. Paper 68, U. S. Geological Survey. Outcrops conspicuous and form landmarks, such as Lee's Peak 500' from the Hecla, frequently mentioned by Lindgren. Gangue very silicious and ore is therefore in demand for fluxing the basic ores from Bisbee. Sulphides found near the surface. Many mineral varieties occur, but main values lie in copper, gold and silver contents, said to average over \$30 a ton before the rise in metal prices.

Development: includes two 300' and several shallow shafts. One of the deeper shafts will be enlarged, retimbered and deepened. The topography does not lend itself to successful tunnelling.

Equipment: includes 250 h. p. boiler plant, 40 h. p. hoist, 700 cu. ft. air compressor; pumps, etc. Has produced some ore, amount not stated.

HERMOSA COPPER CO.**NEW MEXICO**

Office: 30 Church St., New York. Mine office: Hanover, Grant Co., N. M.

Officers: D. M. Riordan, pres.; L. B. Judson, v. p.; M. F. Westover, sec.; Henry W. Darling, treas.; preceding, with A. W. Burchard, John B. Keating, directors.

Inc. July 20, 1905, in New Jersey. **Cap.**, \$100,000; shares \$100 par. Corporation Trust Co., New York, registrar. Annual meeting, first Monday in June.

The mines, discovered 1800, and opened 1880, were worked intermittently, owing to various Indian troubles and lack of funds, until taken over, 1904, by the present owner, which practically is the General Electric Co.

Property: 114 claims, patented, about 2,200 acres, in the Central or Hanover district, adjoining the Chino Copper Co., includes the Ivanhoe and Humboldt mines; also the Copper Queen, Treasure Vault, Ninety, Tourmaline and other mines and attempts at mines. Country rocks are porphyry, granite, quartzite and limestone, showing various contact deposits between granite and limestone, with porphyry intrusions, ores occurring as lenticular bodies, in veins with a generally N. E.-S. W. strike and an average dip of 45°. Four different orebodies are developed, ranging from 15 to 20' in width, with a known depth of 410' and known length of 2,000'.

Development: by several shafts, 300 to 400' deep and all showing ore; the various mines have about 3 miles of workings, estimated to show 100,000 tons of ore, with 25,000 tons blocked out for stoping. The property has large bodies of low-grade concentrating ore carrying average value of 3% copper, 3 oz. silver, and slightly under \$1 gold per ton, with small quantities of lead near the surface and occasional traces of zinc, but not in sufficient quantities to materially hamper reduction.

Equipment: includes a 700 h. p. steam plant, with 7 hoists, good for 500 to 1,000' each, and 4 Sullivan air compressors of 26 drills aggregate capacity. Buildings include machine shop, smithy, carpenter shop, framing mill, warehouse and sawmill, with a total of 20 buildings.

The 100-ton concentrator has a No. 14 Blake crusher, 2 sets of rolls, 1 Hartz jig, 5 Overstrom tables, 2 Wilfley tables, 7 screw sizers, 1 hydraulic sizer and 1 Huntington mill.

Considerable systematic development was done, 1904-1907, based upon estimates of tonnage by eminent engineers, but results did not come up to expectations, for although some fairly large bodies of low-grade ore were found, they were not large enough to render the property profitable. Property closed down and in hands of a caretaker at last reports.

JACK MINING & MILLING CO.

Address: J. F. Thomas, pres. and mgr., Bayard station, via Santa Rita, N. M. J. E. Thomas, supt. and sec.; S. D. Clifford, mill foreman.

Property: the Roosevelt group, a former gold mine in Gold gulch, Santa Rita Mountains, near Bayard, a few miles S. W. of Santa Rita. The ore deposit contains both silver-lead and molybdenum, the former containing 8% zinc and lead.

The concentrating mill handles 30 to 40 tons a day and makes both silver-lead and molybdenite concentrates.

JOHNNY BULL MINE**NEW MEXICO**

W. H. Henry, owner, Boston Road, New York, N. Y.; David L. Creswell, purch. agt., Steins, Grant Co., N. M.

Property: 3 patented claims, south of Steins Pass, between S. P. and E. P. & S. W. R. R., on western slope of Peloncillo range, shows a contact deposit between limestone and a N.-S. monzonite dike. The ore is said to average 5% copper and to run high in lime and iron.

Development: includes 2 old shafts, 100' and 150' deep, with 1,000' of work, exposing 2 parallel veins, each 125' wide. Property was formerly owned by the Johnny Bull Copper Mining Co., whose charter was forfeited in 1902.

Owner reports that the smelter at El Paso, Texas, has settled for 3 lots of ore averaging 7.8%, 6.5% and 4.2% copper, total net returns being \$1,810. About 225 tons of 5% ore has been mined to date, yielding gold and silver also.

JUMBO MINING CO.

NEW MEXICO

Office: Deming, N. M. M. Lininger, supt.

Officers: J. J. Hyatt, pres.; C. J. Kelly, v. p.; E. L. Foulks, sec.-treas.

Inc. 1917. **Cap.**, 250,000; shares \$1 par; 50,000 treasury shares offered, Oct., 1917.

Property: in Cook mining district, 25 miles north of Deming and near the Graphic and the Cook Peak mines. Claims show four strong parallel fissure veins in andesite porphyry.

Development: by 250' shaft with new level at 200' and 250'. On latter level vein No. 1 is 2'-6' wide and carries high-grade silver lead ore.

Equipment: 50 h. p. boiler, compressor and 50 h. p. oil engine.

KING & QUEEN COPPER CO.

NEW MEXICO

Idle. Dr. J. Odd Hamilton, pres. and chief owner. Mine near Steins, Grant Co., N. M., 8 miles S. W. of Steins Pass, near the King Kendall and Johnny Bull mines, shows limestone cut by a large N.-S. dike of monzonite porphyry with ore occurring in contact metamorphic deposit of altered garnetiferous limestone. Ore carries a little bornite, chalcopryite, pyrite, calcite and on the Queen claim, some chrysocolla. The ore is low-grade, carries zinc and lead and is hard to concentrate.

Development: numerous shallow workings showing ore said to average 1½-2% copper. Property being developed under lease and bond in 1915-1916.

LAWRENCE MINING CO.

NEW MEXICO

Office: Oliver Bldg., Pittsburgh, Pa.

Officers: G. A. Deitch, pres.; D. J. Evans, v. p.; Edw. Hopes, sec.-treas.; above, with C. A. Blanchard, J. C. Slack and R. J. Kerr, directors.

Owns lease and option on the Bonney mine of the Bonney Mng. Co., 5 claims, in the Virginia mining district, 5 miles S. W. of Lordsburg, N. M.

In 1917, company sold controlling interest in their lease to the San Toy Mng. Co., namely, 35/60 of the stock, for \$200,000. \$50,000 was paid in cash, \$32,000 is due, Oct. 1, 1917, with payments of \$25,000 every 6 months thereafter.

See San Toy Mng. Co., under Mexico.

MANGAS DEVELOPMENT CO.

NEW MEXICO

Office: Silver City, N. M. **Mine office:** Tyrone, Grant Co., N. M.

Officers: J. E. Saint, pres.; G. A. Kaseman, v. p.; M. W. Porterfield, sec.-treas., with W. C. Porterfield and R. P. Barnes, directors.

Inc. Oct. 2, 1909, in New Mexico. **Cap.**, \$500,000; shares \$5 par; 87,315 issued and paid up.

Property: 37 claims (being patented), the Porterfield-Robinson and Midway Groups, near the Chemung and Savanna mines, on the N. E. slope of the Burro mountains, 12 miles S. W. of Silver City. Property adjoins that of Burro Mountain Copper Co.

The Porterfield-Robinson group of 22 claims, 353 acres, lies near the extreme S. W. edge of the favorable area of the district, the northern part

being the more promising, showing iron stains, with some copper stains, and slip zones.

The Midway group of 15 claims, 10 fractional, 254 acres, carries the N. W. continuation of the ore zone of the Chemung Copper Co., and also lies near the Burro Mountain mine, with conditions markedly similar to those existing on these adjoining properties, on which large quantities of ore have been developed, and are being treated.

The orebodies are a combination of stockwerk and impregnation deposits, carrying values mainly along a series of small intersecting veinlets, with occasional masses of solid chalcopryite up to several inches in size, but ore occurring mainly as minute particles of chalcocite, in veinlets, and as films on gangue rock. See Geology of the Burro Mts. Copper district by R. E. Somers, Bull. Am. Inst. Min. Eng., May, 1915, p. 957.

Nothing has been done since 1910, being short of money. The ground requires drilling.

MANHATTAN MINE

NEW MEXICO

Operated by R. J. Doyle and associates.

Property: 10 patented claims, 200 acres, near Pinos Altos, Grant Co., N. Mex.

Ore: containing gold, silver and copper, occurs in a fissure vein in diorite-porphry, 18" to 5' wide, strike N. 15° E.; dip almost vertical. Average assay said to be \$20 per ton.

Development: 900' tunnel and 300' shaft below tunnel level. Claims to have shipped 1,200 tons of \$20 ore in 1915 and to have received \$26,000 from ore sales.

Preliminary development was undertaken by churn drills, with holes put down at 200' intervals. Drilling was suspended, 1910, but in 1911 an exploratory shaft was started on the eastern side of the Tulloch group, in high-grade carbonate ore, and reached sulphides at comparatively shallow depth. The Midway group when taken over, had 2 shallow shafts and a few pits, showing a little carbonate and silicate ore on the dumps.

Insufficient funds limited company's development plans, but management is good and property has a fair chance of developing into a large mine.

Over 30 men employed, Aug., 1917, including lessees. Ore being shipped to Douglas, Ariz.

MONTE RICO MINING & MILLING CO.

NEW MEXICO

Office: 428 Washington Trust Bldg., Washington, Pa. **Mine office:** Lordsburg, Grant Co., N. M.

Officers: Lawrence R. Boyd, pres.; F. B. Theakson, v. p.; Jas. V. Boyd, sec.-treas.

Inc. in Arizona. **Cap.,** \$500,000; shares \$1 par; non-assessable.

Lands: 9 claims, 120 acres, on Lee's peak, in the Pyramid mountains, Virginia district, 4 miles S. W. of Lordsburg.

Geology: property shows diorite cut by andesite, and there is said to be a dike 100 to 200' wide mineralized throughout and forming the center of a network of veins. Ores at and near surface carry azurite and malachite, succeeded at depth by chalcopryite, and there are also silver, lead and copper ores with small gold values.

Development: mine is reported to have upwards of 2,000' of workings, with ore in sight estimated by the company at 500,000 to 1,000,000 tons, which is probably as true as the statement that its ores can be mined and milled at an expense of \$1.50 to \$2 per ton. In 1916 a tunnel was being driven.

The prospectus of the company is replete with misinformation, and

among other things states that "this formation, as well as the character of the ore, is identical with that found in the great copper mines at Bisbee, Globe, Jerome and Cananea," but as is well known, the orebodies of those localities differ greatly in occurrence. In view of the many questionable statements made, and the unreasonably large profits promised in the prospectus, the company must be regarded with much suspicion:

NATIONAL COPPER CO.**NEW MEXICO**

Idle. Chas. P. Laughlin, sec., Tyrone, Grant Co., N. M.

Inc. Feb., 1902. Cap., \$1,200,000; shares \$100 par.

Property: 22 claims, 10 patented, 4 miles from the Chemung Copper Co., in Whitewater Canyon, Burro Mountain district, has a fissure vein, in granite, of 60' estimated average width, carrying mainly chalcocite, opened by a 200' shaft and a 360' tunnel having a 214' blind shaft. The mine shows considerable bodies of copper ore, mainly in disseminated sulphides of 2 to 3% copper tenor, with some ore carrying up to 15 and 20% copper.

Equipment: includes steam power and a Norwalk air compressor. Described in Copper Handbook, Vol. XI.

NATIONAL GOLD & SILVER MINING CO.**NEW MEXICO**

M. R. Sherman, pres.

Property: the Beck mine, near Steins, Grant Co., N. M., developed by 2 miles of workings with a 300' shaft, showing a 12-18" vein of gold-silver ore. Has steam power and 5-drill compressor, hoist, and a 50-ton concentrator. Worked steadily in 1915, 1916 and 1917. Shipments made to the El Paso smelter are intermittent.

NEW MEXICO ZINC & COPPER CO.**NEW MEXICO**

Address: J. L. Ferry, mgr., Hanover, N. M.

Officers: Judge W. H. Winter, pres.; H. O. Bursum, v. p.; J. A. MacDonald, sec.-treas.

Property: the Mountain Home zinc mines, 11 patented claims, 211 acres, and the Copper Flat group, 52 unpatented claims, covering the extension of the first named group. Holdings adjoin Phelps, Dodge, Empire Zinc, and are near Hanover Bessemer C. & I., El Norte Copper and other producers.

Geology: contact deposits, shear zones and fissure veins in contact metamorphic areas of altered limestone near monzonite dikes and granitic intrusive masses.

NOVEMBER MINING CO.**NEW MEXICO**

W. H. Kinnon, mgr., Steins Pass, N. Mex.

Inc. 1913, in New Mexico, to take over a group of claims, including the World's Fair and Louise, at Granite Gap, 12 miles S. of Steins Pass. Mine shows silver-lead-copper-zinc ore in veins in a contact between limestone and granite.

Development: by shafts, tunnels and diamond drilling.

Equipment: includes compressor and tramway. Has been an intermittent shipper for several years.

OCTO MINING CO.**NEW MEXICO**

Office: 112 East State St., Redlands, Calif. Mine at Lordsburg, Grant Co., N. Mex.

Officers: E. W. Smith, pres.; G. S. Turrill, v. p.; F. E. Sanford, sec.; J. M. Wilson, treas.; O. H. Reinholt, cons. engr., directors; E. K. Davis, gen. mgr.

Inc. Nov. 15, 1912, in Calif. Cap., \$500,000; shares \$1 par; issued, 300,000. Annual meeting, third Thursday in December. In treasury, Sept., 1917, \$11,700.

Property: 8 claims, 125 acres, $3\frac{1}{2}$ miles S. W. of Lordsburg, N. M., and 2 miles from the S. P. Ry. Geology is similar to that of the Eighty-Five and Hecla mines adjoining and is fully described in U. S. Geol. Survey, Prof. Paper, p. 68.

Ore: contains copper, silver and lead values.

Development: by several old and a 145' 3-compartment shaft to be sunk to 600'.

Equipment: includes 40 h. p. hoist, 6-drill compressor, 200 h. p. boiler plant, etc.

Several carloads of surface ore shipped are reported to have netted \$28 per ton.

PINOS ALTOS M. & M. CO

NEW MEXICO

Dead. Company had a bond and lease on 14 claims belonging to the Savannah C. Co., in the Pinos Altos district, N. Mex.

Claims show fissure veins 2' wide in diorite, carrying complex sulphide ores said to carry .25 oz. gold, 8 oz. silver, 2.5% copper, 10% zinc and 2% lead.

Fully described in Vol. XII.

PROGRESS MNG. CO.

NEW MEXICO

Address: Chas. F. Hanson, mgr., or John Evans, supt., Steeple Rock, via Duncan, N. Mex.

Property: 14 miles N. E. of Duncan, shows quartz monzonite with chalcopryrite stringers and veins.

Development: by shaft, 105' deep, Jan., 1917, being actively sunk.

Equipment: includes 45 h. p. Stover gas engine.

REPUBLIC MINING & MILLING CO.

NEW MEXICO

Office: Harrison Blk., Philadelphia, Pa.

Inc. 1916.

Property: the Welch mine, east of the Empire Zinc concentrator at Hanover, developed by 150' double-compartment shaft and carrying a complex low-grade zinc ore. A new mill is to be erected, 1917.

RIVAL MINING CO.

NEW MEXICO

Office: Bisbee, Ariz. **Mine office:** H. M. Ziesemer, supt., Duncan, Ariz.

Officers: J. M. Ross, pres.; Arthur Notman, v. p.; R. A. Ziesemer, sec.-treas., with W. H. Brophy, L. R. Budrow, M. J. Cunningham and Robert Rae, directors.

Inc. March 13, 1917, in Arizona. **Cap.**, \$500,000; shares \$1 par; non-assessable; 275,000 issued. Annual meeting first Monday in March.

Property: 8 claims, 160 acres, in Steeplerock district, Grant Co., N. M. Examined by F. W. Smith, Arthur Notman and I. B. Joraleman.

Geology: quartz vein in andesite, with 70° dip and N. W.-S. E. course.

Ore: carries gold and silver.

Development: new shaft being sunk 300'; old shaft, 150' to be deepened to 500'. These shafts, 1,800' apart, are to be connected at 500'.

Equipment: 18 and 25 h. p. hoists, 520 cu. ft. compressor and 100 h. p. gas engine.

Production: former owners shipped \$14,000 of ore, averaging \$40 per ton.

ROBERT LEE MINE

NEW MEXICO

Address: Pyramid Camp, via Lordsburg, Grant Co., N. M. Owned by Dan. Breil and Harry Small, of Lordsburg, N. M. Mine was operated in 1885 and was later purchased by Dr. Bartlett, inventor of the Bartlett concentrating table, who erected a mill and milled \$97,000 worth of ore. The

claims show a well-defined quartz-calcite vein running N. E.-S. W. and dipping S. E., lying in a zone of altered and chloritized diorite porphyry.

Development: includes the old shaft, 250' deep, which has been reopened and shows in the lower level a streak of ore 2' thick, carrying 30% copper and 500 oz. silver.

SAVANNA COPPER CO.

NEW MEXICO

Address: Henry Hovland, Lonsdale Bldg., Duluth, Minn. Mine near Tyrone, N. M. I. J. Stauber and I. L. Wright, lessees.

Inc. Sept. 16, 1908, in Arizona. **Cap.**, \$2,000,000; shares \$10 par, half in full-paid and half in part paid stock, latter \$5 paid. The company was a merger of the Copper Gulf Mining Co. and Comanche Mining & Smelting Co., and also absorbed the Casa Grande Development Co., owning in fee simple all property formerly owned by the Comanche Mining & Smelting Co. and holding all but 320 shares, or 99.36% of the stock issue of the Copper Gulf Mining Co. In Jan., 1913, the company had 133,116 shares of full-paid stock outstanding. Cash balance, Feb. 1, 1913, was \$12,628.

The Copper Gulf Mining Co. owns its property in fee and owes the Savanna Co. \$124,464 for money borrowed to develop its claims. The combined properties consisted of 199 claims, about 4,000 acres, all in Grant County, N. M., but in 5 districts. The company has 28 claims, 16 patented, in the Pinos Altos district, 4 patented claims in the Anderson district, 17 unpatented claims in Chloride Flat district and 1 patented claim in the White Signal district.

The claims in the Burro Mountain group sold, Jan., 1916, to Phelps, Dodge & Co., for \$700,000, constituted the principal and most valuable holdings. The Comanche group comprised 43 claims. The Copper Gulf group consisted of 1,440 acres. The Jennie group of 4 claims, patented 1910, on the Gila river, 35 miles N. W. of Silver City, is not worked owing to its inaccessibility, and development on the Chloride Flat property has been confined to assessment work.

SUNSET COPPER CO.

NEW MEXICO

L. M. Stiles, pres. and mgr., Box 393, El Paso, Tex.; W. P. Stiles, v. p.; S. F. Johnson, sec.; L. B. Wilcox, treas.

Property: includes the old King mine, 7 miles N. W. of Hachita, developed by 400' shaft with workings on a vein said to show gold-silver-copper ores. Is a prospect.

SUSQUEHANNA MINING CO.

NEW MEXICO

Address: C. J. Plankenhorn, sec., Williamsport, Pa. Company succeeded North American Copper Co., described in Copper Handbook, Vol. XI. In 1915, part of the property was worked by lessees. In 1916, B. W. Randall operated the Nellie Bly mine under lease and bond.

Property: near Lordsburg, 9 claims, patented, in the Pyramid and Virginia districts, including the Nellie Bly and Cobre Negra groups. Claims show andesite, diorite and trachite, having 8 orebodies, reported as fissures running parallel with porphyry dikes.

Development: the Nellie Bly mine, in the Pyramid district, 8 miles S. W. of Lordsburg, has shafts of 450', 125', 65', 33' and 40', with about 6,000' of workings. The 400' level shows a vein of 12' estimated width, with bornite-chalcopyrite ore, said to average 5.8% copper and 5.5 oz. silver per ton.

The Cobre Negra mine, in the Virginia district, 6 miles S. W. of Lordsburg, is reported to carry melaconite, malachite, azurite and chalcopyrite, and is developed by shafts of 332', 180', 60', 85' and 85'. Idle since 1906.

Equipment: includes a 40 h. p. hoist, good for 600', at the Nellie Bly mine, and several mine buildings.

Production: 1916, about 6 cars a month, of ore averaging 4.5% copper, and 4 oz. silver per ton, with 50% to 60% silica, 5% to 6% iron, and 8% to 10% lime.

TULLOCH GOLD & COPPER CO.

NEW MEXICO

Idle. Silver City, Grant Co., N. M. D. H. Tulloch, president.
Inc. 1907.

Property: 50 claims, 1,200 acres, on Edith mountain in the White Signal district, said to show good ore near surface. Developed by 2 shafts, 1 of 200', on the Dagger Point claim, showing ore claimed to average 14% copper. A crosscut tunnel on the Wild Horse claim, run along a dike of iron gossan, showed ore averaging 3% copper. No recent reports received.

TYNDALE COPPER MINING CO.

NEW MEXICO

Address: Lordsburg, N. M.

Officers: W. T. McCaskey, pres.; T. A. Lister, v. p.; J. P. Porteus, sec.-treas. and mgr.; also directors.

Inc. June 21, 1917, in New Mexico. **Cap.**, \$250,000; shares \$10 par; non-assessable; 10,800 issued.

Property: 10 claims, 180 acres, in Virginia district, adjoining the Bonney mine of the Lawrence Mining Co. on the east. Claims are said to show a fissure vein in andesite.

Ore: is oxidized to 275' depth and contains 5.02% copper, 0.25 oz. gold, and 5.57 oz. silver per ton.

Development: by shafts, deepest 270'; sinking to 630' and 1,500' of drifting to be done.

Equipment: 20 h. p. gasoline hoist.

Production: 350 tons of ore in 1916.

TYRONE—EL PASO COPPER CO.

NEW MEXICO

Address: 1115 N. Kansas St., El Paso, Texas. **Mine office:** Tyrone, N. M.

Officers: R. M. Dudley, pres.; T. Lia, v. p.; N. F. Work, sec.-treas.; with J. F. Ross, J. H. Maxey, R. K. Bell, H. L. Watson, J. B. DuBase and P. J. Mortinez, directors.

Inc. Nov. 31, 1917, in New Mexico. **Cap.**, \$1,500,000; shares \$1 par; non-assessable. Operating expenses in 1916 were \$1,600.

Property: 23 claims, 400 acres, 2 miles, S. of Tyrone, N. M., said to show disseminated copper-silver-sulphide ore in porphyry, assaying 3.4% copper and 2 to 6 oz. silver per ton.

Development: by 260' shaft being sunk during Sept., 1917.

UNITED STATES COPPER CO.

NEW MEXICO

Address: P. A. Newman & Co., 20 Broad St., New York. **Mine office:** Hanover, New Mexico. J. D. Kohlmann, mgr. of Hanover mines; J. T. Janes, mgr. of Pinos Altos mines.

Officers: C. B. Manville, pres. and gen. mgr.; W. F. Barnes, sec.; A. C. Hoyt, treas.; with W. H. Park, John Orlebeke, N. A. Karsten, Geo. W. Rodenberg and Paul A. Newman, directors.

Inc. May 1, 1911, in New Mexico, as reconstruction of the Philadelphia Copper Mines Co. **Cap.**, \$1,500,000; shares \$1 par; 500,000 shares issued. Registrar & Transfer Co., New York, registrar; Security Transfer & Registrar Co., New York, transfer agents.

Property: at Hanover, 9 claims, 2 patented, including the Philadelphia mine; at Pinos Altos, 11 claims, including the Hardscrabble mine, all in Grant Co., N. M.

Development: at Hanover by 60, 65, 180 and 300' shafts; also tunnels, with 3,500'; of workings. The mine is equipped with steam plant hoist of 600-ton daily capacity, compressor, drill-sharpener, assay office, houses and hotel.

Production: is 300 tons of ore monthly, varying from 6 to 22% copper, with \$18 gold and silver per ton. Shipments total \$125,000.

Development: at Pinos Altos, by 29 shafts from 20 to 150' deep, mostly inclines on the veins. Two vertical shafts are being sunk. At 140' in one there is 5' of low-grade copper ore, carrying chalcocite and high silver content.

Equipment: includes steam plant, compressor, etc., and 8,000' daily capacity saw mill.

Production is reported as \$71,000.

In a flamboyant prospectus it is stated that the Chino, Hanover-Bessemer, Republic M. & M., Colorado Fuel & Iron, New Jersey Zinc, Calumet & Arizona, St. Louis Smelters, General Electric, Hanover Copper and Phelps, Dodge properties closely surround the company's Hanover group, but no distance is given. With copper at 20c per lb., and 6% ore, a yearly net profit of \$1,296,000 is calculated. Property was examined by J. T. Janes, H. C. Holthoff, J. H. Stewart, J. C. McKee, G. E. Cox, J. D. Kohlmann and Lee, whose reports seem favorable. Regarding the Hardscrabble, J. D. Kohlmann said: "I have proved to my entire satisfaction . . . that the granodiorite dike has more merit in some respects than the now famed porphyry deposits."

Paul A. Newman, who has been distributing the stock of this deceptively named company, has started suit in New York against Jas. W. McAlpine, former president of the company, for \$100,000 damages for failure to deliver 675,000 shares of company's stock, as agreed. It is alleged that but 100,000 shares were delivered for which Newman paid \$66,000. The early advertising by Newman is reported to have stated that the company "is now mining large quantities of high-grade 22½% copper ore," had \$3,000,000 or more of ore and was "about to become a big shipper and mine of mines," etc., and ad nauseum.

UTTER, GEO. H.

NEW MEXICO

Address: Silver City, N. M.

Property: the Carlisle, East Camp, Jim Crow, New Year, and Summit groups of mines in Steeple Rock district, N. M., acquired from the Steeple Rock Development Co.; also the Billali mine.

The Carlisle is under bond to the Carlisle Mining Co. of 170 Broadway, New York, and the Jim Crow to another Eastern concern.

Properties are all patented, developed and show gold and silver, the Carlisle alone showing sulphide ore.

WESTERN MINING & DEVELOPMENT CO.

NEW MEXICO

Held a lease and option on the Bonney mine, but sold rights to the Lawrence Mining Co. (which see), which in turn sold an interest to the San Toy Mining Co., which see.

GUADALUPE COUNTY

PINTADO CONSOLIDATED COPPER CO.

NEW MEXICO

J. L. Matt, supt., Santa Rosa, Guadalupe Co., N. Mex.

Property: covers a 12' layer of copper-bearing sandstone, overlaid by 6' of barren sandstone in Pintado canyon. Carload lots shipped to El Paso smelter averaged 3% copper. The ore is quarried, and leached in a 100-ton leaching plant, erected 1916.

LINCOLN COUNTY

CHICAGO COPPER MINING CO.**NEW MEXICO**

Office and mine: Oscuro, Lincoln Co., N. M.

Officers: E. G. Rafferty, pres., treas. and gen. mgr.; H. H. Miller, v. p.; H. E. Riddle, sec.; preceding, with H. R. Rafferty and M. Loquis, directors.

Inc. Jan. 31, 1906, in New Mexico. Cap., \$1,000,000; shares \$100 par; non-assessable.

Property: 22 claims, unpatented, include Copper Boy and Copper Queen mines, 18 miles from a railway, in the Oscuro mountains, also real estate in Oscuro. Developed by a 60' shaft, and tunnels of 60', 120', 222' and 1,550', with about 3,000' of workings, from which former owners shipped several carloads of ore, said to have returned \$270 per ton. Has steam power and a 2-drill Sullivan air compressor. Reported shipping ore.

WHITE OAKS MINES CONSOLIDATED, INC. **NEW MEXICO**

Office: Room 45, 45 Broadway, and 500 Fifth Ave., New York. Mine office: White Oaks, N. Mex. Richard Wightman, pres.

Inc. in New York. Cap., \$200,000; shares \$5 par. Traded in on New York curb. U. S. Corporation Co., 36 Nassau St., New York, registrar and transfer agent.

Property: about 300 acres in the White Oaks district, Lincoln Co., including the Old Abe mine, the North and South Homestake and the Welen claims, worked in the past for gold; also coal lands. Company claims in its literature to have produced 10 tons tungsten ore and concentrates per month since July 1, 1915.

Equipment: includes electric hoists, 2 stamp mills, and concentrating plant equipped with 5 Joplin hand jigs and one Richards jig.

In May, 1916, the stock sold up to \$16 per share; in June, the price broke from \$11 to \$5. Reported, 1916, that "internal dissension arose in the White Oaks Co.'s management, and rather elaborate plans for reopening the mines have apparently been abandoned."

LUNA COUNTY

NEVADA HILLS MINING CO. (Tungsten)**NEW MEXICO**

Address: Gage, Luna Co., N. M.

Property: 8 claims, purchased in 1916 for \$15,000, in Victoria mining district, near Gage, said to show a vein 20' wide of tungsten ore in lime formation with quartz gangue, opened on the 40' level. Developed by 2 shafts, 130' and 90' deep. The property was formerly worked for silver values. Developing in 1916, and milling plant to be built.

MORA COUNTY

AZURE MINING CO.**NEW MEXICO**

See under Grant Co., N. Mex.

CUCHILLA COMPANY**NEW MEXICO**

Idle. Address: c/o Stephen B. Davis, Jr., East Las Vegas, New Mex.

Property: 1,500 acres of mineral land between the towns of Lucero and Guadalupita, Mora Co., N. M., slightly developed by tunnels and shafts. Company is inactive at present and has only nominal earnings and expenses.

REPUBLIC MINES CO.**NEW MEXICO**

Office: 526 Exchange Bldg., Denver, Colo. Mine office: Lucero, Mora Co., N. M.

Officers: Felix J. Woodward, pres.; Walter Littlefield, v. p.; Marcus Finch, sec.-treas. and gen. mgr.

Inc. Dec. 8, 1903, in Colorado. **Cap.**, \$500,000; increased, 1909, to \$1,000,000; shares \$1 par.

Property: comprises about 7,500 acres, patented, half freehold and half under bond and lease. Claims are 30 miles from a railroad, stretching for 8 miles along Coyote creek, from Mora river to the adjacent mountains, showing a series of 3 parallel cupriferous beds of slate and arenaceous shale, alternating with limestone, having an approximately N.-S. strike. The lands are said to include coal, limestone and iron ore deposits.

Geology: there are 3 main beds, of 3 to 8' claimed average thickness, with 3 minor beds, said to show considerable chalcocite, claimed to give average assays of 8 to 17% copper, with an estimated average tenor of 6%. The company's "expert," Prof. Tyler, is said to have estimated the values of its orebodies, to depth of 350', at \$45,000,000. Though the surface showings are said to be attractive, the geological character of the deposit does not warrant a belief that the property will ever support such a statement.

Development: by shallow pits, with a 50' shaft and several tunnels, longest 650'; with about 4,000' of workings.

Marcus Finch, sec.-treas., writes in May, 1917: "We refuse to give you any facts in relation to our property, believing you to be incapable of publishing a fair, unbiased statement of facts." Our readers know that the Handbook publishes absolutely unbiased and fair reports and may draw their own conclusions from Mr. Finch's attitude and his record.

The Republic mine at Hanover is reported, 1917, to be developing a splendid orebody of high-grade zinc-blende on the 100' and 150' levels. This mine is still a prospect, but a good one.

TRES HERMANAS ZINC MINE

NEW MEXICO

See Azure Mining Co. under Grant County, N. Mex.

OTERO COUNTY

Includes Highrolls, Jarilla (or Brice, Oro Grande, Silver Hill) and Tularosa districts.

BOSTON & BRICE COPPER CO.

NEW MEXICO

A reorganization of the Jarilla Consolidated Copper Co. Mine at Brice, Otero Co., N. M.

Officers: E. E. Locklin, pres.; W. W. C. Spencer, treas. and gen. mgr.; with Clinton Gowdy, G. E. Moffett and John Colthrop, directors.

Inc. 1917, in New Mexico. **Cap.**, \$2,000,000; shares \$1 par; fully paid and non-assessable; issued, \$1,000,000. Annual meeting, first Monday in May.

Property: 40 claims, about 800 acres, in Jarilla (Silver Hill) district, Otero Co., N. M., carrying sulphide ore in contact deposits between limestone and monzonite porphyry. Vein said to be 3 to 30' wide, 300' to a half mile long, and proven to 170' depth, averaging 3 to 5% copper, 2 oz. silver and \$1 gold per ton.

Development: by 5 shafts, deepest 172', and the Harvey tunnel, 165' long.

Company is a merger of and holds the properties formerly owned by the Eureka Mines Cons. Co., Boston Jarilla Copper Co., Amarillo Mining Co. and Eureka Placer Mining Co., whose combined capitalization of \$8,000,000 is reduced to \$2,000,000.

BY-CHANCE COPPER CO.

NEW MEXICO

Owned by Jarilla Copper Co., which see.

EXCELSIOR MINING & DEVELOPMENT CO.

NEW MEXICO

Property: near Orogrande, Otero Co., N. M., includes the Nashville

and Three Friends claims, said to carry a 4' vein of 4% silver-copper ore, also lead carbonate up to 50% in tenor. Controlled by Ben L. Farrar and associates of El Paso. No recent returns. Probably dead.

GARNET COPPER CO.**NEW MEXICO**

Address: Ohaysi, N. M.

Officers: James H. Parker, pres., and C. Jungk, sec.

Inc. in New Mexico, in 1916. Cap., \$60,000; shares \$1 par.

Company operates the Garnet, Mae Belle, James Fisk and Shoo Fly mines at Ohaysi, Otero Co., N. M.

Development: deepest shaft is down 450'. The deposit occurs in garnet-lime zone of altered sedimentaries at porphyry contact, and ore contains copper and gold values. Ore is sent to the El Paso smelter. From 25 to 30 men are employed.

IRON KING MINE**NEW MEXICO**

Operated by the Oro Iron Co., which see. Oro Grande, Otero Co., N. M.

JARILLA CONSOLIDATED COPPER CO.**NEW MEXICO**

Has been reorganized under name of Boston & Brice Copper Co., which see.

JARILLA COPPER SYNDICATE, INC.**NEW MEXICO**

Brice, via Oro Grande, Otero Co., N. M.

Officers: R. B. Hutchinson, pres.; J. J. Mundy, v. p.; T. B. Rains, sec-treas. and acting mgr.

Inc. July, 1912, in Arizona.

Property: the By-Chance group comprising the Stokes, Butterfly, Buckeye and By-Chance claims, all owned outright, is in the Jarilla district, 4 miles from Oro Grande on the El Paso & S. W. railroad. District shows Paleozoic limestone and shale cut by intrusive masses of monzonite porphyry. The By-Chance claim, the only one operated, has a contact metamorphic deposit of chalcopyrite-hematite-garnet ore lying alongside of a porphyry mass with ore along a fracture zone in the limestone.

Development: includes 150' vertical working shaft with a level at 86' on which the blanket orebody, 12 to 30' thick, has been stoped. A 60' winze from this level is reported to show a second and lower orebody estimated to have an average assay value of 3% copper, with streaks of copper glance running up to 30%.

Production: to Oct. 1, 1913, 6,000 tons of ore shipped to El Paso and Douglas, averaging 2% copper and \$2 gold per ton. Shipments to middle of 1914 average 600 tons monthly with returns which just about covered development and operating expenses. Operations resumed late in 1915. No later information.

LA. LUZ COPPER CO.**NEW MEXICO**

La Luz, Otero Co., N. M.

Officers: J. C. Yoes, pres.; W. T. Fulton, v. p.; Jas. G. Barrett, sec-mgr.; Otto Sergeant, treas.; with G. W. Wilson, directors.

Inc. Feb. 1, 1915, in New Mexico. Cap., \$250,000; shares \$1 par. Annual meeting April 1.

Property: 8 claims, 160 acres, about 4½ miles N. E. of La Luz, said to carry a vein 7' wide, averaging 6% copper with small gold and silver values. No development done, but management plans driving a tunnel.

Letters returned, 1917. Property probably closed down.

LUCKY GROUP**NEW MEXICO**

M. D. Gaylord, mgr., Brice, via Oro Grande, Otero Co., N. M.

Property: the Lucky, May, Copper King and Lincoln claims in Jarilla district said to carry malachite ore a few inches to 3' thick in bedding

planes and along seams and cross fractures. The ore averages 7% copper. A chimney of ore 50' wide is said to carry \$4 to \$11 per ton in gold, largely free.

Development: by tunnel, exposing several orebodies at 300' depth. In Sept., 1913, an experimental plant of the Dawson patent process was installed at the mine and a tramway was constructed, 1914.

Production: at the rate of 50 tons per day carrying 2 to 5% copper and \$3.50 to \$10 gold with a bonus of \$2 for iron and lime. J. R. and H. D. Darroch reported to have bought a half interest in the mine. Employed 15 men. No 1917 returns.

ORO IRON CO.

NEW MEXICO

Address: Ohaysi, Otero Co., N. M.

Officers: Winchester Cooley, pres.; T. M. Wingo, sec.; J. H. Parker, gen. mgr.; Edward Salveson, supt.

Cap., \$20,000; shares \$1 par.

Property: the Cinco de Mayo, Iron Duke, Iron King, Iron Queen, Iron Mask, and Laura claims at Ohaysi developed by surface workings. Extracting hematite and magnetite iron ores.

Equipment: Chicago Pneumatic compressor and 5 drills. From 50 to 100 men employed.

OTERO COPPER CO.

NEW MEXICO

Brice, via Oro Grande, Otero Co., N. M.

Property: the Garnet mine group, showing deposits of copper-gold ore in fissures, replacements and contact deposits near monzonite porphyry.

Development: by 500' shaft with an ore-shoot on the 230' level said to run 5% copper and \$6 gold. The mine is equipped with a gasoline hoist.

Property reported, Sept., 1913, under bond and lease to an English syndicate, represented by L. Maurice Cockerill, with J. W. Camphouse in charge as manager.

Letters returned unclaimed, 1917, from former address.

SACRAMENTO COPPER CO.

NEW MEXICO

Address: 310 Two Republics Bldg., El Paso, Texas. **Mine office:** D. C. Sutton, mgr., Tularosa, N. M.

Officers: Ed. Mechem, pres.; Eli Knight, v. p.; R. B. Rawlins, sec.-treas., with W. P. Stiles, T. J. Stafford and J. M. Gale, directors.

Inc. March 28, 1916, in New Mexico. **Cap.,** \$750,000; shares 50c par; non-assessable; 250,000 issued.

Property: 54 claims, 1,080 acres, 6 miles N. E. of Tularosa, N. M., covering Copper Basin, at head of Coyote creek, at base of White Mtns.

Development: by churn drill work, in Sept., 1917, 2 churn drills were operating. It is said that at a depth of 100' copper ore was cut and 34' of ore passed through, assaying 1 to 7%; at 400' there was 10' of 2 to 9% ore. Whole area is to be drilled before a mine equipment is ordered. Company has built a camp, sunk various test pits and cuts, sunk a 200' incline, still being deepened, and owns and operates a Cyclone drill.

TULAROSA COPPER CO.

NEW MEXICO

Office: Tularosa, N. M. **Mine office:** Bent, Otero Co., N. M.

Officers: E. P. Kern, pres.; H. E. Forrester, v. p.; G. B. Bent, sec. and gen. mgr.; W. F. Drake, treas., with J. A. Thatcher, A. J. Merrill and P. M. Lynch, directors.

Inc. March 5, 1905, in New Mexico, as successor of Tularosa Mining & Milling Co. **Cap.,** \$5,000,000; shares \$5 par; issued, \$3,500,000. Stock listed on New York curb. Registrar & Transfer Co., New York, transfer office.

Property: 807 acres, 307 acres patented, at Bent, on the Tularosa river. Mine is 12 miles N. E. of Tularosa on the E. P. & S. W. R. R., about 100 miles N. E. of El Paso, Texas.

Geology: the property is underlaid by a flat sheet of diorite resting on quartzite and covered in general by the basalt sandstone of the Red Beds of the region. This diorite outcrops at the Virginia mine, as the company's workings are called, and dips gently in every direction away from this point. The ore is found in the uppermost part of the diorite, which is much altered to a depth of 35 to 55' below its surface. This ore bed shows lenses of glance, 2 to 18" wide, running in all directions, which together with stringers and veinlets of ore, make a stockwerk proved to be ore-bearing over an area 200' wide and about 1,200' long. The altered rock between the lenses also carries disseminated copper glance and the ore as a whole averages $2\frac{1}{2}\%$ copper; 30 to 55' below the diorite surface, the rock is fresh except along fractures; stringers of ore occur, however, at depths of several hundred feet.

Development: at the Virginia mine there is an open pit 60x120' across and 35' deep which is opened on the richest part of the deposit. The 1st level corresponds to the bottom of the pit; the 2nd level is 25' deeper. These workings are said to block out 85,398 tons of ore in an area of 105x180' in extent. Twelve diamond-drill holes from 88 to 400' deep prospect the ground, and the results form the basis for an estimate of 800,000 tons of indicated ore of an average value of $2\frac{1}{2}\%$ copper.

Property was to be drilled in 100' squares and the limits of the orebody fully determined. One drill hole encountered 136' of ore at a depth of 300'.

Equipment: includes a 12,000' power ditch with hydro-electric plant, consisting of Platt-Francis turbine, alternating-current generator and complete electrically-driven concentrating plant.

The mill was remodeled and enlarged to 300 tons capacity in 1912, new rolls, a hydraulic classifier, another Wilfley table and 5 No. 3 Deister slime tables being added under the supervision of Godfrey D. Doveton. It is said that about 7,000 tons of ore was run through the 30-ton experimental plant in the 4 years ending July 1, 1910, giving a return of 221,230 lbs. fine copper, a net return of almost exactly 1.5% copper. The mill put 15 into 1, giving concentrates said to average 37% in copper tenor, with about 1 oz. silver per unit of copper, but the figures indicate 25% copper tenor for concentrates, if made at the ratio named.

In a circular published by H. E. Thompson & Co., 25 Broad St., New York, it is stated that Tularosa has all the potent essentials to make just as great and valuable a property as Chino, Ray, Inspiration and Miami; and is today practically the one big, undeveloped porphyry copper area that shows the existence of a wonderful orebody that needs only development, which is being aggressively pushed.

Compared with other deposits of similar character, this one is, in our opinion, small and the ore bed thin, averaging perhaps 35', while the ore reserves are not large enough to compare with those of any of the copper porphyries. The property does not warrant a large mill.

The orebody may, however, extend over a greater area, and a drilling campaign should be made. The new parties in control have had wide experience in mining and possess ample means to test the property thoroughly.

ZORO GOLD & COPPER CO.

NEW MEXICO

Address: G. E. Moffett, supt., Alamogorodo, N. M.; E. B. McClintock, pres., El Paso, Texas.

Inc. 1916, in New Mexico. **Cap.**, \$250,000; shares \$1 par; non-assessable; 140,000 issued.

Property: 3 claims, 55 acres, in Silver Hill district, Jarilla mountains, Otero Co., N. M., said to show a contact deposit in limestone. Ore carries 2.5% copper, 0.1 oz. gold and 1 oz. silver.

Development: about 1,200' of tunnels.

Production: lessees in 1916 mined ore containing 120,000 lbs. copper.

QUAY COUNTY

RED PEAKS COPPER CO.

NEW MEXICO

Address: Norton, N. M.

Officers: W. P. McCall, v. p.; D. F. Thomas, sec.-treas.; with J. E. Whitmore, W. S. Townsend, J. Parker and Benham Cain, directors. J. S. Thornton, mgr.

Inc. Oct. 3, 1916, in New Mexico. **Cap.**, \$1,500,000; shares \$1 par; about 800,000 shares outstanding.

Property: 17 claims, 340 acres in Cap Rock district, 30 miles S. E. of Tucumcari, reported to carry a disseminated deposit of oxidized copper ore, with 1.1 to 1.4% copper. The mine is developed by open cuts and will be mined by steam shovel. A 1,000-ton leaching plant is planned for 1918.

A very remarkable and ridiculously amusing "report" on property by Jos. W. Boileau, who is said to be a "metallurgical engineer and geologist," states that the ores carry 2½% copper, 20% nickel and 17% aluminum and that "volcanic bombs (rich in copper nickel ore)" abound over the property. Unfortunately such crass statements, with accompanying piffle, are taken seriously by men not versed in mining.

RIO ARRIBA COUNTY

ADMIRAL GOLD AND COPPER MINING CO.

NEW MEXICO

Idle. Office: Tusas, Rio Arriba Co., N. M. G. F. Hall, mgr.

Inc. 1900, in New Mexico. **Cap.**, \$500,000; shares \$1 par.

Lands: 8 claims, 160 acres, in the Bromide district, show 3 fissure veins carrying silver, copper and gold ores, opened by 3 shafts, deepest 150'. Inactive owing to lack of funds.

TUSAS PEAK GOLD & COPPER MINING CO.

NEW MEXICO

Idle. Office: Portage, Wis. Mine and mill at Tusas, Rio Arriba Co., N. M. R. H. Owen, pres.; R. J. Rosenfeld, sec.-treas.

Inc. April 28, 1902, in New Mexico. **Cap.**, \$2,000,000; shares \$1 par. Bonds, \$100,000 authorized; issued, \$16,000.

Property: 13 claims, 230 acres, and a 5-acre mill site, in the Bromide district, 14 miles W. of Tres Piedras, and 10 miles from a railway. Principal development is on the Tampa mine, having a 13' vein of copper ore, with a 5' paystreak said to average 7.5% copper, balance of ore being of concentrating grade. The Tampa has shafts of 80', 85' and 425', with about one-half mile of workings, showing ore reported by company to assay 5 to 44% copper, 1 to 4.5 oz. silver and \$1.20 to \$3.80 gold per ton, with some ores assaying up to 2.3 oz. platinum per ton and carrying some molybdenum. The main shaft shows ore of good average tenor, but in small quantities, and the management believes that it will be necessary to sink to 500 or 1,000' depth in order to develop good orebodies.

Equipment: includes a hoist and 3-drill air compressor, with an hydraulic dam on Tusas creek, sawmill and a 40-ton leaching plant, planned to treat oxidized ores, but not in operation.

SANDOVAL COUNTY

COSSACK MINING CO.

NEW MEXICO

Property: Lone Star Group, formerly owned by Navajo Gold Mining Co., near Bland, Sandoval Co., New Mexico. A. J. Underwood, supt.

Ore: gold-silver, in veins, running nearly N.-S. and from 12 to 40' wide. Ore averages \$6 per ton in gold and is amenable to cyanide treatment.

Development: about 5,000' of workings, including crosscut tunnels.

Equipment: 100-ton cyanide plant and concentrating mill. No recent returns.

SEÑORITO COPPER CORPORATION

NEW MEXICO

Office: 34 Pine St., New York. **Mine office:** Señorito, Sandoval Co., New Mexico.

Officers: H. B. Walmsley, pres.; W. E. Greenawalt, v. p.; J. A. Kern, sec.; H. W. Webb, treas. J. T. McLaughlin, supt.; W. L. Bain and Oswald Becker, cons. eng.

Inc. Nov., 1916, in New Mexico. **Cap.**, \$1,250,000, in \$1,000,000 common shares at \$1 par, and \$250,000 cumulative 8% pfd. shares at \$10 par, convertible on call at par to common.

Property: 22 claims, 400 acres, in the Nacimiento district, Jemez mountains, 2½ miles from Señorito, N. M. The Copper Glance and Conglomerate No. 1 and 2 are the most important claims.

Development: considerable tunneling, etc., in 1903, exposing a large deposit of low-grade ore. A U. S. Geological Survey report in 1910 said that the Copper Glance claim ore consisted of sulphides, carbonates and silicate of copper in white, to reddish sandstone or grit. The ore beds aggregate about 100' thick. The average ore will probably be low grade. The same applies practically to the Conglomerate claims, where there was said to be 300,000 tons of 3% ore.

Leaching trials were made on the ore by W. E. Greenawalt of Denver, producing copper at under 5c per lb., including mining and milling. An array of metallurgical talent watched the tests, according to names given in a prospectus. The property was sampled in Oct., 1916, by R. S. Rainsford for J. G. White & Co., resulting in a mill being built with a capacity of 250,000 lbs. of 99% copper per month. Taking copper at 20 to 35c per lb., it was assumed that the profit would be 10 to 25c, or \$300,000 to \$750,000 per year, allowing for a 10c cost, which is double that estimated. Property apparently has considerable merit, but it is in our judgment a mistake to figure on so low a cost of production for any considerable period of time.

SAN MIGUEL COUNTY

PECOS COPPER CO.

NEW MEXICO

Office: the Arcade, Cleveland, Ohio. **Mine office:** Cowles, San Miguel Co., N. M.

Officers: Alfred H. Cowles, pres.; Sewaren, N. J.; I. C. Gifford, v. p.; Frederick W. Swan, sec.

Inc. 1904, in Michigan. **Cap.**, \$100,000; shares \$25 par; fully issued and fully paid. The company has a floating debt of \$65,000, owed to stockholders, of whom there are only 5, the company being a close corporation. Mine holdings under lease, since 1915, to Pecos Mines Co.

Property: 15 claims, 268 acres, and 552 acres including valuable coal veins and placer ground, all patented, in the Hamilton district, 12 miles

from Santa Fe. Holdings include water rights to the Pecos river for 2½ miles, with 2,000 h. p. available for development.

Lands show lower Carboniferous limestone. The property carries a contact "vein," vertical, 200' wide, outcropping for 750' and lying alongside an altered schistose diorite. The band of shipping ore is 9' wide with further width of concentrating material. The ore, being complex, is difficult of treatment.

Development: includes 370' Evangeline shaft. Report by W. E. Burlingame, 1907, claims 168,304 tons blocked out on four levels. In 1915-17 much new development has been done by lessees, and the ore reserves are reported to be more than double those of 1907, the pay streak averaging 50' in width.

Equipment: includes a 165 h. p. steam plant, with 2 hoists, 1 good for 600' depth, and a 3-drill Rand compressor.

PECOS MINES CO.

NEW MEXICO

Operating under lease the property of the Pecos Copper Co., which see.

ROMERO MINING CO.

NEW MEXICO

Address: H. C. DeBoca, Las Vegas, N. M.

Officers: T. W. Hayward, v. p.; H. C. DeBoca, sec.; J. M. Cunningham, treas.; with W. G. Haydon and H. W. Kelly, directors.

Cap., \$250,000; shares \$1 par; non-assessable; all issued.

Operations in 1916 cost \$1,500 for assessment work only.

Property: 14 claims in El Porvenir district, San Miguel Co., N. M.

Development: 800' of tunneling, etc., exposed molybdenite in pockets. The Mo S₂ is closely associated with chalcopyrite. Mine is described in Bull. 111 of U. S. Bureau of mines.

SANTA FE COUNTY

ROCKY MOUNTAIN MINES CO.

NEW MEXICO

Office: care G. L. Brooks, pres., Albuquerque, N. M. Mine at Cerrillos; Santa Fe Co., N. M. H. O. Brooks, sec. and mill supt., and E. L. Grose, directors.

Inc. Apr. 4, 1913, in N. M., to work the Tom Payne mine and other properties. **Cap.,** \$1,000,000; shares \$1 par; non-assessable; 470,000 issued.

Property: 9 claims, 100 acres, in the Cerrillos district, held under lease and bond. Claims show orebodies in zone of crushed monzonite and andesite, averaging 2-5' in width. Vein said to be continuous for 700'.

Development: by former companies, includes 3 shafts, 60 to 175' deep, and 3 drift tunnels, 317, 450 and 550' long, said to show ore carrying 0.30% copper, 8% lead, 14% zinc, 3 oz. silver and \$0.03 gold per ton. The Tom Payne claim is the one now worked steadily, also the Eureka claim near Central, N. M.

Equipment: includes a 12 h. p. hoist, several buildings and concentrator with 1 Dodge crusher, 4 Wilfley tables, 2 slime tables. Smelter, 6 miles from the mine, has not been operated by present company, but mill has worked continuously since July 1, 1915. Lead concentrate is shipped to Illinois smelters and zinc concentrate to Kansas and Oklahoma plants.

SAN LAZARUS MINES CO.

NEW MEXICO

Idle. Office: 2837 Hennepin Ave., Minneapolis, Minn. Mine near San Pedro, Santa Fe Co., N. M.

Officers: R. C. Thompson, pres.; Dr. Edw. Gorgen, v. p.; L. J. Hemen, sec.; Clarence R. Thompson, treas.; Geo. W. Churchill, gen. mgr.

Inc. March 9, 1904, in New Mexico. **Cap.,** \$2,000,000; shares \$1 par; non-assessable; issued, \$1,500,000.

Property: 7 patented claims, 125 acres, shows a contact deposit between syenite and limestone, of 3' average width, N.-S. strike and dip of 15 to 25°. This deposit carries copper carbonates and chalcopryite ore estimated by the management to average 3 to 12% copper, without lead or zinc, 15 oz. silver and \$2 to \$6 gold per ton. Lands are in 3 groups, 2 miles from San Pedro, adjoining the Santa Fe Gold & Copper Mining Co.

Development: by a 405' incline shaft, and tunnels of 300', 350', 200' and 450', estimated to show 1,000 tons of ore.

Equipment: includes a small steam plant and 20-ton concentrator with Dodge crushers, Huntington mill and 1 Wilfley table. Have no recent information from company, save as to area of property.

SANTA FE GOLD & COPPER MINING CO. NEW MEXICO

Office: 11 Broadway, New York. **Mine office:** San Pedro, N. M.

Officers: E. J. Macnamara, pres.; Edw. H. Eckhoff, treas., with Chas. N. King, Ernest W. Brown, M. Kaufman, Frederick C. Fischer, W. B. Anderson, E. C. Westervelt and Oscar B. Van Sant, directors.

Inc. Jan. 25, 1899, in New Jersey. **Cap.,** \$2,500,000; shares \$10 par. Old Colony Trust Co., Boston, transfer agent; State Street Trust Co., Boston, registrar. Shares listed on Boston Stock Exchange and New York Curb. Annual meeting, fourth Tuesday in January.

Property: the San Pedro mine, 36,400 acres land, consisting of 3,400 acres of copper claims, and 33,000 acres of miscellaneous lands, comprising the San Pedro Grant in Santa Fe, Sandoval and Bernalillo counties, New Mexico. The San Pedro mine is 17 miles from Stanley on the New Mexico Central railroad.

Development: by a single 200' shaft and 1,600' adit on a blanket vein of 150' average width dipping at an angle of less than 15°, about half the orebody being workable. Ore as smelted averages 3% copper. The metal occurs as chalcopryite, in a garnet and quartz gangue and is almost self-fluxing.

Equipment: includes a steam plant with hoist and 15-drill air compressor. The smelter at the mine has one 125-ton blast furnace, burning Colorado coke and producing matte of about 50% average copper tenor, which is shipped to El Paso, Tex., and Omaha, Neb., for conversion.

Employs 350 men, a good class of Mexican labor. Production started Jan. 1, 1901, but smelting has been suspended many times since that date with mining development alone carried on until copper prices warranted the resumption of ore extraction and smelting operations.

Production:

	Copper Lbs.	Silver Oz.	Gold Oz.	Cost per lb. Copper (a)
1916.....	1,492,472	25,593	3,179
1915 (c).....	1,747,090	24,570	2,104	10.6c
1913.....	1,757,315	35,763	1,150	
1912 (b).....	801,895	13,133	494
1907.....	1,223,457	17,625	786	14c
1903.....	370,483

(a) After crediting gold and silver. (b) Last 6 months. (c) May 24 to Dec. 31, inclusive.

Operations were suspended in 1914 at the inception of the European war; resumed May, 1915.

The property possesses a large tonnage of quite low-grade ore, besides a limited tonnage of smelting ore, recently developed. Company has no outstanding indebtedness, and can operate when copper prices are above

12c a lb. With the metal selling at a lower figure it is good policy to close down and conserve the ore supply.

In Feb., 1917, smelting operations were suspended as the ore was too poor. Development is being continued, and the future depends on results below the 500' level.

SIERRA COUNTY

ANIMAS PEAK GOLD MNG. CO.

NEW MEXICO

Property: at Hillsboro, Sierra Co., N. M., formerly owned by the defunct Hillsboro Cons. Mng. Co. of odious fame. Present management, in 1915, planned refinancing company and development along same lines in accordance with available funds. Work on 200' double compartment shaft started March, 1915. On the 200' level an oreshoot, 3' wide, is said to average \$35 per ton in gold. No recent returns secured.

BLACK RANGE TUNNEL & MINING CO.

NEW MEXICO

Address: E. D. Randolph, sec.-gen. mgr., 219 Main St., Lafayette, Ind.

Officers: H. E. Black, pres.; A. O. Behrn, v. p.; W. C. Mitchell, treas., with T. F. Gaylord, B. L. Phillips and Martin Hardsocg, directors; C. B. Hullinger, supt., Chloride, Sierra Co., N. M.

Company presumably a reorganization of the Black Range Copper Mining Co. and Black Range Reduction Co. (see Vol. X), both now dead.

Property: the Silver Monument mine, showing a vein of silver-copper ore.

Development: 2,300' tunnel and shaft. Management working in cross-cut on 300' level, 1916, where large flow of water was encountered. Main vein has apparently not yet been found. Equipped with steam plant, Rand compressor and a 25-ton concentration mill.

EL CLIFF MINING CO.

NEW MEXICO

Probably dead. Mine at Hermosa, N. M. See Vol. XI, Copper Handbook.

GOLD BELL MINING CO.

NEW MEXICO

Address: Deming, N. M.

Inc. 1916, to develop a silver property N. E. of Hillsboro, Sierra Co., N. M.

ILLINOIS & SARATOGA MINES.

NEW MEXICO

Address: C. T. Brown, Socorro, N. M. Mine at Kingston, Sierra Co., N. M.

Nothing has been done on these mines for several years, but work may be resumed during 1918.

LAS ANIMAS PEAK GOLD MINES CO.

NEW MEXICO

Office: 1516 No. American Bldg., Chicago, Ill. **Mine office:** Hillsboro, N. M.

Officers: Hon. E. W. Kirkpatrick, pres.; R. Liebman, v. p.; C. B. Van Deman, sec.-mgr.; W. A. Nason, treas.; with L. E. Marvin, W. McCarty Moore and J. H. Palmer, directors. E. B. Van Deman, supt.

Inc. 1914, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; 450,000 issued. Annual meeting third Wednesday in January.

Property: 12 claims, unpatented, 240 acres, 4 miles N. of Hillsboro, Sierra Co., N. M., shows gold-silver ore in a fissure vein, said to be 3-12' wide, striking N. and dipping 70°. Developed by several shafts to depth of 435'. A new 2-compartment shaft has been sunk and management estimates 100,000 tons of ore blocked out.

Equipment: includes 50 h. p. steam hoist, Cameron pump and compressor. Old milling plant dismantled and new mill will be erected with flotation process, 1917.

Property was a good producer under former owners, the Philadelphia M. & M. Co., which went into bankruptcy in 1907. Litigation followed and mine remained idle until acquired by present company in 1914. Management plans further extensive development work.

MONITOR SILVER, LEAD & ZINC MINING & MILLING CO.

NEW MEXICO

Offices: 115 Broadway, New York, and McLaughlin Bldg., Santa Fe, N. M.

Officers: Chas. E. Berner, pres.; Chas. W. Berner, v. p.; Gustave F. Ettensperger, sec.-treas.; with Sidney H. Hirsch and Francis C. Wilson, directors. Ricketts & Co., New York, mgrs.

Inc. Feb. 5, 1916, in N. M. **Cap.**, \$1,000,000; issued \$800,000; shares \$1 par. Security Registrar & Transfer Co., New York, transfer agent and registrar. Listed on New York curb.

Property: 500 acres in Hermosa, Palomas mining district, Sierra county, N. M. During 1916 company examined and developed under working options 8 out of 22 properties submitted. On the Antelope \$60,000 was spent for 1,260' of exploration with 232' of work in ore, and plant was overhauled.

Equipment: includes a concentrating plant, hoist, compressor, saw-mill, steam power and houses.

SOCORRO COUNTY

Includes Cooney, or Mogollon, Magdalena, or Kelly, Mill, or Hop canyon, Rosedale, San Andreas, San Lorenzo, Silver Mountain and Socorro districts.

ANACONDA SKOOKUM COPPER GROUP

NEW MEXICO

Address: c/o E. H. Rodgers, 310 West Missouri St., El Paso, Texas. Owned by E. H. Rodgers, L. H. Davis and J. F. Dowling.

Property: 4 claims, unpatented, located at north end of the San Andreas Mts., Socorro Co., N. M., 26 miles west of Oscuro, on the E. P. & S. W. R. R. Claims are said to cover 6,000' of a quartz lode in granite, varying in width from 20' to 100', and to show disseminated copper sulphide ore, assaying 2½% copper, 1½ oz. silver and \$2 to \$3 gold per ton.

Development: Opencuts and pits along the strike of the lode. Churn drilling and 100' tunnel are planned.

BEARUP GROUP

NEW MEXICO

Owned by D. E. Bearup, Cooney, N. M. Located in the Mogollon-Cooney district, Socorro Co., N. M.

Claims: 4 on Gold Hill and 9 in western part of district. The Gold Hill claims show the Maud S. lode. Vein where opened has width of 2' to 13', and is said to assay \$12 per ton. There is also a narrow high-grade streak.

Development: by tunnels, longest 600'. Total amount underground workings, 1,500'. Small shipments have been made of ore extracted during development work, 50 tons said to assay \$98 to \$235 per ton and 50 tons shipped to concentrator said to assay \$21 per ton. There is a small 2-stamp mill and gasoline engine on the property. Employs 6 men. No recent returns secured.

CALUMET-NEW MEXICO MINING CO.

NEW MEXICO

Office: 154 W. Randolph St., Chicago, Ill. Mine office: Magdalena, Socorro Co., N. M.

Officers: Alex. McCallum, pres.; Alpheus McCallum, v. p.-treas.; J. A. Pement, sec.; preceded with Jacob Ehrenberg, directors; J. A. McCallum, supt.

Inc. in New Mexico. **Cap.**, \$1,000,000; shares, \$1 par; outstanding 908,609 shares.

Is a 1915 reorganization of Calumet Montana Mining Co. (See Vol. XI.)

Property: 12 claims, 10 patented, 240 acres, in Magdalena mining district, 2 miles from a railroad, and 5 miles from Magdalena, shows ore assaying up to 21.2% copper, 20 oz. silver and \$19.84 gold per ton, with occasional lead and zinc.

Development: by tunnels with about 3,000' of openings. Company also controls 3 claims in the Pinos Altos mining district, N. M., developed by 570' of shafts and drifts on a fissure vein of ore said to assay 36% zinc, 9% lead, 9 oz. silver and .4 oz. gold. Company did 600' of development work in 1916. Selected ore is being shipped.

CLEVELAND & WEATHERHEAD CO.

NEW MEXICO

Address: Mogollon, Socorro Co., N. M. Weatherhead Bros. of Cleveland, O., and E. C. Cleaveland, Mogollon, incorporators.

Property: the Deadwood and Sunburst mines and mill, near Mogollon, showing the Queen, Deadwood and Confidence-Last Chance veins which average 8' to 10' in width, extend for 2,500' through the claims and carry gold-silver ore of milling grade.

Development: by 500' shaft with total workings of 5,000', which expose 4 ore shoots, 2 of which are 300' long, the others not yet determined.

Equipment: includes 60-ton mill with concentration and cyanide equipment, De La Vergne engine, electric hoist, etc.

Production: to date totals over \$300,000.

DEADWOOD MINING & MILLING CO.

NEW MEXICO

Mogollon, Socorro Co., N. M. Earl C. Cleaveland, gen. mgr.

Ore: gold-silver occurs in 2 veins, said to be traceable for 3,000' and to average \$10-\$12 per ton.

Developed: by 500' shaft. Mine is equipped with 70-ton concentration mill and cyanide plant. Idle.

DIVIDEND MINING & MILLING CO.

NEW MEXICO

Moved from Journal Bldg., Boston, Mass., left no forwarding address. Mine near Estey, Socorro Co., N. M.

Officers: J. M. Bryson, pres.-gen. mgr.; J. E. Simpson, v. p.; B. F. Coburn, sec.-treas.; preceding with F. B. Street, J. Wm. Rice, Samuel Porter, A. B. Spear, Jas. B. Putnam and Halbert E. Parkhurst, directors; W. E. Morong, supt., at last accounts.

Inc. Sept., 1902. **Cap.**, \$3,000,000. Authorized a \$150,000 five-year 7% bond issue.

Property: 2,000 acres, also coal lands about 16 miles distant. It has been claimed that about \$250,000 has been expended on the mine, which shows some sulphide ore, carrying good values in copper, with a little lead, and small values in gold and silver.

The company has been very free with "estimates" and promised that by merely producing 14,400,000 lbs. of copper yearly, millions of dollars could be earned. Company's advertising was indefensible, and the statement that "there has been no such opportunity for investment since the Calumet & Hecla and United Verde were first put on the market" leads to the conclusion that the promoters of the company were sadly lacking either in sense or truth. At last accounts was endeavoring to settle with bondholders by giving them the property.

ECONOMIC MINING & MILLING CO.

NEW MEXICO

George Hopkins, pres. and mgr., Carrizozo, N. M.; Ed. Monroe, sec.; A. V. Swearingin, treas.

Property:—7 claims, in White mountains, 8 miles east of Carrizozo. Ore carries copper with silver and gold values in iron gangue, averaging \$12 per ton. Developed by shafts, tunnels and open cuts, exposing ore-bodies of low-grade copper ore with gold values. Management plans sinking tunnel and acquiring adjoining properties, said to have promising showings of high-grade ore. No recent returns.

HEMBRILLO COPPER MINING CO.

NEW MEXICO

Mine in Socorro Co., N. M.

Officers: J. W. Eubanks, county surveyor, El Paso, Texas, pres.; W. M. Fly, Gonzalez, Texas, v. p.; H. C. Marks, sec.-treas.; John P. O'Connor, gen. mgr.

Inc. 1904.

Property: 12 claims, in Hembrillo canyon, on the eastern side of the San Andreas mountains, 35 miles W. of Tularosa, with a wagon road thereto, said to carry 3 strong veins with N.-S. strike converging to the S. The central or main vein is but a few inches wide at the surface, but widens to 6' in the shaft. Vein lies between quartz-porphyry and limestone and is said to have a nearly vertical dip.

Development: by the Platte crosscut tunnel 1,000' long, in April, 1914, which has cost over \$20,000 and has cut the vein 500' below the outcrop. Before starting this tunnel company sank numerous pits showing copper ore, and a 150' vertical shaft in which the vein is seen to carry oxide and carbonate ores that average 12% copper and has a little chalcopyrite in the lower workings. The heavy flow of water led to the abandonment of this shaft. A 10-ton shipment to El Paso smelter in 1914 is said to have assayed 24% copper and 4.6 oz. silver per ton.

Idle. No recent returns.

HOP CANYON MINING & SMELTING CO.

NEW MEXICO

Office: 154 West Randolph St., Chicago. **Mine address:** Magdalena, Socorro Co., N. M.

Officers: Alpheus McCallum, pres.; Elias G. Raffety, sec.-treas.; Oscuro, N. M.; above with Alexander McCallum and J. A. Pement, directors. J. A. McCallum, supt.

Inc. April, 1906, in New Mexico. **Cap.**, \$1,000,000; shares \$100 par; non-assessable; 8,852 shares outstanding.

Property: 11 claims, 220 acres, 3 miles from Santa Fe R. R., in the Magdalena mining district, shows a shear zone in rhyolite running N. 25° W., with steep dip N. E. Surface shows thin seams of oxidized ore, developed by 1,550' crosscut tunnel and shafts. Total amount of work is about 4,000'. A test shipment made to El Paso in 1915 contained 7.02% copper and 12.9 oz. silver. Company said to be clear of indebtedness and expected to ship ore in 1916. No later returns. Government report states conditions do not warrant the expectation of finding important bodies of ore.

KELLY MINE

NEW MEXICO

Kelly, Socorro Co., N. M. Owned by Tri-Bullion Smelting & Development Co.

MOGOLLON MINES CO.

NEW MEXICO

Address: Sidney S. Kidder, gen. mgr.; Chas. S. Phillips, mine supt., Mogollon, Socorro Co., N. M.

Officers: Frank H. Hitchcock, pres.; Alfred Levinger, sec.; J. H. Hoban, treas., all of New York City.

Directors: Frank H. Hitchcock, Eugene Meyer, Jr., and J. W. Sebinus. T. H. Leitch, chief accountant; A. H. Moulton, mill supt.

Inc. Dec. 6, 1912, in Maine. **Cap.**, \$1,778,410; all outstanding; shares

\$5 par. New York Trust Co., New York, registrar. Annual meeting, 2nd Monday in October. On June 30, 1915, the Mogollon Mines Co. absorbed the **Ernestine Mining Co.**, which was organized Nov. 18, 1902.

Gross earnings, 1916, \$396,213; operating expenses, \$343,205. Paid a 2% dividend in July, 1915; prior to this dividends had been suspended for some time, earnings have been devoted to development and betterment of property.

Property: 16 claims, 12 patented, 216 acres, at Mogollon.

Ore: gold and silver sulphide, in quartz veins in andesite and rhyolite, said to average \$12-\$15 per ton. Main vein, known as the Last Chance, strikes S. E.-N. W.; dips 60° to 70° and is 10'-26' wide.

Development: incline shaft 900' below main tunnel, which is 2,972' long; greatest depth of workings, 1,780'; underground workings total 27,131'; new work in 1916 totaled 2,290'; for 1917, to Aug. 1, 2,792'. Shrinkage stoping is used. Main workings are on Last Chance and Top claims.

Equipment: includes electric hoist; Ingersoll-Rand compressor; De La Vergne oil engines; electric power; 40-stamp mill and cyanide plant, capacity 160 tons daily.

Production: 44,904 tons of ore were treated, 1916, yielding 7,171 oz. gold and 371,350 oz. silver. High price of silver in 1917 made treatment of dump ore profitable. In 1917 to Oct. 1, mill treated 38,562 tons, yielding 268,179 ounces gold-silver bullion.

OAKS CO.

NEW MEXICO

Alma, Socorro Co., N. M. W. J. Weatherby, pres.; H. A. Hoover, sec. Earl C. Cleaveland, gen. mgr.

Dividends: four 1% dividends were paid on pfd. stock, Dec. 1, 1916; Jan. 1, Feb. 1, March 1, 1917. On April 1, 1917, a 1¾% dividend was declared, payable quarterly on pfd. stock.

Property: the Pacific, Hub and a portion of the Johnson groups, 500 acres, in the Cooney, or Mogollon district, about 80 miles by daily stage from Silver City, the nearest railway point. Also has a bond on 300 acres additional, including the Eberle, Deep Down, Maud S, Deadwood and McKinley groups.

The company is developing its mines and shipping ore, also driving the Oaks tunnel, which will start at Mineral creek and crosscut the Gray Hawk, Socorro, Pacific and other veins in its 9,800' length. It will be used as a main drainage and haulage tunnel for the district. The Eberle, McKinley, Maud S, Deep Down and Johnson No. 7 mines are developing and ore is shipped weekly to the Socorro mill.

OZARK SMELTING & MINING CO.

NEW MEXICO

Office: 601 Canal Road, Cleveland, Ohio. **Mine office:** Magdalena, Socorro Co., N. M. Philip Argall & Sons, of Denver, Colo., cons. engrs. Smelter: Coffeyville, Montgomery Co., Kans.

Officers: Geo. A. Martin, pres. and gen. mgr.; Oliver Box, asst gen. mgr.; L. P. Pressler, supt.; W. S. Stevens, mill supt.; W. E. Corts, smelter supt. The company is a subsidiary of the Sherwin-Williams Paint Co.

Property: includes the Graphic mine, 30 claims, 227 acres, with total holdings of 800 acres, in the Magdalena district, showing limestone, shale and quartz, carrying contact ore deposits between limestone and schist, of about 50' proven width, 500' length, and known depth of 500'. The upper workings show large quantities of lead and zinc carbonates, ores being mainly smithsonite and sphalerite, with some cerrusite and argentiferous galena, and occasional cuprite and native copper. Ores are mainly low in grade, with principal values in zinc. The ore-shoot, of about 500' length on the 7th, 8th and 9th levels, is about 100' wide on the 9th level.

Development: is by a 300' shaft, and two 1,500' cross-cut tunnels, with about 8 miles of workings, the lower levels showing a slightly argentiferous sulphide complex of zinc, lead and copper. Property regarded as one of the largest zinc deposits of America.

Equipment: 125-ton mill was erected, 1912, to treat the large tonnage of low-grade complex zinc-lead-iron sulphide ore already developed, by the froth flotation process, using it as an adjunct to older methods of concentration. A 50-ton mill does dry concentration on ores above 20-mesh, and wet concentration on ores below that size. Electric power is used. Employs 400 men.

Production: mainly zinc ore, is shipped to the works at Coffeyville, for the manufacture of lead and zinc oxides, as the base for pigments, of which the Sherwin-Williams Co., in control of this corporation, is one of the largest American manufacturers. Company also has an option on the Kelly mine at Kelly, N. Mex., owned by the Tri-Bullion Sm. & Dev. Co., and is working same with much success.

Lessees paying \$4,000-\$5,000 royalties monthly, 1917, and shipping 25 tons copper ore daily from the Kelly mine.

SOCORRO MINING & MILLING CO.

NEW MEXICO

Office: 200 Fifth Ave., New York. **Mine office:** Mogollon, N. Mex.

Officers: Wm. Childs, Jr., pres.; Harry Balfe, v. p.; Robt. T. Neeley, v. p.; J. Diehl Fackenthal, sec.; Adam K. Luke, treas.; with Wm. A. Barber, Henry D. Hotchkiss, R. E. Dowling, A. L. Williams, David Luke, directors.

Staff: W. Rowland Cox, cons. engr.; D. B. Scott, mgr.; G. C. Baer, supt. H. N. Reed, mill supt.

Cap., \$2,000,000; **par,** \$5.

Bought entire holdings of Mogollon Gold & Copper Co. for \$100,000 at public sale in Socorro, N. Mex., August, 1915. Sale ordered to satisfy judgment of \$416,626, obtained by Equitable Trust Co., New York, holders of bonds to that amount.

Property: 58 claims, partly patented, 1,100 acres, including the Cooney, Peacock, Little Charlie, Independence and Fluoride groups, sometimes known as the Silver Bar mine, in the Cooney district of the Mogollon mountains, 85 miles N. E. of Silver City, the nearest rail point. The Fanny is the principal mine.

The property shows porphyry and andesite, carrying the Fanny fissure vein of 5 to 10' average width, with a paystreak of about 3' average and 30' maximum width, having numerous narrow feeders, some of which carry high gold values. Ores include slightly auriferous and strongly argentiferous chalcopryrite, bornite and chalcocite, claimed to carry increasing silver values at depth, and the east vein has been said to show native copper at depth of 600'. The Cooney and Peacock mines are said to have produced \$1,250,000 worth of ore in the past.

Development: The company operates 3 mines, the Fanny, Johnson and Pacific. The Fanny mine has an 1,100' shaft and the Johnson mine a mile west has two 500' incline shafts. There are also various tunnels on the several groups with an approximate total of 30,000' of underground workings.

Reported in Sept., 1917, that high grade ore was being extracted from 1,100' level of the Socorro mine.

The Pacific mine was optioned to Socorro M. & M. Co. by the Oaks Co., 1916, and an aerial tram was erected to carry ore to the Socorro mill of 230 tons capacity.

Equipment: includes hoists, Imperial compressor, aerial tramway and

240-ton mill, with stamps, Huntingtons and Pachuca tanks. The power plant has 1,000 h. p. De La Vergne crude oil engine.

Recent production: 66,387 tons in 1914; 67,848 tons in 1915; 73,349 tons in 1916. Production in June, 1917, was 35,000 oz. of silver.

The silver mines at Mogollon are 75 miles from Silver City, the nearest supply point, but little information is available concerning them.

STEEPLE ROCK DEVELOPMENT CO.

NEW MEXICO

Out of business. Formerly at Steeple Rock, N. M.

Property: the Carlisle and Jim Crow groups, 33 claims, sold to George H. Utter, in 1914, who sold it 1915 to H. K. Welch and S. McKeever, of New York, who organized the Carlisle Dev. Co.

Mine shows big fissure vein, 20'-40' wide, developed to depth of 637'. Ore carries chalcopyrite, sphalerite and some galena. A \$150,000 Huff electrostatic plant is planned. Operating 1916.

TRI-BULLION SM. & DEV. CO.

NEW MEXICO

Office: 10 Wall St., New York. **Mine office:** Kelly; Socorro Co., N. M.

Officers: J. O. Wall, pres.; S. W. Traylor, v. p.; with G. C. Van Tuyl, Jr., W. B. Nash, H. V. M. Dennis, Jr., J. M. Henderson, A. S. Somers, S. F. Dominick, Gustavus Taylor and Frank Coenen, directors; D. O. Deyer, sec.-treas.

Inc., 1903, in Arizona. **Cap.**, \$5,250,000; shares \$5 par; in 50,000 participating cumulative 4% stock with 1,000,000 common; issued 6,700 shares preferred and 999,900 shares common. Listed on New York Curb. Empire Trust Co., New York, transfer office.

Property: includes the Kelly mine, for many years the company's principal asset, which is a zinc, lead and copper producer in New Mexico, operated since May 1, 1915, under lease by Ozark Smelting & Mng. Co. It is 2½ miles from Magdalena on the Santa Fe R. R. Also owns the Starlight group of copper claims in Arizona.

The Kelly mine, 350 acres, patented, is said to show veins of ore yielding lead and zinc carbonates in the upper workings, running from 25 to 30% lead with small silver values and 25 to 40% zinc. The sulphide ores occurring in depth, give average smelter returns of 25 to 35% zinc, 12 to 15% lead, ½ to 2% copper and 6 to 8 oz. silver per ton.

The Nit and Silver Bell groups were acquired in 1912. The Nit mine, adjoining the Graphic, has an underground connection with the Waldo mine of the Ozark Smelting & Milling Co. The workings of this mine disclose a 50' vein of 4.7 to 6% copper ore, 454' E. of the 215' shaft, in a crosscut from the bottom of a 45' winze sunk from the bottom level.

Since the Ozark Sm. & Mng. Co. took a lease on the Kelly mine, it has uncovered a fine body of zinc-copper ore in new ground. The Ozark Co., a subsidiary of the Sherwin-Williams paint manufacturers, owns and operates a 200-ton mill with flotation equipment.

The Tri-Bullion Co. suffered a loss of over \$32,000 from embezzlement by its former treasurer, 1913-15.

Property now in good hands, and with an able consulting engineer has a promising future.

TAOS COUNTY

BITTER CREEK MINING CO.

NEW MEXICO

Address: Taos, N. Mex.

Officers: Fred S. Lewis, pres.; Wm. T. Hinde, v. p.; Congdon C. Lowe, sec.-treas.-mgr.; with Wm. McKean and Alvin Burch, directors. L. O. Haberstich, supt., Red River, N. Mex.

Inc. July, 1916, in New Mexico. **Cap.**, \$1,000,000; shares \$1 par; 420,020 shares outstanding. U. S. Corporation Co., New York, registrar and transfer agents.

Property: 4 claims, 80 acres at Red River, Taos county, N. Mex., said to show telluride ore in fissure veins in andesite. Values are gold and silver.

Development: by prospect shaft and several shallow tunnels. Developing, October, 1917.

CHAMPION COPPER CO.

NEW MEXICO

Offices: 7 Government St., Kittery, Me., and 1853 Commonwealth Ave., Boston, Mass. **Mine address:** Copper Hill Box, Dixon, Taos Co., N. M.

Officers: A. Morandi Bartlett, pres.; Benj. B. Earl, v. p.; Arthur M. Cripps, sec.-treas.; preceding, with Ralph Thompson, Chas W. Kokerda, directors. Jas. A. Burton, gen. mgr., Dixon, N. M.

Inc. July 7, 1911, in Maine. **Cap.**, \$200,000; shares 10c par; full paid and non-assessable. Listed Boston Curb. Annual meeting March. Commonwealth Tr. Co.; Boston, transfer agt.

In report issued March 1, 1917, company reports assets of \$32,743 cash, \$136,302 in accounts receivable; \$2,159 as stockholders liability, and \$28,796 as cost of property, development and expenses to Dec. 31, 1916. Work at the mine was resumed March 6, 1915. In July, 1914, present corporation acquired the property at foreclosure sale for \$15,499.

Property: 5 claims, patented, 103 acres, also four 5-acre mill sites and a 40-acre water right, on Copper hill, in the Copper Mountain district of Taos county, 9 miles east of Embudo, the nearest railroad station, and 25 miles N. E. of Taos. Mine is said to have 8 practically parallel veins of 18" to 20' width, between a schist footwall and quartzite hanging wall, carrying cuprite, malachite and chrysocolla, succeeded at depth by chalcocite and gray copper, ore all argentiferous and auriferous, with chalcopyrite beginning to show in lower workings, all with quartz gangue.

Development: includes shallow shafts and surface cuts on several claims, a 190' shaft on the Champion, a 180' shaft sunk on a 4' vein in the Oxide mine, and a 500' tunnel, which has stoping ore and cuts a 45° blanket vein. Company plans sinking Champion shaft to 500' and opening drifts at 100' intervals. During 1917, 170' of development work was done and 100 tons of rock was hoisted, and 25 tons milled.

Equipment: includes a Leyner air compressor, Schramm gasoline engine and compressor for 4 drills, in the mill, with a power house adjoining. A 1,000' ground tram leads from the mouth of the Champion tunnel to ore bins. Improvements include a 15,300' gravity pipe line, of 7" spiral steel-riveted pipe. Was not regarded favorably by the late Horace J. Stevens.

EDISON MINING & MILLING CO.

NEW MEXICO

Idle. Property, near Red River, Taos Co., N. M., carries gold-silver-copper ores. Equipment includes a steam plant and 10-stamp mill.

TAOS MINING CO.

NEW MEXICO

Mine office: Twining, N. Mex.

Officers: A. Clarence Probert, pres.-mgr., P. O. Box 56, Taos, N. Mex.; John B. Bidwell, v. p.; J. Wright Giddings, sec.; H. F. Probert, treas., with Harry W. Davis, directors.

Inc. Nov. 11, 1914, in Delaware. **Cap.**, \$2,000,000; shares \$10 par; \$1,173,090 outstanding. Annual meeting, last Monday in January.

Property: 15 claims, 4 patented, 333 acres in Rio Hondo mining district, near Twining, said to carry copper-gold-silver ore in schist and gneiss, averaging 2½% copper, \$4.17 gold and 5 oz. silver per ton. Developed by 1,800' vertical tunnel and several shorter tunnels.

Equipment: includes air compressor and concentrator.

In June, 1917, company was preparing to reopen the Fraser Mountain copper mine, 19 miles by road from Taos, with J. M. Bidwell in charge. The plant at Twining is to be overhauled.

NEW YORK

Companies are arranged in alphabetical order.

AMERICAN ORE REDUCTION CO.

NEW YORK

Incorporators: Wm. l'Huillier, 52 Broadway, New York; R. A. Pryor, Jr.; G. B. Hayes, J. C. O'Brien and Major T. J. Whelen, all of New York.

Inc. 1917 in Delaware. **Cap.**, \$5,000,000. Will manufacture machinery for metallurgical operations.

DOUGLAS, LACEY & CO.

NEW YORK

Company was notorious promoter of numerous mining and oil propositions and was in hands of a liquidating organization, known as the Amalgamated Properties, Inc., at last accounts. Mr. Stevens' opinion of this firm and their clever scheme for obtaining money from small investors is fully described in Vol. X, under the title given above and that of the Amalgamated Gold & Copper Co. of Arizona.

EAGLE SMELTING & REFINING WORKS

NEW YORK

B. Lissberger & Co., prop., Woolworth Bldg., New York. Is not an ore smelter, but makes alloys.

GIRARD DEVELOPMENT CO.

NEW YORK

Garrit B. Kip, Girard C. Herrick and E. Hicks Herrick, 7 Wall St., New York, chief stockholders. Company is a New York corporation interested in several mining properties in the United States.

GRANT MINE

NEW YORK

Mine near Carmel, Putnam Co., N. Y. The orebody consists of a complex of arsenical sulphides, carrying copper, quicksilver, gold and iron. The crude ore is estimated to have a gross value of about \$25 per ton, but, on account of its refractory nature, has no present commercial value, and cannot be utilized without special metallurgical treatment. Closed down for several years.

MATHESON LEAD CO.

NEW YORK

Is a subsidiary of the National Lead Co.

Office: 111 Broadway, New York. **Works** at Long Island City, N. Y.

Officers: W. J. Matheson, pres.; R. P. Rowe, v. p.; E. J. Cornish, treas.; with R. A. Shaw, directors; M. D. Cole, sec.

Inc. in New York. **Cap.**, \$1,000,000; shares \$100 par. Entire stock issue owned by the National Lead Co. Authorized bond issue, \$1,000,000, 5% bonds, due April 1, 1929. Operates a 10,000-ton plant for the manufacture of white leads and oxides.

NICHOLS COPPER CO.

NEW YORK

Office: 25 Broad St., New York. **Works office:** Laurel Hill, Queens Co., N. Y. Employs about 1,500 men.

Officers: C. W. Nichols, pres.; J. B. F. Herreshoff, v. p.; W. C. Webster, sec.; Edw. R. Nichols, treas.; M. E. Harris, auditor.

Inc. May, 1905, in New York. **Cap.**, \$10,000,000; reduced 1912 to \$7,000,000; \$1,000,000 preferred stock issued 1914; shares \$100 par; bonds \$3,000,000. Is the successor of Nichols Chemical Co.

Dividends: to Oct., 1914, at rate of 6% per annum, paid quarterly on common stock; then a break of 2 years, with a disbursement of 4% in Dec., 1916.

The Laurel Hill Works include a smelter and electrolytic refinery, with steam and electric power.

The smelter has 20 reverberatory furnaces, taking 40 to 250-ton charges, each furnace heating a tubular boiler with waste gases. There is 1 Herreshoff water-jacket blast furnace of 600 tons rated daily capacity. Matte and slag flow, in an uninterrupted stream, to a large settler, whence slag skims into pots and matte is tapped into an iron bed. Waste gases pass into a 1,000' main flue, of iron and brick, leading to a 300' chimney.

The electrolytic plant is operated on the series system, and has 550 tanks. Anodes are cast. The final product is cast mainly into wire bars. This company enjoys a deservedly high reputation for the purity of its product and the efficiency of its metallurgical practice. Is the largest electrolytic refining plant in the world; capacity about 45,000,000 lbs. of copper per month.

The works do a very extensive custom refining business, treating mainly ores and matte from outside producers in the smelter, and western blister copper in the electrolytic plant. The works handle all the bessemer copper from the Phelps-Dodge properties, and from the Old Dominion, Calumet & Arizona, East Butte, Granby and Ducktown companies, and others. The mining properties at Capelton, Quebec, are operated by the Albert Copper Co., a subsidiary of the Nichols Copper Co.

Reported 1917, that company had an option on a pyrite deposit near Mokoman, 31 miles from Port Arthur, Ontario.

A labor strike will affect the 1917 output.

NORTHERN ORE CO.

NEW YORK

Edwards, St. Lawrence Co., N. Y.

Officers: T. I. Crane, pres.; W. S. Pilling, treas.

Inc. in New York and operated as a close corporation.

Property: 650 acres, extending over 12 miles in a N. E. direction from Fowler to Edwards, lies within a talc-zinc belt, showing highly metamorphosed pre-Cambrian crystalline rocks. Mine has limestone and serpentine formation with veins, 6" to 14' wide, of sphalerite and pyrite, striking N. E. and dipping 40-50° N. W.

Development: to depth of 500' by 2 vertical shafts and diamond drill holes.

Equipment: includes steam and electric power, machine shop, power house and office building. The 150-ton concentrating mill started operations 1915. Ore is delivered from the mine over a trestle to the ore bins, where it is fed automatically to the rock crusher below. From the crusher the ore passes to rolls and jigs, and finally to James concentrating tables. Wet magnetic separators effect the separation of the zinc and iron sulphides.

Production: shipments of pyrite concentrate are at the rate of 45 tons daily.

ST. LAWRENCE PYRITES CO.

NEW YORK

Offices: 41 Broad St., New York and DeKalb Junction, St. Lawrence Co., N. Y.

Officers: Edward E. Thalmann, pres.; F. T. Rubidge, v. p. and gen. mgr.; W. J. Kingsbury, sec.; R. M. Atwater, Jr., treas.; O. F. Pattberg, supt.

Property: located in DeKalb Twp., St. Lawrence Co., includes the Stella mines, and is one of the four largest pyrite mines in the U. S.

Ore: pyrite, occurring in lenses or veins in gneiss and schist. The orebodies strike and dip in the same general direction as the gneisses, strike

N. E., and dip 20° to 30° N. W. The walls are not sharply defined; the average assay is about 21% sulphur.

Development: by 2 shafts 1,600' apart on parallel deposits. The north shaft, the Stella, is idle; here the orebody extends 400' along the strike, averages 10' in thickness and has been worked to a depth of 900' on the dip. The operating shaft, the Anna, opened by levels 50' apart vertically, has an orebody opened for 1,500' on the strike, and average thickness of 20'. The ore is put through a crusher at the shaft before sending to the mill.

Equipment: includes a 700-ton mill with gyratory crushers, trommels, rolls, Hancock and Harz jigs, Overstrom and Deister Machine Co. tables. In cold weather the concentrates, to prevent freezing, are dried in a Ruggles-Coles cylindrical dryer. Concentrate assaying 44% sulphur, is sold to sulphuric-acid manufacturers and to paper mills. Power is electrical, obtained from a hydro-electric company for about \$30 per h. p. per year. The property is thoroughly described in Eng. & Mining Journal, April, 1913, p. 689.

Production: approximately 150,000 tons ore per year, yielding about 60,000 tons concentrates.

ST. NICHOLAS ZINC CO.

NEW YORK

Address: 37 Wall St., New York. **Mine office:** Summitville, Sullivan Co., N. Y.

Officers: Kirby Thomas, managing director; J. M. Mitchell, supt.

Inc. in Delaware. Cap., \$1,000,000; shares \$1 par; non-assessable.

Property: 1,050 acres between Summitville and Mamakating, 90 miles N. W. of New York City.

Geology: fissure vein in sandstone or "grit" beds, which have been tilted to form the Shawangunk range. Fissure dips with slope of hill and bedding of the grits to N. W. about 45°. On surface vein is indicated for 700', but underground for 400'. Ore is chiefly lead and zinc sulphides, with a little copper.

Development: upper workings opened vein 300' below its outcrop and lower tunnel 800' lower, a total depth of 1,100'. Vein is from 1 to 8' thick and ore 8" to several feet, averaging 2' in upper workings.

Kirby Thomas, who reported on the mine in 1916, estimated 8,000 tons of developed ore, 10,000 tons of probable ore and 58,000 tons of prospective ore. The developed ore should average 10% lead and 20% zinc.

Equipment: 100-ton concentrating mill erected April, 1917. Concentrate sold to American Metals Co.

TOTTENVILLE COPPER CO.

NEW YORK

Works at Tottenville, Richmond Co., N. Y. A. Weiss, gen. mgr. Has an extensive copper refinery for the production of ingot copper and alloys.

Annual capacity, 100,000,000 lbs. Brand is known as "C. T. C." copper.

UNITED METALS SELLING CO.

NEW YORK

Office: 42 Broadway, New York.

Officers: John D. Ryan, pres.; T. Wolfson, v. p.; C. W. Welch, sec.-treas., with Wm. Rockefeller and C. F. Kelly, directors. C. S. Henry & Co., Ltd., 12 Leadenhall St., London, E. C., Eng., European agts.

Inc. Jan. 29, 1900, in New Jersey. Cap., \$5,000,000; shares \$100 par; dissolved in 1915 and reorganized March 15, 1915, in Delaware. Is controlled by the Anaconda Copper Mng. Co., through ownership of entire share capital.

The company does a general commission business in metals, mainly in copper, and is the largest copper broker in the world, being the sales agent for the Anaconda Copper Mng. Co. and affiliated corporations, and

for a number of other producers, having the marketing of upwards of 400,000,000 lbs. of copper yearly.

NORTH CAROLINA

Companies are arranged in alphabetical order.

ASHBORO COPPER MINING CO.

NORTH CAROLINA

Dead. Formerly operated the Scarlett, or Ashboro mine, N. of Ashboro, Randolph Co., N. C., which sec. Company failed to meet payments and lands reverted to owner, F. R. Thorns, 112 Duane St., New York City, in 1916. Described Vol. XII.

BLUE WING MINING CO.

NORTH CAROLINA

D. M. Hill, sec., 60 Federal St., Boston, Mass.

Company has voted to sell all its assets and go out of business, 1917. Fully described in Vol. XII.

CAROLINA COPPER CO.

NORTH CAROLINA

Office: 15 Atwater St., West Detroit, Mich. Mine near Cullowhee, Jackson Co., N. C. Lewis C. Waldo, pres. and treas.; S. H. Knight, v. p.; Geo. E. Berriman, sec.; preceding officers, S. H. Knight, Geo. W. Clark and F. W. Olds, directors.

Inc. Oct. 12, 1901, in Michigan. Cap., \$2,500,000; shares \$25 par; issued, \$1,585,000.

Lands: 1,450 acres, freehold, including the Waychutte mine, show 4 veins, of 27' estimated average width, carrying mainly chalcopryrite, with estimated average values of 3% copper, 4 oz. silver and \$1 gold per ton, opened by a 55' shaft and a 200' tunnel. Lands also include an undeveloped water power. Regarded as promising if worked under proper direction. Never operated.

COPPER KNOB MINE

NORTH CAROLINA

Owned by Monaton Mining Co., which see.

CULLOWHEE MINING & REDUCTION CO.

NORTH CAROLINA

Idle. Cullowhee, Jackson Co., N. C.

Officers: S. B. Ezell, pres.; D. D. Davies, v. p.; Thos. A. Cox, sec. and managing director; Chas. Davies, smelter supt. at last accounts.

Inc. 1905, as successor of Cullowhee Copper Co.

Property: 1,300 acres, 12 miles from Sylvia, nearest rail point, shows a considerable body of sulphide ore, claimed to average about 5% copper and \$4 gold per ton, probably correct for small lots of ore, but cannot be realized from a large tonnage.

Equipment: includes hoists and a Sullivan air compressor, with steam and water power, latter with a plant 3 miles from works. The 30-ton smelter, near Sylvia, blown in Jan., 1909, with semi-pyritic smelting, suspended operations late 1910, and probably will remain idle until rail connections are secured.

GARDNER-HILL MINING CO.

NORTH CAROLINA

Company's gold-copper property, 9 miles from Greensboro, N. C., is being reopened after an idleness of over 50 years.

GOLD HILL CONSOLIDATED CO.

NORTH CAROLINA

Office: Room 309, No. 42 Broadway, New York. Mine at Gold Hill, Rowan Co., N. C. Walter Geo. Newman, pres.

Inc. 1910 as successor of Gold Hill Copper Co., a notorious promotion that caught many Wall Street operators. New company, under same management, became bankrupt and property sold at auction, Jan. 27, 1910, for \$45,000. Company does not own the adjacent Union Copper mine.

Property: consisted of 1,050 acres in Rowan and Stanley Counties, the Gold Hill mine, where gold was discovered, A. D. 1799. Gold quartz veins were discovered 1831, and in 1845 this mine was the largest gold producer in the United States.

Development: by 2 shafts of 615' and 830', and 2 lesser shafts. The mine was operated in 1913 and part of 1914. Shipments to the Perth Amboy smelter returned 1.5% copper and about \$3 gold per ton, with small silver values. Copper occurs in minute particles of chalcopyrite in hard quartz schist and recovery by wet concentration is not commercially profitable.

Equipment: includes ten 100 h. p. boilers and a 10-stamp mill.

This company and its companion, the Union Copper Mining Co., enjoyed decidedly checkered careers. Operations conducted on a considerable scale, 1901-1903, were unsatisfactory and failed to show up the much advertised orebodies. A receivership ensued which was ended early 1906, but a receiver was again appointed, Aug., 1906, for the old company, on the application of Walter Geo. Newman, on claims aggregating \$352,000. In June, 1915, the Court again appointed a receiver for the property, which has been shut down and apparently abandoned by the company.

Mr. Newman evidently used this property solely for stock-jobbing purposes. The mine is considered worked out and low grade, but worthy of some drilling in depth. At best the company could never have paid honest dividends on its capitalization, and under its present president is not regarded as worthy of any confidence whatever.

MOGUL MINING CO.

NORTH CAROLINA

Address: F. Oliver, Charlotte, N. C., and A. S. Proskey, Rawhide, Nev.

Cap., \$1,000,000; shares \$1 par. Listed on New York Curb. U. S. Corporation Co., N. Y., transfer office.

Property: has a 10-year lease on the Mint Hill mines, a gold property in Union county, 18 miles from Charlotte, N. C. Also controls the Proskey-Regent mine at Rawhide, Nev., by ownership of the Proskey Regent Mines Co.

Development: by 38 shallow shafts, one 100' deep, said to show six veins at Mint Hill, carrying \$35 ore. Plant with 120-ton ball-mill erected to treat free-milling ore. The lease calls for 15% royalty.

The Regent mine is said to have produced 3,000 tons of \$20 to \$200 ore, a statement which must be taken with caution, since the whole Rawhide camp is a failure, from an operator's standpoint.

The North Carolina property appears to have been shut down in 1917.

The shares of the company were skyrocketed on the Curb in 1917, by raw and rank manipulation. The men named as directors in the company's prospectus do not admit any connection with the company.

MONATON MINING CO.

NORTH CAROLINA

Hopkins, Ashe Co., N. C. J. B. Shale, pres., 301 W. 108th St., New York City, D. W. Lloyd, mgr., Garren, N. C.

Owns the old Copper Knob mine, 160 acres, freehold, also 90 acres miscellaneous lands, said to show a 30" fissure vein in hornblende slate, carrying carbonate and sulphide ores, mainly bornite. Carload shipments to A. S. & R. Co. of N. J. said to average \$15 per ton in gold, silver and copper. The slate wall rock also carries metal. Property was opened 1880. Has steam power, hoist, 2-drill air compressor, and a 5-stamp mill.

SALISBURY COPPER CO.

NORTH CAROLINA

Idle. Mine near Gold Hill, Rowan Co., N. C. T. B. Brown, pres.; W. S. Blackmer, sec.-treas.

Inc. 1904, in Arizona. **Cap.**, \$100,000; shares \$100 par.

Property: 50 acres, freehold, showing altered schists, carrying a fissure vein with N.-E. strike, and estimated at 4' width. Developed by a 100' shaft, showing chalcopryite reported to average 5% copper and \$5 gold per ton. Ore can be treated by flotation and property probably worthy of careful prospecting.

Letters returned from above address.

SCARLETT COPPER MINE

NORTH CAROLINA

Address: Frederick R. Thorns, owner, 112 Duane St., New York City. R. I. Dickens, supt., Ashboro, N. C.

Property: at Ashboro, Randolph Co., N. C., formerly operated by the Ashboro Copper Mining Co.

Ore: is a sulphide, carrying principally copper and zinc, with iron, alumina, a trace of silver and gold, and occurs in contact and fissure veins, running N. 40° E., with dip of 35°. Pay-shoot reported to be from 2-5' wide.

Development: by 120' vertical shaft and several tunnels, longest 220'.

Equipment: includes 25 h. p. hoist, compressor, pump and steam power. Prospecting and development work only being done, 1917.

TWIN-EDWARDS COPPER MINE CO.

NORTH CAROLINA

Greensboro, Guilford Co., N. C. **Inc.** Sept., 1902. **Cap.**, \$100,000; shares \$100 par.

Owens sundry old properties, including the Twin mine, with an 18' vein, which was worked previous to the American Civil War. Property shut down many years, but company understood to be only dormant, not dead.

UNION COPPER MINE

NORTH CAROLINA

Office: care Sig. H. Rosenblatt, 18 Broadway, New York. **Mine address:** Gold Hill, Rowan Co., N. C.

Lands: 550 acres, freehold, about 15 miles from Salisbury, in Rowan and Cabarrus counties, well watered and timbered. The property has schists, carrying 5 veins with average strike of N. 20° E., and practically vertical dip, of 2 to 20' width, 3 of which carry copper ores, the other 2, reported to carry silver and gold ores respectively, being but slightly developed. The copper veins are mineralized zones carrying lenticular shoots of ore, longest about 100' in length.

In 1916, No. 7 and 12 shafts were unwatered to 140' and work started on a shoot of 3% copper ore, which is 5' wide and exposed for 250'. From December, 1916, to April, 1917, ore was shipped from shaft and dumps. Three drill holes near the Big Cut and No. 5 shafts cut 4% sulphide ore.

Development: is on the Big Cut copper vein, trenched at intervals for a distance of about 1 mile, and having 10 shafts, deepest 650'; these shafts show a vein of 20' wide. The Big Cut vein shows oxidized ores and a little native copper in the upper workings, succeeded by chalcopryite, with quartz gangue. A careful sampling by Dr. A. R. Ledoux gave averages of 4.40% copper, 4 oz. silver and 40c to \$1.20 gold per ton. No. 7 shaft, of 200' depth, shows a vein 4" wide at surface and 3 to 4' wide on the bottom level, where the ore is claimed to average 4.5% copper. There are 14 shafts all told, and about 5,000' of workings. The property has been claimed, in the press, to have produced about \$1,000,000 worth of gold in early days.

One vein is said to carry zinc ore of low value, but is little developed.

Equipment: machinery plant is extensive.

Buildings include a machine shop, smithy, engine house, boiler houses, office building, 50-room hotel, dwellings and stable.

OKLAHOMA

(For map of the Miami Zinc Field, see page 948.)

(Companies are arranged alphabetically.)

The Miami Zinc-Lead field is the newest great mining region of the United States, and presents the superficial aspect of a Western mining boom, though fortunately it lacks, thus far at least, the wildcat stock companies which so often disgrace the earlier stages of development of our far Western mining districts.

The importance of the Miami field can be judged from the fact that although less than two years old, it contains 200 operating concentrating plants, each with one or more working shafts, and that nearly 1,000 churn drills are prospecting the field. The Kansas companies are separately described under that State name.

The following excerpts from a report on the district by the R. W. Hunt Company, give an excellent idea of its salient features.

The Miami Zinc-Lead Field lies in Ottawa County, the extreme northeast County of the State of Oklahoma, and extends into Cherokee County, Kansas. As now developed, it is 3 miles wide and 5 long. The Oklahoma towns in the field are Commerce, Quapaw, Century, Cardin, Tar Creek and Picher. Baxter, Kansas is at the north edge of the field. The Oklahoma portion of the field is in Township Twenty-nine (29) North, Range Twenty-three (23) East, Ottawa County. The Kansas portion of the field is in Township Thirty-five (35) Ranges Twenty-three (23) and Twenty-four (24), Cherokee County.

Geology: The mineralization of the Miami Field appears in trough deposits of zinc and lead ores, found in the Grand Falls cherts of the Boone Limestone Series at various depths below surface from 100 to 300 feet. Beneath these cherts a very compact limestone forms a floor which water does not easily penetrate.

Water carries zinc and lead in solution until it reaches the faults in the overlying cherts. It rises through these fault cracks and penetrates through the fractured and bedded cherts, depositing lead and zinc in them. The greater the fracturing of the cherts, the greater the deposit of metal, both as to quantity and value. The Miami or main fault of the district runs Northeast-Southwest through the District from Baxter, Kansas, to Commerce, Oklahoma, and represents a throw of about 15 feet. Cross faults and fractures extend from this to East and West at varying angles. The principal ore bodies are formed along these cross fractures and in the ground on both side of them for a few hundred feet.

The main fault was sufficiently open to permit constant circulation of water, while the side fractures retained water in a quiet state more favorable to precipitation of metal from the solutions contained. The Northwest-Southeast side fractures have the best ore bodies so far discovered.

The proven portion of the Miami Field proper is within a limited area of about five miles long by about three miles wide, in which small area 99 concentrating mills are built or are building, and more are planned to be built this year. This remarkable development has all occurred practically within the past eighteen months. Drilling in this area is continued principally to obtain additional information regarding ore bodies already discovered. Outside of this proven area drilling is extending to the West, East and North. In all nearly 700 churn drill rigs are in use, and from 400 to 500 new holes are finished weekly.

Developments in the field generally show two principal sheets or beds of ore; the upper at a general depth of 150 to 200 feet, and the lower be-

tween 250 and 300 feet, each bed of ore being from 15 to 30 feet thick, and in some instances twice this thickness. It appears certain that the ore bodies will prove to be much more extensive, and especially much richer than drilling indicates, as actual operations in this District have demonstrated when the mines are opened up by shafts and drifts the ore is from 50 per cent to 100 per cent richer than shown by assays of drill hole samples.

At present many operating mills in Miami are producing better than 10 tons of concentrates from each 100 tons of mine ore. This is locally termed 10 per cent recovery. It is probable that the field as a whole will average 8 per cent recovery, though some mills are actually recovering better than 15 per cent in concentrates. This is proving to be one of the richest lead and zinc fields in the world, and, as its production increases, will force the closing of leaner mineralized districts.

Prospecting is done by means of Churn Drill Holes; Keystone type of drill rigs are used. A 300-foot hole costs from \$450 to \$500, and is drilled in from ten to fourteen days. Samples are taken every few feet of the entire cuttings from the mineralized area passed through, which are assayed for zinc and lead.

The ordinary amount of drilling on 40 acres is from 10 to 30 holes. Old operators in the district are satisfied if they find two or three holes near each other carrying good ore, and will not drill further under such conditions, but sink shafts and build mills at once.

Shafts are sunk to the bottom of the ore body; the ore is mined, using the room and pillar system; trammed to shaft; hoisted to mill bins, crushed by rock breakers and rolls, and concentrated in jigs and on tables, so that the crude mine ore is reduced to a concentrate containing about 60 per cent metallic zinc and 80 per cent metallic lead. This is bought by smelters in the bins at the mills, and there is no further expense.

The entire process of mining and milling is extremely simple and cheap and does not require expert labor.

Mining and milling machinery is standardized and largely made in Joplin. It is not high priced and can be quickly obtained. Wages are on a sliding scale, depending on prices of concentrates, ranging from \$3.00 per day at \$50.00 per ton, to \$4.50 per day at \$100.00 per ton.

Division of costs, so far as obtainable, indicate: Labor, 50 per cent; Supplies, 30 per cent; Power, 15 per cent; General Expense, 5 per cent.

Average of Miami, in 1917, costs are:

Crude Ore:

Mining, Milling, General for 100 tons Mine Ore.....\$160.00
Concentrates:

If 10 tons concentrates produced, cost per ton..... 16.00

If 8 tons concentrates produced, cost per ton..... 20.00

Indicative of what some of the operators are attempting in this field, may be mentioned the campaigns being conducted by some of the larger operators. **The Eagle-Picher Lead Company**, on first entering this field, is reported to have expended a prospecting fund of approximately \$100,000, merely in its exploratory work. The blocking out of its ore bodies after discovery involved as much if not more than the original expenditure. The investment of this concern prior to the beginning of its production period was near \$750,000. This concern now has the largest single production of any company in the district.

The Commerce Mining & Royalty Company, the pioneer prospecting and development company of that field, has never ceased drilling since its

original strike of ore in 1905 in the old Commerce camp. Its drills are kept going constantly, and its expenditure in exploratory work has reached extremely large proportions.

The Church & Mabon interests have conducted some of the largest prospecting undertakings in the field, and as a criterion of how thoroughly their work has been done, may be mentioned that upon one forty-acre tract alone, 80 drill holes have been put down. This concern has developed a large number of forty-acre tracts, many of which have proved to be some of the best producers the district has yet known.

More recently the Miami Zinc Syndicate has taken over leases aggregating 4,000 acres, north of the Kansas and Oklahoma State line and west of Baxter Springs, Kansas, and has conducted upon it a drilling campaign, which is still under way, with only a small part of the acreage tested out.

The largest undertaking, however, that has been started is that of the Chanute Spelter Company, which has to its credit approximately 16,000 acres of ground and whose operations promise to be the most extensive of the entire district. From 20 to 30 drills are kept at work doing exploratory and development work. The field of its operations extends from the Kansas-Oklahoma line north and northwestward to Asbury, Missouri. Ranking close behind the Chanute Spelter Co. is the Waco Mining Co., with 7,100 acres in leases and fees, and P. B. Butler, with 6,500 acres in leases. These large holdings, principally in the Kansas field, are being systematically developed on a large scale. Others who have done a large amount of exploratory and development work are Frank Danglade, T. J. Franks, J. G. Marcum, Vinegar Hill Zinc Co., N. B. Gatch, H. Barndollar and many others.

ADMIRALTY ZINC CO.

OKLAHOMA

(See this title under Kansas division.)

Office: W. B. Shackelford, gen. mgr., Quapaw, Okla. O. F. Brinton, mine and mill mgr.

Property: 120 acres at Douthat, Okla. Shafts are down 220' and have opened 6 to 16% blende and galena ore. Four mills are treating 1,400 tons daily, and by November 15, 1917, management expected to be producing 600 tons of concentrate per week.

AMERICAN PIPE LINE CO.

OKLAHOMA

A subsidiary of the Amer. Z., L. & Sm. Co. and described under that title.

ANNA BEAVER MINING CO.

OKLAHOMA

Is operating a mine and mill in the Tar River field, Okla. Cages are used instead of buckets for hoisting, somewhat of an innovation here.

BAKER MILLING, SMELTING & REFINING CO.

OKLAHOMA

John Baker, pres., writes that he has never deceived anybody, and simply holds the charter, keeping it in force for the present, with no stock for sale. Unfavorably regarded. See Vol. XI, Copper Handbook.

BARTLESVILLE ZINC CO.

OKLAHOMA

Owns the "Lanyon Starr Plant," formerly held by the Lanyon-Starr Smelting Co., and is in turn controlled through stock ownership by the American Metal Co., Ltd.

BIG BEN MINE

OKLAHOMA

Recently sold by the Big Ben Mining Co. to E. L. Bucy of Bartlesville and P. L. Grace of Altus for \$75,000.

Property: a lease on land S. of Douthat, Okla., covering 40 acres. Drilling showed ore at 175'. A shaft is down to ore level and a mill is proposed.

CARTHAGE MINING CO.**OKLAHOMA**

Address: Emma R. Knell, Carthage, Mo.

Cap., \$32,000; shares \$100 par; \$16,000 paid in.

Property: 20-acre lease in the N. E. Oklahoma zinc field.

DULUTH-MIAMI MINING CO.**OKLAHOMA**

Address: Geo. Knox, Quapaw, Okla.

Property: 30 acres at Quapaw, Ottawa Co. Drilling said to have cut some ore assaying up to 37% blende.

FIRST NATIONAL MINING CO.**OKLAHOMA**

Address: Century, Okla.

Property: E. of Century, Okla. Two shafts are down to ore at 145'. Rich ore is being handjigged.

GALENA MINING & DEVELOPMENT CO.**OKLAHOMA**

Property is at Century, Okla., in the Joplin zinc-lead region. Development work has been done on a lease near the Lucky Kid and property is to be thoroughly opened.

HARE MINING & MILLING CO.**OKLAHOMA**

Address: Picher, Okla.

Property: 1 mile W. of Picher. A 200-ton mill has just been completed. Equipment includes gas driven compressors and steam hoist.

HOMESTAKE MINING CO.**OKLAHOMA**

Address: Quapaw, Okla.

Property: a 60-acre lease of the Douthat land, N. of Quapaw. Three mills will soon be in operation.

LANYON STARR SMELTING CO.**OKLAHOMA**

Dissolved. Fully described Vol. XII.

LENNAN ZINC & LEAD CO.**OKLAHOMA**

Operating a lease on the Commerce Mng. & Royalty Co. mine, Miami, Ottawa Co., Okla. An ore face 60' in height is being worked by drifting under the old workings of the 400' level. Equipped with concentrator.

Producing since 1914.

MELROSE MINING CO.**OKLAHOMA**

Address: Quapaw, Okla.

Property: 1 mile N. of Quapaw. Drilling exposed ore from 138 to 210' deep. One shaft is down 170', part of the way in a soft, black shale. No. 2 shaft is being sunk. A 300-ton mill is ready for concentrating the ore.

MIAMI ZINC & LEAD CO.**OKLAHOMA**

Address: Miami, Okla. T. F. Lenan, gen. mgr.

Operates large zinc-lead property in Miami district. Workings to depth of 330' are to be deepest in the field. Three electrically-driven mills yield over 200 tons of concentrate per week.

MUSKOGEE LEAD & ZINC CO.**OKLAHOMA**

Address: Quapaw, Okla.

Property: 60 acres, just W. of Quapaw. Ore has been encountered at 165' and 180' and a mill is to be built.

NIANGUA MINING CO.**OKLAHOMA**

Address: Picher, Okla.

A new concentrator is under construction. Gas engines will drive the plant and compressor and hoisting will be done by air.

ONTARIO SMELTING CO.**OKLAHOMA**

Address: Quapaw, Okla.

Company is erecting a lead smelter with furnace room 34' x 130' and a bag house 67' x 90', to be ready about the end of 1917. This is the first lead smelter in the Oklahoma section of the Missouri-Kansas-Oklahoma region.

RAINBOW LEAD & ZINC CO.

OKLAHOMA

Address: R. H. Drennan, Oklahoma City.

Officers: F. E. Herring, pres.; O. D. Halsell, v. p.; R. H. Drennan, sec.-treas.

Inc. in Oklahoma. Cap. \$100,000. Closely allied with the Ottawa Lead & Zinc Co.

Property: E. of Picher and N. W. of Quapaw. At the Rainbow, ore is found at 165' depth, and is from 20' to 35' thick. A 300-ton mill is being built here and a 200-ton plant for the Ottawa.

REBEKAH MINING CO.

OKLAHOMA

Address: Picher, Okla.

Property: 252 acres N. W. of Picher, was purchased a year ago for \$30,000. Drilling revealed some rich zinc ore. Two shafts are being sunk and a 300-ton mill is under construction.

RÉPUBLIC MINING CO.

OKLAHOMA

Address: W. J. Scafe, mgr., Joplin, Mo.

Officers: W. H. Langford, pres.; F. J. Huttig, v.-p.; F. Huttig, sec.

Cap. \$250,000.

Property: a lease on the Wright land near Tar River, Okla. Two shafts are in rich ore to 224' depth. A 250-ton mill is operating.

SAMBO MINE

OKLAHOMA

Address: Supt. Sambo mine, Lincolnville, Oklahoma.

Purchased Nov., 1917, by R. P. Sharpe of Miami, and R. M. Ferguson, et al. of Mangum, Okla., for \$150,000.

Property: 40 acres of land and a mill in town of Lincolnville next to Nemo and Moran Mining companies. Mill to be enlarged to 500 tons daily. Mine has 5% ore, between 75' and 100' levels.

ST. LOUIS LEAD & ZINC CO.

OKLAHOMA

Address: Quapaw, Okla.

Property: S. W. of Quapaw. Drilling has proved ore and one shaft has been sunk. A mill has been started. Gas driven compressors are to be installed.

ST. LOUIS SMELTING & REFINING CO.

OKLAHOMA

Address: Care E. D. Nix, Miami, Okla.

Company's holdings reported sold Nov. 2, 1917, to Texas-Oklahoma Syndicate for \$5,000,000. Company has two large mills E. of Picher and N. of Quapaw.

Property: 160 acres at St. Louis, Okla., on which two large modern mills are erected to serve the ground already proven and ready for mining. Also 1,240 acres within the proven mineralized area just east of the mill properties.

A new \$15,000,000 company is to be incorporated. The more prominent men interested are: C. C. Slaughter, cattleman, of Texas; Walter Morris and L. P. Gamble of Dallas, Tex., and O. D. Halsell of Oklahoma City.

STANDARD ZINC & LEAD CO.

OKLAHOMA

Address: Tar River, Okla. Ore 30' to 60' thick has been cut by drills and two shafts are down 80' on drill holes. A 300-ton mill is to be erected.

TULSA-SAPULPA-MIAMI ASS'D MINES CO.

OKLAHOMA

Address: H. R. McCreary, sec., Tulsa, Okla.

Property: leases around Wyandotte, S. W. of Miami, Okla. Ore is expected to be cut by new shaft at 150'.

UNDERWRITERS LAND CO.

OKLAHOMA

See same title under the Missouri mines.

WOLFTON MINING CO.**OKLAHOMA**

Office: Webb City, Mo. Charles T. Orr, prés. and gen. mgr.; Jas. B. Millar, treas.

Operated in conjunction with Athletic Mining & S. Co. and Bertha A. Mining Co.

Property: near Picher, Okla., is in the well known Miami belt, carries high grade zinc ore, and has a 1,200 ton mill (per 24 hours). See above named companies, in list of Missouri mines.

WOLFTON MINING CO.**OKLAHOMA**

Address: Henry Gneissing, supt., Picher, Okla.

Cap. \$200,000. Company has a 60-acre lease on the Whitebird land E. of Picher, and is to erect two 500-ton mills.

OREGON.

All companies are grouped by counties and the arrangement is alphabetical.

BAKER COUNTY

This county embraces the Auburn, or Baker, Cable Cove, Conner Creek, Cornucopia, Cracker Creek, Eagle Creek, Greenhorn, Homestead, or Iron Dike, Rock Creek, Sumpter, Virtue and Weatherby districts.

AMALGAMATED MINES CO.**OREGON**

Office: Baker, Ore.

Officers: Wm. Deffren, pres.; W. Burnham, sec.; G. J. Burnham, treas.

Cap., \$1,000,000; shares \$1 par; 754,824 shares issued.

Property: 8 quartz claims in Eagle creek distr., Baker county. Developing.

BAKER MINES CO.**OREGON**

Office: 60 Wall St., New York. Frank S. Baillie, supt. Inc. 1913 as a leasing company to work the Last Chance mine, formerly worked by the Cornucopia Mines Co. The mine is at Cable Cove, near Sumpter, Baker Co., Ore., about 18 miles W. of Copperfield, on the Oregon R. R. & Navig. Co. line.

Ore: massive white quartz containing pyrite, chalcopyrite, zinc blende and gold in the Last Chance vein, strike N. 20° E., dip 45° west.

Development: 700' tunnel cutting the vein at 500' depth on the dip, and a 265' winze sunk in the vein with several hundred feet of drifting on the 100' and 200' levels, also crosscuts to surface for drainage.

Equipment: 20-stamp amalgamation mill, cyanide plant, aerial tramway, laboratory, offices and dwelling houses. Employs about 25 men.

BURNT RIVER DREDGING CO.**OREGON**

Address: 506 Oregonian Bldg., Portland, Ore. O. E. Tisch, pres.; D. D. Wallace, sec.-treas.

Cap., \$250,000; shares \$1; \$39,125 outstanding.

Property: 680 acres, known as the Pomeroy dredging ground, 8 miles S. of Durkee in Baker county. Company reported to plan installing a \$15,000 gold dredge, 1918.

COLUMBIA GOLD MINING CO.**OREGON**

Operated the Columbia gold mine, near Sumpter. Company sold its entire property, 1917, and will soon retire from business.

COMMERCIAL MINING CO.

See Rainbow Mine, Rye Valley, Baker Co., Ore.

CORNUCOPIA MINES CO.**OREGON**

Office: 60 Wall St., New York City. Robt. M. Betts, mgr., Cornucopia, Ore.

Property: the Union-Companion mine at Cornucopia, Baker Co., Ore., 25 miles from a railroad. Gold was discovered in this district in 1880, and in 1895 the Union-Companion claims, although but slightly developed, were sold for \$60,000, and a 20-stamp mill built.

The vein is said to be traceable on surface for 6,800' with strike of N. 20° E., dip of 45° W., and 2-5' wide, maximum width 20'. Wall rock is granodiorite and schist. Vein material is massive white quartz containing 3 to 5% of pyrite, which carries the gold. There is some silver sulphide present, also appreciable quantities of chalcopyrite, arsenopyrite and blende. Ore ranges in value from \$10 to \$20 per ton.

Development: by incline shafts, with the 700' the lowest level at last accounts, said to show 4 ore-shoots having an average width of 3' and an aggregate length of 1,200'.

Mill: 20 stamps, weight 950-lb. each, making 98 drops per minute through 7". Ore is crushed in a 0.125% KCN solution. Stamp duty is 5.15 tons per stamp. Fine grinding is done in two 5'x22' tube mills, each driven by a 50-h. p. motor. The cyanide plant is equipped with Dorr thickeners, 3 Pachuca tanks, and 2 continuous revolving drum filters. An extraction of 87 to 89% of gold and silver is obtained. Average consumption of supplies per ton of ore is cyanide, 1.4 lbs.; lime, 3 lbs.; zinc dust, 0.9 lb. Power is furnished by the company's hydro-electric plant, 2 miles from the plant. Current is transmitted at 6,600 volts and transformed to 2,200 volts for use. Cost of treatment is said to be \$2 per ton. Production figures not available. See Min. Res. of Oregon, Vol. I, No. 8, pp. 36-49. Company is reported to be doing extensive experimental work on its low grade ores with the object of building a new and large mill if tests are successful.

GIRAFFE MNG. & MLG. CO.**OREGON**

Office: Miller, Ore.

Officers: G. Cartwright, pres.; A. O. Weatherman, sec.; Grace Nichols, treas.

Cap. \$150,000; shares \$1 par; 75,000 issued.

Property: 7 gold claims in Mormon Basin, said to show ore occurring in a narrow mineralized granodiorite porphyry dike cutting argillite with intrusive bodies of serpentine and dikes of basalt. Limestone occurs a short distance to the north of the property and granodiorite to the east.

Development: by shaft and tunnel. On No. 2 Giraffe claim, at 85' in depth, gold bearing ore assaying about \$4 per ton was cut. A crosscut is being driven to cut the dike at 300' depth.

Production: 200 tons from the Giraffe No. 1 claim yielded \$7.50 per ton by amalgamation.

GOLDEN CHARIOT MINING & MILLING CO.**OREGON**

Address: Sumpter, Ore.

Officers: Chas. Wiedemann, pres.; O. E. Conner, mgr.; Rose Rennekamp, sec.

Inc. in Oregon. Cap., \$350,000; shares \$1 par.

Property: 400 acres, at 4,500' elevation, 2½ miles from Sumpter, Ore., is said to show a fissure vein in limestone. The gold-bearing ore is reported to occur in shoots, 6' wide on the 210' level.

Development: to 300' by vertical shaft, to be sunk another 200'. Core drilling to 500' below 210' level; winze below reported in free milling ore.

Equipment: includes 50 h. p. friction hoist, steam-driven compressor and pumps.

GOLDEN EAGLE MINING CO.**OREGON**

Office: The Dalles, Ore. J. C. Hostetler, sec.-treas.

Cap., \$441,000; shares \$1 par.

Property: 8 claims in Greenhorn district, Baker Co., Ore. Past production, \$75,000. Claims said to show a number of non-persistent fissures; only three of them ore-bearing. No. 2 vein has been followed to depth of 200', and besides free gold, the ore contains some galena and copper. Possibilities at depth are said to be poor.

Development: by tunnels aggregating 2,600', to depth of 175'; also shaft 75' below lowest tunnel.

HECLA CONS. MINING CO.**OREGON**

Office: Baker, Ore.

Officers: J. L. Rand, pres.; M. E. Brooks, sec.-treas.

Cap., \$1,000,000; shares \$1 par; all issued.

Property: 11 claims, on the west side of Hurricane Creek, about 9 miles from Joseph, in the Wallowa district, Oregon. Claims cover a large area of limestone and superimposed schist, cut by quartz porphyry dikes.

Ore: chiefly galena and sphalerite with some pyrite, occurs in small, lenticular bodies less than 1' wide and 2-3' long. Some cerussite ore (lead carbonate) and occasional copper staining also occurs.

HIGHLAND MINE**OREGON**

Address: Baker, Oregon.

Formerly owned by Highland Gold Mines Co. and worked by Highland Dev. Co.; latter company dissolved, Jan., 1917. Reported sold under bond and lease, Aug., 1916, to Delbert E. Metzger.

Property: 6 claims, in Rock Creek district, Baker Co., Ore., 14 miles from Haines, the shipping point. Claims show 4 ore shoots carrying lead-silver-gold values.

Development: by 6 tunnels with about 5,000' of work.

Equipment: has 50-ton mill. Average recovery has been 2 oz. silver and .25 oz. gold per ton. Tailings reported to contain \$1.80 to \$2.20 per ton in gold and silver.

Production: from 1905 to Apr., 1914, was 6,322 tons of ore and concentrates, yielding \$311,552.

Immediate cause of closing down property was an injunction issued 1914, restraining the company from polluting Rock Creek.

HOMESTEAD-IRON DYKE MINES CO., INC.**OREGON**

Halstead Lindsley, gen. mgr., Room 1508, No. 60 Broadway, New York. D. M. Goodrich, pres.; Chas. C. Goodrich, sec.-treas.

Cap., 1,000 shares, all issued.

Operates property of Iron Dyke Copper Co., which see.

IBEX MINE**OREGON**

Address: Sumpter, Ore.

Property: near Granite Creek, Cracker Creek district, 8 miles N. W. of Sumpter, Ore.

Development: the work done in the past 15 years consists of about 8,000' of tunnels, etc., with 3,000' of it on the gold-bearing vein. The vein averages 5' in width, but has a maximum of 25'. It occurs entirely in argillite, contains sulphides, and is generally low-grade.

IMPERIAL MINING CO.**OREGON**

C. L. Arzeno, mgr., 9 E. 5th St., Covington, Ky.; Alfred Heisler, supt.

Property: Imperial mine at Cable Cove, 11½ miles from Sumpter, the nearest railroad station. Ore occurs in quartz fissure veins in granodiorite. The Imperial, or main vein, is 3 to 4' wide and has been extensively developed.

During 1916 this vein was again encountered in a crosscut 70' E. of the main drift in the Miner tunnel and 168' lower than the nearest workings above. Work was immediately begun to reach the rich ore opened in the level above.

Equipment: includes an 85-ton mill. Has been a small and irregular producer, totaling \$75,000.

IRON DYKE COPPER CO.

OREGON

Mine near Homestead, Baker Co., Ore.

Officers: F. F. Curtze, pres.; F. A. Brevelier, sec.; A. A. Claus, treas.; E. Galligan, supt.

Inc. in Pennsylvania. **Cap.**, \$500,000; shares \$1 par; \$380,000 issued. Erie Trust Co. holds title by trust deed and bond. Worked by Homestead-Iron Dyke Mines Co., Inc.

Property: a copper deposit discovered 1897, about 2,000' from railroad at Homestead. Lower tunnel, 300' above town, is about 1,300' long, cutting the orebody at 800' in and connected by raise with 3 tunnels above. The mine has several thousand feet of workings. The lower tunnel shows massive chalcopryrite and pyrite ore about 6' wide, said to extend upward to the upper tunnel. Ore said to contain \$2 to \$3 gold, 3 oz. silver and 5% copper per ton.

Reopened 1915, after years of idleness, and in 1917 is largest copper producer of the State.

Shipments during 1916 averaged at least 2,500 tons of 6% copper ore to Utah smelters. Ore also contains \$5 per ton in gold and silver values.

In June, 1917, a wide body of 5% ore, with high precious metal content, was opened at a depth of 850'.

A 125-ton concentrating plant commenced work in Sept., 1916, using flotation as part of the process with a 90% recovery claimed.

Mine is a steady producer and apparently has promising possibilities.

KOEHLER MINE

OREGON

Address: A. Koehler, Baker, Ore.

Property: in the Virtue district, 4½ miles from Baker, was a producer of high-grade antimony ore in 1915. Has a well-defined vein, up to 10' in width, carrying antimony and gold ore. Massive and disseminated stibnite both occur.

Output to date is said to be \$15,000, and mine still contains considerable ore.

LAST CHANCE MINE

OREGON

Owned and operated by Baker Mines Co., which see.

LISTEN LAKE GOLD MNG. CO.

OREGON

Office: Baker, Ore.

Officers: F. W. Thomas, pres.; C. I. Flynn, sec.

Cap., \$500,000; shares \$10 par; all issued.

Property: 4 quartz claims and the McNamee placer about 6 miles from Austin on the Sumpter Valley railroad, in Greenhorn mining district, Baker Co., Ore.

Development: by 120' shaft shows a silicified shear zone in gabbro, that is in places as much as 50' wide, and shows small amounts of pyrite and chalcopryrite along fractures. Dump material is said to carry low copper values and a fraction of an ounce of gold.

Shaft is under water below 10' from surface.

OREGON-IDAHO INVESTMENT CO.

OREGON

Baker City, Baker Co., Ore.

Officers: Jas. A. Howard, pres.; John Arthur, v. p.; Fred R. Mellis, sec.-treas.

Cap., \$50,000. Is a small, close corporation organized as a developing and holding company, but whose chief business since 1909 has been the operation of the Baker City, Ore., ore-sampling plant, burned April, 1911, but rebuilt later in the year.

Property: includes the Poorman group, 8 claims, 160 acres, surveyed for patent, on Balm Creek, 25 miles N. E. of Baker. The group shows a copper-bearing vein for 2,000' that has a gossan cap 200' wide in places.

Development: by an 800' tunnel with several short crosscuts at depth of 100', showing 2.5 to 3.5% copper, present as chalcopyrite.

Has lease and bond on the Taber Fraction and has use of the Bourné Gold Mng. company's tunnels to operate mine.

PACIFIC MOLYBDENUM MINES, INC.

OREGON

J. B. Philips, mgr. Property at Greenhorn, Baker county, is reported to show an 8' vein of molybdenum, running from 20 to 25%.

The mill is to be equipped with a 1,000-ton oil flotation unit in 1917-18.

POWDER RIVER GOLD DREDGING CO.

OREGON

Office: Insurance Exchange, California St., San Francisco, Cal. **Operating office:** R. W. Derby, supt., Sumpter, Ore.

Officers: W. P. Hammon, pres.; R. K. Barrows, v. p.; A. E. Boynton, sec.-treas.; with A. L. Dahl and F. J. Mott, directors.

Inc. Oct. 18, 1911, in California. **Cap.**, \$500,000; shares \$1 par, all issued. **Bonds:** \$300,000 authorized, of which \$3,000 are outstanding. Annual meeting 4th Monday in October.

Gross earnings in 1916 were \$640,635, of which \$624,869 was from the gold recovered. Operating costs were \$182,374; sundry expenses, development, etc., \$176,426, leaving \$281,835 net profit.

Dividends: aggregate 85c per share, or \$425,000, to Oct., 1917.

Property: about 1,500 acres placer ground, near Sumpter, Ore., half of which is considered payable. The gravel channel is from 300 to 2,000' wide; it will average 1,000' wide, 18 to 20' deep, and the pay gravel rests on a soft, decomposed rock called "clay webfoot." Dredge digging may be termed tough, and as a result, the bucket-lips wear out in 5 months' use.

Equipment: 2 dredges, the only ones in Oregon electrically driven. One has 9 cu. ft. and the other 7½ cu. ft. buckets, and can dig a total of 10,000 yards daily. Power consumed is 750 h. p. for each boat.

Production: yielded \$624,869 in 1916. Out of Oregon's annual gold yield of about \$1,800,000, this company contributes a third.

QUEEN OF THE WEST MINES CO.

OREGON

Office: 209 Pillsbury Bldg., Minneapolis, Minn. **Mine office:** Cornucopia, Ore.

Officers: A. Y. Bayne, pres.; Lewis W. Campbell, sec.; H. U. Maurer, treas.; R. G. Amidon, mgr.

Inc. in West Va. **Cap.**, \$1,000,000; shares \$1 par; 993,466 shares outstanding.

Property: 11 claims in the Cornucopia district, Baker county, developed by tunnels and equipped with 10-stamp mill, concentrating plant, 50-ton cyanide plant, 3,600' aerial tramway, capacity 6 tons per hour, water power and air compressor.

Geology: described in Min. Res. of Oregon, 1916., Vol. 2, No. 4, p. 186.

RAINBOW MINE

OREGON

Mine at Rye Valley, Baker Co., Ore. Howard S. Lee, mgr.; Frank W. Parker, supt.; Walter W. Dake, Jr., mill supt., at last accounts.

Property: a group covering the Rainbow vein, a brecciated zone 5'-50' wide made of rock fragments cemented by quartz.

Development: 500' shaft, with 1,500' of drifting on vein on 200' level. Operates 15-stamp mill, 100 tons a day with tube mill, Dorr classifier and thickener, Pachuca tank, Kelly press and Merrill filter. See Min. Res., Oregon, Dec., 1914; Vol. 1, No. 8, p. 220.

Reported 1917 to have reverted to the Commercial Mining Co.

RED BOY MINES CO.

OREGON

Stock worthless as property was sold for \$34,500 at sheriff's sale in 1916 and bid in by bondholders.

Reorganized June, 1916, as Red Boy Mng. & Dev. Co., which see.

RED BOY MNG. & DEV. CO.

OREGON

Address: Baker, Ore.

Officers: Ray Nye, pres.; F. A. Harmon, v. p.; A. J. Winter, Jr., sec.; Paul Colson, treas.

Inc. June, 1916. **Cap.**, \$250,000; shares \$1 par; all issued. Is a re-organization of the Red Boy Mines Co.

Property: the Red Boy mine in Granite district, Grant county, credited with past production of \$800,000. Present operations consist of prospect work and re-cyaniding low-grade concentrates. The geology is fully described in Mineral Resources of Oregon, Vol. 2, No. 4, pp. 188-191.

SANGER GOLD MINES CO.

OREGON

Office: J. K. Romig, sec., Baker, Ore. F. W. Paine, pres.

Inc. in Oregon. **Cap.**, \$2,000,000; shares \$1 par; 1,295,146 issued.

Property: 600 acres of quartz and placer claims on W. side of Eagle Creek, in an area which has produced about \$1,500,000, but where since 1900 there has been little work done beyond small placer operations.

Geology: quartz veins in a black clay slate. Ore contains 3% sulphides and is considered to be similar to many Californian gold quartz veins. Owing to older slates being fractured, cut by dikes, etc., prospecting is difficult.

Development: by tunnels and an incline shaft 400' deep. In upper workings the vein shows ore 15" wide, worth \$20 to \$25 per ton; in the lower, below the zone of oxidation, the ore is 24" to 48" wide, and assays \$12 per ton. In 1916 several open cuts and short tunnels were driven to pick up the extension of the vein.

Property worth further exploration, as geologic conditions are good.

SNOW CREEK MINING CO.

OREGON

Baker, Baker Co., Ore.

Officers: Henry B. Smith, pres., Bay City, Mich.; Fred D. Smith, v. p., Ithaca, N. Y.; C. H. McColloch, sec.; R. J. Davison, treas., with J. H. Bowlby, directors.

Inc. June 25, 1914. **Cap.**, \$200,000; shares \$1 par; outstanding, 132,000 shares.

Property: 5 claims, 85 acres, including the Snow Creek mine, formerly owned by Oregon Mines Exploration Co., near Greenhorn P. O. Ore carries gold, silver, lead in contact deposit, 3' to 8' wide; country rock is diorite and slate. Ore extracted in the past is said to have assayed \$12 per ton in gold and silver and 5% lead.

Development: 225' vertical shaft and tunnels, aggregating 1,315'. Claims 9,400 tons of ore blocked out.

Equipment: includes 10-stamp mill. Total output to date about \$40,000.

Title was obtained by present company under foreclosure of mortgage. Sinking shaft 100' deeper and developing was planned, 1916.

SUMPTER SMELTER

OREGON

See Northwest Smelting & Refining Co., Sumpter, Baker Co., Ore.

VIRTUE MINES DEVELOPMENT CO.**OREGON**

Baker, Ore.

Officers: J. K. Romig, pres.; M. Boswell, sec.-treas.

Cap., \$1,500,000; shares \$1 par; 1,384,075 issued.

Property: bonded in 1916 to G. W. Field & Co., of Boston, for \$500,000, consists of 16 claims and placer ground, a total of 400 acres in the Virtue district, Baker Co., Ore. From 1878 to 1898 the gold yield was about \$2,189,000, the largest production being \$259,000 in 1898. Mine was idle for nearly 15 years, but in 1917 it was reported working and electric power was installed.

Claims said to show quartz veins in serpentine striking N. W., dipping 45° to 80° S. W. and averaging 14" in width. Ore carries gold and a little pyrite and chalcopyrite.

Equipment: includes hoist, boilers, 20 stamps, vanners, cyanide plant and electric power.

WHITED MINING CO.**OREGON**

Address: Aldred Whited, Unity, Ore.

Inc. Nov., 1916, in Ore. Cap., \$15,000; \$1 par.

Property: 8 claims situated 5½ miles south of Unity, Baker Co., Ore. Two veins under development show shoots of gold-bearing quartz, the largest one along the hanging wall of a porphyry dike.

Development: includes 2 crosscut tunnels with drifts on the veins.

Equipment: embraces a 10-stamp mill with amalgamating plates and Wilfley tables. Was developing late in 1916.

*CLACKAMAS COUNTY***OGLE MOUNTAIN MINING CO.****OREGON**

Office: 1003 Main St., Oregon City, Ore.

Officers: J. B. Fairelough, pres.; W. J. Wilson, sec.-treas.

Cap., \$1,000,000; \$1 par; all issued.

Property: 22 claims, 14 miles from Gates on the S. P. R'y and 35 miles E. of Silverton, in the Ogle Creek mining district, Clackamas Co., Ore.

Ore: the mine carries low-grade gold ore which occurs in a well-defined fissure vein that averages about 5' in width. The average value is \$5 per ton.

Development: by a 1,460' tunnel driven 560' below the two old tunnels, in order to cut the downward extension of vein. Several small veins have been cut, but contain only very low-grade ore.

Company lost much money building a mill which proved a failure, and it is now doing very little work at property.

CROOK COUNTY

Includes Bear Creek, Butte and Ochoco districts.

AMERICAN ALMADEN QUICKSILVER & GOLD MINING CO.**OREGON**

Office: 100½ Fourth St., Portland, Ore.

Officers: W. B. McKinney, pres.; E. N. Wheeler, sec.-treas.; G. W. Tillotson, Howard, Ore., mgr.

Cap., \$1,500,000; shares \$1 par; all issued.

Property: 3 claims in Sec. 20, T. 14 S., R. 20 E., 11 miles from Howard, in the Ochoco district, Crook county, developed by tunnels. Ore contains cinnabar in altered andesite.

OPHIR MAYFLOWER MINE**OREGON****Address:** A. J. Champion, Howard, Ore.**Property:** 8 miles from Howard, in Ochoco district, Crook Co., Ore., 41 miles from railroad at Redmond.**Geology:** the rocks are andesitic, occurring as flows interbedded with tuffs and breccias. Mineralization is in wide fracture zones of altered rock.**Development:** by 1,400' crosscut tunnel, and one 200' above. Drifts follow the fracture zones. Ore in one shoot is 1 to 6' wide and 70' long; shipments averaged \$70 gold. A second shoot, 20' long and 4' wide, averaged \$125 per ton. The values in the lower tunnel only carry about \$3 per ton.**Equipment:** includes a small amalgamating-concentrating stamp-mill.**CURRY COUNTY**

Includes Agness, China, Collier Creek, Mule Creek, Ophir, Sixes River, and other districts.

BOULDER CREEK GOLD MINING CO.**OREGON****Office:** 80 Sixtieth St., Portland, Ore.**Officers:** R. D. Hewitt, pres., Agness Ore.; John Gardner, sec.-treas.**Cap.,** \$25,000; shares \$100 par; \$21,076 outstanding.**Property:** the Star group of mining claims, about 240 acres, in Sec. 25, T. 34, R. 13 W., Ophir district, Curry County, on which \$4,800 has been spent in the following improvements: 4,800' ditch, sawmill, dam, 1,000' of piping and 800' pipe giant. Results of operations not reported.**GOLD BAR MINE****OREGON****Address:** T. W. Billings, Illahe, Curry Co., Ore.**Property:** placer claims in the Agness district. Worked intermittently since 1856, but regularly only since 1911. Bedrock is black shale; gravel is 9' thick with 4' of overburden. Yields have been fair. Property has plenty of water for washing.**HYDRO SIXES MINES CO.****OREGON****Office:** 57 Post St., San Francisco, Cal.**Officers:** W. J. Bell, pres.; G. W. Root, sec.; C. J. Pease, treas.**Cap.,** \$70,000; \$1 par; all issued.**Property:** 1,200 acres placer ground between Otter and Elephant Rock Creek, just below the forks of Sixes River, Curry Co., Ore. Company uses water under 150' head, from Big Otter Creek.

Employs 50 men. Company has spent \$100,000 improving and equipping property.

SIXES MINING CO.**OREGON****Offices:** 743 West 3rd St., Salt Lake City, Utah, and 625 Market St., San Francisco, Cal.**Officers:** L. R. Eccles, pres.; C. B. Edington, sec.; John Pingree, treas.; W. A. Bechtel, S. F. mining agent.**Inc. in Utah. Cap.,** \$1,125,000; shares \$5 par; 157,900 issued.**Property:** has option on placer claims, 300 acres, owned by the Divilbiss family, on the Sixes River, Curry Co., Ore., 11 miles from Port Orford. Ground contains considerable black sand which holds both gold and platinum, about 10% of the gravel value said to be in the platinum. Three distinct gravel channels are known, one of which is to be dredged, the others hydraulicked. For sluicing a 4½ mile flume is available. It is planned to extract the metals from the black sands.

DOUGLAS COUNTY

Embraces Riddle, Green Mountain and other districts.

ELDORADO COPPER MINING CO.**OREGON**

Address: Andrew Laidlaw, Columbia Bldg., Spokane, Wash.

Incorporators: Andrew Laidlaw, S. W. Miller, C. P. Ritter, F. W. Beyer and Henry Banfield.

Inc. 1916, in Washington. **Cap.**, \$2,000,000; \$1 par. Company organized to take over the Banfield mine, 32 miles east of Riddle, Ore., on the S. P. railway. The price is said to be \$300,000, partly in stock.

Property: 9 claims, known as the Banfield mine, and formerly owned by the Douglas-Umpqua Mng. Co. Claims said to show nine veins, 3 of which have been developed. Ore estimated to average 4% copper with slight gold and silver values.

Development: by 6 tunnels, lowest 900' below surface, with about one mile of workings, estimated by management to block out 300,000 tons of ore.

This is an old mine which has been under development for 16 years.

GRANT COUNTY

Embraces Granite, Greenhorn, New Eldorado, Quartzburg and Susanville districts.

BEN HARRISON MINE**OREGON**

Sold April, 1917, to E. H. Dewey, of Nampa, Idaho. Former owners are said to have spent \$200,000 on the property.

Property: 10 claims, 7,000' above sea level, in Grant Co., Ore., in N. W. corner of Sec. 36, T. 9 S., R. 34 E., 23 miles by road west of Whitney, and 28 miles by road from Sumpter, the nearest railroad stations.

Ore: occurs in the Ben Harrison vein, strike N. 3° E., dip 67° E., which varies in width from 18" to 21", with an average stoping width, where opened, of 77". The vein is a brecciated replacement in granodiorite. Ore minerals are pyrite, stibnite, chalcopyrite, sphalerite, pyrrargyrite and stephanite, with gold of about equal value to the silver in the ore.

Development: by adits, the lowest at the 600' level. Several hundred feet of drifting has been done on the various levels and at the beginning of 1915 there was said to be above the 500' level, 87,000 tons of ore blocked out on 3 sides, with an average value of \$10 per ton. The 600' level has had several hundred feet of drifting done; here the ore is said to be 20% higher in value than the ore in the upper levels.

Equipment: includes 20-stamp mill, tube mill, classifiers and vanners. A 75% extraction was obtained in the mill. This low recovery and high cost of transportation of concentrates caused the former owner to plan building a roasting and cyanide plant.

See Mineral Res. of Ore, Vol. 1, No. 8, p. 176.

BLUE MOUNTAIN MINING CO.**OREGON**

Office: 9 E. Fifth St., Covington, Ky. **Mine office:** Sumpter, Baker Co., Ore. **Works office:** Cable Cove, Grant Co., Ore. G. H. Vonderahe, sec.-treas.

Officers: C. L. Arzeno, pres., gen. mgr.; B. J. Stagge, v. p.; A. E. Buxsel, asst. sec.-treas.; Clemens Backhus, Jr., E. Weitkamp, Jos. Grever, Geo. H. Vonderahe, Bernard Moeller, Alvin Davidson, directors. A. Heisler, supt.

Inc. in Arizona. **Cap.**, \$2,000,000; shares \$1 par; fully paid; non-assessable; 1,373,999 issued. Authorized \$50,000 6% bonds; \$47,500 outstanding. Annual meeting 4th Friday in April.

Property: 27 claims, about 500 acres, 200 patented, is said to be covered with timber with the exception of 35 acres, in Cable Cove district, 11 miles N. W. of Sumpter in Baker and Grant counties, Ore., at head of the north fork of John Day river. Claims include the Baby McKee group, Annex, Last Chance and others, said to carry the Eagle, Rawson, Cloud and Marty veins with gold-silver ore.

Ore: occurs in fissure veins in granodiorite, running slightly E.-N. and dipping in opposite directions. One vein has an average width of 4', a proven length of 2,200' and proven depth of 700'. The Eagle vein is said to be 60' wide and developed for 6,800' in length.

Development: includes a 1,900' main working tunnel with a 262' cross-cut at 1,500'; showing a 6' vein opened up for 25' with concentrating ore. The 640' Baby McKee tunnel, now caved, yielded specimen rock years ago. Company owns the Alpine mill, besides a 10-ton experimental mill and the 85-ton Imperial mill.

In 1916 company took a lease on the Imperial Gold Mng. Co. property, 20 patented claims, of which the Blue Mountain holdings are an extension. The property carries 5 veins with ore shoots 100'-200' long, carrying arsenopyrite 38.70%, galena 8.20%, zinc blende 12.10%, pyrite 3.4%, copper pyrite, 1.4%, lime 2.7%, insol. 30%. This assays 1.5 oz. gold per ton, 12 oz. silver, 7% lead, 8% zinc, 18% iron, 30% insol., 17.8% arsenic and 15% sulphur.

Ore reserves: at the Imperial tunnel are reported to be 1,000 tons averaging \$110 per ton and 13,000 tons \$10 ore. Company appears to have too small a capital to develop its property.

BRIGHT CARBONATE MINING CO.

OREGON

Office: 118 East Webb St., Pendleton, Ore. Geo. Darveau, pres.; John Seibert, sec.-treas.

Cap., \$60,000; shares \$1 par; all outstanding.

Property: 3 claims in the Greenhorn range, Grant county, at an elevation of 7,250', is reported to carry a quartz vein in granodiorite, containing mainly gold and silver values. Mine but slightly developed and still in the prospect stage.

BUFFALO MONITOR MINE

OREGON

Operated under lease by Wm. Narkaus, 1916-17. Mine, about 5 miles from Granite, in Grant county, reported to have 3 veins, carrying pyrite, chalcopyrite, tetrahedrite, galena and stibnite; the main or Monitor vein is said to be 50' wide. Production to date amounts to \$75,000. The lessee has installed compressor and air drills.

EQUITY COPPER & GOLD MINING CO.

OREGON

Address: Rev. W. J. Hughes, pres. and gen. mgr., 2441 Center St., Baker City, Ore. **Mine P. O.:** Prairie City, Grant Co., Ore.

Officers: F. M. Saxton, v. p.; Mrs. Kate Palmer, sec.; G. J. Bowman, treas.; preceding with Hon. T. E. Johns and Rev. R. W. Hughes, directors.

Inc. 1901, in Oregon. **Cap.,** \$150,000; shares 10c par, non-assessable. Paid a dividend of \$3,000.

Property: 16 claims, unpatented, 320 acres, with a 5-acre mill site, in the Quartzburg district, 7 miles north of Prairie City. Reported to show 11 orebodies, 3 under development by tunnels, traceable one-half mile, showing sulphide ore estimated by company to average 2 to 3% copper, 2% lead, 2% zinc, 4 oz. silver and \$18 gold per ton.

The frame mill has 5 stamps, a Blake crusher, New Standard tables and 3 slime tables. Presumably idle.

GOLDEN GATE MINING CO.

OREGON

Office: 145½ S. Main St., Marion, Ohio.

Officers: M. F. Douce, pres.; J. F. Lust, treas., both of Marion, Ohio; G. L. Bender, sec., Greenhorn, Ore.

Cap., 1,500,000 shares, \$1 par.

Property: 2 miles N. of Greenhorn, Grant Co., Ore., said to show a quartz vein in greenstone, pinching and widening to 48 inches.

Development: 2 tunnels on vein; upper 800' long, lower with other workings, 2,400'. Best ore found near mouth of lower tunnel. Two shoots said to be 225' and 60' long with maximum width of 20"; a third is 200' long and up to 42" wide. Ten stamps crushed ore in 1915, but operations were unprofitable, and in 1917 it was reported that mine was closed down and equipment sold.

HEPPNER MINING CO.

OREGON

Office: Heppner, Ore. **Officers:** D. B. Stalter, pres.; J. O. Hager, sec.; S. A. Wright, treas.

Cap., \$1,000,000; shares 10c par; \$97,458 cap. stock issued.

Property: 13 claims, about 18 miles from Austin, the nearest shipping point. Claims show over a dozen quartz veins from 1-20' wide, that carry free gold and some pyrite near the surface. Management claims to have secured a \$16 assay from a 20' sample across the lowest vein. Company has done 256' of tunnel work.

HIDDEN TREASURE GOLD MINING CO.

OREGON

Known locally as I. X. L. mine.

Office: Baker, Ore.

Officers: F. T. Kelly, pres.; N. M. Kelly, sec.

Cap., \$1,250,000; shares \$1 par; 1,090,600 issued.

Property: 11 claims, near Greenhorn, Grant Co., Ore., reported to show 3 veins carrying gold ore. Developed by 2 shafts. Some work done, 1915.

NEW ELDORADO MINING & REDUCTION CO.

OREGON

Office: Austin, Ore.

Officers: E. B. Reed, pres.; E. H. Saxe, sec.-treas.

Cap., \$100,000; shares \$1 par; 1,750 issued.

Property: known as the Pioneer, on the south slope of Greenhorn range, New Eldorado district, Grant Co., Ore., is said to show granodiorite cut by coarse-grained dikes of granodiorite porphyry. Dikes remain hard after the granodiorite alongside has become soft in the altered zones. The altered zone carries veins of bluish quartz from a few inches to 5' wide. Besides gold the ore contains a little antimony, blende, and low silver-gold values.

NORTH FORK MINE

OREGON

Address: Glen and Henderson, Granite, Grant county, Oregon.

Property: a gold-bearing gravel deposit known as the North Fork, or Klopp mine, situated on S. bank of north fork of the John Day river, Granite district. Hydraulic mining was done on a large scale in early years, and on smaller scale recently. Total gold yield about 5c per yard from 6,800,000 cu. yds. Gravel is a compact mass of sandy clay, carrying round to angular cobbles and boulders, sometimes as large as 10' across. These boulders are mainly granitic rocks, but there are some schists and lavas and a little unmetamorphosed argillite. Investigation shows that the deposit is the terminal portion of an old drift sheet laid down by the North Fork glacier.

OLIVE CREEK MINING CO.

OREGON

Office: Baker, Ore.

Officers: Thos. M. Tobin, pres., 9332 So. Chicago Ave., Chicago, Ills.; S. A. Tobin, sec.; A. J. Weckler, treas.

Cap., \$1,000,000; shares \$1 par; all issued.

Owens the Olive Creek and Quartz gulch placers in Greenhorn mining district, Grant Co., Ore.

UNITED GOLD MINING CO.

OREGON

Office: 505 Hyde Block, Spokane, Wash.

Officers: A. B. Lee, pres.; C. C. Robbins, sec.-treas.; E. C. Brain, agent, Granite, Ore.

Inc. in Washington. **Cap.**, \$1,000,000; \$1 par; 568,050 issued.

Property: the Cougar mine, 3 miles N. of Granite, Grant Co., Ore., leased from the Cougar Gold M. & M. Co.

Geology: country rock is black, silicious and semi-slaty argillite. Ore was probably deposited by a combination of replacement and quartz filling of the smaller fractures. Gold occurs in pyrite and ore is not easily amenable to treatment. Three shoots of ore have been exposed.

In June, a 75 to 100-ton flotation plant was being erected. Tailings will be cyanided later.

VINCENT CREEK GOLD & COPPER CO.

OREGON

Address: Austin, Grant Co., Ore.

Officers: Burton Miller, pres.-gen. mgr.; Ernest Blackwell, v. p.; Nellie H. Miller, sec.-treas., and J. S. Edwards, directors.

Inc. Dec. 5, 1907, in Oregon. **Cap.**, \$200,000; shares \$1 par; issued 100,002 shares.

Property: 6 claims, 100 acres, in the Greenhorn district, 5 miles N. W. of Austin, on the S. V. R. R., shows a strong vein, traceable 1,500', said to average 14' in width and 3.5% copper. The country is greenstone and copper mineral chalcopyrite.

Development: by a 25' shaft and 215' tunnel being driven 600' with back of 400'. In Feb., 1916, a 20' vein of copper ore was opened in this tunnel. There are 3 buildings. Mine has no power equipment.

WEST SIDE GOLD & SILVER MINING CO.

OREGON

Address: R. Baird, sec. and mgr., Yamhill, Ore.

Officers: J. A. Simmons, pres.; G. W. Perkins, v. p.; R. Baird, sec.; W. G. Busbee, treas.; the foregoing, with C. C. Laughlin, N. H. Perkins, H. C. Gist, directors.

Inc. April, 1900, in Oregon. **Cap.**, 1,000,000 shares; 1c par; outstanding, 814,307; non-assessable. Annual meeting, first Monday, January.

Property: 3 patented claims, about 57 acres, at Greenhorn City, Baker and Grant counties, under lease and bond to R. Baird, who, in 1915, mined about 550 tons in course of development. Minerals are gold, silver, copper, lead. A number of veins cutting through greenstone and schist run at right angles, the N.-S. veins dipping E., and E. W. veins south.

Alteration and faulting are considerable. Ores contain free gold sulphides in quartz and dolomite; cinnabar is also reported. Shipping ore is said to average about \$60 per ton and milling ore \$20.

Development: by several shallow shafts, comprises about 1,000' of workings, greatest depth being about 40'.

Equipment: includes a small steam pump. About \$10,000 spent in development during past two years. Developing in 1917.

HARNEY COUNTY

TROUT CREEK M. & M. CO.

OREGON

Office: Canyon City, Ore.

Officers: O. J. Darst, pres.; F. S. Slater, sec.-treas.

Cap., \$100,000; shares \$1 par; all issued and paid up.

Property: the Bullion Quartz mine near Burns, Harney district, Ore., said to show granite cut by large porphyry dikes. Vein is up to 14' wide, and the ore carries gold, silver, lead and zinc.

Development: by tunnels and shaft. Shipments were made to Utah, by way of Crane, 22 miles from the mine, in 1916.

JACKSON COUNTY

Includes Ashland, Elk Creek, Gold Hill, Jacksonville and Upper Applegate districts; also part of Greenback district.

BRADEN MINE

OREGON

Gold Hill, Jackson Co., Ore. Owned by C. R. Ray, of Tolo, Jackson Co., Ore., and at last accounts was leased to the Opp Mng. Co. Located in S. E. $\frac{1}{4}$ section 27, T. 36 S., R. 3 W., 3 miles from Gold Hill. Opened up about 30 years ago. Largest production for any one year was \$30,000 in 1907.

Ore: gold in 2' vein, strike N. 30° E., dip 25° S. E. Vein filling is quartz and sulphides. Ore assays about \$9 gold per ton.

Development: several thousand feet of drift tunnels, longest over 1,200'.

Equipment: includes a 20-stamp mill.

For geology, see U. S. G. S., Bull. 546, p. 39.

GOLD HILL QUARTZ MINING CO.

OREGON.

Office: Medford, Ore.

Officers: C. R. Ray, pres.-treas.; E. W. Liljegrn, sec.

Cap., \$60,000; shares \$100 par.

Property: some claims, 2 miles S. E. of Gold Hill, Jackson, Co., Ore. Little has been done, save assessment work.

GOLD NOTE MINE.

OREGON.

Address: E. B. Crouch, Grants Pass, Ore.

Property: on Baker creek, 17 miles from railway at Leland, Greenback district, Jackson Co., Ore.

Development: 300' of work said to have opened 4 to 5% copper sulphide ore, also some gold. Leaching to be tried.

GOLD STANDARD MINING CO.

OREGON

Office: Ashland, Ore.

Officers: P. S. Casey, pres.; F. G. McWilliams, sec.

Cap., \$82,000; shares \$1 par.

Property: 30 acres, $2\frac{1}{2}$ miles W. of Jacksonville, Jackson Co., Ore. Vein supposed to be extension of adjoining Opp mine.

GOLDEN STANDARD MINING CO.

OREGON

Office: 308 Commercial Block, Portland, Ore.

Officers: K. K. Kubli, pres.; E. B. Wilson, sec.; E. J. Kubli, treas.

Cap., \$100,000; shares \$1 par.

Property: 82 acres (known as the Kubli) in Gallo Creek district, Jackson Co., Ore., said to show a 1 to 18" quartz vein opened for 200', carrying rich ore.

Equipment: 2-stamp mill and concentrator. Idle.

LUCKY BART GROUP

OREGON

J. H. Beeman, Gold Hill, Jackson Co., Ore., owner and mgr.

Property: 11 claims, partly patented, 220 acres in Sardina mining district, near Gold Hill, said to carry 5 known veins, averaging 2' in width. Ore is free milling, running from \$5-\$100 and said to average \$50 per ton. Developed by 2,000' tunnel to depth of 190'.

Equipment: includes 40-h. p. steam plant, 5-stamp concentrating mill. Concentrates said to average from 3-5 oz. gold and silver. Mine has been

operated more or less regularly for many years and over 14,000 tons of ore have been milled.

OPP MINE**OREGON**

Address: J. W. Opp, Jacksonville, Ore.

Property: 373 acres, situated 1½ miles W. of Jacksonville, Jacksonville Co., Ore., formerly operated by a company.

Geology: three main veins from 2 to 4' wide, occur in shale and andesite. Two ore shoots, one 300', the other 150' long, carry free gold with pyrite, the ore averaging \$5 per ton.

Development: by 18 adits, with 7,000' of workings. One crosscut is 850', another 550' long.

Equipment: 3,600' tram, 6-drill compressor, 20-stamp mill, 125-ton cyanide plant, etc., in good order.

PEARL MINING CO.**OREGON**

Office: Central Point, Ore.

Officers: W. C. Leever, pres.; J. W. Merritt, sec.-treas.

Cap., \$4,400; shares \$20 par; all issued.

Property: the Buzzard mine, 10 quartz claims, 27 miles N. E. of Trail, Jackson Co., Ore, in Elk Creek mining district.

Geology: ore deposit occurs in a N. W.-S. E. shear zone in andesite; the ore contains complex sulphides and is handjigged before shipment, 4 tons returning \$2,100.

Development: by 1,600' crosscut tunnel, total work 3,000', to depth of 170' on the vein. Mine being worked under lease, 1917, by Paul Wright, of Trail, Ore.

SHORTY HOPE M. & M. CO.**OREGON**

Address: H. S. Sanford, pres.; Ashland Ore.

Cap., \$1,000,000; shares \$1 par; 784,498 issued.

Property: 4 miles up Wagner creek from Talent, in Ashland district, Jackson county, Ore.

Geology: vein occurs in tonalite, diorite, and biotite hornblende contact rock and is from 3 to 10' wide. Ore contains gold, pyrite, some galena and chalcopryrite.

Development: by tunnels, one being 1480' long. **Equipment:** 10-stamp mill driven by water power.

Work appears to have been spasmodic, but not without promise.

UNITED COPPER CO.**OREGON**

Office: 95 Union St., Seattle, Wash.

Officers: S. S. Fluhart, pres.; B. E. Fluhart, sec.; R. N. Leezer, treas.

Cap., \$1,000,000.

Property: the Copper King mine, 18 miles east of Leland, Greenback district, Jackson county, Oregon, said to show a fissure vein in andesite. Ore contains chalcopryrite reported to average 4% copper. A concentration mill was erected in 1916. Rich ore was reported as opened in Aug., 1917.

UTAH QUICKSILVER CO.**OREGON**

Address: Alex Nibley, Edwin Jones, or W. Y. Cannon, owners, Salt Lake City, Utah.

Inc. Aug 1, 1916. **Cap.,** \$50,000.

Property: 35 claims in Gold Hill district, Jackson county, Oregon, under option to Boston people. The Ranier claim is reported to show cinnabar with pyrite occurring in an andesite fault breccia. Vein contains black quartz 12" to 15" wide and ore is generally low-grade. Mostly surface work done to date.

JOSEPHINE COUNTY

Includes Galice, Grants Pass, Greenback, Illinois River, Lower Applegate and Waldo districts.

ALMEDA CONSOLIDATED MINES CO.

OREGON

Succeeded by Almeda Mines Co., which see. Fully described in Vol. XII.

ALMEDA MINES CO.

OREGON

Offices: 1014 Board of Trade, Portland, Ore. and Opera House Block, Grants Pass, ore.

Officers: S. C. Spencer, pres.; L. E. Crouch, 1st v. p.; Nat P. Ellis, 2nd v. p.; H. E. Thurman, sec.; C. M. Huddle, treas.

Inc. July 28, 1916, in Oregon. **Cap.**, \$3,500,000; shares \$1 par; 3,000,000 shares common, 500,000 shares preferred. Successor to Almeda Consolidated Mines Co. Annual meeting, 2nd Tuesday in April.

Property: 17 lode claims, 340 acres, also 500 acres placer ground, in Josephine county, about 26 miles from Grants Pass, and 17 miles from Merlin, nearest railway station on the Southern Pacific, with daily stage line to Almeda. Lands include a 200-acre town site.

The quartz claims are in three groups known as the Almeda, on the north side of the river and the Rocky Gulch and Rand groups on the south side of the river.

The Almeda group consists of 3 claims developed by tunnels and a 535' shaft, with about 2 miles of underground workings. Orebody estimated by the management to show approximately 2,000,000 tons blocked out for production.

Considerable development work has been done on the Rocky Gulch and Rand groups by tunnels and crosscuts. The main vein is said to be 10' to 20' wide on the slate hanging wall, ore being strongly auriferous and slightly argentiferous chalcopryrite. Paralleling the main vein is a body of low-grade ore 20 to 30' wide, highly silicious, mainly chalcopryrite with occasional bornite, giving promise of greater values at increased depth.

Equipment: consists of a 100-ton blast furnace for matting, distillate engines to develop 225 h. p., compressors, motors, boilers, complete laboratory and all necessary buildings.

The 17 mile mountain road from Merlin to the mine is in good condition and motor trucks operate over it the entire year.

The mines are not being operated at present pending the installation of a 200-ton concentrator and electric power.

AMERICAN EXPLORATION CO.

OREGON

Address: Grants Pass, Ore. Reported to have bought the Waldo copper mine, Sept., 1917, for \$135,000.

Mine, 2 miles from Waldo, Josephine Co., Ore., is credited with production of \$300,000 worth of copper ore in recent years. **Ore:** massive chalcopryrite associated with pyrrhotite and pyrite.

BILL NYE MINE

OREGON

J. H. Beeman, mgr., Grant's Pass, Oregon. **Property:** near Grant's Pass, Josephine Co., Ore., shows sulphide ore in veins, said to average \$4 gold.

Development: by tunnels. **Equipment:** 10-stamp mill and cyanide plant. Operated jointly with Lucky Bart mine in 1915. Letters returned, 1917.

CHETKO COPPER CO.

OREGON

Idle. **Office:** Ashland, Ore. Mine near Kerby, Josephine Co., Ore.

Officers: C. W. Evans, pres. and gen. mgr.; C. C. Hicks, v. p. and supt.; A. E. Shepard, sec.-treas.; J. M. Keith, mine supt., at last accounts.

Inc. Aug. 10, 1905, in Ariz. **Cap.**, \$1,000,000; shares \$1 par; issued, \$730,516.

Property: 36 claims, 720 acres, fairly timbered, and 2 water rights, all

in Curry county, Oregon, about 70 miles from Grant's Pass, the nearest railroad point. Said to show 8 orebodies, with 2 under development, 1 reported by company as of 240' average width, traceable $1\frac{1}{4}$ miles, carrying native copper in schist, also covellite, bornite and chalcopyrite, claimed by company as of 9% average copper tenor, with \$4.75 gold per ton.

Development: by shafts of 45', 34' and 80', and by 6 tunnels, of 30 to 230' length, with 969' of workings, estimated by company to show 600,000 tons of ore, with 115,000 tons blocked out for stoping, all of which figures are regarded as excessive.

DOROTHEA GOLD MINES CO.

OREGON

Address: 122 Oregon Terrace, Medford, Ore.; and J. F. Reddy, Grant's Pass, Ore.

Officers: J. F. Reddy, pres.; Lincoln McCormack, sec.; Mary F. Reddy, treas.

Inc. 1916, in Oregon. **Cap.,** \$50,000; shares \$1 par; non-assessable; all issued.

Property: 200 acres, 120 patented, on Coyote creek, Josephine county, Ore. About \$20,000 has been spent on development to Sep. 17, 1917.

Claims show a contact deposit between serpentine and diorite; the mineralized zone is 2 to 12' wide dipping 20°, with N.-S. course. Ore shoot is said to be 200' long and 5' wide, and ore to average \$5 per ton.

Development: by 400' crosscut tunnel and 300' drift on vein, workings amounting to 1,000' to depth of 170'. Reserves given by company as 8,000 to 10,000 tons.

In Sept., 1917, a 5-stamp mill and concentrator were ready to treat the ore, which contained 30% chromic oxide in serpentine. A 65% concentrate is expected. Concentration of low-grade chrome ores is increasing, as less than 40% grade has a narrow market.

GOLCONDA MINE.

OREGON

Address: O. R. Moore, Salem, Ore.

Property: 2 chrome claims, 6 miles N. E. of Takilma, Josephine Co., Ore. Shipped 2,000 tons of ore averaging 40% chromic oxide in 1916. As usual with chrome deposits, they are irregular in shape and variable in quantity, but geologic conditions are considered good.

GOLD & PLATINUM MINES CO.

OREGON

Office: Grants Pass, Ore. I. F. Peck, pres.

Cap., 1,000,000 shares, \$1 par.

Property: 1,280 acres of placer claims on Cave creek, Josephine Co., Ore., for which dam, flume, sluice-boxes, etc., have been constructed.

GREENBACK GOLD MINING & MILLING CO.

OREGON

Address: Placer, Josephine Co., Ore. Mr. Childers, mgr. Owned by R. C. Robinson, Parish, N. Y.; and leased to W. L. Holmes of Buffalo, and H. L. Holmes of Geneva, N. Y.

Property: $1\frac{1}{2}$ miles N. of Placer, which is 8 miles from Leland (nearest railroad), in Greenback district, Ore. Claims said to show a vein of quartz, calcite, and pyrite in greenstone, cut off by serpentine to the east. Ore averages 20" in width, assaying \$8 per ton in upper levels.

Development: since 1897 opened by 12 levels to 500' vertical depth. Above No. 9 most of the ore has been stoped. A winze opened the ore below No. 9.

Equipment: largest plant in southern Oregon, consisting of 40 stamps (motor driven), 3 Risdon crushers, 12 concentrators, cyanide annex, 7,000' aerial tram, and compressor.

Exploration under way at present, employing 30 men. Mine has produced a good deal of gold.

GREYBACK COPPER MINES.**OREGON****Address:** Selma, Ore. John Hampshire, mgr.**Property:** 20 claims, 13 miles E. of Selma, in the Waldo district, Josephine Co., Ore.

Purchased in June, 1917, by Twohy Bros. Co., railroad contractors of California and Oregon.

Development: 700' of tunneling has, it is said, proved a large copper deposit to exist.**JIM BLAINE MINE.****OREGON**

Owned by George Epperly, of Placer, Ore., a former lessee.

Property: 1 patented claim, 20 acres in Placer district, Josephine county, shows gold-silver ore in quartz veins in porphyry formation. The orebody runs N. W.-S. E. and dips 65°. Developed by 200' tunnel to depth of 150'.**Equipment:** includes compressor and concentrating mill. Concentrates reported to average 1 oz. gold and 50 oz. silver. Mine produced 1,000 tons of ore in 1915, yielding a gross return of \$9,842. Ore is to be sent to Tacoma and the mill abandoned.**OAK MINE.****OREGON****Address:** G. A. Baker and Geo. Buell, owners, Grants Pass, Josephine Co., Ore.Mine is 6 miles E. of Hugo, on Jump-off Joe creek, N. W. of Walker Mtn. **Ore:** main vein is gold bearing, but there are also several small copper veins. Minerals in the ore include chalcopryrite, pyrite, sphalerite, galena, quartz, rare malachite and pyrolusite.**Development:** by tunnel with total of 800' of workings. Equipped with 20-h. p. gas engine and compressor.**OLD GLORY GOLD MINING CO.****OREGON****William Stock**, sec.-treas., Grants Pass, Ore.**Cap.**, \$1,000,000; shares \$1 par; 604,200 issued.**Property:** the Old Glory mine on Silver creek in western Josephine county, 4 lode and 2 placer claims, said to show a large lode of low-grade copper ore carrying gold and silver values. Property was to be equipped with machinery in 1916, but the president and general manager died and development will therefore be delayed.**OREGON GOLD MINES CO.****OREGON****Office:** 1208 W. Monroe St., Chicago, Ill.**Officers:** E. E. Dick, pres.; J. M. O'Grady, sec.; H. F. Comstock, treas.; H. D. Norton, atty.**Inc.** in Arizona. **Cap.**, \$2,000,000; shares \$1 par; 1,657,436 issued. Is a re-organization of the American Gold Fields Co.**Property:** the Granite Hill mine, 9 miles N. E. of Grant's Pass, Josephine Co., Ore., which was active from 1902 to 1907 and is credited with a production of \$75,000.**Ore:** quartz carrying chalcopryrite, galena and pyrite with gold values, occurs in veins in tonalite and greenstone. Main vein said to average 5' in width and ore treated in 1907 averaged \$5 per ton.**Development:** by 430' vertical shaft with total of 12,000' of workings, now under water.**Equipment:** includes 20-stamp mill, compressor steam hoist, 5 machine drills and 150-h. p. electric motor.**OSCAR CREEK CONS. MINING CO.****OREGON****Office:** 1st Natl. Bank Bldg., Grant's Pass, Ore. **Officers:** Chas. Burkhalter, pres.-treas.; A. H. Gunnell, sec.**Cap.**, \$250,000; shares \$1 par; all issued.**Property:** the Jewell & Moore group of 5 placer claims, 3 patented, also

3 additional unpatented claims and 92 acres of dump ground, 2 miles E. of Murphy and 10 miles S. of Grants Pass. Credited with production of \$40,000 to 1917.

Equipment: includes 3 miles of ditches and 300' flume line.

QUEEN OF BRONZE MINE

OREGON

John F. Hampshire, mgr.; Reed C. Crowell, supt.; R. H. Clark, cons. engr., Takilma, Josephine Co., Oregon. Mine purchased for \$150,000 by Twohy Bros. and associates, March, 1916.

Property: is in the Illinois Valley and near the Waldo Sm. & Ref. Co. holdings, 30 miles from Waters Creek on the railway. The new California & Oregon Coast Ry. will connect it with Grants Pass and Crescent City, Calif., 1916.

Mine has been a producer for 10 years, shipping ore with 9% copper and \$3.50 gold per ton, but with much ore of lower grade in the mine. Geology described in Min. Resources of Oregon, Vol. 2, No. 4, p. 184.

Thirty outfits are hauling ore to railway, 1,600 tons of copper ore shipped in July, 1917.

TAKILMA SMELTING CO.

OREGON

Office: 301 Mining Exchange Bldg., Colorado Springs, Colo. **Works office:** Takilma, Josephine Co., Ore. Chas. L. Tutt, pres.; Wm. T. Tutt, sec.; J. A. Hull, treas.

Inc. in Colorado. **Cap.**, \$250,000; shares \$10 par. Owns a controlling interest in the Waldo Smelting & Mining Co.

Gross earnings, in 1914-15, were \$55,000, with operating expenses of \$7,500.

Property: mining claims and smelter site in Waldo district. The Queen of Bronze mine (which see) was sold early in 1916 to Twohy Bros. and others of Portland.

Smelter: at Takilma, has a 125-ton water-jacket blast furnace, making matte, when in blast averaging 45% copper, 2.5 oz. silver and \$4.50 gold per ton, which is shipped to the Tacoma smelter for conversion. Owing to heavy rains in fall and winter, causing impassable roads, the smelter can be worked only in summer. The nearest rail point is Grants Pass, 42 miles distant. Equipment includes a sawmill.

Production: 7,543 tons of ore smelted yielding 1,563 tons of matte of about 45% copper tenor, indicating an average return of 8% copper from ore smelted, with production of about 1,350,000 lbs. fine copper in 1905, and 499,662 lbs. fine copper in 1907; the works have been idle since Jan., 1908.

THREELODES MINING CO.

OREGON

Office: Medford, Ore.

Officers: C. E. Wickstrum, pres.; N. L. Townsend, sec.; George Lindley, treas.

Cap., \$350,000; shares 35c par; all issued.

Property: 9 claims, and 9 others bonded, 2 miles W. of Galice, Josephine county, Ore., said to have been exploited in recent years for tin, tungsten, and platinum; in 1916 mine was supposed to be a molybdenum producer.

UNITED COPPER GOLD MINES CO.

OREGON

Idle.

Office: Murphy Blk., Salem, Ore. Mine at Selma, Josephine Co., Ore.

Officers: W. S. Low, pres. and gen. mgr.; E. O. Moll, v. p.; Daniel Webster, sec.; C. E. Lebold, treas.; preceding with W. C. Buckner, James Greig and H. Neugabauer, directors.

Cap., \$500,000; shares \$1 par; issued 219,654. Annual meeting, first Monday in August.

Property: on Pickett creek, near Merlin, has been sold and company now owns 11 claims, in Illinois district, Ore., about 12 miles N. W. of Selma.

Geology: ore occurs in serpentine near porphyry and diorite contacts. A dark gossan sometimes stained with copper is underlain at 15' depth by ore carrying 18% copper and 5 to 10 oz. silver and upwards of \$1 gold, according to management.

Development: amounts to 1,000', with a 500' tunnel and 200' crosscut, exposing 1,000 tons of ore. Property is 34 miles from S. P. R. R. Is regarded as a prospect which might be worked on a large scale were railroad transportation nearer.

VANGUARD GOLD-COPPER CO.

OREGON

Mine near Kerby, Josephine Co., Ore. C. E. Phillips, mgr.

Inc. 1910. **Cap.**, \$1,000,000; shares \$1 par.

Property: 7 miles W. of Kerby, said to carry gold-copper ore. Idle.

WALDO CORPORATION.

OREGON

Office: 1621 L. C. Smith Bldg., Seattle, Wash.

Officers: D. E. Skinner, pres.; Louis Levensaler, v. p.; L. B. Stedman, sec.-treas.; G. M. Esterly, mgr.

Cap., \$100,000; shares \$100 par.

Property: placer ground in the Waldo district, Josephine Co., Ore., carrying auriferous gravel 10' to 25' deep that lies on a bed rock of conglomerate and sandstone with some serpentine. Gravel worked thus far is reported to have yielded 12½c per cu. yd.

Equipment: consists of 3 ditches, 2 giants and hydraulic elevator for lifting the gravel.

WALDO MINE

OREGON

Address: W. B. Whipple, mgr., Takilma, Ore. **Owners:** De Witt Van Ostrand, of Phillips, Wis.; J. F. Reddy and A. H. Gunnell, Grants Pass, Ore.

Property: 20 patented claims, 400 acres, with mill site, in Waldo district, Josephine county, formerly owned by the Waldo Sm. & Ref. Co. of Colorado, which see.

Geology: claims show unrelated masses of chalcopyrite, pyrrhotite and pyrite in abbrecciated, or crushed rock zone, a large part of which is serpentine. Masses sometimes consist of mixed sulphides and serpentine.

A 50-ton mill has been erected to concentrate mine and dump ore. Some ore was shipped to Tacoma last year.

WALDO SMELTING & REFINING CO.

OREGON

Office: 301 Mining Exchange Bldg., Colorado Springs, Colo. **Mine office:** Takilma, Josephine Co., Ore.

Officers: Spencer Penrose, pres.; C. L. Tutt, v. p.; J. A. Hull, treas.; preceding officers, J. A. Hayes, Wm. T. Tutt, directors. E. C. Tucker, supt.

Inc. Dec. 3, 1901, in Colorado. **Cap.**, \$3,000,000; shares \$100 par. Is closely affiliated with the Takilma Smelting Co.

Property now owned by De Witt Van Ostrand and others, see Waldo mine.

LANE AND LINN COUNTIES

These two counties include the Blue River, Bohemia and Quartzville districts.

BLACK BUTTE QUICKSILVER MINING CO.

OREGON

Office: New York Block, Seattle, Wash.

Officers: John N. Powell, pres.; Marion T. Edwards, sec.; W. B. Dennis, Carlton Oregon, managing agent.

Inc. in Wash. **Cap.**, \$5,000,000; shares \$100 par; fully issued.

Property: 1,040 acres, patented, in Sec. 16, 17, 9, 8, T. 23 S., R. 3W, Lane Co., Ore., about 17 miles by wagon road from Cottage Grove, said to carry a low-grade cinnabar deposit. Developed to depth of 900'.

Equipment: includes a 40-ton retort. Production not reported. About 30 men employed.

BLUE BIRD MINING CO.

OREGON

Office: 67 N. Third St., Portland, Ore.

Officers: S. M. Carter, Blue River, Ore., pres.; F. W. Brooke, sec.; C. Marco, treas.

Cap., \$100,000; shares \$1 par; fully issued.

Property: Blue Bird mine, 7 unpatented claims, in Sec. 28, T. 15 S., R. 4. E., 6 miles from Blue River, Linn county, said to carry a deposit of oxidized ore, containing gold and silver values and some iron pyrite. Developed by 500' and 220' tunnels and several crosscuts. Values have yet to be proved.

CHAMPION CONSOLIDATED MINING CO.

OREGON

Officers: H. C. Mahon, pres.; Portland, Ore.; J. A. Smith, v. p.; F. W. Kiesling, sec.-treas.; preceding, with J. Sutherland and Olaus Jeldness, directors.

Inc. June, 1916. **Cap.,** \$300,000; shares 10c par.

Property: 47 claims, 800 acres, at Champion, in the Bohemia district, western Oregon, including the Champion, Helena and Musick mines. The properties were discovered in 1858, and have been worked intermittently in the oxidized zones near surface with a reported gross production of \$2,500,000 in gold.

There are three parallel veins traceable for a mile and averaging 3' in width, and in some places 100' wide in andesite formation. Ore-shoots, as developed, are 5' to 15' wide. Below the oxidized zone, ore carries silver, lead, zinc and copper in addition to gold and much of it of shipping grades, also a porphyry dike 150' wide which assays from \$1.60 to \$3.50 per ton in gold.

Development: all three mines are developed down to and have been partially stoped to the 300' level, with about 14,000' of workings. The most extensive work is at the Champion mine. Work now in progress opening mines at greater depth, the Helena has one ore shoot, the Champion has two and the Musick, two.

Equipment: hydro-electric power plant, compressor plant, hoists, underground electric haulage, etc., and a 30-stamp mill with concentration plant to be increased to 300-tons and to be brought up to date by installation of fine grinding and flotation equipment.

GOLDEN RULE CONSOLIDATED M. & M. CO.

OREGON

Office: Salem, Ore.; C. L. Johnson, sec. **Cap.,** \$500,000; shares 5c par.

Property: 26 claims, 15 miles S. E. of Disston, Bohemia district, Lane Co., Ore. Idle.

LINCOLN MINES CO.

OREGON

Office: Albany, Ore.

Officers: A. M. Hammer, pres.; J. D. McLain, sec.; J. McChesney, treas., all of Albany.

Cap., \$250,000; shares \$25 par; all issued. Is the successor of the Albany M. & M. Co.

Property: 8 claims, known as the Albany mine, about 23 miles from Gates. **Ore:** lead-zinc sulphides with gold values occur near the surface in veins in andesite. Veins are said to be shear zones up to 50' wide with lenses of sulphides on the foot or hanging walls and distributed through the zone.

Spent about \$1,500 in development work, 1916.

NORTH FAIRVIEW MINING CO.

OREGON

Address: Herbert Leigh, 38 E. 6th St., Eugene, Ore.

Officers: G. W. McQueen, pres.; Herbert Leigh, sec.; Darwin Bristow, treas.

Cap., \$300,000; shares 10c par; all issued.

Property: 15 claims N. of Fairview mountain, ½ mile from Bohemia post office, 15 miles S. E. of Disston.

Geology: mineralized fractured zone in andesite, 12' wide, said to have been traced for over a mile.

Development: 2 tunnels, one 300' long, 100' below outcrop; the other 150' long with depth of 450'.

VESUVIUS MINES CO.

OREGON

Office: Eugene, Ore. **Mine office:** Bohemia, Ore.

Officers: E. M. Johnson, pres.; F. J. Hard, sec.-treas.

Inc. in Ore. Cap., \$6,000,000; shares \$1 par; all issued.

Property: 50 claims, including the Vesuvius mine, 15 miles S. E. of Disston, Bohemia district, Lane county.

Geology: andesite flows interbedded with andesitic tuffs, traversed by a fracture zone in which the ore occurs. Galena, chalcopryrite, pyrite and sphalerite are the ore minerals.

Development: by 3 tunnels, the main one 2,000' long. Workings said to disclose 18" to 36" of ore which assays from \$7.50 to \$20.64 per ton.

Equipment: includes a 10-stamp mill with tables, steam plant, saw mill, etc.

WEST COAST MINES CO.

OREGON

Office: 20 Chamber of Commerce Bldg., Portland, Ore.

Officers: W. J. Zimmerman, pres.; W. M. Cake, sec.; W. W. Elmer, mgr.

Cap., \$1,500,000; shares \$1 par; 890,000 issued.

Property: the Champion, Helena, and Musick mines, 47 claims, 12 miles S. E. of Disston, Bohemia district, Lane county, Oregon. Mines are under lease to H. C. Mahon, of Portland. The Champion is said to have yielded \$1,700,000; the Helena, \$150,000, and the Musick, \$180,000.

Development: by tunnels. In the Champion the main lode is 3' wide and at 200' in depth and below, the principal ore minerals are pyrite, chalcopryrite, sphalerite and galena. The other mines contain similar complex ores.

Equipment: includes 3,000' aerial tram, 20 stamps, concentrators and hydro-electric power plant.

MALHEUR AND MARION COUNTIES

Includes Mormon Basin and North Santiam districts.

FREELAND CONS. MINING CO.

OREGON

- Dissolved, March 25, 1914.

Property now owned by Cons. Copper Mng. & Power Co., which see. Fully described in Vol. XII.

GOLD CREEK MINING & MILLING CO.

OREGON

Address: Salem, Ore.

Officers: Otto Hansen, pres.; W. T. Staley, sec.-treas.

Cap., 3,500,000 shares, \$1 par.

Property: 17 claims, 16 miles N. E. of Gates, on S. P. R. R., N. Santiam district, Marion Co., Ore., said to show massive pyrite, chalcopryrite, galena, and sphalerite, in a vein in andesite.

Development: 1,500' crosscut tunnel, driven to cut vein at 2,000', at depth of 600'. This work is considered to have been unnecessary.

LEWIS & CLARK M. & M. CO.

OREGON

Office: Silverton, Ore.

Officers: Dr. F. M. Brooks, pres.; Thos. Skaife, sec.; M. Palmer, treas.

Cap., \$100,000; shares 10c par; \$71,000 issued.

Property: 5 claims, about 18 miles N. E. of Gates, on a branch of the S. R. Ry. Developed by tunnel said to show veins 1-5' wide in andesite. Ore contains copper and iron sulphides, gold and silver in zinc.

Working on a small scale.

RED, WHITE AND BLUE MINE

OREGON

Owned and operated by Geo. H. Bodfish, Malheur, Oregon. Property at Malheur, said to show a quartz vein, 8 to 10" wide, carrying gold values that average \$5 to \$8 per ton. Developed by 134' vertical shaft and equipped with steam hoist, Cameron pump and 6-stamp concentrating mill.

SILVER KING MINING CO.

OREGON

Address: Albany, Ore., or J. J. Langmack, Gerlinger Bldg., Portland, Ore.

Officers: J. J. Langmack, pres.; E. E. Williams, v. p.; Wm. S. Risley, sec.-treas.

Inc. March, 1909. Reorganized and capital reduced under Oregon Blue Sky Law, June, 1914. Present capital, \$500,000; shares \$1 par.

Property: 12 claims covering 4 veins on Little North Santiam river, near Elkhorn, Oregon, in the Cascade Mts., 75 miles from Portland, and 17 miles from railroad; good road with easy grade suitable for auto trucks from railroad to mine. The veins occur in and follow shearing zones, and carry ore with gold, silver, lead, and zinc. There is ample water power and timber for mining purposes on property. Several frame houses, blacksmith shop, mining tools, car and track in main tunnel.

Development: by 2 shafts, 80' and 40' deep; 2 prospect tunnels, 70' and 150', and a number of open cuts on veins, and main working tunnel in over 100', which is now being driven to cut the principal vein of the group at about 1,050' from portal, at a depth of over 900' on vein below the prospect tunnels. Tunnel will drain mine and permit extraction of ore by gravity system.

Average of samples from prospect tunnels show: gold, \$1.20; silver, 15 oz.; lead, 3 to 4%; and zinc, 3 to 4%.

UNION AND WALLOWA COUNTIES

Embracing Camp Carson, Homestead or Iron Dyke (in part) and Wallowa districts.

EUREKA MINING, SMELTING & POWER CO.

OREGON

Idle. P. O. Box 63, Clarkston, Wash. W. E. Howard, sec. **Property:** 40 claims, patented, at Imnaha, Wallowa Co., Ore. Secretary reports, property idle for many years, awaiting railway facilities.

IMNAHA MINE

OREGON

Address: S. L. Winchester, via Joseph, Wallowa Co., Ore.

Property: 25 miles N. of Homestead and 40 miles E. of Joseph, the railroad terminus.

Development: 4,000' of tunnels, etc., a 1,000' tunnel being driven in 1916. Vein said to be 3½' wide. Reserves estimated at 50,000 tons of gold ore.

Equipment: 10-ton mill driven by water-power.

MOUNTAIN GEM MINING & DEVELOPMENT CO.

OREGON

Address: Joseph, Ore.

Officers: Harry Dawson, pres.; T. F. Tomkins, sec.-treas.

Cap., \$200,000; shares 10c par; \$124,211 subscribed.

Property: 11 claims on W. fork of Wallowa river, 10 miles from Joseph and 5 claims 25 miles S. of Lostime.

Geology: ore occurs in a contact zone between grano-diorite and lime-

stone with calcareous schists. Pegmatite and aplite dikes also are present. The ore is found associated with the characteristic contact-metamorphic minerals, garnet, quartz, calcite, etc., the values being in pyrite, chalcopyrite and molybdenite.

Development: crosscut tunnel driven through grano-diorite to the contact where fine-grained pyrite with some chalcopyrite was found, that was 5' wide. Output in 1915 was 14 tons of \$30 ore.

WALLOWA COUNTY MINING & DEV. CO.

OREGON

Address: J. A. Burleigh, Enterprise, Ore.

Officers: Jesse Walker, pres.; J. A. Burleigh, sec.; G. W. Williams, treas.

Cap., \$200,000; shares \$1 par; all issued.

Property: 14 claims, on Lick Creek, Wallowa county, said to show a 2' vein in greenstone, limestone and argillite, cut by aplite dikes.

Development: by 125' shaft.

PENNSYLVANIA

Companies are arranged in alphabetical order.

AMERICAN VANADIUM CO.

PENNSYLVANIA

Vanadium Bldg., Pittsburgh, Pa. Plant at Bridgeville, Pa.

Officers: James J. Flannery, chairman; J. L. Replogle, pres.; E. E. Fernandini, 1st v. p.; J. C. Gray, 2nd v. p.; C. B. Aylesworth, sec. and asst. treas.; H. A. Neeb, treas., with J. R. Flannery, P. J. Barry, Jos. DeWyckoff, B. D. Saklatwalla, and J. G. Butler, Jr., directors.

Inc. Feb. 15, 1916, in N. J., to mine vanadium ores and manufacture vanadium alloys. **Cap.,** \$700,000; shares \$100 par; increased 1916 to \$13,500,000, in \$5,000,000 preferred, \$6,000,000 common stock and \$2,500,000-6% short term notes. Oakland Savings & Trust Co., Pittsburgh, registrar. Company gives out no information.

ARIZONA-IDAHO COPPER EXTRACTION CO. PENNSYLVANIA

Office: 915 Union Bank Bldg., Pittsburgh, Penn. Wm. C. Hagan, pres.; Jos. E. Barnes, v. p.; Ernest H. Browne, sec.-treas.; Wm E. Greenwalt, mgr.

Inc. about 1908. **Cap.,** \$500,000; shares \$1 par; non-assessable; 429,000 shares outstanding.

Owens no mines; property is a copper extraction process which the company claimed would produce copper at from 4 to 6 cts, per pound. Company was offering 50,000 shares at 50 cts. per share, to raise cash required to enlarge the demonstrating plant at Denver, at last accounts.

DONORA ZINC WORKS

PENNSYLVANIA

Operated by the American Steel & Wire Co., a subsidiary of the United States Steel Corporation.

Works: at Donora, near Pittsburgh, Pa. Plant includes bins of 20,000 ton capacity, crushing plant for ore that requires reduction, 6 Hegeler 7-hearth roasting furnaces, mixing house, 10 Hegeler furnaces each containing 912 distillation retorts, pottery, power plant, and sulphuric acid plant. Furnaces are fired by producer gas.

EAGLE METALLIC COPPER CO.

PENNSYLVANIA

Address: care H. D. Deshler, Belvidere, N. J. **Branch office:** 208 Haas Bldg., Allentown, Pa. **Mine office:** R. F. D. 3, Fairfield, Adams Co., Pa.

Officers: F. H. Cuyle, pres.; Dr. P. A. Stem, v. p.; A. L. Wickert, sec.; Thos. Zellner treas.; Owen H. Nagle, gen. mgr.; preceding, with A. V. Diefenderfer, directors.

Inc. 1903, in New Jersey. **Cap.**, \$500,000; shares \$1 par, and rein. Dec. 9, 1910, in Pennsylvania; \$150,000 in treasury after raising \$60,000 to build a smelter in 1911.

Property: 500 acres in Jacks Hollow, on the Maryland border, one-half mile from and crossed by the Western Maryland railroad, near Charmian.

Development: by open-quarry work from pit 200' across, connected with smelter by 750' aerial rope tram. The mine is apparently a large open-cut filled with water. Careful examination of exposed rock and surface material said to show no indication of copper whatever. It is also reported that a pile of crushed ore in smelter bins, 1915, did not contain the minuest particle of mineral. Samples of matte from furnace said to run 2% copper, which evidently came from the pyrite used for flux.

Equipment: includes a 250-h.p. steam plant, 150-h. p. engine and a 2 $\frac{5}{8}$ " core drill, with office and laboratory. Smelter built in 1911. Regarded as a valueless property.

NATIONAL COPPER MNG. & DEVEL. CO. PENNSYLVANIA

Out of business. Property, described in Vol. XII, is now owned by H. D. Deshler.

UNITED M., M. & COPPER SM. CO. PENNSYLVANIA

See description under Maryland.

VANADIUM COMPANY OF AMERICA PENNSYLVANIA

See American Vanadium Co., Penn.

Control of company bought Aug., 1916, by Kuehn Loeb & Co., New York, the Cassatt Co. of Philadelphia, J. Leonard Replogle, Chandler Bros. & Co., and Harrison Williams. The reorganized corporation will have a capital of \$13,500,000 instead of \$700,000 of the old company; \$5,000,000 will be preferred, \$6,000,000 common and \$2,500,000 6% short term notes will be issued. Old stockholders receive \$1,000 a share, \$650 in new stock and \$350 in notes. The old stock is said to have cost \$200 a short time ago, the reorganization being one of the juiciest melons Wall Street has ever known.

VIRGIN COPPER CO. PENNSYLVANIA

Last address: 12-West Bldg., York, Pa. **Mine office:** Charmian, Franklin Co., Pa.

Officers: John H. Dechert, pres.; Chas. E. Wills, v. p.; Clarence A. Wills, sec.; Harry S. Wiest, treas.

Property: about 1 mile N. of Charmian, in the Blue Ridge mountains, near the Maryland state line, shows ore carrying native copper, with silver and gold values said to give assays of \$25 to \$600 per ton.

Development: by 215' shaft sunk at 47°. Four diamond drill holes, of 165 to 800', were bored, 1907.

Equipment: includes small hoist and compressor. Is considered an unpromising venture. Idle.

PHILIPPINE ISLANDS

See ASIA in this book

PORTO RICO TERRITORY

ABUNDANCIA; MINA LA

Idle. Mine near Rio Blanca, Porto Rico, opened in 1869. Produced a small quantity of rich oxidized ore from a paystreak of 8 to 15", carrying bornite and chalcopyrite average 10 to 12% copper, in a vein of cuprif-erous pyrrhotite of 6 to 10' width.

SOUTH DAKOTA

Companies are arranged alphabetically.

AMERICAN MINING CORPORATION**SOUTH DAKOTA**

Address: Deadwood, S. D. Owns the Bismarck mine at Flatiron, a gold-silver-tungsten producer. Mill and cyanide plant on the ground.

AMERICAN TIN & TUNGSTEN CO.**SOUTH DAKOTA**

Owns the Cowboy mine at Hill City, Pennington county, developed by 300' incline shaft, and reported producing 90 tons of tin ore per day, 1917.

Equipment: includes concentrating plant at Hill City, which also treats custom ore from adjacent tungsten mines.

ANACONDA GOLD MINING CO.**SOUTH DAKOTA**

Address: Metropolitan Life Bldg., Minneapolis Minn.

Officers: Martin H. Brede, pres.; O. S. Lofgren, v. p.; H. M. Hokenson, treas., with A. S. Sandberg, L. J. Lundgren, O. H. Carlson, Nels Nelson, N. Westerdahl and G. A. Mattson, directors. O. A. Walstad, sec.; A. E. Hall, supt.

Inc. in South Dakota. **Cap.**, \$1,500,000; par \$1; half common and half preferred stock; \$777,792 issued.

Property: 34 claims, patented, 515 acres, in Roubaix district, near Deadwood, S. D., carries gold-quartz ore in a vein said to widen to 45' on 200' level.

Development: 340' shaft and crosscuts. **Equipment:** steam power and compressor. Plans sinking 3-compartment shaft to depth of 1,000', down 135', May, 1917, and erection of mill on north end of property. Management endeavoring to raise \$50,000 for further development work.

BLACK HILLS COPPER CO.**SOUTH DAKOTA**

Idle. Office: Benton Harbor, Mich. Mine near Rochford, Pennington, Co., S. D.

Officers: E. A. Hoffman, pres.; George M Thresher, sec.; John H. Kerr, treas.

Inc. June 2, 1900, in South Dakota. **Cap.**, \$2,000,000; shares \$1 par.

Property: 27 claims, 510 acres, in the Hornblende district, shows fissure veins in slate, with heavy gossan capping, carrying carbonate and oxide ores. Orebody under development is said by company to average 20' width, and to be more than a mile in length, opened by incline shafts and crosscut tunnels, giving a total of about 1,200' of underground openings. Ores average 1.5 to 3% copper, with small values in gold, silver and nickel. Has steam power, with 60-h. p. hoist, good for 1,500', and 4 power drills. Property considered of doubtful value.

CUSTER PEAK COPPER CO.**SOUTH DAKOTA**

Office: Roubaix, S. D. Burt Rogers, sec., Black Hills Trust & Sav. Bank Bldg., Deadwood, S. D. D. Grupe, pres.; John O'Brien, v. p.; with John Plunkett, directors.

Cap., \$1,500,000; shares \$1 par; assessable; 100,400 shares outstanding. Owns the Jungle mine at the southeast base of Custer peak, showing a porphyry dike cutting schist with 5' of copper ore on both walls.

Development: includes 65', 90' and 250' shafts, showing an 8" streak of nearly solid malachite on the 60' level. The older holdings of the company, 1½ miles from the Jungle mine and S. W. of Deadwood, are said to carry average values of \$6 per ton in oxidized ore to depth of 100', changing below to pyrite and chalcopyrite, showing on the 200' level, a vein of 85' width, assaying about 1% copper with \$1.60 in gold. After several years' idleness, work was resumed in 1916. By April, 1917, the shaft was repaired to 300' depth, and sinking another 200' commenced.

The State Inspector of Mines considers the Custer Peak one of the promising copper properties of the State.

Equipment: includes hoist, air compressor, pump and steam power. Treatment plant probable.

CUYAHOGA MINING CO.

SOUTH DAKOTA

Address: Custer, S. D.; J. H. Snyder, v. p.

Property: the Spokane silver-lead mine. In 1917 the shaft was sunk to 200'. Ore containing 43% sulphur and some copper was shipped to Cleveland, Ohio, for chemical purposes. Good gold ore is being opened. A hoist and additional boilers were installed, 1916.

DAKOTA CONTINENTAL COPPER CO.

SOUTH DAKOTA

Office: 300 Commonwealth Trust Bldg., Harrisburg, Pa. Company is a reorganization of the Continental Copper Mining & Smelting Co.

Property: near Sheridan, Pennington Co., S. D., in the Black Hills, known as the Dakota-Calumet, or Lillian, property, 52 claims, patented, 179 acres. Claims show quartz schist with a pyrrhotized zone, from 50' to 200' wide, traceable one-half mile. The mineralized zone shows bands of nearly pure pyrrhotite, with occasional traces of copper. At boundary between oxidized and unaltered material, a little copper is occasionally found, as a secondary concentration. Small amounts of rich ore were found at the surface and down to 25-30', but property is valueless as a copper mine. Extensive diamond drilling and exploration work makes this conclusion certain. A body of gold quartz ore of commercial grade was cut in diamond drilling.

Development: includes an 850' shaft, 1,170' crosscut tunnel and 9 drift tunnels. New work, 1917, comprises station and drift on 270' level and 100' of sinking.

Equipment: includes 300-h. p. steam plant, with hoist good for 1,200', 7-drill compressor, all necessary shops and an old smelter of no present value. Electric hoist installed, 1917.

Company has a bond on the Golden Summit gold mine, 3½ miles S. E. of Hill City and is developing same.

DEADWOOD-HEIDELBERG MINING CO.

SOUTH DAKOTA

Deadwood, S. D.

Officers: Geo. V. Ayres, pres.; John Treber, v. p.; Jacob Goldberg, treas., with N. E. Franklin, A. T. Roos, mgr., and T. A. Solinsky, directors. Wm L. Treber, sec.

Inc. Aug., 1914, in S. D., as result of work of the Deadwood Business Club, in an attempt to promote the mining interests of the section. **Cap.**, \$125,000; shares 25c par. Annual meeting, in June. Operating expenses were \$4,057 for 13 months to September 1, 1916.

Property: 9 claims, unpatented, 185 acres, on Two Bit Creek, Lawrence Co., S. D., shows gold ore in a contact deposit between shale and porphyry, and is said to average \$5 per ton. Ore reserves said to be 5,000 tons.

Development: 7 tunnels, 65'-380' long, with deepest workings at 193' from surface; total development, 1915-16, amounted to 500' of surface trench work and 460' of underground work.

Production: to 1916 amounted to 147 tons ore. Management plans development work and sinking to the contact of the shale and underlying quartzite.

ECHO GOLD MINING CO.

SOUTH DAKOTA

Dr. Henry H. Jewell, pres.; Dr. Andrew J. Pitman, v. p.; L. B. Snelling, sec.; Frank B. Heald, John S. Rand, W. E. McQueston and Burt Rogers, directors. W. L. Mason, sec.-treas., Manchester, N. H.

Inc. 1892, in South Dakota.

Property: 62 acres, in the Maitland district, 5 miles N. W. of Deadwood, Lawrence Co., S. D., said to show a quartz vein with gold, silver and lead,

in schist cut by phonolite dikes. Orebody, 210' long, assays from \$1 to \$980 per ton. Developed by 200' vertical shaft, and several tunnels, with total workings of 2,270'.

Equipment: includes a 25-h. p. electric hoist, air compressor and sinking pump. Management claims company is well financed, and is yet in the prospective stage.

It is said that in Jan., 1917, a body of sylvanite ore was cut in the drift on the 200' level.

GOLD DOLLAR MINE

SOUTH DAKOTA

In Crown Hill district, Black Hills, S. D. Leased to Coleman, Madill, and others.

Property is a regular gold producer, whose ore is treated in the Mogul mill near Deadwood.

GOLDEN REWARD CONSOLIDATED GOLD M. & M. CO. S. D.

Office: 475 Fifth Ave., New York.

Mine office: Deadwood, Lawrence Co., S. D.

Officers: C. T. Tegethoff, pres.; Harris Franklin, v. p., with R. W. Goelet, Henry de Forest, W. B. Devereux, Walter Luttgen, Ed. de Witt and W. A. Harriman, all of New York, directors. W. J. Johnson, sec.; N. E. Franklin, Deadwood, asst. sec.; Henry Schnitzel, gen. mgr.; F. R. Baldwin, gen. supt.

Inc. June 25, 1896, in South Dakota. **Cap.**, 1,000,000 shares; \$10 par; 841,793 shares issued to June, 1916. Stock transferred at company's office. Annual meeting 1st Tuesday in August at Deadwood, S. D. Gross earnings for 1915 were \$804,068; operating expenses amounted to \$703,837. Balance sheet shows assets, \$10,710,511, and liabilities, accounts payable, \$70,647.

Property: 442 patented claims, 3,391 acres at Terry, in Whitewood and Bear Butte mining districts, near Deadwood, includes, the Union and Astoria mines.

Ore: occurs as contact deposit in shale, carrying gold-silver values and 75% silica. Pay ore occurs in shoots from 5-100' long, said to give average assays of \$5 per ton.

Development: by several tunnels and vertical shafts from 100-350' deep, with about 15 miles of workings.

Equipment: includes electric power, electric double-drum hoist, compressor, 150-ton cyanide plant and 75-ton Wedge roaster. The furnace was stopped in July, 1916, for further investigation of the blue ore, which does not give high recovery. Average gold extraction is 75.55%.

Ore reserves: estimated by management June, 1916, at 2,000,000 tons. Production for 1915 amounted to 57,770 tons, yielding 16,428 oz. gold and 20,196 oz. silver; and in 1916, \$311,242 from 52,204 tons.

HIDDEN TREASURE MINING CO.

SOUTH DAKOTA

Trojan, Lawrence Co., S. D.

Officers: S. T. Cochran, pres.; J. N. Andrews, v. p.-sec.; Banks Stewart, treas. and gen. mgr.; above, with J. T. Bickel, Harry Thurston and Wm. Hill, directors at last accounts.

Property: near Deadwood.

Ore: carries copper-gold values. Has recently resumed shaft sinking after having crosscut E. and W. 100' on the 200' level.

Produced some ore, 1916.

HILL CITY MINING & DEVELOPMENT CO. SOUTH DAKOTA

Hill City, Pennington Co., S. Dak.

Officers: John Wise, pres. and mgr.; with J. W. Stoner, and Albert Booth, directors; E. A. Schilliman, sec.-treas.

Inc. 1911, in S. D. **Cap.**, \$500,000; shares \$1 par; 300,000 shares issued. Annual meeting, March 9.

Property: 11 claims, 6 patented, 220 acres in Burnt Fork gulch, 3 miles north of Hill City.

Ore: gold, in fissure vein, in schist; strike N .S., dip 80°. Said to have an average width of 16'.

Development: by shafts, deepest 200'.

Equipment: includes double-drum hoist, Leyner compressor and a 10-stamp mill. Company plans to sink to 400' depth and later to build a cyanide plant.

HILL CITY TUNGSTEN PRODUCERS CO.

SOUTH DAKOTA

Office: Hill City, S. D.

Inc. in May, 1916. Bought the old Harney Peak tin mill, installed new equipment and started treating tungsten and tin ores.

Property: mine was formerly owned and developed by the Harney Peak Tin Co. Vein said to average 30" in width and the tin ore is low grade, average assays being 1.6% metallic tin. Ore is cassiterite in quartz with coarse crystallization and occurs mainly in narrow seams of mica in the quartz.

Development: by 300' shaft with some drifting. Treats 150 tons daily. Employs about 80 men.

HOMELODE MINING & MILLING CO.

SOUTH DAKOTA

Silver City, Pennington Co., So. Dak. L. A. Richards, gen. mgr.; L. L. Farnam, supt.

Property: shows several quartz veins, 1' to 2' wide, containing gold, silver, antimony, lead and zinc ore. Two veins have been opened up; one by a 200' adit connecting with a shaft, sunk on the vein, at the 100' level; a 50' winze shows the ore to be continuous to that depth. In these workings vein varies from 12" to 18" and is 150' in length; values are mainly in gold and antimony. The second vein parallels the first, is $\frac{1}{4}$ mile E., said to be 24" wide and to contain more zinc than No. 1. Two shafts, 370' apart, 66' and 103' deep, respectively, have been sunk on the vein.

At camp No. 2, there is reported to be a 4 to 6' quartz vein carrying gold-silver values. Developed by 300' shaft with 500' of drifting.

Equipment: includes three 100 h. p. boilers and an amalgamating mill, equipped with Dodge crusher, slow-speed Lane mill, tables and classifiers. Concentrate shipped reported to carry 2-4 oz. gold, and 6-10 oz. silver, principally as arsenopyrite. Cyanide plant to be added in 1917. Company employs 40 men.

HOMESTAKE MINING CO.

SOUTH DAKOTA

Main office: 354 Pine St., San Francisco, Calif. **Eastern office:** 15 Broad St., New York. **Mine office:** Lead, So. Dakota.

Officers: Edward H. Clark, pres.; Frank G. Drum, v. p.; Fred Clark, sec.; Louis P. Haggin, treas.; preceding, with Harry L. Tevis, Thos. Turner and Richard A. Clark, directors; Richard Blackstone, supt; C. W. Merrill and Allen J. Clark, cons. metallurgists.

Inc. Nov. 5, 1877, in Calif. **Cap.**, \$21,840,000; increased March 25, 1913, to \$25,116,000 by payment of 15% stock dividend; shares \$100 par. Columbia Trust Co., New York, transfer agent; Union Trust Co., New York, registrar. Annual meeting, third Tuesday in March, in San Francisco. Listed on New York Stock Exchange since 1879.

Balance sheet for year ending Jan. 1, 1917, shows, assets: mines, plants, etc., \$25,116,000; balance in bank, \$1,298,898; balance with supt., \$33,108; bullion in transit, \$325,569; gen. supplies, \$383,634; total, \$27,157,210.

Liabilities: cap. stock, \$25,116,000; outstanding drafts, \$522,352; unclaimed dividends, \$5,126; accounts payable, \$198; reserve for deprec., \$563,600; profit and loss account, \$949,934.

Operating deficit for 1916 was \$386,681.

Summary of Income Statements

	Receipts	Other Income,	Balance	
Dr.	Mng. Oper.	Shops, etc.	Brought Forward	Total
1916.....	\$6,531,003	\$586,505	\$1,032,933	\$8,150,442
1915.....	6,448,024	77,758	897,596	7,423,378
1914.....	6,160,160	148,562	1,428,248	7,736,970
1913.....	6,186,652	132,716	1,455,958	7,775,326
	Oper.			
Cr.	Expenses(a)	Dividends	Balance Dec. 31	Total
1916.....	\$4,990,300	\$2,210,208	\$949,934	\$8,150,442
1915.....	4,180,238	2,210,208	1,032,932	7,423,378

1913.....	4,200,853	2,146,225	1,428,248	7,775,326

(a) Including salaries, legal, general, etc.; bills payable; taxes; property purchased; interest.

Taxes are high; in 1914, amounting to 16c per ton of ore milled, in 1915, 15c; and in 1916, 16c.

Dividends: have been paid monthly almost continuously since Jan., 1879; were suspended in May, 1907, as result of a fire in the mines, and resumed Jan. 25, 1908; continued to Dec., 1909, inclusive, when they were suspended owing to labor troubles at the mines; resumed in March, 1910. Present rate is 65c per share per month. Dividends paid to Jan. 1, 1918, total \$40,000,000.

The first claims acquired by the company were the Grant and Old Abe, located by J. B. Pearson, Dec. 11, 1875. In the Fall of 1876, representatives of Haggin and Hearst bought these claims, and the Homestake Mining Co. was incorporated. In July, 1878, the first and only assessment was levied, \$1 per share; it furnished the \$200,000 required to build the 80-stamp Homestake mill. In 1899, company acquired the Highland Mining Co., an adjoining property of about 73 acres; also the Black Hills Canal & Water Co., owning 40 miles of ditches, flumes and pipe lines, with reservoirs, improvements and water rights covering the water supply of Deadwood and Lead districts.

Property: 468 claims, about 3,723 acres in the White Wood mining district, Lawrence Co. The towns of Lead and Deadwood and the settlements of Blacktail, Terraville and Central City have grown up around the mines and mills.

Ore: gold bearing, lies in a mineralized zone of nearly vertical Algonkian slates and crystalline schists, having a general strike, N. 35° W., and dipping slightly toward the east, into which enormous masses of rhyolite have been intruded. The ore bearing zone is approximately ½ mile wide and several miles long. Only the northern end of the zone has been extensively developed; such work lying mostly between the gulches, Gold Run, Deadwood and Blacktail. The deposits are not fissure veins, but impregnations that appear to have taken place along two converging lines of crushing; they follow roughly the direction of schistosity and show a general pitch southward; where several unite, the aggregate thickness is over 500' and many stopes are carried across that width of ore. The larger lenses are on the west side of the zone and are flanked on the east by a series of smaller parallel lenses, some of which join the larger at depth. Near the surface the orebodies follow the rhyolite porphyries, but at depth diverge from them and become in part associated with phonolite. The ore varies considerably in composition in different portions of the deposit, but that of the deeper levels, the unoxidized ore, usually contains either chlorite

or ferruginous hornblende (cummingtonite), with quartz, carbonates of lime, magnesia, iron, arsenopyrite, pyrite and pyrrhotite. Ferrous minerals predominated and this has been an important factor in determining the metallurgical treatment. In the upper oxidized parts of the deposits the ore is dark red, but deeper, in the sulphide zone, is greenish blue to blue black. The sulphides vary in amount from 3 to 5%, and even as high as 10% or more of the ore. In the sulphide zone the distribution of gold is uniform and averages \$4 to \$4.50 per ton. Over 60% of the ore is free milling. Secondary enrichment has not resulted in the formation of any particularly rich zones.

Development: 6 shafts; 4 in the footwall, one in the hanging, and one in the lode; depths Jan. 1, 1916:

Ellison	B. & M.	Golden Prospect	Golden Star	Old Brig	Gloden Gate
2,000'	1,700'	1,100'	1,400'	800'	800'

The 1,850' and 2,000' levels of the Ellison shaft will eventually be connected with the B. & M. shaft, through which outlet the bulk of the ore will be hoisted to surface. The B. & M. shaft will be equipped with skips, which will dump into No. 8 Gates crushers, and their product carried by a belt conveyor system to smaller gyratories. Total cost of sinking at the Ellison shaft is said to have averaged \$60.64 per ft. There are in all about 130 miles of workings. Underground work in 1916 amounted to 21,982' of driving and 2,399' of raising. The measured ore reserves are large and sufficient to supply the reduction plants for many years.

The metallurgical equipment at the Homestake is one of the most modern and efficient in the country.

Mills: at the South Side—3 stamp mills (660 stamps) with 36,356 sq. ft. of amalgam plates; 1 regrinding plant, with independent cone system, and 540 sq. ft. of amalgam plates; 4 batteries of cones for classification; 3 clarifying tank houses; 1 sand plant. The mills are the Amicus, Golden Star, Homestake and Pocahontas. In 1915 the Pocahontas mill was completely rebuilt. The Amicus mill is being rebuilt.

At the North Side—2 stamp mills (360 stamps), the Monroe mill and Mineral Point mill; 2 tank houses; 2 cone houses; 1 sand plant. Ore supplied to these mills is usually drawn from the upper levels of the mine, and is at least partly oxidized.

A 5-stamp crushing and concentrating mill was built, 1916, for treating tungsten ores. Equipped with 1 Wilfley and 2 Deister tables. Net yield, in 1916, was \$229,916.

At Deadwood—1 slime plant, treating the combined slime from south and north sides. The stamps weigh 900 lbs., drop 10", making 88 drops per minute. Increased mill capacity is to be secured by a combination of heavier stamps and secondary crushing; the new stamps will weigh 1,000 lbs.; this, it is estimated, will give 10% additional stamp duty, while secondary crushing will allow another 8% increase in capacity. The Homestake order of drop is 1-3-5-2-4 or 1-4-2-5-3. A 25 h. p. back-gear motor drives each 10 stamps. Ratio of water to ore is large, at the Lead mills being 10 or 12 tons of water to one of ore. A minimum of about 50,000 tons of water per day is used, most of which comes from Spearfish Creek and its tributaries, being conveyed over 20 miles in ditches and vitrified clay pipe.

Inside amalgamation is practiced, quicksilver being fed to the mortar. Chuck-blocks are cleaned in rotation, at intervals of about 2 weeks; outside plates, except those of the fourth row, are cleaned and dressed daily.

Fourth row plates are dressed at 2-day intervals. Amalgam is restored three times each month. Oil-fired retorts are used, the resulting bullion being melted in coke-fired furnaces. Loss of quicksilver in retorting is almost nil.

Cost of stamp milling per ton of ore: stamping, 29.2c; amalgamating, normal charges, 2.6c. Supplies and labor rose considerably in 1916.

Regrinding is done in tube mills. In cyaniding the usual methods are closely conformed to. Slime plant costs in 1916 were 8.1c per ton of slime ore. Consumption per ton of slime treated in 1914; sodium cyanide, 0.16 lb.; zinc dust, 0.12 lb.; lime, 3.84 lbs.; hydrochloric acid, 0.39 lb.; costing 0.93c per ton treated; power, 1.15 kw.-hr. A recovery is made of about 94% of the values in the ore: 72% by amalgamation and 22% by cyanidation.

Power and equipment: company has hydro-electric plants at Spearfish and Englewood. New power equipment in 1915 includes a steam-driven electric generating station at Lead, maximum capacity, 4,000 k.v.a.; this, in conjunction with the hydro-electric plants, will furnish sufficient power for all purposes except the hoists, which will continue to be operated by steam. A completely equipped central boiler plant of six 600 h. p. boilers was completed in 1915. The B. & M. shaft was equipped in 1915 with a compound condensing hoist, designed to handle two 6-ton skips from a maximum depth of 4,000'. The company operates its own machine shops, carpenter shops and foundry.

The Homestake Mining Co. has long been known for the fine way in which it has looked after the welfare of its 2,350 employees. In 1914, it completed a recreation building, containing a theatre with seating capacity of 1,000, library, swimming pool, gymnasium, bowling alleys, billiard and amusement rooms.

Production: to Jan. 1, 1917, \$147,141,385. Recent production has been:

	Tons Milled	Recovered per Ton	Total Cost per Ton
1916.....	1,600,220	\$4.0813	\$3.11
1915.....	1,573,822	4.0848	2.6561
1914.....	1,587,774	3.8797	2.9155
1913.....	1,540,961	4.0148	2.7258

In 1916 Homestake produced tungsten ore from the Golden Summit claim, which netted \$229,916.

IMPERIAL COPPER CO.

SOUTH DAKOTA

Idle. Durbin Groupe, pres.; John O'Brien, supt., at last accounts. Property in Custer Peak district, developed by 175' shaft, reaching permanent water level. Crosscutting will be done to open up the 30" ledge.

Equipment: steam hoist, pump and mill of several hundred tons capacity. Mine reported to show good values in copper in upper workings.

MALONEY-BLUE LEAD COPPER MG. & SM. CO. SOUTH DAKOTA

Sheridan, Pennington Co., So. Dakota. Company out of funds, and property idle. Claims show copper ore in limited amount, but property is without merit as a copper producer, despite extensive workings. See Vol. XI, Copper Handbook. Letters neither answered nor returned.

MOGUL MINING CO.

SOUTH DAKOTA

Address: Terry, So. Dakota. Company treats ore from its own mine, from lessees and other companies. Treated 38,671 tons in 1916.

MONTEZUMA & THE WHIZZERS MINE

SOUTH DAKOTA

Address: J. T. Milliken, Deadwood, So. Dakota.

Property: 150 acres, on the divide between Deadwood and Whitewood Cañon, and on Deadwood Creek and West Gold Run, near Lead City, So. Dakota. Property shows Algonkian schists, slates and quartzite, and

carries a strong gossan, of 45' estimated average width, traceable 3,000'. Principal claims are the Spiegel No. 1, formerly known as the Whizzers, and Brownie No. 5, carrying 2 parallel quartzite reefs, about 300' apart. The first named has chalcopyrite in a gangue of hornblende schist, surface ores carrying 0.5 to 1.5% copper, up to 1 oz. silver and \$1-\$2 gold per ton.

Brownie No. 5 claim has 2 tunnels, one 650' long, and has produced about 50,000 tons of low-grade fluxing ore, sent to smelters at Deadwood and Rapid City, until the latter was closed down. A 22' winze, below the water-level, gave picked samples, assaying \$16.80 gold per ton.

The Montezuma claim, near West Gold Run, has 2 short tunnels, showing ore assaying up to 1 oz. silver and \$53.70 gold per ton. Though low in average grade, the property is considered promising, because of the enormous tonnage assured, but needs big capital to develop. Examined and reported favorably on by Geo. Huston, of Mullan, Idaho, and Nicholas Treweek, of Salt Lake City.

Property acquired in 1917 by J. T. Milliken of St. Louis, Mo., who is developing the Oro Hondo nearby. Mine was unwatered and diamond drilling underway in July, 1917.

NEW GOLDEN WEST MINES CO.

SOUTH DAKOTA

Mine near Rochford, Pennington Co., So. Dakota.

Officers: Otto E. Freund, pres.; Geo. H. Williams, v. p. and gen. mgr.; Geo. M. Lee, sec.; Sam T. White, treas.

Inc. Oct., 1915, in So. Dakota, as a reorganization of the Golden West Mining Co. **Cap.**, \$2,000,000, in \$1,000,000 7% preferred and \$1,000,000 common stock.

Property: in Black Hills district, near Rochford, was equipped during 1916 and development commenced.

NEW PURITAN MINING CO.

SOUTH DAKOTA

Galena, So. Dakota.

Officers: Wm. J. McGoffin, pres. and mgr.; Dr. Fred M. Ganty, v. p.; Judge John R. Russell, sec.; Chas. J. Searle, treas., with J. R. Richardson, directors.

Inc. 1915, as a reorganization of the Puritan Mining Co. **Cap.**, \$1,500,000 shares; \$1 par; non-assessable; 200,000 shares issued. Annual meeting in June.

Property: 60 patented acres, in White Wood mining district, Lawrence Co., So. Dakota, shows an orebody, 28' thick in quartzite with gold-silver-lead values, said to assay \$3.60 per ton.

Developed by several shafts to depth of 190'.

Equipment: includes steam hoist, 6-drill compressor, No. 5 Cameron pump and a 250-ton concentrating mill with cyanide unit. Property was idle for 3 years, owing to litigation, but development is now under way.

NEW RELIANCE GOLD MINING CO.

SOUTH DAKOTA

Office: 206 South 4th St., Minneapolis, Minn. **Mine office:** Trojan, Lawrence Co., So. Dakota. F. C. Bowman, gen. mgr.

Property: the Reliance mine, at Trojan, shows gold ore in quartzite formation. Orebody said to have an average width of 8' over a distance of 1,000' and to assay \$4 per ton.

Equipment: includes a 30-stamp mill, treating slime by the continuous decantation, counter current system, drills and air compressor. During 1916, mill treated 13,524 tons of ore, yielding \$49,893.

Work was suspended in Nov., 1916, due to low value of ore. Work has been confined to the upper Cambrian, but future operations will be in development of the lower quartzite, which drilling disclosed at 700'.

NORTH HOMESTAKE MINING CO.**SOUTH DAKOTA**

Address: A. Maitland, Negaunee, Michigan, pres and controlling owner; A. F. Maitland, v. p.; T. C. Jates, sec.; Jos Fountain, supt.

Inc. in So. Dakota. **Cap.**, \$6,000,000; shares \$5 par; 1,000,370 shares outstanding.

Property: 77 patented claims, 1,100 acres at Maitland, Lawrence Co., So. Dakota, shows veins of quartz and sulphide ore, carrying gold and silver values.

Development: by 750' vertical shaft and 600' drift on the 600' level with crosscuts E. and W. for 200' and 100', respectively.

Equipment: includes 125-ton cyanide mill, electric power, 4 electric pumps, 2 compressors and hoist. Mine is credited with a production of \$1,500,000 under former management. Development work carried on intermittently during past 5 years has so far failed to disclose new orebodies of commercial grade.

Work suspended in Sept., 1916, but mine being kept dry.

ORO HONDO MINE**SOUTH DAKOTA**

J. T. Milliken, owner and mgr., 121 Chamber of Commerce, St. Louis, Mo.; E. W. Talbot, supt., Deadwood, So. Dakota.

Property: at Deadwood, So. Dakota, is said to show replacement deposits in schist.

Development: by 2,200' vertical shaft. Did about 2 miles of diamond drilling, 1916, presumably in search of southerly extension of the Homestake orebodies.

Management does not furnish or publish details of its operations.

PURITAN MINING CO.**SOUTH DAKOTA**

Address: Deadwood, So. Dakota.

Directors: Wm. J. McGoffin, F. M. Gantz, J. R. Russell and Jas. R. Richardson.

Inc. Oct., 1915, in So. Dakota. **Cap.**, \$1,500,000; 500,000 shares in treasury.

Property: formerly owned by the Alta Mining Co. and the Puritan Mining Co., on Strawberry gulch, near Deadwood, said to show sulphide ore, carrying gold, silver and lead values.

Equipment: includes cyanide mill and hoist.

Work was resumed early in 1917 after several years' idleness.

RATTLESNAKE JACK MINING & MILLING CO. SOUTH DAKOTA

Galena, Lawrence Co., So. Dakota. Owned by C. B. Harris of Galena, and Wm. Sansome of New York.

Property: several claims, including the Rattlesnake Jack mine near Galena, said to show gold ore assaying \$15 to \$20 per ton.

Development: 200' shaft and tunnels. A 10-stamp mill and cyanide plant, completed in Aug., 1915, ran for several months, when a shutdown was made to build a tailing dam; resumed operations in Jan., 1916, only to close down in April, due to a disagreement between the owners.

Reported that 1,670 tons of ore treated in 1916, yielded \$14,270. Daily tonnage treated averaged 60 tons when the mill was running.

TROJAN MINING CO.**SOUTH DAKOTA**

Office: Deadwood, So. Dakota.

Officers: H. W. Seamon, pres.; G. M. Curtis, v. p.; F. M. Clark, sec.; H. S. Vincent, mgr.; above are the directors.

Inc. 1911, in So. Dakota. **Cap.**, 3,000,000 shares; par \$1; non-assessable; outstanding, \$1,000,000. Annual meeting, June.

The company publishes no financial reports.

Property: 157 patented claims, 1,000 acres, at Trojan, Lawrence Co.,

So. Dakota. Deposit is a flat blanket body between sandstones and slates and yields gold and silver.

Development: by tunnels, the Portland being main outlet.

Equipment: 100 h. p. electric hoists, capacity 5,000'; 600 cu. ft. compressor and 2 gasoline locomotives. Mill equipment is for cyaniding. Capacity 400 tons daily. Crushing is by Chilian and tube mills, filtration by Oliver machines.

Production: 420,000 tons dry ore to Dec. 31, 1916, of which 407,000 tons were treated by company's mill, and remainder sent to smelter. In 1916, output was 107,789 tons worth \$353,554; a gain of 27,886 tons and \$77,366 compared with 1915. Also treats custom ore. One hundred men are employed.

Is the second largest gold producer in So. Dakota. In August, 1917, company acquired a lease on the Republic mine.

WASP NO. 2 MINING CO.

SOUTH DAKOTA

Address: D. A. McPherson, pres., First National Bank, Deadwood, So. Dakota; E. Manion, mgr., Lead, So. Dakota; R. Craig, mill supt. A close corporation, most of the stock still held by original 14 stockholders.

Inc. November, 1901, in So. Dakota. **Cap.**, 500,000 shares; \$1 par; all issued. Original purchase of land paid for from sales of ore. Voluntary assessment of \$50,000 paid in 1911 to replace mill destroyed by fire. To October, 1914, dividends paid, totaled \$451,966. In 1916, 20%, or \$100,000, was distributed. This was over double that paid in 1915.

Property: includes the Alma Fraction and Wasp claims at Flatiron, long famous for low cost mining and milling of low-grade ore, which occurs in the Cambrian formation above the quartzite. Wolframite occurs along fissures in flat Cambrian quartzite.

Development: by open cuts, steam shovels stripping 20' of waste which overlies an ore bed 20' thick. The total mining cost was \$1.661 per ton. In 1916-1917 a decided change was apparent in the ore extracted from underground, and the mill has been dismantled. The ore now requires fine grinding and if development warrants it, a new plant will be erected.

Equipment: included a 500-ton plant, in which the ore was crushed coarsely and cyanided direct at cost of 59.1c per ton. In 1916 a 25-ton plant was erected for concentrating low-grade tungsten ore. It crushes to 1/8" by rolls, recrushes by smaller rolls, grinds by ball mill and treats coarse in jigs, sand on Wilfleys and slime on canvas tables. Three grades of concentrates are produced, 65%, 45% and 35% tungstic acid

Production: in 1914, 176,140 tons ore, average value \$2.015 gold and 28.7c silver per ton, returned \$1.533, at a cost of \$1.287 per ton. In 1915, costs increased and operations were curtailed until shipping and milling of tungsten ores added new profits.

From May, 1915, to March, 1916, company shipped 184 tons ore, averaging 45% tungstic acid. In 1916, 50,035 tons of gold ore averaged \$1.79 per ton; and 36 tons of tungsten concentrate were sold for \$97,869. Total value in 1916 was therefore \$187,775.

TENNESSEE

AMERICAN BALLAST CO.

TENNESSEE

A subsidiary of the Amer. Z. L. & Sm. Co., and described under that title.

AMERICAN ZINC CO. OF TENNESSEE

TENNESSEE

A subsidiary of the Amer. Z. L. & Sm. Co., and described under that title.

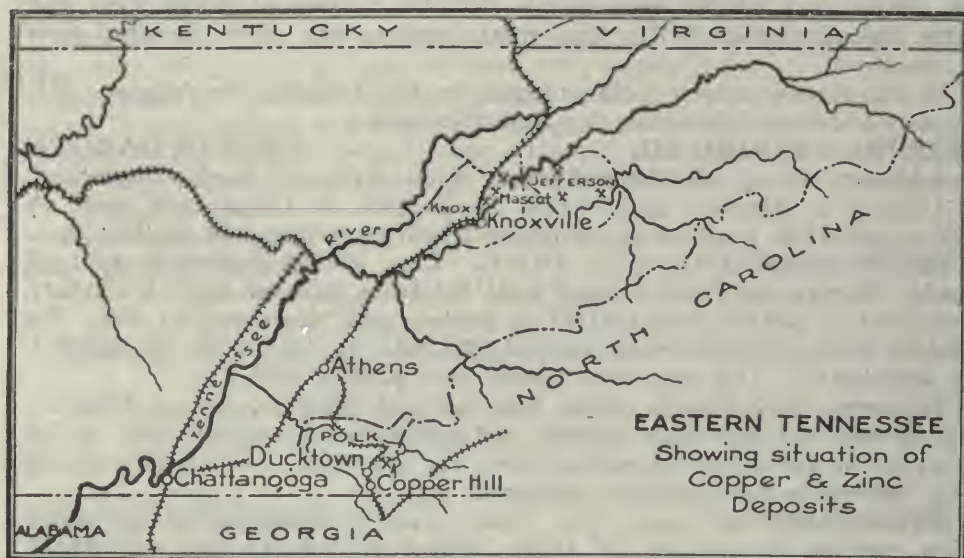

CHATTANOOGA COPPER CO.**TENNESSEE**

Bought by the Ocoee Copper Co., which see.

DUCKTOWN SULPHUR, COPPER & IRON CO., LTD. TENNESSEE

Office: 1 Gresham House, Old Broad St., London, E. C., Eng. Mine office: Isabella, Polk Co., Tenn.

Officers: J. G. Gordon, chairman and managing director; L. G. Mortimer, managing director; preceding, with Col. J. Le G. Daniell, H. G. Palmer, Edward Dexter and Col. H. B. Mortimer, directors; J. W. Felstead,

sec.; William Young Westervelt, 17 Madison Ave., New York, cons. engr. Executives at the mine: C. W. Renwick, gen. mgr.; W. F. Lamoreaux, asst. gen. mgr.

Inc. in Great Britain, Feb. 16, 1891. Cap., £75,000; shares £1 par, in £74,800 ordinary shares and 200 founders' shares. Increased 1907, to £200,000 shares, increase subscribed to by the old stockholders at par, except £48,799 ordinary shares sold to the public at 25s. Stock is fully issued and fully paid. Profits are divisible on the basis of 7%, plus, one-half of the net remaining profits, to ordinary shares, balance of profits going to founders' shares. £109,300 first mortgage, 6½%, debentures outstanding, against which a general reserve fund of £55,000 has been accumulated.

Recent Dividends:

	Shares Ordinary	Shares Founder's £ s d		Shares Ordinary	Shares Founder's £ s d
1907.....	82½%	249 3	1912.....	10%	29 19 5
1908.....	55%	108 18	1913.....	12½%	54 18 11
1909.....	10%	16 0 8	1914.....	12½%	54 18 11
1910.....	10%	21 17	1915.....	13¾%	9 9 10
1911.....	10%	28 4 5	1916.....	20%	129 17 3

Total dividends including 1916, paid to all classes of shares, £558,063. Of this, £363,547, amounting to 375 5/6% on shares outstanding at the times of payment, was paid to the ordinary shares, and £194,506, amounting to 97,253% was paid to the founders' shares, the latter constituting the world's record for profitable copper-mining investment. On the 74,800 ordinary shares, from 1895 to 1907, inclusive, 293%, or £229,636, was paid.

Property: nearly 7,000 acres, bought for £68,057, includes the Mary, East Tennessee and Isabella mines, which are active, and the Calloway and Cherokee mines which are idle. Country rocks consist largely of very tough highly metamorphosed, silicified mica schists, of ancient origin. The ores are exclusively sulphide, averaging about $2\frac{1}{2}\%$ copper and containing minute quantities of gold and silver, sufficient however to be appreciable to the matte.

The **Mary** mine, which is the principal producer, has heretofore yielded largely through the 3-compartment 350' Baxter shaft, and from the 2-compartment 375' No. 2 shaft. The new Gordon, 3-compartment 1,180' shaft is however, the principal producer. The richest ore in the mine is on the lower levels. Ore actually blocked out in the Spring of 1917 is in excess of 1,000,000 tons, averaging over 2% copper and 17% sulphur.

The **East Tennessee** mine, idle since early days, did not commence to produce until 1910. The Thomas, or operating shaft, is 700' deep, has 2 compartments and yields about 30 tons per diem of ore containing nearly 3% copper and 15% sulphur. Reserves of some 15,000 tons of ore containing about $2\frac{1}{2}\%$ copper and 8% sulphur, had been proven in the spring of 1917.

The **Isabella** mine has thus far yielded but a few thousand tons of ore a year. The ore, averaging about 0.8% copper and 29% sulphur, has as yet been used for little else than experimental purposes. 5,600' of systematic diamond drilling, however, has already revealed over 2,500,000 tons of average ore with excellent prospects beyond, so that doubtless the property will, eventually, be worked on a considerable scale for acid and iron manufacture.

Equipment: the power plant at the smelter was enlarged in 1910 and changed from direct to 440-volt, 60-cycle, 3-phase, alternating current, two 500 k. w. Westinghouse-Parsons turbine generator units being installed, including air compressor for acid plant, etc., totaling about 1,500 h. p. The smelter, which is located at Isabella on the company's private, standard-gauge railway, about $2\frac{1}{2}$ miles from the Mary mine, consists primarily of two 500-ton, sectional water-jacket blast furnaces. These furnaces are operated by induction motor Connorsville blowers of 300 cu. ft. per revolution aggregate capacity, charged with Freeland patent electrical charges and served with electrical traveling crane for the mattes and belt bucket elevators for the granulated slag. Since 1902, when heap-roasting was abandoned, semi-pyritic smelting, introduced into this country from Tasmania by this company, has been employed. The first fusion gives a matte containing from 12-15% copper and disposes of the bulk of the non-valuable material of the ore in a slag containing from 0.2 to 0.3% copper. This coarse matte is then raised to 45% copper content by a second fusion in the same furnace, usually undertaken once a week. A small percentage of coke, with cold blast of from 20 to 30 oz. pressure is used in both fusions. The 45% matte is sold to the American Metal Co., of New York, and treated for them at the Laurel Hill, L. I., or the Carteret, N. J., smelters.

In 1905, investigations were undertaken to determine the possibility of making sulphuric acid from the smelter fumes. In 1906, an experimental contact plant was erected but proved unsuccessful, and in 1908, work on the present chamber acid plant was commenced. This plant, which cost over \$600,000, was put into operation in less than a year from the time of breaking the ground for its erection and has since been producing at the rate of from 40 to 50 thousand tons per annum of 60° Beaume sulphuric acid. It was the first acid plant to successfully convert sulphuric gases from pyritic smelting into concentrated acid. In 1915 a 300-ton acid concentrating plant was installed.

In 1916 the electrolytic zinc plant was completed and is now recovering zinc from the acid plant sludge at the rate of one ton a day.

The credit for the successful development of the company is due primarily to the chairman and managing director, Mr. Gordon, himself a technical man, to the consulting mining engineer, Mr. Westervelt, who developed the mines, to the former manager, Mr. W. H. Freeland, assisted by the present manager, Mr. Renwick, who developed the pyritic smelting process employed, and to Mr. N. L. Heinz, chemical engineer, who designed and erected the present acid plant.

Production:

Year	Pounds Copper	Tons 60° B. Sulphuric Acid
1916.....	5,129,000	*41,000
1915.....	5,500,000	41,000
1914.....	5,862,000	46,900
1913.....	5,811,000	48,800
1912.....	5,213,000	48,100
1911.....	5,040,000	45,600
1910.....	4,409,000	46,800

* 11,000 tons contained 95% to 97% acid.

Company is managed with commendable financial probity, technical ability of a high order, and is heartily endorsed as worthy of confidence and investment.

EAST TENNESSEE ZINC CO.

TENNESSEE

Inc. in N. J., and registered in Tennessee. All stock owned by M. C. Hinn. M. Casewell Heine, atty., 1 Liberty St., New York.

Property: 173 acres, 2 miles from Newmarket, on the Southern railway, reported to show zinc blende ore occurring in Knox dolomite in joint planes and fractures in limestone beds.

Development: by drilling claimed to have proven about 6,722,000 tons of ore. Work on the property includes an open quarry pit 75' deep with 5 tunnels running from it.

Equipment: includes 100-ton concentrator, 540' Lidgerwood cable tram and 25 h. p. hoist.

OCOEE COPPER CO.

TENNESSEE

Address: J. I. Carter, Chattanooga, Tenn.

Officers: J. I. Carter, pres.; John Stagmaier, 1st v. p.; G. H. Miller, 2nd v. p.; S. E. Whitaker, sec.; P. B. Carter, treas., with R. B. Davenport, W. S. Palmer, J. C. Vance and W. H. Weatherford, directors.

Inc. 1917, in Tennessee. **Cap.** \$1,250,000; shares \$10 par; 70,000 shares in treasury to be sold to secure capital for development; 55,000 shares paid to Chattanooga Copper Co. for its holdings. Practically a reorganization of this company, the officers and directors remaining the same.

Property: 120 acres in northern part of Ducktown copper district, Polk Co., surrounded on 3 sides by the holdings of the Tennessee Copper Co., and the Ducktown Copper, Sulphur & Iron Co., adjoins the East Tennessee mine on the east, owned by the last named company. Several diamond drill holes prove that the ore deposits of that mine extend downward on their dip beneath the land of the Chattanooga Copper Co., and that the ore is identical in character, mineral association and occurrence with that of the East Tennessee mine. Ore was found in the drill holes at depths of 685 to 1,050'. Ownership of surface carries ownership of all beneath the surface, as Tennessee does not have an apex law. Diamond drill records would in-

dicating an orebody 290' long, 415' in depth and 30' thick, equal to about 241,000 tons, allowing $\frac{1}{3}$ for waste. Development might add to this figure.

The property is an attractive one, especially when the low operating costs of the Ducktown district are considered.

SOUTHERN ZINC & MINING CO., INC. TENNESSEE-VIRGINIA

Office: 115 Broadway, New York.

Officers: E. L. Patton, pres.; Geo. F. Reynolds, v. p.; J. E. Kingsland, sec.-treas., with John H. Banks, S. V. Fulkerson, Horace D. Fry, Kirby Thomas and H. G. Peters, directors; John H. Banks, cons. engr. and metallurgist.

Inc. in Del. Cap., \$1,600,000, in \$600,000 7% cum. pfd., and \$1,000,000 common stock; shares \$10 par; full paid; non-assessable.

Property: owns mineral rights of Fall Branch and Arcadia mines, 1,125 acres; the Fall Branch property, 225 acres, is in the S. W. corner of Sullivan Co., Tenn., 7 miles S. W. of Fordtown; the Arcadia property is in Sullivan Co., Tenn., and Scott Co., Va., about 12 miles N. of the Fall Branch property.

Ore: carries zinc in Knox dolomitic limestone; said to be in the same ore-bearing zone as the Mascot and Bertha mines. Prospecting to date has shown 4 parallel veins. Development has been confined to the centrally located vein. No. 1 vein is opened by a system of open cuts and a 127' incline shaft that has exposed the ore for 300' along the strike. The greater part of this work was done under lease by the East Tennessee Min. & Dev. Co., which built a mill prematurely and exhausted its funds. Reported in July, 1915, "Not enough work has been done to block out any material quantity of ore. Therefore, it is too early to properly estimate ore in sight." A rough estimate of ore in No. 1 vein gives 188,000 tons of 4% zinc ore above the 100' level. Veins 4, 5 and 6 parallel No. 1, but have had no systematic development.

Mill: 100-ton capacity, is now equipped with "Clifford" dry process system. Company plans to remodel mill and build a 100-ton wet mill on the Scott county land. J. H. Banks states in his report: "I consider this a very promising zinc property and can unhesitatingly recommend its further development."

TENNESSEE COPPER & CHEMICAL CORPORATION

TENNESSEE

(See Tennessee Copper Co.)

General office: 61 Broadway, New York. **Corporate office:** Millbrook, New York.

Officers: Adolph Lewisohn, pres.; Sam A. Lewisohn, v. p.; E. H. Westlake, v. p.; F. M. Loper, sec.; E. H. Westlake, treas.

Directors: Jules S. Bache, J. Parke Channing, Wm. B. Joyce, H. M. Kilborn, Adolph Lewisohn, Sam A. Lewisohn, S. S. Rosenstamm, J. H. Susmann, Richard Sutro, Martin Vogel and E. H. Westlake. Annual meeting, fourth Thursday in April.

Inc. Oct. 11, 1916, in New York, to refinance and take over control of Tennessee Copper Co. through stock ownership. Stockholders of latter company were given privilege of converting stock share for share, into stock of the new company, and of subscribing for an equal additional amount of the new stock at \$16 per share. Old stock may still be converted at option of new company, but the right to subscribe to additional stock has now expired.

Capital stock: authorized 400,000 shares, no par value; outstanding, May 3, 1917, 391,498. Columbia Trust Co., New York, transfer agents; Empire Trust Co., New York, registrars. Listed on New York Stock Exchange.

Initial balance sheet, Jan. 3, 1917, shows cash, \$2,779,891; Tenn. C. Co., share a/c (189,215 shares of not less value than \$1,000), \$1,000; State organization tax, \$20,109; paid bankers for underwriting sale of stock, \$400,000. Liabilities include stated capital, \$2,000,000; capital surplus (balance from issue of 200,000 shares at \$16, and 189,215 shares of Tennessee Copper Co. of not less value than \$1,000), \$1,201,000.

TENNESSEE COPPER CO.

TENNESSEE

Subsidiary of Tenn. Copper & Chemical Corp. Same directorate.

Office: 61 Broadway, N Y. Mine at Copperhill, Polk Co., Tenn.

Inc. April 24, 1899, in New Jersey. **Cap.**, \$6,875,000; shares \$25 par; \$5,000,000 issued. State Street Trust Co., Boston, and Equitable Trust Co., New York, registrars; Old Colony Trust Co., Boston and National City Bank of New York, transfer agents. Annual meeting, fourth Thursday in April.

Authorized bond issue, 1915, \$3,000,000; 1st mortgage 6% 10-year convertible sinking fund gold bonds; \$1,855,000 outstanding. This issue enabled the company to retire the \$800,000 outstanding bonds of the first issue, Dec. 1, 1915.

Net surplus, Dec. 31, 1916, was \$1,717,883.

Property: 12,640 acres of mineral and timber lands, in the Ducktown district. Ore was discovered and mining first begun in 1850, and the mines were operated regularly by a New York company previous to the Civil War, and during the earlier part of the war, under compulsion by the Confederate Government to supply copper for munitions of war. Company owns the Burra Burra, London, and the Eureka mines. Company also holds under lease 270 acres, including the Polk County mine. The Eureka was formerly operated under lease for iron ore by the Virginia Iron, Coal & Coke Co.

Geology: property shows pre-Cambrian metamorphosed mica-schist, carrying several lines of mineralization with lenticular orebodies. Four deposits, under development, show extensive gossans, originally having a little rich sooty glance ore under the gossan, which was mined out many years ago. The lenses range 30 to 150' in width, 500 to 2,000' in length, and are of unknown depth. The ore consists of a massive mixture of pyrite and pyrrhotite, with a little chalcopyrite, in a gangue of various metamorphic minerals and quartz, ore ranging from 1.2 to 3% copper, 40% iron, 27% sulphur and 15% silica, with minute quantities of gold and silver. The ore is excellently adapted to smelting, giving very clean slags.

Development: the mines are extensively developed; new work in 1916 totaled 4,090' of diamond-drill holes, and 2,990' of exploration work.

Ore reserves: Jan. 1, 1917, estimated at 3,372,305 tons of copper ore and 2,500,000 tons sulphur ore, not including ore indicated by diamond drilling.

The **Burra Burra mine**, which is the principal property, is operated through a 1,000' main central shaft, sunk at 75° in the footwall, having its first level 170' below the collar, with succeeding levels at 100' intervals, the mine ending 1916 with 8 producing levels, the 9th and 10th levels under

development. The entire output in 1916 came from back stopes in the mine and over 300,000 tons of broken ore was in the stopes Jan. 1, 1917.

The main orebody of the Burra Burra is 1,200' long and averages 60' wide on the 3rd level. There also is the north, or McPherson orebody, developed by a drift from the 3rd level of the main shaft, connecting with the McPherson shaft, now down to the 8th level. This shaft is 2,200' N. E. of the main shaft and facilitates working the McPherson orebody, which is about 900' long with an average width of 25'. The Hiwassee shaft, 900' S. W. of the main Burra Burra shaft, is sunk to the 8th level, showing a comparatively small orebody, of about 200' length and 12' average width. During 1916 a total of 1,820' of underground development work was done. Burra Burra produced 271,770 tons of ore in 1916.

The **London mine** has a 750' shaft, sunk at an incline of 75°, with 6 levels opened, developing an orebody of 25 to 75' width and about 600' length, ranging 2 to 4% in copper tenor. A total of 392' of underground work was done in 1916, consisting mainly of raises and drifts. The London produced 85,552 tons of ore in 1916.

The **Polk County mine** has a 485' vertical shaft, with 5 levels opened, developing an orebody of very irregular shape, up to 120' maximum width, of about 2% average copper tenor. The Polk mine is held under lease. To Jan. 1, 1917, about 778' of drifting had been done. Production of the Polk County mine was 55,438 tons of ore in 1916.

The **Eureka mine**, idle since 1912, has a shaft 165' deep, at which point the first level will be opened. Diamond-drill borings have shown an orebody of 20 to 165' width, about 1,000' length, and it is estimated that this mine has 2,500,000 tons of ore developed that average 44% iron, 30% sulphur and about 1% copper. This ore is to be treated for its iron and sulphur, as experiments indicate that it will make a good non-phosphorous iron ore. An initial unit to try out the process is planned.

Underground work during 1916 cost \$1.26 per ton.

Equipment: at McPherson shaft includes a Nordberg electric hoist, 3 Ragler type electrically driven 2,500-cu. ft. compressors, a combination shaft house and crusher building. Crushing plant includes 18x36" Blake crusher, feeding to a 36"x33" Robins belt conveyor, used as a picking belt, which discharges into storage bins of about 2,500 tons capacity; as far as possible all barren rock is removed from the crushed ore by hand picking, plant having a daily crushing and assorting capacity of 1,500 tons, ore being reduced to 4" size. There are similar shaft rock houses at the London and Polk County mines.

The new power and compressor plant at the McPherson shaft has supplied air for the Burra and London mines. During 1917 a new steel head frame and crusher house was erected at the Burra shaft and the old steam plant has been shut down, electricity being substituted.

The company's private railway connects the mines with the works and has connection at Copperhill with the Louisville & Nashville railway. The track is of standard gauge, with 7½ miles of main line and 8 miles of sidings and spurs. Equipment includes four 105,000-lb Schenectady locomotives, eighty-five 65-ton steel tank cars, 74 standard gauge gondolas and 13 flat cars, and 57 hopper bottom ore cars. The company has a repair shop for locomotives and cars, equipped for making all repairs and capable of completely rebuilding when necessary.

The **smelter:** at Copperhill, 1 to 5 miles from the mines of the company, was designed and built by J. Parke Channing. On the upper level are the ore bins, having storage capacity for 10,000 tons of ore, 800 tons of coke, and necessary fluxes and furnace products requiring retreatment.

Charges are drawn from the bins into cars of 44 cu. ft. capacity, hauled by electric locomotives over 4 tracks that run under the bins and circle around the furnaces, so that a train loaded on any track may go to any furnace and return to the bins.

The furnace building of steel has space for 7 blast furnaces, but only 5 are in use, each having an oval settler lined with firebrick. Slags skim into pots of 105 cu. ft. capacity, which are hauled by the electric locomotives, considerable slag being used for railway ballast.

The converter department has two 40-ton electric traveling cranes taking matte from the settlers to the converters. Two 12' basic lined converters of the Great Falls type were installed in 1916 to replace the old ones.

Hot converter slag is poured into the blast furnace settlers, by reason of which the only converter slags requiring resmelting are the skulls forming in the ladles. Converter bars average about 99.4% in copper tenor. Copper is cast in 210-lb pigs and sent to the Baltimore Copper Smelting & Rolling Co. for electrolytic refining, which affects the saving of the very small gold and silver values contained. The finished electrolytic copper is marketed through the American Smelting & Refining Co.

The smelter power house includes two 250 k. w. 500-volt d. c. Westinghouse generators, direct-connected to 2 Nordberg tandem-compound Corliss engines, and one 400-k. w. 500-volt d. c. Crocker-Wheeler generator, driven by a Bates tandem-compound Corliss engine, all 3 engines running non-condensing, with exhaust steam going to a feedwater heater. Furnace blast is supplied by 3 Nordberg piston blowing engines, each of 20,000 cu. ft. capacity per minute, and 3 Nordberg duplex cross-compound piston blowing engines, each of 30,000 cu. ft. capacity per minute, supplying blast at 50 oz. pressure to a common blast-main, above the charge floor. Converter blast is furnished by 2 Nordberg duplex cross-compound air compressors, supplying 10,000 cu. ft. per minute each, at 12 lbs. initial pressure. An Ingersoll-Rand air compressor furnishes air at 100 lbs. pressure for operating the charging doors and sundry pneumatic tools. The electric plant includes a 110-k. w. 250-volt Keystone generator, direct-connected to a Ball tandem-compound engine furnishing current for electric light, and there is a motor-generator set for transforming a 500-volt current to 220-volt current for electric lighting outside of the power plant.

The smelter boiler house has four 512-h. p. Altman & Taylor water-tube boilers, with Murphy automatic stokers and Foster superheaters, delivering steam at 175 lbs. pressure, with 150° superheat. Coal and ashes are handled mechanically by a bucket and chain conveyor, an 800-ton steel coal bunker being located to feed automatically to the boilers. A brick transformer house was added to the plant in 1915.

The smelter treated 424,197 tons of company ore in 1910; 436,285 tons in 1911; 444,289 tons in 1912; 470,135 tons in 1913; 485,051 tons in 1914; 475,301 tons in 1915; 385,188 tons in 1916. Smelting costs last year were \$1.18 per ton of ore smelted.

Water is pumped from the Ocoee river by three 10" 2-stage Worthington pumps, belt-driven by motors, each with capacity of 2,800 gals. per minute, to large storage tanks above the smelter. A 4,000,000-gal reservoir at about the level of the furnace floor receives the flow from the water-jackets.

The company operates a quartz quarry at Austral, Tenn., 35 miles N. of Copperhill, on the Louisville & Nashville railway. Equipment of the quarry consists of a boiler, air compressor, rock drills and a Bucyrus steam shovel.

The mines, smelter, and acid plants employ a total of 1,650 men.

The smoke damage situation is complicated by the location of the

works, which are in the extreme S. E. corner of Tennessee, winds carrying the bulk of the fumes into the State of Georgia, by reason of which the State authorities of Georgia brought suit against the Tennessee Copper Co. and the Ducktown Sulphur Copper & Iron Co. in the Federal courts, and the latter decided that the smelters must cease operations or stop the fumes by using them for a sulphuric acid plant. This undertaking proved much more difficult than was anticipated by reason of the intermittent and varying nature of the gas supply from the blast furnace tops.

The No. 1 acid plant cost about \$1,600,000 and was put into full operation early in 1908, with a rated capacity of 120,000 tons yearly of 60° Beaumé chamber acid. With the completion of the No. 2 acid plant in July, 1916, the company had 2 large lead chamber plants for the manufacture of 60% acid, with an estimated capacity of 300,000 tons per year. No. 1 was overhauled by July, 1917. There are also plants for concentration of sulphuric acid to 66° and 97½%, and for manufacture of nitric acid.

As the furnace gases contain sulphur dioxide, sulphur trioxide, carbon dioxide, oxygen and nitrogen in considerably varying percentages, new methods of control were found necessary to maintain the volume of sulphurous gases suitable for making sulphuric acid by the chamber process. After some experimentation the problem was solved by equipping 1 of the smaller and 3 of the larger blast furnaces with tight tops, above the charge floor, to exclude atmospheric air, these being connected with a dust chamber, where most of the solid matter is precipitated from the gas, the dust chamber being so constructed as to conserve the heat of the gases sufficiently to concentrate the acid in the Glover towers. There are 2 octagonal Glover towers of 30' diameter and 50' height with suitable nitre plants at the foot of each. After passing through the towers the gases are conducted through very large lead flues of 200 sq. ft. sectional area, which deliver the fumes to the chamber system containing 4,600,000 cu. ft. of chamber space. In a general way the chamber plant is of conventional design, yet the enormous quantities of fumes received and acid produced have brought about developments that are quite new to the industry, among the most notable being the size of gas connections, acid lines, acid coolers and fans, which are all on a scale never before known. The discharge from the chamber plant is conducted into 11 Gay-Lussac towers, which are of a gigantic size, the 3 latest and largest being octagonal of 36' diameter and 65' height. The company has contracted for the sale of its entire production of sulphuric acid to the International Agricultural Corporation, at a price understood to be \$4.81 per ton, the contract expiring on Dec. 31, 1920. This acid plant is the largest and most complete in existence.

Recent Production:

	Tons Ore Smelt.	Lbs. Cu. per Ton Ore	Oper. Cost per Ton	Production		Cost per Lb.	Rec. per Lb.
				Acid Tons	Copper Lbs.		
1916.....	385,188	24.41	\$3.51	181,637	9,404,295	14.36c
1915.....	475,301	26.83	2.82	210,666	12,750,418	10.53c	16.274c

1911.....	436,285	31.65	3.44	13,808,940	10.88c

Silver produced in 1916 amounted to 55,790 oz.; gold, 219 oz.

Low-grade copper ores are treated profitably at other points, but in nearly all other cases there are considerable gold and silver values, which

are lacking in the case of the Tennessee. This company has shown both courage and ability in changing the old method of semi-pyritic smelting, and has shown equal ability and greater courage in the installation of its acid plant, by virtue of which a very serious handicap has been turned into a permanent source of large revenue.

This progressiveness received a setback in March, 1916, when the trinitrotoluol plant, built with \$1,500,000 advanced by the Russian Government, was burned down and suit for recovery of the money begun by lender. The quarterly dividend was omitted on this account.

Events in 1916 were briefly as follows: There was a cave at the principal mine, strikes started, and there were other labor difficulties. These reduced copper and acid production. Then serious defects developed at No. 1 acid plant, which had to be practically rebuilt. The T. N. T. plant destroyed by fire has not been reconstructed. The claim of the Russian Government is disputed by Tennessee Copper Co. and the action is pending. Most of the other claims and suits against the company have been satisfactorily settled, that with the International Agricultural Corporation (which see) reported as settled for between \$400,000 and \$500,000 cash. By 1918 Tennessee Copper should be through with all its troubles, and making much larger profits.

TEXAS

During 1917, increased mining activity has prevailed in the State. In West Texas, in the sulphur fields of the Pecos valley, two companies, the West Texas Sulphur and the Michigan Sulphur & Oil Co., have entered the field. The total output of the latter company now is about 35 tons of sulphur per day. The West Texas Sulphur Company is the owner of three sulphur properties and is occupied in perfecting plants to extract the sulphur.

There is considerable mining activity in the eastern part of El Paso county. The Hazel mine, 10 miles north of Allamore, is shipping considerable quantities of high-grade copper-silver ore. Two miles north of this mine are several prospects which are showing up good, regular shipments of copper ore being made to the El Paso smelter. The Little Lightning mine, located in the Quitman mountain district, a few miles west of Sierra Blanca, Texas, is doing well, sending high-grade copper sulphide to the smelter at El Paso.

Several quicksilver companies in the Big Bend region of Brewster county are producing large quantities of quicksilver. Many old openings have been renewed, resulting in increased output. The Colquitt-Tiger Quicksilver Company is one of the heaviest producers. In the Terlingua district of Texas the most successful and heaviest producing companies are the Texas-Almaden Mining Company; Study-Butte Mining Company; the Chisos Mining Company, and the Mariposa Mining Company.

The mining companies of the State are arranged alphabetically.

AMERICAN SULPHUR CO.

TEXAS

Controls Freeport Sulphur Co. mines at Freeport, Brazoria Co., Tex., at mouth of Brazos river on Gulf of Mexico. Deposit covers 500 acres.

Sulphur occurs in pockets and veins, in porous gypsum deposit beneath limestone cap and many hundred feet below surface of ground. Recovery is by superheated water, compressed air raising the melted sulphur to surface. This is the well-known Frasch process.

Equipment: includes 4 plants aggregating 23,800 h. p., one 3,000 h. p. plant built in 1912, and a 4,000 h. p. plant in 1914.

CHISOS MINING CO. (Quicksilver). TEXAS

Howard E. Perry, pres.-gen. mgr., Terlingua, Brewster Co., Tex. Property is at Terlingua, 108 miles S. E. of Marfa on the S. P. R. R. Cinnabar ore occurs as replacement deposits in limestone and shale. In the lower limestones the ores are generally in nearly vertical calcite veins, or in lodes of friction breccia. For geology see Texas Bull. 405, 1909.

Development: by shafts. The mine, which is the only operator in the district, had a record-breaking year in 1915. **Production:** 1,200 flasks of mercury in Nov. and Dec., 1915, yearly output not available.

Equipment: includes an 18-ton shaft furnace. Employs 150 men.

COLQUITT-TIGNER QUICKSILVER MINE. TEXAS

Marlow Wells, mgr., Terlingua, Texas. Reopened June, 1916, and 40-ton furnace started.

CONSOLIDATED KANSAS CITY SM. & REF. CO. TEXAS

Owens the El Paso smelter at El Paso, Tex. Company owned by American Smelting & Refining Co., and property described under that title.

EL PASO SMELTER TEXAS

Address: Kuno Doerr, gen. mgr.; J. Heggie, supt., El Paso, Tex.

Is a subsidiary of the American Smelting & Refining Co.

The smelter proper occupies 43 acres out of a 1,100-acre tract of land which is traversed by the Santa Fe, El Paso & Southwestern and the Southern Pacific railways.

The monthly average of cars of ore that is brought to the smelter from the surrounding mines has never been less than 1,600. Often it has run as high as 2,300 cars per month and in a few instances even larger amounts of ore have been handled in a month. The business has yearly increased and the facilities for handling ore are also yearly increasing.

Three Godfrey lead roasters and eight mechanical roasters average from 1,200 to 1,500 tons daily. There are three reverberatory copper smelting furnaces, that in practice actually smelt 1,200 tons of copper ore in a working day.

The constant increase in the tonnage of copper smelted at the El Paso smelter has made it necessary to replace the two 10' diameter, 30' long Pierce-Smith converters which have been in use by 2 new converters of the same type, each of which is 30' in length and 13' in diameter.

A 12' Great Falls type converter converts in connection with the others 200 tons of blister copper per day and is not the least important item in the equipment. From 1,500 to 2,000 tons of lead are smelted each month.

An interesting mechanical feature is the 90' craneway span over which two 60-ton cranes are operated. The new converter stack is 300' in height, is 16' in diameter and was built of concrete. The smoke and escaping gases reach this stack through a steel "Balloon type" flue 4,400' long.

Ore worth \$1,500,000 a month and over \$18,040,000 a year are smelted in the plant, which covers 43 acres of ground.

The El Paso smelter is a city within itself, with stores, fire station, church, an electric light plant that could light a city of 50,000; parks, water works and office buildings. A portion of the grounds were used during 1916 and 1917 by United States troops as a military post. The hospital has a number of ever-ready beds and a resident physician. The smelter owns and operates a complete railway system, and more than 7,000 people who live in El Paso look to it for support.

The smelter treats ores from Old Mexico; from the Chino Copper Company in Hurley, N. M.; from the Santa Rita Mining district and from the Globe, Twin Butte, Sahuarita, Patagonia and Dragoon districts of Arizona from the Magdalena, Oro Grande and the Silver City districts in New Mexico.

EMPIRE SMELTING & REFINING CO.**TEXAS**

Inc. 1917, in Chicago, Ill. **Cap.**, \$100,000. Offices in San Antonio and El Paso.

FREEPORT SULPHUR CO.**TEXAS**

Address: Bryan Heights, near Freeport, Texas.

Property: extensive area near the mouth of Brazos river, Brazoria county, Texas.

Geology: sulphur occurs in pockets, cavities, and as streaks impregnating gypsum, or a formation in which gypsum predominates. The bed is about 1,000' from the surface.

Development: by wells drilled to the sulphur bearing formation.

Process: the sulphur is extracted from the rock by the well-known Frasch process. Steam is made in boilers and used in water-heaters, each capable of heating 1,000 gals. of water a minute from 60 to 336° F. under a pressure of 100 lbs. This superheated water is forced down the wells to the formation, the sulphur melts, and rises to surface where it cools. Sulphur is pure and is mostly used in the paper pulp industry, the remainder being used for sulphuric acid manufacture.

Equipment: complete with oil storage, 4½-mile oil pipe line, canal from river, pumping plant, water purification plant, compressors, and large battery of boilers.

HAZEL MINING & MILLING CO.**TEXAS**

Officers: John V. Hughes, Dallas, Tex., pres.; G. G. Wright, v. p.; C. F. Freeman, Dallas, Tex., sec.; R. B. Stichter, treas. **Directors:** J. V. Hughes, T. J. Oliver, G. H. Cox, C. A. Culters, C. F. Freeman, Milton Parks and G. G. Wright.

Property: the Hazel Silver mine, in Diablo mountains, 15 miles N. E. of Van Horn, Culberson Co., Tex., shows a fissure vein that yields chalcocite ore with barite gangue. Shipping ore said to average 10% copper and 50 oz. silver per ton.

Development: includes 700' shaft and extensive workings at various levels. Mine was worked for 10 years by H. G. Clifford of El Paso and A. C. Schriver of San Antonio, producing \$500,000, but was shut down in 1895. A dry concentrator was erected to treat the old dumps, said to contain about 100,000 tons of \$15 copper-silver ore, but was unsatisfactory and has been converted into a wet concentrator.

Reported that the Sutton Steel & Steel Co. of Dallas has taken over the mine and will install cyanide mill, 1917. O. W. Steel, mgr.

MINERAL MILLING CO.**TEXAS**

Office: Van Horn, Tex.

Officers: H. M. Sutton, pres.; W. L. Steele, v. p. and gen. mgr.; E. G. Steele, sec.; O. W. Steele, asst. mgr.; F. W. Schneider, supt.

PECOS MINING CO.**TEXAS**

J. Y. Canon and James Dougherty, of Van Horn, Tex, principal shareholders.

Property: the Pecos mine, 3 miles N. E. of the Hazel silver mine in El Paso county, 19 miles from Van Horn, shows a N. E.-S. W. vein in brown igneous tuffs, traceable 2 miles across the mountains to the Red Maverick mine.

Development: by a 105' shaft with a level at 90', showing seams a few inches thick of copper-silver ore, said to assay 70% copper; the seams in places aggregate 2' in thickness. The mine was first operated in 1888, abandoned after working and relocated 1903, by Geo. Briggs and T. R. Owen, forfeited by technicality of Land Commission and located by J. Y. Canon. Presumably idle.

PRESIDIO MINING AND MILLING CO.**TEXAS**

Office: 255 California St., San Francisco, Cal. Mine office: Shafter Tex.

Officers: W. S. Noyes, v. p. and gen. mgr.; E. M. Gleim, supt.

Cap., \$150,000; shares \$1 par; all issued.

Property: the Shafter or Presidio mine, at Shafter, Presidio Co., has a production record of \$6,700,000 since 1883. Ore: carries silver mainly as chloride.

Development: by about 20 miles of workings.

Equipment: includes 1 mile aerial tram, a 15-stamp 100-ton mill and a cyanide plant. The mill is equipped with 2 tube mills, Oliver filter, Pachuca tanks, Dorr thickener and 250-h. p. de La Vergne oil engines.

Production: in 1916 amounted to about \$390,000. The State of Texas produces about 600,000 oz. of silver annually, practically all from this mine, which has an interesting history. The mine, originally called the Bullis, has been productive for nearly 40 years. Litigation started in 1915 by certain shareholders against W. S. Noyes resulted in his being honorably cleared in Aug., 1917.

SHAFTER SILVER MINE**TEXAS**

Owned by the Presidio Mining & Smelting Co., which see.

SHERIDAN MINING CO.**TEXAS**

Llano, Texas.

Operates a copper molybdenite property in the Llano district, Burnet County, Texas.

TAMA SILVER MINING CO.**TEXAS**

Address: Sierra Blanca, Texas.

Is a new company developing a group of claims in the Quitman district, El Paso County. The ore is silver lead and is found in replacement deposits in limestone.

Adjacent properties include the Thunderbolt group on the lead and zinc bearing Bonanza lode, owned by Geo. H. Stokes, which is developed by two tunnels. Love Bros, are also working similar silver lead deposits at the head of Quitman canyon, 9 miles S. E. of Sierra Blanca.

UTAH**SALT LAKE CITY**

Salt Lake City is a mining center from which the Alta, American Fork, Big and Little Cottonwood, Bingham, Mercury, Tintic and Santaquin districts are reached, and most of the operating companies have offices there. The following list of companies operate at or near the city; others are listed under the district name or county name.

GARFIELD CHEMICAL MANUFACTURING CORP'N**UTAH**

Subsidiary of the American Smelting & Refining Co.

Officers: C. W. Whitley, pres.; C. M. McNeil, v. p.; R. G. Gemmill, v. p.; J. M. Bidwell, sec.-treas.; and E. L. Newhouse, mgr.; above with J. M. Hays, directors.

Treats at Garfield concentrate from the Utah Copper Co. and custom ores from scattered points in Utah. To supply sulphuric acid for leaching copper ore and other purposes, a 150-ton acid plant costing nearly \$500,000 was erected late in 1916. Fumes from the smelter supply the sulphur.

Equipment: two 20' Herreshoff roasting furnaces of 50-ton capacity each, brick-lined steel flue, pyrite burners, Glover tower, lead-lined acid chambers, and two Gay-Lussac towers. Both 66° and 98° B. acid ore

made. Leaching and flotation plants nearby will consume most of the acid.

GARFIELD SMELTING CO.

UTAH

Office: 165 Broadway, New York. Operating office: 714 McCornick Blk., Salt Lake City, Utah. Works office: Garfield, Salt Lake Co., Utah. Is the Utah Copper Co. smelter, owned by American Smelters Securities Co., and itself owns the Garfield Water Co. and the Garfield Improvement Co. The smelter has cost, complete, about \$6,000,000. Fully described Vol. X.

Capacity has been almost trebled by additions and metallurgical improvements since 1911.

HANAUER SMELTING WORKS

UTAH

At Salt Lake City, Utah. Controlled through stock ownership by American Smelting & Refining Co.

KING COPPER MINING CO.

UTAH

Office: Salt Lake City, Utah. Located on the divide between Emigration and Red Butte canyon, 12 miles E. of Salt Lake City, Utah. Controlled by the Baileys of Salt Lake.

Property: shows 6' ledge of copper carbonates on contact between quartzite and blue limestone. Is developed by 300' tunnel, principally in sandstone. Ore said to carry \$14 in gold, copper and silver.

ROB ROY MINING CO.

UTAH

Address: P. T. Farnsworth, 164 E. S. Temple St., Salt Lake City.

Mine near Beaver City, Utah, at mouth of Indian Creek Canyon. T. P. Farnsworth, Salt Lake City, owner. Developed to depth of 300'. Reported about to resume operations, 1916. Mine has produced very rich gold ore, but was closed down several years ago when the vein was cut off by faulting. Tunnel was to be driven south in hopes of finding ore-body.

ST. PATRICK MINING & MILLING CO.

UTAH

Idle. Office: 855 Sherman Ave., Salt Lake City, Utah. Mine office: Hughes Canyon, Salt Lake Co., Utah.

Officers: D. A. Buck, pres.; H. H. Paterson, v. p.; B. A. M. Froiseth, sec.-treas.

Inc. March 17, 1906, in Utah. Cap., \$50,000; shares 20c par; non-assessable; issued, 180,000 shares.

Property: 6 claims, unpatented, 7 miles from railroad, opened by shaft and tunnel, with about 650' of workings, showing gold and silver-copper ore. Annual assessment work only being done.

UTAH ORE SAMPLING CO.

UTAH

Office: Salt Lake City, Utah.

Officers: Jesse Knight, pres.; E. P. Ellison, v. p.; W. L. Mangum, sec.; with J. W. Knight and R. E. Allen, directors. F. M. Manson, gen. mgr.; E. G. Jensen, asst. gen. mgr.; Frank Burgner, gen. supt. at Murray; Geo. Green, supt. at Silver City.

Cap., \$300,000.

Company owns and operates ore-sampling mills at Murray and Silver City, with combined capacity of 500,000 tons of ore annually.

WEST JORDAN SMELTER

UTAH

Owned by U. S. Smelting Co., at West Jordan, Utah.

EMERY, GRAND, IRON, MORGAN, SAN JUAN, UINTAH, WASATCH AND WEBER COUNTIES.

BIG INDIAN COPPER CO.

UTAH

Office: Provo, Utah. Col. C. E. Loose, pres.-gen. mgr.; J. T. Farrer,

v. p.; P. G. Peterson, sec.-treas. and supt.; Niels C. Christensen, metallurgist. Col. Loose and Senator Smoot are the principal owners.

Inc. in Utah. **Cap.**, \$1,000,000; shares 1c par; 185,000 taken by insiders, 700,000 issued for property; 100,000 shares offered the public in 1917 at \$1.

Property: 21 claims, 11 patented, about 350 acres, 38 miles S. E. of Moab and 60 miles from the D. & R. G. railway at Crescent, San Juan Co., Utah. Claims are said to show copper ore occurring disseminated through sandstone with sulphides appearing at 100' depth.

Company started operating a 300-ton leaching plant to use the sulphur dioxide process to treat a large tonnage of 3% ore, in November, 1917. Water is piped from La Sal ranch 7 miles distant.

CALUMET MINING CO.

UTAH

Address: Lund, Iron Co., Utah.

Property: 19 claims, 30 miles N. W. of Lund, developed during 1917. Management estimates 2,000 tons of 30% lead and 2 oz. silver ore available above 75' level. Shipments in Aug., 1917, yielded \$3,000. Production to Sept., 1917, was about 700 tons.

ELDORADO GOLD MINING & MILLING CO.

UTAH

Don Maguire, mgr. and principal owner, Ogden, Utah.

Property: 900 acres, said to show silver-lead-zinc ore in limestone-quartzite contact. Copper ores occur in granite. Shipments in 1912 ran 37.5% lead, 10 oz. silver and \$2 gold. Mine is said to show 40,000 tons of 15% zinc ore and 100,000 tons of silver-lead ore.

Development: includes 1,400' tunnel. In 1917 operations consisted of road work, repairs, etc. Plans mine development and installation of a new tramway.

GREEN MOUNTAIN MINING & MILLING CO.

UTAH

Probably idle. No 1917 returns secured.

Officers: Dr. R. S. Millbee, Marshfield, Wis., pres.; Dr. H. H. Millbee, v. p.; A. E. Goodell, sec.; S. Amberson, treas.; with B. S. Rich, directors.

Inc. 1915, in Utah. **Cap.**, 1,500,000 shares; 100,000 issued.

Property: Green Mountain group in Miners Basin, Grand Co., Utah, 35 miles S. E. of Cisco, on the Denver & Rio Grande R. R., formerly owned by the Green Mtn. G. & C. Mng. Co. and fully described in Vol. XI, Copper Handbook.

Ore: gold, silver and copper, low-grade ore said to average about \$8 per ton; also said to show some high-grade ore. Developed by Dewey crosscut tunnel.

Equipment: 30 h. p. gasoline engine, 2 sets of power drills, compressor and pumps.

JEANETTE COPPER MINING & MILLING CO.

UTAH

Address: via Vernal, Utah.

Officers: J. T. Fitch, pres.; F. B. Hammond, v. p.; C. R. Jones, sec.-treas., with G. A. Storrs and W. H. Griffin, Jr., directors.

Cap., \$200,000; shares 20c par.

Property: 34 unpatented claims in the Uintah basin, Utah, 55 miles S. of Rock Springs, Wyo.

Development: by 1,000' of tunnels and shafts, costing \$10,000. Ore contains up to 20% copper and good gold and silver contents. Shipments were made in 1916.

The long haul prevents shipping ore at a profit, and a plant was planned at last accounts.

MORGAN ARGENTINE MINING CO.

UTAH

Office: 431 First Ave., Salt Lake City, Utah. Mine near Peterson, Morgan Co., Utah.

Officers: Herbert Pembroke, pres.-gen. mgr.; A. B. Pembroke, sec.-treas.

Inc. 1900, in Utah. **Cap.**, \$500,000; shares 1c par.

Property: 15 claims, 9 patented, 280 acres, in Argenta district, shows fissure veins in limestone carrying silver-lead and copper-gold ore.

Company reported May, 1917, that it was starting extensive development work and had purchased machinery.

MORGAN-GALENA MINING CO.

UTAH

Address: 417 Kearns Bldg., Salt Lake City, Utah.

Officers: J. W. Rozzelle, pres.-treas.; A. H. Levine, v. p.; J. H. Ritchie, sec., with F. H. Ashihira and Frank Troxler, directors.

Inc. Oct., 1916, in Utah. **Cap.**, \$100,000; shares 10c par; non-assessable; 500,000 issued.

Property: 6 claims in Morgan county, Utah, said to contain fissure veins in porphyry carrying 37% lead ore with some gold-silver values. Development by shafts and tunnels. Is considered a good prospect.

NATIONAL RADIUM MINES CO.

UTAH

Henry Schwartz, Denver, Colo., pres. **Inc.** in Colorado. **Cap.**, \$400,000.

Property: in Green River district, Emery Co., Utah, shows uranium and vanadium ore in a 5" vein, said to run as high as 20% uranium. Developing in 1916.

SILVER PEAK MINING CO.

UTAH

J. R. Richards, mgr., Cedar City, Utah. **R. B. Shepard**, pres., 408 State St., Salt Lake City. **T. F. Jennings**, sec.-treas., Garfield, Utah.

Inc. July, 1915, in Utah. **Cap.**, \$10,000; shares 1c par; 600,000 issued.

Property: the Blair mine, 6 claims, 120 acres, unpatented, near Pinto, in Pinto Iron mining district, Iron Co., Utah, shows a contact deposit 8'-10' wide carrying copper-lead ores with gold-silver values.

Development: 200' shaft and 2 others. Dumps show 100 tons of \$8 to \$300 ore. Company doing assessment work only.

SOUTHERN PACIFIC GOLD & COPPER M. & M. CO.

UTAH

Office: 39 North Capitol Ave., Salt Lake City, Utah. Mine near Ogden, Weber Co., Utah.

Officers: T. S. Freaney, pres.; Wm. Pough, v. p.; J. W. Burnham, sec. and gen. mgr., at last accounts.

Inc. July 20, 1903, in Utah. **Cap.**, \$1,000,000; shares \$1 par; assessable; issued 798,910. Shares are listed on the Salt Lake Stock Exchange.

Property: 12 claims, unpatented, 240 acres, 3 miles from a railway and about 8 miles north of Ogden, in the Sierra Madre district, reported to carry 25 orebodies, mainly contact deposits between quartzite and gneiss. The main vein of about 50' width, shows some oxidized ores, but mainly auriferous sulphides, including covellite, bornite and chalcopyrite, with some molybdenite, in a 6' vein.

Development: by 65' incline shaft on the Wizard claim, and 8 tunnels, with about 1,000' of workings, said to show ore assaying up to 6% copper, 37 oz. silver and \$1.60 gold per ton.

UTAH PLACER MINING CO.

UTAH

Address: Cisco, Grand Co., Utah.

Officers: Eli Punshon, pres.; L. Charrington, v. p.; Harry Snyder, sec.-treas., with E. Helmerich, T. Peterson, M. Murphy and J. H. Butcher, directors.

Property: 1,320 acres of placer ground on the Grand river, Utah. Gravel is said to carry from 40c to \$3 gold per yard, also some platinum. One channel is 9 to 20' deep. To treat this material a W. F. Mitchell

mill of 420 tons daily capacity is being tested in connection with a drag-line scraper and concentrating tables.

If company has so much gravel it would be better to use a dredge of standard design, if enough water is available. Few dry or wet gravel concentrators are a success.

WASATCH BONANZA MINING CO.

UTAH

Officers: Burdell Davis, pres., Provo, Utah; Wm. Davis, v. p.; Brigham Johnson, sec.-treas.; J. M. Buckner, Geo. A. Storrs, directors.

Inc. May, 1916, in Utah. **Cap.**, \$10,000; 1c par.

Property: 4 claims, the Mayflower group in Decker Canyon, near Charleston, Wasatch Co., Utah.

WOLF MOUNTAIN COPPER CO.

UTAH

Office: C. A. Harker, 506 Eccles Bldg., Ogden, Utah.

Officers: C. A. Harker, pres.; P. M. Parry, v. p.; S. A. Holmes, sec.-treas., with J. R. Cole and J. S. Lewis, directors.

Inc. Jan. 31, 1914, in Utah. **Cap.**, \$100,000; shares 10c par; assessable; all issued.

Income 1916 was \$7,796, \$693 coming from ore sales. **Expenses** were \$7,826.

Property: 37 claims, 33 patented, 720 acres, in Paradise or La Plata district, 5 miles S. of Hyrum, Cache Co., Utah, said to show a fissure vein in quartzite, 45' wide, dipping 37°, with N.-S. course. Ore carries 4½% copper, 2 oz. silver, and 30c gold per ton. Examined by W. F. Mitchell, Don Maguire and J. G. Lind.

Development: by 70 and 350' tunnels. Openings total 820'. Ore blocked out is said to be 10,000 tons and 20,000 tons probable. A 3,000' tunnel is proposed.

Production: 80 tons in 1915 and 1916, the latter averaging \$19.65 per ton. Shipments in 1917 started in July.

For the work done ore reserves seem out of proportion.

ALTA COTTONWOOD DISTRICT

Includes Big Cottonwood and Little Cottonwood

ALBION MINING CO.

UTAH

Office: 703 McIntyre Bldg., Salt Lake City, Utah. **Mine office:** Alta, Utah.

Officers: Wm. Hatfield, pres.; C. E. Loose, v. p.; H. T. Hatfield, sec.-treas., with P. G. Peterson and W. M. Bradley, directors; Col. Geo. H. Watson, gen. mgr.; Sol Snyder, supt.

Inc. 1903, in Utah. **Cap.**, \$1,000,000; shares 10c par; 735,000 shares outstanding. Assessment No. 15 of 1c per share levied October, 1917. Stock listed on Salt Lake Exchange and New York Curb.

Property: 11 patented claims, 250 acres, in the Alta Cottonwood district adjoining the South Hecla ground on the south, includes the Wellington mine of the Albion Group, formerly owned by the Wellington Mining Co. and credited with a \$1,000,000 production from shallow workings. Company advertised March 29, 1910, as delinquent in payment of Utah corporation tax, but refinanced in May, 1915, and operations reported resumed in June, after an enforced shutdown since the panic of 1907.

Further development is expected to cut the Greeley fissure through the 3,800' Quincy tunnel of the South Hecla at a depth of 1,300'; a raise driven up 110' to explore the Hays fissure discovered the Connor vein, carrying bunches of copper-silver-gold ore, said to assay 37 ozs. silver per ton.

Equipment includes machine drills, water power and a 30-ton mill, with jigs, putting about 4 into 1, giving concentrates with small and variable assays in copper, 35 to 40% lead, 40 to 45 oz. silver and 0.15 oz. gold per ton.

The Albion Group, being developed under lease by R. S. Witcher, covers about 2,000' of the Cardiff lode, intersected by the Greeley, Kate Hayes, Garfield fissures; on the first two a high-grade shoot of black sulphides 4' wide has been opened up on a porphyry and limestone contact; this ore is said to assay 1.7% copper, 22% lead, \$1 gold and 26 ozs. silver

PROPERTIES IN ALTA-COTTONWOOD DISTRICT, UTAH

per ton. Shipments begun in October, 1915, reported to average \$50 per ton and netting about \$30 to the leasers.

No recent returns.

ALTA CONSOLIDATED MINING CO.

UTAH

Office: 201 Judge Bldg., Salt Lake City, Utah. Mine office: Alta, Salt Lake Co., Utah. R. S. Lewis, pres.; R. P. Morris, v. p.; W. E. Weyher, sec.-treas., with John Dorius, directors. R. A. Brown, cons. engr.; J. D. Lewis, mgr.

Inc. Aug., 1911. **Cap.**, \$300,000; shares \$1 par, the promoters taking 100,000 shares, and 200,000 shares being placed in the treasury, of which amount 100,000 shares were sold at 20c per share; capitalization was increased Oct. 10, 1913, to \$500,000, to provide stock for treasury purposes, practically all issued Jan., 1916. Stock listed on Salt Lake Exchange.

Property: 17 claims in the heart of Alta's mineralized zone between the Emma and the Michigan Utah properties, include several old mines. Ores are lead and copper sulphides, highly argentiferous. Ores occur as bedded tabular replacement deposits adjacent to crosscutting fissures and are parallel to the bedding and fissure intersections. The Braine fissure, the most important ore-bearing channel of the camp, known for 2 miles and explored on Alta Consolidated ground for 800'. The existence of cross-cut fissures and a porphyry dike are favorable geologic features.

Development: 5,000' of tunnels exposing a deposit of copper ore 20' wide, carrying 2% copper, 80c in gold and silver and excess iron, and worth about \$6.00 at the Garfield smelter, 24 miles away. With cheaper freight (present teaming and freight is \$3.65) it could be worked. Ore occurs at contact between flat dipping quartzite and limestone. The main working, or Silver King tunnel is 300' below the Brooklyn tunnel and an equal distance above the new Alfred tunnel. All recent development is from the main tunnel which follows in a general way the Braine fissure. Drifts east and west from this tunnel have raises to reach the ore. Shipments were made during 1915 from Hoboken lease and from small orebodies encountered in the company workings. In Nov., 1917, it was reported that a drift from the copper Prince tunnel had cut good gold-silver ore.

Past representations of mine management have been misleading and unduly optimistic. While the property has merit the company has no stock in reserve, but was reported out of debt, Nov., 1916, with \$10,000 in the treasury for development purposes.

ALTA COTTONWOOD MINING CO.

UTAH

Address: Salt Lake City, Utah. A. O. Jacobson, pres.; Franklin Webb, v. p.; Val. S. Snow, sec.-treas.; preceding officers, J. C. Wood and R. S. Lewis, directors.

Inc. 1915. **Cap.**, \$250,000; shares 25c par.

Property: 28 claims, 18 patented, known as the Argenta group, located in the Big Cottonwood district, 7 miles southwest of Park City. Claims adjoin the Maxfield mine on the south and the Cardiff on the north. In 1917 the company was planning to start work on a long drainage and exploration tunnel that had already been driven 1,300'.

ALTA DIVIDE GOLD MINING CO.

UTAH

Officers: A. F. Ellgren, pres.; L. H. Hardy, treas.; A. Y. Hardy, sec.; with C. W. Knudsen, and E. M. Tyson, directors.

Inc. April 22, 1916, in Utah. **Cap.**, \$100,000; shares 10c par; 600,000 shares in treasury.

Property: 34 unpatented claims, in Big and Little Cottonwood districts, near Alta, Salt Lake Co., Utah, shows gold values in a vein up to 30' wide in a shale quartzite contact.

Development: commenced in Spring of 1916.

ALTA-GERMANIA MINES CO.

UTAH

Office: 161 So. Main St., Salt Lake City, Utah. **Mine office:** Alta, Utah.

Officers: Geo. H. Watson, pres.-mgr.; Herman Bamberger, v. p.; Robt. F. Marvin, sec.-treas., with H. C. Edwards and D. W. Harcrow, directors.

Inc. in Utah. **Cap.**, \$100,000; shares 10c; assessable; 78,714 outstanding. First assessment of 1c per share levied October, 1917. Stock listed

on Salt Lake Exchange. Financial statement to Jan. 1, 1917, shows resources as follows: mines and plant, \$47,200; mine development, \$6,439; cash in bank, \$1,314; discounts on sale of treasury stock, \$24,356; treasury stock, \$21,286; with accounts payable, \$597.

Property: 67 acres in Little Cottonwood district, adjoining the South Hecla, said to show silver-lead-copper-gold ore. At present development is being done through Dominic tunnel, but will eventually be done through the Quincy tunnel level of the South Hecla mine.

ALTA-MICHIGAN MINES CO.

UTAH

Office: 161 So. Main St., Salt Lake City, Utah. **Mine office:** Alta., Utah.

Officers: same as South Hecla Mining Co.

Inc. in Utah. Cap., \$100,000; shares 10c par; assessable; outstanding, 25,713. First assessment of 1c per share levied October, 1917. Listed on Salt Lake Exchange. Financial statement to Jan. 1, 1917, shows total resources, \$101,000, which includes: mines and plant, \$16,250; treasury stock, \$74,287; and cash, \$1,864; accounts payable, \$1,000.

Property: 17 acres, in Little Cottonwood district, said to show silver-lead-copper-gold ore. Development work is being carried on through the Quincy tunnel level of the South Hecla mine. A prospect.

ALTA MINING & DEVELOPMENT CO.

UTAH

Address: 102 Mercantile Annex, Salt Lake City, Utah.

Officers: Chas. A. Walker, pres.-mgr.; J. R. Walker, v. p.; H. M. Chamberlain, sec.-treas., with Walter C. Lewis and John M. Moore, directors.

Inc. June 29, 1906, in Utah. Cap., \$600,000; shares \$1 par; 326,500 held in treasury. Annual meeting 1st Monday in January. Columbia Trust Co., Salt Lake City, Utah, transfer agent.

Property: about 160 acres, is in the Alta Cottonwood district and located at the head of Little Cottonwood canyon. Lands include the townsite at Alta. Adjoining on the west are the Wasatch mines, and on the north, east and south the South Hecla. The management planned to continue a 330' tunnel that had been started in 1907 at a distance of 3,600' from the townsite down Little Cottonwood Creek. The object in driving the tunnel was to explore the ground under the townsite at a depth of 500'. Several contacts and well-defined fissures are said to cross the property. Idle, 1917.

ALTA PRINCE MINING CO.

UTAH

J. S. Johnson, pres.; C. W. Frees, sec.-treas., 739 E. 21st St., South, Salt Lake City, Utah.

Cap., 1,000,000 shares, par 25c; 300,000 shares in treasury.

Property: 2 claims, patented, at Alta, Salt Lake Co., between the Michigan-Utah and the Prince of Wales Mining Co.'s property. Development tunnel 1,065' at 500' depth.

ALTA SUPERIOR M. & M. CO.

UTAH

Office: Provo, Juab Co., Utah.

Officers: J. I. Bullock, pres.; F. E. Brown, sec.; W. H. Horner, supt.

Inc. March, 1909, in Utah. Cap., \$50,000; shares 5c par; assessable. Previously known as Mineral Flat Extension M. & M. Co.

Property: 2 miles S. of Alta. Little Cottonwood district, Utah.

Development: by tunnel and shaft. Ores contain copper, silver and lead.

ALTA TIGER MNG. CO.

UTAH

Address: 420 Boston Bldg., Salt Lake City. **Mine office:** Alta, Utah. **J. E. Phillips, pres.; Daniel Phillips, v. p.; A. T. Sanford, sec.-treas.**

Inc. 1915. Cap., \$7,000; divided into 700,000 shares; assessable; with

20,000 remaining in the treasury. Report of 1917 gives bills payable \$200.

Property: the Tiger patented claim, 6 acres and an interest in the Highland Chief claim, in the Alta-Cottonwood district, north of the town of Alta. The management intended to work the Tiger claim ground through the Highland Chief claim tunnel. The tunnel was cleaned out in the summer of 1915 when it was found that the Tiger ground had been mined to a considerable extent in early days. The work since has been devoted to the unexplored ground. One shipment made in 1916, claimed to have assayed 18% lead and 16.8 oz. silver per ton.

ALTA TUNNEL & TRANSPORTATION CO.

UTAH

Office: 618 Newhouse Blk., Salt Lake City, Utah.

Officers: John C. D. Clark, pres.; M. P. Braffet, v. p.; John Cain, sec.; F. V. Bodfish, gen. mgr.; preceding officers, V. E. Lollin and Geo. N. Wagner, directors.

Inc. Sept., 1911, in Utah. **Cap.**, \$1,000,000; shares \$1 par; 800,000 issued; assessable; last assessment, 1c per share, called May 12, 1917.

Property: 250 acres, includes the Lucky Dutchman group of 16 claims and the old Alta tunnel ground. Ore occurs in fissure veins in limestone with stringers of ore said to assay 9.7% copper, 21% lead and 13½ ozs. silver per ton.

Development: by drifts and raises which have opened up several rich veins. Company is driving a mile-long drainage and transportation tunnel (2,900' long in Oct., 1917) to open its own and adjoining properties, with portal 3,500' from Silver Fork on the Big Cottonwood, and 8,500' above sea level. Tunnel will be 600' lower than any mine workings of the district and will cut all the great veins of the section.

Equipment. 50-h. p. motor and compressor, drills, a 10' fan for ventilating purposes, a 2-mile power line, boarding house and other buildings.

No report from company.

ALTA-UTAH MINES CO.

UTAH

Address: G. H. Watson, gen. mgr., Alta, Utah.

Property: an old property in the Cottonwood district, near the South Hecla. In Oct., 1917, one tunnel was in 400', and another 200'. The latter shows high grade ore. No. 3 tunnel yielded a carload of 3% copper and 15 oz. silver ore. Company was organized late in 1917.

AMERICAN CONSOLIDATED COPPER CO.

UTAH

Office: Judge Bldg., Salt Lake City, Utah.

Officers: John C. Barnard, pres.; L. L. Smith, v. p. and mgr.; D. C. Dart, sec.-treas.; with J. W. McKinney and L. R. Wardrop, directors; G. Malmberg, supt.

Inc. 1907, in Utah. **Cap.**, \$600,000; shares \$1 par; non-assessable; changed to 1,000,000 shares; 10c par, October, 1917. Stock listed on Salt Lake Stock Exchange.

Property: 19 claims, 1 patented, in Big Cottonwood district, adjoin the Cardiff and Howell on the west.

Development: several tunnels, longest 2,200', driven to cut the Silver King & Garfield fissures, showing heavy mineralization. Samples said to assay 48% zinc, with lead, gold and silver values.

Equipment: includes compressor, drills and mine buildings. Operations resumed Dec., 1914, after an idleness of several years. Management reports working on 1' of \$110 ore 1,700' from portal of tunnel, 600' under surface and expected to make shipments in 1917.

AMERICAN COPPER MINING & MILLING CO.

UTAH

Office: Lehi City, Utah. J. N. Butt, pres.; Charles Anderson, v. p.; A. O. Slade, treas.; preceding officers, Howard Murdock and Chas. Herron, directors; William Asher, sec.

Inc. Aug., 1912. **Cap.**, \$100,000; shares 10c par. An assessment of 1 mill called March, 1914. Property is in Tooele county, but as officers do not reply to letters, no details of the company's holdings are available.

AMERICAN MINING CO.

UTAH

Office: 27 Latimer Blk., Salt Lake City, Utah. **Mine office:** Brighton, Salt Lake Co., Utah.

Officers: I. A. Benton, pres.; A. L. Headberg, 1st v. p. and gen. mgr.; Wm. Crome, sec.-treas.

Inc. 1896, in Utah. **Cap.**, \$50,000; shares 5c par; assessable; all issued; 26 assessments levied to end of 1910. Annual meeting 3rd Monday in May.

Property: 10 patented claims, on Scott Hill, in Big Cottonwood district, 5 miles from a railroad. Ore occurs as sulphides in lime. Orebody is from 2" to 2' wide and average assays run from 5-18% copper, 10 oz. silver and \$3.50 gold.

Development: About 2,000' of shafts and tunnels.

Property: reported under lease and bond, June, 1917, for \$200,000.

AMERICAN STAR MINING CO.

UTAH

Office: 403 Dooly Bldg., Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah.

Officers: Imer Pett, pres. and gen. mgr.; Jas. P. Graves, v. p.; Fred R. Sands, sec.-treas.; preceding officers, Geo. E. Davis and Thos. P. Billings, directors.

Inc. 1909, in Utah. **Cap.**, \$1,000,000; shares \$1 par; issued 599,500 shares.

Property: 2 claims, 15 acres, between the Victoria and Chief Consolidated mines, and touching the Plutus on the east and Eagle & Blue Bell on the west. Mine has about 1,000' of workings, made from the 900' level and 1,000' from the 1,350' level of the Eagle & Blue Bell mine, and is developing through the Eagle & Blue Bell, in 1917. Workings show an ore channel of about 60' width. Property considered promising.

ANTELOPE & PRINCE OF WALES MINING CO.

UTAH

Not incorporated. Controlled by Walker Bros., of Salt Lake City. **Cap.**, \$1,250,000; shares \$1 par; 400,000 shares held in treasury.

Property: 9 claims, patented, in the Alta-Cottonwood district, cover a mile of the Prince of Wales fissure, worked years ago to a depth of 900', said to have produced \$1,000,000 from one shoot alone, and was the "bone of contention" in a celebrated lawsuit in the seventies.

Development: 930' incline shaft and 600' "Annie" tunnel. In 1915 lessees continued the tunnel several hundred feet, cutting the vein 140' below bottom of shaft. Vein where cut is said to have shown good ore containing silver chloride and galena. Company plans to continue the work of the lessees.

BANKERS MINES CO.

UTAH

Office: J. A. Maxfield, Maxfield Apts., Salt Lake City, Utah.

Officers: Noble Warrum, pres.; J. A. Maxfield, v. p.-sec.; A. D. Williams, treas.; preceding with M. B. Connell, B. Y. Golding and Aquilla Nebeker, directors.

Inc. November, 1916. **Cap.**, 1,000,000 shares; 10c par; 500,000 shares in treasury.

Property: 39 claims, about 780 acres, adjoins the Logger Mine in Big Cottonwood Canyon, and is near the old Maxfield mine.

Development: by a tunnel which is expected to cut the Logger vein at 900' in. At 60' in, (Jan. 1917) tunnel was reported to show specks of galena.

BIG COTTONWOOD CONSOLIDATED MINING CO.

UTAH

Office: Boston Bldg., Salt Lake City, Utah. **Mine office:** Brighton, Salt Lake Co., Utah.

Officers: J. F. Dunn, pres.; J. E. Johnson, v. p. and gen. mgr.; J. P. Waite, sec.-treas.; preceding officers, Judge Chas. C. Dey, F. J. Fabian, and P. F. Keyser, directors.

Inc. Sept., 1909, in Utah. **Cap.**, \$250,000; shares 25c par; assessable; 900,000 shares issued; listed Salt Lake Exchange. Annual meeting, 1st Monday in October.

Statement for year ended Oct. 1, 1917, shows total expenditures of \$60,672 to date, including \$13,306 for the Victor tunnel in 1916-17. Cash on hand amounted to \$5,058.

Property: 11 claims in South Fork, Big Cottonwood district, Salt Lake Co., carry auriferous and argentiferous lead and copper ore on which work is being done. Driving the Victor crosscut tunnel, now in 1,400', to cut fissure veins in lime and quartzite. No ore reserves developed as yet. Property is a prospect.

BIG COTTONWOOD COPPER & GOLD MINING CO. UTAH

Mine office: Brighton, Salt Lake Co., Utah.

Officers: Col. Nicholas Treweek, pres. and gen. mgr.; W. Mont Ferry, v. p.; J. Leonard Burch, sec.-treas.; preceding officers, J. E. Galligher and John S. Bransford, directors, at last accounts.

Inc. in Utah. **Cap.**, \$1,500,000, increased 1906, to \$3,750,000; shares \$5 par; non-assessable. Is operated as a close corporation.

Property: 140 acres, adjoining the Mountain Lake Consolidated Mining Co., on the southeast, and carrying same ore zone, near the head of Big Cottonwood canyon, and also in the Snake Creek district.

Development: by a shaft, showing ore assaying up to 8% copper, with small gold and silver values, and a long tunnel with about 2,000' of workings. Mine apparently has considerable bodies of sulphide ore, averaging about 5% copper and \$2 per ton in combined gold and silver values.

BIG KING MINING CO. UTAH

Office: 519 Newhouse Bldg., Salt Lake City, Utah.

Officers: S. A. Parry, pres.; H. B. Cole, v. p.; H. H. Harris, sec.-treas., with B. P. Critchlow and G. R. Halstead, directors.

Inc. June, 1916, in Utah. **Cap.**, 600,000 shares; 25c par; 240,000 shares in treasury, August, 1917. Stock listed on Salt Lake Exchange, but trading suspended, February, 1917, by the listing committee.

Property: 24 claims, 480 acres, in Big Cottonwood Canyon, reported to show 3 well-defined fissure veins, carrying copper, silver and iron manganese ore. A prospect.

BOSTON DEVELOPMENT CO. UTAH

Office: 911 Boston Bldg., Salt Lake City, Utah.

Officers: F. H. Vahrenkamp, pres. and gen. mgr.; Thos. Austin, v. p.; Richard Winder, treas.; preceding officers, S. S. Stillman and B. F. Fitzgerald, directors; R. B. Garff, sec.; A. Boulais, supt.

Cap., \$500,000; shares \$1 par; assessable; 3 assessments levied; last one of 3c due Feb., 1917.

Property: the old Maxfield mine on the north side of Cottonwood Canyon, in the Big Cottonwood district, 3 miles north of the Cardiff mine, and 2 hours by auto from Salt Lake City, was taken over on a \$250,000 bond and lease, 1914. The Maxfield mine, discovered in 1872, is one of Utah's well-known early day mines; it is credited with a production of over a million dollars in gold, silver, copper and lead. The present management is said to have spent \$70,000 in 1915, in unwatering and equipping the mine.

Ore: above the water level is silver-lead, carbonate; below, it is galena, containing gold, silver and copper. Orebodies vary in width from 6" to 24'.

Development: mainly by tunnels. The mine is about worked out above the main tunnel which was driven north and west, a total of 4,000'. New management plans systematic development work including the sinking of the 1,900' incline shaft.

In Jan., 1917, a new strike was made at 1,900'. The ore was followed for 20' and 700 tons were shipped, averaging \$65 per ton. In Sept., 1917, a narrow vein of rich lead-silver ore was cut at a distance of 1,100' in the tunnel. The ore will average \$165 per ton, it is said.

Equipment: includes 2 air compressors, pumps and electric power.

Production: shipped steadily in 1916. Ore from 1,800' level averaged \$50 a ton.

BRANBORG MINING CO.

UTAH

Office: Judge Bldg., Salt Lake City, Utah. J. C. Barnard, pres.; D. C. Dart, v. p.; L. R. Waldrop, sec.; J. W. McKinney, F. W. Price, directors. Inc. April, 1915. **Cap.**, 500,000 shares; 10c par.

Property: 11 claims, 220 acres, located at Big Cottonwood. A prospect.

CANTON MINING CO.

UTAH

Owens the Canton group of claims in Alta-Big Cottonwood district.

Incorporators: W. W. Armstrong, pres. of Natl. Copper Bank, Salt Lake City; James Farrell and Duncan MacVichie, a consulting engineer, 507 Newhouse Bldg., Salt Lake City.

Property: 500 acres adjoining the Cardiff, Wasatch, Crown Prince and Frederick Mines.

Development: tunnel work aggregates about 3,000'. Reported to have produced considerable tonnage of ore running from 100 to 250 oz. of silver.

CARBONATE CONSOLIDATED MINES

UTAH

Address: Woolley Brothers, brokers, Newhouse Bldg., Salt Lake City.

Officers: Leo Neilsen, pres.; D. A. West, sec.-treas.

Inc. in Utah. Cap., \$1,000,000; shares \$1 par; 600,000 issued.

Property: 19 claims in Big Cottonwood district. Surface workings said to have yielded \$1,250,000 years ago. Recent litigation has been settled, and prospecting started.

CARDIFF MINING & MILLING CO.

UTAH

Office: 1218 So. Main St., Salt Lake City.

Mine office: Alta, Salt Lake Co., Utah.

Officers: Ezra Thompson, pres.-gen. mgr.; Fred N. Price, v. p.; J. D. Murdock, sec.-treas., with L. H. Thompson and T. A. Reamer, directors. Con O'Neil, supt.

Inc. 1906, in Utah. **Cap.**, \$500,000; shares \$1 par; assessable; all issued. Last assessment of 1c per share delinquent June 1, 1914.

Dividends: initial dividend of 25c, Oct. 15, 1915; 25c June 1, 1916, Sept. 1, and Dec. 1, 1916; 25c Aug. 1, 1917; total, \$1.25 per share, or \$625,000.

Returns to the State Board of Equalization are given as: net proceeds, \$372,000; gross returns, \$645,772; expenditures; transportation, \$104,124; labor, \$114,173; supplies, \$44,295; improvements, \$10,978.

Stock listed on Salt Lake Exchange.

Property: 14 claims, partly patented, 25 miles from a railway, in the Alta Cottonwood district, 26 miles from Salt Lake City, includes the Mountain Chief group, N. W. of the Columbus Consolidated.

The Cardiff is now one of the richest silver-lead mines of Utah. Idle for years, a prospecting tunnel started in 1914, cut a limestone-quartzite contact, where intersected by an ore fissure several hundred feet below old and slightly productive workings. This tunnel cut a bedded orebody, averaging 10' thick, that had been opened for 235' long, 795' on its dip (22°) and which contains about 250,000 tons of \$30 ore.

A second and new orebody on a new fissure was cut in August, 1917.

Development: by tunnel, and 1,180' inclined shaft 500' below the tunnel and following the ore down along bedding plane, also a new 235' shaft in quartzite hanging wall. A new orebody or possibly an offshoot of the others is cut on the 235' level.

Ore reserves: estimated Jan., 1917, at 200,000 tons of \$30 ore blocked out.

Equipment: includes compressor, drills, electric power, dwellings, machine and blacksmith shop.

Production: was begun in 1910 and to 1913 amounted to 3,339 tons, valued at \$100,549. Recent production was made from the stopes above the 850' level. Shipments in 1916 to the Salt Lake smelter averaged 100 tons daily, returning 38.2% lead, 13.4 oz. silver, 3% copper. Employs 85 men. Ore is now being hauled by tractors and shipments will be materially increased.

Production amounts to 125 tons of \$45 to \$50 ore daily during the summer months, but only half this amount when the winter snows cover the ground. Owing to the low price of lead in October, shipments were suspended for a time.

CITY ROCKS MINING CO.

UTAH

Office: Leopold Bldg., Houghton, Mich.

Officers: N. W. Haire, pres.; John Edwards, v. p.; Jas. P. Edwards, sec.-treas.; W. S. Zehring and Jos. Bosch, directors.

Inc. 1906, in Utah. **Cap.**, \$1,000,000; shares \$5 par. Has an issue of convertible bonds. Property consists of shareholdings in the Michigan-Utah Mining Co., received for lands sold in 1912.

COLUMBUS EXTENSION MINING CO.

UTAH

Consolidated with Rexall Silver & Copper Co. to form the Columbus-Rexall Con. Mines Co., which see.

Described Vol. XII.

COLUMBUS-REXALL CONS. MINES CO.

UTAH

Office: 125 Main St., Salt Lake City, Utah.

Mine office: Alta, Utah.

Officers: L. Greene, pres.; M. R. Evans, v. p.-mgr.; F. B. Cook, sec.; S. A. Whitney, treas., with H. W. Lane, Fred A. Price and John Gallacher, directors. J. D. Houston, supt. R. A. Brown, cons. engr. Columbia Trust Co., N. Y., registrar and transfer agts. Annual meeting, 1st Monday in June.

Inc. July 15, 1916, in Utah. **Cap.**, \$600,000; \$1 par; 586,234 issued; assessable. Is a consolidation of the Columbus Extension and Rexall Silver and Copper Mng. Co., described in Mines Handbook, Vol. XII.

Shares jumped from 13c in July to \$2 in September, 1917. Profits for July, August, and September totaled \$30,000.

Property: owns an interest in 18 claims, 15 patented, about 200 acres, in the Alta Cottonwood district, Utah. Ore is copper with some galena.

Development: by 5,000' tunnel. In July, 1917, at 500' in from the portal of tunnel and at depth of 1,350' in Rexall ground, rich ore was opened in limestone, not far from the quartzite contact. Up to October 27th, the yield was 1,900 tons of smelting ore. Some of this assayed 13.96% copper, 3.8% zinc, 0.37 oz. gold, and 32.9 oz. silver per ton. Early in November a drift from the main tunnel cut ore at 75', and passed through 16' of ore.

Shipments are made to the smelter at Murray and averaged 40 tons per day in October, 1917.

Equipment: includes tramway and motors.

COTTONWOOD ATLANTIS MINING CO.

UTAH

Office: 521 Vermont Bldg., Salt Lake City, Utah.

Mine office: Alta, Utah.

Officers: Samuel Neff, pres.; R. O. Dobbs, v. p.-gen. mgr.; J. H. Moss, sec.-treas.; with Sol Snider and R. C. Middlewood, directors.

Transfer office: 521 Vermont Bldg., Salt Lake City. Annual meeting in May.

Inc. July, 1915, in Utah. **Cap.**, 1,000,000 shares; 10c par value; 750,000 issued, non-assessable.

Property: 12 claims, 115 acres, of which 6 are patented in the Little Cottonwood district. Ore which carries lead, silver, gold and copper occurs in shoots at the intersection of two orebearing fissures with a thrust fault contact having a limestone foot wall and a quartzite hanging wall. This contact courses South 15° East and dips 25°.

Development: by tunnels that are 175' to 450' in length, having 1,500' of underground workings with a depth of 400'. During 1916, 191' of crosscutting was done.

It is the plan of the company to crosscut to the thrust contact as has been done at the Cardiff mine two miles north.

COTTONWOOD KING MINING CO.

UTAH

Office: 519 Newhouse Bldg., Salt Lake City, Utah.

Mine: Big Cottonwood Canyon.

Officers: S. A. Parry, pres.; A. Anderson, v. p.; H. H. Harris, sec.-treas.; preceding, with H. P. Hucy, G. H. Webb, C. R. Halstead and J. W. McLaughlin, directors. A. B. Gattrell, mgr.

Inc. July 2, 1915. **Cap.**, \$150,000; shares 10c par; 150,000 shares in treasury. Late in 1916 company levied an assessment of ½c per share which should net \$4,419. Listed on Salt Lake Exchange.

Property: 28 claims, 560 acres, and a bond and lease on the Giles property of 31 claims, located between Big Cottonwood and Park City, Utah. Bond calls for \$600,000, with no payments due for 2 years.

All the property of the Big King Mining Co., bought, 1917, by exchange of stock share for share, property 52 claims, 1,040 acres, adjacent to Cottonwood King ground; also a bond and lease on Giles property, 31 claims.

Development: 2,100' of tunnels and 187' shaft with 500' of workings. Management states that on account of faults, 600' of development done in 1916-17 proved disappointing. In October, 1917, company was sinking a winze. Property is still in a prospective state. It adjoins the Daly Judge and Silver King Coalition of Park City.

COTTONWOOD METAL MINING CO.

UTAH

Office: 503 Utah Savings and Trust Co. Bldg., Salt Lake City.

Mine office: Alta, Cottonwood Mining District.

Officers: W. M. Ferry, pres.; S. J. Truman, sec.-treas., preceding with E. E. Watrous, E. P. Watrous, and H. R. Watrous, directors.

Inc. in Utah. **Cap.**, \$1,000,000; shares 10c par. Outstanding 440,000 shares paid for property and organization expenses. The balance is to provide funds for development work.

Property: 38 full claims, 760 acres, known as the Watrous group, in the Big Cottonwood district. Property is said to be crossed by six large fissures which cut the series of sandstone, shale, quartzite and limestone. These fissures run N. 35°-40° E., dip 60° to the N. W., and are cut by E. and W. fissures. Orebodies are found at these intersections especially in the soluble white lime. The deposits of the district are bedded deposits by replacement.

Development: by 380' tunnel that has cut first fissure. It is the plan of the company to continue the tunnel to cut all the fissures.

Equipment: 4 drill compressor, blacksmith shop, and houses.

Management frankly states that property is a prospect and that they will spend the money in honest development. Prof. J. H. Webber of Salt Lake says that there is much first-class territory to prospect.

DAYS FORK MINING CO.**UTAH****Office:** 608 Boston Bldg., Salt Lake City, Utah.**Officers:** Henry Harker, pres.; M. T. Ellison, v. p.-mgr.; E. O. Lee, sec.-treas., with H. E. Booth and B. H. Cannon, directors.**Inc.** April, 1911, in Utah. **Cap.**, \$60,000; shares 10 cts. par, assessable. 475,000 shares outstanding.**Property:** 5 claims, 85 acres, in Big Cottonwood mining district. Management reports \$2,500 expended in prospect work during 1916.**EAST HECLA MINING CO.****UTAH****Office:** 1119 Boston Bldg., Salt Lake City, Utah.**Mine office:** Alta, Utah.**Officers:** J. B. Taylor, pres.-gen. mgr.; E. J. Broberg, v. p.; W. Hansen, Jr., sec.-treas.; D. J. Cook, supt.**Inc.** in 1916, in Utah. **Cap.**, 1,000,000 shares; 10c par.**Property:** A group of claims at Alta, Utah, adjoining the South Hecla mine, said to show a prominent outcropping vein and about 3' of ore in a shaft sunk on it. Ore carries copper, lead, silver and gold values.**Development:** a new tunnel 250' long is being driven to cut the downward extension of the vein beneath a 75' shaft, that shows copper ore.

Management doing legitimate exploration work.

EMMA CONSOLIDATED MINING CO.**UTAH****Office:** 27 William St., New York City. **Mine address:** Alta, Salt Lake Co., Utah.**Officers:** G. G. Rice, pres.; Wm. Barret Ridgely, v. p.-treas.; Judge H. D. Rummel, 2d v. p.; R. W. Gnekow, sec.; J. J. Beeson, gen. mgr.**Inc.** 1917, in Delaware. **Cap.**, \$3,000,000; shares \$1 par, non-assessable; 2,668,693 issued. Is the holding company, owning more than 98% of the outstanding capitalization of Emma Copper Co. and over 80% of Old Emma Mines Co. Also bought the lease on Old Emma Mines Co. ground from the Old Emma Leasing Co. (now dissolved), which ran until Sept., 1917.**Emma Copper Co.**

Controlled through ownership of over 98% of outstanding capitalization by the Emma Cons. Mng. Co.

Property: includes 11 claims in Little Cottonwood district and the adjoining Vallejo and Joab Lawrence groups, bought 1915 in exchange for 352,000 shares of stock. The company has a lease on the Emma mine owned by the Old Emma Mines Co., which see.**History:** the Old Emma mine was a famous early-day producer, having shipped over \$6,000,000 worth of lead-silver ore in the 60's and 70's, from above the 300' level. It was sold to the Emma Silver Mng. Co., for \$5,000,000 and soon afterwards the orebodies appeared worked out, or cut off by a fault. After vain attempts to find the orebodies below the fault, the mine lay idle until 1915.

Chas. S. Herzig made a geological study of the property with the deduction that it contained a faulted portion of the Old Emma bonanza orebody, whereupon diamond drilling was started. Under direction of J. J. Beeson, geologist, the Emma vein was located, 1916, at about 250' below where it had been cut off by the fault, and the displaced segment of the orebody opened up.

Development: by 1,700' tunnel, 400' shaft and drifts on several levels.

Management is diamond drilling in 1917 in the hopes of locating the downward extensions of 4 other orebodies, all presumably cut off by the Montezuma fault. In November a mineralized zone 50' wide was passed through, assaying a few ounces of silver.

Production: from Jan. to Nov., 1917, 8,400 tons were shipped with average net returns of \$30 a ton. Shipping between 80-100 tons daily to Midvale smelter, Sept., 1917.

FREE COINAGE MINING & MILLING CO. UTAH

Office: 69 Commercial Bldg., Salt Lake City, Utah. Mine near Alta, Salt Lake Co., Utah. L. A. Evans, pres.; D. H. Wenger, sec.-treas.

Inc. 1896, in Utah. **Cap.**, \$125,000; shares 25 cts. par, assessable, with 2 assessments levied.

Property: 4 claims, 3 patented, in Little Cottonwood canyon, 2 miles from a railroad, developed by shaft and tunnels, showing lead and copper ores. Letters neither answered nor returned. Probably idle, or moribund.

GLENWOOD MINING CO. UTAH

Office: 1102 West Seventh South St., Salt Lake City, Utah.

Officers: E. P. Mowers, pres. and gen. mgr.; N. W. Sonnedecker, v. p.; M. L. Grovenor, sec.-treas.

Inc. Feb. 21, 1901, in Utah.

Cap., \$30,000, shares 10 cts. par, assessable; increased 1912, to \$125,000, shares 25 cts. par.

Property: 8 claims, patented, in Big Cottonwood district, 6 miles from a railroad, opened by shafts and tunnels, with about 1,600' of workings.

GREAT COPPER KING MINING CO. UTAH

Inc. Aug., 1904, in Utah. **Cap.**, \$50,000; shares 10 cts. par; issued, \$47,500, assessable; last assessment 1/10 ct. delinquent March 7, 1914.

Property: 10 claims, unpatented, including 4 claims, 1 fractional, held under bond and lease, near the mouth of Little Cottonwood canyon, 7 miles from Alta, Salt Lake Co., Utah. Mine has shallow shafts and a 330' tunnel, with about 800' of workings, showing auriferous and argentiferous copper and lead ores. Ore occurs in fissure veins as contact deposit in granite and quartzite.

Samples taken from main tunnel on 300' level said to assay from 19-33% copper. J. E. Smith, a director, was developing property under contract in 1916.

GREAT WESTERN GOLD & COPPER CO. UTAH

Merged 1916 with Mountain Lake Mining Co. and Thor Mining Co. under title of Great Western Mines Co., which see.

GREAT WESTERN MINES CO. UTAH

Office: Knight Bldg., Provo, Utah.

Officers: Jesse Knight, pres.; J. W. Knight, v. p.; W. L. Mangum, sec.-treas., with Jas. H. Moyle, W. I. Snyder, R. A. Brighton and K. S. Jordan, directors.

Inc. 1916, in Utah. **Cap.**, \$150,000; shares 10c par; outstanding in May, 1916, 1,270,000 shares. Listed on Salt Lake City Exchange. Debts reported, \$6,036. Company is a merger of the Great Western Gold & Silver Co., Mountain Lake Mining Co., and the Thor Mining Co., all described in Vol. XI, Copper Handbook.

Property: 98 claims, in the Big Cottonwood and Snake Creek districts, in Salt Lake and Wasatch counties.

Ore: gold, silver, copper, and lead, mainly in contact deposits; no estimate of ore in sight.

Development: 500' of shafts, 8,500' of tunnels, 350' winzes and raises, and 2,000' of crosscuts. Ten cars of copper ore said to have been shipped from the property. No special equipment. Company has a transportation agreement with the Snake Creek Mining & Tunnel Co., a subsidiary of the Judge Mining & Smelting Co., for use of the 14,000' tunnel. Early in 1917 a start was made to explore ground cut by the tunnel.

HOWELL MINING CO. UTAH

Office: 218 So. Main St., Salt Lake City, Utah.

Officers: Ezra Thompson, pres.; J. C. Lynch, v. p.; Lynn H. Thompson, sec.-treas.; with J. M. Howell and David Neff, directors.

Inc. in 1910. **Cap.**, \$600,000; shares \$1 par; 500,000 shares outstanding. Listed on Salt Lake Exchange.

Property: an old mine, formerly known as the Baby McKee, 8 claims, 4 patented, 140 acres, in the Alta-Cottonwood district, Salt Lake Co., about 25 miles S. E. of Salt Lake City, adjoins the Cardiff property on the east. Reported that it will eventually be merged with Cardiff. Claims cover strike of Howell vein, said to be traceable on property for over a mile, with strike N. E.-S. W. and 4' width. Country rock is quartzite and limestone.

Ore: silver, copper, lead, zinc and antimony, said to average \$20 to \$50 per ton.

Development: 150' of shafts, 1,790' of tunnels, 90' of raises, 40' of cross-cuts. Shipments were made prior to 1910, but amount not known. Management is continuing upper tunnel to the contact in 600', October, 1916, and driving the lower tunnel farther along the Howell fissure.

IOWA COPPER MINING CO.

UTAH

Address: Park City, Utah.

Officers: L. R. Perry, pres.; D. G. Scott, v. p.; R. T. Kimball, sec.-treas.; with J. Carson and D. E. King, directors.

Cap., \$1,000,000; shares 10c par; increased from \$500,000 in June, 1917; 750,000 issued. Earnings from ore sold 1916, \$3,000; operating expenses, \$5,000.

Property: 9 patented clai s, 180 acres, in Big Cottonwood district, 1,000' N. W. of Silver King Coalition

Development: by tunnel, with 200' incline in ore and 100' crosscut from incline with 50' shaft on quartzite lime contact, showing 2' of copper ore.

In 1917 a compressor and other mining machinery was installed. Several shipments were made, yielding as high as \$900 per carload. Recent developments reported as good. Work under way at 400' depth. Eighteen men are employed.

KENNEBEC CONSOLIDATED MINING CO.

UTAH

Address: 239 Atlas Bldg., Salt Lake City, Utah.

Officers: Ezra Thompson, pres.; S. M. Levy, v. p.; Shand Smith, sec., with W. J. Wolstenholme, A. T. Sanford, H. S. Barnhardt, J. Patrick and P. S. Keogh, directors.

Inc. in 1901. **Cap.,** \$400,000; shares \$1 par; 130,000 shares in treasury.

On the basis of 3c per share on their holdings, shareholders subscribed to a loan bearing 8% during June, 1917.

Property: 30 patented claims, about 400 acres, in the South Fork of the Big Cottonwood district, Salt Lake Co., Utah, adjoins the Cardiff on the east and west and the Wasatch Mines and Columbus Extension on the north.

Development: by a 700' incline shaft, a 3,000' lower tunnel and an upper tunnel.

Property is an old-time silver-lead producer and has been under development by present management for many years.

Work was resumed in July, 1917. The Cardiff Company, adjoining, which is interested in the Kennebec, is supplying air for power.

KENNEBEC MINING CO.

UTAH

Company reorganized in Oct., 1917, under name of Kennebec Consolidated, which see.

LAST CHANCE MINING CO.

UTAH

Owns 1 patented claim adjoining the American Copper Co., in the Big Cottonwood district, near Alta, Salt Lake Co., Utah. Shaft, at depth of 70', is said to show a 6" lead of silver-lead ore. Operations resumed in 1915 by F. O. Horne and Jas. Häuerbach.

No recent returns.

LOGGER MINING CO.

UTAH

Officers: J. A. Maxfield, pres.-mgr.; R. D. Maxfield, v. p.; D. J. Bloem, sec.; C. S. Tingey, treas., with J. W. McKinney and Mrs. K. F. Scott, directors.

Inc. July, 1915. **Cap.**, 1,00,000 shares; 1c each. Stock listed on Salt Lake Exchange.

Property: the Logger mine in Big Cottonwood canyon, adjoining the Maxfield mine, shows a 1' fissure vein, developed by a 350' adit and a winze now being sunk on the vein from the 200' point. Assays said to return \$16.47 gold, 13.4 oz. silver and 11% copper.

A lower tunnel was started 100' below upper tunnel, 1916, and is reported to have cut the vein seen above with several other small veins of ore, assaying from \$50-\$240 per ton in copper, gold, and silver.

Developing energetically, 1917, and expecting to start production.

MAXFIELD MINE

UTAH

Operated by Boston Development Co.

MICHIGAN-UTAH CONSOLIDATED MINES CO.

UTAH

Office: 411 Felt Bldg., Salt Lake City, Utah. **Mine office:** Alta, Salt Lake Co.

Officers: Norman W. Haire, pres. and gen. mgr.; H. R. MacMillan, v. p.; N. A. Robertson, sec.; L. H. Farnsworth, treas.; with Frank B. Cook, C. A. Gillette, and R. J. Evans, directors. R. A. Brown, cons. eng.; Ed. Cook, foreman.

Inc. April 26, 1915, in Utah, as a reorganization of the bankrupt Michigan-Utah Mining Co. **Cap.**, 1,500,000 shares; 25c par; assessable; 1,354,608 shares issued. Listed on Salt Lake Exchange. Columbia Trust Co., registrar. Annual meeting, 2nd Monday in February.

Gross earnings in 1916 were \$125,985, all from ore sales.

Property: 72 claims, 42 patented, 1,200 acres, including a millsite, in the Big and Little Cottonwood mining districts. Claims show Paleozoic sediments cut by granite, the ore occurring in fissure veins in limestone, and as contact metamorphic deposits between limestone and granite, having a general strike of N. 65° E., and a dip of 32°. There are 5 distinct and parallel veins showing average widths of 2½' and traceable 5,000', reported to carry copper, lead, zinc, silver and gold values, averaging \$25 per ton. Ores are carbonates at and near surface, succeeded below by sulphides.

Development: principally by tunnels, all workings being in the oxide and carbonate zones, but sulphides are proven to occur in depth by workings of the Columbus Consolidated Mining Co., near by. Total underground openings aggregate over 50,000', about one-half being represented by tunnels, drifts and crosscuts that are all in ore, raises and winzes aggregating 10,500' additional. Ore is transported by aerial tramway to Tanners flat, 5 miles from the mine, thence by narrow-gauge railway to Wasatch, where connection is made with the Salt Lake & Alta standard gauge road which runs to the Midvale smelter. The tram has a maximum capacity of 200 tons daily.

The Copper Prince tunnel has been driven under property about 1,700', exposing several large orebodies that are soon to be mined, the Lavinia fissure showing well in Oct., 1917.

Equipment: includes two 90-h. p. hoists, and everything necessary for mining 150 tons daily. Air is supplied by the Wasatch Power Co. from Little Cottonwood creek.

Buildings include machine shop, carpenter shop, several dwellings and a smithy, located underground as a measure of protection from snowslides, which are of frequent occurrence in this region.

Production: in 1916: 154 oz. gold, 90,816 oz. silver, 364,685 lbs. copper, 916,851 lbs. lead, worth \$225,832 gross. Shipping 150 tons, daily, 1917.

As much ore was shipped in first half of 1917 as in all of 1916, 2,500 tons being moved in October. Considerable copper ore is also ready for extraction.

Part of the property is operated under lease by the Triangle Mining Co., a close corporation, which see. Property considered promising.

MINERAL FLAT EXTENSION MINING & MILLING CO. UTAH

Name changed to Alta Superior Mining & Milling Co., which see.

Office: Provo, Juab Co., Utah.

Property: 2 miles south of Alta, in Little Cottonwood district, White Pine canyon, shows a 3' vein of copper ore, giving assays up to 50% copper, also silver-lead ores. Developed by tunnel and shaft, with drifting on vein. Company has kept up assessment work on its unpatented claims. Tunnel in 300' early in 1916.

No recent information available.

MINERAL FLAT MINING CO. UTAH

Address: Hugh Trenholm, supt., American Fork, Utah.

Property: in the American Fork district. A tunnel is being driven to explore several fissures known to exist, and was in 3,000' late in Oct., 1917. Three fissures have been cut, showing good ore in bunches. Assessments are levied to keep the work going.

MONETAIRE MINING CO. UTAH

Office: 405 Newhouse Bldg., Salt Lake City, Utah.

Officers: D. J. Williams, pres.; N. V. Jones, v. p.; B. F. Cummings, sec.-treas.; with W. H. King and D. W. Cummings, directors.

Inc. Sept. 19, 1912, in Utah. **Cap.**, \$250,000; shares 25 cts. par; assessable; 885,000 shares outstanding. Annual meeting third Tuesday in January. Listed in Salt Lake City.

Property: 2 patented claims, 6 acres, in Little Cottonwood mining district, said to show lead-zinc ore, with some molybdenum, in fissure veins in limestone and quartzite. Veins strike E. W. and dip almost vertical. Ore shipped said to have returned \$17 per ton. No recent shipments reported.

Development: 127' vertical shaft and tunnels, with about 1,000' of workings. Claim to have 20,000 tons of ore blocked out.

Equipment: includes an electric hoist. Mine is a prospect, idle at present.

NEVA MINING CO. UTAH

Office: 400 Boyd Park Bldg., Salt Lake City, Utah. **Mine office:** Brighton, Utah.

Officers: A. H. Rock, pres.; C. E. Cole, v. p.; Walter Steadman, sec.

Inc. 1906, in Utah. **Cap.**, \$75,000; shares 15c par. Last assessment 1/5c levied Sept., 1917. Stock is listed on Salt Lake Exchange.

Property: 5 unpatented claims, adjoining the Cardiff on the W., show silver-lead-gold ore in a fissure vein, running E. W. along a quartz-lime contact and said to give assays of 45% lead, 30 oz. silver and 0.1 oz. gold. Developed by incline shaft and tunnel. Operations were resumed in 1915 and shaft is being sunk to intercept the Cardiff contact lode.

Property in dispute with the Cardiff Mining Co. was won by the Neva, and is considered valuable. Operations are carried on by small assessments.

OLD EVERGREEN M. & T. CO. UTAH

H. G. McMillan, gen. mgr., 649 E. South Temple St., Salt Lake City, Utah.

Cap., \$300,000; shares \$1 par; all outstanding.

Property: 12 patented claims, 3 miles N. E. of Alta, in the Big Cottonwood district, Salt Lake Co., was an old-time producer of gold-copper ore. Developed by 2,700' drainage and transportation tunnel. Idle.

ONTARIO SILVER MINING CO. UTAH

Offices: 163 So. Main St., Salt Lake City, and Room 1208, 32 Broadway, New York.

Mine office: Park City, Utah.

Officers: J. E. Bamberger, pres.; Ernest Bamberger, v. p.-treas.-gen. mgr.,

with N. A. Dunyon, John S. Critchlow, Wm. C. Osborne, H. G. McMillan and Walter Linforth, directors. Herbert Cohen, sec.; J. L. Tilton, New York, asst. sec. Newton A. Dunyon, supt.

Inc. 1887, in Calif. **Cap.**, \$15,000,000; shares \$100 par; all issued. Stock is listed on New York Exchange. Union Trust Co., New York, registrar. Annual meeting, third Monday in January. Was at one time the largest silver producer in Utah with a total production of about \$35,000,000 gross and a dividend record of \$14,932,500.

The annual report, Dec. 31, 1916, showed receipts from ore sales and royalties, \$289,691; disbursements, \$290,645; cash and bullion on hand, bonds and other liquid assets, \$311,620.

Property: the Ontario mine, 800 acres, patented, across the divide from the Emma Copper Co., at the head of Little Cottonwood canyon; also owns an interest in the Weber Coal Co., 811 acres coal land and the New Quincy and Naildriver Mining Companies.

The Ontario is an old and very famous silver-lead mine in which the ore occurs in a great pipe and chamber deposit in limestone. Ore shows an increase in zinc content at depth. In December, 1915, the manager decided to reopen the Ontario mine below the 1,500', or Drain tunnel No. 2 level. The old workings were unwatered to the 1,700' level and work was done on the 500, 1,000, 1,500 and 1,700' levels in 1916, on company account.

Development: about 60 miles of old workings, includes two tunnels and a shaft 2,000' deep. From the 900' level to surface, mine is worked by lessees.

Shaft caved badly in November and the lower levels were flooded, but by May, 1917, retimbering and unwatering had been accomplished.

On the 1,600' level a vein was encountered showing 25' of milling ore.

Equipment: includes 3½ miles power line, 2 electric pumps, hoist, compressor and 100-ton mill.

Stock believed to have a speculative value in addition to its liquidation value of about \$8 per share. Although the high-grade ore is mined out there is much low-grade ore left in the property which will yield a fair profit with silver at 80c or better.

PRICE MINING CO.

UTAH

Office: 410 Utah Savings & Trust Co. Bldg., Salt Lake City, Utah.

Officers: F. W. Price, pres.-treas.; M. R. Evans, v. p.; W. M. McCrea, sec.

Inc. April, 1915. **Cap.**, \$250,000; shares 25 cts. par; assessable; 650,000 issued. Stock is listed on the Salt Lake Exchange.

Operating expenses in 1916 were \$8,000.

Property: 17 claims, 300 acres, in South Fork canyon, Alta-Cottonwood mining district, Salt Lake Co., Utah, considered to carry the Cardiff contact, which is intersected at right angles by several fissure veins. Samples taken at depth of 15' on the Nettie claims, reported to have assayed 64.2% lead, 50 oz. silver and \$12 gold per ton.

Development: by 400' and 150' tunnels. Plans adding electric power, compressor and drills. A prospect.

PRINCE OF WALES MINING CO.

UTAH

Address: Walker Bros., Salt Lake City, Utah.

Property: at Alta, 60 acres, was closed down, 1914, when a snowslide destroyed its equipment. Mine has 950' incline shaft from which \$2,000,000 worth of ore was mined, 1870-1875, until the influx of water stopped operation. Alta T. & T. Co. tunnel will entirely drain the ground.

In July, 1917, 19 tons of \$100 ore was shipped.

RED BELL MINING CO.

UTAH

Office: 519 Newhouse Bldg., Salt Lake City, Utah.

Officers: S. A. Parry, pres.; M. E. Price, v. p.; H. H. Harris, sec.-treas.

Inc. Nov., 1916. **Cap.**, 800,000 shares, 10 cts. par; 340,000 shares in treasury.

Property: 16 claims in Big Cottonwood canyon, Salt Lake Co., about 1 mile E. of the Old Maxfield mine, reported to have produced rich silver-lead ore.

Development: by tunnel, in 150', Sept., 1917, and said to have penetrated a 12' porphyry dike carrying lead, iron, and copper. Lack of power prevented ore extraction for 2 months, but this work was resumed in November.

RED CLOUD MINING CO.

UTAH

F. N. Leonard, mgr. Property at American Fork includes the Eudora, First Chance, and Red Cloud claims and 2 millsites.

Development: by 675' tunnel in quartzite, said to show 5' of silver-lead ore. The tunnel is being driven to reach the contact, 1917.

REED'S PEAK MINING CO.

UTAH

Office: 1 Mining Exchange Bldg., Salt Lake City, Utah.

Officers: Frank Andrews, pres.; W. J. Bardsley, v. p.; F. A. Stiefel, sec.-treas.; with Robt. Kimball, E. W. Hulse, T. L. Mitchell, and L. G. Schwalenberg, directors.

Financial statement for fiscal year ended Sept. 30, 1916, showed: receipts, \$18,191; expenditures, \$9,799, cash balance, \$8,391.

Inc. Feb. 14, 1907, in Utah. **Cap.**, \$50,000; shares 10c par; outstanding April, 1917, 489,000 shares; assessable. Listed on Salt Lake Exchange.

Property: 21 unpatented claims, 420 acres, 12 miles from a railroad, located on South Fork in Big Cottonwood mining district, Salt Lake Co. Claims said to show fissure veins in limestone carry lead-silver ore.

Development: by tunnels, upper 450' long, lower 1,450' long. Objective of lower tunnel is the intersection of the Birthday No. 1 fissure with a N.-S. fissure at a depth of 800' from surface; this intersection is expected to be reached within a short distance; Birthday fissures Nos. 1 and 2, said to have been productive of shipping ore on upper levels.

Equipment: includes a compressor, machine drills and electric power.

A few tons of ore have been shipped from development work; property is a prospect.

REXALL SILVER & COPPER MINING CO.

UTAH

Consolidated, 1916, with Columbus Extension Mng. Co., and now known as Columbus-Rexall Cons. Mines Co., which see. Described Vol. XII.

SECRET MINING & MILLING CO.

UTAH

Offices: 618 Newhouse Bldg., Salt Lake City and Alta, Utah. Reported "dead" in Copper Handbook, Vol. X. Reorganized and rejuvenated in 1915.

Officers: R. W. Clough, pres.; W. M. Minor, v. p. and treas.; H. S. Harper, sec.; with E. R. Phelps and W. H. Clough, directors.

Inc. about April, 1906, in Utah. **Cap.**, \$300,000; increased in 1915 to \$600,000; shares \$1 par. The additional 300,000 shares were to provide funds for development.

Property: 15 claims, 300 acres, 100 patented, at Alta, Little Cottonwood mining district, adjoining the Albion on the S. E., said to show lead-silver ore. Country rock is quartzite.

Development: by tunnels; reported in April, 1916, that an 80' tunnel would be extended to cut the surface showings at a depth of 800'. The company is also reported as having obtained the right from the Albion to drive a crosscut into Secret ground from a point 2,500' in from the portal of the Albion tunnel. An upper tunnel is in 500'. Workings total 700'. No orebodies large enough for production have been found. In Sept., 1917, the lower tunnel was being extended 200'. Property is in the speculative class.

SELLS MINING CO.

UTAH

Address: Judge Bldg., Salt Lake City and A. O. Jacobson, supt., Alta.

Officers: Ezra Thompson, pres.; L. R. Eccles, v. p.; Jas. Murdoch, sec.; John Pingree, treas., with A. O. Jacobson, J. C. Lynch, and Lynn Thompson, directors.

Inc. 1914, in Utah. **Cap.**, 600,000 shares; 25c par; 400,000 issued. In May, 1916, there was \$3,994 in the treasury; debts amounted to \$13,500 on the property and \$24,446 on the 6 patented claims, latter amount was due Sept. 1, 1916. Listed on Salt Lake City Exchange. Company has remained courteously non-communicative to requests for information.

Property: 16 claims, 6 patented, in the Alta-Cottonwood mining district, Salt Lake Co., 8 miles from a railroad, said to cover 1,800' to 3,000' along the mineralized zone passing through the South Hecla property which adjoins on the west.

Ore: carries silver-lead-zinc-copper, in fissure veins in limestone and in contact deposits between limestone and granite; veins strike N. E.-S. W.

Development: mainly through the Dwyer tunnel of the South Hecla company, consists of a 200' shaft, 2,200' of tunnels and 600' of raises. Reported in May, 1916, 200' of ore proven on the strike, with ore in a 100' raise; average width of ore 6'. Shipments of about 125 tons were made early in 1916, returning \$2,768 net. Initial shipment is said to have assayed 77 oz. silver, 3% lead, 1.6% copper, 1.6% zinc and 19% iron per ton. Is a speculative mining venture, that has promising ground.

In June, 1917, workings were connected with the old Lexington tunnel, giving another opening to the Sells and improving ventilation. In September 7' of silver-lead ore was cut by a raise 125' above this tunnel. Shipments are about 2 cars per week.

An aerial tram 2,000' long, costing \$10,000, to carry 10 tons per hour, was being erected in November, 1917. This will allow of transport during the winter.

SILVER MOON MINING CO.

UTAH

Office: 27 Latimer Block, Salt Lake City, Utah.

Officers: A. L. Headbug, pres.; Wm. Cromie, sec.-treas.

Inc. Jan. 29, 1912. **Cap.**, \$10,000; shares 2c par, assessable. In treasury, May, 1916, 200,000 shares and \$780 in cash; no debts. Listed in Salt Lake City.

Property: 7 unpatented claims in the Big Cottonwood district.

Ore: carries silver, gold, lead. Little development has been done. Four men employed. Property is a prospect.

SOUTH CARDIFF MINING CO.

UTAH

Address: George N. Lawrence, pres.; 420 Boston Bldg., Salt Lake City; W. H. King, v. p.; Allen Sanford, sec.-treas.; and George A. Steiner, directors.

Inc. April 9, 1916, in Utah. **Cap.**, 1,000,000 shares; 450,000 in treasury.

Property: 10 claims, 160 acres in Cottonwood district, adjoining the Cardiff, Howell & Monte Cristo, and the Canton Mining Co. holdings, is supposed to carry extension of Cardiff fissure.

SOUTH HECLA EXTENSION MINING CO.

UTAH

Office: 161 So. Main St., Salt Lake City, Utah.

Officers: the same as South Hecla Mng. Co.

Inc. in Utah. **Cap.**, \$100,000; shares 10c par; assessable; outstanding \$53,879. Listed in Salt Lake City.

Property: 37 acres in the Little Cottonwood district, adjoining South Hecla Mining Co., said to show silver-lead-copper-gold ore. Development is being done through the Quincy tunnel level of the South Hecla mine. Is in the prospect class.

Assets at Jan. 1, 1917, totaled \$101,747, including \$32,085 for property and plant, \$19,422-for development and \$46,122 for treasury stock. Current assets were \$4,118, against current liabilities of \$1,747.

SOUTH HECLA MINING CO.**UTAH**

Office: 161 So. Main St., Salt Lake City, Utah. **Main office:** Alta, Salt Lake City, Utah.

Officers: Geo. H. Watson, pres.-gen. mgr.; Herman Bamberger, v. p.; R. F. Marvin, sec.-treas.; preceding with H. C. Edwards, Thos. Coughlin, V. M. Burman and D. W. Harcrow, directors. Matt Aho, mine superintendent.

Inc. Sept. 14, 1910, in Utah. **Cap.,** \$500,000; shares \$1 par; assessable; issued \$262,920. Company was organized as a merger of the South Columbus Consolidated Mining Co., and Alta-Hecla Mining Co., and holds properties formerly held by the Bingham-Centennial, Alta-Quincy, Columbus Wedge, Ivanhoe and Lilburn mining companies. Company exchanged stock on the basis of 1 share of South Hecla for 5 shares of South Columbus, and 1 share of South Hecla for 5 shares of Alta-Hecla. Shares are listed on the Salt Lake Stock Exchange. Annual meeting, second Wednesday in September.

Assets at end of 1916 totaled \$600,271, including \$208,534 for property, \$237,080 for treasury stock, and \$51,577 discounts.

Gross earnings in 1916 amounted to \$166,916, all from ore sales; operating expenses were \$127,541, leaving a credit balance of \$39,375. Initial dividend, 15 cts. per share, paid Aug. 10, 1916.

Property: 41 claims, partly patented, 550 acres, in the Little Cottonwood district. Claims carry 8 well defined ore bearing fissures in granodiorite and limestone, running N. 70° E., dipping 70° N. and contact deposits between limestone and granite. The 3 orebodies under development, one in the Kate Hayes, the others in the Wedge fissure, are reported by the management to average 20' in width, and to carry malachite, azurite and tetrahedrite in the surface zone, succeeded by chalcopryrite, galena and sphalerite, estimated by the management to average 1% copper, 15% lead, .05 oz. gold and 35 oz. silver per ton. No. 1 shoot of the Kate Hayes is 940' long; No. 2 proven for 300' long.

Development: is by two main working tunnels, the Quincy and Dwyer: the Dwyer 2,000', Alta-Quincy 1,800', South Columbus 1,400', Rustler 1,200', Scott 1,700', Neversweat 150' and the White of 700'. The mine as a whole has about 7 miles of workings, lighted by electricity. Main development during 1915 was on the 250' level of the Wedge vein; 11 incline raises and 14 crosscuts were driven, all in ore.

In 1916, work on the Wedge vein was continued from the 100, 250, and 400' levels. This opened the orebody 300' W. and to a vertical depth of 430' from the surface. Milling ore was opened on other levels, but company wishes to extract smelting ore. Five blocks of ground were leased. Three feet of copper-silver ore was opened in November, 1917.

Equipment: includes a 60-h. p. electric plant, with a 10-h. p. hoist good for 200', and a 2-stage Chicago P. Co. compressor. Buildings include a shop building, housing smithy, machine and carpenter shops, with a 3-story boarding house and 5 dwellings.

Production: company in 1916 shipped 7,962 tons of ore containing 267 oz. gold, 164,619 oz. silver, 1,236,357 lbs. lead, 55,366 lbs. copper, 738,473 lbs. zinc and 782,059 lbs. iron. Lessees marketed 1,097 tons of ore containing 34 oz. gold, 16,493 oz. silver, 218,015 lbs. lead, 5,361 lbs. copper, 157,854 lbs. zinc, and 47,089 lbs. iron. In Sept., 1917, shipments by company were 4 carloads per week, only transportation hindering double this quantity.

Absorption of the Albion property, owning 12 claims at Alta, was reported Aug., 1916. With improved transportation facilities, company should become a dividend payer. Company employs 60 men.

TAR BABY MINING CO.**UTAH**

Office: Sugar House, Salt Lake City, Utah. **Mine office:** Alta, Salt Lake Co., Utah.

Officers: C. R. Greene, pres. and gen. mgr.; J. M. Matsen, v. p.; C. F. Greene, sec.-treas.; R. B. Rankin, and J. W. Brewer, directors; H. D. Greene, supt.

Inc. 1911, in Utah. **Cap.**, 500,000 shares, increased June, 1916, from 400,000; 20c par; outstanding, 483,000 shares. Listed on Salt Lake City Exchange. Fourteen assessments levied to Oct., 1917, three of 1c each, 1917.

Property: 6 claims, in the Alta-Cottonwood district, on the south fork of Big Cottonwood. The purpose of the enterprise is to cut the Cardiff lime-quartzite contact by working through the Victor company's tunnel, whereby an additional depth of 500' will be gained. The ore horizon should be cut late in 1917.

THOR MINING CO.

UTAH

Merged 1916 with Great Western Gold & Copper Co. and Mountain Lake Mining Co., with title of Great Western Mines Co., which see.

TRIANGLE MINING CO.

UTAH

Address: 521 Felt Bldg., Salt Lake City. **Mine address:** Alta, Utah.

Officers: Howard C. Fields, pres.; Wm. C. Stewart, v. p.; Irma R. Fields, sec.-treas.; Howard H. Fields, mgr., with Harry A. Marsh and Wm. C. Lidvall, directors.

Inc. July 15, 1917. **Cap.**, \$25,000; shares \$1 par; 6,201 outstanding. Operated as a close corporation. Annual meeting 1st Saturday in September.

Company operates a lease on part of the property of the Michigan Utah Consolidated Mines Co., Little Cottonwood district, Salt Lake Co., Utah, and mine is described thereunder.

Production: in 1915 was 2,000 tons; in 1916, 5,000 tons, averaging \$25 per ton.

WASATCH MINES CO.

UTAH

Office: 713 Judge Bldg., Salt Lake City, Utah. **Mine office:** T. W. Blake, supt., Alta, Salt Lake Co., Utah.

Officers: A. H. Cowie, pres.; A. C. Ellis, Jr., v. p.; W. O. Williams, sec.-treas.; with H. G. Williams, C. H. Gibbs, W. S. Cooper and B. F. Kay.

Inc. Feb. 8, 1913, as a merger of the Columbus Consolidated Mining Co., Flagstaff Copper Co., and Superior-Alta Mining Co. **Cap.**, \$1,000,000; shares \$1 par; issued 357,971 shares. The consolidation of these properties was effected on the basis of 160,000 shares for Columbus Consolidated Co., 100,000 shares for Flagstaff Co., and 40,000 shares for Superior-Alta. Stock is listed on the Salt Lake Stock Exchange. McCornick & Co., Salt Lake City, registrar. Annual meeting second Thursday in June.

Annual report as of Nov. 1, 1915, showed cash on hand, \$3,643; accounts receivable, \$10,428; current liabilities, \$2,996.

Property: 78 claims, 62 patented, about 900 acres, and mill sites at Tanner's Flat and at the mouth of Little Cottonwood canyon, on the E. flank of the Wasatch mountains.

Geology: Claims show a number of fissure veins cutting limestone, shale and quartzite, also numerous bedded and contact deposits between limestone and quartzite. The bedded deposits contain the principal orebodies. Occasional highly mineralized shoots are found ranging from 30 to 100' in width, several hundred feet long, and carrying up to 11% copper, 18% lead, 15% zinc, 66 oz. silver and \$4 gold per ton, but ore is generally pockety and mainly below payable tenor. Ores are carbonates at and near surface, succeeded by sulphides at depth.

The Flagstaff group carries several ore deposits, one of which is said to range up to 300' in width and to be traceable 2,000'. Developed by the 5,000' Tom Moore tunnel. This tunnel also cuts 6 smaller veins and has a 450' crosscut to the N. E., with about 13,000' of workings. Other workings include the 500' Burgess tunnel, 1,200' Burnswood tunnel, 1,200' Flagstaff tunnel, and

the 700' Flagstaff shaft. The mine was a considerable producer of silver-lead carbonates in early days.

The Columbus Consolidated group shows a vein, known as the Braine fissure, of about 12' average width, opened by 2 tunnels, 1,250' apart, on practically the same level. A strike of rich zinc ore was made on the Relief claim, above the Columbus tunnel in June, 1915; the vein was reported to show 3' of ore assaying from 35 to 40% zinc, 2½ oz. silver and 11% lead.

Development: by 5 shallow shafts and 4 tunnels, including a drainage tunnel, 4,000' down the canyon, planned to unwater the Columbus and adjoining properties, with about 3 miles of workings. The Holland and Columbus tunnels are connected on the Braine fissure, the first-named with electric traction. The output is divided into copper, silver-lead and concentrating ore. The mine is wet and has a 600-gal. pump.

Shipments in 1916 assayed from 34c to 70c gold; 8 to 51 oz. silver; 5 to 6% lead; 5 to 14% copper, 6 to 14% excess iron per ton, yielding from \$20 to \$60 per ton.

A Pelton water wheel works under a head of 494', taking water through a 20" and 22" steel pipe line of 4,500' length, developing 660 h. p., which is transformed into electricity by two 300-kw. dynamos and carried to the mine by a 4½-mile transmission line. At the mine there are four 25-h. p. hoists good for 600' each, 10-drill Nordberg and two 5-drill Ingersoll-Sergeant air compressors, a machine shop and a sawmill.

The 150-ton concentrator is equipped with a Gates gyratory crusher, 2 sets of Rogers rolls, six 3-compartment jigs and 7 Wilfley tables, the mill putting about 4 or 5 tons into 1. A cyanide unit was installed in 1915.

Development work above the tunnel level proved disappointing and the management has concentrated all energy on the deep drainage tunnel to be driven 5,000', about 500' below the present lowest workings and which will make economical and profitable mining at depths possible; also up to 1,500' below other properties in the district. Company drives sufficient funds to cover operating expenses from the sale of electric power and compressed air to most of the mines in the district.

By August, 1917, the tunnel was in 300', in addition to 900' of open cut, making 1,200'. Progress in the limestone was 9' daily with 2 shifts. Most of the drifting was in granite and conglomerate.

WASATCH UTAH MINING CO.

UTAH

Office: Kearns Bldg., Salt Lake City. **Mine office:** R. D. No. 4, Landy, Utah.

Officers: F. L. Palmquist, sec.-treas.; J. L. Kraft, L. Moody, A. W. Manz, J. Hyldahl, E. Tressing, Asa Bacon, J. W. Reihman, directors.

Inc. October, 1902, in Nevada. **Cap.**, \$1,000,000; shares par \$1; assessable; all issued.

Bonds: authorized, \$100,000; issued, \$35,000. Annual meeting, second Monday in June.

Property: 51 claims, 14 patented, known as the Consolidated Jefferson mine, 9 miles from railroad, near mouth of Little Cottonwood canyon; also 40 acres dumping ground. Mine has two systems of veins, a narrow E.-W. fissure in hornblende schist with high-grade gold, silver and copper ore, and a large N.S. quartz fissure about 8' wide containing ore running from \$2 to \$5 gold per ton, which is all milled.

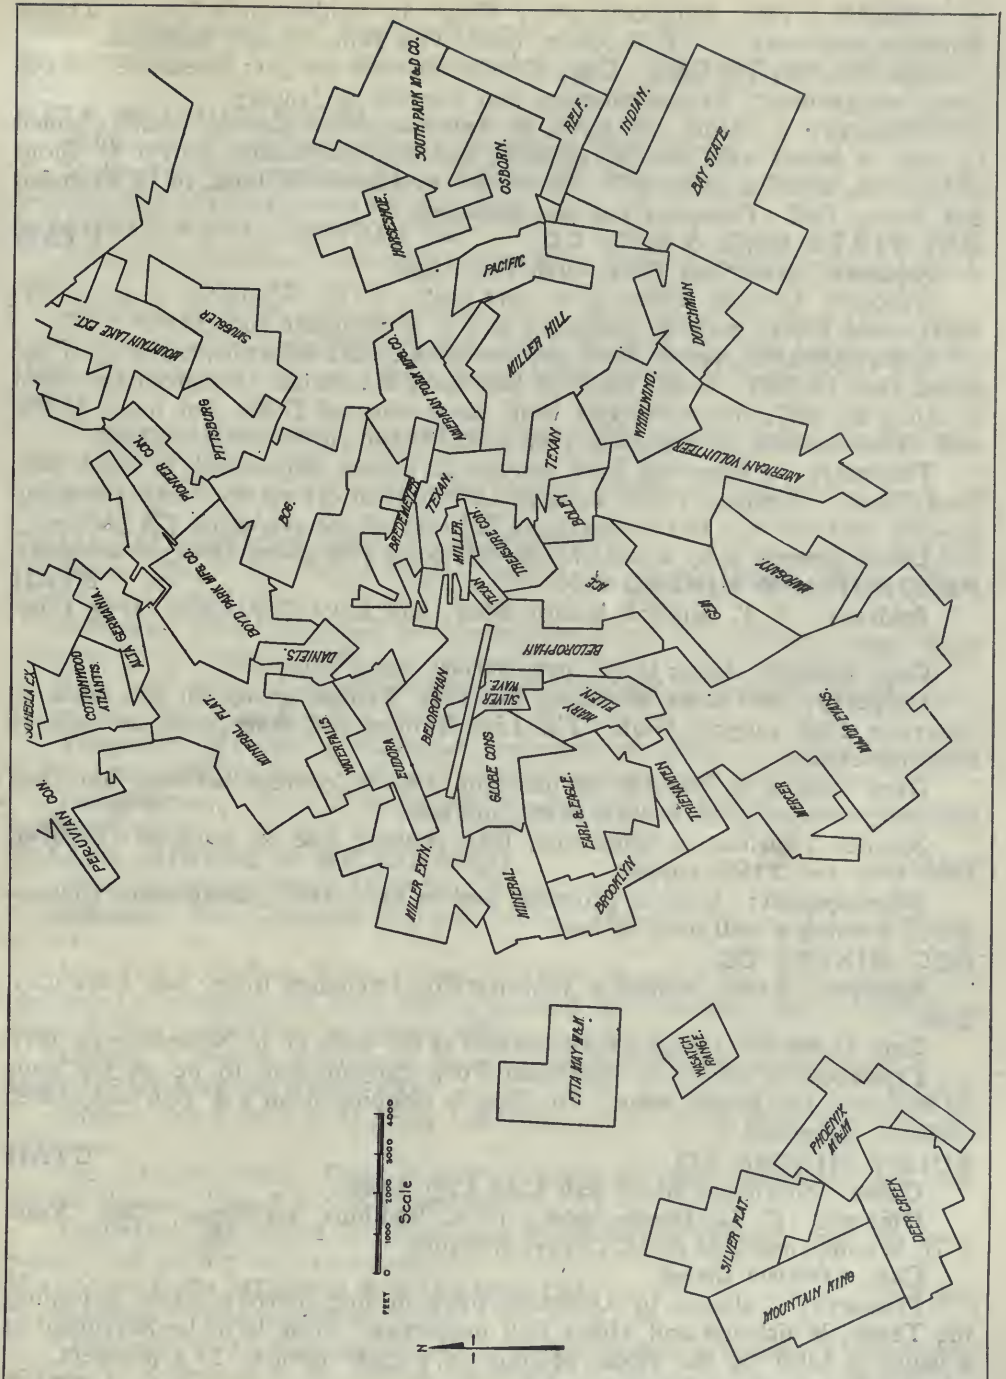

Development: by adit at level of top of mill by glory-hole method through 500' slope.

Equipment: includes compressors, buildings, experimental 5-stamp mill with Wilfley and vanner, large mill with crusher, Chilean mill, plates and Pierce amalgamator. All machinery electrically driven; power furnished by Utah Light & Power Co.

WEST TOLEDO MINES CO.**UTAH****Office:** 1 Mining Exchange Bldg., Salt Lake City.**Mine office:** Alta, Utah.**Officers:** E. W. Hulse, pres.; T. L. Mitchell, v. p.; F. C. Cohen, sec.-treas.; with J. A. Foley and P. M. Magregor, directors. A. O. Jacobson, mgr.**Cap.**, \$500,000; shares 10c par; outstanding 398,000 shares. Listed on the Salt Lake Stock Exchange.**Property:** 11 claims in the Little Cottonwood district, Salt Lake County.**Development:** chiefly by the Superior and Frederick tunnels which are to be extended to cut several known mineralized veins. The Frederick tunnel is over 3,000' long. Grade of ore so far found is reported to be low. Actively developing in Sept., 1917, at several points to open both the E. and W. Cardiff contacts. Property is in a line with Cardiff and South Hecla in both of which the overthrust contacts have proven ore bearing.**WOODLAWN COPPER MINING CO.****UTAH****Office:** 305 Atlas Blk., Salt Lake City, Utah. Mine near Brighton, Salt Lake Co., Utah.**Officers:** H. W. Lawrence, pres.; A. C. Ellis, Jr., v. p.; George N. Lawrence, sec.-treas.; W. J. Lawrence, mgr.**Inc.** 1899, in Utah. **Cap.**, \$70,000; shares 10 cts. par, assessable.**Property:** 7 claims, patented in the Big Cottonwood district, 18 miles from a railroad, having 3 tunnels of 360', 980' and 100', with over 4,000' of workings, showing lead, zinc, silver and copper ore, whose value is mainly in lead.**Development:** work was resumed in 1915, after an idleness of several years, the main tunnel being driven 500' farther. By Aug., 1917, a 165' incline shaft had been sunk and drifting was underway for an ore shoot. On the 100' level this shoot yielded up to 70% lead and 190 oz. silver ore.*AMERICAN FORK DISTRICT***ALBERTA MINING CO.****UTAH****Office:** American Fork, Utah.**Officers:** Ammon Mercer, pres.; S. H. Roundy, v. p.; Jas. L. Mercer, sec., with M. F. Cowley, Nelson McCarty and David Davis, directors.**Inc.** May, 1917, in Utah. **Cap.**, \$30,000; shares 3 cts. par; 500,000 shares held in treasury.**Property:** 15 claims in Silver Lake mining district, said to carry good values in gold, silver, copper, lead and molybdenum. Developed by 135' tunnel. A prospect.**AMERICAN FORK EXPLORATION CO.****UTAH**

Formerly the Wild Dutchman Mining & Milling Co.

Address: American Fork, Utah.**Officers:** W. E. L. Dillaway, mg. dir. and treas.; J. E. Rothwell, W. B. Farmer, J. B. Hubbard and F. J. Justin, directors; Carl B. Ferlin, supt.**Inc.** in Utah. **Cap.**, \$150,000; shares \$1 par; all issued.**Property:** company owns lease on the Dutchman mine and all shares of the Fissures Exploration Co. (which see), and thereby owns by assignment and purchase the lease of the Pacific mine.**Development:** by upper and lower tunnel following the Pacific fissure and cross fissures. Estimated value of ore reserves is \$1,000,000. Ore is high in lead and silver; while copper ore carrying gold is being developed.**Equipment:** in Oct., 1917, a new 200-ton mill, costing \$100,000, started treating dump ore. Houses were erected for staff and employees, also necessary shops, 300-ton concentrate bins, assay-office, etc**Production:** during the season of 1916 crude ore and concentrate were

shipped worth \$60,000. The concentrates came from the old Fissures Exploration mill, which was demolished and in its place a flotation plant may be erected.

ARGONAUT MINING & SMELTING CO.

UTAH

Address: 310 Kearns Bldg., Salt Lake City, Utah.

Officers: Wm. Chipman, pres.; Hugo B. Anderson, v. p.; J. Tracey Wootton, sec.-treas.; J. H. Wootton, mgr., with John Hower, directors.

Inc. Feb., 1917, in Utah. **Cap.**, \$50,000; shares 5 cts. par; assessable; 515,000 shares outstanding. Annual meeting, 2nd Tuesday in January.

Property: 7 claims, 140 acres, in American Fork canyon, Utah, claimed to carry a fissure vein of lead sulphide and iron carbonate, with a 4" shoot of lead ore, assaying about \$25. Developed by tunnel, 90' long, to be extended 200' during 1917. Company has no equipment.

BAY STATE MNG. & DEV. CO.

UTAH

Address: American Fork, Utah Co., Utah.

Officers: Geo. B. Tyler, pres. and mgr.; J. H. Wootton, v. p.; J. W. Storrs, sec.-treas., with A. Chipman and E. J. Bennett, directors.

Cap., \$1,000,000; shares 5 cts. par; assessable; last assessment, No. 5, of $\frac{1}{2}$ c called June 14, 1917. Stock listed on Salt Lake Exchange. Financial statement to April 20, 1917, shows receipts from stock sales of \$7,990 and loans \$1,000, with disbursements for preceding year of \$9,160 and current bills of \$1,333.

Property: at American Fork canyon, 22 claims, unpatented, 18 miles from the railroad. Company claims to have 1,000 tons of ore on the dump averaging 5 to 8% lead and 8 to 10 oz. silver, and 210 tons of ore averaging \$75 per ton.

Development: is by a tunnel over 320' long with about 1,065' of workings.

BELOROPHON MINING CO.

UTAH

Address: A. T. Sanford, Boston Bldg., Salt Lake City, Utah. John Cleg-horn, mgr.

Cap., \$100,000; shares 10 cts. par; 960,000 shares issued.

Property: 250 acres adjoining the Live Yankee group on the north in American Fork canyon, Utah. The Live Yankee and other veins are said to cross the claims.

Ore: occurs in fissures in quartzite and in contact between lime and quartzite, carrying gold, copper, silver, and lead.

Shipped 1 carload in September, 1914, running 1.38 oz. gold, 10 oz. silver, 5.8% lead, and 3.45% copper.

Development: work in progress, and in Oct., 1917, management contemplated erecting a mill next spring.

BOG MINING CO.

Address: Evans, Morris & Whitney Co., Exchange Bldg., Salt Lake City, Utah.

Cap., \$1,000,000; shares 100,000, offered at 15c each, up to November 24, 1917.

Property: 12 claims in American Fork canyon, said to be on the same formation as the Pacific mine. The Bog is shipping from a 3' vein and a deep tunnel is proposed.

BOLEY MINING CO.

UTAH

Office: Newhouse Bldg., Salt Lake City, Utah.

Officers: E. G. Jensen, pres.; J. A. Stallings, sec.-treas.; Chas. Read, J. H. Woodmansee and A. M. Cheny, directors.

Cap., 1,000,000 shares.

Property: 7 claims, in American Fork mining district, Utah, adjoining the Texan, Whirlwind and Miller Hill properties. Mine is to be developed at a depth of 1,000' by the Texan Mining Co.'s 1,300' tunnel. Is a prospect.

EARL & EAGLE MINING CO.

UTAH

Address: C. W. Earl, pres.-gen. mgr., George E. Hemphill, supt., American Fork, Utah Co., Utah. W. E. Evans, sec., Lehi, Utah.

Cap., \$10,000; shares 1c par; \$5,600 issued. Listed in Salt Lake City.

Property: 10 claims, about 200 acres, is a consolidation of the Clipper & Silver King and Steel groups, located in American Fork district, about 25 miles southeast of Salt Lake City.

Claims are reported to be traversed by several ore bearing fissures and dikes. Tunnel was 1,100' long, September, 1917, and is being driven to reach the fissure or Live Yankee vein, expected at 1,200'. Property is in the prospect class.

ETTA MAY MINING CO.**UTAH**

Address: Frank Jardine, mgr., American Fork, Utah.

Property: in American Fork district. In Aug., 1917, a tunnel was in 80', showing lead-silver ore, with some copper.

FISSURES EXPLORATION CO.**UTAH**

Entire stock issue owned by American Fork Exploration Co., which sec.

Address: C. B. Ferlin, supt., McCornick Blk., Salt Lake City, Utah. Has a 10 years' lease on property of Pacific Gold M. & M. Co., at American Fork, Utah, Co., Utah, which sec. Also leases other groups at head of Mary Ellen gulch.

Company is shipping copper-silver ore, eight teams being steadily employed, July to Oct., 1917.

Employs 35 men at Pacific mine where a 200-ton mill started work in Oct., 1917.

GOLD HILL MINES DEVELOPMENT CO.**UTAH**

Main office: 425 Atlas Block, Salt Lake City, Utah. **Mine office:** American Fork, Utah.

Officers: Theo. Nicholes, pres. and gen. mgr.; A. J. Weber, v. p.; H. J. Fitzgerald, sec.-treas.

Inc. July, 1916. **Cap.**, \$1,000,000; par \$1; 300,000 in treasury; 290,000 sold. Increased 1916 from \$50,000; 10c par.

Property: 9 claims in American Fork district, Utah Co., Utah, on Miller Hill. Ledge said to show copper ore, with lead and gold-silver values.

Development: by 3 short tunnels, lowest being driven to open-ore found in upper tunnel.

JULIAN MINING & MILLING CO.**UTAH**

Idle. American Fork, Utah Co., Utah.

Officers: Jas. Chipman, Jr., pres.; Wm. Thornton, v. p.; J. E. Bennett, sec.-treas.

Inc. Aug., 1909, in Utah. **Cap.**, \$50,000; shares 5 cts. par. Apparently succeeded a company of same title organized in Nebraska, with an office at Geneva, Neb., which lost its charter 1909.

Lands: 5 claims, unpatented, showing gold, silver and copper ore.

MAJOR EVANS MINING CO.**UTAH**

Office: 440 Boston Bldg., Salt Lake City, Utah. C. B. Felt, pres.; R. Leo Bird, sec.

Inc. 1915, in Utah. **Cap.**, \$100,000; shares 10c par; assessable; treasury, 440,000 shares. Listed in Salt Lake City.

Property: 42 claims in American Fork mining district, said to show copper-lead-silver ore. Is a prospect.

MARY ELLEN MINING & MILLING CO.**UTAH**

Address: American Fork, Utah.

Officers: W. C. Boley, pres.; T. S. Priday, v. p.; J. W. Storrs, sec.-treas.; with R. C. Boley and T. M. Allman, directors.

Inc. 1909, in Utah. **Cap.**, \$100,000; shares 10c par; assessable; 650,000 issued.

Property: 7 claims, 125 acres, in American Fork district, Utah, said to show a vein in quartzite and limestone.

Ore: is partly sulphide, and contains lead, silver, and gold values.

Development: by tunnels totaling 700'. Idle for 3 years, but work resumed in 1917.

MILLER HILL MINING CO.**UTAH**

Office: Knight Block, care Knight Bros., Provo, Utah. **Mine office:** American Fork, Utah Co., Utah.

Officers: Jesse Knight, pres.; J. Wm. Knight, v. p.; W. Lester Mangum, sec.-treas.

Cap., \$100,000; shares 10c par. Shares are listed on the Salt Lake Stock Exchange. In Sept., 1917, 25,000 shares of stock were offered for sale at 50c a share.

Property: 33 claims, 30 patented, adjoining the Mineral Flat mine, are developed by 2,200' tunnel with about 2,400' of workings. Drift, 30' long, will be extended 500' to cut the Pacific fissures and work is provided for by assessments, 2c per share being called Nov. 12, 1917. Employs 15 men. Company purchased the adjoining Mountindell property in 1916.

MILLER MINES DEVELOPMENT CO.**UTAH**

Office: 804 Newhouse Bldg., Salt Lake City, Utah.

Officers: J. H. Leavell, pres.; G. H. Ryan, v. p.; H. W. Ragland, sec.-treas.; with M. P. Kirk, and L. D. Foreman, directors. J. C. Fitzgerald, supt.

Inc. in Utah. Cap., \$1,000,000; shares 10c par; 543,500 issued; non-assessable.

Property: 11 claims, 10 patented, 70 acres, at Miller Hill, in American Fork district, Utah Co., Utah. Miller mine operated under 5 years' lease and bond.

Geology: replacement deposit in upper Cambrian limestone. Orebody said to be 600' long and of good width. Ore carries lead and zinc carbonates, and is reported to assay 0.73 oz. gold, 20.7 oz. silver, 43.95% lead, 17.2% iron, and 6.1% zinc.

Development: by tunnels 300 to 1,200' long to depth of 400' with total underground workings of about 15,000'. In 1918 company expects to prospect veins in quartzite.

MILLER MINING & SMELTING CO.**UTAH**

Office: 406 Dooley Block, Salt Lake City, Utah. W. A. Wilson, gen. mgr.

Property: 10 claims, patented, 56 acres, in American Fork canyon.

Ore: carries gold, silver, and lead. Management reports production of \$1,600,000 to end of 1912. Development resumed June, 1917, and mine under lease and bond.

MINERAL FLAT MINING CO.**UTAH**

Office: Provo, Utah. **Mine office:** American Fork, Utah Co., Utah. Jesse Knight, pres.; J. C. Jensen, mgr.

Inc. in Utah. Cap., \$100,000; shares 10 cts. par; assessable. Shares listed on Salt Lake Stock Exchange.

Property: 22 claims, partly patented, 25 miles from a railway, carries lead and copper ores. Developed by shaft and tunnels of about 2,000' aggregate length, upper levels showing occasional bunches of good ore, but without continuity of payable mineral. Extension of main tunnel underway, 1917.

Equipment: includes a hydro-electric plant, with a 9,000' pipe line and several buildings.

MONARCH MINES CO.**UTAH**

Title changed from Plentiful M. & M. Co., 1916.

Address: American Fork, Utah.

Officers: Chas. O'Hran, pres.; F. W. Wright, v. p.; with W. A. McBride, E. J. Seastrand, and J. A. Kauffman, directors. J. Watt Storrs, sec.-treas.

Inc. June, 1915, in Utah. Cap., \$30,000, increased March, 1916, to \$40,000; shares 5c par; 600,000 issued.

Property: 9 claims, 186 acres, near American Fork, Tooele Co., in Lake-side mountains, shows galena and carbonate ore in fissure vein cutting blue and

gray limestone, with N.-S. strike and dip of 70° W. Pay ore reported to have been cut in 1916, at 140' depth in a 40' vein of lead carbonates. A 2½' streak is said to assay 78% lead and 10 oz. silver.

Development: by 3 incline shafts, deepest 193'.

Ore reserves: 100,000 tons estimated as blocked out.

Equipment: includes 2 motor trucks.

OLD EMMA LEASING CO.

UTAH

Office: 40 Exchange Place, New York City.

Dissolved April, 1917. Assets consisting of 416,667 shares of Emma Cons. Mines Co. stock being distributed to stockholders at ratio of 3 shares of O. E. L. for 1 share of Emma Cons.

OLD EMMA MINES CO.

UTAH

Emma Consolidated Mining Co. owns 80% of the outstanding capitalization.

Property was leased for 14 months from July, 1916, to Old Emma Leasing Co., which was dissolved in April, 1917. Lease sold to Emma Cons. Mining Co., which see.

OSBORN CONSOLIDATED MINING & MILLING CO.

UTAH

Address: American Fork, Utah.

Officers: at last accounts, S. Osborn, pres. and gen. mgr.; W. D. Lovelless, v. p.; Alfred J. Osborn, sec.-treas.

Inc. July 17, 1907, in Utah. **Cap.**, \$125,000; shares 25 cts. par.

Property: 9 claims, in American Fork canyon, about 4 miles from Park City, shows veins of 5 to 8' width, carrying lead values near surface, developed by a number of shallow shafts and shaft tunnels. The 200' main shaft is sunk at an incline of 42°. Copper ores occur in depth in many of the adjacent mines and are expected here. Development meagre. Presumably idle.

PACIFIC GOLD MINING & MILLING CO.

UTAH

Office: American Fork, Utah.

Officers: J. L. Craig, pres.; Jas Chipman, Jr., v. p.-treas.; H. C. Johnson, sec.-mgr.; with A. B. Stevenson, A. K. Thornton, directors.

Inc. 1900, in Utah. **Cap.**, \$100,000; shares 10 cts par; assessable; 400,000 shares outstanding. Annual meeting, 1st Monday in Feb. Financial statement for year ending Feb. 3, 1917, showed balance in bank, \$7.26, after payment of dividends No. 1 and No. 2, amounting to \$8,000.

Property: Blue Rock group, 6 patented claims, 120 acres, in American Fork mining district, Utah Co., Utah, shows quartzite and limestone, carrying several fissure veins varying in width from 17" to 15'. Veins strike N. 30° E. and dip 50° N. W.

Ore: lead-silver sulphide, estimated by management to average 50% lead, 25 oz. silver, .02 oz. gold, 1.5% zinc, 15% iron, 0.1% copper, 22% sulphur.

Development: by 3 tunnels, 300', 700' and 1,000' long, with about 5,000' of workings, estimated to show 100,000 tons of ore blocked out for stopping, Dec., 1915. The main fissure was cut at depth of 500'. A drift was run on the vein 75' S. and another 500' N.; at the end of the latter a crosscut made to the hanging-wall was reported, Feb., 1917, to have disclosed 26' of ore, averaging \$55 per ton in copper, silver and gold. Carload shipments in 1916 amounted to 978 tons, netting \$49,999, the Pacific Co. receiving \$8,637 in royalties. Total production to date about \$32,000. Property operated under a 5-year lease, from 1914, by the Fissures Exploration Co., controlled through stock ownership by American Fork Exploration Co., on a royalty basis.

Equipment: includes a hydro-electric-generating plant, installed in Dec., 1916, at a cost of \$20,000. The mill treats about 70 tons per day, concen-

trates netting \$37 per ton. A 200-ton mill constructed during 1917, was started in October by the American Fork Exploration Co., which see.

PATHE MINING CO.**UTAH**

Address: American Fork, Utah.

Officers: John E. Berg, pres.; L. A. Anderson, v. p.; Boise A. Wells, 2nd v. p.; S. L. Anderson, sec.; S. T. Shelley, treas., with W. F. Anderson and Abner Chipman, directors.

Inc. March, 1917, in Utah. **Cap.**, \$10,000; shares 1c par.

Property: the Silver King Nos. 1 and 6 claims in American Fork district.

PITTSBURGH CONSOLIDATED MINING & MILLING CO. **UTAH**

Address: American Fork, Utah Co., Utah.

Officers: Mrs. E. Tarbet, pres.-mgr.; H. H. Green, v. p.; J. G. Doolittle, sec.-treas.; with B. Snyder and P. S. Keoch, directors; J. Benton Leggatt, cons. engr.

Inc. 1903. **Cap.**, \$500,000; shares \$1 par; 300,000 shares issued.

Property: 9 claims, 6 patented in both Salt Lake and Utah counties, mainly on the American Fork side of the divide.

Ore: occurs in fissure veins.

Development: by 3 tunnels from American Fork canyon, is on the Pittsburgh fissure. A 500' upper tunnel is credited with a production of 11,000 tons under former management. The tunnels are in 500' and are connected by winzes and raises. Operations were resumed in 1914 after an examination of the property by J. Benton Leggatt. In No. 2 tunnel a 12' orebody of solid lead-zinc sulphide is said to have been exposed, assaying 25% lead, 34% zinc, 40c gold, 5 oz. silver, 26% sulphur and 5% iron per ton.

In 1915 the 3 tunnels were connected and drifts run along the several fissures. A fourth tunnel, started to top the Pittsburgh fissure 150' lower than No. 3, will be driven 1,200' and is to serve as a means of transportation. A wagon road was built to Alta in 1916.

Equipment: includes necessary mine buildings and dwellings.

SILVER FLAT MINING CO.**UTAH**

Property: the old Nebraska mine in Delta Creek, Silver Lake section, American Fork, Utah, shows silver-lead ore in fissures in limestone cut by porphyry dikes.

Ore: is high in zinc.

Development: by 1,200' of tunnels. Work resumed, June, 1916.

SILVER SIDE MINING CO.**UTAH**

Address: American Fork, Utah.

Officers: J. E. Beveridge, pres.; A. O. Jacobson, v. p.; W. Holmes, sec.-treas.; with H. P. Huey and M. M. Beaver, directors.

Inc. 1916, in Utah. **Cap.**, \$50,000; shares 5c par.

Property: is 5 miles up American Fork canyon, Utah, and is said to show silver-lead ore in a lime-quartzite contact.

Development: by tunnels and shallow shaft.

SOUTH PARK MINING & DEVELOPMENT CO.**UTAH**

Office: 310 Kearns Bldg., Salt Lake City. O. A. Relf, pres.; J. Tracy Wootton, sec.-treas.

Inc. May 24, 1916. **Cap.**, \$50,000; shares 5c par; assessable; \$3,000 issued. Listed in Salt Lake City.

Property: 17 claims, 14 patented, in American Fork mining district, said to show iron carbonate containing silver-lead values.

Development: in 1917, two tunnels were being extended to cut the vein. In October, the 250' tunnel cut ore assaying 2.99% copper, 57.8% lead, 303 oz. silver, and \$2.40 gold per ton.

TEXAN MINING CO.**UTAH****Office:** 400 W. 7th South St., Salt Lake City, Utah.**Officers:** Chas. Tyng, pres.; Frank Nelson, sec.**Inc.** in Utah. **Cap.**, \$1,000,000; shares \$1 par; outstanding, \$825,000. Listed in Salt Lake City.**Property:** 200 acres in American Fork district, said to show silver-lead-copper-gold ore. A tunnel was driven over 1,000' in the Texan mine, while the Miller Hill tunnel is in 2,100'; both tunnels are in quartzite. No commercial orebodies have been found yet.**UTAH CENTENNIAL MINING CO.****UTAH****Address:** Pleasant Grove, Utah.**Officers:** J. E. Thorne, pres.; L. L. Nelson, v. p.; D. Noble, sec. and treas.; J. W. Thorne, J. E. Thorne, C. Thorne and L. L. Nelson, directors.**Inc.** 1907. **Cap.**, \$1,000,000; shares 5c par; outstanding, 250,000 shares; assessable. Annual meeting in April.**Property:** 10 claims in American Fork Canyon, American Fork district, Utah Co. Fissure vein carries gold, silver, lead, copper ore. Developed by a 450' tunnel. Property is a prospect undergoing development.**WHIRLWIND CONSOLIDATED MINING CO****UTAH****Office:** 400 W. 7th St., Salt Lake City, Utah; Harry Kreuse, supt, American Fork, Utah.**Officers:** Chas. Tyng, pres.-mgr.; Frank K. Nelson, sec.**Inc.** April 24, 1916, in Utah. **Cap.**, \$250,000; shares 25c par; 800,000 shares issued. Listed on Salt Lake Exchange. Cash on hand, \$6,250.**Property:** 7 claims, unpatented, 110 acres, in the American Fork mining district, adjoining the Miller Hill on the West, 20 miles from a railroad, said to show silver-lead ore.**Development:** by 2 tunnels; one started June, 1916, was 1,000' long in Oct., 1917, and was reported to have cut some lead carbonate ore at 760' in.

Installation of machinery and power was planned for 1916-17. Stock offered by W. H. Childs & Co., for 7c a share in May, 1916.

WIG MOUNTAIN MINING & MILLING CO.**UTAH****Officers:** George A. Storrs, pres., American Fork, Utah; George A. Brown, v. p.; J. W. Storrs, sec.-treas., John Curzon, and Jos. Thurgood, directors; F. Jardine, supt.**Inc.** May, 1916. **Cap.**, \$1,000,000; shares 1c par.**Property:** the Jumbo group, 7 claims, on Wig mountain. Is a prospect which was being developed in Aug., 1917. Ore contains lead and silver.*BINGHAM DISTRICT (see p. 1354)**MILFORD, OR STAR DISTRICT***BEAVER COPPER CO.****UTAH****Office:** 222 D. F. Walker, Bldg., Salt Lake City, Utah. Mine at Milford, Beaver Co., Utah.**Officers:** A. D. Moffat, pres.; A. J. McMullen, v. p. and gen. mgr.; F. S. Walden, sec.-treas.; preceding officers, A. D. McMullen, Lewis Merriman, Chas. A. Weaver and Jas. H. Paterson, directors; D. P. Rohlfing, cons. engr.**Inc.** 1907, in Utah. **Cap.**, \$1,000,000; shares 10c par; assessable; all issued; 4 assessments levied to date. Annual meeting, third Monday in March. Listed on Salt Lake exchange.**Property:** 4 claims, 75 acres, in the Beaver Lake district, carrying an ore zone for about 6,000', with 2 veins, known as North and South, that are fissures in monzonite. Six veins about 4' wide, developed by 4 pits and a shaft, with 308' of workings, show oxidized and sulphide ores, the latter chalcopyrite, estimated by management to average 2% copper, 6 oz. silver and 80c gold per ton. Company has raised sufficient funds to install complete equipment

and had sunk shaft to 200' level, Feb., 1917. Shipped 35 tons of ore carrying 3 to 4% copper early in 1917.

CAPITOL MINING CO.

UTAH

Address: Charles Smith, supt., Milford, Utah.

Property: 2 claims, 3½ miles S. W. of Milford, Utah. Being developed by shaft, and machinery to be erected in Nov., 1917.

Ore: carrying silver, lead and gold occurs in limestone and porphyry.

COPPER RANCH CONS. MINING CO.

UTAH

Office: 130 South, on West Temple St., Salt Lake City, Utah.

Officers: D. L. Evans, pres., Malad, Ida.; Jos. Pingree, sec.-treas., Salt Lake City; A. F. McCulley, v. p.; D. E. Kirk and E. V. Kessler, all of Malad, directors.

Inc. Sept., 1917, in Utah.

Property: the Copper Ranch mine, 10 claims, located next to Milford Copper Co. ground, 7½ miles west of Milford. Mine operated during 1916-17 by lessees who produced 100 cars of ore netting \$32,368 smelter returns. Orebodies in sight reported sufficient for regular shipments for several years. High-grade ore cut in Sept., 1917. Shipments, 1917, one hundred cars ore netting \$32,368.

Development: by 300' incline shaft with drifts and crosscuts on ore.

New company will furnish new equipment for mine, sink shaft and build a one-mile spur to connect with Frisco branch of Salt Lake Route.

COPPER RANCH MINING CO.

UTAH

Mine near Milford, Beaver Co., Utah.

Officers: Moses Thatcher, former pres.; C. L. Rood, v. p.

Inc. in Utah. **Cap.**, \$500,000; shares 50c par.

Property: sold Aug., 1917, for \$57,000 to D. L. Evans, of Malad City, Jos. Pingree and A. S. McCully, of Milford, Utah. This amounts to 13½ a share of Copper Ranch stock. (See Copper Ranch Consolidated.)

CREOLE COPPER MINES CO.

UTAH

Inc. 1917. **Cap.**, \$250,000; shares 25c par. H. S. Wooley, sec. (See Creole Mining Co.)

CREOLE MINING CO.

UTAH

Mortgage reported foreclosed in March, 1917. Said to be controlled by Creole Copper Mines Co. Ore shipments made up to Dec., 1916, and financial trouble arose.

Property: 10 claims, 6 patented, 75 acres in Lincoln mining district, Beaver Co., Utah, shows gold, silver, copper, lead ore in a contact deposit between granite and limestone. Deposit has an E. W. course and dips E. 38°. Average assays said to be 12% copper, 5% lead, 17 oz. silver and \$1 to \$5 gold per ton.

Development: 220' incline shaft and 200' tunnel, with total underground workings about 1,500'.

Considered of doubtful future value.

CROFF MINING CO.

UTAH

Officers: R. R. Tanner, supt., Beaver, Utah; G. P. Norton, sec.

Cap., \$1,000,000; shares \$1 par; 295,000 shares and \$7,354 in treasury, Jan., 1916. Listed in Salt Lake City.

Property: 5 patented claims, in Lincoln mining district, 12 miles east of Milford, Beaver Co., Utah. Ore is found along the contact of lime shale hanging-wall and limestone foot-wall and varies in width from 6" to 3'. It is said to carry silver, lead, copper and gold.

Development: by 240' incline shaft, still sinking; also 665' of tunnels and drifts. Have proven ore shoot on 150' level.

Three carloads of ore shipped, 1917, assayed 13% lead, 6 oz. silver and \$2.80 gold per ton.

Equipment: includes a gasoline hoist and air-compressor.

GOLD CROWN MINING & MILLING CO.

UTAH

Address: Milford, Beaver Co., Utah.

Officers: A. L. Cullimore, pres.; C. G. Johnson, v. p.; S. L. Swanson, sec.-treas.; James Kirk, mgr.; W. E. Yardley, asst. mgr.

Cap., \$10,000; shares \$1 par.

Property: 7 claims and lease on another in Star district, Beaver Co., Utah. Some rich lead-silver ore opened.

GRANITE COPPER CO.

UTAH

Beaver, Beaver Co., Utah.

Officers: A. L. Fotheringham, pres. and mgr.; Jos. McEwen, v. p.; J. F. Tolton, sec.-treas.

Cap., \$1,000,000; shares \$1 par.

Property: in the Mineral range between Milford and Beaver, Utah, has a 2' vein, carrying high-grade silver-lead ore with some copper.

Opened by a 250' shaft and 1,100' tunnel. About \$25,000 has been spent on mine, known as the King of the Hills. Under bond and lease, 1917-18.

KING OF THE HILLS MINE

UTAH

Address: Milford, Beaver Co., Utah. Mine in Granite district, 25 miles N. E. of Milford, reported to have 14 to 18' contact metamorphic vein of copper-lead ore in limestone, cut by porphyry.

Development: by tunnels. Equipped with concentrating mill, making a product carrying 10% copper, 42% lead and 10 oz. silver. Developing at last accounts.

LEONORA MINING & MILLING CO.

UTAH

Office: 18-20 E. 1st South St., Salt Lake City, Utah. **Mine office:** Milford, Beaver Co., Utah.

Officers: John Matson, pres. and mgr.; J. W. Chase, v. p.; C. D. Brown, sec.-treas.; preceding, with L. H. Stohr and N. P. Hansen, directors; A. C. Nebeker, mine supt.

Inc. Dec. 19, 1903, in Utah. **Cap.,** \$100,000; shares 10c par; assessable; issued, 950,000 shares.

Property: 13 claims, in the North Star district near Milford, shows fissures in limestone carrying replacement deposits of gold, silver, zinc and lead ores.

Development: by tunnels of 900', 500' and 300' and 7 shallow shafts of 25' to 100' depth.

Company did 1,500' of development work in 1916 and has cut some promising looking veins. Expects to be shipping soon.

Equipment: includes electric hoist and air compressor.

MAJESTIC COPPER MINING & SMELTING CO.

UTAH

Office: 53 State St., Boston, Mass. John M. Dick, president. To all practical intents and purposes this company was succeeded, 1904, by Majestic Copper Co., which was succeeded, 1908, by Majestic Mines Co. Majestic Copper M. & S. Co., however, remains in existence, though practically the entire stock issue, and a large majority of the bonds, are owned by the Majestic Mines Co. Very fully described in Vol. IV, of the Copper Handbook.

MAJESTIC MINES CO.

UTAH

Office: 342 Exchange Bldg., Boston, Mass. **Mine office:** Milford, Beaver Co., Utah.

Officers: John M. Dick, pres.; H. M. Inman, v. p.; D. J. Flanders, sec.-treas.; J. A. Bailey, G. F. Kellogg, John Muller, R. H. Phillip, E. M. Southworth and John Freeland, directors; Alex. D. Moffat, mine mgr.

Inc. May 18, 1908, in Maine, practically as successor of Majestic Copper Co. and Majestic Copper Mining & Smelting Co. **Cap.,** \$5,000,000; shares \$5 par; assessable; issued, 808,795 shares.

Stocks of both companies were exchanged share for share for stock of the Majestic Mines Co. on payment of 15c a share; bonds of the Majestic Copper Mining & Smelting Co. were exchanged for stock of the Majestic Mines Co., giving 900 shares of new stock for each \$1,000 bond.

The result of the reorganization has been as follows: all floating indebtedness of the operating company has been liquidated; \$868,500 of the \$1,000,000 outstanding bonds have been purchased and are now owned by the Majestic Mines Co.—practically 87%—which gives the Majestic Mines Co. control of the situation. Assessments of present company have been as follows: 15c in 1908; 5c in June, 1910; 10c in April, 1911. Shares listed on Salt Lake Stock Exchange, Boston and New York Curbs. Federal Trust Co., transfer agent; State Street Trust Co., registrar, Boston, Mass. Annual meeting, third Tuesday in March.

Property: 120 claims, 2,450 acres, in 8 groups, also an 80-acre smelter site, and 800 acres miscellaneous lands. The groups, located in 5 different districts of Beaver county are the O. K., Old Hickory, Harrington-Hickory, Vicksburg, Hoosier Boy, Southern States, Larkspur, Copperfield and Treasurer, said to have about 100 orebodies, carrying copper, gold, silver, platinum, lead, cobalt, bismuth, vanadium and uranium. The company has plated the town site of Lewisville, where the smelter was located, and the property is served by the Salt Lake Route.

Development: claims are under active development, 1917; there are 18 shafts, 100 to 600' deep, with a total of 6 miles of underground workings. The Old Hickory and O. K. mines yield copper ores, the others silver-lead ores.

The principal work of the present company is on the Old Hickory group of 9 claims, from which shipments are being made at the rate of about 33 tons ore daily. Smelter returns on this ore are given as 3.46% copper, 1.7 oz. silver and 39.7% iron.

The **O. K. mine**, 7 claims, formerly the principal producer, has a 500' three-compartment shaft, with a vein up to 20' in width, development being mainly on the 300' and 400' levels. This mine has over 500,000 tons of low-grade ore blocked out, in what apparently is a stockwerk, up to 250' in width, carrying stringers of high-grade ore. The O. K. mine, idle in 1915, is producing 8% copper ore, 1917.

The **Harrington-Hickory** group of 27 claims, partly fractional, shows numerous fissure veins, intersected by cross veins, both approximately vertical, and, in addition, has a series of bedded veins, presumably following bedding planes, dipping at 30° to 35°, giving 3 separate intersecting systems of orebodies. Development is by a 600' two-compartment vertical main working shaft, with drifts on the 500' level, where there is a body of high-grade ore, assays from which have given 1% copper, 37 to 55% lead, 18 to 22 oz. silver, and about \$1 gold per ton.

The **Vicksburg** group of 4 claims, a lead-silver mine, formerly worked for gold, has 3 practically vertical fissures, of 2 to 20' width, with mineralized cross-fissures, developed by a 200' 2-compartment working shaft, a 150' incline shaft and numerous shallow shafts and pits. It is said that high-grade ore has been encountered at a depth of 150' in this mine. Worked by lessee and 20% royalty paid to company on gross proceeds.

The **Hoosier Boy**, a silver-lead mine, about 3 miles from the Horn Silver mine, is now under development.

Producing about 600 tons per month, 1917. An 800' shaft has been sunk and considerable work done at 200', 400', 600' and 800' depth.

Equipment: includes 6 gasoline and 1 steam hoist. Electric power, for lighting and pumping, is taken from the Beaver River Power Co.

Production: in 1916 was about 6,500 tons of ore, yielding 350,065 lbs. copper, 294,678 lbs. lead, 257,476 lbs. zinc, and 18,680 oz. silver.

Mines closed down from Aug., 1914, to May, 1915, but operations now being pushed rapidly. Producing about 600 tons per month, 1917.

MASTER KEY MINING CO.

UTAH

Address: 1014 Boston Bldg., Salt Lake City, Utah.

Officers: A. G. Gutheil, pres.; C. W. Reese, v. p.; G. M. Sullivan, sec.-treas.; with A. J. Mooney and Henry Barney, directors.

Inc. Feb., 1915, in Utah. **Cap.**, 1,000,000 shares of no par value; assessable; 500,000 held by Trustee.

Property: 7 claims, 5 being patented, 123 acres, 8 miles, W. of Milford, Star district, Beaver Co., Utah.

Geology: ore occurs in bedding planes and fissures in limestone dipping N. E., the Mowitza shale-contact carrying the large orebodies, which extend along the bedding into the Red Warrior limestone. Company expected to cut ore horizon at depth of 250'. Hoosier Boy fissure intersects it. Is a prospect.

MILFORD COPPER CO. OF UTAH

UTAH

Office: Newhouse Bldg., Salt Lake City, Utah. **Mine office:** Milford, Utah.

Officers: F. E. Turner, pres.; C. W. Saacke, v. p.; H. A. Frank, sec.; F. B. Cook, treas.; with Alfred Frank, mgr.; J. W. Caswell, supt.; and H. C. Todd, directors.

Inc. Feb. 3, 1917, in Utah. **Cap.**, \$500,000; shares \$1 par; all issued; non-assessable. Transfer office, 61 Broadway, New York. U. S. Corporation Co., New York, registrar. Annual meeting, January 15. Earnings at rate of \$100,000 per year.

Property: 18 patented claims, 300 acres, at Milford, Beaver Co., Utah, known as the Montreal mine, being one of the properties developed extensively by the Glasgow & Western Exploration Co., in liquidation. In Feb., 1916, mine was leased by Alfred Frank and others, who eventually organized the Milford company.

Geology: contact deposit in limestone and quartz-monzonite. Orebody 10 to 50' wide, dips 45°, and has an irregular course. Ore is partly sulphide and averages 2.5% copper, 0.75 oz. silver, 0.01 oz. gold, 15% silica and 37% iron.

Development: by tunnels and shafts to 400' depth, workings amount to 3,000'. Ore reserves estimated at 30,000 tons.

Equipment: 8x10" air-hoist and 10-drill Sullivan compressor. Railroad spur to be constructed to mine, to save \$1,000 per month.

Production: ships 100 tons daily to Garfield smelter, Utah, which desires the high iron-content of the ore. Output is to be doubled by end of 1917.

MONZONITE SILVER & COPPER CO.

UTAH

Officers: S. S. Pond, pres. and gen. mgr.; D. Rigby, sec.; Geo. Baglin, treas.

Cap., \$50,000; shares 5c par; assessable. In treasury, Jan., 1916, 400,000 shares; bills receivable and cash, \$2,500. Stock listed in Salt Lake City.

Property: 7 unpatented claims, near Milford, Beaver Co., 6 miles from the railroad, surrounded by the Leonora, Hoosier Boy and Paloma Extension mines. **Ore:** silver and copper.

Development: 100' shaft with 50' of crosscutting. Is a prospect.

Letters returned from Milford, in 1917. Probably idle.

MOSCOW MINING & MILLING CO.

UTAH

Offices: 1020 Boston Bldg., Salt Lake City, and Moscow, Beaver Co., Utah.

Officers: Matthew Cullen, pres.; J. L. Rawlins, v. p.; Athol Rawlins, sec.-treas.; G. S. Wilkins, supt.

Inc. May, 1907, in Utah. **Cap.**, \$1,000,000; shares \$1 par; assessable; issued, \$900,000. Listed on Salt Lake Exchange.

Dividends: \$108,000 to Sept., 1917, at rate of 2½c per share. Company does not reply to requests for information.

Property: 7 claims, including the Moscow mine in the Star district, 7 miles from a railroad, covers about one-half mile of the strike of an ore zone 50' to 60' wide. Ore mainly silver-lead, with some copper and zinc. The Moscow mine is one of the oldest in the district, having been worked over 30 years ago.

Development: tunnels and shaft to the 1,400' level. A winze is being sunk below this level to develop a new ore shoot, assaying 50 oz. silver and 50% lead; and a raise on the same is in good ore.

Shipments: have been fairly consistent during the past year. In June, 1917, output was 1,000 tons, averaging about \$30 per ton.

Company employs 60 men. Electric power is used.

O. K. EXTENSION MINING & REDUCTION CO.

UTAH

Office: 222 D. F. Walker Bldg., Salt Lake City, Utah. **Mine office:** Milford, Beaver Co., Utah.

Officers: A. J. McMullen, pres. and gen. mgr.; T. M. Farrell, v. p.; Chas. A. Weaver, sec.-treas.; preceding with R. H. Greenhalgh, directors.

Inc. Nov., 1899, in Utah. **Cap.**, 300,000 shares; 3c par; assessable; issued, 125,000; total assessments to date, \$15,363. Annual meeting 2nd Tuesday in October.

Lands: 6 claims, 3 patented, 120 acres, near the Majestic mine, in the Beaver Lake district, show monzonite and quartz-porphry, carrying 2 fissure veins, of 5 to 24' estimated average width, traceable 150'. Opened by 7 pits and shafts of 15 to 510' depth, and a 150' tunnel, with 1,045' of workings, showing chalcopryite estimated to average 2% copper. Inactive except for annual assessment work.

ORPHAN BOY MINING CO.

UTAH

Idle. Milford, Utah.

Officers: James R. Craig, pres.; W. D. Williams, v. p. and mgr.; Chas. A. Doe, sec.-treas.; with M. R. Williams and P. J. Evans, directors.

Property: in Star district, 20 miles S. W. of Milford, Beaver Co., Utah, shows limestone, cut by quartz monzonite, with ore in veins and replacements. There are 11 claims, adjoining the Red Warrior and Mowitza mines, developed by 500' shaft with 1,200' of tunnels and workings from which considerable high-grade ore has been shipped. Vein, though narrow, has bodies of lead-carbonate ore carrying a little copper. Presumably doing annual assessment work.

PALOMA EXTENSION MINING CO.

UTAH

Office: 218 Judge Bldg., Salt Lake City, Utah. **Thos.** Marioneaux, pres.; Lorin Hall, sec.

Inc. in Utah. **Cap.**, \$50,000; shares 5c par; assessable; 645,000 shares outstanding. Listed in Salt Lake City.

Property: 300 acres in Star mining district, Beaver county, shows N. E. fissures carrying silver-lead-copper ore. These fissures cross contacts between limestone beds running N. and dipping E., quartzite that runs E. and dips N., and a granite or quartz monzonite. Ore occurs where the contacts are crossed by the fissures.

Property a prospect.

PALOMA GOLD AND SILVER MINING CO.

UTAH

Office: Judge Bldg., Salt Lake City, Utah. **Mines and works:** Moscow, Beaver Co., Utah.

Officers: M. P. Braffet, pres.; Chas. W. Olson, v. p., with W. Scowcroft, H. B. Cole and B. F. Caffey, directors; J. H. Braffet, sec.-treas.; C. J. Graff, supt.

Inc. in Utah. Cap., \$100,000; shares 10c par; assessable; last assessment levied Aug., 1917. Stock is listed on the Salt Lake Exchange.

Property: 14 claims in Star district, near Moscow, said to cover 3,000' along a limestone-monzonite contact intersected by 2 fissure veins, carrying silver, lead and copper ore.

Development: by 500' of trenching and 900' incline shaft, which was being deepened in June, 1917, and will be used as a main working shaft.

PROGRESSIVE MINING CO.

UTAH

Office: 229 South West Temple St., Salt Lake City, Utah. Mine near Milford, Beaver Co., Utah.

Officers: L. B. Bohn, pres.; I. Lessing, v. p. and mgr.; C. T. Mixer, sec.-treas. and cons. engr., Box 56, Salt Lake City; preceding, with F. J. Nichols, C. C. Crismon and Jas. Barrett, directors.

Inc. Aug. 20, 1906, in Utah. Cap., \$250,000; shares 50c par; assessable; fully issued. Total assessments to date, \$10,000.

Property: 6 claims, 80 acres, patented, in the Star district, 8 miles from a railway, carrying argentiferous copper and lead ores. The mine has a 150' incline shaft, with about 1,000' of workings, developing a 3' vein, said to carry ore assaying up to 8% copper, 35 oz. silver and \$1 gold per ton. A few small shipments have been made.

Mine under lease in 1916, but idle in 1917.

RED WARRIOR MINING CO.

UTAH

Office: Providence Bldg., Duluth, Minn. **Main office:** Milford, Beaver Co., Utah.

Officers: Leonidas Merritt, pres.; Alfred Merritt, v. p.; W. H. Borgen, sec.; E. R. Ribenack, treas.; preceding with Jas. T. Hale, John E. Merritt, Angus Buchanan and W. F. Acker, directors; Wilbur J. Merritt, supt.

Inc. Jan. 25, 1908, in Minnesota. Cap., \$250,000; increased Jan., 1911, from \$150,000, and again increased, Jan., 1917, to \$600,000; shares \$1 par; non-assessable; issued, 210,000. Shares are listed on the Duluth Stock Exchange and New York curb. Annual meeting, 2nd Tuesday in January.

Property: a silver-lead mine comprising 8 claims, 1 patented, 95 acres, in the Star district, eight miles from the Salt Lake Route. The claims show orebodies occurring along the bedding planes of limestone, the one under development said to have an average thickness of 6', width of 50' and proven depth of 600', and carries ore estimated by the management to average 21% lead, 1% zinc, 18 oz. silver and 25c gold per ton. In the deeper levels the mine has shown ore assaying 12% copper, 1% lead and 3 oz. silver per ton.

Development: by an 812' vertical shaft with levels at 500' and 675' and a 200' winze sunk on the vein from the 500' level. There are also numerous old shallow shafts and tunnels, the mine having about 3,000' of old and 4,000' of new workings. These workings were estimated to show 20,000 tons of ore, with about 10,000 tons blocked out for stoping by the former management. The mine was operated from 1870 until 1889 and was reopened 1907, by this company. The shaft is to be deepened to 1,000'. New work has been concentrated on the 500' level, 1917.

The property of the Mowitza Mining Co., adjoining the Red Warrior, was purchased early in 1917.

It is understood that the mine has the same N.-S. ore channels mined in the Moscow mine, whose workings of equal depth are about 1,500' distant.

Equipment: includes a hoist good for 1,500' and a 3-drill compressor.

ST. CROIX CONSOLIDATED MINES.**UTAH**

Organized in August, 1917, to continue work of St. Croix Mines Co., which see, operating in Star district, Beaver Co., Utah.

Officers: M. J. O'Brien, pres.; A. D. MacIntyre, v. p.; P. M. Pearce, treas.; W. C. O'Brien, sec.; with D. Graham, W. M. Evered and E. O. Davie, directors; E. O. Davie, supt.

Cap., \$600,000; shares \$1 par.

ST. CROIX MINES Co.**UTAH**

Office: 601 Providence Bldg., Duluth, Minn. **Mine office:** Milford, Utah.

Officers: Hansen Ev. Smith, pres.; J. A. Pierce, v. p.; A. W. McNair, sec.; A. M. Colby, treas., with E. O. Davie, directors.

Inc. March 10, 1915, in Utah. **Cap.**, \$1,000,000; shares 25c par; non-assessable. Earnings in 1916 were \$5,000 from development work. Expenses in 1916 and to July, 1917, over \$12,000.

Property: 7 claims, 1 patented, 80 acres, in Star district, Beaver Co., Utah, said to show 5 contact deposits in so-called white and blue lime. Ore occurs as chimneys and contains copper, silver and lead. Copper mineral is chalcopyrite.

Development: by 300' shaft and 400' tunnel, opening ground to depth of 500'. Workings total 1,500'. Ore being blocked out in Aug., 1917.

Equipment: 35 h. p. gasoline hoist, and 4-drill compressor.

Production: intermittent since 1870.

ST. MARY MINING CO.**UTAH**

Office: 601 Providence Bldg., Duluth, Minn. **Mine office:** Milford, Beaver Co., Utah.

Officers: Hansen Ev. Smith, pres.; J. Eton Bowers, v. p.; Paul M. T. Thompson, sec., all of Duluth. W. D. Ryan, mgr.

Inc. 1908, in Arizona. **Cap.**, \$500,000; shares \$1 par; assessable.

Property: 4 claims, 3 of 30 acres area, patented, near the Moscow and Red Warrior mines, on the east side of Topache peak, 4 miles from Milford, in the Star district. Claims show 5 contact veins between limestone and an igneous intrusive. Orebody under development claimed to average 17% copper, 10 oz. silver and one carload said to have returned \$76 per ton.

Development: by a 165' shaft with several hundred feet of drifts.

The mine, opened 1870, produced until 1890. Again opened, 1909, and operated intermittently, producing about 250 tons of ore annually.

TALISMAN CONSOLIDATED MINING CO.**UTAH**

Address: P. O. Box 1065, Salt Lake City. **Mine office:** W. W. Crone, supt., Milford, Utah.

Officers: H. S. Joseph, pres.; S. S. Pond, v. p.; H. W. Brock, sec.; L. B. McCornick, treas.; with L. B. Merriman and M. J. Morris, directors.

Inc. July 7, 1917, in Utah. **Cap.**, \$100,000; shares 10c par; assessable; 300,000 issued.

Property: 20 claims; also Cedar Talisman and Empire mines under lease for 2 years, total 450 acres, in Star district, Beaver county, Utah.

Geology: fissures and contact deposits in limestone. Orebody is from 1 to 5' wide and ore said to assay 10% lead, 15 oz. silver, and 10% copper, with some zinc and gold.

Development: by incline shafts 200 and 1,000' deep. Workings total 5,000'. Reserves consist of 1,000 tons of high-grade and 40,000 tons of low-grade ore, the latter in the leased mines.

UTAH BALTIMORE CONSOLIDATED CO.**UTAH**

Officers: J. P. Evans, pres.; 408 S. 13 E. St., Salt Lake City, Utah;

J. M. Williams, v. p.; C. A. Doe, sec.-treas.; J. T. White, W. D. Williams, directors.

Inc. in 1916. **Cap.**, \$1,000,000; shares 5c par; no indebtedness.

Property: 10 claims, 5 in Beaver Co., Utah, known as the Mollie Pitcher group, 5 in the Rocky district, known as the Bill Williams group. Mollie Pitcher group has a 100' shaft in vein of copper ore, said to be 60' wide and of shipping grade. Loading station on R. R. about a mile from mine.

UTAH MINING, MILLING & TRANSPORTATION CO. UTAH

Moscow, via Milford, Beaver Co., Utah. Chas. T. Birchard, pres, and gen. mgr., at last accounts.

Property: include the Hub and Lady Bryan mines, latter bought 1909, of Mathew Cullen et al., S. of the Burning Moscow, 6 miles from a railway, in the Star district.

Development: by a 400' two-compartment main shaft, developing a vein variously reported as 2 to 30' in width, carrying silver-lead carbonates, and a bedded deposit in limestone showing high-grade cuprite, from which small shipments of ore have been made. Ore said to carry \$6-\$7 in silver and gold with heavy percentage of iron. No recent returns. Probably idle.

UTAH NATIONAL MINES CO. UTAH

Address: G. W. Field & Co., 50 Broad St., New York.

Officers: F. E. McMillin, pres.; M. Butler, v. p.; T. L. Lloyd, sec.-treas.; with D. C. Pettibone, George Henderson and J. T. Lloyd, directors.

Inc. Feb., 1917, in Delaware. **Cap.**, \$1,000,000; shares \$1 par; non-assessable.

Property: the Silver King mine, in Newfoundland district, Boxelder Co.; and the Lady Bryan in the Star district, Beaver Co., Utah.

Development: 3,000' of work said to have been done in the Silver King, opening silver-gold-copper ore assaying over \$60 per ton. In the Lady Bryan \$16 ore is exposed to depth of 510'. Estimated reserves in May were 75,000 tons.

The only news available about this property is published in a weekly review and statements seem to be exaggerated.

UTAH-UNITED COPPER CO. UTAH

Office: 222 D. F. Walker Bldg., Salt Lake City, Utah. **Mine office:** Milford, Beaver Co., Utah.

Officers: A. J. McMullen, pres. and gen. mgr.; Chas. A. Weaver, sec.-treas.; preceding with Arthur B. Gatrell and Jas. E. Edmunds, directors. D. P. Rohlfing, engr.

Inc. 1908, in Utah, as a merger of the Wasatch M. & M. Co. and Skylark Copper M. & M. Co. **Cap.**, \$6,000; shares 1c par, were originally \$1; assessable; issued 150,000; with \$30,909 assessments levied to March, 1913. Annual meeting, second Monday in October.

Property: 14 claims, 2 patented, a 10-acre mill site and a patented water right, including the Skylark and O. K. groups, in the Beaver Lake district, 6 miles from a railway and 12 miles W. of Milford.

Geology: limestone, monzonite and granite are cut by fissure veins and carry contact deposits between monzonite and limestone. The ore minerals include cuprite, melaconite and azurite together with chalcopyrite and marcasite in a ferruginous gangue.

Development: one vein reported to average 20' in width, is opened by 5 shafts, deepest 470', and by several tunnels, longest 250'. The ore is reported to average 2% copper and to carry small silver, gold and lead values.

Equipment: includes 25 h. p. hoist, compressor and 3 buildings.

For 2 years company has been driving a tunnel, which was in 175' on

July 7, 1917, and had 125' to go to cut intersection of E. W. and N. S. fissures at a depth of 200'. Work is to be resumed at the 470' shaft, where some high-grade copper was reported in 1915.

VICKSBURG GOLD AND COPPER CO.

UTAH

Mine near Milford, Beaver Co., Utah, leased June, 1916, to United States Mines Operating Co.

Property: 5 claims in Star district, covering 4,000' of limestone belt cut by ore-bearing fissures.

Development: shallow, but ore shipped May, 1916. Property will be equipped with machinery.

VOLUNTEER MINING CO.

UTAH

Letters returned in May, 1917, from last address. Milford, Beaver Co., Utah.

Officers: W. C. Albertson, pres. and gen. mgr.; W. H. Havenor, v. p.; S. G. Cole, sec.; H. E. Havenor, treas., asst. sec. and engr.; preceding with Geo. Havecamp, directors.

Inc. in Utah. **Cap.**, \$50,000; shares 10c par; non-assessable; issued \$25,550. Annual meeting, 2nd Monday in May.

Property: 6 claims, unpatented, 600 acres, in the North Star district, seven miles from the Salt Lake Route. Claims show contact deposits between limestone and intrusive porphyry. The mine has only two 12' pits and a 70' tunnel. Company reported March, 1916, to be operating a lease on the north end of the Lakeview Mining Co.'s property.

FRISCO OR NEWHOUSE DISTRICT

CALDO MINING CO.

UTAH

Company has a lease on the dump of the Horn Silver Mine at Frisco, Beaver county, Utah, said to contain 200,000 tons of silver, lead, zinc tailings. Operates a 200-ton flotation mill.

CEDAR TALISMAN CONS. MINES CO.

UTAH

Offices: 515 Newhouse Bldg., Salt Lake City and Milford, Beaver, Co., Utah.

Officers: S. S. Pond, pres. and mgr.; F. B. Sherwood, v. p.; Geo. Baglin, sec.-treas.; with H. M. Chamberlain, Geo. Lynch and G. L. Bemis, directors.

Inc. March, 1909, in Utah, as a merger of the Cedar Mining Co. and the Talisman Mining Co.; latter company described in The Copper Handbook, Vol. XI. **Cap.**, \$500,000; shares .50c par; assessable. The 10th assessment was levied on March 15, 1917, of 1c a share. All outstanding. Stock transferred at company office. Listed in Salt Lake City.

Financial statement, Jan. 1 to April 30, 1916, shows profit of \$2,851. At this time management changed and in report, May 1 to Sept. 16, on operating loss was given of \$8,193 on this period, or net loss of \$5,341. Management has been changed again and reports are not available.

Property: 13 claims, 8 patented, 250 acres, in the Star mining district, Beaver Co., Utah. **Ore:** carbonate of lead, copper and zinc containing gold-silver values.

Development: several thousand feet of shafts and underground workings, the lowest on the 1,000' level of the incline, or main working shaft. Recent work has been done from the 200' to the 1,000' level. On 300' level drift is out 267' and will probably be driven 200' further. Previous to the consolidation the two properties are said to have had a total net production of \$130,000, but for years they have not shown a production of any importance. Company claimed 50,000 tons mill ore on dump and blocked

out, that will average 8% lead, 14% zinc, 7 oz. silver. In July, 1917, the property was leased for 2 years to H. S. Joseph, who started shipping 12% lead and 10 oz. silver ore in August.

It will be necessary for the company to find a method for treating this low-grade ore before it can be realized upon and a 10-ton electrolytic zinc plant has been proposed for the purpose. Some high-grade zinc ore is shipped regularly.

Electric power was substituted in 1915 for steam power whereby a monthly saving of \$190 is claimed.

COMMONWEALTH MINES CO.

UTAH

Office: 420 Herald Bldg., Salt Lake City. Mine office: Newhouse, Beaver Co., Utah.

Officers: Wm. M. Bradley, v. p.; W. T. Aiken, sec.-treas.; Newton A. Dunyon, gen. mgr.; preceded with C. H. Strevell and Jas. H. Paterson, directors.

Inc. Nov., 1906, in Wyoming. Cap., \$600,000; shares \$1 par:

Property: the Commonwealth mine, 7 claims, in the Star district, adjoining Lady Bryan and Progressive mines. Claims show Topache limestone with intrusive sheets of altered green porphyry, cut by fissures, with more or less mineralization along fissures and outward along certain limestone beds. Considerable lead ore was produced from surface workings in the past and the Nellie claim has copper sulphides in its bottom workings. The Beaver claim has ores giving average assays of 13.2% copper and 17.2 oz. silver per ton, with more or less lead.

Development: by a 1,400' tunnel, with back of about 300'. Said to have secured ore assaying up to 4% copper, 20% lead and 60 oz. silver per ton.

Equipment: includes gasoline power and an air compressor. Development shows but little ore, mostly low-grade, and claims are not especially promising according to geological reports.

COPPER MOUNTAIN MINE

UTAH

Owned by Samuel Newhouse, Newhouse Bldg., Salt Lake City, Utah. Leased to A. J. McMullen, Milford, Utah.

Operating expenses for year were \$1,500 and gross earnings, \$795.

Property: 7 patented claims, 125 acres, in Beaver Lake mining district, Beaver Co., Utah.

Geology: Ores containing gold, silver, iron and copper occur as contact deposits in shoots coursing E.-W. with a dip of 70° to the north with a monzonite foot wall and a limestone hanging wall. Ore is copper oxides with lime and iron, containing 4% copper by general average of carload lots.

Development: by a shaft 100' vertical, then 150' incline and 620' of drifts. Mine is worked by overhead stopping.

Equipment: 15 h. p. gas hoist.

Production: 60 to 70 tons for 1916. Ore reserves are estimated at 10,000 tons. Lessees expect to increase production in 1917.

CUPRIC MINES CO.

UTAH

Office: 17 Battery Place, New York. Operating office: 206 Templeton Bldg., Salt Lake City, Utah. F. A. Bishop, sec.; M. C. Morris, mgr.

Inc. May 11, 1908, in New York. Cap., \$1,000,000; shares \$1 par; assessable; issued, \$500,000. Is affiliated in finances and is managed by the Horn Silver Mining Co.

Owns the Cupric, or Iron Devil mine, 16 claims, unpatented, in the Frisco district, Beaver County, adjoining the Peacock mine. Property is at the east end of White mountain and 2 miles S. E. of Newhouse. The mine is near the igneous contact, dikes and tongues of monzonite invading the limestone; there are numerous mineralized fissures carrying chalcoppyrite, pyrite, specular hematite and magnetite with garnet, tremolite, muscovite, etc.

Development: by 2 old incline shafts and new 425' two-compartment vertical shaft, sunk near the main tunnel of the Cactus mine. Equipped with gasoline hoist and 7 men employed. Property has good ore, but not, it is believed, in large enough quantity to make mine profitable.

GOLDEN REEF CONS. MNG. & DEV. CO.

UTAH

Officers: D. P. Rohlfing, pres.; Leon Sweet, v. p.; H. S. Young, sec.-treas., with L. Simons, J. Rosenberg, C. B. Stewart and David Spitz, directors.

Cap., \$100,000; shares 10c par; 800,000 shares outstanding.

Property: about 750 acres, in Beaver County, about 5 miles N. of the Horn Silver mines, developed by 450' double-compartment shaft, said to disclose a 30' vein of hornsilver on the 100' level. Drifting is being done on the 300' level, Sept., 1917.

HORN SILVER MINES CO.

UTAH

Office: 27 Cedar St., New York. **Operating office:** McCornick Bldg., Salt Lake City, Utah. **Mine office:** Frisco, Beaver Co., Utah.

Officers: Jacob Neadle, pres. and treas.; Alexander B. Simonds, v. p.; Edward F. Emmet, sec.; preceding, with Harvey N. Wadham, E. B. Critchlow, A. B. Simonds, W. R. Britton, Chas. Brennehan, Wm. J. Barrette and H. S. Young, directors; Benjamin B. Lawrence, cons. engr.; Wm. H. Hendrickson, mgr.

Is a reorganization of the Horn Silver Mining Co., which was inc. in 1879 in Utah, with cap. of \$10,000,000; shares \$25 par. Stock in old company exchangeable for stock in the new on an equal basis.

Inc. Oct. 17, 1917. **Cap.,** \$400,000; shares \$1 par; 348,000 issued. Listed on N. Y. Curb.

Dividends: old company paid \$5,642,000 in dividends to 1907. Three dividends of 5c each were paid in 1916, two by the former company and one by the present. Five cent dividend declared April 16, 1917.

Statement for 1916 shows receipts from ore shipments, \$188,259; misc. income, \$65,342; operating expenses, \$140,973; special deep development, \$29,117; general expenses, \$27,808; net profits, \$62,798.

Property: 19 claims, 9 patented. The mine is extensively developed, has been a large producer of zinc, lead, silver and gold, and has yielded some copper as a by product. The old bonanza mine carried good values to depth of about 800', showing silver ores on the footwall, with copper ore on the hanging.

Main orebody was lost at 900' and new company's main object is to find its extension below that level. Shaft has been deepened to 1,150' and two veins cut on the 1,000' and 1,100' levels, which may be indicative of larger orebodies at greater depth.

Production: in 1916, 16,567 tons of ore were shipped, yielding \$188,259. Tonnage was made up of 8,504 tons lead-silver ore, 3,986 tons zinc-lead, 102 tons zinc, 1,237 tons copper and 2,739 tons old slag.

HORN SILVER MINING CO.**UTAH**

Reorganized, 1916, as Horn Silver Mines Co., which see.

INDIAN QUEEN CONSOLIDATED MINING CO.**UTAH**

Office: Provo, Utah. **Mine office:** near Newhouse, Beaver Co., Utah.

Officers: Jesse Knight, pres.; L. N. Morrison, v. p.; W. L. Mangum, sec.-treas.; K. S. Jordan, gen. mgr.; foregoing, with F. E. Smith and J. W. Knight, directors.

Inc. 1907, in Utah. **Cap.**, \$150,000; shares, 10c par. Listed on Salt Lake Stock Exchange.

Property: 39 patented claims in Newhouse district.

Development: by 3 tunnels, 4,700', 300' and 200' long, respectively; also prospect tunnels and shafts. Worked by lessees from 1910, but company resumed in 1916. Extensive exploration under way in 1917.

Equipment: includes compressor, drills, blower and electric power. Part of the mine under lease to Jens Nelson, who cut ore in August, 1917.

KING DAVID MINING CO.**UTAH**

Address: Provo, Utah. **Mine office:** Frisco, Beaver Co.

Officers: Jesse Knight, pres.; David Evans, v. p.; W. L. Mangum, sec.-treas.; K. S. Jordan, gen. mgr.

Inc. 1908, in Utah. **Cap.**, \$500,000; shares 50c par; assessable; 67,000 issued. Shares listed on Salt Lake City Exchange.

Property: 63 claims, patented, 940 acres, adjoining the Horn Silver mine, is supposed to carry the extension of the Horn Silver vein. Claims are well mineralized.

Ore: mainly silver-lead bearing, with small quantities of zinc and copper.

Development: by 800' 3-compartment shaft and several prospect tunnels and shafts. Present work consists of drifting, sinking and diamond-drilling.

Equipment: includes two 80 h. p. boilers, a double-drum hoist, 5-drill air compressor, 14 machine drills, generator, blower and steel head-frame.

REVENUE CONSOLIDATED MINING CO.**UTAH**

Frisco, Utah. Address: John B. Taylor, 678 E. S. Temple St., Salt Lake City.

Property: 66 claims, 22 patented, 1,320 acres in Pine Grove district, T. 28 S. R. 16 W. on west side of Wah Wah Mtns., 20 miles S. W. of Frisco or Newhouse, stations on Milford branch of Salt Lake Route. Elevation 7,500' at mine camp. Peaks 3,000'-4,000' higher.

Geology: claims cover quartzite beds, overlain by 600' of green shales, capped by 5,000' of thickly bedded limestone, intruded by thin dikes and a boss of yellowish decomposed porphyry. These beds dip eastward into the mountains, at 20° to 40°, the west slope of the range being of similar structure, with igneous rocks forming the east side. A strong E. W. fault runs through the center of the property, dislocating the beds 1,000' to the east, on S. of fault, and ending in a porphyry intrusion. Ores are lead and silver bearing and occur in fissure veins in quartzite. Four parallel N. W.-S. E. veins north of Pine creek are 3'-6' wide, have smooth walls, quartz filling and carry galena of concentrating tenor, with occasional masses of shipping ore. There are several other undeveloped parallel veins, but all end at the shale belt. South of the fault a parallel 6'-20' vein represents the probable faulted continuation of the Cliff vein north

of the fault and cut by another fault continues on the N. S. south of the vein.

Favorable reports made 1906 by Chas. Calcolk Jones and by D. P. Rohlfing, former manager of Hornsilver Mine at Frisco.

Development: active in 1904-05, was resumed 1913, but stopped 1914. It comprises the 500' Buckbee and 600' Southside tunnels, 125' Cliff shaft with 200' drift work, 130' Tasor shaft and various lesser openings. The Revenue tunnel is to crosscut all these veins in depth and supply the mill.

Equipment: includes 300 cu. ft. compressor, Corliss steam engine, etc., but no mill machinery. Property promising.

SOUTH UTAH MINES & SMELTERS

UTAH

Office: 165 Broadway, New York. **Mine office:** Newhouse, Beaver Co., Utah.

Officers: Hugo Hoffstaedter, pres.; H. G. Robinson, sec.-treas.; with J. F. A. Clark, E. P. Earle and Samuel Newhouse, directors; W. L. Heidenreich, gen. mgr.; R. J. Tullock, mill supt.

Inc. Feb. 28, 1910, in Maine, as successor of Newhouse Mines & Smelters. **Cap.,** \$4,300,000; shares \$5 par; issued 645,800 shares. **Debentures:** \$1,071,000 of 6% 20-year income bonds, convertible into stock at par, remaining from a \$1,500,000 bond issue put out by the Newhouse Mines & Smelters. Interest on bonds is said to be payable annually, but only if and when earned, and then out of net profits of the year's operations. The old company defaulted in interest on its bonds, and the property was bought for \$500,000 under foreclosure, old shareholders being given stock, share for share, plus a payment of \$1 per share for new stock. The reorganization brought about \$600,000 into the treasury, of which all but about \$200,000 was required to liquidate the floating debt of the old company. The annual report for year ended June 30, 1912, showed an operating loss of \$31,113, increasing a former deficit to \$118,353, and gave current assets as \$179,500 and current liabilities as \$33,723. No report has since been issued. Listed on New York Curb. Equitable Trust Co., New York, transfer agent; Windsor Trust Co., registrar. Annual meeting, third Monday in October. A dividend of 50c per share, amounting to \$300,000, paid Aug. 31, 1907, by the Newhouse Mines & Smelters.

Property: 13 claims, patented, 201 acres, with miscellaneous holdings, including the Midvale placer, 168 acres, water rights at Wah Wah springs, mill, town sites and grazing lands, total holdings of 7,882 acres.

The mineral property carries about 1 mile of the strike of the Cactus vein. The Cactus mine shows monzonite-porphry country rock, near a limestone contact, and ore is essentially an irregular mass of brecciated monzonite, carrying copper impregnations, including some oxidized ores in the upper workings, but at depth mainly chalcopryite, associated with pyrite, averaging about 1.15% copper and 25c per ton in combined gold and silver values. Although the average grade of ore is very low, there is some high-grade sulphide ore, mainly chalcopryite, assaying up to 15 and even 20% copper, but the quantity of such ore is very small.

The mine has practically no ore reserves, though there is an orebody between the 700' and 800' levels containing about 100,000 tons of 1.5% ore, with an additional 100,000 tons of probable ore. A new orebody opened on the 600' level for a short distance was said to show ore averaging about 1.8% copper.

Development: by two working shafts, of 600' and 900' depth, with levels at 100' intervals, and connected on the 600' level with a 6,300' main haulage

tunnel, having a grade of 5%, laid with 30-lb. steel rails. Tramming is done by electric locomotives, hauling trains of 21 cars. The tunnel is electric-lighted throughout, and cuts several cupriferous veins before reaching the main orebody. The mine has upwards of 4 miles of workings. Principal developments are between the 300' and 700' levels, and the 600' level, giving the principal showing of ore, was said to have an orebody of 135' width and about 125' length, carrying ore of a little better than 1% copper.

Equipment: includes 200 h. p. steam plant, with a 150 h. p. hoist good for 600', and a 40-drill Ingersoll-Sergeant air compressor, both operated electrically. There also is an auxiliary electric hoist on the second level.

The mine and mill are connected with the Salt Lake Route.

Mill: the 1,000-ton mill is 100x400' in size, in two 500-ton duplicate sections, designed on the unit plan, to allow for future expansion. The western section, which is the concentrator proper, contains a 15-ton Whiting traveling crane, and the power plant. Equipment includes three 10x24" Blake crushers, 4 sets of rolls, 1 Huntington mill, 22 Hartz jigs, 48 Wilfley tables, 10 Johnston tables, 8 Wilfley slimers, 16 Callow tanks and Sherman settling tanks and classifiers. Ore is received in 1,000-ton steel bins, whence it is drawn by belt conveyors, equipped with plunger feed, and transferred to elevators, of which there are 2 for each section, 1 for dry and 1 for wet ore. Concentration is about 12.5 into 1. A flotation unit was added in 1914.

The power plant includes five 350 h. p. Babcock & Wilcox boilers, a Green fuel economizer and a 165' steel smokestack of 8' diameter. The steam plant is held in reserve, machinery being actuated by electric energy, brought 50 miles over the lines of the Telluride Power Co. There are two 500 h. p. Westinghouse-Parsons turbines, making 3,600 r.p.m. Water is brought 8½ miles from 6 large springs, at Wah Wah, having a flow of about 1,000 gals. per minute.

Production: for fiscal years ending June 30 was 5,670,993 lbs. fine copper, 53,862 oz. silver and 2,272 oz. gold in 1906; 7,244,179 lbs. copper, 48,595 oz. silver and 1,721 oz. gold in 1908; from Sept. 1, 1910, to June 30, 1912, 5,527,810 lbs. copper, 43,691 oz. silver and 2,450 oz. gold, secured from 426,703 tons of ore, of which 701 tons were smelting ore and 34,062 tons of concentrates, giving an actual net extraction of about 13 lbs. fine copper, 6c silver and 11c gold per ton. During 3 months ended Sept. 30, 1912, production totaled 674,987 lbs. copper. The mine was closed down owing to a strike from Sept., 1912, to April, 1913. From April, 1913, to June, 1914, production was 3,294,113 lbs. of copper. Mine was again closed down, June, 1914.

Mining costs have been estimated at 90c and milling costs at 50c per ton. It is obvious that the Cactus is an exceedingly low-grade mine and will require careful handling to earn substantial profits.

BEAVER COUNTY

Includes scattered districts of Newton, Beaver, Jarloose, or Lincoln, and Fortuna. (See others under Milford and Frisco districts.)

BEAVER-BUTTE COPPER CO.

UTAH

Office and mine: Beaver, Beaver Co., Utah. Sherman McGarry, supt.

Inc. 1909, in Utah. **Cap.**, \$50,000; shares 10c par; assessable. Property idle from 1912-1914, owing to lack of capital, but development of work resumed in summer of 1914, and property reported under lease to Senator A. B. Lewis, representing Eastern capitalists, 1916.

Lands: 15 claims, unpatented, in the Newton district, 8 miles from a railroad, show gold-silver ore and are believed to carry the continuation of the Sheep Rock ledge.

Development: by a 150' two-compartment shaft, crosscuts and drifts. Company claims to have 2' of \$10 ore on surface and 19' of \$8 ore on the 150' level with 1' of \$18 ore along the footwall side. Plans installing an electric hoist and drifting on the 150' level. See Beaver Gold Mines Corp. and remember Majestic Mines. No returns, 1917.

BEAVER GOLD MINES CORP.

UTAH

Officers: A. B. Lewis, pres.; E. C. McGarry, v. p.; M. P. Braffet, sec.-treas., with B. F. Caffey, W. L. Cook, W. H. Stephens and S. Glazier, directors. A. B. Blainey, mgr.

Inc. in 1914. **Cap.**, \$3,500,000; shares \$1 par.

Property: claims covering the Sheep Rock, gold vein in the Newton district in eastern Beaver Co., 12 miles northeast of Beaver City, Utah.

Development: by a shaft 100' deep, in 1915. Company claims to have cut a vein of milling ore, 15' wide on the 60' level, and 18' wide on the 100' level. At last accounts was planning on sinking an additional 60'. In Jan., 1916, the company is reported to have obtained a bond, \$240,000, on the old Sheep Rock mine, a former high-grade producer, developed to the 300' level and equipped with a 5-stamp mill. Promotion methods have caused much comment.

BEAVER HORSESHOE GOLD MNG. CO.

UTAH

Beaver City, Beaver Co., Utah.

Officers: H. B. Ward, Mina, Nev., pres.; John Waldis, Tonopah, v. p.; C. R. Bunker, Salt Lake City, sec.-treas., with Fred Zimmerman, J. W. Kelley and F. E. Becker, directors.

Inc. in May, 1915. **Cap.**, \$250,000.

Property: 19 claims located on south Fork of Beaver river, 14 miles east of Beaver City. Surface samples are said to assay \$24.60 in gold. Letter returned unclaimed, 1917. Probably closed down.

BEAVER LAKE METALS CO.

UTAH

Office: 400 W. 7th, South Street, Salt Lake City, Utah. Lewis Merri-man, mgr.; F. K. Nelson, sec.

Inc. April, 1916. **Cap.**, 1,000,000 shares; assessable; assessment No. 2 of 2½c levied June, 1917. Stock listed on Salt Lake Exchange.

Property: 14 claims, unpatented, adjoins the Beaver Copper Co., and is reported to be crossed by three N.-S. fissures which in turn are intersected by an E. W. vein. Vein was faulted on the 90' level.

Ore: a carload shipped in November, 1916, is reported to have averaged over \$46 per ton, samples carrying 11% zinc, 40% lead, 11 oz. silver and 11% iron.

Development: by 150' main shaft, 100' incline shaft and about 400' of drifts. Management is searching for the continuation of the vein cut above.

BLUE RIBBON GOLD MINING CO.

UTAH

Minersville, Utah.

Officers: W. B. Seymour, pres.; L. Shaw, v. p.; Fred R. Pryor, sec.-treas., with J. H. McOmie and Clara D. Smith, directors.

Inc. Feb., 1915, in Utah. **Cap.**, \$100,000; shares 10c par; issued \$60,460.

Property: 8 claims in Jarloose mining district, 6 miles E. of Minersville, Beaver Co., Utah.

Ore: gold in shoots in vein 6' to 12' wide, between well-defined walls of rhyolite. Average assay said to be \$9.40 per ton.

Development: by 50' shaft. Plan the addition of 25 h. p. gasoline hoist, and sinking shaft of 500' depth. Is a prospect only.

FORTUNA GOLD QUEEN MINING CO.

UTAH

Office: B. F. Capper, pres., 333 Judge Bldg., Salt Lake City, Utah.

Property: 3 claims at Fortuna, Beaver Co., Utah, said to show free gold in 8' quartz vein in limestone and porphyry. Opened by tunnels and 200' shaft. Has gasoline hoist. Closed down.

FORTUNA INDEPENDENCE MINES CO.

UTAH

E. C. McGarry, pres., 1388 S. 9th E. St., Salt Lake City, Utah.

Property: 8 claims in Fortuna district, Beaver County, and 2 claims in Grand County, held under bond and lease. Ore occurs in intrusive rocks, porphyry and trachyte predominating. Mine is developed by 165' shaft and 400' adit, said to show an oreshoot 18" wide and exposed for 135', giving assays of \$20 gold and 3-5 oz. silver. Management plans extending the adit to 800' in 1917. Five-stamp mill under construction 1917, at company's Henry Mtn. property, 85 miles S. of Green River station.

IBAPAH GOLD MINING CO.

UTAH

Property: the Queen of Sheba mine, in the south end of the Deep Creek country, Beaver Co., Utah, an old gold mine credited with a production of \$80,000. Mine shows vein 5-18' wide. Pay ore occurs in shoots assaying from \$10-\$13 per ton.

Development: by a 1,187' main tunnel, several short tunnels and a 376' raise.

Equipment: includes a small mill.

Worked under a 3-year lease from 1914 by C. E. Johnson.

SHEEPROCK MINING & MILLING CO.

UTAH

Office: W. A. Wilson, 406 Dooly Block, Salt Lake City, Utah.

Officers: W. A. Wilson, pres. and treas.; C. W. Morse, v. p.; C. Browne, sec., with W. B. and F. B. Eisenman and L. A. Jeffs, directors.

Inc. Sept. 4, 1893, in Utah. **Cap.,** \$100,000; shares 10c par; non-assessable; 450,000 issued.

Property: 10 patented claims, 177 acres, in Newton district, Beaver Co., Utah, said to show a fissure vein in rhyolite. Ore contains gold and silver.

Development: by 300' shaft and 1,000' tunnel.

Equipment: 25 h. p. electric hoist and 25 h. p. electric compressor.

In development stage only.

STAMPEDE MINES CO.

UTAH

Address: A. T. Burton, sec., Beaver City, Utah.

Officers: B. F. Caffey, pres.; Archie MacFarland, v. p.; A. T. Burton, sec.-treas., with Sam. Glaser and R. H. Strickland, directors.

Inc. 1916, in Utah. **Cap.,** \$100,000; shares 10c par; assessable; 800,000 issued.

Property: 14 claims, 250 acres, in Lincoln or Jarloose district, Beaver Co., Utah, said to show fissures in limestone, dipping 40° and pitching N. 70° E. Sulphide ore reported to contain 0.09 oz. gold, 25 oz. silver, 21.5% lead and 2.46% copper. Shoot occurs at junction of 2 fissures and is said to have been followed down by 350' shaft, ore showing persistence at depth with signs of bedding in dolomite.

Equipment: 6 h. p. gasoline hoist, 140 cu. ft. compressor, etc.

Production: 21 tons in 1916.

A small mine with possibilities. Rail and smelter facilities nearby.

BINGHAM DISTRICT

ALPINE GALENA MINING CO.**UTAH**

Owned and operated by Alpine and Provo men.

Property: in Alpine Canyon, near Bingham, Salt Lake Co., Utah, contains ferruginous lead ore, in bunches in black limestone.

Development: by 312' tunnel and incline shaft. Plans to drive tunnel to reach blowout 350' below surface. Assessment called in 1914 in order to provide funds for further development.

BINGHAM AMALGAMATED COPPER CO.**UTAH**

Office: 61 Commercial Block, Salt Lake City, Utah. **Mine office:** Bingham Canyon, Salt Lake Co., Utah.

Officers: B. F. Grant, pres.; L. A. Marks, v. p.; F. R. Snow, sec.-treas.; W. P. Davis, gen. mgr.; preceding officers, R. E. Miller and Dr. A. McCurtain, directors. E. W. Jones, supt.

Inc. Jan. 7, 1907, in Utah. **Cap.,** \$5,000,000; shares \$5 par; non-assessable; issued, \$3,500,000. Shares are listed on the Salt Lake City Stock Exchange.

Property: 24 claims, 300 acres, patented, known as the Illinois and Copper Glance groups, carrying 7 mineralized veins. The principal orebodies exposed in the Bingham Amalgamated are on the same vein as the Congor orebodies and of about the same character of ore. Vein is 15 to 40' thick, developed for several hundred feet in depth, but the water and high cost of wagon haul stopped further development. In a tunnel on the west side of the property a 20' vein shows streaks of good ore all through it. The Montana Bingham tunnel cuts this vein about 100' deeper, 3,948' from the portal, and opened it for 100'. Samples taken from this vein said to run from 3.2-6.5% copper, 7 oz. silver, \$1.20 gold and 25% iron. Development work resumed the latter part of 1915 after an idleness of several years.

The Illinois has a 640' shaft, with a 6 to 9' vein carrying a 2' pay-streak of about 5% copper ore, with occasional assays up to 40%, the average of 50 assays being 2.8% copper, 2 oz. silver and \$2 gold per ton. The Copper Glance group has a 1,400' tunnel, in McGuire gulch. Mine has a total of 2,450' of workings.

In summer of 1917, company mined ore from a raise at the East end of the 300' level. A trial shipment of 90 tons in June, yielded \$25 per ton, the ore carrying 4.73% copper, 2 oz. silver, \$1 gold, 26.4% iron and 35.6% insoluble. The shaft, flooded in July, was reopened later. Shipments in October were about 4 carloads.

BINGHAM ANACONDA COPPER CO.**UTAH**

Office: 11 Main St., Salt Lake City, Utah. **Mine** in Markham Gulch, Bingham, Utah.

Officers: E. McCarrick, pres.; B. B. Gray, v. p.; P. L. Meyers, sec.-

Cap., \$1,000,000; shares 10c par. Owns a group of claims under development, 1917.

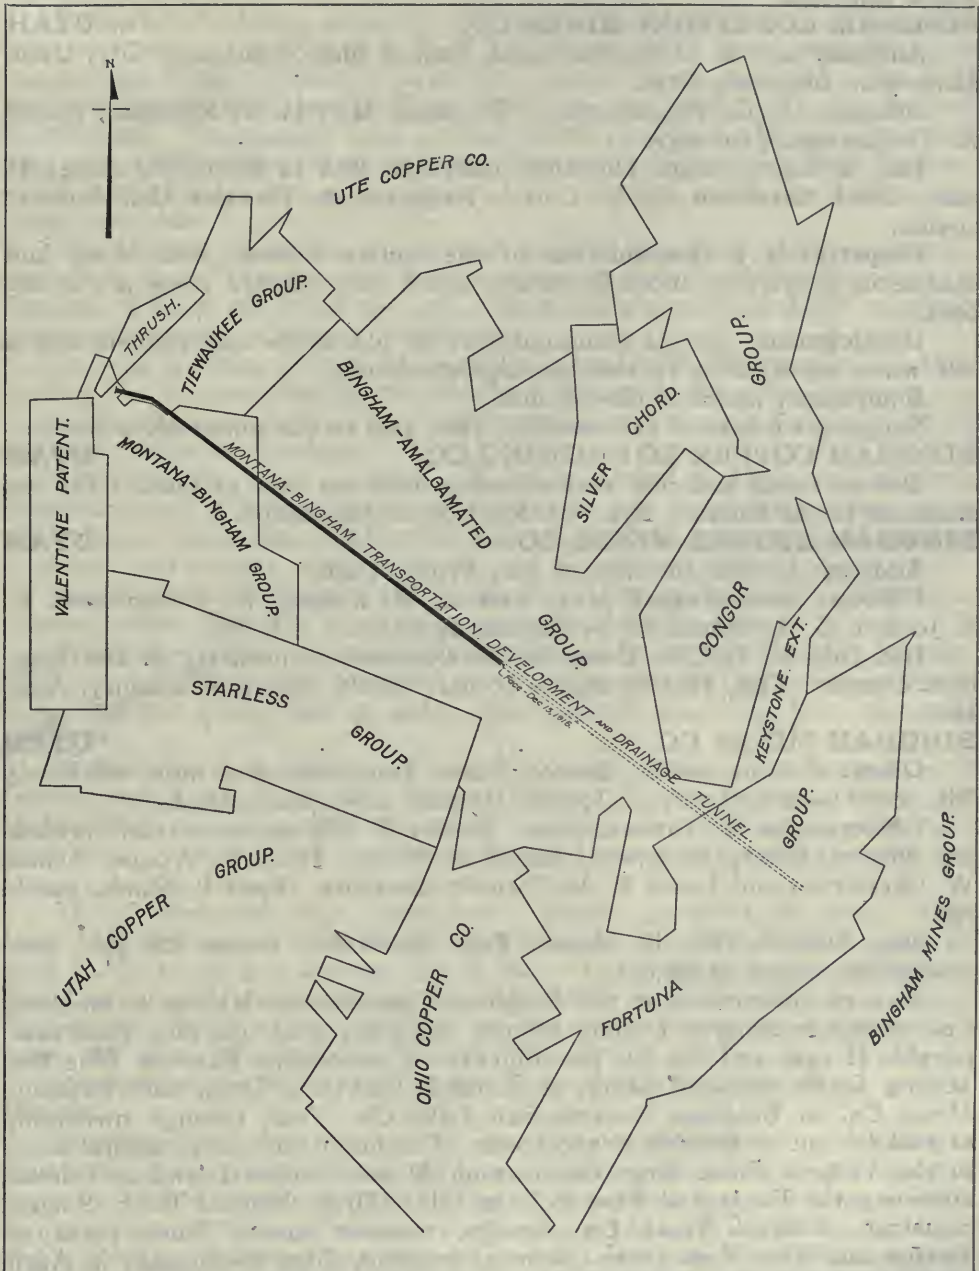

BINGHAM CENTRAL MINING CO.**UTAH**

At Bingham Canyon, Salt Lake Co., Utah. Idle. This company and the Bingham Standard Copper Co. were controlled by the Bingham Central Standard Copper Co., which sold this stock, 1909, to Utah Metal Min-treas.; above with A. Gustaveson and R. E. L. Collier, directors. ing Co. for stock in latter company and is now controlled by the Utah Metal & Tunnel Co., which see. Described Vol. X.

BINGHAM CENTRAL STANDARD COPPER CO.**UTAH**

Was organized as a holding company, controlling, through ownership

of practically entire stock issues, the Bingham Central Mining Co. and Bingham Standard Copper Co., and sold these subsidiary stocks, 1909, to the Utah Metal Mining Co. for 300,000 shares of latter, which was escrowed

PART OF BINGHAM DISTRICT, UTAH

until 1911 and extended upon payment of 10,000 additional shares until Nov. 8, 1912, and subsequently to Jan. 1, 1914, to permit building by Utah Metal Mining Co. of a \$150,000 aerial tramway from the western end of the big tunnel to the International smelter at Tooele. On release of escrow, 1914, company was to be wound up.

Minority stockholders formed a committee in 1915, with E. J. Huff, chairman, offices at 405 Atlas Blk., Salt Lake City, and attempted to recover property, claiming irregular disposition of the company's assets. Stock valueless.

BINGHAM COALITION MINES CO.

UTAH

Address: care E. O. Leatherwood, Boston Bldg., Salt Lake City, Utah. Mine near Bingham, Utah.

Officers: W. G. Thomas, pres., Portland, Me.; H. P. Sweetser, treas.; A. T. Hastings, gen. mgr.

Inc. in Maine. **Cap.**, \$1,000,000, increased 1916 to \$1,500,000; shares \$1 par. Stock listed on N. Y. Curb. Registrar & Transfer Co., transfer agents.

Property: is a consolidation of the Butler Liberal, Red Wing and Massasoit properties, about 50 claims, which have yielded some ore in the past.

Development: several thousand feet of old drifts and tunnels and a 130' winze reported to be sunk on high-grade ore.

Equipment: includes 175-ton mill.

Shipping 4-5 cars of ore monthly, 1917, said to run about \$60 a ton.

BINGHAM COPPER BOY MINING CO.

UTAH

Out of funds and idle several years, with no sale or market for the stock, so far as known. See Vol. XI, Copper Handbook.

BINGHAM EMPIRE MINES CO.

UTAH

Address: Knight Investment Co., Provo, Utah.

Officers: Jesse Knight, pres., with A. M. Knight, W. L. Mangum, K. S. Jordan, G. A. Storrs, E. G. Jensen, directors.

Inc. July 31, 1915, in Utah, for development of property in the Bingham district. **Cap.**, \$10,000; shares 1c par; 484,000 shares in treasury, Aug., 1915.

BINGHAM MINES CO.

UTAH

Office: 60 Congress St., Boston, Mass. Imer Pett, gen. mgr., 404 Dooley Blk., Salt Lake City, Utah; Joseph Hyland, supt., Lark, Utah.

Officers: Jas. P. Graves, pres.; Sydney S. Millett, sec.-treas.; preceding officers, Henry N. Sweet, Alfred B. White, Thos. S. Woods, Arthur W. Chesterton and Lewis B. McCornick, directors. Fred R. Sands, purch. agt.

Inc. April 6, 1908, in Maine. **Cap.**, \$1,500,000; shares \$10 par; non-assessable; issued \$1,000,000.

Is a reconstruction of the Bingham Consolidated Mining & Smelting Co., having exchanged 1 share of new stock for 1 of old, plus \$3.50 cash, payable \$1 cash and five 50c installments. Controls the Eagle & Blue Bell Mining Co., a dividend payer, of Eureka, Juab Co., Utah, and Yosemite Mines Co., of Bingham Canyon, Salt Lake Co., Utah, through ownership of \$451,250 out of \$900,000 issued stock. Purchased the entire capital stock of the Victoria Cons. Mng. Co., owning 49 acres mineral land at Eureka, adjoining the Eagle and Blue Bell, in 1914. First National Bank, Boston, registrar. Federal Trust Co., Boston, transfer agent. Stock listed on Boston and New York curbs. Annual meeting, third Wednesday in April, at 97 Exchange St., Portland, Me.

Company has liquidated its bonded indebtedness of \$1,480,790, besides having paid for the property of the Victoria Cons. Mng. Co.

Balance sheet Dec. 31, 1916, shows assets \$85,158 cash and loans, and \$9,439 accounts receivable, etc., with accounts payable of \$1,078. Gross earnings in 1916 were \$251,443, and operating expenses \$107,691, leaving a net operating gain of \$119,847 after deducting \$23,904 for prospecting and

development work. Earnings of the company and subsidiaries for the first 8 months of 1917 total \$669,938.

Dividends: initial dividend of 50c and Red Cross dividend of 25c a share paid July 2, 1917; 50c paid October 5, 1917.

Property: 60 claims, patented, 430 acres mineral land, in the Tintic district, comprising the Dalton & Lark and Commercial mines, and 596 acres non-mineral lands. The ores carry lead, copper, silver and gold. The lead ore averages 90c gold, and 11.65 oz. silver per ton, with 0.67% copper, and 18.64% lead. The copper ores average \$1.40 gold and 4.92 oz. silver per ton, with 1.58% copper and no lead. Some of the ores are high in iron, hence desirable for fluxing the ores of the district, which are highly silicious, as a rule.

The company now has the deepest shaft in the Tintic district, as connection is made between the Mascotte tunnel and the Yosemite shaft, a distance of 2,150' on dip of the vein. New work comprised 2,669' of drifts, crosscuts, raises and winzes in 1916.

Lessees working in the old workings mined 8,760 dry tons of ore 1916, netting the company \$43,024 as royalty. Mining is by square sets in the large deposits, up to 20' across, and by stulls in the smaller veins. There are many miles of workings.

The Victoria Cons. includes: 7 patented claims, 50 acres, with the Snowflake and Victoria mines at Eureka. Ore is gold-silver-lead with some copper, occurring in chamber deposits in limestone. Pay ore occurs in shoots and streaks of variable size, up to 100' in width.

Development: includes 1,200' shaft with 2,500' of workings. Has compressor, added 1913, 112 h. p. hoist, and uses electric power.

Production: 7,455 tons in 1912; 12,552 tons in 1913; 8,763 tons in 1914; 3,071 tons in 1915; a total of 58,806 tons. Shipments in 1915 averaged 9.06% lead; 12.40 oz. silver; .242 oz. gold. The Victoria mine has been the main producer.

Equipment: at the Dalton & Lark includes a 250 h. p. steam plant, with several hoists and a 25-drill Ingersoll-Rand air compressor. There are 10 buildings, including machine shop, smithy, carpenter shop, office and dwellings. A private rail line, with electric locomotives, connects with the Denver & Rio Grande railway.

The Commercial mine comprises 5 claims, patented, 30 acres. The main orebody occurs as a fissure in limestone and replacement in latter, with E.-W. strike and average dip of 38°. Ore is exclusively chalcopryrite. The Commercial was closed down Sept., 1916, as smelter did not require fluxing ore. Most of the lead and copper ore comes from the Brooklyn mine, 200' below the Mascotte tunnel.

Production: in 1916 was 27,709 dry tons of \$238,709 gross value, netting \$205,262.

Equipment: of the Commercial mine is exclusively electric, including a double-drum electric hoist with 52 h. p. induction motor, 75 h. p. induction motor, a 10-drill Ingersoll-Rand air compressor, and three 50 k. w. electric transformers. Buildings include an office, warehouse, sawmill, smithy, barn and ore bins. Company has no mill, but has privilege of 1/10 of capacity of 2,000-ton mill near mine. Mine is served by the Copper Belt line of the Denver & Rio Grande railway. Company installed electric power plant, 1916.

Production: ore shipped to smelters: 49,986.81 tons in 1912. 38,987.95 tons in 1913, 49,866.87 tons in 1914, and 44,975.19 tons in 1915; 28,892 tons in 1916, including 6,380 tons lead ore averaging \$21.31 per ton and 21,598 tons copper ore averaging 1.3% copper. Production for first 7 months

1917 amounted to 728,305 oz. silver, 470,965 lbs. copper, 8,354,563 lbs. lead and 5,249 oz. gold, netting \$590,869.

The present management has made splendid progress in handling difficult financial and mining problems.

Eagle & Blue Bell Mining Co.

Subsidiary of Bingham Mines Co.

Office: 60 Congress St., Boston, Mass. **Operating office:** 404 Dooly Block, Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah.

Officers: Jas. P. Graves, pres.; Henry N. Sweet, v. p.; Imer Pett, asst. treas.-gen. mgr.; Geo. E. Davis, sec.; preceding with Fred H. Williams, Duncan MacVichie and Fred R. Sands, directors; Sydney S. Millett, treas.; Wm. Owens, mine supt.

Inc. Sept., 1898, in Utah. **Cap.**, \$250,000, increased, March, 1910, to \$1,000,000; shares \$1 par; issued 893,146 shares. **Dividends:** 4 of 5c each in 1913; 3 of 5c each in 1914; 1 of 10c and 1 of 5c in 1915; 2 of 5c in 1916, amounting to \$535,888 for the four years. Two dividends of 10c a share paid May 1 and June 1, 1917, the total now being \$800,000.

In March, 1910, issued 644,347 shares of new stock at 50c to take up a floating debt of \$269,925 and put \$50,000 in the treasury, for working capital. Is controlled, through stock ownership, by Bingham Mines Co. First National Bank, Boston, registrar; Federal Trust Co., Boston, transfer agent. Stock is listed on the Boston curb. Annual meeting, first Saturday after first day of October.

Annual report for year ending Dec. 31, 1916, shows total receipts, \$323,995; expenditures include operating expenses, \$120,528, and mine development, \$39,841. Net operating gain was \$154,776, as against \$143,345 in 1915.

Assets amounting to \$1,077,699, include mining properties and real estate, \$877,635; mine construction and equipment, \$132,483; cash and receivables, \$35,448.

Liabilities include: outstanding stock, \$893,146; surplus, \$184,553.

Profits for first 8 months in 1917 are \$452,614, against \$154,776 in this period of 1916.

Property: 17 patented claims, 73 acres, includes a 9-acre mill site carrying the water right to a spring having a flow of about 30 gals. per minute. Lands lie between the Centennial-Eureka, Victoria and Chief Consolidated mines, on the Victoria-Grand Central ore zone, in the Mammoth Limestone.

Geology: ore occurs as chamber deposits in limestone, carrying gold, silver, lead and some copper. The lime is cut by numerous fissures, at all angles, with mainly vertical dip, carrying pipes, shoots and erratic deposits of ore at the intersections of fissures and bedding planes, in massive blue limestone. The mine has considerable bodies of silicious copper ore, lead sulphides and carbonates. Pay shoots vary from 6-100' in width. Average assays of dry ore: .230 oz. gold; 12.99 oz. silver; .31% copper; lead ore assayed: .13 oz. gold, 16.81 oz. silver and 17.05% lead.

The mine workings indicate 4 separate ore channels striking northerly and southerly and occasionally joined together by immense ore deposits made along easterly and westerly cross faultings. The ore occurrence shows a great similarity throughout, giving the zone a width of over 600', but each channel apparently has its characteristic mineral association.

History: according to C. H. Blanchard, pres. of the D. & B. Mines Co., ore was discovered by 30' shaft, and mill erected before ore development warranted, with consequent abandonment. Relocated several times, and

eventually developed by 1,200' tunnel, that eventually found downward extension of oreshoot cut by shaft. Profitably worked till panic of '93; later reopened and all ore in sight taken out and mine was idle until sold to Bingham Mines crowd, who sank deep winze from tunnel; extracted all ore in sight and ran in debt for \$300,000; Hornblower & Weeks assumed debt, taking company notes, and installed Imer Pett as mgr. and Wm. Owens, as supt. New management followed for 800' a thin, iron-stained seam on the 1,000' level and found immense body of pay ore, making it one of the big mines of Tintic.

Debt is paid off, fine plant installed, and over \$700,000 paid in dividends, with ore reserves ensuring profits for years to come.

Development: has been extensive in the last few years; the 3-compartment shaft is now 2,018' deep, with levels at 700, 1,000, 1,350, 1,550, 1,700 and 1,875', and blind levels at 1,100, 1,200, 1,300, 1,425 and 1,538'.

Development in 1916 amounted to 3,086'. The main operating shaft was sunk from 1,700' to water level, 2,018', and a station was cut at 1,875'. Due to very favorable developments on upper levels, no station has as yet been made at 2,000', but this will be done in near future.

Lead-silver ore was encountered at a point 132' below the 1,700' level and found more or less continuous for 90'. In the North Extension ground, a big body of lead ore was found at 1,000'.

These disclosures demonstrate the extension of the big ore zone the entire length of the property and practically from surface to water level, giving the Eagle & Blue Bell a very large stoping area.

Equipment: includes a 180 h. p. Hendrie & Bolthoff double-drum hoist, good for 2,000' depth, a 100 h. p. tubular boiler and a 4x6' electric triplex pump. The mine was electrically equipped throughout and a 250 h. p. Ingersoll-Rand air compressor and 225 h. p. electric hoist installed in 1916. Electric power is supplied by the Utah Power & Light Co.

Production:

	Tons	Oz. Gold	Oz. Silver	Lbs. Lead	Lbs. Copper
1916.....	25,594	987	347,501	5,714,776	577
1915.....	26,744	1,226	441,263	8,275,734	3,806
1914.....	32,736	1,444	554,411	8,588,565	31,443
1913.....	35,244	7,514	417,279	4,664,362	129,062

Decreased production in 1916 was due to the fact that the mine was not operated to full capacity, owing to installation of new equipment and because smelters refused to take more than 50 tons daily for several months.

Total shipments to date since 1908, 156,688 tons. Average grade of ore shipped in 1916 was (dry ore) \$20.74 compared with \$8.13 per ton gross value in 1915. Gross value of total ore shipments in 1916 was \$530,850, giving net smelter returns of \$323,394. Shipments are made to Salt Lake Valley smelters.

Victoria Consolidated Mining Co.

Owned by Bingham Mines Co.

Office: 404 Dooly Blk., Salt Lake City. Mine at Eureka, Tintic district, Juab Co., Utah.

Officers: James P. Graves, pres.; Harold P. Fabian, v. p.; with A. L. Hoppaugh, R. E. Mark and Chas. C. Dey, directors. J. R. Brain, sec.; Sydney S. Millett, treas.; Provo. Imer Pett, gen. mgr.; Wm. Owens, supt.

Inc. March 7, 1899, in Utah. **Cap.**, \$70,000; shares 10c par; \$49,985 issued. Has paid \$232,492 dividends to June, 1917.

Annual meeting first Monday in January. Net operating gain in 1916 was \$35,451.

Property: 7 patented claims, 50 acres, includes the Snowflake and Victoria mines at Eureka. Ore is gold-silver-lead with some copper, occurring in chamber deposits in limestone. Pay ore occurs in shoots and streaks of variable size, up to 100' in width.

Development: includes 1,200' shaft with 2,500' of workings. Has compressor, added 1913, 112 h. p. hoist, and uses electric power.

Company has made an agreement with Plutus Mining Co. for running a crosscut from the Victoria 1,200' level into its ground. This work will explore Victoria ground for 400' or so east of the shaft.

Production: 7,455 tons in 1912; 12,552 tons in 1913; 8,763 tons in 1914; 3,071 tons in 1915; 7,339 tons lead ore in 1916; a total of 66,145 tons. Shipments in 1916 gave net smelter returns of \$73,136.

Yosemite Mines Co.

Subsidiary of Bingham Mines Co.

Property: 12 claims, patented, in the West Mountain mining district, Bingham Canyon, Utah.

Development: by the Yosemite shaft connecting with the Mascotte tunnel on the 2,200' level and the 1,650' Paradox tunnel. Work done on 500' level, Lead Mine vein, and on 800' level on the Yosemite vein, in 1916. A raise driven from 800' level to the Cluster develops the Cluster ore-bodies and ventilates the 800' level.

Production: 795 tons shipped, 1916, giving smelter returns of \$12,301.

Lessees produced 245 tons and paid company \$1,811 in royalties.

BINGHAM-NEW HAVEN C. & G. MNG. CO.

UTAH

Absorbed by the Utah Metal & Tunnel Co., and property described thereunder.

CONGOR GOLD & COPPER MINING CO.

UTAH

Office: 506 Auerbach Bldg., Salt Lake City, Utah. Mine near Bingham Canyon, Salt Lake Co., Utah.

Officers: Glen R. Bothwell, pres. and gen. mgr.; R. C. McConaughy, v. p.; Frank E. Loose, sec.; preceding, with E. F. Jenkins and C. G. Hall, directors, at last accounts.

Cap., \$1,000,000; shares \$1 par.

Property: 10 claims, 150 acres, adjoins the Bingham Amalgamated on the north, in Bingham Canyon, Salt Lake Co., Utah. Developing 3' vein from 4,000' tunnel of Montana Bingham Co., working about 100' from face of tunnel. Mine reported to have about 100,000 tons of ore exposed, running from \$6 to \$50 per ton and averaging \$14.

Company has a contract with the Montana Bingham Consolidated Mining Co., shipping its ores through the Miller Ore Transportation tunnel of that company to the Denver & Rio Grande railroad tracks at a cost of 25c per ton of ore and 12½c. per ton of waste.

FORTUNA MINING & MILLING CO.

UTAH

Office: Bamberger R. R. Bldg., Salt Lake City, Utah. **Mine office:** P. O. Box 123, Bingham Canyon, Salt Lake Co., Utah. Simon Bamberger, pres.; J. B. Bean, sec.; E. A. Vail, engr.

Inc. March 10, 1904, in Utah. **Cap.,** \$300,000; shares \$1 par; non-assessable; fully issued.

Property: 23 claims, mainly fractional, 170 acres, adjoining the Congor in Keystone gulch. Mine was opened 1875 and closed 1908. The property is now operated under bond and lease by the Montana Bingham Cons. Mining Co. and is described under that title. The property has apex rights to six important bedded veins, of which the Mayflower and Fortuna are the most important. The former is a well defined bedding fault vein in quartzite, but inasmuch as the adjacent rock is shattered and impregnated

with pyrite coated with copper glance, the ore averaging 1.8% copper, the vein is actually 30' or more thick, whereas the pyrite vein filling may be but 2' to 8' thick.

Production: 1905-1907, under Wm. N. Rossberg, 16,000 tons copper-iron ore assaying 5% copper, with \$2 to \$4 in gold-silver; also 4,000 tons lead ore assaying 30% lead and \$4 to \$8 in gold and silver. The panic of 1907 closed the mine until June, 1916.

The bond is held by the Fortuna Mine Leasing Co., who gave option on a 75% interest to M. B. Cons. M. Co.

GENERAL EXPLORATION CO.

UTAH

Alfred Frank, gen. mgr., Newhouse Bldg., Salt Lake City, Utah.

Officers: Alfred Frank, pres.; E. L. Newhouse, Jr., v. p.; O. Bamberger, sec.-treas. (all of Salt Lake City); above, with John MacGinniss of Butte, and O. W. Saacke of New York, directors.

Inc. in Utah, in June, 1915. **Cap.**, 10,000 shares; \$1 par; 7,500 outstanding.

Company was formed to operate the property of the Ohio Copper Co., under a lease obtained from the receivers and trustees in bankruptcy. Renewals of this lease were made from time to time until Jan. 1, 1917, when the property was taken over by the reorganized Ohio Copper Co. of Utah. Royalties aggregating upwards of \$500,000 were paid, and lessees are also said to have made large profits.

GREAT DIVIDE MINES CO.

UTAH

Inactive. **Office:** 422 McCornick Bldg., Salt Lake City, Utah. **Mine office:** Lincoln, Tooele Co., Utah.

Officers: Henry A. McCornick, pres.; Walter A. Cooke, v. p. and gen. mgr.; Jos. H. Hurd, sec.; Rodney T. Badger, treas.; John B. Taylor, supt.

Inc. Aug. 15, 1903, in Utah. **Cap.**, \$2,000,000; shares \$5 par; non-assessable. Company controls Western Mining & Milling Co. and Homestead Tunnel & Copper Co.

Property: 108 claims, mainly patented, 1,735 acres, 600 considered as well mineralized, with 160 acres mill and smelter sites, lying on the Tooele side of the Oquirrh mountains and on the summit of the range, west of the holdings of the Utah Consolidated. Property shows Cambrian quartzite, monzonite-porphry and altered limestone, with a number of fissure veins and contact deposits between limestone and quartzite. Claims cover 11,600' on the westerly course of the mineralized limestone beds of Bingham. This tract is 2 1/6 miles from E. to W. and 10,800' N. S., and contains the apexes of many ore-bearing fissures, and the westerly extensions of the ore-bearing limestone bed worked in the Utah Consolidated, Bingham, New Haven, Utah, Apex and Yampa mines.

Development: includes the 400' Homestake tunnel in Pine Canyon; 525' North tunnel at 6,600' elevation, and the 2,457' Spring tunnel. These tunnels are prospect work only, but ore is cut in the last named at 1,050' in, and shows a 5' width for 40' along the drift and in a 25' raise. A vertical E. W. fissure 100' wide is also cut at 2,250' from the portal and shows kidneys and stringers of silver-lead ore.

Equipment: includes a 35 h. p. electric plant, with a 1-drill Ingersoll air compressor, and there are 10 buildings, including a small power house, 2 smithies, a bunk house, stable and dwellings. Electric current is taken from the Telluride Power Co., over this company's private line from the sub-station at Bingham. Property considered promising, but no recent news received.

HIGHLAND BOY GOLD & COPPER MINING CO.

UTAH

Controlled by Utah Cons. Mining Co., and described under that title.

HOMESTAKE T. & C. CO.**UTAH**

Idle. Is a subsidiary of the Great Divide Mines Co. and controlled by John B. Taylor, v. p., 678 E. So. Temple St., Salt Lake City; Walter A. Cook, sec.-treas.

Inc. 1906, in Utah. **Cap.**, \$100,000; shares \$5 par; assessable; fully issued. Is a close corporation, with only 5 stockholders.

Property: 30 claims, in Pine Canyon, West Mountain section, Tooele county, with water rights, tunnel rights and franchise for a deep tunnel, from Pine Canyon into the Bingham district; also several hundred acres of bench lands, and an 800-acre smelter site, 4 miles from the International smelter. Claims show veins with lead and copper ores.

KEYSTONE EXTENSION MINING CO.**UTAH**

Mine near Bingham, in West mining district, Salt Lake Co., Utah. Company inactive for some time owing to heavy flow of water in mine workings. **Property** covers about 3,000' of the Keystone vein outcrop and shows ore said to average \$14 per ton in gold, silver, lead and copper values, from surface down to bottom of 165' shaft.

Development: by inclined shaft with drifts on vein opening up stopes from which shipments have been made. The Montana Bingham Consolidated Mining Co. is to open the ground by its deep tunnel, thus eliminating pumping costs and heavy wagon-haul charges on ore shipped, but no recent information can be obtained.

MINERAL LANDS CO.**UTAH**

Idle. **Office:** 36 Exchange St., Portland, Me. **Mine address:** Bingham Canyon, Utah. J. A. Waterman, treas.

Inc. 1913, in Maine. **Cap.**, \$500,000; shares \$5 par. Company owns entire capital stock of the Markham Gulch Mining & Milling Co.

Property: the Red Wing and Butler-Liberal mines, with about 300 acres in Markham gulch, formerly owned by the North Utah Co., at Bingham, Utah. The claims carry the Florence and Erie fissures, latter having been a good producer in the upper levels.

Development: mainly by tunnels, with about 5 miles of workings, showing ores carrying lead, silver, copper and gold values, in about the order named.

Equipment: includes 200 h. p. electric hoist and 12-drill compressor. No recent returns received.

MONTANA-BINGHAM CONSOLIDATED MINING CO.**UTAH**

Office: 66 West Broadway, Salt Lake City, Utah. **Mine office:** Bingham Canyon, Salt Lake Co., Utah.

Officers: C. G. Ballentyne, pres. and mg. dir.; L. R. Eccles, v. p.; E. A. Vail, sec.; John Pingree, treas., with W. E. Hubbard, and J. Jorgensen, directors; J. B. Leggatt, gen. mgr.; Harry Bowman, supt.

Inc. July, 1910. **Cap.**, \$3,000,000; shares \$1 par; issued, 1,783,000 shares. Owns 156,000 shares of Bingham Amalgamated C. Co. stock. **Debentures:** \$200,000, at 6%, due June 1, 1918; \$183,000 outstanding; total assessments to date, \$18,164.

Property: Original holdings consisted of the Puritan and Eddie groups, carrying the Quinn fissure, the main ore fissure of the Utah Copper ground.

During 1916 the company purchased the Tiewaukeee mine, which has produced over \$1,500,000 of high-grade shipping ore; also the Valentine patent, which carries the mineral right under the town of Bingham; the Thrush claim; and in May, 1917, acquired a controlling interest in a bond and lease held by Jas. E. Higgins, of Butte, Mont., on the Fortuna mine, giving the company control of approximately 640 acres immediately adjoining the Ohio Copper and surrounding the Starless mine on three sides.

On Nov. 7, 1917, purchase of the Fortuna was completed. The deal was financed by sale of the balance of treasury stock to Honolulu, Salt Lake City and Los Angeles interests. About 1,000,000 shares were taken and paid for by the syndicate, and \$240,000 was set aside to redeem outstanding bonds, and complete payment for the Tiewaukee and Valentine mines.

The most important holding of the company is the Fortuna mine, which shows an intruded sheet of monzonite-porphyry in tilted series of quartzite and limestone beds, traversed by four nearly parallel veins following the strike and dip of the monzonite sheet or of the quartzite bedding, occasionally cutting across, and accompanied by some fracturing and crushing. Veins 2' to 25' thick, carry streaks and shoots of pyrite, some of them with good copper value, as chalcopyrite and chalcocite. Southern workings have shoots of silver-lead ore and much copper ore occurs in Eastern end of workings, 20'-50' thick with 2% copper.

Development: by an incline shaft 1,100' deep, and an inner blind shaft below the tunnel. The main development is along the 4,200' Keystone tunnel with one lower and 2 above it. Total workings are 16,000'. Mine was opened in 1875 and closed in 1908. Is equipped with 1,500' hoists and a compressor.

The Montana-Bingham tunnel is a deep transportation and drainage tunnel, which develops the Congor, Fortuna and other holdings at great depth, the Fortuna group alone covering over 1,000 acres of patented mineral ground. On Aug. 25, 1917, the tunnel was in 5,470', has cut six veins and penetrated the quartzite beneath the Keystone porphyry of the Fortuna mine.

In the various properties owned and controlled by the Montana-Bingham there is said to be a large tonnage of milling ore and the company claims many million tons partly developed and indicated.

A flotation mill is now in operation on the Fortuna section of the property, which will treat 250 tons daily.

Tiewaukee mine: main tunnel, over 1,000' long, cut several bedded veins, large stopes of old workings north of it, that contain much milling ore. Pillars left in stopes show 18.9% lead, 6% copper, 27 oz. silver per ton. An ore-bearing fissure was cut at 310' from the portal. Tiewaukee shaft is 90' vertical, connecting with a drift from the main tunnel, while shaft continues as an incline on the bedded vein. In 1917 the shaft was continuing vertically 110' below the tunnel level, the rock changing from quartzite to limestone.

The Valentine mine, also in Bingham Canyon, has been an irregular shipper from an orebody, assaying 4% copper. It has a 500' tunnel and 225' shaft, cutting a vein of silver-copper ore.

Company has contracts with Bingham Amalgamated C. Co. and will receive 10% of net proceeds on all ore shipped through the tunnel; from Keystone Extension Mng. Co., 25c per ton of ore and 12½c per ton for waste; from Bingham-Congor C. Co., 15c p. t. of ore or waste; from Fortuna Mng. Co., 25c p. t. ore and 15c per ton for waste; also an agreement with Col. E. A. Wall to handle Starless ores when drift from tunnel has been extended on one of Montana-Bingham veins into Starless ground; 300,000 gallons water per day is flowing from tunnel, which is valuable for milling, etc. When completed tunnel will cut 10 veins at 1,000'-2,200' depth on their dip and will drain them, allowing cheap mining. Tunnel mouth is near the D. & R. G. railway sidings.

If properly financed and placed under one competent manager the company should become a dividend payer in a short time.

NEW ENGLAND GOLD & COPPER MINING CO.**UTAH****Office:** 67 Milk St., Boston, Mass.**Mine office:** Bingham Canyon, Salt Lake Co., Utah.**Officers:** Jas. S. Williams, pres.; E. E. Abercrombie, v. p. and managing director; Geo. F. Bradstreet, sec.-treas.; preceding, with Woodford Yerxa, Francis H. Dowse and Geo. Bancroft, directors.**Inc.** June, 1899, in Colorado. **Cap.**, \$2,000,000; shares \$10 par; issued, \$1,294,467.**Bonds:** \$500,000 authorized, at 6%; issued, \$390,000. Paid a 10% stock dividend, Oct., 1908. Federal Trust Co., Boston, registrar; Geo. F. Bradstreet & Co., transfer agents. Annual meeting, first Monday in June.**Property:** the Bingham group of 9 fractional claims, 18 acres, in the Bingham, or West Mountain district, Utah, lying south of the Boston Consolidated, next to the Last Chance group and near the Utah Metals property. The company also owns a group of 4 claims at Goldfield, Nev.

The old Nast mine of the Bingham group shows porphyritic country rock carrying 3 fissure veins, of 30" average width, opened by the 1,600' Nast tunnel and the 1,670' Benton tunnel, both in ore, and 2 shafts, 1 of 159', with a total of about 6,000' of workings. Veins are said to widen at depth and ores are said to give average assays of 30% lead, 10% zinc, 15 oz. silver and \$4.50 gold per ton, with small and variable percentages of copper, some of the monzonite country rock carrying copper values that may prove workable at some later date.

Equipment: includes a steam plant with 2 hoists, 1 of 30-h. p., good for 800' depth. The concentrator has a 4x12" Sturtevant crusher, 2 rolls, 2 Hartz jigs and 1 Wilfley table, operated by commercial electric current.**Production:** was 2,108 tons of lead concentrates and 165 tons of copper ore, 1907, but property was closed down, late 1907, and mine was worked on only a small scale, 1908 to 1910, securing 936 tons of ore, giving net smelter returns of \$36,986. In 1910, the Utah Metal Mining Co. sued this corporation for \$700,000 damages, alleging trespass and illegal ore-extraction. A survey proved that company was not guilty of trespassing and suit was cancelled.

In 1911 the mine produced milling silver-lead ore, yielding 150 tons high-grade concentrates per month, netting the company \$25,874. In 1913 output was reduced to 8,360 and the mine was shut down by reason of western creditors forcing their claims. The Trust Co. holding mortgage securing the bonds, foreclosed same, Dec., 1915, at request of the bondholders and a reorganization of the company was contemplated. Interest, amounting to \$46,800 on bonds has not been paid since Feb. 1, 1914.

NEW UTAH BINGHAM MINING CO.**UTAH****Office:** 62 Broadway, New York. **Mine office:** Bingham Canyon, Utah.**Officers:** J. C. Blanc, pres.; N. O. Connor, sec.; H. A. Bellows, treas.; preceding, with H. F. Hoevel, J. W. MacRae, F. Harold Brown and F. T. Bellows, directors; P. M. McCree, supt.**Inc.** April, 1912, in Maine. **Cap.**, \$1,375,000; shares \$2.50 par; \$2.50 paid; 230,287 shares outstanding.**Bonds:** authorized, \$100,000, 5-year, 7%, issued Sept. 23, 1911, and payable Sept. 23, 1916; \$14,000 outstanding, \$23,000 cancelled. Bonds now being re-funded. Security Transfer & Registrar Co., New York, transfer agent. Stock is listed on New York Curb and London Stock Exchange. Annual meeting 3rd Wednesday in June. Company acquired property and assets of the Utah Bingham Mining Co. for \$1,182,550, giving the shareholders one new share, \$2.15 paid, for each \$5 share held.**Property:** 20 claims, 19 patented, 130 acres adjoining the Telegraph mine

of the United States Mining Co., in Bingham Canyon, Utah. Claims cover about 3,000' along the footwall portion of the Jordan limestone ore-bearing zone of Bingham. The large orebodies of this district are found in fissures within the limestone, or along limestone contacts, and the Jordan belt is the most productive of the 3 belts known in the camp; 16 fissure veins have been opened. Before the company acquired the property a number of promising veins carrying ore in the porphyry, but too narrow to be valuable, had been exposed. These veins pass into the limestone and are expected to have large orebodies at the contact. Ore is mainly silver-lead.

Development: consists of about 15,000' of work, mainly by 3 tunnels. In the Turngren tunnel, over 1,300' long, 8 veins from 1 to 4' thick have been cut, 7 showing ore and 2 of them worked. These two veins run north, are parallel and contain high-grade ore in the Spanish mine and along the outcrop in the company's ground. The Harrison tunnel, 600' long, is in quartzite and will crosscut the Rough and Ready veins, which are opened by 3 other tunnels higher up the mountain, all showing ore. Work on these veins has been discontinued and all work concentrated on the Giant Chief.

The Giant Chief vein is a fault fissure, developed by a 200' shaft from which further exploration is being conducted on the 150' level; 600' of drifts and crosscuts driven in 1915 from this point have at 800' depth in the sulphide zone cut 7 fissures encountered in the higher workings. These veins carry oxidized mineral matter, surrounded by a soft lime, and show porphyry mineralized with iron pyrites. A small vein of carbonate ore, running nearly 50% lead, has been opened; the Bonanza tunnel was driven 977' along the Giant Chief vein, and then across it to reach the ore, 150' deeper than where first opened.

Equipment: includes compressor, 180-h. p. electric plant, taking current from the Utah Power & Light Co., hoist and all necessary buildings.

Production: recent shipments said to have assayed 17.33 oz. silver, 1.49% copper, 23.5% lead, 22.8% iron, 10.7% silica.

Property is well adapted for tunnel work, has large blocks of virgin ground and is considered promising. Company is an intermittent producer.

NIAGARA MINING CO.

UTAH

Is controlled by United States Smelting, Refining & Mining Co.

NORTH BINGHAM CONSOLIDATED MINING CO.

UTAH

Office: Provo, Utah. Mine near Bingham Canyon, Salt Lake Co., Utah. Jesse Knight, pres.; Wm. W. Mathews, v. p.; W. Lester Mangum, sec.-treas., and J. Wm. Knight, directors.

Inc. June, 1907, in Utah. **Cap.,** \$100,000; shares 10 cts. par; assessable; levied a one-half ct. assessment, 1910. Is controlled, through stock ownership, by the Knight Investment Co.

Property: 6 claims, in Barney Canyon, has a very wide ore zone, said to show leached ore carrying traces of copper and up to \$2.80 gold per ton.

Development: includes a tunnel of about 1,000', and a 2-compartment shaft. Property is considered a good development proposition. Idle.

OHIO COPPER MINING CO. OF UTAH

UTAH

Office: 43 Exchange Place, New York.

Officers: H. E. Rogers, pres.; Chas. A. Kittle, v. p.; E. S. Hooley, v. p.;

S. K. Kellock, sec.-treas.; Alfred Frank, gen. mgr.; above with J. H. Flagler, M. N. Buckner, A. R. Rogers, A. R. Peacock, Hugh Aiken and S. B. Sherman, directors.

Inc. Nov., 1916, in Maine, as a reorganization of the Ohio Copper Mining Co., formerly the Ohio Copper Co. **Cap.**, \$2,500,000; shares \$1 par; 2,200,000 issued.

Net profit for first 3 months, 1917, was \$180,122.

History: the Ohio Copper Mining Co. was inc. July 8, 1912, as a reorganization of the Ohio Copper Co., with capital of \$8,000,000, acquiring the mining claims of the latter company. The Ohio Copper Mining Co. assumed \$1,242,000 Ohio Copper Co. 6% convertible gold bonds; dated September 1, 1907, due September 1, 1917; bonds were secured by first mortgage on all mining property, plants and real estate then owned, or which might be acquired thereafter.

On September 1, 1914, the company defaulted payment of interest on bonds, whereupon a bondholders' protective committee was formed, which requested deposits of the bonds with the Mutual Alliance Trust Co. of New York as depository. On September 14, in the United States District Court of New York, Judge Mayer appointed Morris J. Hirsch and George C. Austin as receivers of the company in bankruptcy proceedings brought by creditors. On October 27, Clark Grove, E. McCormick and Charles T. Lark were appointed trustees to represent the creditors. On September 19, 1914, the company filed a voluntary petition in bankruptcy, scheduling assets of \$1,343,257, and liabilities of \$1,668,838. On July 16, 1916, the Empire Trust Co. of New York, as trustee under the bonds filed suit to foreclose the mortgage. The property was sold under foreclosure on August 30, 1916, to a representative of the bondholders' committee for \$750,000. Meanwhile, the mine and mill were being operated by the General Exploration Co. under lease from the receivers.

After the foreclosure sale, three plans of reorganization were devised, one by the bondholders' protective committee and one each by two stockholders' committees. That of the "Rogers" (so-called from the name of the chairman, Hubert E. Rogers) stockholders' committee was acceptable to the Court; the former sale was set aside and the property sold to this committee for \$1,350,000.

Under the plan of the Rogers' Committee, there was to be paid into Court whatever amount should be found due upon the bonds less whatever sums had been realized on the property: (a) By the trustees in bankruptcy; (b) By the receivers appointed in the foreclosure proceedings; (c) By the purchaser since the foreclosure sale; after deducting, in all cases, whatever amount the Court should determine should be deducted for expenses in connection with these various matters.

Stock of the new company was to be issued to the committee to be disposed of as follows: 1,500,000 shares to be sold to an underwriting syndicate at par less 15% commission; 150,000 shares to be retained by the committee for reorganization purposes; 850,000 shares to be placed in the company's treasury for future needs. Of the shares to be sold by the underwriting syndicate, the stockholders of the 1,350,000 shares of the Ohio Copper Mining Co. were given first opportunity to acquire new stock in exchange for their holdings on a share-for-share basis and payment of \$1 per share. The amount raised by this sale of stock was sufficient to pay off outstanding bonds, clear the property of all indebtedness and provide a working capital of approximately \$200,000.

Property: 14 claims, patented, 120 acres, bounded on the N. and W. by holdings of the Utah Copper Co., on the E. by the Fortuna Mining & Milling Co., on the S. by United States Mining Co., and on the S. W. by the Boston Consolidated. The Mascotte tunnel, controlled by the Heinze Estate, through the Bingham Central railway, exacts a toll of 15 cts. per ton on all ore extracted through that avenue, yielding a very considerable revenue to the owners.

Reported Sept., 1917, that company has secured stock control of the Bingham Central R. R., which owns the Mascotte tunnel.

Geology: property carries some ore in veins along a mineralized zone with E.-W. strike and dip of 45° N., consisting of a belt of quartzite of 500' width carrying 2 parallel veins, known as the What Cheer and All's Well. These veins are more than 500' apart, and separated by mineralized quartzite which constitutes the main orebody of the property, the ore averaging 1.015% copper. The quartzite, which adjoins the laccolithic mass of monzonite-porphry of the neighboring Utah Copper and Boston Consolidated properties, is much shattered and broken, with ore disseminations and impregnations along shatter and cleavage planes, in the brecciated material, ore being chiefly chalcocite and chalcopyrite, associated with pyrite, readily amenable to concentration, and lying above the level of the Mascotte tunnel.

Estimates of ore developed vary greatly, the former management claiming that ore had been developed under about 5 acres, the porphyritic orebody being estimated as 400' wide, 1,000' long and 600' deep. One estimate gave 3,746,165 tons of ore developed with 9,738,690 tons of probable ore and the average tenor probably about that of the ore milled; or 1.01% copper.

The 14,000' single track Mascotte tunnel, connecting with the shaft at depth of 1,100', cares for the large volume of water coming from the workings. Ore is blocked out in 100' squares, with extensive development on the 3rd, 5th and 7th levels, and the caving system is used in extraction. Ore is sent from the upper workings, through chutes, to a 4,000-ton ore-bin, 20' wide and 200' long, extending over both tracks; loaded in about 4 minutes from the bins into trains of 18 to 20 five-ton double-bottom steel cars, and hauled by electric locomotives, to the concentrator at Lark.

The mill, at Lark, 3,200' from the mouth of the Mascotte tunnel, is 317' long and 391' deep, in 5 units, built in 6 terraces. Capacity is 3,000 tons daily, and in October, 1917, about 2,300 tons was being treated, the flotation units not being ready. Equipment includes 2 coarse and 4 fine Blake crushers, elevators, trommels, conveyors, 4 roughing and 8 finishing rolls, of Allis-Chalmers make, 16 Monadnock Chilean mills, 144 jigs, 288 Wilfley and James tables, and Callow classifying tanks. The installation includes 51 motors, ranging from 15 to 150-h. p.

Recovery was low, about 47%, and in 1917, an experimental 500-ton Minerals Separation plant and 150-ton Janney machine were installed. Results were excellent, at least 80% of the copper contents being saved. Flotation system is being installed throughout mill, 1917.

Production: for first 3 months, 1917, was 1,424,247 lbs., netting \$147,279. In August, 2,300 tons of ore were being handled daily. Company had 1,919,758 lbs. copper in the hands of the A. S. & R. Co., Aug., 1917.

The property should prove profitable from now on with higher extraction of copper and a thoroughly competent management.

PHOENIX MINING CO.

UTAH

See Utah Apex Mining Co.

PINE CANYON & BINGHAM TUNNEL CO.

UTAH

Office: 121 N. W. Temple St., Salt Lake City, Utah.

Officers: J. B. Moreton, pres.; Richard Savage, v. p.; Homer Benton, 2nd v. p.; Louis Levine, sec.-treas.

Inc. July 28th, 1916, in Utah. **Cap.**, \$1,500,000; \$1 par; 800,000 issued and in secretary's hands.

Property: 42 claims, 150 acres patented, covering apex of mountain, W. of Bingham, shows two N. E.-S. W. fissures, a bedded contact deposit and the Star vein, in quartzite, carrying limestone beds and cut by Bingham monzonite porphyry.

Company owns 2,000' tunnel running from Pine Canyon toward Bingham. Portal of the tunnel will be 1½ miles from the International smelter at 5,600' elevation. The Great Western tunnel at an elevation of 7,300' is between the Great Divide group and the Star group, half way up the mountain side between the Nancy Hanks and the portal of the new Pine Canyon tunnel.

SAMSON MINING CO.**UTAH**

Subsidiary of the Bingham Mines Co.

SILVER SHIELD MINING & MILLING CO.**UTAH**

Office: McCornick Bldg., Salt Lake City. Mine office: Bingham Canyon, Salt Lake Co., Utah.

Officers: Henry Cohn, pres.; H. S. Joseph, v. p.-gen. mgr.; H. W. Cram, sec. with J. M. Hayes, Lou Moore, R. E. Mills and J. M. Soloman, directors.

Inc. in Utah. Cap., \$300,000; shares \$1 par; assessable; 285,000 shares issued. Paid \$4,500 in dividends prior to 1903. Listed in Salt Lake City. Requests for information ignored.

Property: about 320 acres, at Bingham Canyon.

Ore: carries mainly silver-lead, with some gold.

Development: by a tunnel over 8,000' long, connected with tunnel of the U. S. Mng. Co. Reported in 1916, that a 4' vein of \$40 ore had been found by a lessee, 3,500' from the tunnel portal. Several carloads of ore reported to have been shipped and mine now worked on company account. Also reported Sundays have been designated as days upon which visitors will be welcome.

Shaft from surface to tunnel is to be sunk 500'. Was down 100' in Sept., 1917. Lessees are working on lead ore near the surface and underground. Company states that it is earning expenses.

Equipment: hoist, 5-drill compressor, 50 h. p. motor, etc.

STARLESS MINE**UTAH**

Office: care Col. Enos A. Wall, owner, Salt Lake City, Utah. Mine office: Bingham Canyon, Utah.

Property: 8 claims patented, 160 acres, lying N. E. of the holdings of the Utah Copper Co., is developed by an incline shaft and numerous tunnels, longest 2,000', with crosscuts and upraises, aggregating 10,000'.

Development: said to block out 800,000 tons of 1 to 2% copper ore.

Equipment: includes a hoist.

The 125-ton mill, enlarged and remodeled 1910, at a cost of \$50,000, is equipped throughout with machinery of Col. Wall's own design, comprising Wall corrugated rolls, Wall steel rolls for middlings, 3 sets of jigs, 2 tables for concentrates, 2 Wilfley tables, and washers, of trough form, with valves and sprayers, concentrates being discharged through the bottom and sands from the top.

STIBNITE MINING CO.**UTAH**

Address: H. C. Baker, 2421 Washington Ave., Ogden, Utah.

Officers: H. C. Baker, pres.; A. M. Miller, v. p.; G. M. Flowers, sec.-treas.; with Leroy Buchmiller and H. J. Craven, directors.

Inc. April, 1917, in Utah. Cap., \$100,000; shares 10c par; 800,000 issued; non-assessable.

Property: 686 acres, patented, 4 miles N. of Bingham, in Wasatch Range, Box Elder Co., Utah.

Development: by 2,452' adit, total openings 4,315' to depth of 800', showing various types of deposits in limestone, quartzite and shale, the ore containing lead and antimony. Reserves are estimated at 126,000 tons. Antimony ore mined in 1916 was 67 tons, assaying 66% metal.

Equipment: compressor, 6,200' tram, 125-ton concentrating plant. Flotation is to be added in 1918.

TOM MOORE GROUP**UTAH**

Office: 159 South State St., Salt Lake City, Utah. Mine office: Bingham

Canyon, Salt Lake Co., Utah. A. M. Surbaugh and Thos. Moore Surbaugh, owners.

Property: 39 claims, 22 patented, 715 acres, with direct rail connection, in the N. E. part of the Bingham camp.

Development: by 16 shallow shafts and short tunnels, principal work being by the Highline tunnel, with another tunnel driving at lower depth. The mine carries gold and silver-bearing lead and copper ores, with small quantities of native copper, in quartz. Owners do not care to have output or other details made public, and returned letters unopened in May, 1917.

UTAH-APEX MINING CO.

UTAH

Office: 10 Post Office Square, Boston, Mass. **Mine office:** Bingham Canyon, Utah.

Officers: R. F. Haffenreffer, Jr., pres.; J. J. Murphy, v. p. and treas.; with N. P. Duvally, sec., W. F. Coffin and G. F. McGahey, directors; A. A. Robert, Jr., asst. sec.; V. S. Rood, supt.

Inc. May, 1902, in Maine, as a merger of the Copperfield Mining Co. and York Mining Co. **Cap.,** \$3,000,000; increased 1906, from \$2,500,000; shares \$5 par; issued 528,200 shares.

Bonds: \$500,000, authorized at 6%, convertible, were retired July 1, 1916. Company absorbed the Highland Boy, Petro, Minnie and Phoenix mining companies. State Street Trust Co., Boston, transfer agent. Annual meeting, second Thursday in November.

Balance sheet for year ended Aug. 31, 1917, shows assets totaling \$3,840,349, including \$2,480,789 for cost of properties; \$486,702 cash; \$321,475 for development and equipment.

For fiscal year ending Sept. 1, 1917, gross ore sales, royalties, etc., were \$1,273,571. Mining, development and milling cost, \$688,172; general insurance, taxes, depreciation (\$94,066), etc., \$251,350, leaving a net profit of \$334,049. Dividends absorbed \$132,050.

Dividends: initial quarterly dividend, 12½c, paid Oct. 1, 1915, 75c in 1916, and 50c in 1917, to Oct. 15. Total is \$726,275.

Property: 34 claims, 244 acres, including the York, Copper Field, Petro, Highland Boy Consolidated and Phoenix groups, adjoins the Utah Consolidated on the S. and W., on York hill, Carr Fork canyon.

Geology: claims show limestone and quartzite, carrying the Parnell, Petro, York, and Andy bedded veins. These veins are cut by several fissures which have been more or less developed. The Dana, the principal orebody, is apparently a contact deposit between quartzite and limestone, showing an ore-shoot standing vertically, without disseminations in the contact, up to 15' in width and 500' in length on the 4th level. The mine primarily is a producer of high-grade lead ore, but has considerable copper, and some zinc; all ores carry silver and gold values with an excess of iron, giving low smelting charges. First-class ores carry about 2% copper, and \$6 to \$8 combined gold and silver values per ton, the second-class copper ores carrying about \$3 per ton in combined gold and silver values. First-class lead ores carry 35 to 50% lead, with silver and gold values, and second-class lead ores range 7 to 14% in lead tenor, with small gold and silver values.

Development: by 3 shafts and 6 tunnels, with several miles of openings. The main working shaft is down to the 1,500' level. The tunnels, known as the Parnell, Minnie, Smilax, Andy, Andy No. 2 and Parvenu, are spaced at 200' vertical intervals, and are connected by incline blind shafts, with electric hoists, on the Parnell vein, which is estimated by the company to be 5' in width and to be mineralized for about 1,000' in length and to 2,000' in depth. The Andy tunnel develops 3 ore-shoots, on the Parnell vein. The Parvenu tunnel, which is the principal working, is about 1 mile in length, cutting the Parnell vein with a back of about 2,200'. Since the decline in the copper market 1907, attention had been

devoted mainly to silver-lead ore. A silver-lead orebody opened in the Parvenu tunnel, having a maximum thickness of 100', with a width of better than 100' and length undetermined, shows direct smelting ore of 15 to 20% lead, with 3 to 5 oz. silver per ton, and excess of iron, estimated to carry net values of \$8 to \$10 per ton. The Parvenu shaft was completed to the surface, and a new hoist started in April, 1917.

A 3,000' Bleichert aerial tram, not in present use, runs from the portal of the Andy tunnel to a loading station. Ore is shipped over a spur track of the railway line of the Utah Copper Co.

Mine was examined 1916, by Pope Yeatman, who discussed the lead-silver, lead-silver-zinc and copper ore occurrences, of which lead has been the most important. There is little chance for development of ore between 200 and 1,000' but above 200' there are possibilities. The York beds show promise of ore at depth. The principal orebody is the Parvenu, which on Nov. 1, 1917, contained 50,000 tons of 14% lead and 14% zinc ore. Its lower extension seems to be close to the 1,500' level. The future lies in extensive development, all other departments being in good order.

From March to late in May, 1917, the mine was closed on account of a fire in the lower levels, necessitating flooding the workings. This cost \$43,000 cash.

Ore reserves are estimated at 73,000 tons, assaying 0.03 oz. gold, 3.5 oz. silver, 11% lead, and 8% zinc. Present indications show that new ore will be opened faster than that mined.

Equipment: includes two 15-drill air compressors and 2 electric hoists, 1 of which is a double-drum Davis hoist installed at the 7th level station in the Parvenu tunnel. In April, 1917, a new Nordberg hoist was installed on the surface. The old Phoenix mill at the mouth of the Parvenu tunnel was dismantled and a new 200-ton mill built 1909, on the same site. The new mill is said to effect a concentration of 4 into 1, with a saving of about 77% of assay values. In 1914, company increased the capacity of the concentrator to about 350 tons daily, and in 1915 a flotation equipment was added.

The lead mill treated 53,518 tons in the year ended Aug. 31, 1916, from which 16,947 tons of concentrates were recovered. The copper mill treated 2,010 tons. Average cost of milling was 72.2c per ton in 1915, as compared with 79.8c in 1914. In 1917 the mill treated 17,637 tons of ore, assaying 0.034 oz. gold, 3.76 oz. silver, and 11.37% lead.

Company has contracts with U. S. Mng. & Sm. Co. and American Sm. & Ref. Co. for daily shipments of 300-400 tons lead zinc ore and lead ore and concentrates respectively. Employs 400 men.

Production: years ended August 31:

Year	Gold, Oz.	Silver, Oz.	Lead, Lbs.	Copper, Lbs.
1917.....	3,551	396,989	24,414,451
1916.....	4,924	620,022	37,304,675	2,355,475
1915.....	4,000	560,000	32,000,000	2,400,000

High prices for lead and silver resulted in larger profits, but with the recent decline in these metals the outlook is not so promising, specially also considering the conclusions of Pope Yeatman given above.

UTAH CONSOLIDATED MINING CO.

UTAH

Office: 42 Broadway, New York. **Operating office:** 608 Dooly Block, Salt Lake City, Utah. **Mine office:** Bingham Canyon, Utah.

Officers: R. H. Channing, Jr., pres.; Adolph Lewisohn, v. p.; with Sidney Chase, J. S. Dunstan, H. H. Anthony, J. W. Allen, Maxwell Woodhull, directors; A. H. Melin, sec.-treas.; Frederick Cowans, gen. mgr.; A. S. Winther, supt.; T. S. Van Wagoner, purch. agt.

Inc. 1903, in New Jersey. **Cap.,** \$1,500,000; shares \$5 par. Is a reconstruc-

tion of Utah Consolidated Gold Mines, Ltd., a British corporation that in turn succeeded the Sevier Gold Mines, Ltd., Oct., 1896. Property of the Utah Consolidated Mining Co. is 2,490 shares of the 2,500 shares of the capital stock of the Highland Boy Gold & Copper Mining Co., of New Jersey, the latter corporation holding direct title to the Utah properties. The company also owns 8,250 shares of stock of the Anaconda Copper Mng. Co., stock derived from sale of Internat'l S. & R. Co. Shares are listed on the Boston and Salt Lake stock exchanges. Annual meeting, first Tuesday in April.

The company's total income for 1916 was \$4,773,962, with surplus of liquid assets over liabilities of \$2,549,995. Net earnings were \$1,038,637 in 1903; \$1,164,348 in 1904; \$1,887,385 in 1905; \$2,835,008 in 1906; \$1,179,412 in 1907; \$326,312 in 1908; \$154,263 in 1909; \$65,348 in 1910; \$438,430 in 1911; \$603,923 in 1912; \$636,470 in 1913; \$565,665 in 1914; \$1,128,122 in 1915; \$1,924,177 in 1916.

Dividends:

1903.....	\$3.20	1908.....	\$2.00	1913.....	\$1.50
1904.....	3.00	1909.....	2.00	1914.....	2.00

1906.....	5.00	1911.....	.50	1916.....	1.50
1907.....	7.00	1912.....	1.50	1917.....	3.75

Total dividends to Sept. 28, 1917, \$45.89 per share, or \$13,767,000.

Property: 43 claims, patented, 404 acres, known as the Highland Boy group, in Carr Fork canyon, 2½ miles from Bingham canyon. The Highland Boy mine was a considerable producer of silver-lead ore, 1870-90.

In 1915 the Bingham Copper Boy group adjoining the Utah Cons. on the north was purchased for \$18,747. Property promising but undeveloped.

Geology: property has 6 ore deposits which are replacements of limestone beds, 150 to 300' thick, with quartzite above and below. These beds dip from 25 to 45° N. and the rocks are cut by a series of porphyry dikes that are nearly vertical and run N. E. The ore deposits form well-defined shoots with E.-W. strike and N.-E. pitch. They are large, varying up to 100' in width and 100 to 200' in length, and are separated by barren limestone; the largest orebody so far developed is said to be 320' in extreme horizontal width and 340' in length. An ore-shoot carrying galena was found in the lower workings in an extension of the Yampa limestone. The predominant ore of the mine carries chalcopryite, with some bornite and chalcocite, associated with pyrite in a limestone gangue.

Development: the Highland Boy mine is opened by an old 900' shaft, and 7 tunnels, of 1,000 to 2,600' length. No. 7 tunnel, 700' below the crest of the mountain, is 2,600' in length and is the main avenue of extraction, all tunnels being connected, and ore milled, through chutes, to the bottom tunnel. There are 2 blind shafts, deepest 500', starting from the 700' level, with large electric hoists, raising ore to that point for extraction by the electric haulage plant in No. 7 tunnel. The ore breaks easily and is extracted by the top-slice caving system, ore is broken mainly on contract.

New openings were 20,510' in 1913; 19,778' in 1914; 19,890' in 1915, and 25,819' in 1916.

On No. 13 level there was 5,328' of work done in 1916. East of the main shaft the principal copper orebodies were found smaller and more silicious. Two lead shoots were developed and one of 14,000 tons assay 17% lead, 5.52 oz. silver, 0.05 oz. gold and 0.7% copper. The other, opened for 70', contained 25.6% lead, 8.7 oz. silver, 0.06 oz. gold, and 0.65% copper. In the upper limestone, eastern section, at bottom of incline shaft, 70' of ore assayed 2.6% copper, 0.06 oz. gold, and 0.8 oz. silver, across 18" and 30' assayed 3% copper, 0.06 oz. gold and 0.8 oz. silver, across 24". West of the Occidental fault 5' of 15% lead, 4.04 oz. silver, 0.05 oz. gold and 0.3% copper ore was opened.

Ore reserves: estimated at end of 1915: 266,700 tons of 1.9% copper, \$1.00 gold and 0.69 oz. silver ore and 43,500 tons of 16.20% lead ore with 80c gold, 4.96 oz. silver and 0.7% copper; at end of 1916: 180,000 tons of 1.77% copper, 0.048 oz. gold and 0.69 oz. silver ore and 23,400 tons of 16.03% lead, 562 oz. silver, 0.038 oz. gold and 0.81% copper ore.

A 12,700' aerial tram leads from the portal of No. 7 tunnel to ore bins on the Rio Grande Western railway. There is a subsidiary aerial tram, crossing Carr Fork canyon, used for handling lumber and mining supplies.

While the great orebodies of the mine are worked out the property is far from exhausted, and development work is encouraging. In 1916, reserves were equal to half of the ore mined in that year.

Company mined 360,034 tons of 1.734% copper ore, and 74,542 tons 14.168% lead ore in 1916, the latter containing 4.249% silver per ton and 0.737% copper.

Production:

	Lbs. Copper	Lbs. Lead	Oz. Silver	Oz. Gold
1916.....	12,211,118	18,175,709	558,845	21,727
1915.....	8,836,091	17,777,604	370,985	19,387
1914.....	7,584,391	14,588,276	284,196	15,528
1913.....	7,710,668	19,208,063	378,960	14,172
1912.....	6,506,814	8,734,398	230,004	14,042
1911.....	9,162,023	3,311,939	160,366	16,730
1910.....	7,489,471	154,321	14,802
1909.....	10,043,900
1908.....	10,648,243

Total dividends paid to Jan., 1918, amount to \$78,465,778.

The company controls the Nevada Consolidated Copper Co., owning slightly more than 50% of the outstanding stock, having exchanged its own stock on the basis of 1 share of Utah for 2¼ shares of Nevada. The company controls, through stock ownership, the Bingham & Garfield Railway Co., described later. During 1910 the Utah Co. absorbed the Boston Consolidated Mining Co. and the Shawmut Consolidated Copper Co.

History: in 1862 General P. E. Connor was stationed at Fort Douglas, Salt Lake City, in command of the Third California Infantry, a regiment of volunteers largely recruited from experienced California prospectors and miners. General Connor believed that the prosperity of Utah would be enhanced by immigration from the outside. He therefore encouraged exploration for minerals in the State and freely gave furloughs to his miner soldiers, in order that they might do the necessary prospecting. As a result, mineral was discovered in Bingham canyon early in the fall of 1863, and it is probable that it was not long after this date until the first prospecting was done in what is now called the "Bingham copper porphyry." This prospecting consisted of a tunnel, afterwards called "Soldier Tunnel," driven into the copper bearing porphyry for a distance of 200' on the westerly side of main Bingham canyon, and on property now owned by the Utah Copper Co.

The mining property now embraced in the holdings of the Utah Copper Co. had been known to be copper-bearing for many years, but was supposed to be too low-grade to pay and was not taken up for active development until the organization of the original Utah Copper Co. in 1903. Previous to that time, any work done was in hunting for the rich copper ore that is found here and there in the seams of the rock and in the fissures and fault planes. In the spring of 1903, the Utah Copper Co. acquired a controlling interest in the property, and began the construction at Copperton of a 300-ton experimental concentrating mill. The work at the mine was commenced in November, 1903, and the mill began its operations in April, 1904.

The early development of the mine was designed along the lines of properly opening up the ground for the application of what is known as the caving system of mining, and until June, 1907, all the ores extracted were derived from development work and by the application of that system. The underground mining operations at the Utah mine were discontinued permanently September 18, 1912, and those at the old Boston Consolidated on March 31, 1914, so that now all the mining is being carried on by steam shovel operations.

Property: the Utah Copper Co., excepting the Chile Copper Co.'s mine at Chuquicamata, has the largest developed orebody in the world, its proven tonnage exceeding that of the Rio Tinto, its nearest copper competitor, and even exceeding the proven tonnage of the greatest of the enormous iron mines of the Mesaba range, or the developed tonnage of gold ore of all the combined mines of the Witwatersrand. Not only has the Utah Copper Co. the second largest body of developed ore of any mine, but it also is the greatest ore producer, measured by tonnage, of any mine of any metal.

The entire mineralized area of the property is covered by a thickness of about 115' of low-grade and oxidized material that cannot be profitably treated by standard methods of concentration. At the inception of development, information as to the comparative thickness of capping and ore was very meagre, but as the work progressed it was readily seen that a system of mining, much cheaper than by caving, could be applied, and it was determined to adopt the use of steam shovels and remove the oxidized over-burden entirely, leaving the sulphide ore uncovered, so that it could also be handled by steam shovels at a very low cost. This character of work was commenced in August, 1906, and has since been prosecuted vigorously so that by the end of the year 1916, there had been removed from the property 39,706,865 cubic yards of capping and 54,678,700 dry tons of ore.

The maximum quantity of capping and ore ever handled in one day was 84,229 tons, and the maximum ever handled in any one month was 2,526,858 tons. The ore production from the property of the Utah Copper Co. has increased from 300 tons a day in July, 1904, to an average of over 30,000 tons daily, during the last half of 1916. In Aug., 1917, the average was 37,500 tons daily, while on one day in September the quantity was 47,000 tons of ore.

Geology: orebodies consist of an altered silicious porphyry, containing small grains of copper minerals, very uniformly disseminated throughout the mass, both in fracture seams and in the body of the rocks, and averaging about 1.45% copper, 0.12 oz. silver and 0.014 oz. gold. The primary copper mineral is chalcopyrite, but as a result of the oxidization of this mineral and the secondary deposition of others, practically all of the sulphide minerals of copper are now present, the predominating one being chalcocite. There are three zones in this deposit, as follows: the oxidized zone, about one-third of which contains carbonates of copper in sufficient quantity to render the material payable by leaching with a dilute solution of sulphuric acid; second, the zone of secondary enrichment, in which is found all of the concentrating sulphide ore of commercial value; and third, the zone of primary material, which is too low-grade to be profitable by any method of handling and treatment at present known.

Property: total area of lode mining claims in Bingham is 741.69 acres, of which 11.73 acres are outlying fractional claims and 729.96 acres is the group of adjacent claims lying on both sides of Bingham canyon above the town, and where the mine is located, and within the boundaries of which development has shown that at least 226 acres contain mineralized porphyry of commercial value. The entire porphyry area has not yet been developed; and the maximum thickness of the orebody in the 226 acres has not been fully demonstrated, but calculations show that previous to January 1st, 1917, there had been developed in the property, 424,524,258 tons of ore, averaging 1.415% copper, of which quantity, 270,000,000 tons were classed as fully developed, and 154,524,258 tons as partly developed. There was mined from the entire property prior to Jan. 1, 1917, a total of 54,678,700 tons of ore, averaging 1.449% copper; total reserves remaining, 369,845,558 tons, averaging 1.415% copper.

Development: in making the calculations to determine the tonnage of ore and its average assay, there were used 56,714 assays, representing 33,776' of diamond drill and churn drill holes, 293,637' of drifts, raises and winzes, and 16,630 linear feet of steam shovel cuts, or a total of 334,518' of development work. The orebody, as at present developed, has a maximum length of a little over one mile, and a maximum width of more than one-half mile.

Further development of the property will add materially to its ore reserves.

The total area of land other than lode claims owned by the company is 9,162.3 acres, consisting of 1,201.87 acres near the mouth of Bingham canyon, part of which was formerly used in connection with the operation of the Copperton plant, 675.69 acres in Utah and Davis counties, and 7,275.9 acres at the Magna and Arthur plants. Of this last acreage, approximately 2,340 acres are now included within the area upon which the tailings are being impounded.

The porphyry deposit on the westerly side of the canyon is worked by steam shovels. There are 24 steam shovel levels from A to W inclusive, the levels being named alphabetically, beginning with A at the elevation of the railroad tracks in the bottom of the canyon and extending to W level near the top of the mountain; also one level below A, called sub A. Each of these levels is connected with the bottom or main level, with standard gauge railroad tracks constructed on 4% grades, so that the steam shovels load the ore directly into railroad cars which are hauled by 50-ton saddle tank engines to the main yard and assembled into trains to be transported to the mills. From sub A to V level, the difference in elevation is 1,446', and from sub A level to the top of the mountain, it is 1,600'. The high face of ore extending from A to F level, across which intermediate levels have been cut out, has a vertical height of about 240'. From F to W level, the difference in elevation between the levels varies from about 68' to 100', depending upon certain topographical conditions which control the elevations of the stripping lines extending from the steam shovel levels to the waste dumps.

No work has yet been done on the easterly side of the canyon, except development by drifts, raises, cross-cuts and churn drill holes, with a small amount of underground stopping.

Equipment: at the mine at the end of 1916 included 38 standard-gauge switching locomotives, 11 narrow-gauge switching locomotives, 1 standard-gauge Shay locomotive, all operated by steam; 16 Marion, 2 Bucyrus and 2 Atlantic type, of standard-gauge steam shovels, 1 combination steam shovel and locomotive crane, 110 standard-gauge 12-yd. all-steel dump cars, 110 standard-gauge 6-yd. wooden dump cars, 140 narrow-gauge 4-yd. wooden dump cars, 50 standard-gauge 30-yd. all-steel side dump cars, 3 standard-gauge flat cars, 100,000 lbs. capacity, 9 narrow gauge flat cars, 1 engine tender, 4 star drills, 7 Keystone drills, and 6 air compressors having a combined capacity of 8,000 cubic feet of free air per minute.

The problem is to remove the stripping from the ore and carry it to adjacent gulches to waste, and load the ore into railroad cars to be transported to the mills. The rock is broken by blasting before removal by the steam shovels, holes being bored by churn drills operated by steam, and piston drills operated by air. The holes are sprung and prepared ahead of the steam shovel operations, and are loaded and shot at such times as are required by the individual shovels on the different levels. An average of 1 pound of powder has been required to break down about 5 tons of rock ready for the steam shovel to load. There are 53.14 miles of standard-gauge track in and around the mines, 2.48 miles of narrow-gauge and 1.7 of three-rail track, a total of 57.32 miles, all owned by the Bingham & Garfield Railway Co.

The shovels and locomotives at the mine are operated by steam, but extensive use is made of electric power received from the Utah Power & Light Co. Buildings at the mine include machine and carpenter shops, car repair shops, compressor buildings, storehouses, office buildings, club house, boarding houses and other minor structures.

Mills: company had three mills, one at Bingham canyon, now dismantled, and two at Garfield, 20 miles from the mine. The 900-ton Copperton mill at Bingham canyon, the first concentrator put up by the company, is fully described in Volume VIII, Copper Handbook. It was closed permanently August 1, 1910, and all machinery that was suitable was sent to the Arthur mill for use there.

The finely disseminated copper glance necessitates fine crushing with the formation of slime and a tailing loss of about 0.5% copper. Concentration is about 23 into 1.

The **Magna** mill, the first plant built at Garfield, stands on a 3,000-acre site, four miles E. of the Garfield smelter and 1 mile E. of the Arthur mill. It is connected with mine and smelters by the Bingham and Garfield, Denver and Rio Grande, and Salt Lake Route railways. The building is 505'x600' and contains two 3,000 ton units, each of 6 sections, each unit being 300'x505' in size, occupying a site of about 20 acres. The plant is so designed that 2 additional units of the same size can be added when desired. Milling was begun June, 1907, with two sections, and the 12th and final section of the mill was started in November, 1908. The ore bins of the Magna mill are of 25,000 tons aggregate capacity, with bins of 12,000 tons in the coarse crushing department and 13,000 tons in the fine crushing department.

The Magna mill treated 16,785 tons daily in 1916, and is divided, longitudinally, into three departments, for coarse crushing, fine crushing, and concentrating. Additions to this plant have increased its capacity to 24,000 tons daily.

To treat about 40,000,000 tons of oxide and partly oxide capping overlying the sulphide ore, a leaching plant including 12 tanks capable of treating 3,000 to 4,000 tons a day is about complete. This ore carries 13 lbs. copper per ton, of which 10 lbs. are soluble in sulphuric acid, at a treatment cost of 9c. per lb.

The coarse crushing department consists of 2 sections having a capacity of 8,000 tons each in 24 hours. Each coarse crushing section is equipped with 2 No. 7½ gyratory crushers, 4 sets of 54"x20" Garfield roughing rolls, 4 elevators, 12 conveyors, 60 steel apron ore feeders, 7 motors and one 25-ton, 3-way, motor crane. In this department the ore is crushed dry to approximately ¾" in size.

The fine crushing department contains 36-6' Garfield Chilean mills, 24 sets of 37"x15" Garfield rolls, 24 steel apron ore feeders, 24 elevators, 72-3'x4' impact screens, 12 motors, and one 15-ton, 3-way motor crane. In this department the ore is crushed dry to about 10 mesh of rolls, and wet to about 40 mesh by Chilean mills.

The concentrating department for the entire plant is built on 3 floors, and contains 22 roughing and 44 finishing No. 5 Wilfley tables, 122 Garfield-roughing tables, 1,104-6' vanners of suspended type, 83 Richards-Janney classifiers, 240-9' and 148-7' 60° conical settling tanks.

Miscellaneous buildings at the Magna plant consist of machine shop, thoroughly equipped for all repairs, boiler and blacksmith shop, warehouse, transformer house, pumping stations, ice house, carpenter shop, rigger shed, main office and dormitory.

The reserve pumping plant No. 1, used in whole or in part when the main pumping plant No. 2 is out of primary water, is situated 1500' N. E. of the Magna mill, and includes a Nordberg triple-expansion condensing pump with capacity of 10,000 gal. of water per min.; 3 two-stage Jeanesville centrifugal pumps and 3 two-stage D'Olier centrifugal pumps driven by 450 h. p., 350 h. p., and 250 h. p. G. E. induction motors, and having

capacities of 4,500, 3,500 and 2,500 gals. per min. respectively. These pumps with a combined capacity of 31,000 gal. per min., pump through two 24" wooden stave pipe lines, each 1800' in length, against a 230' head into a 5,500,000 gal. concrete lined reservoir above the Magna mill. In addition to the above are three 3-stage Byron Jackson centrifugal pumps driven by 400 h. p. G. E. and two 250 h. p. Westinghouse induction motors, and having capacities of 3,000, 1,500 and 1,500 gal. per min. respectively, which pump through one line of pipe, 1,700' of which is 20", and 5,870' of 30" wooden stave pipe line direct to a 2,000,000 gal. concrete lined reservoir above the Arthur mill, elevating the water 330'. The total combined capacity of this plant is 37,000 gal. per min.

The sources of supply for this station are springs at the plant developing 15,000 gal. per min. and through a canal which returns the water from the tailings pond, where both tailings and drainage water are impounded over an area of 1,000 acres. In time of low water, when the pond elevation is not sufficient so that the water will flow to the pumping station, it is lifted a maximum of 10' from the pond into the return canal by a 24" 20,000 gal. per min. Byron Jackson centrifugal pump, driven by a 60 h. p. G. E. induction motor.

The main pumping plant, called plant No. 2, is situated immediately east of the Magna mill, and at the end of the Utah & Salt Lake Canal, which brings the water from Utah lake about 40 miles from the plant, and through which, at certain seasons of the year when the farms in Salt Lake county do not require water for irrigation purposes, all of the primary water for both the Magna and Arthur plants is received. The equipment in this plant consists of 2 single stage 10,000 gal. per min. Worthington centrifugal pumps, each driven by a 150 h.p. G. E. induction motor, and one single-stage 5,000 gal. p.m. Worthington centrifugal pump, driven by a 75 h.p. Westinghouse induction motor, all 3 of which pump direct into the Magna 5,500,000 gal. reservoir through 700' of 30" wooden stave pipe line, against a 24' head; and 3 single-stage 5,000 gal. p.m. Worthington centrifugal pumps, each driven by 200 h.p. G. E. induction motor, 1 single-stage 3,000 gal. Bryon Jackson centrifugal pump, driven by a 150 h.p. Westinghouse induction motor, all pumping direct to the Arthur mill 2,000,000 gal. reservoir through 6,300' of 30" wooden stave pipe line, against a static head of 120'. The total capacity of this plant to the Magna mill is 25,000 gal. p.m., and to the Arthur mill, 18,000 gal. p.m., which is 70% more than is required by either mill.

The **Arthur mill**, about one mile west of the Magna mill, was built by the Boston Consolidated Mining Co., at a cost of upwards of \$1,500,000. It was remodeled to a capacity of 13,253 tons of ore daily in 1916 by replacing the Nissen stamps with rolls and Chilean mills to correspond to the practice at the Magna mill. It has 13 operating sections. The ore bins at Arthur have a capacity of 21,500 tons, 9,000 in the coarse crushing department and 12,500 tons capacity in the fine crushing department. Additions to the mill have increased its capacity to 16,000 tons daily.

The coarse crushing department is in a separate building adjoining the coarse ore bins and is equipped with 3 No. 8 gyratory crushers, 4 sets of 72"x20" Garfield roughing rolls, 4 elevators, 14 conveyors, 102 steel apron ore feeders, 10 motors and one 25-ton, 3-way motor crane. This department has a capacity of 15,000 tons in 24 hours and the ore is crushed dry to approximately $\frac{3}{4}$ " in size.

A crushing plant costing \$250,000 is being erected at the Arthur mill, and will be the largest in the United States.

The fine crushing department contains 26 six ft. Garfield Chilean mills.

26 sets of 37- $\frac{1}{2}$ "x15" rolls, 78-3'x4' impact screens, 26 steel apron ore feeders, 26 elevators, 26 motors and two 15-ton, 3-way motor cranes. In this department the ore is crushed dry to approximately 10 mesh by rolls and wet to approximately 40 mesh by Chilean mills.

In the concentrating department there are fifty-two 4-compartment, fifty-four 5-compartment and thirty-nine 3-compartment Richards-Janney classifiers, 156 Garfield roughing tables, 26 roughing and 34 finishing No. 5 Wilfley tables, 840-6' vanners, 14 elevators, 312-9' and 52-7', 60° conical settling tanks and 14 motors.

Miscellaneous buildings at the Arthur plant consist of sub-station, machine shop, boiler shop, oil house, compressor building, warehouse, carpenter shop, foundry, pattern storage building, general office, telephone building and emergency hospital, dormitory, mess house, lumber shed, heating plant, assay office, time office, and scale house.

Electric power used at both the Arthur and Magna plants is taken from the Utah Power & Light Co.

The 13,000 h.p. steam-electric plant, 1,500' N. E. of the Magna mill was erected by the Minneapolis Steel & Machinery Co. The boiler plant has 20 Heine 419 h.p. water tube boilers, working under 175 lbs. steam pressure, equipped with American automatic stokers, having separate mechanical drives of special design. There are two 26x50x48" Allis-Chalmers cross-compound Corliss condensing engines direct connected to 1,500 k. w. A. C. generators, and three 32x70x48" Nordberg cross-compound Corliss condensing engines direct connected to three 2,250 k.w. A. C. generators. There are 2 concrete smokestacks, 180' high, 12' inside diam. at the top. This plant has not been in operation since Feb., 1914.

The Utah Copper Co. employs 1,640 men at the mines, and 1,650 at the mills and shops at Garfield.

Bingham & Garfield Railway

Inc. July, 1908, in Utah. **Cap.** of \$6,515,000; shares \$100 par. Controlled by the Utah Copper Co., through ownership of the entire share capital.

The main line from Garfield to the mines, including tracks to the smelter, Sand Spur, and the Carr Fork Extension to the Apex Yard, is 25.83 miles. Yard and side tracks along the main line aggregate 21.70 miles. This together with tracks in and around the mine, and tracks not owned but operated over, makes 111.73 miles of track. The average grade for the entire line is about 2%; the maximum grade is 2.5%, with curves compensated .04 of a foot per degree of curvature. There are 4 tunnels with an aggregate length of 4,821', all driven 18' wide and 22' high; the longest being 2,085.11. There are 3 steel viaducts with an aggregate length of 2,010', containing about 3,000 tons of steel; the longest, across Carr fork, being 690' long and 190' high. Equipment of the line includes 4 Mallet articulated compound locomotives, each weighing 228.5 tons on drivers; 1 consolidation type locomotive, weighing 87 tons on drivers; 14 switching locomotives; 500 hopper-bottom steel ore cars; 50 drop-bottom side-dump steel general service gondola cars; 124 steel concentrate cars, making a total of 674 cars, each of 60-tons nominal capacity, with 10% excess allowance for overload; 6 steel flat cars of 50-tons capacity; 4 steel frame powder cars of 50-tons capacity; 10 wooden flat cars of 25-tons capacity; 3 steel tank cars of 7,000-gals. capacity each; 7 caboose cars; 1 Jordan spreader; 1 scale-testing car; 1 business car; 2 passenger coaches; 2 tool and kitchen box cars; 13 outfit cars and one 120-ton wrecking crane.

The cost of the complete line was upwards of \$5,000,000. The first

train load of ore, about 2,600 tons, was taken down the main line on September 14th, 1911, and regular passenger and freight service was started the following morning. In 1916 the line handled 28,585 tons of freight and 661 passengers daily.

In 1916, transportation cost 27.92c per ton.

(a) 11 months. (b) Includes transportation, all fixed, general and maintenance charges. (c) Gross production. (d) After making allowances for smelter deductions, and crediting value of gold and silver recovered, but not including miscellaneous income.

Production in 1916 also included 461,596 oz. silver at 66.68c and 47,648 oz. gold, compared with 371,712 oz. silver @ 49.880c, and 36,760 oz. gold in 1915.

Increase of ore reserves for 1916 was 23,530,258 tons in excess of tonnage mined. Much additional ore can and will be developed.

Total amount of capping removed was 5,911,455 cu. yards. The total area upon which stripping operations has been conducted was 226.6 acres and the actual area stripped was 111.58 acres.

Practically all ore produced was mined by steam shovel at average mining cost of 28.12c per ton, of which 7.5c represents charges for stripping and .38c charges for development, leaving actual working cost, including proper proportion of all fixed and general charges, 20.24c per ton as compared with 16.61c per ton in 1915.

The directors have authorized construction of a leaching plant to treat the oxidized material, estimated at 40,000,000 tons. It is the intention to build this plant with an initial capacity of from 2,000 to 3,000 tons per day. For the purpose of furnishing acid for this plant, the company participated equally with the Garfield Smelting Co. in financing construction and operation of an acid works near the smelter, now in operation.

Improvements under way promise not only a continuation of production increases but further reductions in costs.

Utah Copper is still the brightest star in the Hayden-Stone-Jackling

galaxy, and its aggressive and brilliantly competent management promises to keep the company in its present enviable position.

Profits for 1917 are likely to be reduced about \$13,000,000 by payment of the Federal excess profit tax.

UTAH & EASTERN COPPER CO.

UTAH.

Office: 127 Church St., New Haven, Conn. **Operating Office:** 508 McCormick Bldg., Salt Lake City, Utah. **Mine office:** Dixie, Washington Co., Utah. **Works Office:** Shem, Washington Co., Utah.

Officers: Louis E. Stoddard, pres.; T. W. Farnam, sec.-treas.

Inc. 1901, in West Virginia. **Cap.**, \$1,500,000, increased later to \$3,500,000; shares \$5 par, in \$2,000,000 preferred and \$1,500,000 common stock.

Property: 11 claims, patented, 220 acres, and a 40-acre smelter site, including the old Dixie mine, in the Tutsagubet or Cave Springs district, near Green river.

Geology: 5 replacement deposits in limestone, 1 of 40' estimated average width, carrying cuprite, azurite, and massive malachite ores, said to give average assays of 15% copper.

Development: by a 775' blind shaft, sunk from the breast of a 225' tunnel. This tunnel caved, 1905, and it was necessary to run a new tunnel, of 800', to reopen the mine. Old workings said to show about 100,000 tons of ore.

Equipment: includes a small gasoline plant.

The company has 2 smelters, 1 worthless; the new smelter has a 100-ton water-jacket blast furnace, with water power, secured from the Santa Clara river, 2 miles distant, and a small auxiliary steam plant. The smelter is at Shem, about 50 miles from Acoma, on the Rio Grande Western railroad, the nearest shipping point, and transportation for 14 miles of the distance is by traction engine.

Production: 1,448,597 lbs. copper in 1904; 400,166 in 1905, and 391,779 lbs. in 1907. Property considered promising but is handicapped by lack of rail transportation. Worked by lessees, 1915, who shipped several cars of 30% ore.

Letters returned unanswered in May, 1917.

UTAH LEAD & COPPER CO.

UTAH

Office: Kearns Bldg., Salt Lake City, Utah. **Mine Office:** Bingham Canyon, Utah.

Officers: Carl Brandt, pres.; Harry M. Stonemetz, v. p.; J. P. McDonough, sec., all of Boston. W. D. Bohm, manager.

Inc. Dec 24, 1912, in Maine, as the successor of the Bingham Copper Co. **Cap.**, \$500,000; shares \$1 par. Debentures \$100,000, at 6% convertible bonds; outstanding, \$31,750. Federal Trust Co., Boston, transfer agent; Paul Revere Trust Co., registrar.

Property: 11 claims, patented, about 102 acres, on the eastern slope of Carr Fork Canyon. Company also owns a one-half interest in the Diamond Extension, and one-half in the Diamond claims adjoining.

The property shows 3 fissure veins, several bedded deposits of silver-lead ore and a fissure vein of copper ore of less promise. A big outcrop near the W. end line is said to have yielded considerable high-grade gold and silver ore with lead carbonates, to former owner.

Development: by 2 tunnels, longest 1,200', and 2 shafts on the Venice claim. There are about 3,000' of workings, showing ore below commercial tenor generally, but with occasional streaks of ore assaying up to 70% lead and 15 to 30 oz. silver.

Equipment: includes a small air compressor.

Property has been idle for some time, but was planning to reopen, at last accounts.

UTAH LEASING CO.**UTAH**

Office: 305 Newhouse Bldg., Salt Lake City, Utah. **Mine Office:** H. H. Adams, supt., Newhouse, Utah.

Officers: V. P. Strange, pres.; J. C. Dick, v. p.; D. R. Pingree, sec.-treas.; with Herbert Salinger and F. W. Royer, directors.

Inc. in Utah. Cap., \$30,000; shares 10c par; assessable; 250,000 issued.

Gross earnings in 1916 were \$335,168; less \$189,312 for general expenses; \$24,642 for royalties, and \$44,092 for depreciation.

Dividends: 31c per share in 1916, or \$25,000; and \$47,500 in 1917 to May 31.

Property: a lease on about 1,000,000 tons of copper-gold-silver tailing at the old Cactus mine, Newhouse, Utah.

Equipment: one 20-ton Marion steam shovel, 750-ton plant including two 8'x48" Hardinge mills, 2 Dorr classifiers and 2 Minerals Separation flotation units.

Electric power is obtained from the Beaver River Power Co., at 44,000 volts, stepped down to 2,200 and 4,400 volts.

Production: feed to the plant averages 0.7% copper, and concentrate assays 16.5% copper, 0.05 oz. gold, 2oz. silver and 25% iron. In 1916, 175,923 tons yielded 1,473,529 lbs. copper, 253 oz. gold, and 7,596 oz. silver. Recovery is 70%. To April 1, 1917, 225,000 tons had been treated.

This seems to be a profitable venture, especially on low-grade material, but at present rate of treatment the available resources will be cleaned up in under three years.

UTAH METAL & TUNNEL CO.**UTAH**

Office: Walker Bank Bldg., Salt Lake City. **Mine Office:** J. F. Bauchelle, supt., Bingham, Utah.

Officers: Jas. E. Rothwell, pres.; A. B. Martin, v. p.; W. E. L. Dillaway, sec.-treas., 45 Milk St., Boston, Mass., with Walter B. Farmer, M. A. Taylor, H. M. Richmond and J. B. Hubbard, directors.

Inc. May, 1914, in Maine. Cap., \$725,000; \$1 par; increased from \$500,000; Nov., 1914, to purchase Bingham-New Haven C. & G. Mng. Co.; 691,588 shares issued. **Bonds:** \$350,000 authorized; \$221,000 outstanding. Commonwealth Trust Co., Boston, and Registrar & Transfer Co., New York, transfer agents. International Trust Co., Boston, and Empire Trust Co., New York, registrars. Company acquired 214,589 shares out of 228,689 issued shares, Bingham-New Haven C. & G. Mng. Co., by exchange of share for share. Latter company has been paying dividends since 1906, with \$285,861 paid in 1915, and a total of \$960,493. Listed on Boston Stock Exchange; traded in on New York Curb. Stock sold at \$1 to \$10.50 in 1915. Annual meeting, first Monday in May.

Company is a reorganization of the Utah Metal Mining Co., itself a consolidation of the Bingham Central, Bingham Standard, and Bingham Metal Mining Co.

Statement for 1916 covers the combined companies, as nearly all the Bingham-New Haven shares had been acquired and the whole of the property has since been purchased. Gross earnings were \$1,499,268 from ore mined and \$35,947 from water, etc. Costs were \$933,384. The profit after deducting taxes, interest, depletion charge, and adding interest earned, was \$528,737. Current assets were \$774,117, and liabilities, \$66,662.

A dividend of 50c. per share, or \$342,473, was paid in August, 1916. In 1917, 50c was paid on Feb. 15, and 30c on Dec. 10. Total to end of 1917 is \$895,768.

Property: is extensive, covering 3,539 acres, including 139 acres timber land in Bingham district, adjoining holdings of Utah Cons. and Utah Copper Co. (Boston Con.), and extending across the range to Middle Canyon, on the Tooele side. The company's active asset is a transportation and drainage tunnel, cut 11,500' through and 2,300' below the crest of the range, from near Tooele to Bingham Canyon (Carr Fork). This gives direct short transportation to Tooele and Garfield and develops a large flow—600,000 gals. per day—of water sold to the Garfield mill of the Utah Copper Co.

The Bingham or Carr Fork holdings include the Bingham Central & Bingham Standard groups, an area in which the various mineral bearing limestone beds of the camp are cut by the Saginaw-Burning Moscow and Nast veins and crossed by the Old Jordan fault. The claims on the Tooele side show similar limestones, cut by fissures, but the development work there has not thus far shown commercial orebodies, as it has on the Bingham side.

In Nov., 1914, the company started crosscut exploration from the big drainage tunnel at 8,200' from the Tooele portal. In March, 1915, 1,300' from the Bingham portal, the latter work encountered mineralized ground, and on upraising 70', an orebody 25' thick was cut. Drifting disclosed a second orebody E. of and above the first, and later a third orebody, already opened and mined by the Bingham New Haven Co., was cut. At present there are five productive orebodies on the combined properties. One copper ore shoot 300' below the B. N. H. tunnel has been proven for over 200'.

The transportation tunnel is 8'x9' in the clear, double-tracked, with $\frac{1}{2}\%$ grade. It develops the mineral bearing limestone and veins at depths of 375 to 900' below any other workings.

By purchasing control of the Bingham-New Haven company, the two properties can be developed together, each mining its own ground from tunnel on the other's claims. It also gives the Utah Metal much needed tramway facilities saving 60c. per ton on ore shipments, and the use of the B.-N. H. mill. The Bingham-New Haven property is described later on.

Development: on the Utah Metal includes besides the 11,490' transportation and drainage tunnel, and the workings therefrom, extensive tunnel development on the Bingham Central and Standard group, embracing the 700' Saginaw, 2,000' Whiteley, 2,000' Jeff. Davis, 400' Deem, 950 Mtn. Maid, the Amelia and lesser tunnels, all showing ore at various points. On the Tooele side, the Middle Canyon group has one 5,000' tunnel, another 1,700' and a third 500' long.

New work in 1916 amounted to 13,413' at a cost of \$11.08 per foot. The ground already opened, and the orebodies found, indicate the existence of similar other deposits. A large amount of mill-ore has been developed. In Utah Metal ground, the new deep shaft, No. 104, should encounter shipping ore opened on the upper levels. Three years' ore supply is estimated as available.

Equipment: includes a 400-ton mill using the Callow system of flotation, enlarged 50% Oct., 1917. In July, it was stated that a new mill might be erected at the other end of the tunnel, near the International smelter.

Production:

	Ore, Tons	Lead, Lbs.	Copper, Lbs.	Gold, Oz.	Silver, Oz.	Gross Value
1916.....	71,402	6,301,670	1,761,520	17,934	388,757	\$1,499,268
1915.....	9,860,089	2,873,815	16,914	475,894	1,386,845

Cost of mining was \$2.51, and of milling, \$1.11 per ton.

In Oct., 1917, a five years' contract was arranged with the International Smelting Co. for Utah Metal ore, the price to be the average for the week preceding receipt of the ore.

Property: the Bingham-New Haven property includes 26 claims, 500 acres, adjoining the Utah Consolidated on the S. E., includes the Zelnora mine near the head of Carr Fork. Claims show 3 fault fissures in porphyry and a contact deposit 3' to 8' in width, between quartz-porphyry and limestone. The copper ore averages 3.5% copper, \$6 in gold and silver and about 12% excess iron. The lead ore averages 20% lead, \$7 in gold and silver and 1.5% copper, ores being chalcopyrite, galena and sphalerite. The main ore supply is from 3 beds of limestone, which strike E. W. and dip N. Company now mining 2 deposits of copper, 2 of lead and one of complex ore.

Development: by tunnels with a blind shaft starting 900' from the portal of the lowest tunnel, there being a vertical distance of 1,200' between the highest and lowest workings. The 1,030' lower tunnel cuts a wide fissure vein, giving assays of about 3% copper, 2.3 oz. silver, and \$2.50 gold per ton. Terminal at the upper tunnel was moved to the lower tunnel and mine is operated through the latter. The shaft is now down 320' below the 500', or Highland Boy level, and crosscuts have been driven 200' and 320' below the tunnel level to cut a recently found ore-body which averages 6' in width where cut. Estimated 2-3 years' ore reserves in sight. Mine has several miles of workings with an aerial tram, connecting with loading bins on the Copper Belt railroad.

Equipment: includes electric power, air compressor and 175-ton mill, equipped with jigs, Wilfley and Deister tables, vanners and ball mill for fine grinding. The completion of a connection with the main working tunnel of the Utah Consolidated Copper Co., in Dec., 1912, permits shipments over that company's tram line to the Tooele smelter, reducing transportation costs 20c. per ton.

Production:

	Lbs. Copper	Lbs. Lead	Oz. Silver	Oz. Gold
1914.....	908,424	6,791,644	294,995	9,478
1915.....	2,574,261	4,903,906	325,448	6,617

Gross earnings were \$718,676 in 1914, and \$726,203 in 1915, derived solely from ore sales.

Daily output of ore, 300 tons at present, will be increased and a flotation plant will be built. About 165 men are employed.

VICTORIA CONSOLIDATED MINING CO.

UTAH

Owned by Bingham Mines Co., which see.

WESTERN MINING & MILLING CO.

UTAH

Is a subsidiary of the Great Divide Mines Co., which see.

Office: J. H. Hurd, sec., 219 Douglas Ave., Salt Lake City. Controlled by John B. Taylor, 1154 Downington Ave., Salt Lake City, Utah. A. B. Hirth, pres.; E. D. Haskins, v. p.; W. A. Cooke, treas.

Inc. 1897 and reorganized 1905 in Utah. **Cap.**, \$300,000; shares \$1 par; assessable, with 2 assessments levied; issued \$200,000. Is a close corporation, having only 9 shareholders.

Property: 20 claims, 19 patented, 215 acres, in the Pine Canyon section of the Bingham district, on the western slope of the Oquirrh mountains. The claims are developed by numerous tunnels, and show the same limestone beds, cut by mineralized fissures, which have made the bonanza

orebodies of the Utah Cons. and other properties on the east side of the range.

YOSEMITE MINES CO.

UTAH

Controlled by Bingham Mines Co., which see.

BOXELDER COUNTY

CEDAR RIDGE MINING CO.

UTAH

Owens 5 claims, about 65 acres, adjoining the Lake View mine on N. E., Promontory Pt., Boxelder Co., Utah.

Samples show good zinc values on length of 1,500' development work, showing 11.7% zinc for 60 samples cut at regular intervals along workings.

CLIPPER MINING CO.

UTAH

Successor of Mohawk Mining Co.

Inc. July, 1916, by T. J. Yates, J. S. Barlow, John Russon, Dr. G. N. Curtis and J. A. Dalton, all of Salt Lake City.

Property: 7 claims, near Tecoma, Boxelder Co., Utah, shows 2 veins exposed throughout property, carrying silver-lead and zinc ores.

Development: by an 80' shaft with 100' of drifting. Is a prospect only.

DEWEY SILVER AND COPPER CO.

UTAH

Address: Lorin Hall, or Leo Atcheson, Brigham City, Utah.

Property: 5 claims, 5 miles N. of Brigham City, Boxelder Co., Utah.

Development: by tunnels, ore occurring in limestone. Surface ore said to contain up to 60% lead with some silver and copper.

GINZA COPPER CO.

UTAH

Idle. Mine near Kelton, Boxelder Co., Utah. Operations stopped in 1915 after considerable prospecting had failed to locate ore of commercial grade. Described Vol. XI, Copper Handbook.

JAY HAWKES MINING CO.

UTAH

Ogden, Utah, owns 6 claims in Little Valley, on Promontory Point, in Great Salt Lake, near the Lake View property. Ore carries galena with silver. About \$3,000 has been expended on development, in incline shaft and open cut work.

LAKEVIEW MINING CO.

UTAH

Office: Ogden, Utah. **Mine office:** Promontory Point, Utah.

Officers: W. H. Wattis, pres.; Samuel S. Arentz, v. p. and mgr.; L. F. Farr, sec.-treas., with C. L. Farr and Jas. Wotherspoon, directors.

Inc. March 9, 1915, in Utah. **Cap.**, \$500,000; shares 5c par; assessable; all issued to officers of the company. Annual meeting March 9th.

Dividends: to May, 1916, amounted to \$124,000.

Property: 15 claims, unpatented, 235 acres, at Promontory Point, Boxelder Co., 3 miles E. of Saline on the S. P. R. R., shows zinc-lead ore in a contact deposit between limestone foot and shale hanging-wall. The ore-body measures up to 20' in width, runs N. 35° W. and dips 35° N. E. Pay ore occurs in shoots from 1'-20' wide and from 50'-250' along the strike. Assays reported to average 32% zinc, 5% lead, 2% iron, 16% insoluble.

Development: to 1,000' below the outcrop by 5 adits, from 250'-350' long. A 6' vein assaying 18% lead with some silver has recently been opened on the South Hill ground and is now under development. Zinc ore as shipped averages 32% and lead ore 26%.

Equipment: includes 600' tram and oil-driven Chicago pneumatic compressor of 187 cu. ft. capacity.

Production: to July 1st, 1917, 279 cars realized \$352,471, mostly from zinc carbonate ore.

The mine and management have made quite a remarkable record. Located Jan. 27, 1915, work was commenced March 9, with a small force and by December, 1915, all debts were paid, the mine was developed, equipped and shipping, a \$70,000 dividend paid to stockholders and a cash surplus remained in the treasury. Mine developing into a lead property with depth and sulphides replacing oxidized ore. Property examined and sampled by Pierre Peugeot, July, 1917.

LITTLE VALLEY MNG. CO.**UTAH**

Owens 9 claims in compact group N. and E. of the Lakeview property, Promontory Point, Boxelder Co., Utah.

LUCKY BOY MINING & MILLING CO.**UTAH**

E. E. Lowry, pres.; Ira Griffiths, sec.-treas.

Inc. April 20, 1916. Cap., \$50,000; shares 10c par; assessable; 25,000 shares outstanding. Listed in Salt Lake City.

Property: 6 claims, in Clear Creek mining district, Boxelder Co., Utah, said to show copper-silver-gold ore.

MINERAL MOUNTAIN MINING CO.**UTAH**

Address: Tecoma, Nevada.

Officers: G. Austin, pres.; F. Litz, v. p.; E. B. Whipple, sec.; C. T. Whipple, treas., with J. P. Weber, directors.

Inc. March, 1908, in Utah. Cap., \$100,000; shares 10c par; 475,000 issued; assessable to 1c yearly.

Property: 13 unpatented claims, 250 acres, in Lucin district, Utah, 6 miles from Tecoma, Nevada.

Geology: contact and fissure veins in limestone, quartzite and granite. Shoots are from 12 to 24" wide. Ore carries lead carbonate and silver. Developed to 350' by incline shaft.

PENNUVA COPPER CO.**UTAH**

Office: 954 Wilson Ave., Salt Lake City, Utah.

Officers: J. R. Austin, pres., Salina, Utah; G. D. O'Conner, v. p. and mgr.; W. R. McPherson, sec.-treas.; W. N. Beatty and Jas. Spelman, directors.

Inc. 1916, in Utah. Cap., \$25,000; shares 5c par.

Property: 10 claims, unpatented, and 2 under 10-year lease, situated on Promontory Point, next to the Lakeview zinc mine and 2 miles from Salina on the S. P. R. R.

Development: 200' shaft on quartz shale bed showing bunches of chalcopyrite ore assaying 20-30% copper; also 110' drift on 60' level.

PLANETARY MNG. & MLG. CO.**UTAH**

Address: T. E. Weyher, sec., 210 Judge Bldg., Salt Lake City, Utah.

Cap., \$10,000; shares 10c par; assessable; reduced from \$500,000 in Nov., 1917.

Property: claims near the old Century mine, N. W. of Kelton, Boxelder Co., Utah. Development work is provided for by assessments.

PROMONTORY MINING CO.**UTAH**

Office: 54 Commercial Bldg., Salt Lake City, Utah. Mine office: Promontory, Boxelder Co., Utah. B. D. Siegfus, pres. and mgr.

Cap., \$600,000; shares \$1; issued, 450,000.

Property: about 7 miles north of Promontory point, shows a contact deposit between dolomite and porphyry.

Development: by a 105' shaft, sunk on an 8' vein, showing copper ore with a paystreak said to give assays of 5 to 18% copper, 1 to 40 oz. silver and about \$9 gold per ton. A 6' vein of low-grade zinc ore reported under development in 1916. See Lakeview Mining Co.

SALT LAKE COPPER CO.**UTAH**

Office: 11 Broadway, New York. **Operating office:** McIntyre Bldg., Salt Lake City, Utah. **Mine office:** Lucin, Boxelder Co., Utah.

Officers: Frederick Lewisohn, pres.; E. C. Westervelt, treas.; other directors, Walter Lewisohn, S. W. Peck, E. H. Westlake, E. J. Macnamara, O. B. Van Sant and Wm. Burns, mgr.

Inc. Oct. 10, 1906, in Maine. **Cap.**, \$2,200,000 shares \$10 par. Debentures, \$59,000, at 6%, payable out of net earnings.

Property: 108 claims, known as the Copper Mountain mine, at an elevation on 7,200' above sea level, in the Newfoundland district, and 100 acres within the limits of Salt Lake City.

The Copper Mountain mine has a number of tunnels and shafts, the 1,500' main tunnel having a back of about 400', and a 500' tunnel has been planned to be driven 1,200', to enter the hoped-for sulphide zone. The mine has upwards of 2 miles of workings, and is estimated to have in sight and blocked out, 75,306 tons of copper ore of 1.1% average tenor, not at present commercial ore. For the last few years the mine has been worked by lessees.

SANTA MARIA GOLD & COPPER MG. & REDUCTION CO.**UTAH**

Office: P. O. Box 517, Ogden, Utah. **Mine office:** Utah Hot Springs, Boxelder Co., Utah. Don Maguire, pres. and mgr.

Inc. 1907, in Utah. **Cap.**, \$500,000; shares \$1 par.

Property: includes mill and smelter sites, lying in a very rugged territory in the Sierra Madre district of the Wasatch mountains. Land carries 7 fissure veins, practically parallel, with a strong cross-fissure, and 1 contact deposit. The veins range from 12 to 70' in width, and ore contains chalcopyrite, associated with pyrite and occasional small amounts of galena, ore being mainly of concentrating grade.

Development: by the 2,000' Clara Belle tunnel, cutting 3 veins, and planned to cut 5 more, with backs of 200 to 1,800'. The mine has about a mile of workings, showing ore developed regarded as sufficient to warrant a mill.

Equipment: includes a power house, air compressor, smithy and boarding house. Idle several years.

UNITED PROMONTORY MINING CO.**UTAH**

Officers: B. D. Siegfus, pres., 572 S. 12 E. St., Salt Lake City, Utah; M. Rumph, v. p.; B. O. Siegfus, sec.-treas., with A. W. Phillips, O. P. Peterson and Geo. A. Horn, directors.

Cap., 700,000 shares; 1c par; 300,000 shares in treasury, June, 1916.

Property: 6 claims, in Boxelder Co., Utah, 7 miles N. of Promontory on the S. P. R. R., shows vein 20' thick in limestone-porphry contact. Developed by 125' shaft with levels at 45' and 115'. Upper level showed some high-grade copper ore; 115' level, at 18' from shaft showed bunches of copper ore. Company has been developing the mine for about 8 years.

In 1917, a compressor, etc., was installed, and management soon hopes to commence shipping ore.

VIPONT MINING CO.**UTAH**

Address: H. G. McMillan, 649 E. S. Temple St., Salt Lake City, Utah. W. A. Wilson, mgr.

Company owns 800 acres in Ashbrook district, in N. W. corner of Boxelder Co., developed by 5,000' of workings from which much ore was formerly shipped.

WESTERN ZINC CO.**UTAH**

Had lease and was operating the Lakeview Mng. Co. (which see) property on Promontory Point, Utah, in 1916.

MILLARD COUNTY

(includes Antelope district)

ANTELOPE STAR CONSOLIDATED MINES**UTAH**

Inc. March, 1917, in Utah. **Cap.**, \$300,000; shares 10c par. Is a consolidation of several properties in Mineral Mountain range, 9 miles S. E. of Black Rock, Millard Co.

The incorporators are: Leo Neilson, Logan, Darby Crandall, New York, W. R. Hensleigh, V. L. Arnold and Chas. M. Morris.

ANTELOPE STAR MINING CO.**UTAH**

Office: 602 Newhouse Bldg., Salt Lake City, Utah.

Officers: A. C. Nebeker, pres. and mgr.; M. O. Hardy, sec., with W. N. Williams, Aquilla Nebeker, John Matson and Martin Knight, directors; H. L. Parker, mgr.; A. McLease, supt.

Inc. in Utah. **Cap.**, \$10,000; shares 1c par; 250,000 shares in treasury. Stock listed on Salt Lake Exchange.

Property: 9 claims and a mill-site, about 200 acres, 20 miles N. E. of Milford, in Millard Co., said to have a 5' fissure vein of milling ore, assaying 8-10% lead. The orebody is leached at surface, and contains barium, lead, silver, copper and iron.

Development: by 373' tunnel, 65' shaft and about 800' of drifting and raises. Promoted by Woolley Bros., Salt Lake City.

BEAVER RANGE MINE CO.**UTAH**

Address: Black Rock, Millard Co., Utah.

Officers: John B. Taylor, pres. and gen. mgr.; W. W. Moody, v. p. and supt.; R. B. Graff, sec.-treas.

Inc. July, 1916, in Utah. **Cap.**, \$100,000; shares 10c par.

Property: 10 claims, in the Mineral Mountain range, 10 miles S. E. of Black Rock on the Salt Lake R. R. Claims are in limestone near quartzite and said to carry copper and lead ore, in three prominent N. S. fissures.

Development: over 1,500' of tunnel and shaft work. Main Chicago tunnel is in over 300' and is expected to cut the shoots which show lead ore on the surface.

BLACK ROCK COPPER MINING & MILLING CO.**UTAH**

Address: Black Rock, Millard Co., Utah. Walter James, gen. mgr.

Property: 11 claims, 17 miles S. W. of Black Rock, being developed by 250' shaft and a drift on the 180' level, exposing a vein in limestone, said to show copper values.

DETROIT COPPER MINING CO.**UTAH**

Samuel A. King, agent, Judge Bldg., Salt Lake City, Utah; V. W. Kelly, pres., Deseret, Utah.

Inc. Jan., 1916, in Utah. **Cap.**, \$1,000,000; shares \$1 par; 400,000 in treasury. Holds 5-year \$100,000 bond and lease, from Nov. 24, 1915, on 40 claims, locally known as Ibex mine, and owned by Ibex Gold Mng. Co.

Property: the Ibex mine (see Ibex Gold Mng. Co.), situated in Detroit district, Millard Co., Utah, 35 miles from Oasis, and 20 miles west of end of Delta branch line. Claims were located 35 years ago, work began 1894, and the Ibex Co. was formed and smelter put up at Leamington, Millard Co., Utah, treating 50 tons per day. In winter of 94-95, company failed and property was idle till 1906, when Jesse Knight took it up and re-organized the Ibex Co., patented the claims and sank two shafts. Worked until panic of 1907. Idle till 1915, when lease and bond was taken from Mr. Knight by local farmers who organized the Detroit C. M. Co. and shipped ore.

Claims cover two horizons of limestone; one blue and hard, the other light and soft, both cut by porphyry dikes and intrusives. Ore occurs in veins and bedding offshoots, the veins being 25'-100' in width.

Ore: carries 2%-20% copper, with trace to 3 oz. per ton silver and \$1 to \$20 per ton gold. Elevation of mine 5,500' to 6,500' above sea level.

Development: 600' shaft on Keystone claim, a tunnel on Ibex, with 500' vertical depth at face and a 500' shaft on E. P. H. claim. Good auto road from Delta to Oasis. Reported on May 6, 1916, by Wm. A. Farish.

Freight to Oasis, \$6 (to R. R. terminal \$4); R. R. to Salt Lake, \$2.50; smelter treatment, \$4.

EAST ANTELOPE MINING CO.

UTAH

Address: 417 Vadner Ave., Salt Lake City, Utah.

Officers: John W. Chase, pres.; H. E. Giers, sec.-treas.; John Matson, acting manager; Albert Joest, supt.

Cap., 1,000,000 shares; 1c par; assessable. Expenditures for 1916, \$8,639, being money received from stock sold. Balance, \$1.68.

Property: 8 claims, unpatented, on Mineral Mountain, Millard Co., Utah, adjoins Keno and Antelope Star mines.

Development: by 400' tunnel with drift on limestone quartzite contact. Mr. Matson reports 800' new work in 1916-1917, showing excellent ore in small amount in west drift. Reported to have cut 22% copper ore, Sept., 1917, with galena stringers near it. Plans installation gasoline engine, and extension of both N. and of W. drifts to cut Copper King fissure.

KENO M. & M. CO.

UTAH

Controlled by Knight Investment Co., Provo, Utah. **Mine office:** Frisco, Utah.

Officers: Jesse Knight, pres.; W. Lester Mangum, sec.-treas.; Knight Starr Jordan, gen. mgr.; R. S. Andrew, supt.

Inc. March, 1907. **Cap.,** 500,000 shares; 10c par. Stock listed on Salt Lake Exchange.

Property: located in the Antelope mining district, Millard Co., is in the development stage, with good prospects of striking ore.

MAMMOTH COPPER MINING CO.

UTAH

Office: 219 Judge Bldg., Salt Lake City, Utah. Edward Bardsley, pres.; B. D. Lyon, sec.-treas.

Inc. in Utah. **Cap.,** \$10,000; issued, \$6,000; shares 1c par; assessable. Listed in Salt Lake City.

Owns 240 acres in Millard Co., 15 miles from Milford, said to show a vein of copper ore in monzonite. Development is surficial only, and property is a prospect.

SUMMIT COUNTY

PARK CITY DISTRICT

AMERICAN FLAG MINING CO.

UTAH

Office: 815 Newhouse Bldg., Salt Lake City, Utah. **Mine office:** Park City, Summit Co., Utah.

Officers: Geo. H. Rathman, pres., treas. and gen. mgr.; Wm. M. Curtis, v. p. and mgr.; John Cain, sec.; F. V. Bodfish, supt.

Inc. 1902, in West Virginia. **Cap.,** \$500,000, increased to \$1,000,000 on reincorporation in Nev., 1910; shares \$1 par; assessable; fully issued.

American Flag property is leased to the Park City Mines Co. and described under that title.

ANCHOR MINING CO.

UTAH

Idle several years. **Office:** Calumet, Mich.

Officers: John D. Cuddihy, pres.; F. W. Taylor, sec.-treas., and Henry L. Baer, directors.

Inc. June, 1908, in Michigan. **Cap.**, \$150,000; shares \$25 par; issued, 1,800. Annual meeting, second Tuesday in June.

Lands: 9 claims, patented, 131 acres; in the Snake Creek district, one-half mile south of Daly-Judge mine, near Park City. Company is the successor of the Wolverine Mining Co.

BIG FOUR EXPLORATION CO.

UTAH

Office: 804 Newhouse Bldg., Salt Lake City, Utah.

Officers: Morris P. Kirk, pres.; J. H. Leavell, v. p.; John Pingree, sec.-treas.; preceding, with E. B. Critchlow, directors.

Inc. Dec., 1912, in Utah. **Cap.**, \$500,000, increased Jan., 1917, to 600,000; shares \$1 par; assessable; a 10c assessment was levied in Oct., 1917. Listed on Salt Lake Exchange. Reported liabilities, Sept., 1917, \$258,000; assets consist of \$300,000 plant and \$40,000 worth of ore. Company is in financial difficulties and the directorate is said to favor a receivership. On Oct. 5, 1917, 200,000 treasury shares at 12½c each were issued.

Company operates a 750-ton wet concentration mill at Atkinson, 7 miles N. of Park City, Utah. Mill was constructed to treat dump estimated to contain over 1,000,000 tons of tailings, the accumulation from Park City mills.

Production: in 1915, 11,365 tons treated; shipping ore totaled 198 tons, yielding 164,509 lbs. zinc; concentrates, average grade, 38.4%, totaled 668 tons, yielding 371,538 lbs. zinc. Extraction 62%. An 800-ton mill was completed, 1917.

The U. S. Smelting Co. has an option on a controlling stock interest, in return for money advanced, amounting to \$200,000, Sept., 1917. The U. S. S. Co. also has a smelting contract with the Big Four, the terms of which are not reported.

BOSTON-UTAH MINING CO.

UTAH

Geo. T. Stenhouse, mng. director. Control held by St. Petersburg, Fla., capitalists.

Property: extensive holdings in the Morgan mining district, the supposed northerly extension of the Park City ore zone, shows native copper in fissure on a contact between flat dipping limestone beds and a granite hanging wall.

Recent work includes a new 35' tunnel and an incline shaft.

BROADWATER MILLS CO.

UTAH

Address: Park City, Utah.

Officers: C. C. Broadwater, pres.; L. D. Mills, v. p.; H. S. Shuey, sec.-treas., with C. W. Merrill and F. H. Ricker, directors; R. E. Adams, mgr.

Inc. 1915 in Nevada. **Cap.**, \$1,000,000; shares \$1 par; all issued.

Mill at Park City, has a daily capacity of 300 tons. Remodeled with Mineral Separation flotation system and other concentrating machinery, said to be treating 350 to 750 tons daily of silver-lead-zinc tailings from dumps owned by Grasselli Chemical Co., of Cleveland.

CALIFORNIA COMSTOCK CONS. MNG. CO.

UTAH

Office: Park City, Utah.

Officers: W. I. Snyder, pres.; B. F. Bauer, v. p.; M. H. Sowles, sec.-treas.; E. J. Raddatz, W. F. Snyder, J. A. Cunningham, Sherman Fargo, directors; J. C. Jensen, gen. mgr.

Cap., \$1,000,000; par \$1; 485,000 shares outstanding.

Property: a consolidation of the California and Comstock mines of Park City comprising 135 acres. See Professional Paper 77, entitled Geology and Ore Deposits of Park City District.

A new promotion by Evans, Morris, Whitney & Co., of Salt Lake City.

Development: by 3-compartment shaft, 450' deep, being sunk to 750' and crosscuts 1,500' long on the 250 and 450' levels; also 2 tunnels, each over 1,000' long. Three faces of silver-lead-zinc and 3 of 8% copper ore are exposed, ore reserves of the former being estimated at 10,000 tons, worth \$25 per ton.

Shipments in September were 30 tons daily. Company has a mill, built in 1903.

Property promising, with several ore fissures crossing the productive horizons of the sedimentary series.

CONKLING MINING CO.

UTAH

Mine office: Park City, Summit Co., Utah.

Officers: Col. Nicholas Treweek, pres.; Wm. C. Hall, v. p.; Geo. A. Lund, sec.; J. Leonard Burch, treas.; preceding, and Margaret Treweek, directors.

Inc. Sept. 17, 1908, in Utah. **Cap.**, \$500,000; shares \$1 par; assessable. Is a close corporation, with 25% of stock owned by Silver King Coalition Mines Co.

Property: 2 claims, 2 miles from a railroad, shows gold, copper and lead ores, developed by a 1,000' tunnel on the lands of the Silver King. No returns secured. Company has brought suit against the Silver King Coalition Mines Co. for illegal extraction of \$575,000 in ore from Elephant stope.

DALY JUDGE EXTENSION MINING CO.

UTAH

Park City, Utah.

Officers: Bishop W. D. Lewis, pres.; Mrs. Clarissa Whitehall, v. p.; S. L. Lewis, sec.-treas., with S. L. Raddon and Henry Spriggs, directors. **Inc.** in Utah. **Cap.**, \$600,000; shares 10c par.

Property: 8 claims, 140 acres, partly patented, at Park City, developed by 700' tunnel and 2 shafts, said to show copper-lead-silver ore in fissure veins.

DALY-JUDGE MINING CO.

UTAH

Reorganized in 1916 as the Judge Mining & Smelting Co., which see.

DALY MINING CO.

UTAH

Office: 918 Kearns Bldg., Salt Lake City, Utah.

Officers: Col. E. A. Wall, pres.; Geo. W. Parks, sec.

Inc. in Utah. **Cap.**, \$3,000,000; all issued; shares \$20 par; assessable; Farmer's Loan & Trust Co., New York, registrar. Listed on Salt Lake City Exchange.

Dividends: paid \$2,925,000 to 1897. Dividends resumed in 1917, bringing total to \$2,970,000, including \$45,000 to October 1.

Property: in Uintah district, Summit Co., Utah; 6 claims and an interest in 12 of the Ontario Silver Mining Co. claims; also an interest in 17 claims of the Daly West Co., and 195½ acres in joint ownership of the Ontario Silver Mining Co., total acreage 316, of which 116 are patented.

Ore: silver-lead-gold and copper in fissure veins in quartzite. The property is an old one, and at last accounts had 2,300' of shafts and much unexplored ground between the 800' and 1,700' levels. Work has been carried on intermittently during the past few years. Ore assays from 45 to 80 oz. silver, 8 to 15% lead, and \$0.75 to \$1.50 gold per ton. Present production is said to average about 250 tons per month.

DALY WEST MINING CO.

UTAH

Office: 163 South Main St., Salt Lake City, Utah. **Mine office:** Park City, Summit Co., Utah.

Officers: Frank J. Hagenbarth, pres.; H. G. McMillan, v. p. and gen. mgr.; Herbert S. Cohen, sec.; W. S. McCornick, treas.; F. L. Williams, Jr., gen. supt.; Edw. L. Talbot, mine supt.; John C. Thompson, mill supt.; F. I. Williams, engr.

Inc. Feb. 14, 1902, in Colorado. **Cap.**, \$3,600,000; shares \$20 par, and has been once reconstructed. Owns a 20% stock interest in the Little Bell Mining Co., an adjoining property. Corporation Trust Co., New York, North American Trust Co., New York, and McCornick & Co., Salt Lake City, registrars; American Loan & Trust Co., Boston, North American Trust Co., New York, and McCornick & Co., transfer agents. Stock listed on Boston Stock Exchange.

Revenue from ore in 1916 was \$237,681, less \$223,952 for mining, milling and general. The surplus was \$28,144.

Dividends: 30c quarterly reduced to 15c, in 1913; total to end of 1916, was \$6,606,000. Nothing was paid in 1914, 1915 or 1916, but 10c was paid in Sept., 1917.

Company is a large silver-lead producer, copper being a by-product, with annual production of about 800,000 lbs., or a total of 16,000,000 lbs., from 1898-1913.

Property: the Daly West and Quincy mines with 50 claims, patented, 250 acres in the Uintah district. Extensive orebodies carry gold and silver-bearing chalcopryite, galena and sphalerite, with silicious gangue, values being mainly in silver and lead, with small copper values, and still smaller gold values. Ores are declining in value with depth. Production formerly equally divided between smelting and concentrating ore, is now mainly the latter. The property has 3 principal veins, of 4 to 6' minimum and up to 40' maximum width. Upper workings are practically worked out, lower workings show concentrating ore. Owing to fire, no work was done, 1914-1915, but operations were resumed in 1916.

Development: the main shaft is 2,300' deep, and the mine has about 15 miles of workings, an average of nearly 1 mile of new ground being opened yearly. Connection was made, Oct., 1909, with the 3-mile Ontario drainage tunnel, on the 2,100' level, for the use of which company pays \$750 monthly rental.

Ore mined in 1915 came mostly from the 1,400 to 2,100' levels; average assays were 25% lead, 24 oz. silver, \$2 gold, with copper values. In 1913, the concentrates shipped averaged 34¼% lead and 52 oz. silver, with 8,332 tons of lead concentrates and 1,598 tons of zinc concentrates. Production in 1913 was 60,788 tons of ore. The copper in the lead concentrates averaged 1.86%.

Equipment: includes hoists and air-compressor. The 350-ton concentrator was destroyed by fire Dec., 1913. A new 600-ton mill was built and went into commission Jan., 1915. Plant includes a flotation unit with capacity of 30 tons of dry slime per day. The mill is treating 200 tons daily.

Costs for 1913, producing 60,788 tons, were: \$5.28 per ton for mining; general expenses, \$1.56 per ton; milling costs, \$1.46 per ton of ore fed.

Production: recent shipments have been as follows: 20,344 tons in 1913; 24,341 tons in 1914; 13,620 tons in 1915; 9,980 tons in 1916. In August, 1917, the mill was treating 200 tons daily of 3 to 8% lead and 5 to 10 oz. silver ore. Shipments in that month were 1,700 tons of crude ore and concentrate.

Property, though an old one, has much new territory yet to be prospected and the known ore shoots give indications of going to greater depths. 100 men employed in 1916-1917.

D. & M. MINING CO.**UTAH**

Controlled by Silver King Cons., which see.

JUDGE MINING & SMELTING CO.**UTAH**

Office: 1022 Kearns Bldg., Salt Lake City, Utah. Mine P. O.: Park City, Summit Co., Utah.

Officers: H. Otto Hanke, pres.; M. C. Fox, v. p.; G. M. Lambourne, sec.-treas. and mgr.; W. M. Bradley and A. C. Wall, directors; O. N. Friendly, gen. supt.; Geo. D. Blood, cons. engr.**Inc.** 1901, in New Jersey, as the Daly Judge Mining Co. Reorganized, 1916, under present name. **Cap.**, \$300,000; shares \$1 par, increased March, 1916, to \$500,000; 480,000 shares issued. Stock listed on Salt Lake Exchange.**Dividends:** paid in 1916, amounted to \$435,000; total dividends to date, \$1,590,000. Present rate is 25c per share, quarterly. Balance of \$555,290 in treasury, Jan. 1, 1917. Total receipts from ore sales in 1916, \$839,455.**Property:** company has valuable holdings, about 1,100 acres patented ground, covering 11,000' of a fissure vein system, in Park City district, adjacent to the Daly West mine. Is a large producer of silver-lead ores with much zinc and a small amount of copper.**Development:** mainly by tunnel and drifts, amounted to 12,677' in 1916, of which 49.65% is on the Daly vein, 48.21% on the Bock vein, and 2.14% on the Middle vein. The depth ranged from 300 to 1,900'. On the Daly the most important results were at the hanging-wall fissure, which has been consistently productive. A valuable shoot was developed on the 1,200' level of the Bock vein. It is 300' long and 256' high, of high grade. Generally, exploration was satisfactory.

The Snake Creek tunnel driven 14,500' to the property line was completed early in 1916; it will unwater the mines at greater depth and provide transportation. It is to be extended later for further exploration of the property.

Equipment: includes 400 h. p. electric hoist, compressor and 500-ton wet concentrating plant with flotation unit for treatment of slimes, making a zinc and lead product. During 1916, a 15-ton electrolytic zinc plant was erected.

Property is a regular dividend payer and the unexplored portion of the mine is promising. The technical direction is good.

Production: in 1916, 65,951 tons. The mill treated 61,787 tons of ore, yielding 10,019 tons of lead and 6,129 tons of zinc concentrate. Ratio of concentration was 4.7 to 1 for all products. Metal output was 477,852 oz. silver, 535 oz. gold, 8,114,627 lbs. lead, 5,153,049 lbs. zinc, and 341,198 lbs. copper. This includes the metal in 4,164 tons of ore shipped to smelters. To date the metal output is 6,100,272 oz. silver, 12,335 oz. gold, 124,716,008 lbs. lead, 92,090,199 lbs. zinc, and 3,326,073 lbs. copper, sold for \$7,322,289.

The company's progress in zinc production is of interest. As ore contracts expired in April, 1916, zinc concentrate was stored. By Feb. 1, 1917, a 15-ton electrolytic plant of good design, was erected and started. In 1916 the mill made 6,129 tons of concentrate, assaying 44.58% zinc, 4.38% lead, 6.54% iron, and 21.47 oz. silver. Of this, 2,929 tons were sold, the balance of 3,200 tons being held for the refinery. The process is roasting, leaching with 8% sulphuric acid, purifying solutions, filtering, and electrolytic deposition of pure zinc on aluminum discs. The filtered concentrate pulp is sold to lead smelters. The spelter was 99.9% pure in October, 1917.

KEARNS-KEITH MINING CO.**UTAH**

Out of business, property being conveyed to the Silver King Coalition Mines Co. of Park City, which see.

KEYSTONE MINING CO.**UTAH**

Offices: 163 S. Main St., Salt Lake City, Utah, and 32 Broadway, New York.

Officers: H. G. McMillan, pres.; Ernest Bamberger, v. p. and treas., with John Dern, H. I. Wilson, C. W. Saacke, Alfred Frank, John McGinnis, directors. L. B. McCornick, sec.; Herbert Cohen, asst. sec.; J. L. Tilton, asst. sec.

Inc. Sept. 12, 1902, in Wyo. **Cap.**, \$700,000; shares \$1 par; outstanding \$500,000; assessable; last assessment 2c, Dec., 1915. Transfer office: J. L. Tilton, 32 Broadway, New York. Empire Trust Co., New York, registrar. Listed on Salt Lake Exchange and on New York Curb as a prospect.

Property: 16 patented claims, 66 acres, in Uintah mining district, 3 miles S. W. of Park City, said to show silver-lead ore.

Development: 225' vertical shaft and 700' tunnel, work of former years. Has been idle a number of years; a little work done in 1915. Sinking winze from tunnel level during 1916.

The property was rehabilitated in 1916, compressor and motor installed and exploration started. A suit against the Kearns-Keith Mng. Co. and the Silver King Coalition Mines Co., asking \$1,500,000 damages for alleged unlawful extraction of ore pending, June, 1916.

LITTLE BELL CONSOLIDATED MINING CO.**UTAH**

Office: Newhouse Bldg., Salt Lake City, Utah. **Mine office:** Park City, Summit Co., Utah. Solon Spiro, pres. and gen. mgr.; S. M. Bamberger, sec.; Joe Kemp, supt.

Inc. 1902, in Wyoming. **Cap.**, \$1,500,000; shares \$5 par; nonassessable; fully issued. Began payment of 5c quarterly dividends, Nov. 1909, and up to and including Sept. 2, 1910, had paid 4 quarterly dividends of \$15,000 each. Shares listed on Salt Lake Stock Exchange; 20% of stock owned by Daly West Mng. Co.

Property: 30 claims, patented, in Park City district.

Development: extensive, showing deposits of lead-silver ore.

Equipment: includes steam power, with hoist and air compressor. Electric power is taken from the Knight plant at Provo. The old 100-ton mill at the Fortuna Mining Co., at Bingham Canyon, was bought 1910, and re-erected at Park City. Worked intermittently.

NAILDRIVER MINING CO.**UTAH**

Is a subsidiary of the Ontario Silver Mng. Co., 163 So. Main St., Salt Lake City, Utah.

Officers: W. Mont. Ferry, pres.; Herbert Cohen, sec.-treas.

Inc. Oct. 2, 1902. **Cap.**, \$600,000; shares \$2 par; assessable; 287,450 shares issued. Stock listed on the Salt Lake Exchange.

Property: 13 claims in Park City mining district, Summit Co., Utah, shows silver-lead-gold-copper ore, developed to depth of 600' by shaft and drifts. J. D. Fisher was lessee at last accounts and had opened up ore in 3 places. Over 100 tons shipped in October, 1916.

NEW QUINCY MINING CO.**UTAH**

Office: 202 Atlas Blk., Salt Lake City. **Mine office:** Park City, Summit Co., Utah.

Officers: W. S. McCornick, pres.; W. R. Hutchinson, v. p.; A. L. Thomas, sec., with F. J. Hagenbarth, H. G. McMillan, M. B. Johnson and Herman Bamberger, directors. Peter Harrington, supt.

Inc. June, 1915. Is a reorganization of the Thompson Quincy Mining Co. **Cap.**, \$125,000; shares 10 cts. par; assessable; with assessments not to exceed 3 cts. during the first year. Exchange of stock made on a share-for-share basis, calling for distribution of 1,055,958 shares. Stock is listed

on Salt Lake Exchange. The New Quincy Co. assumed the obligations of the Thompson Quincy.

Annual report for 1916 shows receipts totaling \$23,046, of which \$7,303 was from ore sales, \$10,426 from assessment, \$3,040 from sale of shares, and \$2,261 balance from 1915. Disbursements amounted to \$21,726, \$16,983 being spent at the mine. Cash remaining was \$1,320. Indebtedness at end of 1916 was \$42,326, plus \$3,199 interest.

Property: 140 patented acres in Park City district, with rights of way and easements from the Daly West, Daly and Ontario companies. The claims supposedly carry the extension of the Quincy orebody of the Daly West mine. Developed by a 625' two-compartment vertical shaft, a cross-cut tunnel through the Little Bell mine, cutting a contact vein, said to carry ore assaying up to 20% lead, 160 oz. silver and \$2 gold per ton, and through the Ontario drain tunnel No. 2, which was extended to the Quincy mine by the Ontario company. Work in 1913 under the former management was mainly from the 900' level of the Daly and Ontario companies and a shaft raised from the 900' Daly West level to the contact was completed.

In 1915, a 293' crosscut was run N. 31° W. across the Plumed Knight ground. This crosscut is 84' above the 900' level, Daly West, and starts from the Talbot raise; a raise was also driven on fissure No. 4 on a 43° incline a distance of 250', giving a vertical height of 160'. The crosscut intersected 9 fissures, all of which showed some slight signs of mineralization.

In 1916, milling ore from 1 to 10' wide was found at various points, and 870 tons shipped returned \$7,303 net. In the Bonanza Flat area there is still 2,000' of unexplored ground. Total development work in 1916 was 743'.

Workings from a raise above the 260' level, which is above the 900' of the Daly West, opened 3' of rich ore in July, 1917. Shipments are being made from this point.

The company's engineer advised as necessary for the proving of the property further drifting west on the so-called Thompson-Quincy workings, which is now being done, crosscutting south from the Talbot fissure another 400' until the Thompson-Quincy fissure is intersected at a point about 700' west of the old workings, thus opening up new territory; also crosscutting south on the intermediate level to intersect other fissures known to exist.

NEW YORK BONANZA MINING CO.

UTAH

Park City, Summit Co., Utah. Reported in July, 1916, that work was to be resumed at this old mine.

Old company described in Copper Handbook, Vol. XI.

PARK CITY KING MINING CO.

UTAH

Officers: Thos. Marioneaux, pres., Kearns Bldg., Salt Lake City; Frank Barnes, sec.-treas.; Sam'l Dowse, supt., with D. M. Griffith, directors.

Inc. May, 1917, in Utah. **Cap.**, \$100,000; shares 10c par; 625,000 shares in treasury.

Property: 60 acres, adjoining the Silver King on the W. at Park City, said to carry 3 fissure veins, showing copper and silver values. The tunnel is being extended to 450' in Nov., 1917.

PARK CITY MINES CO.

UTAH

Care of American Flag Mine, Park City, Utah.

Officers: J. H. Leavell, pres.; H. R. MacMillan, v. p.; John Pingree, sec.-treas.

Inc. in Utah. **Cap.,** \$1,000,000; shares \$1 par; 521,526 shares issued, 36,000 in treasury, June, 1916. Listed on Salt Lake City Exchange.

Company has bond and lease on the American Flag mine at Park City, for \$250,000 and owns 34,000 bonds and 65,000 shares of American Flag stock.

Development: 1,150' shaft, with levels and drifts. Ore reserves estimated at 10,000 tons. Production to June, 1916, \$400,000, the ore averaging \$31 and \$20 net.

PARK UTAH MINING CO.

UTAH

Office: Kearns Bldg., Salt Lake City, Utah.

Officers: H. O. Hanke, pres.; W. M. Bransford, v. p.; G. W. Lambourne, gen. mgr.-treas.; S. G. Taylor, sec.; above with M. C. Fox, G. D. Blood, H. Pingree and H. L. Nehring, directors.

Inc. 1917, to develop several hundred acres of patented ground in the Park City district, Utah.

Development: company is crosscutting N. and S. from the Ontario drain tunnel at about 10,000' in from the portal. Management is trying to solve the problems of the Frog Valley and McHenry faults. Installed compressor and drills, October, 1917.

SILVER KING COALITION MINES CO.

UTAH

Offices: Kearns Bldg., Salt Lake City, and Park City, Utah.

Officers: David Keith, pres.; Thos. Kearns, v. p. and gen. mgr.; J. S. Bransford, 2nd v. p.; W. S. McCornick, treas.; preceding, with Henry Newell, W. M. Ferry, Jas. Ivers, J. S. Bransford, J. F. Judge, and M. C. Fox, directors. F. J. Westcott, sec.; B. E. Kearns, asst. sec.; Jas. Humes, supt.

Inc. May 20, 1907, in Nevada. **Cap.,** \$6,250,000; shares \$5 par, all issued. Annual meeting third Monday in May. Transfer agents: Empire Trust Co., New York; Federal Trust Co., Boston, and F. J. Westcott, Salt Lake City. Registrars: Equitable Trust Co., New York; First National Bank, Boston, and Utah Savings and Trust Co., Salt Lake City. Stock listed on Salt Lake City and Boston Stock Exchanges.

Balance sheet as of Dec. 31, 1914, showed: assets, \$6,520,264, which included property account, \$6,320,950; ore in transit, \$62,903; cash, \$135,713. Liabilities included accounts payable, \$90,292; reserved for depreciation, \$124,358; dividend checks not deposited, \$49,970; surplus, \$7,644.

Dividends: to Oct. 1, 1917, \$15,272,385, which includes \$10,675,000 paid by original Silver King Mining Co. Present rate, 15c quarterly, or \$187,500.

Property: 327 patented claims, about 2,250 acres, covering 19,000' along the strike of the ore zone at Park City, 35 miles S. E. of Salt Lake City, consists of the holdings of the following mining companies: Silver King, Union, Park City, Fairview, Alliance, Woodside, Mass., Jupiter, Kearns-Keith, Crescent, Apex, Boss, Baltimore, St. Louis-Magnolia, Pinyon Ridge, Odin, Belmont and Uintah Treasure Hill Coalition.

Ore: silver, lead, copper and a minor amount of gold, occurs in limestone and quartzite. For geology see U. S. G. S. Prof. Paper No. 77.

Development: shafts and tunnels, with many miles of workings. One of the main workings is the 3-compartment Silver Hill winze sunk from the Alliance tunnel level, at a point 8,500' from the portal; the collar of the winze is 1,600' from surface. In 1917 extensive development was done N. W. of the shaft, towards Thayne canyon and large orebodies found in the Park City limestone.

Ore reserves not reported. The management gives out but little information, which may be due to the fact that the company has had considerable litigation over apex rights.

The mine is electrically equipped, and company owns a 600-ton mill; 400 tons being treated daily at last accounts. A flotation section which

started operating Dec. 5, 1915, is said to give an increased saving of from 10% to 15% silver and 10% lead. Company employs 400 men.

Production: 29,285 tons of ore and concentrate in 1916; in 1917 shipments ran about 600 tons ore, or 1,000,000 lbs. lead per week. Output is at rate of 27,000,000 lbs. lead, 1,200,000 lbs. copper, 1,700,000 oz. silver and 1,200 oz. gold per annum.

A judgment was rendered against the company in November, 1916, for ore extracted from the Conklin Mining Co.'s ground; the amount claimed is \$500,000. The Silver King claimed the Judge, Keystone and Conkling companies will drain its Alliance tunnel and take its water supply and therefore seeks an injunction.

SILVER KING CONSOLIDATED MINING CO.

UTAH

Offices: Newhouse Bldg., Salt Lake City and Park City, Utah.

Officers: Solon Spiro, pres.; R. P. Morris, v. p.; D. L. Wertheimer, treas., with H. A. Lee, Sherman Fargo, W. C. Lewis and Herman Harms, directors. G. W. Browning, sec.

Inc. 1902 in Wyoming as the Silver King Cons. Mng. Co.; re-incorporated Feb. 24, 1908, in Utah. **Cap.**, \$700,000, increased Sept. 12, 1912, from \$500,000; shares \$1 par; issued Jan. 31, 1916, 688,581. Empire Trust Co., New York, transfer office. Metropolitan Trust Co., New York, and Columbia Trust Co., Salt Lake City, registrars. Stock listed on New York Curb and Salt Lake Exchange.

Annual report for year ended Feb. 1, 1917, shows: balance Feb. 1, 1916, \$232,645; receipts for year, \$676,304, of which \$500,499 was from ore sales; balance Feb. 1, 1917, \$235,457.

Dividends: year ended Jan. 31, 1914, \$308,791, derived from judgment paid by co-tenant; 1915, \$251,033; 1916, \$255,032; 1917, \$294,562; to Oct., 1917, \$105,000, making \$1,422,705 to date.

Property: 1,076 acres near Park City, adjoins Silver King Coalition on the west. **Ore:** carries lead, silver, gold and copper in replacement deposits in limestone and quartzite. For geology of the district see U. S. G. S. Prof. Paper No. 77.

Development: by shafts, lowest level is at 1,800' depth. Ore mined during 1916 came mostly from stopes between the 1,500 and 1,625' levels. The flat ore-shoots adjacent to the main fissure are said to be over 32' thick and 4' to 30' wide. Branches from this main orebody, 1' to 5' thick, extend out into the adjoining country on both sides of the vein, making a mass of ore in places 100' wide. Development in 1917 totaled 7,058'. Average grade of ore produced in 1916, 43.52 oz. silver, 0.042 oz. gold, 26.13% lead and 1.13% copper, realizing \$49.57 per ton. Company employs 200 men.

Production (years ending Jan. 31):

	Ore, Tons	Lead, Lbs.	Silver, Oz.	Gold, Oz.	Copper, Lbs.	Net Value
1917*.....		3,123,328	282,085
1917.....	10,082	5,273,216	439,007	423	228,819	\$500,499
1916.....	13,719	7,843,139	652,076	605	411,086	519,478
1915.....	9,987	5,593,786	503,784	514	257,912	346,990
1914.....	609	316,434	22,319	40	6,343	19,847
1913.....	612	461,830	27,813	55	9,656	27,143

* February 1 to September 1.

New work includes a 14,000' working tunnel which is on company ground and will serve for drainage, transportation, and development. Estimated cost of tunnel, \$400,000. By September, 1917, this tunnel was in a

distance of over 4,000'. Its purpose is to explore the Thaynes Canyon area, where some rich ore was opened recently. A 10,200' tramway was built in 1916 to convey ore to the mill and railroad. A mill, initial capacity 70 tons daily, was built by Traylor Eng. & Mfg. Co., employing flotation.

The property has become a steady producer during the past two years and the company, apparently, is on a sound footing; its earnings are mainly from the lead-silver content of the ore and vary with the market price of these metals.

THOMPSON-QUINCY CONSOLIDATED MINING CO. UTAH

Reorganized, 1915, as New Quincy Mining Company, which see.

THREE KINGS SILVER MINING CO. UTAH

Office: 616 Newhouse Bldg., Salt Lake City, Utah. Mine office: Jas. McGlenn, supt., Park City, Utah.

Officers: W. R. Elliott, pres.; W. Anderson, v. p.; P. J. McIntosh, sec.-treas.

Inc. May 13, 1914, in Utah. Cap., \$100,000; shares 10c par; \$75,000 issued. Annual meeting, June 8.

Property: the Nelson, Mineola groups, 156 acres at Park City, showing usual geologic conditions of that camp, with fissures carrying silver-lead ore.

Development: 550' shaft. In 1917 a winze was sunk 200' below the main tunnel level, cutting the limestone quartzite contact and exposing some galena stringers, besides iron and manganese ore.

Management is confident of finding commercial ore.

PIUTE COUNTY

INCLUDES MARYSVALE DISTRICT AND OTHERS

ARROWHEAD MINES CO. UTAH

Officers: H. D. Chase, pres., 76 G St., Salt Lake City, Utah; Chas. A. Root, v. p.; G. Alma Gardner, sec.-treas.; A. J. Hogan, managing director, with J. A. Reeder, H. Mann, R. M. Usher, Chas. Anderson and W. J. Allen, directors. J. H. Nelson, supt.

Cap., \$10,000; shares 10c par; assessable; 261,953 shares in treasury. Stock listed on Salt Lake Exchange.

Property: the General Connor mine, 9 claims, 1 patented, near Marysvale, Piute county, said to show a 15' fissure vein of free milling ore, with a 16" streak averaging \$18-\$20 in gold and silver.

Development: by 95' shaft, 225' tunnel, winzes and crosscuts. Ore reserves estimated at \$275,000. Five men employed. Management plans sinking from tunnel level and erecting a mill.

BEAVER MINES CO. UTAH

Office: 222-23 Continental Bank Bldg., Salt Lake City, Utah. Mine address: Marysvale, Piute Co., Utah.

Officers: A. H. Cutright, pres. and mgr.; Geo. R. Raymond, v. p.; W. E. Kilburn, treas.; A. Maxwell, sec., and Alex. Beckstead, directors.

Inc. Dec. 17, 1910, in Utah. Cap., 1,000,000 shares, 1c each; issued 850,000 shares. Annual meeting, second Saturday in January.

Property: 11 claims, 220 acres, in the Ohio district, 5 miles from D. & R. G. R. R. Claims carry copper-bearing gold-silver ores in fissure veins in andesitic porphyry, giving average assays of from \$1 to \$60 per ton. There are 7 veins, 2 developed by crosscut tunnels, 725' and 72' long, to reach the main vein. Mine has only a prospecting outfit. Management plans drifting and developing on several veins.

COPPER BUTTE MINING CO.**UTAH**

Idle. Office: Richfield, Sevier Co., Utah. Wm. Johnston, pres.; George H. Ogden, sec.-treas.

Property: is a copper prospect on Gold mountain, in the Kimberly district, Piute Co., Utah.

Development: by a short tunnel, showing a 6' vein of low-grade silver-bearing copper ore. Company claims to have discovered a large deposit of alunite, a potash ore, in 1916.

MINERALS PRODUCTS CORPORATION.**UTAH**

Address: Marysvale, Utah. Controlled by Chicago capital.

Property: alunite bearing claims, 9 miles S. W. of Marysvale.

Equipment: includes aerial tram 6,200' long, 600 h. p. steam plant and 50-ton mill to extract potash from the alunite, which is a hydrous sulphate of aluminum and potassium. On Oct. 25, 1917, mill was destroyed by fire, loss given as \$200,000 net.

WEDGE GOLD MINING & MILLING CO., THE.**UTAH**

Office: 1102 W. 7th South St., Salt Lake City, Utah. Mine near Marysvale.

Officers: E. P. Mowers, pres.-gen. mgr.; N. W. Sonnedecker, v. p.; M. L. Grovenor, sec.-treas.; the foregoing, E. J. Schenck and K. D. Schenck, directors.

Cap., \$300,000; shares \$1 par; all outstanding.

Property: near head of Bullion canyon, 10 miles S. W. of Marysvale, Piute Co.

Mine contains a gold-bearing quartz fissure vein in latite; dip 15° S. E. strike N. E.-S. W. Orebody varies from ½" to 20" in width. Mine has been developed and worked chiefly under lease. Workings include a shaft, 400' adit and 200' of drifts. Shipments are of high-grade ore only.

*TINTIC AND SANTAQUIN DISTRICTS***AMERICAN MINES SYNDICATE.****UTAH**

Office: Houghton, Mich. Mine office: Eureka, Juab Co., Utah.

Officers: Walter Fitch, pres.; J. H. Rice, v. p.; Wm. P. Seager, treas.; preceding officers, Cecil Fitch and Exilda Fitch, directors.

Inc. 1907, in Arizona. Cap., \$100,000, shares \$100 par; paid in, \$80 per share; issued, \$86,350. Is a holding company, controlling the Chief Consolidated Mining Co. through ownership of 361,000 shares.

APEX STANDARD MINING CO.**UTAH**

Inc. 1917, in Utah.

Officers: Lewis Merriman, pres.-mgr., Eureka, Utah; Frank Kimball, v. p.; S. S. Pond, sec.-treas., with F. W. Brock and Hugh Hefferman, directors.

Property: 20 claims, 400 acres, E. of the Tintic Standard, East Tintic district, Juab county. Developed by 165' shaft.

Management plans sinking to 1,000' in 1917 before crosscutting.

BECK TUNNEL CONSOLIDATED MINING CO.**UTAH**

Merged April, 1916, with the Colorado Mng. Co. and now called the Colorado Cons. Mines Co., which see.

BLACK JACK CONSOLIDATED MINING CO.**UTAH**

Merged 1917 with Empire Mines Co., which see.

BOSTON & TINTIC MINING CO.**UTAH**

Office: Provo, Utah. Mine office: Mammoth, Juab Co., Utah. Jesse Knight, pres.; Wm. H. Tibbals, v. p.; W. Lester Mangum, sec.-treas.

Inc. 1899, in Utah. Cap., \$1,000,000; shares \$1 par; assessable; issued, \$747,000.

PROPERTIES IN TINTIC DISTRICT, UTAH

Stockholders voted March 26, 1916, in favor of the merger of the company into the Empire Mines Co., which see. Shares exchanged on the basis of $38\frac{1}{2}$ of Empire for 100 Boston & Tintic stock.

BULLION BECK & CHAMPION MINING CO.**UTAH**

Care U. S. Smelting, Refining & Mining Co., 55 Congress St., Boston, Mass., and Newhouse Bldg., Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah.

Officers: Geo. W. Heintz, pres.; Jos. F. Smith, v. p.; Ambrose Nord, sec.-treas.; C. E. Allen, mgr.; preceding officers, J. H. Horlick and M. C. Morris, directors. L. C. Doty, supt.

Cap., \$1,000,000; shares \$10 par; 63,787 issued; last assessment of 20c called in April, 1914. Dividends: to end of 1909, were \$2,738,400, last dividend being 10c, July 11, 1908. Company is a veteran of the Tintic district and a close corporation whose stock is mostly held by the U. S. S. R. & M. Co. through its ownership of the Centennial Eureka Co., which holds a majority interest in the Bullion Beck & Champion Mining Co. Balance sheet December, 1915, shows gross earnings of \$3,453; current assets \$7,459 and current liabilities \$1,363.

Property: 3 claims, adjoining the Centennial-Eureka, which is under the same control, and with which sideline agreements stopping litigation were secured, 1908. Mine was discovered, 1876, and has been a producer since 1880.

Development: 1,300' shaft, with 200' winze below the bottom level, and by the Beck tunnel. Ore is mainly carbonate and chloride in limestone formation, carrying copper, gold, silver, lead and zinc values.

Equipment: includes a 200-ton mill, with steam and electric power.

Production: in 1915 was 2,700 tons, averaging \$11 per ton and yielding 41 oz. gold, 29,306 oz. silver, 775,728 lbs. lead, 27,042 lbs. copper and 375,670 lbs. zinc.

About 60 men working leases on property.

CARISA GOLD & COPPER MINING CO. OF MAINE.**UTAH**

— Inc. 1907, in Maine. **Cap.,** \$500,000, increased Jan., 1909, to \$600,000; shares \$1 par; issued, \$545,000. Was a reorganization of the Carisa Gold & Copper Mining Co., which levied assessments of \$30,000 and paid dividends of \$60,000.

Stock purchased in April, 1917, by the Knight interests for \$115,000, which amount was to be divided pro rata among the Carisa stockholders. Property is now part of the holdings of the Empire Mines Co. and described thereunder.

CENTENNIAL-EUREKA MINING CO.**UTAH**

Subsidiary of U. S. S. R. & M. Co.

Office: 55 Congress St., Boston, Mass. **Operating office:** Newhouse Bldg., Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah.

Officers: Wm. G. Sharp, pres.; C. G. Rice, v. p.; F. W. Batchelder, sec.-treas.; preceding officers, B. Preston Clark, J. J. Storrow, Sidney W. Winslow and Niel W. Rice, directors; Geo. W. Heintz, gen. mgr.; Clarence E. Allen, mgr.; A. P. Mayberry, supt.

Inc. 1876, in Utah, and reorganized, 1899, in Maine. **Cap.,** \$5,000,000; shares \$25 par; issued, \$2,500,000. Is controlled by United States Sm., Ref. & Mining Co., through ownership of 99,980 shares of the 100,000 shares of issued stock.

Dividends: \$7 per share in 1906; \$2.50 in 1907; \$11.50 in 1908; nothing in 1909; \$6 in 1910 and 1911; \$3 in 1912 and 1913, making a total of \$4,050,000 to end of 1914. Last dividend of \$1 per share declared April 1, 1916. Annual meeting, third Wednesday in April.

Property: in the Tintic district, includes the Centennial, Eureka, Tintic, Dove, Swan and Pelican group. Ores carry fair values in gold, silver, copper and lead. Majority interest of Bullion Beck and Champion mining companies held by company.

Development: by a 3,260' shaft, and the 2,160' Holden tunnel, completed 1909, connecting with the shaft just below the 500' level. This tunnel permits the ore to be delivered directly to railroad cars, eliminated the rope tramway and handles the water from the mine. Ores are shipped to the Midvale smelter of the U. S. Smelting Co., at West Jordan, Utah. The mine is timbered with square sets, and formerly was dry, but the lower levels are wet, water being handled by a 500-gal. Sulzer-Winterthur electric pump. About 300 men are employed. Surface equipment includes 40-stamp mill, steam and electric power with necessary engine houses and shops.

Production: in 1909 was 109,538 tons; 1910, 90,375; 1911, 109,079; 1912, 117,957; 1913, 101,101; 1914, 58,365; 1915, 47,996; 1916, 51,381.

CHIEF CONSOLIDATED MINING CO.

UTAH

Office: Houghton, Mich. Wm. P. Seager, sec.-treas. **Mine office:** Eureka, Juab Co., Utah.

Officers: Walter Fitch, pres. and gen. mgr.; F. W. Denton, v. p.; Cecil Fitch, supt.; above with J. H. Rice, W. A. Hodgson and D. L. Robinson, directors.

Inc. Feb. 9, 1909, in Arizona. **Cap.**, \$1,000,000; shares \$1 par, nonassessable; issued, 884,020. Houghton National Bank, registrar; Boston Safe Deposit & Trust Co., transfer, agent. Has about 1,900 shareholders. Stock is listed on the Boston curb. Annual meeting, third Tuesday in February, at office of company, Tucson, Ariz.

Dividends: 1913, 20%; 1914, 10%; 1915, 10%; in 1916, 20%; 1917 to Nov., 25%. Total to date, \$665,121.

Statement for the year ending Jan. 1, 1917, showed receipts of \$1,601,903, including \$1,315,441 from ore sales and \$210,034 balance from 1915. Disbursements include dividends Nos. 7, 8, 9 and 10, amounting to \$176,481; purchase of properties, \$148,705; machinery and equipment, \$31,634 and mining costs, \$684,611, which left a balance of \$477,295, on Jan. 1, 1916.

Total receipts since organization to Dec. 31, 1916, were: \$228,160 from sale of 249,185 shares of stock; \$3,086,680 from ore sales and \$20,474 from interest; a total of \$3,335,314. Disbursements: mining claims, \$428,539; buildings and equipment, \$131,002; mining expense, \$1,752,770; dividends, \$841,900. Report for first half 1917 showed balance on hand, \$614,017; ore sales for six months, \$872,598, and \$487,566 on Oct. 1.

Property: patented claims, 1,315 acres and unpatented claims, 3,250 acres, in the Tintic and North Tintic mining districts. Company owns the mineral rights under the city of Eureka, the Little Edgard Mining Co. and the Deprizim group; controls the Homansville Mining Co., the Baltimore Consolidated Mining Co. These last four groups comprise about 600 acres. Company also controls the majority of the shares of the Plutus Mining Co. of 14 adjoining claims. The company has continuous ownership for 3½ miles east from its mine, covering 2/3 of the mineralized district. Original property of company was 100 acres.

The Eureka lands carry about 4,000' of the strike of the Victoria ore channel, which has an extreme width of about 400', the Victoria ore channel being on the Mammoth-Grand Central ore zone, and parallel to the Centennial-Eureka zone. The Victoria ore channel has a practically N.-S. strike, the ore occurring in pipes and shoots in nearly vertical lime beds.

Development: by an 1,800' and a 600' vertical shaft with about 62,000' of workings, principal development being on the 1,000', 1,200', 1,400', 1,600' and 1,800' levels. The main shaft was enlarged to provide a double hoisting compartment and a ladderway. This was done without interfering with hoisting and an increased production results.

For the year 1916 development work amounted to 25,844'; 2,619' was

done on the Pinyon Peak tract, including 593' of shaft sinking; and 246' on the Plutus. Total amount of development work by the company since its inception, 63,147'. For first half of 1917 company did 6,261' of work at its mine, 800' at the Plutus and 1,615' at the Pinyon Peak tract.

Company surrendered its lease on the Scotia mine.

Production:

	Ore, Tons	Copper, Lbs.	Lead, Lbs.	Zinc, Lbs.	Gold, Oz.	Silver, Oz.	Value Net
1916....	83,606	1,795	18,439,153	879,410	8,331	1,739,004	\$1,315,441
1915....	36,142	5,648	8,232,606	622,465	4,634	403,854	309,136
1914....	39,629	237,901	5,782,118	71,665	6,291	645,419	324,299
1913....	51,173	117,328	2,597,091	4,806	1,030,132	381,287
1912....	30,038	1,141,222	7,838	969,907	509,426
1911....	6,703	825,551	389	306,362	117,583
1910....	8,273	800,802	584	531,483	217,059

Gross average value ore in 1916, \$14.71 per ton, net \$7.94; in 1915, \$20.55, and \$9.96 respectively.

For 1916 the average gold content was 0.1015 oz., silver 21.18 oz., lead (on lead ore) 13.31%, copper 1.95%, zinc 30.52%. The zinc-lead ores averaged 19.58% zinc and 18.2% lead, with gross value of \$31.52 and an average net value of \$18.64 per ton. Average New York price received for metals was 66c for silver, 6c for lead, 26c for copper and 5.4c for zinc.

Production for first half of 1917 was 35,919 tons, mostly lead ores; the average net value was \$24.41 per ton and net profit after payment of all charges was \$355,678.

Equipment: the plant has three 150-h. p. boilers, with mechanical stokers, a hoist and 15-drill Nordberg air compressor. The double-cylinder hoist has 6' balanced drums, 1½" steel cable, and operates 2 triple-deck cages in balance, carrying 1-ton cars, to depth of one-half mile. Buildings include a power plant, housing the boilers, hoists and air compressors; a machine shop, carpenter shop, and a smithy, all of steel frame. Property considered valuable and management excellent.

COLORADO CONSOLIDATED MINES CO.

UTAH

Office: Provo, Utah.

Officers: Jesse Knight, pres.; J. William Knight, v. p.-mgr.; W. Lester Mangum, sec.-treas., with R. E. Allen, J. S. Smith, K. S. Jordan and A. M. Knight, directors. Controlled by Knight Investment Co.

Is a consolidation of the Beck Tunnel Cons. Mng. Co. and Colorado Mng. Co.

Inc. April, 1916. **Cap.**, 2,500,000 shares; 10c par; stock in old companies exchanged share for share. Listed on Salt Lake Exchange.

Dividends of \$675,000 have been paid by the Beck Tunnel and \$2,600,000 by the Colorado Cons.

Property: 28 claims, near the Sioux Consolidated, in the Tintic district, Juab Co., Utah, contains large deposits of low-grade ore carrying silver, gold, lead and copper values.

Development: main shaft is 2,000' deep and will be sunk to water level. A drift on 2,000' level is being driven east to cut various fissures, October, 1917. Lessees are also doing development.

COLORADO MINING CO.

UTAH

Merged April, 1916, with the Beck Tunnel Cons. Mng. Co. and now called the Colorado Cons. Mines Co., which see.

COPPER LEAF MINING CO.

UTAH

Mine in the Tintic district.

Officers: J. C. Diehl, of Provo, Utah; J. E. Mayer, of Salt Lake City;

J. W. Taylor, mgr., of Eureka; T. F. Pierson and Alex. Hedquist, of Provo.
Inc. 1916, in Utah. **Cap.**, 600,000 shares; \$1 par.

Property: several claims in the Tintic mining district. Company said to be sinking a shaft 500' and to be installing a 40 h. p. hoist.

CROESUS MNG. CO.

UTAH

Address: Major Catlin, Eureka, Utah.

Property: the Connolly, Dunderberg and California claims in the Eureka district. The first named claim has a 400' shaft, at which depth \$50 lead-silver ore was cut in October, 1917. The other two mines have produced in the past.

CROWN POINT MINING CO.

UTAH

Knight Investment Co., Provo, Utah. John Roundy, pres. and gen. mgr., Knightsville, Juab Co., Utah.

Inc. 1907, in Utah. **Cap.**, \$100,000; shares 10c par; assessable. Listed in Salt Lake City.

Ore: silver-lead. Development by 800' shaft to be sunk to 1,100' with 400' drift south on 800' level.

Funds for development work raised by assessments.

DELSA MINING CO.

UTAH

Property about 6 miles from Santaquin, reported operated under lease by G. M. McLean in 1917. Ore occurs in veins, 1-2' wide, carrying silver-lead-zinc. Developed by tunnel, 500' long at vertical depth of 300'.

DESERET MOUNTAIN MINES CO.

UTAH

Office: 409 Atlas Bldg., Salt Lake City.

Officers: W. Mont Ferry, pres.; D. H. Livingston, v. p.; Wm. D. Livingston, sec.; S. J. Truman, treas., with J. W. Mellen, J. H. Turner and I. D. Wines, directors. D. E. McPherson, supt.

Cap., 1,000,000 shares; 500,000 reserved for treasury.

Property: 12 claims, 250 acres in the West Tintic mining district, Juab County, said to show a contact vein, between limestone and porphyry, 12' wide, carrying copper ore that assays better than 3%.

Development: by 300' new incline shaft and an old shaft 218' deep, drifts, stopes and raises. Plans continuing shaft to 500' level. About middle of October, 1917, the 300' level crosscut had cut the vein. 10 men employed. Complete equipment being installed, July, 1917.

DRAGON CONSOLIDATED MINING CO.

UTAH

Office: care Knight Investment Co., Provo, Utah. Mine near Tintic, Juab Co., Utah.

Officers: Jesse Knight, pres.; J. Will Knight, v. p.; W. Lester Magnum, sec.-treas.; R. E. Allen and L. E. Ritter, directors; E. R. Higginson, supt.

Inc. 1911, in Utah. **Cap.**, \$2,000,000; shares \$1 par; issued 1,750,000; 250,000 in treasury. Stock listed in Salt Lake City. Annual report for year ending Dec. 31, 1915, shows assets, \$2,006,266, which includes: mining property, \$1,636,931; cash and accounts receivable, \$40,000, and liabilities, \$6,266. Receipts totaled \$103,982 from ore sales, and operating expenses, \$78,285, leaving a net gain for the year's operations, \$25,697, and a total gain to date of \$68,857.

Initial dividend of 1c a share declared Feb. 20, 1917 and continued quarterly, \$75,000 being paid to Nov., 1917. Is heaviest shipper in the Tintic district, as ore is low-grade pyrite used as a flux by smelters.

Property: 28 claims, patented, 122 acres, comprising the Dragon and Governor groups in Tintic district. The Governor group has 2,000' or more of the big Iron Blossom fissure in limestone, from which the great production of that and the Sioux mines has come. The Dragon group

shipped 100 tons per day of iron ore to the U. S. smeltery, for a long time. The Governor ground has a rich orebody of copper-silver ore developed by drifts from the Iron Blossom on the 300', 600', 800' and 1,000' levels, showing a 20' vein with 0.5 to 10% copper and 20 to 50 oz. silver. Part of the property is worked through the Black Jack shaft.

In 1915 development work consisted of 1,143' of drifting, 983' of tunneling and about 400' of raises, winzes and opencuts. In the tunnel connecting the workings with the Iron Blossom property, large bodies of low-grade ore were encountered. Work is being prosecuted on the 900' level, in 1916.

Equipment: includes electric pump on 1,000' level which secures water supply of the Knight-Christensen mill, and a hoist installed in 1915.

Production: 1,743 tons in 1914, yielding 44,006 oz. silver, 135,814 lbs. copper, 57,552 lbs. lead and 432.37 oz. gold; 7,804 tons in 1915, yielding 102,143 oz. silver, 490,750 lbs. copper, 14,766 lbs. lead and 2,559 oz. gold.

Shipping 260 tons daily, 1917.

DULUTH & UTAH DEVELOPMENT CO.

UTAH

Idle. Office: 503 Utah Savings & Trust Bldg., Salt Lake City, Utah. E. J. Raddatz, pres.-treas.; Peter Porter, v. p.; Harvey J. Jones, sec.

Inc. in Utah. Cap., \$500,000; shares \$10 par, as successor of No-U-Dont Mining & Milling Co.

Property: 4 fractional claims, about 50 acres, near the Honerine tunnel and next north of the Honerine mine, which carries copper, at considerable depth. Mine has 2 shafts, deepest 500', with about 3,000' of workings, and under former ownership, produced silver-lead ore from above the 500' level, shipments said to have returned 35 to 60% lead and 20 to 30 oz. silver per ton, and to have aggregated \$250,000 in value. Copper ore is expected at depth.

Property was to be absorbed by Bullion Coalition Mining Co. upon completion of payment of the \$15,000 purchase price. Part payments in 1914 and February, 1915, have already been distributed as dividends among the stockholders.

EAGLE COPPER MINING CO.

UTAH

Mine office: Santaquin, Utah Co., Utah.

Officers: Armon Cravens, pres.; C. W. Higginson, v. p.; C. E. Snell, sec.-treas.; L. F. Peterson, supt.

Inc. May, 1907, in Utah. Cap., \$1,000,000; shares 10c par. Last assessment of $\frac{1}{2}$ c delinquent, April 11, 1914.

Mine, on Mount Nebo, east of Santaquin, has shipped a little high-grade lead and copper ore. Developing with a small force.

EAST TINTIC DEVELOPMENT CO.

UTAH

Property bought, 1916, by Eureka Lilly Mining Co., which see.

EMERALD MINING CO.

UTAH

Mine office: Mammoth, Juab Co., Utah. J. E. Oglesby, pres.; J. L. Yundt, gen. mgr.

Inc. 1896, in Utah. Cap., \$300,000; shares \$1 par; assessable, fully issued; last assessment one-third cent a share, delinquent June 15, 1914.

Property: 4 claims, and additional land bought, 1910. Mine has 1,100' shaft, with about 4,000' of workings, on a narrow but rich vein, carrying copper, silver and lead ores.

In May, 1913, it was reported that 22' of ore cut on the 2,000' level of the Opex mine extended into this property. In July, 1913, company started a drift on the 1,100' level to be driven 1,200' north, to open up the ore formerly worked on the 2,000' Opex, the latter company having withdrawn permission to use the workings.

Development: on the Emerald property in the 700' winze disclosed a 4' vein between well defined walls, showing heavy iron mineralization and sugar quartz.

Company has levied assessments for years and been regarded as the "wildest of wildcats," but is now in favor and may repay stockholders for their blind faith and yearly contributions.

Reported April, 1917, to look promising on 700' level. Company also working on the 1,000' level.

EMPIRE MINES CO.

UTAH

Address: Jesse Knight, Provo, Utah.

Inc. 1917, in Utah. **Cap.**, 3,000,000 shares; 5c par.

Is a consolidation of the Black Jack, Boston & Tintic, Central Mammoth, Lower Mammoth, Garnet, Old Colony, Eureka, Manhattan and Opex Consolidated mining companies, all controlled by the Knight Investment Co.

In April, 1917, the stock of the Carisa Gold & Copper Mng. Co. of Maine at Mammoth, Utah., was bought for \$115,000.

Property: over 700 acres in the Tintic district, Utah, east of Silver City and south of Eureka.

Development work is being done from the Lower Mammoth deep shaft, crosscuts being driven at the 1,500 and 1,800' levels.

The consolidation should result in a thorough development campaign of this part of the Tintic district.

The Black Jack Cons. property comprises 26 claims, patented, 350 acres in Tintic mining district.

Development: by a 2,000' tunnel and a two-compartment shaft, planned to be deepened eventually to 2,000'. The 1,000' level shows auriferous copper ore, of fair tenor, in broken ground, and the bottom level, at 1,400', showed a 10' vein carrying silver-lead ore. Mine also has some copper ore high in iron, available for fluxing use.

Results to date discouraging, although about 25,000' of work has been done. New workings have passed from white into gray limestone, considered more favorable for ore.

The Boston Tintic property comprises 3 claims, patented, 46 acres, near Black Jack mine, carrying 2 fissure veins, in porphyry, of which 1, of 3 to 5' average width, traceable 2,000', has been opened by tunnels of 40', 70' and 120', and by a 240' incline shaft that followed the vein and cut bunches of good ore assaying 1 to 3% copper, 20 to 55% lead, 25 to 45 oz. silver and 80c gold per ton. The ore occurs on a limestone-porphyry contact and a 103' shaft is said to be in shipping ore.

Property of the Carisa G. & C. Mng. Co. consists of the Carisa and Spy mines, 8 claims, patented, 57 acres, adjoining the Centennial-Eureka at Mammoth, Tintic district, Utah. Claims show deposits between limestone and quartzite, 3 of which give average assays of 4.51% copper, 3.5 oz. silver and 0.037 oz. gold per ton. Mine is pockety, but shows considerable concentrating ore.

Property of the Lower Mammoth Mng. Co. consists of 6 claims, 50 acres patented, adjoining the Mammoth and Grand Central mines, carrying a continuation of the Mammoth orebody.

Development: by 700' tunnel, and 2,000' three-compartment shaft. The extensive workings show large bodies of low-grade ore, decreasing in values with depth. The oxidized zone extends to depth of at least 1,800', ores to this depth including lead carbonates, ruby silver and native silver. The copper ore occurs mainly on the footwall of the Mammoth vein, and is overlaid by silver-lead ore of smelting grade, the segregation of the

copper and lead ores being remarkably complete. The lower workings in the sulphide zone show auriferous and argentiferous galena, chalcopyrite and pyrite, coming in at a depth of 1,800' to 2,000'. Recent development consists of a drift on the 700' to cut the orebody, followed by a raise from the 1,000' level.

Equipment: includes 2 electric hoists, 1 of 165 h. p., with double drum, good for a half-mile depth, and an electric air compressor. Buildings include a carpenter shop, smithy, assay office and superintendent's dwelling.

Production in 1916 was from the 1,500 and 1,700' levels. Company claims to have a 200,000-ton orebody, averaging 13% zinc, between the 1,500' and 1,800' levels.

EUREKA BULLION MINING CO.

UTAH

Address: J. M. Bestelmeyer, mgr., Provo, Utah.

Officers: D. R. Beebe, pres.; H. C. Hicks, sec.-treas.; N. C. Hicks and August Bostelmeyer, all of Provo, directors.

Inc. 1916, in Utah. **Cap.**, \$1,000,000; shares 5c par; assessable.

Property: 7 patented claims, formerly owned by the Grutli Mining Co., were bought at sheriff's sale, 1916, for \$8,960. Claims are in the East Tintic district, N. W. of the Tintic Standard property, and are said to show a 50' vein on surface with a limestone porphyry contact.

Development: by 525' shaft reported to show quartz in a cave 150' long, 50'-75' high and 75' wide at 500', with manganese.

Equipment: includes compressor, 60 h. p. steam boiler, hoist, etc.

EUREKA CROESUS MINING CO. OF NEW YORK

UTAH

Controls or owns the Eureka Utah Mining Co. of Salt Lake City.

Property: the Huebner mine, Eureka, Juab County, Utah, shipping high-grade lead-silver ore regularly.

EUREKA HILL MINING CO.

UTAH

Office: Deseret National Bank Bldg., Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah.

Officers: Moylan C. Fox, pres.; Waldemar Van Cott, v. p.; Jas. E. Berkey, sec., with Ed. W. Packard, directors. Jackson C. McChrystal, managing engr.; Chas. Weisbaker, supt.

Inc. Nov. 12, 1875, in Utah. **Cap.**, \$1,000,000; shares \$100 par. Is a close corporation, credited with having paid \$2,000,000 in dividends. Paid \$1 dividend, 1916. Annual meeting, third Tuesday in February.

Property: 5 claims, 27 acres, patented, also a 25-acre mill site and 150 acres miscellaneous lands, in the Tintic district, adjoins the Bullion-Beck and Centennial Eureka. The Eureka Hill mine has a 1,500' main working shaft and about 30 miles of workings. Orebodies are lenticular deposits, carrying cuprite, malachite and enargite, with average values of about 1.4% copper, 6% lead, 25 oz. silver and \$3 gold per ton. Mine worked for 45 years, but shut down, 1911, and only old workings mined by lessees since then. Produced many millions of silver-lead ore from above 1,000' level. Deep development in future will be from adjacent mines.

Knight-Dern interests, 1916, leased tailing dumps of Eureka Hill, reported to contain 200,000 tons of ore, averaging \$4.50 per ton.

Lessees produced about 2,300 tons of ore in 1916.

EUREKA LILLY MINING CO.

UTAH

Office: Judge Bldg., Salt Lake City, Utah. **Mine office:** Eureka, Utah.

Officers: Grant Snyder, pres.; Gideon Snyder, sec.-treas. A. N. Holdaway, mgr.; Brig. Snyder, supt.

Inc. 1908, in Utah. **Cap.**, \$1,000,000; shares \$1 par. Company is a consolidation of the Lilly and Provo mining companies. In 1916, the East Tintic Dev. Co.'s property was bought.

Property: 7 patented claims in the East Tintic mining district, adjoining the Tintic Standard mine and including the Ralph mine of the East Tintic Dev. Co., bought in 1916; from which considerable high-grade silver-lead ore was mined years ago.

Development: by 1,325' incline shaft, which passed into hanging wall of vein, and overshot it 20 or 30' on 1,250' level. Ore was cut in shaft and 3 headings on 1,400' level (Sept., 1917) are reported in orebody. Bottom is reported in limestone impregnated with sulphides.

Produced over \$150,000 worth of ore from above the 200' level.

EUREKA MINES CO.

UTAH

Address: John H. McChrystal, gen. mgr., Eureka, Utah.

Officers: Wm. R. Wallace, pres.; Jackson C. McChrystal, v. p.; J. E. Berkley, sec.-treas.; above with H. S. Auerbach, directors.

Inc. 1916, in Utah; **Cap.**, \$1,000,000; shares 10c par.

Property: in the Tintic district is bounded by the Chief Consolidated, Gemini, Centennial, Eureka and Eagle and Blue Bell mines.

Ore: silver-lead of milling grade, averaging about 6 oz. silver and 4% lead with occasional zones of enrichment.

Development: mine has been opened up through the deep workings of the Gemini on the 900' to 1,500' levels. Shipments being made in 1917 are reported to carry 90 oz. silver and 9% lead and to average \$70 to \$80 a ton.

In August, 1917, a 16' winze on 900' level cut 30 oz. silver ore with 12% lead, and stoping was started. A connection was made between the 1,300' and 1,400' levels.

EUREKA STANDARD MINING CO.

UTAH

Address: Knight Investment Co., Provo, Utah.

Property acquired by the Knight interests in 1917, from the Uvada Copper Co., for 550,000 shares of E. S. stock.

Directors: Jesse Knight, W. Lester Mangum, J. Will Knight, John Pingree and F. C. Richmond.

Inc. 1917. **Cap.**, \$1,000,000; shares 10c par.

Property: 14 claims, about 280 acres, in the East Tintic district, formerly known as the Montana group. Shows several large outcrops.

Development: by 500' 3-compartment shaft which will be sunk to 1,000'.

FARRAGUT MINING & MILLING CO.

UTAH

Address: c/o Ashby S. Thatcher, Boston Blk., Salt Lake City.

Property: the Admiral Farragut group of claims in the North Tintic district, near Eureka, developed by a 265' shaft, which is to be sunk to 500' in 1917.

GEMINI MINING CO.

UTAH

Office: 723-4 Kearns Bldg., Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah.

Officers: E. W. Packard, pres.; Jackson H. McChrystal, v. p. and gen. mgr.; J. E. Berkley, sec.; E. O. Howard, treas., with W. Van Cott, directors. John H. McChrystal, supt.

Cap., 5,000 shares, \$100 par.

Dividends: to March, 1917, totaled \$2,460,000. In 1916 there was distributed \$80,000, equal to \$16 per share.

Property: the Gemini is a silver-lead mine with accessory copper ore, in shoots. There are 3 fissure veins, in an ore-channel about 450' wide, cut transversely by a number of cross-fissures, making a rather complex system of orebodies, the main fissure, of 15 to 20' width, having a S. E. dip, with ore shoots raking to the north. Ore in the upper workings aver-

ages about 12% lead and 40 oz. silver, while the bottom level, at 1,600', shows a 20' vein carrying argentiferous 3% copper ore. The mine has a 1,700' shaft and a 300' winze, equipped with electric hoist. The adjoining Ridge & Valley mine is operated through the Gemini shaft. Company operating on 1,600 and 1,700' levels, opening the new ore system. Upper levels leased, over 100 men being employed, they contributing largely to the daily output of 70 tons. One set of lessees mined gold-silver-copper-lead ore that returned over \$13,000 per carload.

The Gemini has been a regular producer since 1886.

GODIVA MINING CO.

UTAH

Office: 735 Kearns Bldg., Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah.

Officers: E. W. Packard, pres.; J. C. McChrystal, v. p. and gen. mgr.; J. E. Berkley, sec.; E. O. Howard, treas.

Cap., 1,000,000 shares; \$1 par; 100,000 treasury stock sold in 1917, remaining 200,000 offered public.

Property: 64 acres of patented claims in Tintic district. Only leasing done for some years, company not operating on account of settlement of estates. From 1908 to April 1, 1917, production was 13,701 tons of crude ore and 2,861 tons of concentrate, worth \$805,687. In 1916 zinc and silver-lead ores yielded \$93,000, mostly from 700' level.

Development: by 1,200' shaft, with work under way at that level. Several sets of lessees are mining ore. At 700' 31% lead and 15 oz. silver ore has been opened.

Equipment: 250 h. p. hoist, compressor, 100-ton concentrator, ore bins, buildings, etc.

GOLD CHAIN MINING CO.

UTAH

Provo, Utah. **Mine office:** Mammoth, Juab Co., Utah.

Officers: C. E. Loose, pres. and gen. mgr.; J. T. Farrar, v. p.; P. G. Peterson, sec.-treas.; preceding officers, G. Simmons and John R. Turloes, directors. W. D. Loose, supt.

Inc. Dec., 1910, in Utah. Cap., \$250,000; shares 25c par.

Dividends: to date, \$130,000. Company absorbed the Ajax Mining Co., said to have paid upwards of \$1,000,000 in dividends.

Property: the Gold Chain group and Ajax mine in the Tintic district. Recent development on the 1,500' level has shown an orebody which averages 15 to 20 oz. silver, 40 to 50% lead and \$2 to \$3 gold per ton.

Development: from Lower Mammoth mine to west end of the property, 900' below the deepest previous work, disclosed another orebody said to carry 3% copper, 44 oz. silver and \$2.50 gold per ton.

Production: about 100 tons per day, from the 200 to 700', inclusive, and 1,500' levels.

Ore: shipped is medium grade. Output in 1916 over 10,000 tons. Finances are favorable for resumption of dividends.

Equipment: hoist, 17-drill compressor, and electric motors.

GRAND CENTRAL MINING CO.

UTAH

Office: Provo, Utah. **Mine office:** Mammoth, Juab Co., Utah.

Officers: Jos. T. Farrar, pres.; H. L. Holbrook, v. p.; Preston G. Peterson, sec.-treas.; Col. Edwin C. Loose, gen. mgr.; W. D. Loose, supt.

Inc. Feb. 1902, in Colorado. Cap., \$600,000, increased 1909 from \$250,000; shares \$1 par, nonassessable; issued 500,000. Stock listed on Salt Lake Exchange. Last dividend 4 cts; total dividends to June, 1916, \$1,675,250.

Property: the Grand Central is the deepest mine of the Tintic district. It adjoins the Centennial Eureka and is opened to the 2,600' level, carrying a vein with an orebody 200' wide in places and of low average grade,

though it is the largest orebody in the Tintic camp. A second ore shoot, 700' west of the old one, and with parallel strike, was opened on the 2,000' and 2,100' levels. This ore shoot averages 15 to 20% copper on the 2,380' level and has been opened up on the 1,600' level for a distance of 1,200', showing a width of 50 to 100'. At this point the ore is bunchy, requiring careful sorting. Mine producing from the 400' to the 2,300' levels, inclusive.

Equipment: includes hoist, tramway and electric power. Mill to be constructed after the Knight Christensen plant has proved successful.

Production: for 1916 was 27,000 tons of ore. Monthly shipments in 1917 about 2,500 tons. Employs about 35 men. Property and management good.

GRANITE MINING & MILLING CO.

UTAH

Santaquin, Utah.

Officers: E. O. Bylund, pres.; Jos. Tietjen, v. p.; Jas. Goodall, sec.; C. A. Lindstrom, treas. and supt.; preceding officers, T. B. Heelis, R. J. Armstrong, and Jos. Crook, directors.

Property: 12 claims, unpatented, near Santaquin, includes the Granite mine. Claims show limestone with ore-bearing fissures, carrying replacement deposits of copper and silver-lead ore developed by 1,000' tunnel.

GRUTLI MINING CO.

UTAH

Mine at Eureka, Juab Co., Utah.

Inc. Dec., 1908, in Utah. **Cap.**, \$100,000; shares 10c par. Listed on Salt Lake Exchange.

Property: 7 claims, patented, adjoining the East Tintic Consolidated on the north, 2 miles from a railroad. Mine has a 250' main shaft, winze and cross-cuts, showing gold, silver and lead ores.

Equipment: includes steam hoist and compressor. Developing at last accounts.

HUMBUG MINING CO.

UTAH

Merged with Uncle Sam Consolidated Mining Co.

IBEX GOLD MINING CO.

UTAH

Joy, Juab Co., Utah. A Knight Investment Co. property, under lease and bond to Detroit Copper Co. and described thereunder.

IRON BLOSSOM CONSOLIDATED MINING CO.

UTAH

Officers: W. Lester Mangum, sec.-treas., 11 Knight Blk., Provo, Utah. Jesse Knight, pres.; J. Wm. Knight, v. p.-gen. mgr.; preceding, with R. E. Allen and A. M. Knight, directors. H. V. Birch, asst. mgr. Chas. Zabriskie, supt.

Inc. Nov. 7, 1899, in Utah. **Cap.**, 1,000,000 shares; 10c par; assessable; all outstanding.

Dividends: \$400,000 in 1913; \$330,000 in 1914; \$350,000 in 1916; \$250,000 in 1917 to Oct. Paying 5c quarterly, 1917, with extras of 25c to Oct, a balance sheet of Dec. 31, 1916, showed receipts: \$819,722; \$594,766 from ore sales, with a cash balance on hand of \$135,095, April 30, 1917.

Property: 15 claims, patented, 147.75 acres in the Tintic mining district, Juab Co., Utah. The Iron Blossom mine is in limestone cut by a large fissure on which the orebodies are aligned.

Development: property is opened to a depth of 1,900' and is mining a very large orebody of silver-lead ore. In Oct., 1915, high-grade copper ore, carrying silver, was opened in a winze on the 900' level and a large tonnage of this ore is expected to run 10%. A crosscut 80' from the winze on the 1,000' level, mostly in vein matter, carried 20' of copper ore, assaying from 9-16%.

Management reports that 1916 was an excellent year, and the future is favorable. Indications point to a shoot of copper ore developed from the 900' to the 1,200' level. A raise 75' above 1,300' found it inclining N. E. Connection has been made with the 1,700' level which will improve ventilation.

Diamond drilling for 1,300' on the 1,900' level failed to disclose anything of value.

Mine had 58,193' of underground workings at end of 1916, of which 5,751' was done in 1916.

Production: of smelter ore in 1916 was 33,530 tons (dry), yielding 4,601 oz. gold, 923,468 oz. silver, 3,099,300 lb. lead and 619,761 lb. copper. The gross value was \$26.84 per ton and cost \$9.89 per ton. Milling ore amounted to 13,547 tons, averaging 1.305% copper; 9.58 oz. silver and 0.077 oz. gold per ton; or in value, \$9.03 gross and \$4.516 per ton cost. This ore is treated by the Tintic Milling Co. Production for first half of 1917 was 35,000 tons of all classes of ore. Daily output is 90 tons of 4 to 6% copper ore.

Property good, but ore shoots erratic, although past experience indicates that the company will keep up its record for several years.

IRON KING MINING CO.

UTAH

Mine near Eureka, Juab Co., Utah.

Officers: Col. C. Edw. Loose, pres.; Reed Smoot, v. p.; P. G. Peterson, sec., all of Provo, Utah.

Cap. \$2,000,000; shares, \$1 par, increased from \$1,000,000 in July, 1917.

Property is in Tintic district and has not yet found a body of silver-lead ore. Assessments of 1 ct. a share have paid for development work. Mine has a 600' shaft and a 3,500' tunnel, planned to be driven 6,000' eventually. The mine is said to show 100,000 tons of iron ore blocked out and ready for stoping. Mine closed down March, 1912, owing to inability to market the iron ore at a profitable figure, but was re-opened in April, 1917. A new shaft is being sunk from the tunnel level and contracts arranged for sale of the iron ore.

Equipment: includes compressor, etc.

JOE BOWERS MINING CO.

UTAH

Office: 515 Dooly Blk., Salt Lake City, Utah. John Dern, pres.; A. Reeves, sec.

Inc. in Utah. **Cap.**, 450,000 shares; 25c par; assessable; 460,216 shares outstanding. Listed in Salt Lake City.

Property: 40 acres in the Tintic district shows silver-lead ore. Is a prospect.

KING WILLIAM MINING CO.

UTAH

Office: 546 E. 1st South St., Salt Lake City, Utah. **Mine address:** Eureka, Juab Co., Utah.

Officers: Chas. H. Blanchard, pres. and gen. mgr.; F. G. Morse, v. p.; W. A. Wright, sec.; N. G. Hall, treas.

Inc. 1907, in Nevada. **Cap.**, \$1,250,000; shares \$1.25 par; non-assessable.

Property: 2 claims, patented, 16 acres, surrounded by the holdings of the Eagle & Blue Bell, Centennial-Eureka and Grand Central.

Development: is through the Eagle & Blue Bell workings, on the 500' and 1,000' levels, corresponding with the 1,400' and 1,900' levels of the King William. There are several shallow shafts.

In Oct., 1916, the mine was sold by the sheriff to a company that has 1,000,000 shares, on which an assessment of ½c each was levied. There is no information from the mine for 1917.

KNIGHT INVESTMENT CO.

UTAH

Offices: Knight Blk., Provo, and 817 Newhouse Bldg., Salt Lake City, Utah.

Officers: Jesse Knight, pres.; Amanda M. Knight, v. p.; W. Lester Mangum, sec.-treas.; preceding, with R. E. Allen, J. Wm. Knight, Knight Starr Jordan and R. Knight, directors.

Controls 17 properties, ranging from prospects to successful dividend paying mines, in the Tintic district, Juab Co., Utah, including the Beck Tunnel Cons., Black Jack Cons., Bonneville Mining, Dragon Cons., Iron Blossom Cons.,

Lucky Boy Cons., Opex Cons., Spring Canyon Coal, Tintic Milling, Utah Ore Sampling, Colorado Mining, Knight Christensen Metallurgical companies, the Rico Wellington Mining Co. at Rico, Colorado, and the Lucky Tiger and Black Hawk Zinc mines near Neck City, Mo., acquired in 1915. The latter 2 properties are fully developed, equipped with 250-ton mill and credited with production of high-grade ore.

Company also operates the Knight Woolen Mills and Eureka Hill R. R. Co. The new 100-ton Knight Christensen custom milling plant at Silver City, designed by N. C. Christensen to treat the complex, low-grade Tintic ores, was started Oct., 1913, and operated successfully on Iron Blosson ore, attaining an 85% extraction at a cost of less than \$2 per ton, until completely destroyed by fire, April 4, 1915.

LEHI-TINTIC MINING CO.

UTAH

Address: H. J. Fitzgerald, sec.; George Nichols, pres., 125 Atlas Block, Salt Lake City, Utah.

Property: 12 claims in the Tintic district, about 4 miles from Eureka, shows silver-lead-gold ore in fissure vein.

Development: by 2,100' tunnel. Equipped with compressor and steam power. Operated intermittently with proceeds from assessments. 22 of which had been called to April, 1917. Reported early in November, 1917, that the tunnel had cut the Empire vein, assaying 28% lead, 6 oz. silver, and \$2 gold per ton. Stock listed on Salt Lake Exchange.

LILLY MINE.

UTAH

Office: 414 Judge Bldg., Salt Lake City, Utah.

Officers: Grant Snyder, pres.-mgr.; Thos. Bonoth, v. p.; Gideon Snyder, sec.-treas.; above, with H. Blementhal, G. N. Holdaway, directors.

Property: 12 claims, 10 acres at Eureka, in the Tintic mining district, Utah, adjoining the Tintic Standard mine.

Mine credited with past production of \$100,000 worth of ore from upper workings.

LOWER MAMMOTH MINING CO.

UTAH

Merged, 1917, with Empire Mines Co., which see. Stockholders receive 15 shares of Empire for every 100 of Lower Mammoth held.

LOWLAND TUNNEL WATER & TRANSPORTATION CO.

UTAH

Office: 819 Newhouse Bldg., Salt Lake City. **Mine office:** Starr, Utah.

Officers: Louis Fugal, v. p.-mgr.; C. L. Whitney, sec.-treas.; with Geo. F. Wasson and D. H. Livingston, directors.

Inc. Nov., 1912, in Utah. Cap., 1,000,000 shares; 1 ct. par; non-assessable; 350,000 issued.

Property: 36 unpatented claims, 700 acres, in Nebo mining district, Juab Co., Utah, said to carry gold-silver-lead-copper-zinc-iron ore. Formation is quartzite, lime and granite.

Ore: occurs as a contact deposit and in fissure veins, running N.-S. with dip of from 40-90°.

Company is driving a 10,000' drainage and transportation tunnel into the Mt. Nebo mineral belt to serve 11 companies operating in that district and to develop its own mineralized ground. The tunnel was in 600', Jan. 1, 1917.

MAMMOTH MINING CO.

UTAH

Office: 409 Hooper Bldg., Salt Lake City, Utah. **Mine office:** Mammoth, Juab Co., Utah.

Officers: Samuel McIntyre, pres. and gen. mgr.; Samuel McIntyre, Jr. v. p. and supt.; Col. R. M. Wilkinson, sec.

Inc., 1881, in Utah. Cap., \$10,000,000; shares \$25 par. Reincorporated Dec. 5, 1906, in Nevada. Cap., \$1,000,000; shares \$2.50 par. Controls the Cleveland

Mining Co., through ownership of 70% of capital stock. Annual meeting, first Tuesday in February.

Dividends: 5c per share in 1913, nothing in 1914, 5c in 1915, 25c in 1916, and \$1 in 1917; total to Nov., 1917, \$2,820,000.

As a result of 9 years' litigation, a judgment in favor of the Grand Central Mining Co. was rendered, 1910, against the Mammoth Mining Co., and necessitated the levying of a 10c assessment, 1910, the first in the history of the company.

Property: 19 claims, in Tintic district. Mine opened about 1870, is developed extensively and has a 2,300' main shaft, the deepest in the Tintic camp. Irregular shoots and chimneys of lead and copper ores occur, values being mainly in silver and lead.

Production: 36,000 tons in 1914; 26,000 tons in 1915; 36,600 tons in 1916; 24,000 tons to July, 1917. Dumps containing over 250,000 have been leased, yielding company 50c to \$1 per ton net.

Prospects are brighter than at any time in company's life of 25 years.

Equipment: includes complete plant, installed in 1910. About 130 men are employed.

MAMMOTH NO. 2 MINING & MILLING CO.

UTAH

Idle. Office: 409 Hooper Bldg., Salt Lake City, Utah. Mine at Mammoth, Juab Co., Utah.

Officers: Wm. H. McIntyre, pres.; Samuel McIntyre, v. p. and treas.; Isaac Jennings, sec.

Inc. 1900, in Utah. **Cap.**, \$300,000; shares \$1 par; assessable; fully issued.

Property: 2 claims, patented, adjoining the Mammoth Mining Co., shows lead and copper ores.

MAY DAY MINING & MILLING CO.

UTAH

Address: Box 1418, Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah.

Officers: John Dern, pres.; M. P. Braffet, v. p.; A. Reeves, sec.; W. S. McCornick, treas.; with J. C. Dick, directors. C. C. Griggs, supt.

Inc. 1896 in Utah. **Cap.**, \$200,000; shares 25c par; assessable; all outstanding. Stock transferred at company's office. Annual meeting, first Monday in April. Listed on Salt Lake City Exchange.

Balance-sheet for year ended March 31, 1917, shows \$61,071 received from ore sales, \$31,799 from sundries and 1915 balance, a total of \$92,770. Expenses totaled \$64,761. Cash on hand, \$12,009.

Dividends: to April, 1917, total \$268,000; including \$16,000 paid in 1916-17.

Property: 6 claims, 5 patented, 60 acres, in the Tintic mining district.

Ore: zinc silver and lead in limestone.

Development: by 1,100' vertical shaft and 1,500' tunnel. The mine has been practically out of ore several times; at one time the supply was so low the stock dropped to 1c per share; the larger part of its dividends has been paid since then.

Equipment: includes 50-h. p. electric hoist and compressor, capacity 250 cu. ft.

Production: for year ending March 31, 1917, 1,360 tons lead ore, valued at \$40,980; 569 tons zinc ore, valued at \$18,378. Regular shipments are being made, but production is not large.

Development: work is being carried on with the hope of finding new orebodies, though it is said the present rate of production can be maintained for some time even if none are found. Part of the property is leased, and company itself leases part of the Chief Consolidated ground.

Prospecting, started 2 years ago in the S. part of the property, was disappointing and has been suspended. Work between the 500' and 700' levels has opened a little ore.

NORTH SCRANTON MINING CO.**UTAH****Address:** A. Adams, supt., Lehi, Utah.**Officers:** H. B. Merrihew, pres.-mgr.; B. C. Lott, v. p.; F. R. Heidebreich, sec.-treas.; with D. H. Cox, directors.**Inc.** May, 1905, in Utah. **Cap.**, \$100,000; shares 10c par; assessable; 421,000 issued. Operating expenses in 1916 were \$1,684.**Property:** 10 unpatented claims, 200 acres, in North Tintic district, Utah, said to show a fissure in dolomitic limestone.**Ore:** consists of 6 to 8" streaks, reported to carry 23% lead and 6 oz. silver per ton.**Development:** by tunnel and winzes to depth of 300' with total workings of 2,200'. The fissure has been followed down for 200'.

Is a prospect.

OLD SUSAN MINING CO.**UTAH****Office:** 411 Felt Bldg., Salt Lake City, Utah.**Officers:** W. H. Simmons, pres.; P. F. Thompson, v. p.; E. D. R. Thompson, sec.-treas.-mgr., with F. A. Druehl, directors.**Inc.** 1899, in Utah. **Cap.**, 400,000 shares; 10 cts. par; 257,572 shares outstanding. Annual meeting first Monday in January.**Property:** 3 patented claims, 25 acres in Tintic mining district, Juab Co., Utah, shows gold-silver lead ore in fissure veins in porphyry and monzonite. Developed to depth of 300' by 1,500' tunnel. The mine is now worked by lessees on a royalty basis.**OPEX CONSOLIDATED MINES CO.****UTAH**

Is a part of Empire Mines Co., which see.

OPOHONGO MINING CO.**UTAH****Office:** Provo, Utah.**Mine address:** Samuel Cox, supt., Eureka, Juab Co., Utah.**Officers:** Wm. Hatfield, pres. and mgr.; J. H. Hatfield, v. p.; J. W. Hatfield, sec.-treas.**Inc.** 1908, in Utah. **Cap.**, \$250,000; shares 25 cts. par; assessable. Shares are listed on the Salt Lake Stock Exchange.**Dividends:** Three 1-ct. and two 2-ct. declarations in 1911-12 and one of 2 cts. on Jan. 30, 1913, a total of \$80,907 to 1916. Stock is listed on the Salt Lake Exchange.**Lands:** 3 claims, patented, in the vicinity of the Black Jack and Ajax mines.**Development:** by shafts and tunnels, with about 2,000' of workings, to depth of 1,000', with principal workings on the 500' and 700' levels. The mine is operated jointly with the Gold Chain, with which it is connected on the 300' level, and hoisting is through the Black Jack shaft. The 450' level shows an 18' orebody, said to give assays up to 10% copper and \$60 gold per ton. The 700' level shows this same ore shoot. Present development is mainly in the main tunnel of Gold Chain mine, now being driven to cut the main vein. The 1,000' level shows the fissure in the east drift, but no ore, as the ore shoot has not been reached. Lessees are at work in the upper levels and are getting 7% copper ore on the 300-750' levels. The ore contains 7-10 oz. silver and \$1-\$2 gold per ton.

Machinery equipment, owned jointly with the Gold Chain, includes an air compressor.

Production: has been intermittent since it began in 1909. Lessees operating from 400' to 700' levels, shipped about 850 tons of copper ore, 1916.

Producing about 150 tons monthly, 1917.

OXFORD CONSOLIDATED MINING CO.**UTAH****Eureka, Utah.** James Crooks, pres.; Geo. W. Owen, sec.-treas.; C. H. Spriggs, mgr.

Inc. June, 1909, in Utah. **Cap.**, \$25,000; shares 5 cts. par; assessable.

Lands: 9 claims, patented, show copper and lead ores. Levied an assessment of one-half cent, early 1911, to pay indebtedness incurred through litigation. No work has been done since patent to property was issued.

PLUTUS MINING CO.

UTAH

Controlled through stock ownership by Chief Consolidated Mng. Co.

Address: Eureka, Juab Co., Utah.

Inc. 1907, in Utah. **Cap.**, \$100,000; shares 10 cts. par, fully issued; assessable. Last assessments of 1 ct. per share levied May and Oct., 1917. Absorbed the Tetro Mining Co., Jan., 1909. Shares are listed on the Salt Lake Stock Exchange.

Property: 14 claims, patented, including the Tetro group of 3 claims, from which the Tetro Mining Co. paid \$18,000 in dividends. Mine carries auriferous and argentiferous lead and copper ores, developed by a 600' shaft, about 3,700' of tunnels, and 1,250' of other workings.

Equipment: includes a 75-h. p. electric motor, hoist and air compressor. Buildings include necessary shops and an office.

PROVO MINING CO.

UTAH

Address: Provo, Utah.

Officers: J. C. Leetham, pres.; J. W. Farrer, v. p.; D. W. Conover, sec.-treas.; with J. N. Strong, J. D. Dixon and J. C. Graham, directors.

Inc. Feb. 28, 1887, in Utah. **Cap.**, \$100,000; shares 10c. par; assessable; 828,440 issued.

Property: 3 patented claims at North Tintic, adjoining the Tintic Standard. Lead-silver-zinc ore occurs in pockets. Development by 300' shaft.

QUEEN ISABELLA MINES CO.

UTAH

Officers: Alex. Caldwell, pres., Eureka, Tooele Co., Utah; Alex. Ray Irvine, v. p.; S. R. Thurman, sec.-treas., with Daniel Caldwell and Bert Thurman, directors.

Inc. 1916, in Calif. **Cap.**, \$50,000.

Property: 14 claims adjoining the Sharp mine, Tintic district, and carrying the extension of the Sharp vein. The Sharp mine while under 2-year lease and bond to Mr. Alex. Caldwell produced 15 carloads of silver-lead ore, netting \$15 to \$20 per ton, and 100 tons not yet shipped are said to have a higher value. The new company will develop the prospect.

RAYMOND-ILLINOIS MINING CO.

UTAH

Office: 312 McCornick Bldg., Salt Lake City, Utah.

Mine office: Eureka, Juab Co., Utah.

Officers: F. J. Hagenbarth, pres. and mgr.; J. M. Wheeler, v. p.; J. C. Lynch, treas.; preceding, and Thos. Kearns, directors; M. B. Kearns, sec.

Inc. 1905, in Utah. **Cap.**, \$450,000; shares \$1 par; assessable. Assessments of one-half-cent a share fell due May 7, and June 29, 1917.

Property: 15 patented claims, in the Tintic district, shows fissures and replacements in limestone. Developed by about 1 mile of tunnels and a 1,500' vertical shaft, which as yet have shown but little ore. The bottom workings are wet. Diamond drilling was done, 1909-10, from the bottom of the shaft. Idle since 1914.

RICHMOND & ANACONDA CONSOLIDATED MINING CO.

UTAH

See Uncle Sam Consolidated Mining Co.

RIDGE & VALLEY MINING CO.

UTAH

Address: 723 Kearns Bldg., Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah.

Officers: Wm. R. Wallace, pres.; Jackson C. McChrystal, v. p.-mgr.; H. S.

Auerbach, treas.; J. E. Berkley, sec.; J. H. McChrystal, supt., above with Sarah H. McChrystal, directors.

Cap., \$1,000,000; originally \$150,000, increased 1915 to \$500,000 and in 1916 to present amount.

Property: 39 claims, 443 acres, adjoining the Gemini property, and operated through the Gemini shaft for many years. Ores carry lead-silver-copper-gold values.

Development: by 1,700' shaft, and extensive workings. Lessees extracting ore reported to assay 49% lead, 16 oz. silver. Shipments amounted to 800 tons in March, 1917. Most of the work in July was at 1,700'.

SANTAQUIN CHIEF MINING CO.

UTAH

Letters returned in 1917, from 529 Newhouse Bldg., Salt Lake City. L. A. Martin, pres.; C. E. Martin, sec.-treas.

Inc. April 29, 1911, in Utah. **Cap.**, \$100,000; shares 10 cts. par; assessable. In treasury, April, 1916, 176,993 shares stock and 476 cash. Total debt reported as \$1,955. Listed in Salt Lake City.

Property: 7 unpatented claims, in Santaquin mining district, 65 miles S. E. of Salt Lake City, several miles from a railroad, and adjoining its twin brother, the Santaquin King on the south. Is said to show a well-defined fissure in limestone.

Development: consists chiefly of 250' of tunnels with 225' of winzes. Reported that "The ore found consists of silver, lead and zinc. The ore in sight has not been determined, according to official information." One tunnel is said to show a 3' width of vein with lead-zinc ore. At last accounts work had been resumed and in April a contract let for extending the main tunnel 300'. Property is a prospect, but not in the "preferred" class.

SANTAQUIN KING MINING CO.

UTAH

Letters returned in 1917, from former office Newhouse Bldg., Salt Lake City, Utah. R. B. Young, pres.; Ben C. Rich, sec.-treas.

Inc. 1911, in Utah. **Cap.**, 1,000,000 shares, increased in 1912 to 2,000,000; 50 cts. par. In treasury May, 1916, 242,065 shares stock and \$344. Listed in Salt Lake City.

Property: 9 unpatented claims, located in Santaquin mining district, 65 miles S. E. of Salt Lake City, 7 miles from a railroad, adjoins the Santaquin Chief on the north.

Ore: occurrence said to be similar to that of the Santaquin Chief.

Development: in May, 1916, consisted of 350' of tunnels with total underground workings of 780' estimated "1,500 tons of commercial ore in sight." Reported that "unquestionably they will still be mining there after we have given way to the next generation"; unquestionably they will, if the old saying holds true that "a sucker is born every minute."

SCRANTON LEASING CO.

UTAH

Address: c/o Wade & Funkel, Scranton mine, Eureka, Utah. Operates under lease the Scranton mine at North Tintic, Utah. Produces lead and zinc ores from new discovery on surface and from Magazine tunnel. Employs 52 men.

In 15 months, to July, 1917, the output was 6,000 tons, containing 20% lead and 32% zinc.

SCRANTON MINING & SMELTING CO.

UTAH

Offices: McIntyre Bldg., Salt Lake City and Scranton, Tooele Co., Utah.

Officers: T. G. Wolf, pres.; H. A. Knapp, treas., with B. H. Throop, all of Scranton, Pa., R. J. Deighton, sec.-mgr., and Wm. H. Bramel, Salt Lake City, directors.

Cap., \$30,000; shares \$1 par.

Property: in the North Tintic district, is an old producer of silver, lead and zinc ores and the stopes were pretty thoroughly worked out. The company operated the mine until 1915. Lessees are now working it; reported in May, 1916, that 1,200 tons of lead and zinc ores, yielding \$23,000 had been shipped during the past two months. About 50 men employed at present.

See Scranton Leasing Co.

SELMA MINES CO.

UTAH

Office: Kearns Bldg., Salt Lake City, Utah.

Mine office: Knightsville, Juab Co.

Officers: C. E. Beers, pres.; S. J. Hawkins v. p.; O. W. Carlson, sec.-treas.; with L. C. Peterson, mgr., and G. A. Seequist, directors.

Inc. Dec., 1909, in Utah, as successor of Selma Consolidated Mining Co. Cap., \$50,000; shares 5c par; assessable, except 50,000; 740,000 outstanding. Statement made in June, 1917, shows current assets of \$13,655, and current liabilities, \$5,616. Miners have taken half of their wages in shares.

Property: 34 claims, unpatented, near the Lehigh Tintic mine, supposed to carry the northern extension of the mineral zone of the Colorado mine, 2 miles from a railway. The property has a lime-porphry contact, with 3 principal fracture zones carrying silver-lead and copper ores, and has secured small quantities of exceedingly high-grade ore.

Development: by a 3-compartment shaft, and tunnels showing leached ground with occasional bunches of good ore. The old company expended about \$75,000 on development. Workings total 2,650', including a 200' shaft, and tunnels 80, 900, and 1,400' long, opening ground to depth of 1,000'. The shaft is to be deepened to 600'.

Equipment: includes electric power and electric hoist.

Developing: in 1916-'17. Reported in Oct., 1915, "Selma has no high-grade orebodies in sight at present, but all indications point to them at any time"; apparently conditions of "low visibility" prevent the ore from being sighted.

SIoux CONSOLIDATED MINING CO.

UTAH

Succeeded Nov. 30, 1917 by Sioux Mines Co., receiving 493,470 shares for entire assets.

Provo, Utah.

Officers: Reed Smoot, pres.; R. L. Anderberg, sec.

Inc. about 1890, in Utah. Cap., \$1,000,000; outstanding, \$745,387; shares \$1 par. Listed in Salt Lake City. Has paid total dividends of \$872,105; last one of 4 cts. per share, July 25, 1911. No report was issued for 5 years and stock was practically dead on the Exchange, quoted around 3c. In Feb., 1916, it jumped to 24c, attributable to the reported strike of high-grade copper ore at depth in the adjoining Iron Blossom.

Statement of accounts from Jan. 1, 1916 to Sept. 22, 1917, shows balance, Jan. 1, 1916, \$6,257; receipts from ore sales (lessees), \$16,428; stock sales, \$18,157; misc., \$4,015; loans, \$18,000. Expenses totaled \$62,858; profit, \$164.

Property: 6 patented claims at Eureka in Tintic mining district, said to show silver-lead ore. Many years were spent in developing the prospect and then it was allowed to lie idle for a number of years. About 1907 work was resumed and ore found in 1908; this put the mine on a dividend basis for a time. Known ore reserves were exhausted in 1911 and mine closed down in May, 1912, to be worked since in a desultory way by lessees.

Development: by shaft to the 1,000' level. In April, 1916, the company resumed work; sank the shaft from 600' to 1,000' level. Drifts for about 500' E. on the 800' and 1,000' levels in search of the continuation of the orebody recently found in the Iron Blossom, failed to find commercial ore. Considerable quartz has been found that management believes that ore will be found at

greater depth. As company has no unissued stock and is in debt, it must borrow or reorganize. On Nov. 8, 1917, a meeting was held and sale approved of company's entire assets to the Sioux Mines Co. (to be organized) with 1,000,000 shares capital; 500,000 shares to be issued in payment, balance to be used for working capital and for clearing indebtedness.

SIoux MINES CO.

Address: R. L. Anderberg, sec., Provo, Utah.

Succeeds Sioux Cons. Mng. Co., which see.

SOUTH IRON BLOSSOM MINING CO.

UTAH

Robinson, Juab Co., Utah. George Jones, pres.; T. L. Schofield, sec.-treas.

Inc. 1908, in Utah. **Cap.**, \$100,000; shares 10c par; assessable; outstanding \$241,000. Listed in Salt Lake City.

Property: 4 claims in the Tintic mining district, showing silver-lead ore.

SOUTHERN SWANSEA MINING CO.

UTAH

Letters returned in 1917 from 408 South State St., Salt Lake City, Utah.

Mine office: Silver City, Juab Co., Utah.

Officers: Geo. Jones, pres.; Geo. A. Shepard, v. p.; Richard B. Shepard, treas.; Emma C. Shepard, sec.; R. E. Jones, supt.

Inc. July 31, 1907, in Utah. **Cap.**, \$10,000; shares 1 ct. par; issued, \$8,500. An assessment of 1/30 of a cent a share is levied annually. Shares are listed on the Salt Lake Stock Exchange.

Property: 12 claims, unpatented, south of the Swansea mine and supposed to carry an extension of the Swansea vein, showing porphyry, quartzite and lime, with a fissure vein of 12' estimated average width, traceable 1 mile, carrying auriferous and argentiferous oxidized and sulphide ores of copper and lead, developed by a 200' shaft.

SWANSEA CONSOLIDATED MINING CO.

UTAH

Office: Knight Bldg., Provo, Utah.

Officers: Jesse Knight, pres.; R. E. Allen, sec.-treas.

Inc. in Utah. **Cap.**, \$100,000; shares 10 cts. par; 999,798 outstanding; assessable. Listed in Salt Lake City.

Owens 145 acres in Tintic mining district, said to show silver-lead ore.

Property closed. Lessees are working the dumps.

SWANSEA EXTENSION MINING CO.

UTAH

Officers: Arthur L. Thomas, pres.; Heber M. Wells, sec. and treas.

Inc. June 12, 1908. **Cap.**, \$100,000; issued \$2,245; shares 10 cts. par. Listed in Salt Lake City. Owns 3 claims in Tintic mining district.

SYNDICATE MINING CO.

UTAH

Santaquin, Utah Co., Utah. B. H. Bullock, pres.-mgr.; Nora A. Bullock, sec.-treas.

Inc. Jan. 7, 1911, in Utah. **Cap.**, 1,250,000 shares; 2 cts. par. Listed in Salt Lake City.

Property: 10 unpatented claims, near Santaquin, said to show a 20' vein containing ore with gold, silver and copper values. The vein fissures are in limestone and orebodies are expected at vein intersections. Developed by 725' tunnel. Property is a prospect, in which ore in commercial amount has not yet been found, though surface croppings are promising.

TINTIC CO.

UTAH

Office: 734 Fifth Ave., New York.

Mine office: Bingham Canyon, Salt Lake Co., Utah.

Officers: Grant B. Schley, pres.; Kenneth B. Schley, v. p. and sec.; E. B. Schley, treas.; preceding, with Frederick Strauss, Alfred Jaretski, E. J. Berwind and D. Sullivan, directors.

Inc. 1903, in Maine. **Cap.**, \$2,700,000; shares \$2 par; issued \$2,091,249. Original cap., \$3,000,000; shares \$5 par, increased, 1906, to \$4,000,000, with an outstanding issue of \$3,500,000 stock in 700,000 shares of \$5 par, which was first

reduced 1909, to \$2,100,000, by cutting the par value from \$5 to \$3 and was immediately thereafter increased to present amount of \$2,700,000.

Bonds: \$500,000 authorized, at 6%, convertible into stock, of which \$422,900 is outstanding, this bond issue having been made to liquidate a floating debt. The company is a securities-holding corporation only, and is the parent company of the Tintic Mining & Development Co., Yampa Smelting Co. and West Mountain Tramway Co., properties of which are described under the titles of the two first-named companies.

TINTIC CENTRAL MINING & MILLING CO.

UTAH

Office: Provo, Utah.

Mine address: T. T. Holdaway, Knightsville, Juab Co., Utah. J. T. Farrer, pres.; R. L. Anderberg, sec.-treas.

Inc. June, 1907, in Utah. **Cap.**, \$50,000; shares 5 cts. par; assessable; all issued. Three assessments yearly of one-half cent a share. Stock listed on Salt Lake Exchange.

Property: 20 claims, covering ground adjacent to the Iron Blossom in the Tintic district and supposedly carrying the extension of the ore-bearing fissures of that mine. These fissures are in limestone and are cut by porphyry, carrying irregular but very profitable orebodies.

Development: includes a 1,038' shaft with extensive workings on the 870', 920' and 1,020' levels. In 1914 about 542' of development was done on the 870' level, opening up a fissure of low-grade quartz and a streak of lead-silver ore, running parallel with the fissure. During 1915, work was confined to the 800' level.

Equipped with electric power.

In April, 1917, arrangements were made with the Iron Blossom company to develop the Tintic Central from the former's 1,700' level, by continuing it several hundred feet. In September some lead-silver ore had been opened on the 900' level.

TINTIC COMBINATION MINING CO.

UTAH

Consolidated with Tintic Empire and Bullock companies to form United Tintic mines, now dead, the property passing to the Tintic Tunnel Co.

TINTIC DELAWARE MINING CO.

UTAH

Address: J. F. Rawson, West Tintic, Utah.

Officers: W. D. Rawson, pres.; J. T. Hammond, Jr., v. p.; J. F. Rawson, sec.-treas.; with J. H. Ekker, Albert Ekker and A. Madsen, directors.

Inc. in Utah. **Cap.**, \$100,000; shares 10c par.

Property: 8 claims, in West Tintic, 12 miles from Dunbar, Juab County, Utah, said to carry ore containing 82% lead and 8 oz. silver per ton, opened in Sept., 1917. Shipments to be made.

TINTIC DELMAR MINING CO.

UTAH

Office: Snow Bldg., Provo, Utah. **Mine office:** Eureka, Juab Co., Utah.

Officers: Lewis Merriman, pres.; Andrew Madsen, v. p.; Harvey Cluff, sec.-treas.; with C. W. Reed and T. Boardman, directors.

Inc. March 27, 1909, in Utah. **Cap.**, \$100,000; shares 10 cts. par.

Property: 20 claims, partly patented, in the North Tintic district, on which limestones occur with geologic conditions like those of Centennial Eureka mine.

Development: by 350' tunnel, to be extended to crosscut formation, which shows stringers of quartz carrying ore said to give good assay values in silver, lead and copper where 2 large cross breaks intersect. A 114' winze encountered fissures opened by a drift, 100' below the tunnel, reported to show ore carrying 300 oz. silver, some gold, lead and a little copper in a shoot encased in low-grade ore. Sinking was under way in May, 1917, and a hoist and compressor were installed in August.

Property reported on favorably by C. A. Porter of the Utah Copper Co. and by Prof. J. E. Tallmadge. Is a promising mining gamble.

TINTIC DRAIN TUNNEL CO.

UTAH

Address: Provo, Juab County, Utah.

Officers: Jesse Knight, pres.; W. L. Mangum, sec.-treas.; with J. S. Smith, E. F. Birch, Henry Barney, and C. W. Reese, directors.

Organized in Sept., 1917, to drive a 5½ mile adit from Goshen valley to a point near Silver City, for drainage of adjacent mines and sale of water for irrigation. Company owns 300 claims along the right-of-way.

TINTIC MILLING CO.

UTAH

Provo, Utah.

Officers: Jesse Knight, pres.; G. Dern, v. p.-mgr.; W. L. Mangum, sec.-treas.; T. P. Holt, gen. supt.

Inc. in Utah. Cap., 1,000,000 shares, 3 cts. par; assessable. The purpose of the company is to provide a process and a mill for treating low-grade ores of the locality, hitherto found valueless. The mill employs the Holt-Dern and Knight-Christensen roasting furnaces and leaching. Operations began Mar., 1916, the mill treating 200 tons daily in Oct., 1917, mostly from the Iron Blossom and Dragon Consolidated mines. Bullion assays 90% copper and carries from 600 to 2,000 oz. silver per ton.

Briefly the process is: crusher, 4 sets of rolls, 11 roasting furnaces; four 100-ton leaching tanks, and scrap iron precipitating boxes. The charge for roasting is a mixture of oxide and sulphide ores, coal dust, and salt. This process is amenable to the low-grade silver-copper-gold ores of the district.

TINTIC MINING & DEVELOPMENT CO.

UTAH

Office: 734 Fifth Ave., New York. **Mine office:** Bingham Canyon, Salt Lake Co., Utah.

Officers: Grant B. Schley, pres.; E. B. Schley, v. p.; W. J. Walworth, sec.-treas.; C. G. Raynor, asst. sec.-treas.; preceding, with W. L. Thomas, E. J. Berwind and Kenneth B. Schley, directors.

Inc. Aug., 1896, in West Virginia. Cap., \$3,000,000; shares \$5 par; reorganized Jan., 1906, in Maine. **Cap.,** \$600,000; shares \$1 par. Is a subsidiary of the Tintic Co., and operated as a close corporation, making no public reports. Property was mortgaged 1910, for \$150,000, jointly with the Yampa Smelting Co. and West Mountain Tramway Co., to secure a \$675,000 issue of 8% gold bonds.

Bingham Property: the Yampa mine and a group of 30 claims, 180 acres, on Carr fork, Bingham canyon, near the Ohio mine, and adjoining the Utah Consolidated on the N. and Boston Consolidated on the W. The claims carry a contact or bedded vein, of 10' minimum, 37' average and 200' maximum width, between a quartzite foot and limestone hanging, this being among the largest orebodies in the Bingham district, outside of the properties having disseminated porphyry ores. The deposit carries disseminated chalcocite, covellite and chalcopyrite, said to average 1 to 3% copper, 2 oz. silver and \$1.50 gold per ton, while smelter returns for 1909 were only about 1.7% copper, and probably under \$2 per ton in combined gold and silver values. The ore has a considerable excess of iron, rendering it valuable for smelting the highly silicious ores common to the Bingham district.

At Tintic, Utah, company owns claims near the Mammoth, Grand Central and Centennial-Eureka mines in the Tintic district, having a 300' shaft, with a power plant and air compressor. Heavy expenditures on this property gave indifferent results, and it has been idle several years.

Development: is confined to the Yampa mine, a claim of less than 6 acres, entirely surrounded by the Utah Consolidated, and developed by 2 tunnels and a shaft. The Craig haulage tunnel, on the 1,200' level, is 3,248'

long, intersecting the main vein at about 2,200' from the portal and connecting with the shaft at 2,448'. The upper or Yampa tunnel intersects the shaft at 475' and runs about 1,000' on the vein. The 1,700' shaft has 3 compartments, and is operated in 2 sections, 1 from the 400' level to surface, and 1 from that level to 1,200' level, with balanced hoists. There are 12 levels opened, approximately 128' apart. Ore from the upper workings is sent down the shaft to the Craig tunnel, which has an electric haulage system, with 2 electric locomotives, taking trains of six 3-ton cars.

Equipment: includes an electric hoist, and a power plant near the portal of the Craig tunnel, with steam and electric motors. Power is furnished by the Telluride Power Co. There is a 35-drill Ingersoll-Rand 2-stage air compressor, direct-connected to a 200 h. p. motor. Ore is transported by the West Mountain Tramway Co., controlled by the Tintic Co., which has a 12,270' Leschen aerial tram, the longest in the district, of 700 tons daily rated capacity, having 600-ton ore bins at the upper terminal, connecting with the Yampa smelter at the lower end. The tram line saves about 25c per ton on cost of transporting ore.

Production: 4,069,886 lbs. fine copper in 1905; 4,699,765 lbs. in 1906; 5,001,255 lbs. in 1907; 5,412,850 lbs. in 1908; 6,500,000 lbs. in 1909; 6,172,243 lbs. in 1910; 6,157,175 lbs. in 1911; 1,666,000 lbs. copper, 45,680 oz. silver, and 2,699 oz. gold in 1915; 3,271,249 lbs. copper, 86,875 oz. silver and 4,244 oz. gold in 1916.

The Yampa mine, though small, is considered valuable and the management good.

TINTIC STANDARD MINING CO.

UTAH

Office: 422 Judge Bldg., Salt Lake City, Utah.

Mine office: Eureka, Juab Co., Utah.

Officers: E. J. Raddatz, pres.-treas.-gen. mgr.; W. I. Snyder, v. p.; Geo. F. Busch, sec.; with L. H. Stohr and Ira I. Travis, directors; E. J. Raddatz, gen. mgr.; John Westerdahl, supt.

Inc. Oct. 2, 1907, in Utah. **Cap.**, \$1,300,000; shares 10c par; assessable; issued, 1,175,000. Has levied 19 assessments of ½c each up to 1916. Stock listed on Salt Lake Exchange. Annual meeting, Sept. 15.

Initial dividend, amounting to \$24,000, paid, June 23, 1917. No. 2 of like amount paid on Oct. 25.

Property: 95 claims, 1,760 acres, of which 15 claims, 300 acres, are patented, 2½ miles from rail in the East Tintic district.

Geology: mine shows limestone, quartzite, and porphyry, carrying fissure veins with N.-S. strike and dip of 55° E. in limestone.

Ore: carries lead and copper, and is reported to assay from a trace to 50% lead, 1 to 105 oz. silver, and \$1 to \$15 gold per ton. The management reports the main orebody as 200' wide.

Development: one 1,000' ventilating shaft, one 1,300' 3-compartment shaft, and about 8,000' of drifts, etc. Both shafts show shipping ore, present output being 800 to 1,200 tons monthly.

Equipment: includes a 100-h. p. steam plant, with an 80-h. p. double-cylinder hoist, good for 1,500' depth, and a 3-drill air compressor. There are 15 buildings. Also double-drum hoist with 75-h. p. motor and an 800 cu. ft. Chicago Pneumatic compressor with 150-h. p. motor.

TINTIC TUNNEL CO.

UTAH

Letters returned unanswered July, 1917, from Newhouse Bldg., Salt Lake City.

Officers: L. A. Martin, mgr., with F. C. Richmond, D. R. Beebe, S. B. Smith, B. D. Lyon, H. J. Fitzgerald, R. J. Evans, D. F. Davis and C. E. Martin, directors.

Inc. 1916, in Utah. **Cap.**, \$2,000,000.

The company plans to drain the E. and S. ends of the Tintic district by means of a 5-mile tunnel. It has absorbed the holdings of the United Tintic Mines, which was a consolidation of the Tintic Combination, the Tintic Empire and Bullock companies.

Property: 28 claims, about 600 acres, in the Tintic district, near Eureka, said to show 4 parallel veins in an ore zone, or channel, that lies east of the Mammoth-Grand Central and the Centennial-Eureka ore zones. The claims are so located as to give approximately 2 miles on this vein system.

Ore: carries copper, lead, silver and gold values. The veins vary greatly in width, but are generally of small size, the Bullock vein, in which work has been centered, showing a maximum width of about 4'. The ore in this vein runs high in iron and carries about \$20 per ton in copper, lead and silver.

Development: principally on the old Bullock property, includes shafts of 280', 215' and 102' and several old tunnels.

Equipment: includes a small steam plant and hoist.

Plans drifting S. from shaft No. 2 in hopes of finding orebody at intersection of veins. Excess of water and high cost of mining below water level have caused decrease of production.

TINTIC ZINC CO.

UTAH

Address: H. E. Clark, 11 Maple Hill, Saranac Lake, N. Y.

Officers: G. P. Smith, pres.; S. A. Breed, v. p.; H. E. Clark, sec.-treas.; with C. A. Suchen and W. A. Black, directors. G. H. Ryan, supt.

Inc. in Utah. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; 700,000 issued. Income during 1916, \$1,680; expenses, \$1,548; cash on hand at beginning of 1917, \$346.

Property: 12 claims, 240 acres; in North Tintic district, Utah.

Development: by 700 and 60' tunnels; workings to 300' depth total 1,000'. Prospecting for zinc-lead-silver ore.

UNCLE SAM CONSOLIDATED MINING CO.

UTAH

Office: 516 Dooly Block, Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah.

Officers: Hon. John Dern, pres.; M. P. Braffet, v. p.; Frank D. Kimball, treas.; Fred C. Dern, sec.; J. C. Dick, gen. mgr.; C. C. Griggs, supt.

Inc. June 29, 1900, in Utah. **Cap.**, \$750,000; shares \$1 par; assessable; increased, Aug. 21, 1912, from \$500,000; issued, \$550,000, with 1 assessment levied. The company formerly owned a 50% stock interest, 400,000 shares, in the May Day Mining & Milling Co., which stock was distributed 1910, to shareholders, as a stock dividend. The Richmond & Anaconda Mining Co., adjoining, was absorbed 1912, by the Uncle Sam.

Shares are listed on the Salt Lake Exchange. Annual meeting, first Monday in June.

Regular dividend rate was 2 cts. per share monthly, changed June, 1910, to 2 cts. quarterly, with an extra dividend of 3 cts., Dec., 1910, dividends for 1910 having been 19 cts. per share; total dividends to April, 1913, were \$470,000; none since. No. 2 assessment of 1c a share was levied on Nov. 2, 1917.

The annual statement for year ended May 31, 1917, shows: ore sales realized \$4,443, and balance from 1915 was \$8,712, making \$13,155. Expenses totaled \$11,601, leaving \$1,554 cash balance, May 31, 1917.

Property: 4 claims, patented, in Tintic district, including the Humbug mine, which is the principal property, producing mainly auriferous silver-lead ore of both smelting and milling grades. A good orebody was developed, 1911, in the western part of the property.

Equipment: is electrical. Mine worked by 5 lessees in 1916.

Production: in 1916, 25 tons zinc ore and 265 tons lead ore.

Last report states that company expects to do development on west part of the property, with funds derived from royalties. This work will, it is hoped, disclose the southern extension of the Yankee orebody opened in 1916.

UNION CHIEF MINING CO.

UTAH

Office: Newhouse Bldg., Salt Lake City.

Officers: G. L. Bemis, pres.-mgr., Santaquin, Utah; Geo. Baglin, sec.; A. W. Larson, supt.

Inc. 1903, in Utah. **Cap.**, \$1,000,000; shares \$1 par; assessable. Listed on Salt Lake Exchange.

Property: 18 claims, 6 patented, 370 acres, in Santaquin mining district, shows lead-silver ore in vein reported to be about 6' wide.

Development: over 8,000' of tunnels and drifts. Reported to have found high-grade ore at 550' depth in 1916, but as only picked samples seem to have been assayed, no averages can be given. Equipped with electric power line and compressor.

In October, 1917, a winze was down 400' near a limestone contact, being sunk 1,700' from the tunnel portal and to vertical depth of 1,300'. More or less high-grade lead-silver ore was opened during sinking.

UNITED TINTIC MINING CO.

UTAH

Office: 422 Judge Bldg., Salt Lake City.

Officers: E. J. Raddatz, pres.; C. E. Martin, sec.; F. Thornburg, supt.

Inc. in Utah. **Cap.**, \$1,000,000; shares 50c par; assessable. Listed on Salt Lake Exchange.

Property: 28 claims in the Tintic mining district. Was sinking shaft in May, 1917.

In July a pool was formed for one year in order to sell treasury shares for development funds. In October, 1917, it was proposed to consolidate with the South Standard Mining Co.

UTAH CONSOLIDATED MINES CO. OF TINTIC

UTAH

Office: 425 Atlas Bldg., Salt Lake City. T. R. Cutler, pres.; H. J. Fitzgerald, sec.-treas.

Inc. in Utah. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; all issued. Listed in Salt Lake City.

Property: 100 acres in Tintic mining district, shows silver-lead ore. Developing in 1916.

UTAH MINERALS CONCENTRATION CO.

UTAH

H. Atkinson, mgr., Eureka, Juab Co., Utah. A. W. Parshall, supt.

Owns 250-ton custom concentrating mill for local ores. Milled tungsten ores in 1916.

Company in hands of receiver in 1917.

VICTOR CONSOLIDATED MINING CO.

UTAH

Letters returned unanswered July, 1917, from P. O. Box 1225, Salt Lake City, Utah. **Mine office:** Eureka, Juab Co., Utah.

Officers: J. S. Wells, pres.; A. W. McCune, v. p.; J. A. Groesbeck, sec.; W. S. McCornick, treas., with J. H. Brown, directors. Vivian McCune, gen. mgr.

Inc. 1903, in Utah. **Cap.**, \$375,000; shares 50 cts. par; all issued; assessable, with 5 assessments levied and fully paid. Stock is listed on the Salt Lake Exchange.

Property: 5 claims, 38 acres, patented, including the Victor and Boss Tweed mines, carrying gold and lead-silver-bearing copper ore, developed to depth of 800'. The company is idle and the mine has been in the hands of lessees since 1909. Shipments reported to run 7% copper and 8 oz. silver per ton.

VICTORIA GOLD MINING CO.**UTAH**

Care Mrs. R. S. Robertson, treas., 1076 E. 2nd South St., Salt Lake City, Utah. Dr. A. A. Kerr, pres.; E. W. Hall, v. p.; M. G. Robertson, sec.

Property: 8 claims, patented, near Gemini mine at Tintic.

Development: 500' incline shaft and 400' tunnel opening up a large body of manganiferous iron ore carrying lead values. A new tunnel was to be driven in 1916-17 to open a new deposit.

WHITE STAR MINING CO.**UTAH**

Mine office: Eureka, Juab Co., Utah.

Officers: C. H. Thompson, pres.; P. A. Sörenson, v. p.; Emma C. Shepard, sec.; Bernard Rich, treas., and Harry Rich, directors.

Inc 1898, in Utah. **Cap.**, \$30,000; shares 10c par; assessable; with several assessments levied.

Property: 4 claims, patented, 80 acres, 3 miles from Eureka, the nearest rail point. The mine has a 100' shaft and 100' tunnel.

Company has apparently acquired a new property in the North Star district, Beaver Co., from which in Aug., 1917, two cars of \$52 ore were shipped and a compressor, hoist and other electrically driven equipment has recently been installed.

The White Star mine in the Silver Island district, Western Tooele Co., is near the Kentucky-Douglas, Western Utah and Gethin Leroy mines, all active.

YANKEE CONSOLIDATED MINING CO.**UTAH**

Office: 308 Newhouse Bldg., Salt Lake City, Utah. **Mine office:** Eureka, Juab Co.

Officers: A. W. Vosburg, pres.; G. L. Bemis, v. p.; A. E. Canfield, sec.-gen. mgr. Lew Merriman, supt.

Inc. July 8, 1898, in Utah. **Cap.**, \$1,000,000, increased in 1908 from \$500,000; shares \$1 par; assessable; all issued; listed in Salt Lake City. Has paid dividends of \$192,500; last dividend paid in Feb., 1913, 1c per share.

Property: 134 acres on Godiva Hill, Tintic district, includes the Yankee, Mountainview and Lakeview mines, lying between the Beck Tunnel and Uncle Sam Consolidated on the south and May Day on the north.

Ore: silver-lead-zinc with some gold. Country rock is limestone and porphyry. For geology of Tintic District see U. S. G. S., Folio No. 65.

Development: by tunnels and shafts, deepest 1,700'. Late development is along a strong fissure vein thought to be the May Day showing high-grade silver ore. A drift is also being run on a quartz ledge from the bottom of a 100' winze. Lessees are working part of the property.

Company has not replied to requests for information, but it is reported that rich silver-lead ore was opened in April, 1917, and the company was shipping occasional carloads during the year, receiving up to \$182 per ton net, while lessees produced 44% zinc ore.

ZUMA MINING & MILLING CO.**UTAH**

Address: Eureka, Juab Co., Utah.

Officers: P. J. Fennell, pres. and mgr.; Mrs. Mary E. Drescoll, treas.; W. F. Shriver, sec.

Inc. 1907, in Utah. **Cap.**, \$500,000; shares 50c par; 700,000 shares outstanding. Stock listed on Salt Lake Exchange.

Property: 6 claims, 4 patented, in the East Tintic district, near the Crown Point and Iron King mines, said to carry gold-silver-lead zinc ore.

Development: is by a 500' shaft, 1,000' of tunnels and winze. In Oct., 1917, it was reported that on the 500' level 6 to 12" of 55 oz. silver and 30% lead ore had been opened for some distance.

Equipment: including hoist, engine and compressor, claimed to have cost \$24,000.

TOOELE COUNTY

Includes Clifton, or Deep Creek, Dugway, Ophir and other districts, with various scattered mines.

DEEP CREEK DISTRICT

BREWER GOLD & COPPER MINING CO.**UTAH**

Office: 212 Utah Savings & Trust Co. Bldg., Salt Lake City, Utah.

Mine office: Ibapah, Tooele Co., Utah.

Officers: J. P. Gardner, pres.; S. W. Morrison, v. p. and treas.; H. B. Windsor, sec.; John Mortimer, asst. sec.

Inc. Feb. 16, 1907, in Utah. Cap., \$50,000; shares 10c par; assessable; 4 assessments have been levied.

Lands: 11 claims, 6 patented, on Dutch mountain, in the Clifton district, less than 5 miles to loading station on the Deep Creek railroad. In operation, May, 1917.

COPPEROPOLIS MINING CO.**UTAH**

Address: N. A. Dunyon, mgr., Tooele Co., Utah.

Property: 65 claims in Deep Creek district. Shipments of selected ore in Oct., 1917, reported to have returned 60% copper, 65 oz. silver and \$12 gold per ton.

Development: by tunnels.

DEEP CREEK COPPER KING CO.**UTAH**

Address: R. C. Naylor, Gold Hill, Tooele Co., Utah.

Property: 10 claims in Deep Creek district, extending south from the Western Utah Copper claims.

Development: by 100' shaft said to be sunk on copper-silver-lead ore.

DEEP CREEK COPPER M. & M. CO.**UTAH**

Office: 202 Atlas Block, Salt Lake City, Utah.

Officers: R. C. Naylor, pres.; J. Pingree, treas.; A. L. Thomas, Jr., sec.; above with A. Winzell, L. Housekeeper, I. A. Powell and W. T. Smith, directors.

Property: 10 claims, in the Deep Creek district, Tooele Co., Utah, said to show lead-silver-copper ore.

Development: by shallow shaft on the Moonlight claim which is to be sunk 100' on a 2½' vein.

Company raising funds for development work by stock sales, late in 1917.

DUGWAY COPPER MINING & SMELTING CO.**UTAH**

Office: 54 East 4th South St., Salt Lake City, Utah. Mine office: Clover, Tooele Co., Utah.

Officers: O. F. Peterson, pres.-gen. mgr.; P. C. Kittle, v. p.; A. V. Peterson, sec.; O. F. Peterson, treas.; preceding with A. E. H. Peterson and H. B. Windsor, directors.

Inc. June 13, 1902, in Utah. Cap., \$30,000; shares 10c par; assessable; issued, \$22,506. Annual meeting, third Tuesday in July.

Property: 6 claims, patented, 118 acres, in the Dugway district, 43 miles from a railroad. Shows an ore zone, reported by company, to be 300' long on the 200' level, containing a number of orebodies that carry chalcopryrite, bornite and argentiferous galena, giving assays of 1 to 15% copper, up to 30% lead, up to 7% zinc, up to 66 oz. silver, and \$1.60 gold per ton.

Development: by a 333' incline shaft, with about 1,000' of workings, showing considerable ore of good average assay tenor. Mine has no power equipment. Has been idle for several years.

MAP OF CLIFTON (DEEP CREEK) DISTRICT, UTAH

FERBER COPPER CO.**UTAH**

Office: Chas. A. Herzig, mgr. and cons. engr., 515 Dooly Blk., Salt Lake City, Utah. **Mine office:** Ferber, via Wendover, Utah.

Officers: J. C. Dick, pres.; John Dern, v. p.; A. Reeves, sec., with W. W. Armstrong, A. A. Ellis, Jr., Duncan MacVichie and W. H. Clark, directors. John M. Price, supt.

Cap., \$1,000,000; shares \$1 par; 550,000 shares in treasury; 100,000 shares treasury stock offered at 25c per share, April, 1917.

Property: 8 claims and 4 held under bond, in the Deep Creek mining district, about 14 miles W. of Gold Hill. Claims show limestone near a monzonite intrusion, and are said to show a vein, 4-6' wide, carrying ore that assays 5½-7% copper, 3-12 oz. silver and 40c gold per ton.

Development: by two shafts, one 70' deep showing 3' of high-grade copper ore. Recent work is said to have shown 18% copper ore with 11 oz. silver, and at 100' depth in No. 1 shaft there was 25' of oxide ore.

Mr. Herzig is a good judge of a mine, and his management ensures proper development.

GARRISON-MONSTER MINING CO.**UTAH**

Office: Utah Sav. & Trust Co., Salt Lake City, Utah. **Mine** near Gold Hill, Tooele Co., Utah.

Officers: J. P. Gardner, pres.; J. S. Garrison, v. p.; H. B. Windsor, sec.; S. W. Morrison, treas.

Inc. June, 1906, in Nevada. **Cap.,** \$1,000,000; shares \$1 par. Is a merger of the Garrison G. & C. Mng. Co. and the Monster Mng. Co.

Property: 26 claims, patented, on Dutch mountain, in the Deep Creek district, 40 miles from Wendover, on Western Pacific Railroad. A branch line to the district was completed in 1917, reducing transportation costs materially. The Garrison Monster company built a loading station at Garrison station on its spur from the Deep Creek line. Mine has 3,500' of workings and is said to show considerable bodies of silver-lead ore. Work was resumed during June, 1917; 20 men employed.

GETHIN LEROY UNITED MINES CO.**UTAH**

Office: 517 Atlas Blk., Salt Lake City, Utah.

Officers: A. S. Fowler, pres. and treas.; E. P. Hapgood, 72 R St., Salt Lake City, v. p.; Jas. Moffat, sec., with Given Fowler and Loris Pratt, directors.

Cap., \$1,000,000; shares \$1 par; 750,000 issued. Paid a dividend of 1c per share, Nov., 1913.

Property: in Silver Island district, Tooele Co., 15 miles north of Wendover, said to contain silver ore. Company has made several shipments during the past few years. Property was worked by lessees, who are said to have shipped 500 sacks of ore in Jan., 1916.

Property was to be sold in Aug., 1917, to satisfy a judgment for \$3,616 in favor of E. Hanson.

LUCKY STAR COPPER MINING CO.**UTAH**

Address: N. J. Nielson, sec.-treas., Dugway, Tooele Co., Utah.

Officers: G. N. Strike, pres.; J. T. Aydelotte, v. p., with Israel Larson and Peter Sacos, directors.

Cap., \$500,000; shares 10c par; 275,000 in treasury.

Property: Lucky Star mine in Dugway district, adjoining Cannon mine and held on lease and bond, 45 miles from rail at Faust.

Development: by 260' incline shaft with drifts on ore 5' thick, for length of drift, said to assay 9% copper and 15 oz. silver per ton. Eighty ton shipment said to be ready late in October.

POLE STAR COPPER CO.

UTAH

Offices: Vandergrift Bldg., Pittsburgh, Pa., and Newhouse Bldg., Salt Lake City, Utah.

Officers: P. S. Chambers, pres.; D. A. Rees, v. p.; A. E. Custer, 2nd v. p.; F. A. Duerr, treas.

Inc. Nov., 1916, in Delaware. **Cap.**, \$1,500,000; shares \$1 par. Statement rendered Mar. 20, 1917, showed cash on hand and accts. receivable, \$125,402.

Property: 15 claims, 5 patented, about 230 acres, in the Clifton or Deep Creek mining district, Tooele Co., Utah, 167 miles S. W. of Salt Lake City. Gold Hill is the post office address, about 2 miles south.

Geology: country rock is monzonite with porphyry intrusions. East and west veins traverse the claims and are in turn cut by N.-S. dikes, the rich ore occurring at these contacts. Veins are said to be 4-12' wide and ore to average 5-7% copper, 49 oz. silver, \$4.65 gold, with about 12½% bismuth.

Development: by 9 shafts, 5 tunnels, several drifts and open cuts. Main vertical shaft is 300' deep and reported to be all in ore. Tunnel No. 2, about 350' long, is yielding shipping ore.

Equipment: includes 2 gasoline hoists, compressor, etc.

Literature sent out from Pittsburg is suspiciously lurid, though mine may have merit and officers be reputable.

QUEEN OF SHEBA MINE

UTAH

Owned by J. W. Lawton, Chicago, Ill.

Property: in the Deep Creek district, about 29 miles S. W. of Gold Hill, carries free milling gold ore in a quartz vein said to be from 14-25' wide.

Development: by 1,080' tunnel and a 276' raise, driven in 1914.

Equipment: includes 10-stamp mill and 1,700' aerial tramway. The mine is credited with past production of \$150,000. Operated by lessees in 1917.

SEMINOLE COPPER CO.

UTAH

Address: F. L. Wilson, Brooks Arcade Bldg., Salt Lake City, Utah.

Property: adjoining that of Western Utah Copper Co., near Gold Hill, Deep Creek district, Tooele Co., Utah. Ore deposits are numerous and varied in character, but attention in 1917 is being given to tungsten, opened to depth of 135'. Some molybdenite is also being developed. In September a 50-ton mill was nearly complete. Shipments were made by express. Prospects said to be bright for a small but profitable property.

SOFFE SILVER MINING CO.

UTAH

Directors: J. C. Soffe, pres.; W. R. Soffe, v. p.; J. W. McKinnig, sec.-treas.; with W. J. Soffe, mgr.; A. J. Shulson.

Inc. May 7, 1916, in Utah. **Cap.**, \$10,000; shares 1c par.

Property: 12 claims, unpatented, in Erickson mining district, Tooele Co., 30 miles west of Faust Station on Salt Lake route. Claims show high-grade silver-gold ore. Letters returned in May, 1917. Probably idle.

TOOELE GOLD HILL M. & M. CO.

UTAH

Address: Peter Clegg, Tooele, Utah.

Officers: Peter Clegg, pres.; C. W. Bailey, v. p.; T. S. Marks, sec.-treas., with W. Carder and J. Donovan, directors.

Inc. April 7, 1917, in Utah. **Cap.**, \$50,000; shares 10c par; 222,500 issued.

Property: 6 claims, patented, 110 acres, in Clifton district (Deep Creek), Tooele Co., said to have a contact deposit in granite and limestone. Ore carries gold, silver, copper and lead.

Prospecting in August, 1917.

UTAH-RELIANCE MINING CO.**UTAH**

Office: 408 South State St., Salt Lake City, Utah. **Mine office:** Ibapah. Tooele Co., Utah.

Officers: J. G. Bywater, pres.; D. B. Tripp, v. p.; Richard B. Shepard, sec.-treas. and gen. mgr.; preceding with W. A. Langford and Samuel Divett, directors.

Inc. 1908, in Utah. **Cap.**, \$5,000; shares 1c par; assessable; issued, \$3,000, fully paid.

Property: 8 claims, unpatented, 160 acres, about 45 miles from a railway, showing porphyry and limestone.

Development: by a 175' tunnel and a 100' shaft, latter showing ore assaying up to 16% copper, 4 oz. silver and 40c gold per ton.

Letters returned unanswered, 1917.

WESTERN PACIFIC COPPER CO.**UTAH**

Office: care Wilson Bros., Brooks Arcade, Salt Lake City, Utah. **Mine office:** Callao, Juab Co., Utah.

Officers: E. J. Yard, pres.; Jackson H. McChrystal, v. p. and gen. mgr.; Elroy M. Clark, sec.-treas.

Property: 320 acres, adjoin the Western Utah Copper Co., in the Willow Springs division of Deep Creek district, Tooele county, just over the Juab county line.

Development: by a shaft and 2 tunnels, 400' and 1,200' long, developing ore averaging about 13% copper, 23% lead and 22% iron, with small silver and gold content. In 1914 a rich strike was reported in a south drift run from the bottom of the 250' shaft. The vein is said to be 15' wide and a 100-ton sample ran 24.4% copper. Occasional small shipments of ore have been made.

Equipment: includes steam plant and air compressor.

WESTERN UTAH COPPER CO.**UTAH**

Office: 1604 Walker Bank Bldg., Salt Lake City, Utah. **Mine office:** Gold Hill, Tooele county, Utah.

Officers: Harold R. Smoot, pres.; Duncan MacVichie, v. p.-gen. mgr.; Edwin T. Jones, sec.-treas.; with Imer Pett, Frank Fisher, H. H. Green and Senator Reed Smoot, directors. R. E. Phelan, mgr.

Inc. 1906, in Nevada. **Cap.**, \$2,500,000; shares \$5 par; fully paid and non-assessable; 499,500 issued.

Property: 5 groups of claims and 360 acres ranch land, a total of 716 acres, comprising the Gold Hill, Yellow Hammer, Calaveras, Tuolumne, and Ochre Springs groups; also the Redding Springs ranch, valuable for water for reduction purposes.

The properties are situated in the Clifton district, Tooele county, reached by the Western Pacific and Deep Creek railroads, about 167 miles S. W. of Salt Lake City. Examined in 1917 by F. W. Weeks.

Geology: predominant rocks are granite and limestone. The deposits are replacements in limestone.

The Gold Hill group has about 200,000 tons of ore that averages 4.6% copper, 3.58 oz. silver, and 0.023 oz. gold per ton. In addition to this there is said to be a large tonnage of silver-lead ore under development and partly blocked out, averaging 9% lead and 12 oz. silver per ton.

The Deep Creek railroad from Wendover, Utah, to Gold Hill, Utah, was completed March, 1917, and ore shipments began on March 3 from the Gold Hill mine, averaging 200 tons of copper ore per day.

The Calaveras and Yellow Hammer groups commenced shipping about July 1. The product from these groups is gold-copper-silver ore,

This is a detailed map of mining claims in the Goodwin Townsite area. The map shows numerous rectangular plots representing individual claims, many of which are labeled with company names such as "COPPER QUEEN M.B. CO.", "HUDSON MINING CO.", "WOODMAN MINING CO.", "CHRISTMAS MINING CO.", "WESTERN UTAH COPPER CO.", "GOLD HILL COPPER CO.", "KENO GROUP", "CLIFTON COPPER BILT", "SPECIAL GROUP", "FLORENCE M. CO.", "SEWING E COPPER CO.", "ELECTRIC M.M. CO.", "MOUNTAIN SPRINGS M.S. CO.", "RYCLOWE LEAP YEAR", and "VIOLET GOLD M. & M. CO.". Geographical features include "Deep Creek", "Goodwin Townsite Railroad", and "Woodman Road". A north arrow is located on the right side of the map. The bottom of the map is divided into sections by vertical lines, with labels "T. 6S. R. 18W." and "T. 6S. R. 17W." indicating township and range coordinates.

CLAIM MAP OF DEEP CREEK DISTRICT, UTAH

Ore shipments by company in August, 1917, were 4,600 tons, averaging 4½ copper and 5 oz. silver per ton.

WESTERN UTAH EXTENSION COPPER CO.**UTAH**

Address: A. E. Custer, mgr., Newhouse Bldg., Salt Lake City, Utah, or Gold Hill, Utah. P. S. Chambers, pres.

Inc. in Delaware. **Cap.**, \$2,500,000.

Property: 15 claims, adjoining the Western Utah Copper mine, in the Clifton district, Tooele Co., Utah. Examined in 1917 by F. W. Weeks.

Property is said to contain a well defined fissure in limestone and granite, over 5,000' long. In September a shaft was being sunk. Ore opened in a tunnel is said to assay \$3.20 gold, 19.4 oz. silver, and 17.4 copper, evidently picked ore.

Company banks on developing an extension of its neighbor's orebody.

WILSON CONSOLIDATED MINING CO.**UTAH**

Offices: 208 Brooks Arcade Bldg., Salt Lake City, Utah, and Wendover, Tooele Co., Utah. Clyde H. Wilson, pres.; Frank L. Wilson, sec.-treas.

Property: located in the Clifton district, Deep Creek district, Tooele Co., 45 miles from Wendover, was the only mine in the U. S. which shipped bismuth ore in 1914. Reported to have shipped one 25-ton lot of 8% bismuth ore carrying gold and silver. Ore was hand jigged to bring shipment up to 20%.

Reported in July, 1917, that tungsten was found on the property and that 200,000 tons of ore had been blocked out; of which class or value was not specified.

WOODMAN MINING CO.**UTAH**

Address: Gold Hill, Tooele Co., Utah.

E. F. Woodman, pres.; Geo. E. Woodman, v. p.-sec.-treas.

Property: the Frankie group, 2¼ miles S. of Gold Hill, said to show low-grade copper ore opened up for 72' in a 200' tunnel, Nov., 1917.

Ore: occurs in a granite-limestone contact, and the ore will, it is said, average 2% copper, \$1.20 gold, 2 oz. silver, but a 3' streak on the wall carries 15-20% copper.

Shipments reported to be 100 tons weekly.

Company also owns the Cane Springs mine S. W. of Gold Hill, and the Alverado group E. of the town. In both groups a gold-bearing calcite vein occurs in the granite-limestone contact. The two mines have, it is said, produced \$270,000. Seven men are employed at the Cane Springs mine.

*OPHIR DISTRICT***CARBONATE KING MINING CO.****UTAH**

Officers: M. J. Dooley, pres.; J. F. Free, v. p.; F. E. Harding, sec.-treas.; of Salt Lake City.

Cap., 1,000,000 shares; 10c par; 400,000 in treasury.

Property: in Ophir camp, near Hidden Treasure mine. Company has acquired the Hetty Green, Schindler, Ethelwin and Pinky claims.

Development: 200' inclined shaft on Hetty Green vein. Some drifting has been done. Property is still in prospective state.

CLIFF MINING CO.**UTAH**

First Nat'l Bank Bldg., Milwaukee, Wis. **Operating office:** 414 Judge Bldg., Salt Lake City, Utah. **Mine office:** Ophir, Tooele Co., Utah.

Officers: A. G. Kern, pres.; Grant Snyder, v. p.-mgr.; J. A. Stewart, sec.-treas., with A. D. Thompson, Frank Adams, Geo. Swift and E. McVicker, directors. A. H. Williams, supt.

Inc. May 31, 1906, in Maine. **Cap.**, \$3,000,000; shares \$10 par, all outstanding. **Dividends:** to 1916, \$90,000.

Property: in the Ophir district, contains silver-lead-zinc ore as replacement deposits in limestone.

Development: by tunnels, with several miles of underground workings.

Equipment: includes electric power and one-mile aerial tram.

DRY CANYON CONSOLIDATED MINING CO.

UTAH

Gisborn, Tooele Co., Utah.

Officers: C. J. Garber, pres.-treas.; L. L. Travis, v. p.; J. E. Darmer, sec., with V. C. Anderson and Violet S. Scribner, directors.

Inc. 1900, in Utah. **Cap.**, \$100,000; shares 5c par; assessable; 1,800,000 shares outstanding. Annual meeting Jan. 15.

Property: 29 claims, 12 patented, 400 acres, in Dry Canyon, Ophir mining district, Tooele Co., Utah, said to show gold, silver, copper, lead and zinc ore, but not in commercial quantity at present. Miners said to have produced a little ore before present company acquired it.

Development: by tunnels with a total of 8,000' underground workings.

Production: shipped two cars of ore, 1916, netting about \$2,000. Company is shipping some ore while doing development work, 1917.

EUREKA OPHIR MINE

UTAH

At Dry Canyon camp, via Stockton, in Rush Valley district, Tooele Co., Utah, on the S. P. L. A. & S. L. R. R.

Property shows veins with replacement orebodies in Paleozoic limestones at and near dike contact and was shipping 50 tons a month from the 200' and 375' levels, averaging 8% copper, 15 oz. silver, 10% lead, in 1913.

Property idle in 1914, but reported operated under bond and lease by Mineral Development Co., in 1915, and shipping \$26.92 ore from the 200' level. Plans sinking main shaft to 400' level. No recent returns.

FEDERAL MINING & MILLING CO.

UTAH

Stateline, Iron Co., Utah. I. C. Clark, mgr. Company owns the Ophir mine and a mill in Rice canyon. Reported to have taken a working option on the Blue Jay group in Washington mining district, Beaver county, in 1916. Is a private corporation.

GOLD BOND MINING & MILLING CO.

UTAH

Office: 27 Latimer Block, Salt Lake City, Utah.

Officers: A. A. Crome, pres.; Walter Crome, v. p.; Wm. Crome, sec.-treas., with W. C. Howe and C. F. Stanley, directors.

Inc. 1898, in Utah. **Cap.**, \$25,000; shares 5c par; assessable; 200,000 shares outstanding.

Property: 2 unpatented claims, 4 miles from a railroad, Tooele Co., Utah, shows a contact fissure vein, traceable on surface and carrying streaks of copper, gold, silver in limestone formation. Assays average 4% copper. Is merely a prospect reported to have good showings. Developed by a shallow shaft and 120' tunnel, with about 300' of workings. Tunnel being driven to cut orebody. Four men employed.

LION HILL CONSOLIDATED MINES CO.

UTAH

Office: 50 Congress St., Boston, Mass. **Mine office:** Ophir, Utah.

Officers: E. W. Clark, pres.; Ed. A. Fordyce, sec.-treas.

Inc. Sept., 1910., in Maine. **Cap.**, \$1,000,000; shares \$1 par; fully paid; 431,347 issued.

Property: 640 acres in the Ophir camp, Tintic mining district, Tooele Co., reported to show high-grade silver-lead ore in fissure veins in limestone formation.

Development: by 5,000' of shafts, tunnel and drifts. Operated by lessees, and zinc-silver-lead ore mined, 1915-16.

MONO DEVELOPMENT CO.**UTAH**

Address: J. H. Cook, pres., or Matt Gisborn, Salt Lake City, Utah. Mine at Dry Canyon, near Ophir, Salt Lake Co., Utah. Stock assessed $\frac{1}{4}$ c a share.

Property: a group of claims, 300 acres, noted in 1872-3 for its high-grade silver ore. Claims are near the following producing mines: Mono Brooklyn, Thad Stevens, Kearsage and Eureka Ophir. A new wagon road built Oct., 1917, from Dry Canyon to the railway gives a new impetus to work, as heretofore ore was hauled 9 miles to Stockton.

Developed: by 2,500' tunnel.

NEW STOCKTON MINING CO.**UTAH**

Office: Mankato, S. D. Mine at Stockton, Utah.

Officers: F. M. Currier, pres.; R. A. Dunham, v. p.; W. Z. Harrison, sec.-treas., Hess Bldg., Salt Lake City. W. A. Wilson, cons. engr., 406 Dooly Block, Salt Lake City; C. B. Kennedy, W. D. Kimball and M. M. Ferguson, directors.

Property: the old Ben Harrison mine at Stockton showing a vein with one to two feet of ore, which averages 10% to 45% lead, 5 to 40 oz. silver and 60c to \$7 gold per ton.

Development: by shaft with main work on 200' and 500' levels.

Production: \$70,000 in 1913-1914. As shipped the ore has averaged \$12 to \$15 per ton with silver-gold-lead values.

In 1917 lessees were shipping ore averaging 45% lead and 35 oz. silver per ton.

OPHIR HILL CONSOLIDATED MINING CO.**UTAH**

Office: Miner Bldg., Butte, Mont. **Mine office:** Ophir, Tooele Co., Utah.

Officers: Wm. A. Clark, pres.; W. C. Siderfin, sec.; E. W. Clark, treas. and gen. mgr.; preceded with Chas W. Clark, directors. A. G. Swanson, mine supt.; R. H. Dunstan, mill supt.; E. Bowman, engr. Company is managed as a close corporation.

Property: one-half mile north of Ophir, carries the 5' Top-vein, the 20' Big vein, the Middle vein 10', the Copper vein 8', and the Blue vein 6' thick, and from 10'-100' wide.

Ore: contains argentiferous galena, with pyrite, averaging 8% lead and 10 oz. silver per ton; also some copper and zinc ores. Ores occur as replacements in argillaceous limestone and shale, in 3 clearly defined shoots, known as the Wild Delirium, Miner's Delight and Western Stope.

Development: an 1,800 incline shaft, with the usual levels and stopes, also a transportation tunnel nearly 1 mile long, through which all ore is taken. This tunnel intersected the vein on the 1,300' level; it also drains the mine at depth.

Equipment: includes a steam plant, not operating, and a hoist; there is a gravity tramway from the mine to the 200-ton mill.

Production: averages about 100 tons daily of lead-silver ore, with a little gold and $2\frac{1}{2}$ % copper. Concentrates run about 10-12 oz. silver and 10-12% lead per ton. The property is an excellent one. A branch line of the Salt Lake Route was built to the property in 1912.

OPHIR KING GOLD MINING CO.**UTAH**

Mine near Ophir, Tooele Co., Utah.

Inc. Nov., 1907, in Utah. Cap., \$10,000; shares 2c par, assessable.

Lands: 30 acres, patented, 9 miles from railroad, adjoining the Ophir Hill and Cliff Mining Co.'s properties and carry auriferous and argentiferous copper and lead ores. Mine has 400' tunnel, with some crosscutting and several shallow shafts. Property worked under lease in 1913. Prop-

erty and equipment were sold at sheriff's sale in Nov., 1914, to John B. Holmes, for \$1,750, to satisfy a judgment obtained by Holmes.

OPHIR QUEEN MINING CO.

UTAH

S. Crawford, Cedar River, Mich., controls property.

OPHIR-UTAH MINING CO.

UTAH

Idle. **Office:** Salt Lake City, Utah. Mine near Ophir, Tooele Co., Utah. G. G. Schliep, pres.; C. L. Olson, sec.-treas.

Inc. Feb. 13, 1909, in Utah. **Cap.**, \$250,000; shares 25c par; non-assessable.

Lands: 7 claims, 9 miles from railroad, show copper and lead ores. Has several buildings and a hoist.

STOCKTON STANDARD MINING CO.

UTAH

Address: W. N. Grundy, 523 Atlas Blk., Salt Lake City.

Officers: A. P. Davidson, pres.; D. J. Lemmon, v. p.; W. N. Gundry, sec.-treas., with H. Roy Allen, Hon. A. C. Smoot, E. V. Anderson and Carl F. Beuhner, directors.

Inc. in Utah. **Cap.**, \$10,000; shares 1c par.

Property: 10 claims, 5 patented, 170 acres, said to show a vein of silver-lead ore in a 70' shaft.

Development: by 200' shaft, with 450' drift in which a N.-S. fissure has been cut showing ore for 60'. Drifting N. on fissure for E.-W. contact in September, 1917.

WEST MERCUR MINING CO.

UTAH

Office: 11 Broadway, New York. J. Macnamara, sec. **Mine office:** Ole Strom, supt., Ophir, Utah.

Company is operating a mine on the western dip of the Camp Floyd district, and has been developing only, in 1917.

Equipment: includes a 150-ton mill.

OTHER DISTRICTS IN TOOELE COUNTY

KENTUCKY-DOUGLAS MINING CO.

UTAH

Address: care Roger Traweck, sec., 62 W. 3d St. N., Salt Lake City.

Officers: E. S. Holt, pres.-treas.; Thos. E. Brooks, v. p., with T. S. Fowler, directors.

Inc. 1916, in Utah. **Cap.**, \$1,000,000; shares \$1 par; 600,000 paid for property, 400,000 in treasury.

Property: 10 claims, in Silver mining district, western Tooele Co., Utah, said to show silver-lead ore in veins and deposits in limestone, at and near porphyry contacts.

Development: 150' crosscut tunnel, expected to cut vein at 250'. Is a prospect.

O. K. SILVER M. & M. CO.

UTAH

David Keith, gen. mgr., Kearns Bldg., Salt Lake City, Utah. Thos. Kearns, pres.; W. G. Lamb, sec.-treas.

Inc. 1909, in Utah. **Cap.**, \$100,000; shares 10c par, assessable; assessment No. 14 of 3c per share levied May, 1917.

Property: 33 claims in Erickson mining district, Indian Springs (near Tintic Jn.), Tooele Co., Utah.

Development: by a 280' incline shaft, reported all in ore running better than 186 oz. silver and \$4.70 gold per ton.

Production: in 1916, 5 cars of ore shipped netted \$30,000.

Doing mostly development work, 1917.

WASHINGTON COUNTY

(Includes Goldstrike district.)

ADAH COPPER CO.**UTAH**

Address: St. George, Washington Co., Utah.

Officers: A. H. Dahle, pres.; Geo. A. Axelrad, sec.-treas.; A. B. Harris, mgr.

Inc. 1916, in Utah. **Cap.**, 600,000 shares; 2c par.**Property:** the Burg mine, in Harrisburg district, Washington county, 10 miles E. of St. George, said to be a regular shipper of copper-gold-silver ore. Management plans erecting a 40-ton leaching plant in 1917.**BEE BEE MINING CO.****UTAH****Office:** 409 Kearns Bldg., Salt Lake City, Utah. **Mine office:** Goldstrike, Washington Co., Utah.

Officers: H. G. Snyder, pres.; John A. Bryson, v. p.; Robt. L. Judd, sec.-treas.; with E. J. Lund and Thos. Marioneaux, directors; S. F. Snyder, supt.

Inc. April 13, 1915. **Cap.**, \$100,000; shares 10c par, issued \$70,000. Assessment of 4/10c per share levied, Aug., 1916.**Property:** 3 claims, unpatented, in the Goldstrike mining district, Washington Co.**Development:** in July, 1915, claimed to show 20,000 tons of \$10 to \$35 free milling ore in fissure vein. Employed 3 men at last accounts.**BULL VALLEY GOLD MINES CO.****UTAH****Office:** 410 Felt Bldg., Salt Lake City, Utah.

Officers: M. R. Evans, pres.; Willard Snowcroft, v. p.; N. A. Robertson, sec.-treas., with M. P. Braffet and R. G. McQuarrie, directors.

Inc. 1913. **Cap.**, \$100,000; shares 10c par.**Property:** 16 patented lode claims, 295 acres, 1 millsite, and one placer claim, 35 acres in Goldstrike district, near Enterprise, about 40 miles from Modena in Salt Lake Route.**Ore:** free milling gold quartz found in fissure veins, 3' wide, along porphyry dike in lime, quartz, andesite and rhyolite formation, is said to run as high as \$50 per ton.**Development:** 2,247' of workings, including 2 tunnels, 500' and 705' long.**Ore reserves:** estimated at 10,000 tons milling ore in sight, valued at \$20 per ton.**Equipment:** 3-stamp, 10-ton mill.**Production:** consisted of several high-grade shipments in 1915. Plan erecting reduction plant.**BULL VALLEY HASSIAMPIE GOLD MINING CO.****UTAH****Goldstrike,** Washington Co., Utah.

Officers: J. D. Alsop, pres.; Ren Bryson, v. p. and supt.; J. A. Bryson, sec.-treas., with H. J. Burgess, A. B. Hemenway, A. F. Miles, W. E. Ayer, directors.

Inc. July 28, 1913, in Utah. **Cap.**, \$100,000; shares 10c par; outstanding, \$70,500. Annual meeting 1st Monday in July.**Property:** 3 claims, 60 acres, unpatented, adjoining Bull Valley Gold Mines Co., in the Goldstrike mining district, covers a large belt of porphyry and quartzite.**Ore:** gold in fissure vein, 17' wide, with 80° dip, said to assay from \$1.20 to \$14.60 per ton.**Development:** 150' incline shaft, with 165' of drifting on the 100' level and 65' on the 150' level. Plans sinking to the 300' level. Another shaft,

on quartzite and porphyry contact, has been sunk to depth of 50'. There is a 105' tunnel on the vein.

Property is still in the development stage.

GOLDSTRIKE BONANZA MINING CO.

UTAH

Officers: H. G. Snyder, pres.; C. J. Price, v. p.; Rolla E. Clapp, sec.-treas., 603 Newhouse Bldg., Salt Lake City; with B. N. C. Stott and C. A. Peet, directors.

Inc. May 25, 1915. **Cap.**, \$100,000; \$65,000 issued.

Property: 2 groups, 11 lode claims, in the Goldstrike district, about 1 mile W. of Hamburg, and 36 miles from Modena on the S. L. R. R.

Ore: oxide occurs in fissure veins in porphyry, said to be from 2' to 4' wide and to average better than \$20 per ton. Ore is free milling and carries manganese.

Development: 35' shaft, tunnel and crosscuts. Reported sacking high-grade ore at last accounts.

GOLDSTRIKE CONSOLIDATED MINING CO.

UTAH

Office: 603 Newhouse Bldg., Salt Lake City, and Goldstrike, Utah.

Officers: Rolla E. Clapp, pres.-gen. mgr.; Bishop Geo. A. Holt, v. p.; F. A. Johnson, mgr. and supt.; with Thos. Marioneaux and P. P. Canfield, directors; J. S. Farrington, sec.-treas.

Inc. May, 1915, in Utah. **Cap.**, \$160,000; shares 10c par; assessable. Transfer office: 605 Newhouse Bldg.

Property: 16 unpatented claims, in Goldstrike mining district, about 38 miles S. of Modena on the Salt Lake Route.

Ore: gold occurs in fissures in limestone and quartz porphyry dikes traversing the limestone formation. Assays taken from shaft showed from \$3.65 to \$31 per ton in gold and silver.

Development: 100' shaft, crosscut and surface cuts. Property is a prospect.

GOLDSTRIKE MINING & LEASING CO.

UTAH

Office: 603 Newhouse Bldg., Salt Lake City, Utah.

Officers: H. G. Snyder, pres.; E. J. Lund, v. p.; Rolla E. Clapp, sec.-treas.; with Clyde McQuarrie, Louis R. Lund and H. A. McQuarrie, directors.

Inc. April 16, 1915. **Cap.**, \$100,000; shares 10c par.

Property: lease Nos. 1 and 2 on Hamburg claim of Bull Valley Gold Mines Co., 3 claims of the Herd Girl group, Last Chance and Cripple Creek groups in Goldstrike district, Washington Co., Utah. Said to show gold ore occurring in fissure vein, 4' wide and averaging from \$7 to \$20 per ton.

Development: 500' adit, at depth of 300' with several winzes, drifts and upraises.

Equipment: two 3-stamp mills of 20 tons daily capacity, 20 h. p. engine and compressor.

Ore reserves: 10,000 tons blocked out, according to published reports. Employs 15 men.

LA VORE GOLD MINES CO.

UTAH

St. George, Utah.

Officers: Willard Snowcroft, pres.; R. G. McQuarrie, v. p.; D. H. Morris, sec.-treas., with Irvine McQuarrie and Herrick McQuarrie, directors.

Inc. 1915, in Utah. **Cap.**, \$100,000; shares 10c par; 60,000 issued.

Property: 10 claims in the Goldstrike district, Washington Co., Utah, said to show a vein 11' wide, averaging \$5 gold per ton.

Letters returned, 1917. Probably closed down.

VERMONT

ORANGE COUNTY COPPER MINE

VERMONT

Strafford, Orange Co., Vt. J. B. Reynolds, mgr. and principal owner, 54 No. Main St., Rutland, Vt. Lovat Fraser, engr.

Lands: 900 acres, held under deed of mining rights, are near the Elizabeth mine, 13 miles from the Boston & Maine railway. Property carries a lenticular orebody, conforming to dip of the country rocks, which include gneiss, under garnetiferous mica-schist and above hornblende-schist, with strike of west of north, and average dip of about 45°. The lens, of 40' extreme width, but not mineralized for the full width, is traceable 4,000' on the property. Ore carries chalcopryite, disseminated in massive pyrrhotite, averaging 2% copper.

Development: by 110' incline shaft, with about 70' of laterals on the 100' level.

Equipment: includes steam boilers, a 3-drill air compressor and several mine buildings. Geology is described, Bull. 455, U. S. Geol. Survey. Owner writes that "mine is in transition state—new development anticipated."

PIKE HILL MINES

VERMONT

Address: Corinth, Orange Co., Vt.

Officers: John H. Allen, pres.; John J. Coakley, sec.-treas.; preceding, with C. A. Andrews, George Marshall and D. S. Conant, directors; H. G. Hunter, mgr.

Inc. Jan. 9, 1906, in Vermont. **Cap.**, \$200,000; shares \$100 par; outstanding, \$160,300.

Property: 101 acres, freehold, in the Corinth district, 14 miles from the Boston & Maine railway, shows mica-schist carrying lenses of chalcopryite disseminated in pyrrhotite, of 2% estimated average copper tenor. The mine was worked in a small way at intervals during the nineteenth century.

Equipment: hydro-electric power and 100-ton flotation plant being installed, 1917.

Production: 131,911 lbs.; fine copper in 1905; 304,377 lbs. copper and 1,098 oz. silver in 1906; 425,367 lbs. copper and 2,292 oz. silver in 1907. Inactive from Nov., 1907, until Oct., 1915, when experiments with the flotation process were started. Shipments from Oct., 1915, to Jan., 1916, about 210 tons, claimed to run 10% copper and 1 oz. silver per ton.

VERMONT COPPER CO.

VERMONT

Office: 576 Fifth Ave., New York. **Mine office:** South Strafford, Orange Co., Vt. G. E. Parks, sec.; G. M. Heckscher, mgr.

Inc. 1906, in Arizona, as successor of Elizabeth Copper Co. **Cap.**, \$1,000,000, and since has taken over the Strafford Mining Co. and the Sharon Power Co.

Property: 12 miles from Pompanoosue, the nearest rail station, includes the old Elizabeth mine, opened 1793, for magnetic pyrites, and operated early in the nineteenth century by the Vermont Copperas Co., which is said to have made, at one time, about 6,000,000 lbs. of copper yearly, beginning a small incidental production of copper about 1830, when it was found that the mine carried an average of about 3 per cent copper, in the form of chalcopryite disseminated in pyrrhotite.

Geology: the orebody is a thin lens of pyritic ore in foliated mica-schist, wedging out at the bottom. The lens has been mined for 700' in length and is reported, by the management to have been opened up for more than 2,000' in length, ranging from 50 to 100' in width, of which 8 to

10' is ore. Management estimates upwards of 1,000,000 tons of pyritic ore in sight, consisting of pyrrhotite and pyrite with small amounts of chalcopyrite. Diamond-drill borings, made 1909, have shown ore to continue for 200' depth below the present workings.

Development: by a 1,340' tunnel with back of 225', and a 200' incline blind shaft. The dumps carry about 50,000 tons of discarded ore, of which large portions are estimated by the management to average 1.75 per cent copper.

A hydro-electric power station on the White river, equipped for 500 h. p., formerly transmitted current 9 miles to the mine and works. There also is a small steam plant and an air compressor at the mine.

The reduction plant at the mine included a mill and smelter, the former using the Rowland magnetic separation process. The smelter has a 300-ton blast furnace in which semi-pyritic smelting was tried, but abandoned 1908, for heap roasting.

After an idleness of several years, operations reported to have been resumed June, 1916, under management of Professor George Guess of the University of Toronto.

In September, 1917, it was reported that a Boston syndicate had bought the 300,000 tons, more or less, of dump ores and erected a 250-ton flotation plant to treat the material. Rich ore is also said to have been opened recently.

VIRGINIA

ALLEGHANY ORE & IRON CO.

VIRGINIA

Address: Care H. B. Spackman, pres., Buena Vista, Va.

Property: iron ore mines at Oriskany, Va., having an annual output of 225,000 tons.

AMERICAN RUTILE CO.

VIRGINIA

Address: Pacific Bldg., Washington, D. C. W. M. Slater, pres.; Albert Harper, sec.-treas.; H. Wanke, supt.

Inc. in Virginia. Cap., \$100,000; shares \$100 par; issued \$97,500.

Property: 5 claims at Roseland, Nelson Co. Rutile, containing 96% titanium oxide, is mined from open-cut workings. Equipment includes steam hoist, pump, a 2,500' aerial train, and a 10-stamp mill. The mill, with a daily capacity of three tons, is equipped with Wilfley tables, and a Wetherill magnetic separator. Gross earnings for 1914-1915 were \$70,000, with operating expenses of \$25,000. Production amounted to 250 tons of rutile, with ilmenite as a by-product.

No recent figures obtainable.

ARMINIUS CHEMICAL CO., INC.

VIRGINIA

Office: 44 Pine St., New York. **Cap.,** \$10,000. J. Frederic Kernochan, pres.; T. McGovern, mgr., Mineral, Louisa Co., Va.

Property: shows a large lens of pyrite in ancient schistose rocks, worked for iron pyrite. Mine worked by shafts. Equipped with steam hoists, Ingersoll compressors, and output is concentrated in a 350-ton mill.

CABIN BRANCH MINING CO.

VIRGINIA

Office and mine: Dumfries, Prince William Co., Va. Is controlled by the Virginia-Carolina Chemical Co.

Property has a large lenticular body of iron pyrites carrying up to three-fourths of 1% copper recovered as a by-product after roasting.

Development: by shaft, equipment, including a steam hoist and air compressor. Mine employed 50 men at last accounts.

CRIMORA MANGANESE CORPORATION

VIRGINIA

Office: 30 E. 42nd St., New York, and Crimora, Augusta Co., Va.

Directors: Presidency vacant in Sept., 1917; John D. Brooks, v. p.; John H. Hulbutt, sec.-treas. Wm. L. Hogg, mgr., Crimora.

Inc. Sept. 29, 1914, in Va. **Cap.**, \$1,000,000; shares \$100 par; all outstanding. **Transfer office:** Security Transfer & Registrar Co., New York. Annual meeting, last Monday in Sept.

Bonds: authorized and issued \$500,000 1st mtge. 6% sinking fund gold bonds, due 1929.

Property: 946 acres, including the Crimora mine, 2 miles east of Crimora station, on the Norfolk & Western R. R. The mine was first opened in 1867 and acquired by present company in 1914. Deposit consists of manganese-ore masses of various sizes scattered through a clay basin, $\frac{1}{2}$ mile long, several hundred yards wide and 200' deep. The ore is hard and consists of psilomelane and pyrolusite. Percentage of ore to clay varies considerably, from 2 to 20% of ore to the clay, by volume. Ore assays 42 to 48% manganese. See U. S. G. S. Bull., No. 427, pp. 58-61, pp. 101, 270.

Development: by open pits using a drag line excavator; formerly done by underground workings. Management claims 1,000,000 tons ore proven, with probable reserves of 3,000,000 tons.

Equipment: electric power, and a 200-ton mill, which started operating in June, 1916. Management anticipates a yearly production of 15,000 to 25,000 tons ore.

DURGY MINE

VIRGINIA

Being operated by T. G. Pool and associates of Virgilina, Va.

Property: 1,500 acres in Person county, North Carolina, shows copper ore occurring as chalcocite and bornite in a fissure in greenstone schist.

Development: by 515' shaft is reported to have blocked out 100,000 tons of 2% copper ore.

Equipment: includes hoist, compressor and pump with steam, air and electric power. Company planned to install a 100-ton flotation mill in 1917.

GOONEY MANOR COPPER CO., INC.

VIRGINIA

Front Royal, Warren Co., Va.

Officers: Hugh E. Naylor, pres., gen. mgr. and purch. agt.; Lewis F. Cooper, v. p.; S. M. Chiles, sec.; Geo. H. Bowman, treas.; preceding officers, H. C. Sheetz, N. S. Waller, S. M. Chiles, S. R. Millar, J. S. West, A. J. Sager, H. R. Kern, directors.

Inc. July 12, 1909, in Virginia. **Cap.**, \$500,000; shares \$100 par; issued 3,763. Annual meeting third Thursday in July.

Property: 84 acres, 5 miles south of Front Royal, reported to carry a fissure vein in porphyry and contact deposits between limestone and porphyry, with generally N. E.-S. W. strike and dip of about 55°. Main orebody is reported to average 7' width, and to be traceable 800', carrying a little malachite near surface, with chalcopyrite at depth, averaging 5% copper, 1 to 6 oz. silver and \$2.50 gold per ton. Orebodies apparently are lenticular.

Development: by a 40' open cut, a 65' tunnel and by shafts of 250 and 228' without laterals, estimated by the company to show 35,000 tons of ore.

Equipment: includes a 150 h. p. steam plant, with a 50 h. p. hoist good for 800' depth, and a 1-drill Rand air compressor. Buildings include a smithy, engine house, tool house and dwelling.

A 120-ton mill for crushing alumina was erected in 1917, running regularly since Jan. 1. Equipped with Buchanan and Sturtevant crushers and 4 screens. Another 150 h. p. steam hoist installed, $\frac{1}{2}$ mile standard railroad, 3 complete quarry plants and pumps for water supply. Employs 20 to 50 men. Product regularly shipped.

HIGH TOP MINING CORPORATION**VIRGINIA**

Walter Hall, supt., Elkton, Rockingham Co., Va.

Inc. 1909, in Arizona. **Cap.**, \$10,000,000; shares \$10 par. Is a reconstruction of the High Top Copper Mining Co.

Property: about 1,000 acres in Greene Co., Virginia, 10 miles from Elkton, on the Norfolk & Western railway, said to show ore zone 600' wide carrying sulphide ores, claimed to give average assays of 6% copper, 10 oz. silver and \$15 gold per ton, which figures are entirely too high.

Development: by shaft 130' deep, with a 30' crosscut said to show 8' of rock spotted with bornite and chalcocite, giving sample assays of 10% copper. There also is a 55' shaft and several shallow pits and open cuts, tracing the outcrop of the entire length of the property. A report formerly circulated by the company states that there are 70,000,000 tons of commercial ore discovered, which is a statement worthy of Baron Munchausen. Property does show occasional spots and bunches of copper ore and a few tons of selected ore have been shipped, but the mineralized rock as a whole is altogether too lean to work at a profit. Company is believed to have no chance to succeed, its officers to be self-deceived and stock is considered valueless. The property has been visited by various geologists and described in official government reports and the guarded warning given therein should be heeded.

At the request of the financial house backing the company, this office sent Geo. Herbert Morgan, E. M., to look over the property and see if above statements were incorrect. His examination confirms what has been said and throws serious doubt on the judgment, to say the least, of the retired army officer, who is acting as the company's advisor and engineer.

HOLLOWAY MINE.**VIRGINIA**

Idle. Owned by Wm. M. Pannebaker estate. Virgilina, Va.

Property: the old Holloway or Eustis mine, 3½ miles S. of Virginia, Halifax Co., Va., on a spur of the Southern railway. Has a 460' shaft, and produced ore from 75', 150', 200' and 300' levels. The vein is strong, persistent and 3 to 33' wide, owing to lenticular expansions. The ore is chalcocite in quartz, with epidote. Is described in detail by Weed in Bull. 455, U. S. Geol. Survey, p. 79. Produced 6,000 tons of 12% ore about 1902.

KAY MINE SMELTING CO.**VIRGINIA**

Address: Mountainair, New Mexico.

Officers: Z. L. Kay, pres. and gen. mgr.; J. R. Wilbourne, v. p.; H. P. Wilder, sec.; H. J. Watkins, treas., and Jas. S. Sebree, directors.

Inc. Aug. 8, 1905, in South Dakota. **Cap.**, \$1,000,000; shares \$1 par; 525,000 shares paid Z. L. Kay for property; 200,000 issued.

Property: 261 acres, comprising the Kay farm at the N. end of the Virgilina district, 9 miles from South Boston, in Halifax county, Virginia. The tract shows lenticular quartz veins enclosed in schistose rocks formed from old volcanic tuffs and andesite of the type characteristic of the Virgilina district. Veins consist of white quartz and carry primary copper glance below the water level with carbonates, oxides and some native copper in the oxidized zone. One vein varies from 3 to 6' in width and is said to be traceable 1 mile. A recent report tells of 2 veins 10' wide. The future of the entire district, including this property, depends upon the use of some cheap method of concentration, which flotation apparently supplies.

Company recently acquired some copper claims near Scholle, N. M. In July, 1917, 9 tons sent to Pueblo, Colo., carried 8% copper.

NORFOLK SMELTING CO.**VIRGINIA**

A New York corporation; operates under lease on a royalty basis, the smelting department of Virginia Smelting Co.'s works, which see.

SEABOARD COPPER CO.**VIRGINIA**

Idle. Office: 77 South Market St., Boston, Mass. Mine office: Virgilina, Halifax Co., Va.

Officers: Geo. R. Leghorn, pres.; Edward L. Pond, sec.

Inc. July, 1902, in New Jersey. Cap., \$300,000; shares \$1 par.

Property: the Dorothy and Bailey mines, 135 acres, in the Virgilina district, 3 miles from the Southern railroad, shows an 8' fissure vein in schist, carrying bornite ore, estimated to average 3 to 4% copper, with combined gold and silver values of \$1 to \$1.20 per ton.

Development: by shafts of 30', 265' and 115', and by 2 tunnels, of 165' each, with a total of 840' of underground workings. The ore occurs in well-defined shoots: the proportion of shipping ore is small but mine might be profitably worked if flotation is used.

Equipment: includes a 275-h. p. steam plant, with a 25-h. p. Lidgerwood hoist, good for 500' depth, and a 5-drill compressor. There is a 100-ton mill, and buildings include an engine house, bunkhouse and office. Company inactive since 1904, but still alive.

SULPHUR MINING & RAILROAD CO.**VIRGINIA**

Office: 11 S. 12th St., Richmond, Va.

Officers: S. D. Crenshaw, pres.; A. R. Ellerson, v. p.; Thos. Armstrong, sec.-treas.; P. H. Haskell, supt.; Mineral, Louisa Co., Va.

Property: a pyrite mine whose ore carries low copper content. Has 600' shaft with steam power, compressor, etc. Ore treated in 500-ton concentration mill. Company makes cement copper from its mine and seepage waters, but is primarily a producer of pyrite for sulphuric acid plants. Is controlled by Virginia-Carolina Chemical Co.

UNITED STATES MANGANESE CO.**VIRGINIA**

Office: 74 Broadway, New York. Mine address: Elkton, Va. Fred Berger, supt.

Property: a tract of several hundred acres S. E. of Elkton, shows 5' of manganese ore mostly psilomelane and pyrolusite, occurring disseminated and massive in yellow clay overlying quartzite. Recent development indicates a large deposit of commercial ore. Mine has washer and concentrating tables.

VIRGINIA-CAROLINA CHEMICAL CO.**VIRGINIA**

General office: Richmond, Va. Corporate office: Jersey City, N. J.

Officers: S. T. Morgan, pres.; E. B. Addison, 1st v. p.; S. D. Crenshaw, v. p.-sec., with C. G. Wilson, N. S. Meldrum, Henry Walters, Harry Bronner, B. Cutler, A. J. Hemphill, Alvin W. Krech, C. I. Stralem, S. H. Miller, and Geo. W. Wetts, directors. S. W. Travers, treas.; E. T. Orgain, aud.

Inc. Sept. 12, 1895, in New Jersey. Cap., authorized, \$38,000,000 com. and \$30,000,000 8% cumulative pfd.; increased May 12, 1914, from \$20,000,000; shares \$100 par; outstanding \$27,984,400 com. and \$20,012,255 pfd. The \$9,988,200 unissued pfd. stock is reserved to provide for conversion of the 10-year 6% debentures. Annual meeting, first Wednesday in Sept. New York Trust Co., New York, transfer agent. Guaranty Trust Co., New York, registrar. Listed on New York and Richmond Stock Exchanges.

Bonded debt: \$12,600,000; first gold 5's dated Nov. 2, 1908; due Dec. 1, 1923; \$4,734,505 10-year 6% convertible gold debentures dated May 15, 1914, due May 15, 1924.

Balance sheet: year ending May 31, 1917, showed assets: \$94,476,148, which included current assets of \$40,135,303, compared with \$34,719,690 the previous year. Current liabilities were \$13,192,158, compared with \$7,437,833 the previous year.

Income account for fiscal year ending May 31, 1917, showed net earnings of \$5,905,250, compared with \$5,427,467 the previous year. Dividends absorbed \$2,020,710. The surplus May 31, 1917, was \$15,608,135, against \$13,175,376 on May 31, 1916.

Company was formed to consolidate a number of manufacturers of fertilizers, acids, chemicals, and kindred products. It owns and operates large pyrite mines, producing a large portion of the pyrite used by it in manufacturing sulphuric acid; in addition it has foreign potash, sulphur, and other properties. Controls the Sulphur Mining & Railroad Co. (which see), which owns pyrite mines in United States, and sulphur deposits in Mexico.

Also the Charleston, S. C., Mining & Manufacturing Co., which owns and mines phosphate rock in Florida, Tennessee, South Carolina, and Kentucky.

VIRGINIA CONSOLIDATED CHEMICAL CORPORATION VA.

Office: 100 Broadway, New York. **Works offices:** Brinton, Bristol and Norfolk, Va. J. T. Williams, pres.

Operates the properties formerly owned by the Virginia Zinc & Chemical Corporation, which has retired from business. While primarily a manufacturer of chemicals used in the paint, paper and rubber business the company also mines considerable raw material from its properties in the different Southern States.

VIRGINIA COPPER MINE.

VIRGINIA

Office: care Richard Lamb, 90 West St., New York. **Mine address:** High Hill, Halifax Co., Va.

Property: the High Hill mine, 617 acres, in the Virgilina district, developed by 8 shafts of 140 to 340' depth, with about $\frac{1}{2}$ mile of workings. Mine shows 2 veins giving assays up to 5.9% copper, 2 oz. silver and 80c gold per ton. Ores are highly silicious, the gangue containing about 87% silica, which precludes smelting and wet process concentrating. Property was formerly operated by the Virginia Copper Co., Ltd.

Equipment: includes a 350-h. p. steam plant. Idle several years, but plans resuming operations in 1917.

VIRGINIA LEAD & ZINC CORPORATION.

VIRGINIA

Address: J. H. Batcheller, mgr., Mineral, Va.

Officers: Berkeley Williams, pres.; W. M. Cary, v. p.; Norwood Bentley, sec.-treas.

Inc. Nov. 30, 1915, in Virginia. **Cap.,** \$600,000, including \$200,000 10% cumulative pfd. \$5 shares, and \$400,00 com. \$5 shares. Debentures \$200,000 3-year 6% convertible gold notes.

Property: 1,200 acres; the Valznico mine in Spotsylvania Co. and the Valcooper mine in Louisa Co., Va., under development during 1916.

The Valznico mine has a fissure vein in schist, dipping 75° S. E. and pitching N. 40° E. The ore is a complex sulphide, containing 4% lead, 12% zinc and silver, copper, gold and iron.

Development: by 250' vertical shaft and 2,400' of workings.

Equipment: Lidgerwood hoist, Sullivan compressor, Cameron pump, steam plant and 50-ton concentrating mill.

Production: in 1916 was 2,300 tons of ore, averaging 4% lead and 12% zinc.

VIRGINIA MINING CO.

VIRGINIA

Controlled through stock ownership by General Chemical Co. Operates the Gossan pyrite mine at Monarat, Carroll Co., Va.

VIRGINIA SMELTING CO.**VIRGINIA**

Office: 131 State St., Boston, Mass. **Works office:** West Norfolk, Norfolk Co., Va.

Officers: W. E. C. Eustis, pres.; A. H. Eustis, v. p.; F. A. Eustis, sec.-treas.

Inc. Nov. 10, 1909, in Maine, as successor of Eustis Smelting Works. **Cap.**, \$1,000,000; shares \$100 par; nonassessable; in \$500,000 preferred and \$500,000 common stock. Annual meeting, first Tuesday in October.

Company owns the Eustis Smelting Works, or Norfolk smelter, on tide water, near Norfolk, with railroad facilities to all points. The situation is favorable for custom smelting, as more coal is shipped from this vicinity than from any other center in North America and traffic commands favorable freight rates on return cargoes. The location also insures the best coke for metallurgical use, on advantageous terms. Ore received by vessel is unloaded by machinery into standard railway cars, with facilities to set aside any desired portion into a sample car, standing on a separate track. The unloader has a maximum capacity of 1,000 tons in 24 hours. Railroad cars containing ore are hauled by locomotives upon trestles, whence ore and coke are dumped into storage bins having capacity for 25,000 tons of ore, and if necessary, the works can store 50,000 tons of ore.

The smelter has a single water-jacket blast furnace of 600 tons daily capacity, using sea water for the jackets. The plant does a general custom business, treating ore from Sherbrooke, Quebec, and ore from El Cobre mine of the Cuba Copper Co., the iron in the Sherbrooke ore fluxing the silicious Cuban ore. The works contain 2 Dwight-Lloyd sintering machines; one operates on copper material in connection with the blast furnace, the other treats the leached residue and pyrite cinder to produce sinter, which is shipped to pig iron blast furnaces. The leaching department contains a Ramen-Beskow chloridizing furnace; two Holt-Dern chloridizing furnaces; a precipitating plant, and a large gas washing plant.

The smelting department of the works is operated under a lease on a royalty basis, by the Norfolk Smelting Co., a New York corporation.

VIRGINIA ZINC & CHEMICAL CORPORATION, LTD. VIRGINIA

In liquidation. Properties acquired by the Virginia Consolidated Chemical Corporation, which see.

WASHINGTON

Spokane is the natural center for the mining districts of eastern Washington, as well as the Coeur d'Alene region, and Seattle for western Washington, but the descriptions are arranged geographically by counties, because this seems the most convenient grouping for quick reference.

CHELAN COUNTY

Includes Wenatchee, Bridge Creek, or Stehekin, Entiat, Horseshoe basin, or Pershall, Lakeside, Leavenworth, Peshastin, or Blewett, and Railroad Creek districts.

AURELIA CROWN CO.**WASHINGTON**

Office: P. O. Box 187, Seattle, Wash. **O.** Robert Dahl, pres., treas. and gen. mgr.; **A. E.** Coxhead, v. p.; **H. M.** Dahl, sec.; preceding officers, Geo. C. Whipple and L. A. Sherman, trustees.

Inc. in Washington. **Cap.**, \$10,000,000; shares \$10 par; nonassessable; issued \$8,137,600.

Lands: 36 claims, 730 acres and 2 mill sites of about 10 acres, 16 miles

west of Lucerne, Chelan Co., Wash. Property includes gold, copper, silver-lead and molybdenite mines, having 8 tunnels, of about 1,300' aggregate length, and several open cuts. The Crown Point molybdenum mine has 3 tunnels, said to develop 2,000 tons ore. The Silver Trail silver-lead mine has a 6' fissure vein. Tunnel No. 3, on the copper vein, shows 4 ore shoots,

MINING DISTRICTS OF NORTHEASTERN WASHINGTON, NORTHERN IDAHO AND BRITISH COLUMBIA

of 4 to 8' width, carrying ore said to give average assays of 15.5% copper and \$8.65 gold and silver per ton.

Geology described, Min. Technology 15, Bull. 111, p. 79.

Equipment: includes a hydraulic plant, with 2 Pelton wheels and 832' of 10" and 11" and 472' of 6" double-riveted steel hydraulic pipe. There is

an air compressor. Buildings include a machine shop, engine house, saw-mill, warehouse and 3 cabins. The mill has 2 crushers, rolls and a Schull concentrator. Has an aerial tram.

Company makes claims of large annual profits to be earned from the operation of its mines, sawmill, water power plant and in water and rail transportation, but the railroad is yet to be built, the mines are only slightly developed and the tonnages which would make annual earnings of \$2,800,000 possible, are neither blocked out nor reasonably assured. The total expenditure on the property to Jan. 1, 1913, is \$86,552, a small sum compared with the amount of stock issued. The company's circulars considered misleading and not liked. Company fails to answer letters, possibly because of the comments given above.

CHELAN CONSOLIDATED COPPER CO. WASHINGTON

Michael J. Cocoran, asst. sec.-treas, 180 Broadway, New York.

Operating office: 811 Lowman Bldg., Seattle, Wash. **Mine office:** Leavenworth, Chelan Co., Wash.

Officers: F. D. Wilsey, v. p.; Thos. J. Higgins, sec.-treas.; preceding officers, Henry D. Bristol, Edw. W. Kuhn, A. T. La Vallette, J. L. Jurey and Louis Arndt Stein, trustees.

Inc. May, 1906, in Wash. **Cap.**, \$12,000,000, shares \$10 par, nonassessable; issued, \$5,779,140. Guaranty Trust Co., New York, registrar. Annual meeting first Tuesday in June. Company absorbed the Red Mountain Gold & Reduction Co., the North Star Mng. Co. and a large number of individual mining properties.

Property: 14 claims at Index, Snohomish Co., and 130 claims at Red Mountain, Chelan Co., Wash., 50 miles north of Leavenworth.

Property: the Index mine, between the Ethel and Bunker Hill Sullivan mines, has a 4' vein, opened by tunnels of 600' and 700', with about 2,000' of workings, showing a 6" paystreak of high-grade bornite and chalcopryrite ore.

The Red Mountain lands, unpatented, 4 miles west of Phelps creek, include 67 claims owned outright, and 58 additional claims held through the North Star Mining Co., which is controlled through stock ownership.

Development: by 2,000' main tunnel, supplemented by 600' of diamond-drill borings, showing a 5' vein carrying values in copper and gold, and 2 smaller veins.

Equipment: includes gasoline power and an Ingersoll air compressor, and there are 6 or 7 buildings.

Company is inactive, as ore is too low-grade and in too small quantity to operate profitably.

CHEROKEE MINING CO. WASHINGTON

Incorporators: Wm. Rakestraw, M. E. Bennett, Lloyd Harris, C. G. Edwards, all of Wilbur, Wash., and I. Toner, of Spokane.

Inc. 1917 in Washington. **Cap.**, \$1,500,000. Will develop the Cherokee group of claims.

HOLDEN GOLD & COPPER MINING CO. WASHINGTON

Mine near Lucerne, Chelan Co., Wash.

Officers: J. H. Holden, pres.-mgr., Chelan, Wash.; A. W. Lachapelle, v. p.; O. A. Hoag, sec.-treas.; above with Chas. N. Boon, directors.

Cap., \$250,000. Company has no debts and no earnings to date.

Property: 3 claims, 60 acres, on Railroad creek, near Lake Chelan, 87 miles N. of Wenatchee on the G. N. R. R., shows gneiss and schist cut by granite with a vein of 40' average and 185' claimed maximum width.

Development: by 6 tunnels, Nos. 2 and 3 being connected by a blind shaft with about 2,000' of workings on 3 levels. There also are numerous

open cuts. Mine shows ore said to assay from 7 to 10% copper, 2 oz. silver and \$5 to \$10 gold per ton. Idle, except for annual assessment work.

KING SOLOMON MINE.**WASHINGTON**

S. J. Gray, owner, Lakeside, Wash.

Property: near Lucerne, Chelan Co., Wash., consists of 3 patented claims, developed by 1,500' of tunnels said to show fissure veins in gneiss porphyry, carrying gold-silver-copper values.

CLARKE COUNTY

Includes the southwesternmost districts of the state, near Portland, Oregon.

WASHOUGAL GOLD & COPPER MINING CO.**WASHINGTON**

Address: Washougal, Clarke Co., Wash.

Officers: F. A. Mabec, pres.; John Scharboarer, v.-p.; J. B. Jordan and T. A. Altman, secretaries; Dr. Otta Sutter, treas., at last accounts.

Inc. 1902 in South Dakota. **Cap.**, \$1,000,000, shares \$1 par.

Property: 560 acres, held on a 30-year lease, from the State, near Mt. St. Helens, in the Bald Mountain district, on the upper Washougal river. Several vertical fissure veins are in granite, one of which, averaging 6' thick, is developed by an 1,800' tunnel exposing ore, estimated to average 5% copper, 15% lead and zinc, 2 to 70 oz. silver and \$1 to \$15 gold per ton.

Equipment: includes gasoline hoists and a 3-drill Sullivan air compressor. Had a 25-ton concentrating mill working in 1916; but no information available.

Described in Mining and Scientific Press, 1916, by F. Brinsmade.

FERRY COUNTY

Includes Belcher, Columbia river placers, Danville, Lone Star, Meteor, or Covada, Republic and San Poil districts.

ALLIANCE MINING CO.**WASHINGTON**

Address: 622 Old National Bank Bldg., Spokane.

Officers: M. O. Hunter, pres.; F. H. Hunter, v. p.; W. W. Gifford, sec.-treas.; preceding officers, J. M. Lloyd and C. M. Hansen, directors.

Inc. Sept. 9, 1913, in Wash. **Cap.**, \$1,500,000, shares \$1 par, outstanding \$1,303,288; assessable, not exceeding 5 assessments of 5 mills each year. Bonds authorized \$100,000, outstanding \$32,400. In 1914 the company took over for \$171,000 the property of the Anaconda Gold Mng. & Reduction Co., paying \$120,000 in Alliance stock, and assuming an indebtedness of \$51,000 for the remainder.

Property: 7 claims, 5 patented, 100 acres, in the Eureka mining district, Republic, Wash., adjoining the property of the Republic mine, cover 3,500' along the strike of the Republic vein, 12' to 30' wide, and the Princess vein, 2' to 10' wide.

Early development of the properties was done when only high grade ore was shipped, and the Alliance Co. acquired the holdings of 4 different companies for the purpose of mining and milling the low grade ore. The veins are developed to a depth of 600' by means of a 385' tunnel and a 400' winze, with total workings of 5,000'. No development work has been done since organization, but operations are to be resumed in the near future.

Equipment: includes gasoline hoist and a 3-drill compressor.

AMERICAN REDUCTION CO.**WASHINGTON**

Address: Republic, Ferry Co., Wash.

Inc. in 1915 by F. R. Clark, of Spokane; P. N. Clark and G. W. Sommer. The property of the North Wash. Power & Reduction Co., which had

been held by a receiver for 2 years, was purchased together with adjoining holdings.

Equipment: includes concentrator, mill, and power plant. No returns available.

BEECHER GOLD MINING CO.

WASHINGTON

Address: Orient, Wash. Alex A. Anderson, mgr.

Property: near Orient, Ferry Co., Wash., has the Beecher mine on it in which gold-quartz ore occurs in stringers.

Idle, 1917.

BELCHER MINING CO.

WASHINGTON

Mine office: Republic, Ferry Co., Wash. Jos. A. Anderson, pres. and mgr.

Property: the Belcher claim shows irregular replacement deposits of pyrite associated with garnet, epidote, tremolite and magnetite in marble and interbedded shale, etc., intruded and metamorphosed by monzonite porphyry dikes and sheets.

Development: by 3 tunnels showing sulphide orebody 5'-20' thick, on dip plane (see Bull. 550 U. S. G. S. 1914, pp. 167, 175, 179).

A 1,000' aerial tram connects the tunnels with ore bins on the railroad. Water, brought 2,000' from Lambert creek, through a steel pipe, generates electric power, supplemented by a gasoline auxiliary plant.

Equipment: includes an air compressor and power drills.

Property was reopened May, 1911, and shipped low-grade gold-bearing pyritic copper ore to Granby smelter. Mine reported, 1914, to have opened up lenses of low-grade ore on the lower level. No recent returns.

BEN HUR LEASING CO.

WASHINGTON

Mine office: formerly at Republic, Ferry Co., Wash.

Dissolved: company was a co-partnership formed to operate the Ben Hur mine at Republic, Ferry Co., Wash., under lease.

Property: the Little King and Queen claims on Gold Hill, developed by 800' shaft, showing gold, silver, and copper ore. Equipped with steam power, compressor, etc. New plant installed 1913. Property was intermittently worked, 1911-12, and drifting done on the 200' and 400' levels. Mine was operated under lease by Cons. Mining & Smelting Co. of Canada, Ltd., during 1914-15, but given up early in 1916. See Vol. X. of the Copper Handbook.

COPPER BUTTE MINING CO.

WASHINGTON

Orient, Ferry Co., Wash. J. D. Gumpper, pres.; H. J. Miller, sec.; Willis Townsend, gen. mgr.

Inc. Dec., 1905, in Washington. Cap., \$1,000,000; shares \$1 par.

Property: 4 claims, patented, in the Pierre Lake district, south of Orient, shows 2 veins in open cuts, 14' and 15' wide, respectively.

Development: by 300' shaft with drifts on the 100' level shows copper-gold ores, but not in commercial quantity. During 1916-'17, a 1,000' tunnel was driven. It has a vertical depth of 430', and is expected to cut the ledge within a few feet.

FIRST THOUGHT MINING CO.

WASHINGTON

Idle. Orient, Wash. Patrick Burns and Blake Wilson, of Calgary, owners. Alexander Sharp, mgr., Vancouver, B. C. Property produced \$750,000 prior to 1909, idle since. Company won a suit against Stevens County assessor, June, 1916, and court ordered valuation reduced to \$10,000.

GWINN MINING CO.

WASHINGTON

Idle. **Address:** Meteor, Ferry Co., Wash. Peter Proff, mgr. at last accounts.

Company owns a group of claims in the Meteor, or Covada district, showing fissure veins in sedimentary rocks cut by diorite and carrying complex ore said to average about \$16 per ton in gold, silver, copper and lead.

Development: by shafts and tunnels, said to have blocked out considerable low-grade ore which is being treated in a 50-ton concentrator. Company is also erecting a dam on Hall creek for its hydro-electric plant.

ILLINOIS COPPER & SILVER MINING CO. WASHINGTON

Idle. Letters to Pittsfield, Ill., neither answered nor returned. Mine at Keller, Ferry Co., Wash. J. C. Davis, pres. and gen. mgr.; J. D. Nighbert, v. p.; A. Hamilton, supt.; W. S. Clapp, sec.; J. D. Hess, treas., at last accounts.

Inc. in Washington. Cap., \$2,000,000; shares \$1 par, nonassessable, in \$1,000,000 preferred and \$1,000,000 common stock.

Owns 9 claims, in the San Poil district. The Columbia group of 4 claims, 3½ miles from Keller, shows auriferous and argentiferous copper ores. The Oregon group has 300' of workings, developing a vein claimed to be 72' wide, showing low-grade ore, carrying some zinc.

Not favorably regarded.

INTERNATIONAL GOLD MINING CO. WASHINGTON

Head office: Empire State Bldg., Spokane, Wash. **Mine office:** Rockcut, Ferry Co., Wash.

Officers: Peter Reid, pres.; D. F. Kizer, v. p. and atty.; G. H. Walters, sec.; C. L. Russell, treas.; above with H. L. Williams, directors.

Cap., \$1,000,000; shares, \$1 par.

Property: 6 claims in the Orient district, developed by tunnels and equipped sufficiently for a small mine.

KNOB HILL MINING CO. WASHINGTON

Office: 622 Old National Bldg., Spokane. **Mine office:** Republic, Wash.

Officers: John Byrne, pres.; Chester Shoudy, v. p.; J. W. Cloyd, gen. mgr., with T. A. White, H. V. Chamberlain, H. Kreysski, and F. Gorrecht, directors. O. A. Broyles, sec.-treas.

Cap., \$1,000,000; shares \$1 par; all issued. Stock listed on Spokane Exchange. Annual meeting Jan. 12th.

Dividends: resumed in March, 1917, after a 3 years' lapse, and to July, \$30,000 has been paid, making \$100,000 to date.

Mining costs, 1916, were \$21,716; freight and treatment, \$32,037; general expenses taxes, insurance, \$13,870; leaving a profit of \$33,802. Cash on hand at end of 1916 was \$5,209, also \$23,593 of ore in transit. Balance of \$5,000 was paid on the Alpine claim. In June, 1917, there was a reserve of \$27,000.

Property: the Knob Hill and Mud Lake mines at Republic, Ferry Co., Wash. The Knob Hill is developed by shafts and crosscuts. A vein 4-7' wide, opened on No. 2 level at a vertical depth of 250', gave assays of \$27 per ton. On the intermediate level a 4' vein carrying values up to \$50 in gold is being developed; on the 3rd or lower level recent development work opened up a 7' vein of \$15 ore.

Shipments: to Trail smelter during 1916 amounted to 6,905 tons of ore, valued at \$101,425.

Company purchased the Alpine claim, adjoining the Knob Hill on the E., for \$20,000. It is believed to carry the extension of the Knob Hill vein. A 500' shaft is to be sunk on the Alpine, which will give a depth of about 900' on the dip of the vein and crosscuts will be driven to reach the Knob Hill orebody. About \$8,000 is being spent on equipment at this shaft.

Prospects of company are much brighter than for some time, and should be fairly profitable in a small way.

LAKINA COPPER CO.**WASHINGTON**

See same title under Idaho mines.

LAURIER MINING CO.**WASHINGTON****Office:** 410 Columbia Blk., Spokane, Wash. **Mine office:** Laurier, Ferry Co., Wash.**Officers:** Dayton H. Stewart, pres.-mgr.; Grant A. Stewart, v. p.-supt.; E. K. Erwin, sec.-treas.; with J. S. Talkington and Guy P. Linville, directors. G. A. Stewart, supt.**Inc.** Oct. 22, 1908, in Wash. **Cap.**, \$1,000,000, increased later to \$1,500,000; shares \$1 par; all issued.**Property:** 7 claims unpatented, about 120 acres, in the Curlew district, 9 miles from Grand Forks, B. C., and 127 miles N. W. of Spokane. Developed by 140' shaft and several tunnels, showing a vein of pyrrhotite ore said to show copper, silver and gold values.**Equipment:** includes a 2,900' aerial tramway connecting the mine with a railroad siding, constructed in 1915, one drill, gasoline compressor.**Shipments:** commenced in 1915, were sent to the Granby smelter; about 500 tons of copper-silver ore from development work averaged 4.16-7.66% copper and 2 oz. silver, netting \$30 per ton.

In 1916, 1,200 tons shipped reported to have averaged 4% copper and 3 oz. silver per ton, netting \$30 per ton.

LONE PINE-SURPRISE CONS. MNG. CO.**WASHINGTON****C. P. Robbins**, pres.-mgr., Wolverton Block, Spokane, Wash.; **G. C. Taylor**, supt.**Property:** Last Chance mine, formerly owned by the Republic Cons. Mines Corp., at Republic, Ferry Co., Wash., and said to show a 5' vein carrying \$13 ore. Developed by a 500' two-compartment shaft and tunnel. Equipped with a 514 cu. ft. compressor, hoist and boiler.**MANILA MINING & MILLING CO.****WASHINGTON**Idle and probably defunct. **Keller, Ferry Co., Wash.****Property:** the Manila mine, 4 claims, with 20-acre reservoir and mill site, well timbered, in the San Poil district, 7 miles from the Columbia river and 4 miles W. of Ferry, the nearest rail station. The Manila mine is on the summit of a mountain and shows a large deposit of disseminated chalcopyrite ore, traceable 1,000'.**Development:** by tunnels, the oldest 100' below the apex, another 150' lower. Said to be diamond drilling, 1916. Mine was under option for \$60,000 to the Keller Indiana Co., now bankrupt, which put up a smelter in 1906, but failed to develop mine and property supposedly reverted to Farr Bros. Has 20,000' sawmill.

No recent information.

NATIONAL LEAD-SILVER CO.**WASHINGTON****Office:** Hutton Bldg., Spokane, Wash.**Officers:** C. D. Muxen, pres.; E. D. Weller, v. p.; E. H. Pattison, sec.-treas. and mgr. trustee; J. E. Orr, asst. sec., and G. F. Ingraham, directors.**Inc.** 1915, in Wash., as successor to the Phoenix G. & C. M. & M. Co. **Cap.**, 2,000,000 shares; 5c par; assessable. Annual meeting, third Tuesday in Nov.**Property:** 9 claims, known as the Panama group, and mineral rights to 159 acres, about 2 miles N. of Curlew, Ferry Co., said to show 4 veins carrying gold-silver-lead-copper-iron. Ore occurs as replacement deposits, in veins carrying quartz, lime and iron carbonate. The country rock is fine grained syenite with large dikes of porphyry with strata of lime lying parallel, running nearly N. and S., with dip of 80° W. Ore was encountered on 3 different contacts in the first 500' of the tunnel. The first vein, about 40'

wide was intersected 600' from the portal of the tunnel. A second vein cut 820' proved to be 5' wide.

Development: consists of 1,200' main lower tunnel, 225' Panama, and several shorter tunnels, numerous open cuts and prospect shafts. Property favorably reported on by G. Cleveland Taylor in 1914.

NORTHWEST MINES DEVELOPMENT CO.

WASHINGTON

Office: 204 Paulsen Bldg., Spokane, Wash. **Mine office:** Keller, Wash.

Officers: Wm. E. Johnson, pres.-supt.; H. J. Lefevre, v. p.; Harry J. Neely, sec.-treas.; Wm. E. Malm, mgr. Keller; preceding, with Henry Osterman, H. J. Earnest, directors.

Inc. Dec. 15, 1915, in Wash. **Cap.**, \$200,000; shares \$100 par; 500 outstanding. Authorized bond issue, \$300,000; none issued. Annual meeting, 2nd Monday in January.

Property: 17 claims, 330 acres, surveyed for patent, 12 claims in Okanogan county and 5 in Ferry county, said to show zinc, gold, silver and lead ore in fissure veins and disseminations in granite.

Development: by 2,000' of tunnels and diamond drilling, 140' vertical shaft with 480' of underground workings, of which 435' are claimed to be in ore averaging 1.83% copper, and 32' in copper-zinc ore, assaying 14% zinc for 10'.

Equipment: includes electric power and 150-ton smelter at Keller. Only meagre development done to date. Secretary reports, 1916, "Ore reserves unknown, but immense."

ORIENT GOLD MINES, LTD.

WASHINGTON

Company had financial troubles in 1914 and was sold in Nov., 1915, to settle labor liens. Reorganized as Orient Gold Rock Mng. Co.

ORIENT GOLDEN ROCK MINING CO.

WASHINGTON

Office: 205 Hyde Block, Spokane, Wash. Mine at Orient, Ferry Co., Wash.

Officers: C. E. Gray, pres. and gen. mgr.; Thos. R. L. Harris, v. p.-treas.; C. E. Ficks, sec.

Inc. 1917. **Cap.**, \$1,500,000; shares \$1 par.

Property: the White Elephant mine with 6 claims, located 3 miles south of the Canadian border, and an equal distance from Rock Cut. The mine is a gold producer, but contains gray copper ore. The mineral zone, 75' wide, lies between diorite and andesite.

Development: by a 225' incline shaft sunk on the vein with a dip of 70° E. Workings on the 100' level show disseminated pyrite ore carrying from \$3 to \$6 per ton, with occasional shoots of copper ore.

Equipment: includes steam plant, compressor, sawmill, etc.

Property reported taken over by a Spokane syndicate, March, 1916, and cyanide plant to be erected.

PHOENIX GOLD & COPPER MNG. & MILLING CO. WASHINGTON

Curlew Ferry Co., Wash.

Succeeded by National Lead-Silver Co., which see.

QUILP GOLD MINING CO.

WASHINGTON

E. L. Tate, sec.-treas.-gen.-mgr., Hyde Bldg., Spokane, Wash.

Cap., \$1,500,000; shares \$1 par; 67,500 shares outstanding.

Property: the Quilp mine at Republic, Ferry county, located in 1896 and operated intermittently by several companies, has paid five dividends, totaling \$67,500; last payment in 1912. Mine was reopened in 1914 under present management, after lengthy litigation with the defunct Republic Mines Corporation.

Development: by 1½ mile of workings to depth of 500'.

REPUBLIC CONS. MINES CORPORATION**WASHINGTON**

Republic, Ferry Co., Wash.

Officers: A. B. Willard, pres.; A. J. Langhan, sec.; J. P. Burson, treas.; Geo. S. Bailey, gen. mgr. Is a reconstruction of Republic Mines Corporation

Inc. in 1914 to take over the Lone Pine, Surprise and Pearl claims in the Eureka mining district in Ferry county; these claims were worked in 1910-13 by the Republic Mines Corp., which is said to have produced over \$2,000,000 in gold and silver during the last 2 years it operated and before it went into bankruptcy in 1913. The Republic Cons. optioned the property in 1914 to a new company, the Western Union Mines Co., which operated for a short time and passed tranquilly away in 1915; this company was soon succeeded by another new company, the West Virginia Mining Co., which purchased some new machinery, operated a few months, and, like its predecessor, suffered a painless death, in Oct., 1915. The property reverted to the Republic Cons. Mines Co.

In July, 1916, the property was reported as shipping 200 tons daily to Trail, B. C., and planning to sink a 2-compartment shaft to a depth of 1,000'. The property is said to have merit and could be operated profitably under competent management. For geology, see U. S. G. S. Bull. 550, pp. 150-162. Employs 40 men.

In July, 1916, Geo. S. Bailey, trustee in bankruptcy of the Republic Mines Corp., gave a deed to the 3 claims named above, receiving \$82,000 in final payment. At the same time, the Republic Cons. Corp. gave a mortgage on the claims to Jerome J. Day of Wallace, Idaho, to secure a loan of \$93,000, payable July 17, 1917. This mortgage gives the Day Bros. control of mining operations.

SILVER CREEK MINING & MILLING CO.**WASHINGTON**

Company dead and property sold for taxes. Now owned by Gold Cord Mining & Milling Co., Keller, Wash.

WALLA WALLA COPPER MINING CO.**WASHINGTON**

Office: Walla Walla, Wash. **Mine office:** Keller, Ferry Co., Wash. Jasper King, supt.

Property: 1 mile N. E. of Keller, in the southern half of the old Colville Indian reservation, shows a vein of 30' estimated width, partially mineralized with gold-copper ore of fair assay value. Developed by an opencut shaft and tunnel. Reported in 1916, that company had struck a large body of high-grade copper ore.

WEST HILL MINING CO.**WASHINGTON**

Out of business, having forfeited the bond on the San Poil mine in the Republic district. Former organization embraced J. W. Turner, pres., Spokane, Wash.; Thos. Neill, v. p.; Ralston McCaig, sec.-treas., Spokane; Jerome Drumheller and C. M. Hansen, directors.

Property: taken on a \$150,000 bond and lease from the receiver of the defunct San Poil Mng. & Milling Co., a well known gold producer, whose ores carry \$7 to \$15 per ton.

Mine has 400' shaft and extensive levels, said to block out 30,000 tons of ore above the 300' level.

There is a 75-ton cyanide mill on the ground.

LEWIS COUNTY

Including the Mineral and St. Helens districts (see Skamania county)
CASCADIA MINING & DEVELOPMENT CO. **WASHINGTON**

Mine office: Toledo, Wash.

Officers: E. A. Sessions, pres., 106 W. 6th St., Vancouver, Wash.; W. A. Gray, v. p.; W. D. Scott, sec.-treas.; J. F. Hartley, asst. sec.; preceding with M. A. Poppleton, J. P. Finley, Geo. S. Reid, W. H. Bennett, directors.

Inc. March 12, 1887, in Washington. **Cap.**, \$6,000,000; shares \$1 par; \$1,164,615 in treasury.

Property: 108 claims, 2,170 acres; 330 patented in St. Helens mining district on the divide at the head of the Toutle river in Cowlitz, Lewis and Skamania counties, includes the Polar Star and Minnie Lee groups. Properties show fissure veins in grano-diorite, running N. E.-S. W. and dipping 40'-60'. The copper ore which carries gold and silver values, occurs in shoots, 2'-12' thick and 20'-100' long. This ore is said to average 17.9% copper, 24.85% iron, 10.75% silica, 4% aluminum, 1.2% lime, 34.5% sulphur, 5.68% antimony, 0.8% zinc and 0.05% nickel.

Development: 5,000' of work including 300' to 700' tunnels with about 1,500' on ore. About 100,000 tons of shipping ore has been mined and put on the dump. Production has been deferred waiting for cheaper transportation. The mines are 16 miles from a railroad over a heavy grade, but a new line 48 miles long to Castle Rock, Wash., is planned. Property has been under development in a small way for 19 years past. Property has been examined and reported on by Prof. F. L. Barker, State Metallurgist, Eugene, Oregon; Robt. E. Hanley and G. B. Wilson.

LINCOLN COUNTY

(Crystal District)

NEW CRYSTAL MINING CO.

WASHINGTON

Office: 3-4 Fall City Blk., Spokane, Wash. **Mine office:** Miles, Lincoln Co., Wash.

Officers: John O'Connor, pres.; Fred J. Becker, v. p.; C. L. Colby, sec.-treas., with John Gray, C. C. Lantey, directors. M. H. O'Connell, supt.

Inc. in Washington. **Cap.**, \$1,500,000; shares \$1 par; assessable; 1,000,-000 shares outstanding. Annual meeting May 12.

Operating expenses in 1916 amounted to \$1,620.

Property: 4 patented claims, 80 acres, near Miles, an old-time producer, in the Deer Trail district.

Development: by shaft to 181' depth, with 1,200' of workings, shows a fissure-vein 6' wide in limestone. Shoots are 28" wide. Ore carries lead, silver and zinc, the latter veins being 75' from the former.

Ore reserves: estimated at 48,000 tons blocked out, and 1,000 tons on the dumps.

Equipment: includes 35 h. p. hoist, compressor, pump, steam plant, etc. A 100-ton mill is contemplated.

MASON COUNTY

Includes the Olympia mountain region west of the southern end of Puget Sound.

UNION MINES CO.

WASHINGTON

Union, Wash.

Company owns a group of claims carrying veins with silver-lead ore, said to average \$25-\$45 per ton.

Development: by 200' shaft with a level at 190'. Twenty-five men are employed and shipments made occasionally. Company planned sinking shaft to depth of 400'.

OKANOGAN COUNTY

Includes Conconully, or Ruby, Chesaw, or Myers Creek, Nespelem, or Moses, Nighthawk, Oroville, or Osoyoos Lake, Palmer Mountain (also known as Loomis and Wannacut Lake), Methow, or Squaw Creek, Twisp, Upper Methow and Wauconda districts.

ALDER GROUP MINING & SMELTING CO. WASHINGTON

Idle. Mine near Twisp, Okanogan Co., Wash. Lands, about 3 miles from Twisp, have 3 tunnels, of 3,000' aggregate length, longest said to show a 60' vein, claimed in the press, to be solid ore, without any waste. Mine is said to have blocked out a considerable amount of silicious ore, mainly auriferous chalcopryrite. Company awaiting construction of railroad up the Columbia river from Pateros to Twisp.

APEX MINING CO. WASHINGTON

James P. Blaine, superintendent, Chesaw, Okanogan Co., Wash.

Property: the Ben Harrison mine, showing fissure veins carrying gold-silver-copper ores. Developed by a shaft with gasoline hoist. Mine intermittently operated.

COPPER WORLD EXTENSION MINING CO. WASHINGTON

Idle. Loomis, Okanogan Co., Wash. Walter A. Boyle, pres.; Edw. H. Caylor, v. p.; Alfred F. Carman, sec.-treas.; R. J. Thomas, supt., at last accounts.

Inc. Jan. 11, 1904, in Washington. **Cap.**, \$1,500,000; shares \$1 par.

Property: 8 claims, 160 acres, on Palmer mountain, in the Wannacut lake district, shows an orebody about 25 to 30' wide, opened by a 300' 2-compartment shaft, with crosscut on 210' level said to show 17' vein of chalcopryrite, assaying 8% copper, 4 oz. silver and \$1.40 gold per ton.

Equipment: includes steam plant, with 2 small hoists and 5-drill air compressor.

COPPER WORLD GOLD MG. & SM. CO. WASHINGTON

Idle. **Office:** 401 Columbia Bldg., Spokane, Wash. **Mine office:** Loomis, Okanogan Co., Wash. Jerome L. Drumheller, pres. and mgr.; Jolin Wentworth, v. p. and supt.; S. A. Child, sec.-treas.

Inc. in Washington. **Cap.**, \$3,000,000; shares \$1 par, non-assessable.

Property: 2 claims, patented, lying between the Copper World Extension on the east and the Leadville mine on the west, on Palmer mountain, 4 to 5 miles N. E. of Loomis. Claims show a gossan of 100' width, traceable 2,000'. The mine has several short tunnels and shallow shafts, and a 135' two-compartment incline shaft, having a 125' crosscut, reported to be in ore, without reaching the hanging wall, ore being reported to give average assays of 4.5% copper, 2 oz. silver and \$1 gold per ton, with excess of iron.

CRESCENT MINING CO., LTD. WASHINGTON

Office: 201 Lindsey Bldg., Winnipeg, Manitoba, Can. **Mine office:** Twisp, Okanogan Co., Wash.

Officers: D. C. McFee, pres.; C. H. McNaughton, v. p.; J. H. Sutherland, sec.-treas., with F. J. Carr, D. C. McFee, D. D. Young and D. Munroe, directors. G. B. Creighton, mgr.

Cap., \$3,000,000; unsubscribed stock, \$1,291,786; shares \$1 par; non-assessable. Company is a reorganization of the Crescent C. Mng. Co.

Property: 48 claims, about 960 acres, and a mill-site on the east side of Cascade Range, in Okanogan Co., about 100 miles S. W. of the Granby. Ore occurs in fissure veins, carrying chalcopryrite, bornite and quartz. Main development by tunnel 822' long. A good deal of graphite is mixed with ore.

Equipment: includes a Samson turbine, electric plant, air drill, saw-mill, mine buildings and miners' lodgings. A compressor and hydro-electric plant will be installed. Exploration in 1916 cost \$8,127, and for 1917, \$25,000 is required.

DOUBLE HEADER MINING CO.

WASHINGTON

Main office: 505 Railway Exchange Bldg., Seattle. **Mine office:** Ed. Moore, supt., Nespelem, Okanogan county, Wash.

Officers: H. P. Dickinson, pres.; W. R. Gay, v. p.; C. C. Lacey, sec.-treas., with Jay Benn, Ed. Moore, H. L. Mayberry and F. M. D'Camp, directors.

Inc. 1914, in Washington. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; 1,174,326 issued. Annual meeting first Tuesday in June.

Property: 7 claims, 120 acres, 1½ miles S. of Nespelem, Wash. Examined by A. O. Ingalls and others.

Geology: claims cover a quartz vein in granite, dipping 40° N. E. with N. W.-S. E. course. An ore shoot said to exceed 400' in length and 5' in width, carries ore expected by management to average not less than 25 oz. silver and 0.1 oz. gold per ton.

Development: by 80' vertical and 125' incline shafts, workings totaling 1,000'. Blocked out reserves are estimated at 35,000 tons, which is going some for the meagre work done.

A custom plant is to be erected by a syndicate near Nespelem, to treat company's ore.

The president states that the Double Header has been grossly mishandled for many years. Previous management's aim was to mine ore of sufficient grade to stand a 40-mile haul, plus rail freight and treatment charges. The mine is now considered a comparatively low-grade property, requiring ore treatment at the mine. Shareholders were fed upon unwarranted promises, but this sort of thing has been eliminated.

FAVORITE GOLD & COPPER MINING CO.

WASHINGTON

Probably dead. See Vol. XII.

Mine at Nighthawk, Okanogan Co., Wash.

GRANT CONSOLIDATED COPPER MINING CO.

WASHINGTON

Chesaw, Okanogan Co., Wash. Geo. A. McLeod, mgr.; A. D. McPhee, supt., at last accounts.

Inc. 1907, in Washington. **Cap.**, \$1,650,000.

Property: 14 claims, on Copper mountain, near Chesaw, developed by an open cut and tunnel planned to be driven 1,500', cutting 2 strong veins carrying medium-grade chalcopryite in considerable quantities. Shipments said to have returned about 6% copper and \$3 gold per ton.

Equipment: includes two 80 h. p. boilers and an air compressor. Letters neither answered nor returned.

IVANHOE MINING CO.

WASHINGTON

W. B. McChesney, mgr., Oroville, Wash.

Property: on Palmer Mtn., 7 miles from Oroville, Okanogan county, is developed by a 4,400' tunnel to a vertical depth of 1,559', at which depth the main orebody was intersected. No recent returns.

METHOW GOLD & COPPER MINING CO.

WASHINGTON

Office: 419 C. of C. Bldg., Spokane, Wash.

Officers: W. D. Scott, pres. and mgr.; J. N. Tewinkel, sec.-treas., with F. S. Dow, W. G. Traub and N. O. Baldwin, directors.

Inc. 1899, in Washington. **Cap.**, \$2,500,000; shares \$1 par; 2,400,000 issued; non-assessable.

Property: 8 patented claims 20 miles from Twisp, on west fork of Methow river, Methow valley, Okanogan Co., Wash., said to show fissure

veins in Algonkian rocks. Ore (sulphide) carries copper, silver and gold values.

Development: includes 3 tunnels, longest 600' with openings of 1,200' to depth of 500'. Has available water power and timber. Idle, except for annual assessment work, on account of lack of transportation.

MULTNOMAH MINING, MILLING & DEV. CO. WASHINGTON

Idle. **Office:** 405 Kuhn Bldg., Spokane, Wash.

Officers: M. J. Hills, v. p. and sec.; Dr. F. O. Hudnutt, asst. sec. and gen. mgr.

Inc. 1901, in Washington. **Cap.**, \$2,000,000; shares \$1 par.

Property: about 600 acres, in 4 groups, including the River group of 260 acres, patented, carrying placer gold; the Mineral Hill group of 100 acres, 3 miles west of Nespelem, Okanogan Co.; the Ramsey group of 60 acres, adjoining the Nespelem Central Mining Co., 5 miles west of Nespelem, and the Multnomah group of 180 acres, 4 miles west of Nespelem, with a tunnel of about 1,100', said to cut a 15' vein, showing argentiferous lead ore. There are 5 buildings, and a dam built across the Nespelem river.

PYRRARGYRITE MINING CO.

WASHINGTON

Successor to Ruby Mining Co.

Mine and home office: Nighthawk, Okanogan Co., Wash. **Eastern office:** Mansfield, Ohio.

Officers: Monroe Harman, pres. and gen. mgr.; Jas. A. Hower, v. p.; Chas. B. Bushnell, sec.-treas.; preceded with Dr. S. P. Ecki and M. L. Branyan, directors.

Inc. Nov. 5, 1902, in Washington. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; issued, \$1,175,000. **Bonds:** \$100,000 authorized, at 7% maturing 1915; issued, \$35,100. Annual meeting, second Tuesday in June.

Property: 5 claims, patented, 80 acres, with 46 acres miscellaneous freehold lands, on Mt. Chopaca, near the Similkameen river, 3 miles south of the international boundary and within 600' of the Great Northern railroad.

Geology: claims show syenite, cut by veins containing lenticular ore-bodies running N. W.-S. E. and dipping at 47°. The vein under development is about 4' thick, traceable for 1,000', and carries cupriferous ore stated by management to assay 0.5 to 10% copper, 1.5% lead, 2.5% zinc, 5 to 2,800 oz. silver, and from a trace to \$4 gold per ton.

Development: by 3 crosscut tunnels with drifts on the vein. The main working tunnel, 300' below the old workings and about 350' below the outcrop, is 1,110' long, and has 550' of drifting on the vein and an equal amount of drifting run from a 100' upraise. An inclined shaft sunk on the vein from the lower tunnel has short levels at 100' and 200' depth.

Ore reserves: estimated at 135,000 tons of ore blocked out, carrying 30 oz. silver besides copper and gold values and which it is believed can be profitably mined and milled.

Equipment: includes a 15 h. p. electric hoist and 5 buildings. Company's report shows a total expenditure at the mine from beginning of work to April 28, 1913, of \$118,000, of which ore sales furnished \$17,062, bonds \$35,100 and stockholders (175,000 shares) \$65,838.

In 1917 company expected to erect a mill including flotation, which process is expected to save at least 90% of the metal contents.

Property promises to make a good small mine.

Q. S. COPPER CO.

WASHINGTON

Office: 229 North Division St., Spokane, Wash. **Mine office:** Q. S. Ranch, Cuess, via Loomis, Wash.

Officers: M. E. Jesseph, pres.; A. M. Dewey, v. p.-gen. mgr.; J. P. Heckert, sec.; A. F. Suksdorf, treas.; preceding with Wm. F. Harrah, Niles, Mich., trustees.

Inc. April 10, 1914, in Washington. **Cap.**, \$2,000,000; shares \$1 par. Is successor of the Q. S. Mining Co., which corporation was sold out by a receiver appointed by the Washington courts. Property was purchased by the new corporation, which paid all the debts, amounting to more than \$25,000, and issued stock at 2c a share to the old stockholders; forfeited stock was left in the treasury, which gave the corporation a majority of the stock. Bad management in 1912 wrecked the former company and led to a receivership, no annual meeting being held that year. Property was sold for taxes, but sale set aside by the courts when the receiver was appointed. Litigation involving ownership pending, Sept., 1917.

Property: 13 claims, with 10 acres of mill sites, and water rights on Sinlahekin creek, about midway between Loomis and Conconully, along the flank and crest of Æneas mountain, in the Salmon River district. The property shows fissure veins in diorite carrying mainly low-grade copper ores. The company claims an orebody 300' wide at surface, which has been crosscut for 238' at a depth of 800' below the outcrop without reaching the wall, and traced by stripping for 6,000' on surface, showing a ledge of 212' width at the north, 300' in the middle and 285' at the southern end of the property.

Development: begun 1897, is by 2 open cuts at either end, a pit of 50x150' in the middle, and a tunnel 1,063' long cutting the vein at depth of 800', with another tunnel, intended for the main avenue of extraction, 540' long, planned to cut the orebody at depth of 2,000'. One tunnel shows chalcopyrite ore said to give assays of 11.4% copper and estimated to average 2 to 4% copper, with small and variable silver values and about \$1 gold per ton. The company claims an average ore value of \$14 per ton from several hundred assays.

Assessment work only has been done since new company came into control.

Q. S. MINING CO.

WASHINGTON

Succeeded by Q. S. Copper Co., which see.

RUBY MINING CO.

WASHINGTON

Nighthawk Okanogan Co. Succeeded by the Pyrargyrite Mining Co., which see.

SHIPPER GOLD MINING CO.

WASHINGTON

J. P. Blaine, pres.-mgr., Chesaw, Wash.

Officers: H. L. Mooney, v. p.; A. C. Blaine, sec.; W. A. Harry, treas. **Inc.** May 31, 1916, in Wash. **Cap.**, \$1,000,000; \$1 par; 600,000 issued.

Property: 3 claims, unpatented, 56 acres, located one-fourth mile north of Chesaw, Wash., contains a 3½' flat quartz vein running E.-W., with 22° dip.

Ore: contains gold values with pyrite, and is said to average \$20 per ton.

Development: 700' of work, including 110' shaft, connected with 380' tunnel, blocking out 1,000 tons of \$20 ore.

Production: 1,200 tons of \$40 ore. Company owns 25-ton mill with rolls and vanners, etc., and expected to remodel same, develop mine and mill ore in 1917.

TILLICUM DEVELOPMENT CO.

WASHINGTON

Probably dead as letters sent company in May, 1917, have been returned.

Mine at Loomis, Okanogan Co., Wash.

Is the successor of the Palmer Mountain Tunnel Co., inc. Aug., 1912, in Washington.

Cap., \$300,000; shares \$1 par; 50,000 preferred, 250,000 ordinary; issued, 30,000. Debentures, \$19,000, 6%, none issued.

Property: 15 claims, 250 acres, in the Loomis (Palmer Mt. or Wannacut Lake) district, 12 miles from the Great Northern railroad. The Summit claim shows a N. W.-S. E. fissure vein in diorite, averaging 8' wide and proven to depth of 115'.

Development: 3 tunnels, all on the vein, said to show ore of commercial grade in small amounts. Vein averages 5' between walls and gives indications of opening up an orebody of profitable size. Ore reported to average \$40 gold and 10 oz. silver with traces of copper. Company has 750 h. p. water power and 450 k. w. electric plant, transmission line and machinery, as well as 100-stamp mill and sawmill.

Company's original plan of tunneling Palmer Mountain appears to have been abandoned. This crosscut is reported to be 5,993' long. Presumably idle.

TRINIDAD MINING & SMELTING CO.

WASHINGTON

Office: Tonasket, Wash.

Officers: Jos. Coleman, pres.-mgr.; T. W. Brown, v. p.-sec.; E. H. Twight, treas.; T. W. Brown, supt.

Inc. Dec. 1, 1911, in Washington. **Cap.**, \$1,000,000; shares \$1 par; 703,700 issued.

Property: the Central group, 16 unpatented claims, 320 acres in the Galena mining district, Okanogan Co., shows gold and silver-bearing lead-copper ores, occurring as a dissemination in andesite.

Development: to depth of 150', consists of shaft, tunnel, trenchings and open cuts, with a total of 700' of underground workings. Average assays said to run from \$12 to \$30 for shipping ores and from \$2 to \$8 for low-grade ore. Property is owned and operated by the officers of the company, who consider it has a large low-grade deposit. One of the recent troubles has been due to the Land Office allowing homestead filings on parts of the property.

PEND OREILLE COUNTY

(Includes the Metaline district; also see Stevens County)

BEAD LAKE GOLD-COPPER MINING CO.

WASHINGTON

Officers: G. C. Geisler, pres., E. 1111 Augusta Ave., Spokane, Wash.; G. W. Whittaker, v. p.; W. E. Allen, sec.-treas.

Property: 20 claims, about 400 acres, in Newport mining district, Pend Oreille Co., Wash. Ore contains silver, lead and copper values.

Development: by about 5,000' of tunnel work and 600' of shaft work which, it is claimed, has opened up sufficient ore to justify installation of a concentrator, preparations for which were being made, 1917.

LEAD & ZINC CO.

WASHINGTON

Controlled by L. P. Larsen and Jens Jensen, of Metaline Falls, Wash.

Property: the Josephine mine, at Metaline Falls, Pend Oreille district, one of the biggest zinc producers in the State.

Equipped: with 250-ton ball concentrating mill, 1,000' compressor, 75-h. p. electric hoist and aerial tram. Flotation is being installed, 1917.

Production: shipping regularly. To Aug., 1917, 80 carloads of zinc concentrates were shipped.

METALINE ORIOLE MINING CO.**WASHINGTON**

Metaline, Pend Oreille Co., Wash. Fred N. Davis, pres. and gen. mgr.; Stella M. Davis, sec.; Joseph Lancaster, mg. eng.

Inc. Dec. 30, 1910, in Washington. **Cap.**, \$2,000,000; shares \$1 par, assessable. Total calls to end of 1916, \$37,500.

Lands: 5 claims, 100 acres, and a 5-acre mill site, unpatented. Property has a fissure vein in quartzite 6 to 8' wide, carrying about 1% copper, 12% lead, 25% zinc, with silver and gold values.

Development: by 200' shaft and tunnels of 50', 400' and 750'. A 100' incline shaft sunk on the vein from the lower tunnel shows ore throughout a 70' drift.

Equipment: includes steam power, with small hoist and 3-drill air compressor. Company planning to erect a 50-ton mill in 1917.

PIERCE COUNTY

(Includes Carbon River District)

BRITISH-AMERICAN COPPER MNG. & SM. CO. **WASHINGTON**

Office: 510 White Bldg., Seattle, Wash.

Incorporators: Arthur Bernstein, Norman Herman, Adam Beeler, J. J. Sullivan, and E. M. Kennard.

Inc. in 1917 in Washington. **Cap.**, \$2,000,000. Company plans to develop copper mines in British Columbia.

EAGLE PEAK COPPER MINING CO.**WASHINGTON**

No recent returns. **Mine office:** Longmire, Pierce Co., Wash. **Main office:** Tacoma, Wash.

Officers: R. H. Wheelock, pres., Ashford, Wash.; Bakier Long, v. p.-mgr.; M. A. Long, sec.-treas.; preceding, with G. W. Anderson and Chas. Metzler, directors.

Inc. 1908 in Washington. **Cap.**, \$150,000; shares \$1 par, fully paid and nonassessable; issued, 130,000. Annual meeting, April 21.

Property: 2 claims, 40 acres in Cascade mining district, 14 miles from railroad, in the heart of the Tatoosh range, near Mt. Tacoma. Claims show fissure veins in granite with ore carrying bornite and chalcocite and said to average 17% copper, \$4 in gold and some silver.

Development: by shaft and tunnel.

Equipment: includes 25-h. p. power plant, air compressor and 4 buildings.

REDEMPTION GOLD CO.**WASHINGTON**

Office: 734 New York Block, Seattle, Wash.

Officers: Benj. P. Tuggle, pres.; Clifton G. Stapleton, v. p.; Clifford M. Hardy, sec.; John Kendall, treas. Clinton F. Blaine, cons. engr.

TACOMA SMELTING CO.**WASHINGTON**

Office: 120 Broadway, New York. **Works office:** Tacoma, Pierce Co., Wash.

Officers: F. H. Brownell, pres.; Edw. Brush, v. p.; L. D. Craig, sec.; H. Y. Walker, gen. mgr.

Inc. in Nevada. **Cap.**, \$500,000; shares \$1 par. Is a subsidiary of the American Smelters Securities Co.

Property: a smelting plant with a 52-acre site, 6 miles from Tacoma, on Puget Sound. Property is well located for receipt and dispatch of materials, and has extensive wharves, with ore bunkers and automatic devices for unloading cargoes.

The smelter has 2,500 tons daily capacity, and treats copper, silver,

gold ores and concentrates, from the entire western coast of North America, and a considerable tonnage of South American ores.

Equipment: 2 blast and 1 reverberatory furnaces. The converter department has a capacity of 300 tons of blister copper daily.

The electrolytic plant capacity is 8,500 tons per month.

Electric power is received at 40,000 volts and stepped down to 100 volts for use, the works requiring about 6,000 h. p. Fuel is petroleum, brought in tank steamers from the oil fields of southern California.

The Tacoma smelter is one of the most important custom plants on the Pacific coast, the management is progressive, and the metallurgical practice excellent.

TENAS MINING CO.

WASHINGTON

Idle. Office: 320 California Bldg., Tacoma, Pierce Co., Wash. Mine near Keller, Ferry Co., Wash.

Officers: J. R. Turner, pres.; P. J. Sweeney, v. p.; C. E. Peterson, sec.; D. McPherson, treas.; preceding, with Otto B. Roeder and F. W. Heide, directors, all of Tacoma, Wash.

Inc. Sept., 1910, in Washington, succeeding the Iconoclast Consolidated Mines Co., whose property was sold for debt. Cap., \$10,000; shares \$1 par; fully paid and assessable up to 25% per year; issued, 3,448. Assessments to 1916, 71 cents per share.

Property: 5 claims, 95 acres, relocated 1912, 2 miles N. of Keller, shows 3 contact deposits with an orebody 30' in maximum width, giving average assays of 3.6% copper and 2 oz. silver per ton with some gold.

Development: by a 325' main shaft and 3 tunnels with claimed total length of 514'. Annual assessment work only has been done since 1908. Company is a holding corporation, awaiting an opportunity to sell or bond the property.

SKAGIT COUNTY

(Includes Bald Mountain and Thunder Creek districts)

SILVER TIP MINING & POWER CO.

WASHINGTON

Office: J. H. Beattie, 718 Green Bldg., Seattle, Wash.

Officers: A. Julian, pres.; G. B. Gilfillan, v. p.; J. H. Ferguson, J. J. McLean, P. D. Roberts and H. R. Sanderson, directors. M. S. Davys, engr.

Inc. Jan. 15, 1910, in Washington. Cap., \$1,000,000; shares \$1 par; 615,862 issued. Bonds, \$700,000 of 7%.

Property: the Lake Side mines, 557 acres, Skagit Co., Wash.; also the Hewitt and Lorna Doone mines in Slocan district, B. C.

SKAMANIA COUNTY

(Also see Lewis County)

MOUNT ST. HELENS CONS. MINING CO.

WASHINGTON

Office: 516 Selling Bldg., Portland, Ore. Mine office: Spirit Lake, Skamania Co., Wash.

Officers: Thos. Prince, pres.; J. P. Tamiesie, v. p.; J. M. Bell, sec.; Dr. Henry Waldo Coe, principal shareholder, treas.; Andrew Olson, supt.; Geo. W. Lilly, engr.

Inc. 1902, in Oregon. Cap., \$1,800,000; shares \$1 par.

Property: 65 claims, patented, 1,300 acres, estimated to carry 45,000,000' of standing timber, on the North fork of the Toutle river and on the shores of Spirit Lake, 50 miles from Portland. It includes the former holdings of the Sweden Copper Co., Calumet Copper Mng. Co., Bronze

Monarch Mng. Co., Chicago Mng. Co., Yellow Metal Mng. Co., Earl Mng. Co. and Cascade Copper Mng. Co. The company also owns a three-fourths interest in the United mines. In addition to copper ores the tract contains gold veins, an ochre bed, a granite quarry and a deposit of pumice stone.

Claims are said to show syenite, diorite and slate with fissure veins carrying about 20 orebodies ranging from 5 to 100' in estimated width. The ores carry chalcocite, bornite and chalcopyrite and vary from 2 to 25% copper, some lead, 2 to 50 oz. silver and \$1 to \$40 gold per ton.

Development: by 5 tunnels, longest 2,300', and 50' shaft, with about 5,500' of workings, estimated by the management to show 125,000 tons of medium and high-grade ores with a greater tonnage of milling ore.

Lands are owned outright and the company has no bonds or debts, but the property has been practically idle for some years awaiting the construction of a much-needed railway. Mines fully described Vol. XI, Copper Handbook.

SNOHOMISH COUNTY

Includes Darrington, Granite Falls, Index, Monte Cristo, Silver Creek and Silverton, or Stillaguamish districts.

ALASKAN COPPER RIVER MINING CO.

WASHINGTON

Address: Everett, Snohomish Co., Wash.

Inc. in 1917. Cap., \$2,000,000. Will develop gold mines in Alaska.

Incorporators: E. B. McGill, T. M. Williams and Dr. C. A. Mead.

BOSTON-AMERICAN MINING CO.

WASHINGTON

Office: 217 Commerce Bldg., Everett, Wash. Mine office: Monte Cristo, Snohomish Co., Wash.

Officers: H. D. Cowden, pres.; C. A. Riddle, v. p.; L. E. Engel, sec.; F. W. Boston, treas.; preceding with J. H. Adams, P. E. Low, E. Garber and H. B. Cowden, directors. D. R. Kyes, supt.

Company is not a reorganization of the United Mining Co. (which see), but stockholders of the United Mining Co., with few exceptions, have more than an equal proportional holding in the Boston-American Mng. Co.

Inc. in 1913, in Washington. Cap., \$2,000,000; shares \$1 par; non-assessable; 1,600,000 common, 400,000 preferred; 1,344,200 com. and 293,450 pfd. issued.

Financial statement, Jan. 1, 1917, shows: receipts for 1916, \$107,678; expenditures, \$68,928; balance on hand, \$38,750.

Property: 88 claims, 26 patented, and 4 patented mill sites, at Monte Cristo, Wash., said to show a dike of low-grade ore 300' wide, containing fissure veins with streaks of ore from a few inches to 4' in width. Ore said to contain gold, silver, copper, zinc and arsenic. Mineralized zone said to have been proven by workings over a length of 750' and to show for 5,000' on surface.

Development: 14 tunnels, the longest, 1,850' in Dec., 1915, is 1,400' below the next higher tunnel. Total underground workings about 19,600'. This work is claimed to have proven up five distinct ledges at depths from the surface to 2,000' the ledges being regular, well defined, true fissure veins. Management claims to have 120,000 tons ore blocked out and to have shipped 18 carloads ore that assayed \$29 per ton in gold, silver and copper, 8% arsenic and 2½% zinc.

Management plans the construction of a mill because the Tacoma smelter does not offer as favorable a treatment charge as formerly.

The mine was examined by I. H. White, of Butte, Mont., who is quoted as having reported that there is more than enough ore blocked out to warrant the construction of a 200-ton mill.

Company's former literature considered grossly misleading and has created an unfavorable impression which can only be removed by frank statements of operations and economical development.

BUNKER HILL MINING & SMELTING CO.

WASHINGTON

Office: 1123 Broadway, New York. **Mine office and works:** Reiter, Snohomish Co., Washington.

Officers: Chas. G. Reiter, pres.; John D. Campbell, sec.; LeRoy B. Sherman, treas.; preceding officers, J. E. Bowman, A. W. Avery, Wilbur Morris, Eric T. Christensen and Manfred Rockefeller, directors.

Inc. Oct. 24, 1902, in Maine. **Cap.**, \$3,000,000; shares \$1 par; reduced, March 23, 1908, to \$1,500,000, and afterward increased to \$2,000,000; shares \$1 par, in \$1,500,000 common stock and \$500,000 cumulative 8% preferred stock, latter to provide for payment of bonds, second mortgage notes and script notes; outstanding Jan., 1917, 1,497,000 common shares and 420,000 preferred shares. Annual meeting, last Tuesday in October. Was the successor of Bunker Hill-Sullivan Copper Mining Co.

Mining property and other assets were purchased by the Western Copper Mining Co. in June, 1917, and the mine is described under that title.

DUTCH MILLER MINING & SMELTING CO.

WASHINGTON

Inactive. H. P. Fogh, pres. and agent for majority stockholders, 1403 Howell St., Seattle, Wash. Geo. H. Law, sec.-treas.

Cap., \$2,000,000; shares \$1 par; all issued; 1,000,000 shares in escrow for 5 years. Majority of stock is held by an ore contract association, which made a 5-year contract for output, the Dutch Miller to get 40% of earnings as royalty, one-half to apply to payment on 500,500 shares optioned to the ore contract association.

Property: 2 patented claims, on summit of range, 12 miles south of Skykomish, Wash., formerly worked by the Seattle-Boston Copper Co. Claims show an ore body in a vein in granodiorite. Ore is chalcopryrite with tourmaline and quartz and is high-grade. Mine lacks transportation facilities and rope tramway must be installed to get ore to the wagon road.

ECLIPSE CONS. MG. & INVESTMENT CO.

WASHINGTON

Address: John E. Newell, supt., Silverton, Snohomish Co., Wash. O. Robert Dahl, pres., Seattle, Wash.; S. Hilmar Dahl, v. p.; H. M. Dahl, sec.; preceding officers, Andrew Chilberg and John E. Newell, directors.

Inc. 1906, in Washington. **Cap.**, \$3,000,000; shares \$1 par; non-assessable; giving \$2,000,000 in stock for the property.

Land: 10 claims, unpatented, and a mill site, in 2 groups, including the mill and claims on the Stillaguamish river, formerly held by Copper Independent Consolidated Mining Co.

Mine has 5 tunnels, longest 1,100', on a fissure vein in slate, carrying a little copper, but mainly gold and silver values. Water power from the Stillaguamish river develops 830 h. p. by turbine. The concentrator, rated at 300 tons daily capacity, has tank room for cyanide treatment. A compressor of 1,000 cu. ft. capacity to be installed. No 1917 returns.

FLORENCE-RAE COPPER CO.

WASHINGTON

Index, Snohomish Co., Wash. N. Rudebeck, mgr.; Fred Booth, supt.

Property: on Copper mountain, about 4 miles E. of Index, has a tunnel showing a 10' paystreak of chalcopryrite in the Margurite vein and an

assay of 400 lbs. taken across 6' of the vein averages 12 oz. silver, 18.5% copper, 29.6% iron, 7.2% silica and 35.8% sulphur.

Development: hindered 1913-14 by litigation among opposing factions of stockholders. Presumably idle since.

NEW YORK-SEATTLE COPPER MINING CO. WASHINGTON

Probably dead. Mine near Index, Wash. Described in Copper Handbook, Vol. XI.

PUGET SOUND REDUCTION CO. WASHINGTON

Everett, Snohomish Co., Wash. Is controlled, through stock ownership, by American Smelters Securities Co. The works have three 30x180" blast furnaces, 1 running on copper ores, making a 50% matte, which is blown up to blister copper in a reverberatory furnace and shipped east for electrolytic refining. Also includes an arsenic plant.

SEATTLE-BOSTON COPPER CO. WASHINGTON

Idle. Company owns water rights of 40,000 est. h. p. and a charter for a railway to open large timber tracts and reach the Dutch Miller mine, described under title of Dutch Miller M. & S. Co. The former mine holdings of the Seattle-Boston C. Co. are described in Vol. VIII, Copper Handbook.

WASHINGTON-IOWA COPPER MINING CO. WASHINGTON

Idle. **Property:** on the eastern fork of Silver creek, 2 miles above Mineral and 14 miles N. W. of Index, adjoin the Edison Mining & Development Co., and both properties are worked under one management. Claims are said to show 5 veins, carrying complex ore, consisting of chalcopyrite, galena, sphalerite and pyrite, with quartz gangue.

Development: by the 1,200' Bonanza crosscut tunnel.

WESTERN COPPER MINING CO. WASHINGTON

Office: 1123 Broadway, New York. **Mine office:** Reiter, Wash.

Officers: C. G. Reiter, pres.; Leroy B. Sherman, v. p.; J. J. O'Brien, sec.; J. D. Campbell, treas., with W. D. Schwarzwaelder, E. J. Wright, E. T. Christensen, Manfred Rockefeller and T. A. Meed, directors. C. Hendricks, mgr.; V. V. Clark, cons. engr.

Inc. April 25, 1917, in Maine. **Cap.**, \$2,000,000; shares \$1 par; non-assessable; 1,125,000 issued. Annual meeting, first Tuesday in April.

On June 6, 1917, company purchased assets of the Bunker Hill Mining & Smelting Co. for a stock consideration and assumed B. H. debts of \$84,973, consisting of bonds and notes.

Property: 20 claims, 15 patented and 1 millsite, patented, 371 acres at Reiter, Snohomish Co., Wash. Examined by Cory Wright, T. E. Brown, E. M. Simonds and V. V. Clark. Claims said to show fissures in granite, syenite and diorite, dipping 45°, with N. 46° E course.

Ore: is mainly chalcopyrite, associated with magnetite. On account of this latter mineral, the consulting engineer considered that prospecting with a dipping needle should find additional copper deposits. The Bell shoot has been followed to 500' depth and the Jumbo to 100'.

Development: by incline shafts, 86 and 500' deep and tunnels, the longest 2,600'. To depth of 1,200' workings total 6,100'. Diamond drilling cut a parallel body to the Bell at 497 to 526', assaying 6.99% copper. This hole is to be followed by a shaft. Exploration cost \$112,927 to the end of 1916.

Equipment: to Dec., 1916, cost \$72,195, covering 300-h. p. hydro-electric plant, 100-ton concentrator, 50-ton smelter, compressor, tramway, diamond drill, steam engine, hoist, etc.

Property is well equipped for production if ore is developed and has a large asset in over 50,000,000' of standing timber.

STEVENS COUNTY

Includes Bossburg, Chewelah, Colville, Deep Creek, Deer Park, Deer Trail, Metaline, Meyers Falls, Northport, Old Dominion, Orient and Silver Queen districts.

ADMIRAL MINING CO.**WASHINGTON**

Mine: in Colville district, near Valley, Stevens Co., Wash.

Officers: T. H. Greenway, pres.; T. R. Tate, v. p.; Mrs. T. R. Tate, treas., Chas. Warsth, sec.

Inc. 1914, in Washington. **Cap.**, \$1,500,000; shares \$1 par.

Property: 65 acres, patented, developed by 3 tunnels. Reported to have opened up a silver-copper vein 18"-8' wide, assaying from \$30-\$100 per ton. In April, 1916, the property was optioned to J. R. Brown and W. Everett of Spokane for \$30,000 and development work started. Shipments scheduled for the summer of 1917.

AICHAN BEE SILVER-LEAD MINING CO.**WASHINGTON**

Office: 401 Jamieson Bldg., Spokane, Wash.

Officers: H. M. Howard, pres.-mgr.; Emma S. Stephan, v. p.; Dr. B. F. Blosser, sec.-treas., with H. G. Twomey and A. P. Witherspoon, directors. J. Currie, supt., Fruitland, Wash.

Inc. August 1, 1916 in Wash. **Cap.**, \$10,000; shares 1 cent par; 600,000 shares outstanding.

Property: 8 patented claims, 160 acres, in Deertrail district, Stevens county.

Ore: occurs as a contact deposit in granite. Three veins under development said to give average assays of \$52 in silver-lead and \$3.72 in gold.

Development: by tunnels to depth of 150'. Management plans erecting 5-stamp mill and extending tunnels in 1917 with returns from stock sales.

AMERICAN MINERALS PRODUCTION CO.**WASHINGTON**

Address: Thos. W. Cole, mgr., Valley, Wash.

Property: 3 claims, 2,000 acres, in Stevens county, Wash., said to carry a large deposit of magnesite. Shipping in 1917.

A 16-mile standard gauge road being built Oct., 1917, from Valley to the property.

AMERICAN TUNGSTEN CONS. CORP'N**WASHINGTON**

Address: Hutton Bldg., Spokane. Wm. Sheck, gen. mgr.; Henry Becker, supt., at last account.

Company a reorganization, 1912, of the Germania Mng Co. **Cap.**, \$1,000,-000, shares \$1 par.

The Germania Co., composed principally of German investors, was organized 12 years ago to develop the Roselle mine, 25 miles west of Springdale, Stevens Co. It is said that \$500,000 was spent in driving tunnels, in the concentrator and buildings. In 1911 the company became involved in litigation, later going into bankruptcy.

In Jan., 1916, eastern interests, represented by F. T. Hamshaw, of Seattle, obtained a lease and bond on the properties held by the Corporation and started operations. Holdings include the Germania and Roselle mines. Development, consisting of a 200' shaft and 3 tunnels with 3,000' of work, is said to have exposed a considerable tonnage of ore.

ARK GROUP MINING & MILLING CO., LTD.**WASHINGTON**

Office: Kettle Falls, Wash. J. J. Budd pres. and gen. mgr.; D. E. Grobe, v. p.; O. L. Budd, sec.-treas.; preceding officers are the directors.

Cap., \$250,000; shares 25c par, 20c paid, 5c assessable; issued 437,595; assessments to date \$3,000. Annual meeting Oct. 1.

Property: 12 claims, partly patented, in the Kootenai district, British Columbia, and the Silver Queen group, 3 miles S. of Kettle Falls, Stevens Co.,

Wash. Ore occurs in contact between granite and lime with S. W. strike and dip of 45°. Vein reported to be from 30 to 60' wide, traceable for three-fourths of a mile and proven to depth of 150' and carries 10 to 20% copper with good silver values.

Developed by 3 shafts and 3 tunnels, longest being 800'. Equipped with steam power, 1 air compressor and 2 air drills. The Washington property has been under development for several years.

AURORA COPPER MINING CO.

WASHINGTON

Probably dead. See Vol. XII.

BONANZA MINE.

WASHINGTON

Property: 200 acres, located 3 miles from Bossburg, Stevens Co., Wash. The mine, an old-time producer, said to have had an output of \$1,000,000, and idle for 15 years, was reopened in 1915 by lessees who started shipping silver-lead ore to the Trail smelter.

Developed: by incline shaft with 6 levels, and a total of 3,000' underground workings. See U. S. G. S. Bull. 550, p. 63.

BUTTE-CHEWELAH COPPER CO.

WASHINGTON

J. O. Gillice, pres., Paulsen Bldg., Spokane, Wash.; F. M. Bell, v. p.; P. L. Eberhardt, sec.-treas.; preceding officers, G. B. Harrington and R. J. Davis, directors; R. J. Davis, gen. mgr.

Inc. March, 1913., in Washington. **Cap.**, \$1,000,000; shares \$1 par; fully paid and non-assessable; 500,000 issued.

Property: 4 claims, 75 acres, in the Valley mining district, Washington. Shows vein in sedimentaries close to a diabase intrusion; average strike N. 25° E., and dip 60°. Ore occurs as mixed sulphides, mainly chalcopryite and gray copper in a gangue of quartz, calcite and spathic iron. At 100' in depth the vein is said to be 6' wide and the ore to average 2 to 5% copper 1 to 5 oz. in silver and 50 cents to \$1 in gold per ton.

The property is developed by 100' winze, reported all in ore, a 300' shaft and 125' tunnel. Equipment includes a hoist and air compressor, installed in Sept., 1913.

CHEWELAH COPPER KING MINING CO.

WASHINGTON

Office: 115 Wall St., Spokane, Wash. **Mine office:** Chewelah, Stevens Co., Wash.

Officers: S. P. Domer, pres. and gen. mgr.; H. H. Hebert, v. p.; J. Grier Long, sec.-treas.; preceding, with E. W. Shively and F. M. Jarvis, directors.

Inc. 1898 in Washington. **Cap.**, \$100,000, shares 10 cts. par, changed 1909 to \$1,000,000, shares \$1 par, and increased March, 1912, to \$1,250,000; issued 1,136,230 shares. Bonds \$30,000 authorized at 8%; issued \$10,360. Annual meeting, third Thursday in May.

Property: 4 claims, 1 fractional, 47 acres, patented, and a 3-acre mill site, with 80 acres miscellaneous lands, 6 miles east of Chewelah, shows 4 orebodies, estimated widths of 8 to 56', carrying mainly chalcopryite and gray copper, with estimated values of 3 to 5% copper, 2 to 6 oz. silver and \$1 to \$2 gold per ton.

Development: 300' shaft, and tunnels of 1,200' and 1,350', estimated by management to show 300,000 tons of ore.

Equipment: includes 100-ton smelter. Operations were suspended for lack of funds and receivership asked by creditors December, 1915.

CHEWELAH GREY COPPER MINING CO.

WASHINGTON

Company reported out of existence, July, 1917. Formerly at Chewelah, Stevens Co., Wash. See Vol. XII.

COLUMBIA COPPER CO.

WASHINGTON

Chewelah, Wash. **Officers:** C. M. Carroll, pres., Spokane, Wash.; Alex Robinson, v. p.-mgr.; Oscar Olson, sec.-treas. T. J. Vaughan Rhys, cons. engr.

Property: a 10 year lease and bond, for \$100,000 on the High-grade Mining

Co. property in Deertrail Mining district, formerly owned by Carson Bros. of Reardon, Wash. Claims said to show 9' of ore from which shipments have been made.

CONSOLIDATED COPPER CO.

WASHINGTON

Office: 906 Paulsen Bldg., Spokane and Turk, Stevens Co., Wash. Mine at Springdale, Stevens Co., Wash.

Officers: W. H. Stowell, pres.; Geo. C. Gates, v. p.; V. W. Brasch, sec.-gen. mgr.; preceding and Chas. A. Libby and E. R. Traeger, directors.

Inc. 1913 in Washington. **Cap.**, \$1,500,000; shares \$1 par, assessable; total assessments to Dec., 1915, 16 mills. Annual meeting, Jan. Company is a reorganization of the Togo Mining & Smelting Co.

Property: about 240 acres, 160 patented, in Cedar Canyon district. Ore occurs principally as copper pyrites in slate, serpentines and quartzite with a N.-S. strike and 40 to 60° dip. One orebody, developed by tunnels, with about 2,000' of workings, is reported by management to average 3 to 5' in width, in upper levels, and to carry 8% copper, 3½ to 5 oz. silver and a trace of .02 oz. gold per ton. Upper levels said to show bornite, copper glance and a little native copper. A 1,000' crosscut tunnel is said to cut several veins, undeveloped at last reports.

Equipment: includes gasoline engine and hoist. The mine has been closed down for several years, but management expects to begin operations in 1917.

COPPER CLIFF COPPER MINING CO.

WASHINGTON

Inactive. **Office:** 724 Peyton Blk., Spokane, Wash. **Mine office:** Chewelah, Stevens Co., Wash.

Officers: T. F. Wilson, pres., treas. and gen. mgr.; J. O. Blair, v. p.; L. C. Dougherty, sec.; L. K. Armstrong, mng. engr.

Inc. Feb. 24, 1912, in Washington. **Cap.**, \$1,000,000; shares \$1 par; issued, \$62,000.

Property: 60 acres and 40 acres timber lands, held under bond and lease, in the Chewelah district, shows contact deposits between altered granite and limestone. Ores are mainly copper, with small silver values.

Development: by shafts of 332' and 730', and by tunnels, longest 600', giving depth of 1,000'.

COPPER HOARD MINING CO.

WASHINGTON

Property: the Lookout claim has been bonded to the Chewelah Grey Copper Mng. Co.

COPPER QUEEN MINING CO.

WASHINGTON

Property taken over by Copper King Mining Co. and a new company organized under title of King Mining Co., which see.

ELECTRIC POINT MINING CO.

WASHINGTON

Address: Roy A. Young, pres.-gen. mgr., Northport, Wash. Dan Dodds, supt., Cummins, Wash. **Directors:** J. E. Yoder, v.-p.; F. A. Turner, sec.; W. B. McGregor, treas., with L. C. Jesseph, R. A. Young and F. T. McCollough, directors.

Cap., \$1,000,000; \$1 par 793,500 issued. No bonds. One quarter interest owned by Walter J. Nicholls. Paid 1c dividend on Jan. 31, 1916, 2c in March, 1917 and 3c in June, 1917, a total of \$47,810. Profits for 1916 were \$93,753. Balance Jan. 1, 1917 was \$68,184.

Property: 13 claims, 245 acres, unpatented, 20 miles E. of Northport and 13 miles from Boundary, the shipping point. Mine is on top of a mountain 4,000' to 5,000' high with surface showing three ore "chimneys"; No. 1 ore chimney was opened by a glory hole, exposed a body of ore 25' wide containing carbonates in which boulders of galena were imbedded.

A 250' shaft with drifts and cross-cuts has proved chimney No 1 to main-

tain the same size and grade at this depth. This one chimney is estimated to contain over 11,000 tons of ore. The second and third chimneys have been cut by drifts. No. 2 chimney is 33' wide at 225'; No. 3 chimney from which much galena ore has been mined, is now practically exhausted. There are several other ore bodies reported to exist on the property.

Ore: galena which appears to be a replacement in dolomitic limestone. Shipments run from 25% to 75% lead.

Development: by 250' shaft and 900' tunnel.

Production: to Jan. 30, 1917 was 11,000 tons of ore.

Mining costs reported at \$6 a ton which does not include development or haulage.

GALENA FARM MINING CO.

WASHINGTON

Inc. in Spokane to develop silver-lead claims near Colville, Stevens Co., Wash. Similarity of name with a property in British Columbia has led to confusion at times.

GERMANIA MINE

WASHINGTON

Property near Springdale, Stevens Co., Wash. W. von Scheck, mgr. Formerly owned by Germania Mng. Company. Litigation over title kept mine closed for years. Regarded as a promising tungsten producer. Development work and 200-ton mill (dismantled in 1916) cost \$500,000.

GLADSTONE MOUNTAIN MINING CO.

WASHINGTON

Address: J. M. Hall, sec., 201 Sherwood Bldg., Spokane, Wash. W. J. Nicholls, mgr.

Officers: F. T. McCollough, pres.; T. S. Lane, v.-p.; W. J. Nicholls, treas.; preceding and J. A. Welch, R. W. Nuzum, directors; E. H. Brang, supt. at Cummins; A. G. Larson and A. Lakes, Jr., cons. engrs.

Inc. Aug., 1916, in Wash. **Cap.,** 1,500,000 shares, 10c par; non-assessable; 1,082,000 outstanding; 100,000 shares treasury stock offered the public, November, 1917, at 15c per share.

Ore sales in 1916, \$601. Operating expenses to July 1st, 1917, \$26,400. Cash on hand \$2,000, also ore worth \$10,000 in bins.

Property: 16 claims, 11 surveyed for patent, 289.9 acres, situated 20 miles E. of Northport, Wash. and but 900' from Electric Point mine, the claims almost surrounding that property.

Geology: vertical chamber or so called "chimney" deposits in limestone. Ore contains lead as carbonate, 1 oz. silver, trace of gold.

Development: by Setting Sun shaft 275' with drifts at 50, 100, 200 and 260', total underground openings 450'. Shaft and drifts show pay-shoot 120' long with workable width, of carbonate lead ore. Also has 120' Lone Star shaft with ore.

Ore reserves: 1,000 tons, assaying 20% lead. Grade shipped in 1916 was 14.6%. Total output to 1917 was 440 tons. Proposed work is extension of drifts from shaft, driving tunnel and surface exploration. In July, 1917, a drift on 260' level cut a chimney of 6 to 8% ore, with rich pockets.

Equipment: Fairbanks-Morse 15 h. p. gasoline hoist.

In 1917 shipped 15 cars of 13% to 16% lead ore netting \$9,327. Employs 18 men and four 4-horse teams. The monthly expenses are about \$3,500. Shipments average 20 tons per day.

Shaft is to be sunk to 600' and output increased to 50 tons per day, early in 1918.

HALL CREEK MINING & MILLING CO.

WASHINGTON

Daisy, Stevens Co., Wash. Herman Camerer, supt.

Property: the Gwin mine and group of claims, shows a fissure vein carrying gold-copper ore, developed by 400' shaft.

Equipment: includes steam plant and water power, hoist and 4-drill Fairbanks compressor. Has a 75-ton concentration mill, driven by electric power.

No recent returns.

HECLA COPPER-SILVER MNG. & MLG. CO.

WASHINGTON

Chewelah, Wash.

Officers: J. C. Argall, pres.; Howard McPhee, v. p.; Robt. A. Wilson, sec.-treas.; Fred F. Foster, supt.; preceding, with C. W. Linscott and Chas. Kliner, directors.

Property: 11 claims $3\frac{1}{2}$ miles N. E. of Chewelah and S. of the United Copper Co. holdings. Claims show 4 ledges, the main vein varying from 6 to 14' wide, traceable by cuts and pits for nearly a mile and averaging 5.4% copper, \$1 in gold and \$1.80 in silver.

Developed: by a 75' tunnel and a 150' vertical shaft. **Equipment:** includes a 50-h. p hoist and a 4-drill compressor. Company plans sinking the shaft to 500'.

HIGH GRADE SILVER & COPPER MINING CO.

WASHINGTON

Office: Chewelah, Wash. **Officers:** T. F. Hertezell, pres.-gen. mgr.; L. E. Hertezell, v. p.; W. W. Dicksen, sec.-treas.

Inc. July, 1909. **Cap.**, 1,500,000 shares, assessments of 9 mills levied to date.

Property: 3 claims, about 3 miles N. E. of Chewelah, Stevens Co., Wash., shows a granite intrusion in lime with development along contact. **Ore:** high-grade copper with silver-lead values.

Development: by 125' shaft and a new 60' shaft being sunk on a body of oxidized iron ore. **Equipment:** includes hoist, boiler, pump, etc.

Has produced only a few tons of ore since 1909 and if development proceeds as rapidly in the next eight years as in the past, the mine may be a profitable one in our lifetime.

Property taken over July, 1916, by Columbia Copper Co, which see.

JUNE COPPER CO.

WASHINGTON

H. S. Spedden, supt., Chewelah, Stevens Co., Wash.

Inc. June, 1913, in Washington, by R. C. Toole, L. B. Cottingham and W. L. Hansom.*

Presumably owns the June-Echo mine near Chewelah, where a 40-h. p gasoline hoist has been installed and a 200' shaft sunk. Vein shows copper-silver ore. Reported under lease to J. W. Douglas, 60 Wall St., New York, in May, 1915.

No 1916 returns.

KING MINING CO.

WASHINGTON

Officers: V. D. Williamson, pres., Empire St. Bldg., Spokane, Wash.; J. W. Douglas, v. p.-gen. mgr.

Inc. in 1916, to take over the Copper King and Copper Queen mines at Chewelah, Stevens Co., Wash.

The Copper King shows 4 veins carrying grey copper and chalcopryrite ore and is developed by 1,200' tunnel. A 4' ledge of high-grade ore was cut on the 500' level. Equipped with 100-ton oil-burning smelter, which was completed by former management. The mine was bid in at receiver's sale for \$125,000, July, 1915.

The Copper Queen property, 6 claims, is developed by 200' tunnel and cross-cuts. An 8' vein showing silver and copper ore was intercepted 50' from the portal of the tunnel, at a depth of 70'.

No recent information available.

LIBERTY COPPER MINING CO.

WASHINGTON

Office: Spokane, Wash. **Mine office:** Bluecreek, Wash.

Officers: J. H. Reser, pres.; C. Oldfather, v. p.; A. Haas, sec.; S. G. Neff, treas. and gen. mgr.; R. E. McVicar, trustee.

Inc. in Wash. **Cap.**, \$1,000,000; shares \$1 par.

Property: 6 claims, well watered and timbered, on Blue creek, about

1½ miles from Blue creek station, and 6 miles N. W. of Chewelah. The main vein, developed by 4,000' of tunnels, is about 18" wide, carrying auriferous and argentiferous copper and lead ores.

Equipment: includes a Fairbanks-Morse steam hoist, 100-h. p boiler and an air compressor. The mine has been under steady development since 1906, and made its first carload shipment March, 1909, to the Northport smelter. Management is said to plan a concentrator.

LONE STAR COPPER MINING CO.

WASHINGTON

Officers: Oscar De Camp, pres.; Wm. S. Thyng, sec. and engr., and R. C. Rimertsen, directors.

Inc: April, 1910, in Washington, practically as a reconstruction of the Copper Hill & Milling Co. **Cap.,** \$1,500,000; shares \$1 par. Owns sundry claims, including the Copper Hill mine near Newport, Stevens Co., Wash., developed by several shallow shafts and tunnels. Mine has an 18' vein, carrying chalcopyrite, disseminated in pyrrhotite. There is no machinery. Idle several years, except for annual assessment work.

LOON LAKE COPPER CO.

WASHINGTON

Office: 408 Columbia Bldg., Spokane, Wash. **Officers:** Judge Geo. Turner, pres.; A. W. Kemp, v. p.; Frank Crane, sec.-treas.; Evan Morgan, managing director, with A. De Voto and E. K. Erwin, directors.

Inc. 1915. **Cap.,** \$375,000; shares 25c par. Surplus, July, 1917, was \$50,000, with \$25,000 worth of ore in bins. **Dividends:** 1c a share monthly declared July, 1917.

Property: the Kemp-Komar and O. K. mines, 310 acres on Grouse creek, 6 miles N. of Loon Lake, Stevens Co., on the Great Northern R. R., said to carry a well-defined fissure vein, 20' wide, running E.-W. which gave returns of from 24-30% copper when formerly worked.

Development: by 500' incline shaft. A level at 200' goes E. on the vein for 325' cutting 2 orebodies, one of chalcocite ore from which nearly \$100,000 worth of ore was shipped, 1916. The second vein carries milling ore. Both veins have been cut on the 300' level, and management is now sinking to get under them at depth.

Equipment: includes hoist and pump.

Property resumed shipments, 1916, after 15 years' idleness and is shipping regularly, 1917.

NEW CURRENCY MINING CO.

WASHINGTON

Organized to take over the property of the Jay Gould Mining Co., at Chewelah, Stevens Co., Wash., said to show copper-lead-silver ore.

NORMAN MINES CO.

WASHINGTON

Offices: 1300 Old National Bank Bldg., Spokane, Wash.; and Northport, Wash.

Officers: J. A. Welch, pres.; H. R. Welch, v. p.; Sidney Norman, gen. mgr., sec.-treas., with O. C. Moore and J. W. McBride, directors.

Inc. 1914. **Cap.,** \$100,000; shares 10c par; assessable after treasury stock is sold; 900,000 shares issued. Company reported a cash surplus of \$6,000, May, 1916.

In Oct., 1916, all ore had been extracted and work was stopped. Zinc carbonate worth \$25,000 was shipped in 1916. For description see Vol. XII.

Property: 5 claims, about 100 acres, 7 miles S. E. of Northport, Stevens Co., Wash. Claims show a shear zone of lead-zinc carbonate ore in altered limestone, said to average 30% zinc, 13% lead, 4.6% lime, 1.1% sulphur, 5.5% iron, 2% insoluble.

Development: mainly on the Great Western orebody; with strike N. E. and dip 50° N. W., reported to measure 200'x150'x5' in width. The Empire vein,

25' at surface, has not yet been found in the lower workings. The Great Western group is developed by 325' tunnel and winze sunk to 200'.

Equipment: consists of a 2,000' aerial tramway at the Last Chance and a 600' surface railroad. Twenty men employed.

NORTHPORT SMELTING & REFINING CO.

WASHINGTON

Northport, Stevens Co., Washington. **Officers:** J. J. Day, pres.; E. R. Day, sec.; with Edw. Boyce, E. H. Knight and F. M. Rothrock, directors; R. W. Marston, mgr.

Cap., \$1,000,000; shares \$1 par. Company owns the Northport smelter, built on the site of the old Le Roi Mining Co.'s plant. The new \$500,000 plant was blown in March 7, 1916.

Equipment: 3 lead furnaces, 42" wide and 16' long, of 300 tons daily capacity, are now in operation. Company is treating ores from the Hercules and Tamarack & Custer. In Aug., 1917, a Cottrell electric fume-precipitator, costing \$100,000, was erected.

O-LO-LIM COPPER CO.

WASHINGTON

Office: 414 Kuhn Block, Spokane, Wash.

Officers: Jas. Keeth, pres.-mgr.; F. T. McCormick, v. p.; D. R. Riegel, sec. Inc. May 11, 1917, in Wash. **Cap.,** \$100,000; shares 10c par; assessable; 500,000 outstanding. Annual meeting, 1st. Tuesday in Dec.

Property: 160 acres in the Spokane Indian Reservation, Stevens Co., Wash., leased for 25 years from the Government; 10% of net smelter returns to be paid the Government. Lands were opened to leasers in May, 1916, and work started on company's ground in Jan., 1917.

Ore: copper occurs in contact in shale and granite. Ore is high-grade but its extent is still to be determined.

Development: by 60' shaft and tunnel from which 40 tons of ore have been shipped averaging 8-9% copper.

Tunnel and shaft work in progress, 1917.

REDWOOD COPPER MINING CO.

WASHINGTON

Dead. Mine at Chewelah, Stevens Co., Wash. Developed by 400' tunnel with several hundred feet of raises and winzes expected to expose copper at greater depth. Operations ceased in April, 1912, and property was lost under foreclosure of mortgage. Present owners are Chas. Stevens and others of Robinson Straus & Co., St. Paul, Minn.

ROYAL COPPER MINING & MILLING CO.

WASHINGTON

L. J. Winslow, pres. **Mine address:** Chewelah, Stevens Co., Wash.

Property: 7 claims said to show 3 parallel ledges having slate and granite contacts.

Development: by 400' tunnel said to show values in copper, lead, silver and gold. Property is a silver-lead mine with small amounts of copper. Company probably dormant as letters were returned in May, 1917.

SECURITY COPPER CO.

WASHINGTON

Address: 720 Peyton Bldg., Spokane, Wash. **Mine office:** Chewelah, Stevens county, Wash.

Officers: J. F. McGinnis, pres.; M. C. Hunter, v. p.; A. H. Syverson, sec.-treas.; with L. K. Armstrong, gen. mgr.; G. E. Hyatt, supt.

Inc. 1913, in Washington. **Cap.,** \$1,000,000; shares \$1 par. Reorganized 1917 with 1,500,000 shares of which 1,200,000 shares are outstanding; shares assessable.

Operating expenses in 1916 were \$20,000, making total of \$100,000 to end of that year.

Property: 9 claims, 200 acres, includes the Matterhorn and Van Slyke groups, adjoining the Standard-Chewelah, and the June-Echo mines. Shows fissure veins in shales and schists. Ore carries copper and silver.

Development: by about 1150' of underground work on a series of six veins by 550' shaft, levels, and tunnel.

Equipment includes a gasoline hoist and a 3-drill air compressor.

SHARP MINING CO., BYRON E.

WASHINGTON

Owens Cleveland group of 10 claims, north of Springdale, Stevens Co., Wash., an old property closed down because the silver-lead ore was zinciferous; 15,000 tons reported on dumps and blocked out.

A 50-ton mill was to be erected in 1916.

SILVER BELL MINING CO.

WASHINGTON

Address: E. H. Belden, 1208 Old National Bank Bldg., Spokane, Wash.

Officers: E. H. Belden, pres.; R. F. Blackwell, v. p.; with H. N. Metzger, J. M. Fitzpatrick and J. C. Broad, directors; E. F. McCabe, sec.-treas.

Inc. Nov., 1916, in Washington. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; 1,000,000 issued.

Property: 8 claims, 160 acres, 5 miles S. E. of Loon Lake, and 35 miles N. W. of Spokane, Wash.

Development: by 125' shaft, shows 4½' quartz vein in granite. Ore said to contain 25 oz. silver per ton, with gold up to \$4. Sinking is to be continued to 250'.

Equipment: 16 h. p. gasoline hoist. Is a silver prospect.

SILVER QUEEN MINING CO.

WASHINGTON

Out of business. Property operated by Ark Group M. & M. Co., which see.

SILVER TRAIL MINING CO.

WASHINGTON

Office: care J. Richard Brown, W. 1619 Clark St., Spokane, Wash.

Officers: J. R. Brown, pres.; A. L. Hooper, sec.; W. S. Haish, treas.; with Robert Bell, A. J. Bell, Peter Reid and M. S. Peters, directors.

Inc. 1915 in Washington. **Cap.**, \$125,000; shares 10c par.

Property: the old Clungstone mine, 8 miles E. of Evans in Colville mining district, opened in early '90s by Col. I. N. Peyton.

Development: tunnels, the lower one 700', with 400' drift on a 2'-6' vein of silver-lead ore. Shipments made to Trail, 1916.

It is reported that the mine shows enough ore opened to keep a 50-ton mill operating a year.

SPOKANE COPPER CO.

WASHINGTON

Address: C. H. Harvey Co., 618 Paulsen Bldg., Spokane, Wash.

Officers: B. Mabry, pres.; D. K. McDonald, v. p.; E. A. Moye, sec.-treas.; with J. S. Ramage and J. Dillard, directors.

Inc. 1917 in Washington. **Cap.**, \$100,000; shares 10c par; 600,000 issued.

Property: in Loon Lake district, Stevens Co., Wash.; 46 miles from Spokane. Examined by C. A. Low in August, 1917.

Development: by 100' shaft and small opencut. In latter at depth of 4', a 27' orebody is said to have been uncovered, 8' on the footwall showing leached carbonate ore.

Company's backers seem to bank on conditions in adjoining mines, and in the company's literature these conditions constitute the burden of the song.

UNITED COPPER MINING CO.

WASHINGTON

Office: 300 Title Bldg., Spokane, Wash. **Mine office:** Chewelah, Stevens Co., Wash.

Officers: Conrad Wolfe, pres.-gen. mgr.; W. G. Collins, v. p.; M. E. Poole, sec.-treas.; with Daniel Hoch, J. H. Griffith and E. C. Blanchard, directors. E. A. Wolfe, supt.

Inc. in July, 1906, in Washington. **Cap.**, \$1,000,000; shares \$1 par; fully issued; assessable by majority vote. Last assessment Sept., 1914, ½ cent a share. Annual meeting, Jan. 28. Company and Guaranty Trust Co., New York, trans-

fer agents; Registrar & Transfer Co. and Spokane & East Trust Co., Wash., registrars. Listed on New York Curb, May 1, 1917.

Revenue in 1916 was \$372,296, of which \$121,581 was profit. No. 5 dividend absorbed \$10,000. Cash on hand at end of year was \$7,867, and indebtedness \$18,446.

Dividends: \$130,000 to Aug. 15, 1917.

Property: 16 claims, patented, 103 acres, $4\frac{1}{2}$ miles N. E. of Chewelah, the nearest rail point.

Geology: shale and schist, and a vein with an orebody of 6' estimated average width, carrying malachite, chalcopryrite and tetrahedrite, reported by the company to have been proven to average 2.5% copper, 5 oz. silver and 40c gold per ton. Ore is mainly chalcopryrite, with streaks of gray copper ore on both walls, latter carrying up to 24% copper, 400 oz. silver and \$2 gold per ton. In July, 1917, a persistent diorite dike on the main 1,000' level crosscut, was cut by 6' of ore, which also appeared persistent.

Development: by shafts 250' below 1,000' level, and 5,000' tunnel, giving depth of 1,250'. Considerable development work was done in 1914-15; diamond drilling reported to prove the orebodies to depth of 1,400'. The mine has over 40,000' of workings. In June, 1917, reserves were worth \$2,000,000.

Equipment: includes 2 hoists, air compressors, capacity 1,200 cu. ft., 11 power drills, 2 pumps, and an electric light plant. Electric power is obtained from the Meyers Falls Power & Light Co. There are several mine buildings, including a 15x24' frame machine shop.

Has 500-ton concentrator, and an oil flotation plant, in which Gen. Naval Stores oils are used. Recovery to date has been from 77% to 80%. Ore and concentrates are shipped to the Cons. Mng. & Sm. Co., at Trail, B. C.

Production: for 1915, 650,995 lbs. copper, 103,195 oz. silver, and 8 oz. gold. In 1916, 1,179,178 lbs. copper and 159,271 oz. silver were extracted. Yield for 1917 is expected to be 3,500,000 lbs.

UNITED STATES COPPER-GOLD MINE

WASHINGTON

Prospect about 3 miles N. E. of Chewelah, Stevens Co., Wash., shows small quartz veins in limestone. Ore is chalcopryrite, pyrite with some malachite and azurite. Developed by 340' and 100' tunnels.

VALLEY MAGNESITE CO.

WASHINGTON

Office: Old National Bank Bldg., Spokane, Wash. **Mine office:** Valley, Wash.

Officers: F. M. Handy, pres.; B. E. Kehler, v. p.; W. J. Matthews, sec.; Robert Carnochan, treas. and Irving Whitehouse, asst. sec.-treas.; also directors.

Inc. in Washington. **Cap.**, \$1,500,000; shares \$5 par; 213,000 issued.

Anticipated earnings based on an estimated output of 150 tons per day, sold at \$32.50 per ton, less \$12 per ton, cost of calcined product, approximate \$3,000 daily.

Property: 1,080 acres at Valley, Stevens Co., Wash.

Development: to 100' depth, is estimated to expose 1,000,000 tons of magnesite, one exposure being 75 by 200'. Mining is being done by quarry methods. The ore is a gray, coarsely crystalline magnesite, containing 0.5% lime and 2.7% silica, which is well within market requirements. Mining costs \$1 per ton.

Equipment: 10 kilns with accessories. Capable of making 150 tons daily of calcined magnesite.

Production: 40 tons of calcined ore daily shipped to the Harbison-Walker Refractories Co., Pittsburgh, Pa.

This unusual deposit of magnesite may prove to be the main source of supply in the United States.

VALLEY MINING CO.**WASHINGTON**

Address: J. B. Tuttle, mgr., Valley, Wash.

Property: the Edna mine, 9 miles from Valley, has been idle for 12 years.

Development: In Sept., 1917, the mine was unwatered to 400', and levels driven at 100, 200 and 300' in depth. Copper silver ore exposed is said to have a value of \$600,000.

VULCAN MINING CO.**WASHINGTON**

Office: 2025 West 3rd Ave., Spokane, Wash. Mine at Orient, Stevens Co., Wash.

Officers: H. M. Gibson, pres.; P. Lewis, v. p.; A. O. Stuberg, sec.; P. Larsen, treas.; preceding with J. D. Grimes, directors.

Inc. July, 1914, in Wash. **Cap.,** \$1,500,000; shares \$1 par; assessable.

Property: 7 claims, 4 miles N. E. of Rock Cut at 3,850' elevation, shows 3 northwest veins with gold ore; also some silver.

Development: on No. 1, a gold-silver vein, includes a 148' shaft, with 42' crosscut, 53' shaft and 570' tunnel, 300' below the surface. Crosscutting in 1916 on the 570' tunnel level to tap the main orebody. A 50' crosscut in the 570' tunnel was expected to reach the ore about midyear 1917. No. 2 vein is developed by 4 prospect shafts, a 37' tunnel and 100' incline. The third vein is opened by a 75' shaft.

Present owners have spent over \$20,000 on development.

WHATCOM COUNTY

(Includes Mount Baker and Barron, or Slate Creek districts)

BOUNDARY RED MOUNTAIN MINING CO.**WASHINGTON**

R. J. Bonnemort, supt., Sardis, B. C. Control purchased June, 1916, by George Wingfield and associates of Goldfield, Nev.

Property: in Whatcom county, Wash., shows a fissure vein containing an ore shoot developed for 600' and averaging 4' in width, of \$20 ore.

Development: carried on intermittently since 1889, is by tunnels, the second or 700' level, showing high-grade ore.

Equipment: includes a hydro-electric plant and a 10-stamp mill.

HAMMOND MINING CO.**WASHINGTON**

Officers: F. C. Hammond, Bellingham, Wash., pres.; Hugh Eldridge, v. p.; Geo. C. Fisher, sec.-treas.; with Frank Wright, Fred J. Wood, directors.

Inc. 1914. **Cap.,** paid up, \$500,000.

Property: 32 claims, 600 acres in T. 39 N., R. 8 E., in Sec. 5, 6, 7 & 8 of Whatcom Co., Wash., includes the Great Excelsior mine.

Ore: gold-silver, said to average \$4 per ton, occurs in formation of slate, sandstone and andesite.

Developed: by 2,500' of underground workings.

Equipment: includes a 100-ton 20-stamp mill. **Production:** said to be 10,000 tons of ore, with net returns of \$20,276, to 1915.

Company was building a 150-ton cyanide plant in 1915.

No recent returns secured, and property reported early in 1917 as closed and plant being sold.

*YAKIMA COUNTY***ELIZABETH GOLD HILL MINING CO.****WASHINGTON**

North Yakima, Yakima Co., Wash.

Officers: L. L. Matterson, pres.; P. J. Eschbach, v. p.; Frank X. Nagler, sec.-treas.; preceding, with Jos. Feser, Thos. Hope, E. P. Sanford and Rudolph Mayer, directors.

Inc. 1900, in Washington. **Cap.**, \$1,000,000; shares \$1 par, non-assessable. Annual meeting, second Monday in March.

Property: 14 claims, unpatented, 200 acres, adjoining the Blue Bell mine on the north, about 65 miles N. W. of North Yakima, in the Summit district. Shows a number of orebodies in granite, carrying gold-silver-lead-copper ores, with 1,600' of workings.

Ore reserves: estimated by management, 150,000 tons of ore, with 100,000 tons blocked out for stopping, averaging \$40 per ton, which figures are excessive.

Equipment: includes steam and water power, and a small sawmill, with material for a 10-stamp mill on the ground. Idle.

WISCONSIN

Wisconsin produces over 40,000 tons of zinc per annum, from the treatment of over 2,000,000 tons of 2.7% ore. The dressed concentrate is mostly reduced to metal at Illinois smelters. The principal centers of production are Benton, Hazel Green, Linden, Livingston, Mifflin and Platteville. During 1916 there were 68 producers with full equipment.

The various copper and iron mines of the state are arranged alphabetically.
BARABA MINING CO. (COPPER) **WISCONSIN**

Idle. **Office and mine:** Mellen, Ashland Co., Wis. Nelson Baraba, Sr., pres.; Nelson Baraba, Jr., sec.

Inc. 1906. **Cap.**, \$1,000,000, shares \$1 par. Has a shallow shaft showing ore assaying 2.8% copper, with traces of gold and silver.

B. M. & B. MINING CO.

WISCONSIN

Address: Jos. Wilson, supt., Mifflin, Wis.

Company is operating zinc mines in the Mifflin district.

CLEVELAND MINING CO.

WISCONSIN

Office: 625 Bank & Insurance Bldg., Dubuque, Iowa. S. W. Burford, mgr.; H. L. Jones, supt.

Property: 40 acres, includes the Cleveland, Scrabble Creek, Lawrence and Square Deal Mines, at Hazel Green, Grant Co., Wisc. Lead-zinc ore occurs in flats and pitches in limestone.

Development: several 150' shafts with 1,500' underground workings said to block out 100,000 tons of ore.

Equipment: includes a 75-h. p. electric hoist, a 6-drill air compressor and a 250-ton concentrating plant, put into commission in May, 1915.

Production: shipments reported very light in June, 1917, from the Cleveland and Lawrence mines. From the Wilson mine at Potosi camp a car of high grade concentrate is shipped each week. Shipments made to Mineral Point Zinc Co. under contract. Employs 160 men on double shift.

FIELD MINING & MILLING CO.

WISCONSIN

Office: 2200 Insurance Exchange, Chicago, Ill. **Supt.'s address:** R. F. D. No. 7, Scales Mound, Ills.

Officers: Robt. W. Hunt, pres.; Jas. C. Hallsted, v. p., with L. V. Rice, C. C. Whittier, directors. F. W. Guthrie, sec.-treas. L. V. Rice, gen. mgr.

Inc. 1908, in Illinois. **Cap.**, \$100,000; shares \$100 par; \$65,000 outstanding. Annual meeting 1st Tuesday in May.

Financial reports for 1916 shows: receipts from ore sales, \$776,329; gross earnings, \$778,500; operating expenses, including royalties, \$452,989; net income, \$325,511.

Property: the Thompson mine near New Diggings, Wisc., an important lead-zinc producer, developed to depth of 225' by vertical shaft. Ore occurs in fissure veins and disseminations traversing dolomite. Management estimates ore reserves at 350,000 tons in May, 1917.

Equipment: includes electric power, 50 h. p. hoist, 600' elec. compressor, centrifugal pump, 800-ton mill, equipped with jigs and tables.

Production: the mill treated 200,000 tons of ore during 1916, concentrates averaging 45% zinc, 75% lead, 31% sulphur, 16% iron.

FRONTIER MINING CO.

WISCONSIN

Office: 413 Fletcher Trust Bldg., Indianapolis, and Galena, Ill.

Officers: J. H. Billingsby, pres.; D. C. Ellison, v. p.; W. C. Haneisen, sec.-treas.; preceding, with C. W. Craig, C. R. Hinkle, Carl L. Rost, S. O. Deschler, directors.

Cap., \$125,000; shares \$100 par.

Dividends: begun April, 1916, were 2% the first of each month, and 10% on the 15th.

Property: 500 acres under lease, in Sections 8 and 9, T. 1 N., R. 1 E., at Benton, Wis. **Ore:** zinc sulphide in pitches and flats in limestone. Stopes are 120' wide and 35' high.

Development: 3 shafts, average depth of 150'. Room and pillar mining system is used.

Equipment: includes one 50-h. p. and one 75-h. p. electric hoists, air compressor and Keystone drilling machines. There are also 3 concentrators with daily capacity of 600 tons in 10 hours.

The Calvert property produces 220 tons of zinc concentrate and 6,000 lbs. lead ore weekly; the Bull Moose 200 tons weekly. The Hird mine, under development, shows high-grade milling ore. The Treganza mine is operated under lease by the Burr Mining Co., a subsidiary. A new power and concentrator plant began operations in May, 1916. Employs 400 men. Wages are \$2.75 to \$3 for car men and shovelers.

Shipments made under contract to the Grasselli Chemical Co.

GRUNOW MINING CO.

WISCONSIN

Address: Herman Grunow, supt., Mifflin, Wis.

Company is operating zinc mines in the Mifflin district.

HOLMES MINING & MILLING CO.

WISCONSIN

Idle. Mellen, Ashland Co., Wisc. **Officers:** John Holmes, pres.-mgr.; A. D. Barnes, v. p.; Thos. A. Humphrey, sec.; F. P. Simmonds, treas.; preceding with Edw. Bekken, A. D. Wilson and A. D. Hill, directors.

Inc. Jan. 9, 1902, in Wisconsin. **Cap.,** \$150,000; shares 25 cts. par.

Property: 160 acres in the Penokee iron range, about 1 mile N. of Bad river, shows fissure veins in greenstone, diorite and slate with E.-W. strike and dip of 70°. Three orebodies are claimed of which one, said to be 40' wide and traceable one-half mile by a strong gossan, with slate footwall and diorite hanging, is reported to have chalcopyrite in a quartz gangue. Ores give assays up to 9 oz. silver and \$3 gold per ton. **Development:** by shafts of 150' and 188'.

Equipment: includes a 16 h. p. hoist.

INDIAN MOUND MINING CO.

WISCONSIN

Quincy, Ill. **Mine office:** Benton, Wis. L. N. Dana, supt.

Property: the Monroe mine, near Benton, Lafayette Co., Wis., is a regular shipper of galena and sphalerite concentrates.

KLAR PIQUETTE MINING CO.

WISCONSIN

Address W. H. Doyle, sec., Platteville, Wisc.

Company is operating zinc mines in the Platteville district.

LUCKY FIVE MINING CO.

WISCONSIN

Mr. McKinley, supt., Dodgeville, Wisc. Operates a lease on Davis and Thomas lands, in Dodgeville district, near Cuba City, Grant Co., Wisc., and is the largest producer of high-grade lead-zinc concentrates in the district. Developed by 100' shaft.

Equipment: includes steam plant and 50-ton concentrator. Shipments made to the Collinsville smelter, under lease to the Picher Lead Co.

LUCKY SIX MINING CO.

WISCONSIN

Office: care Republican House, Milwaukee, Wisc. J. N. Vail, supt., R. R. No. 2, Livingston, Wisc.

Property in Mifflin district, Iowa Co., Wisc., developed by two shafts. Produced about 2,957 tons of zinc concentrate in 1916.

LUCKY TWELVE MINING CO.

WISCONSIN

Address: L. N. Dana, mgr., Benton, Wisc.

Company is operating zinc mines in the Benton district.

McMILLAN ZINC CO.

WISCONSIN

Offices: Platteville and Hazel Green, Grant Co., Wisc.

Officers: A. C. McMillan, pres.; Henry Hornischfeger, v. p.; H. B. Morrow, sec.-treas.; preceding, with L. C. Dagenhardt and C. M. Echols, directors; L. C. Dagenhardt, supt., Hazel Green.

Inc. Aug. 3, 1914, in Wisc. **Cap.**, \$100,000; shares \$1 par. Annual meeting, August 14. Operating expenses for 1915 are given as \$34,536 with no income, due to fact that the company was putting the property in shape to produce.

Property: 100-acre lease, at Hazel Green, said to show zinc and lead sulphides occurring in a disseminated deposit in the Galena limestone formation.

Development: 180' vertical shaft.

Equipment: includes steam hoist, 300 cu. ft. air compressor, pumps and a mill, capacity 400 tons per 20 hours. No recent returns.

M. & D. MINING CO.

WISCONSIN

Address: Geo. Jarrett, supt., Platteville, Wis.

Company is operating zinc mines in the Cuba City district.

MIDLAND MINING CO.

WISCONSIN

Address: R. Davis, supt., Platteville, Wis.

Company is operating zinc mines in the Platteville district.

MINERAL POINT ZINC CO.

WISCONSIN

Address: B. A. Hoskins, mgr., Galena, Ill.

Subsidiary of the New Jersey Zinc Co., operating the following mines in the Wisconsin zinc region: Black Jack mine at Galena, Ill.; Coker at Livingston, Wis., Fox at Strawbridge, Kennedy at Highland, Kennedy at Hazel Green and the Penna-Benton at New Diggings, Wis.

At Mineral Point company has a concentrating plant, including a multi-hearth roaster of 150 to 200 tons daily capacity and magnetic separators to remove pyrite from jig concentrates, whose zinc content is raised from 37 to 59%. Recovery is 90% at cost of \$2 per ton.

NATIONAL ZINC SEPARATING CO.

WISCONSIN

Address: W. N. Smith, gen. mgr., Platteville, Wis.

Company operates a roasting and magnetic-separating plant, capacity 200 tons of ore in 24 hours, at Cuba City, Grant Co., Wis., producing a 60% zinc concentrate.

NORTHWESTERN IRON CO.

WISCONSIN

Address: J. H. Means, mgr., Milwaukee, Wis. E. P. O'Connor, supt.

Property: the Mayville mine in Dodge Co., Wis., developed to 125' depth.

Ore: is a soft, red non-Bessemer hematite, containing 38.42% iron, 1.09% phosphorus, 4.11% silica and 11.04% moisture. This is concentrated to 43.19% iron.

Output in 1916 was 125,970 tons, making 1,101,360 tons to date.

O. P. DAVID MINING CO.

WISCONSIN

Address: T. R. Webster, sec., Montfort, Wis.

Company is operating zinc mines in the Montfort district.

OPTIMO MINING CO.**WISCONSIN**

Office: 1127 State Life Bldg., Indianapolis, Ind.

Property: at Linden, Iowa Co., Wis., is the main producer of lead-zinc concentrates in the Linden district. Operates a 100-ton mill and produces concentrates averaging from 30-40% zinc.

Equipment: includes electric power, drills and pump.

PEACOCK MINING CO.**WISCONSIN**

Address: Henry Ovitz, supt., Mifflin, Wis.

Company is operating zinc mines in the Mifflin district.

PENI MINING CO.**WISCONSIN**

Address: H. C. Holtz, supt., Mifflin, Wis.

Company is mining zinc ores in the Mifflin district.

ROBT. W. HUNT CO.**WISCONSIN**

Address: L. V. Rice, mgr., New Diggings, Wis.

Property: the Crawhill zinc mine at Scales Mound, Ill., near New Diggings, Wis.

ROSS MINING CO.**WISCONSIN**

Address: Chas. Ross, supt., Mineral Point, Wis.

Company is developing and mining a zinc deposit in the Linden district.

RUDOLPH LAND CO. (COPPER)**WISCONSIN**

Idle. Mine near Gordon, Douglas Co., Wis.

Inc. 1905, as successor of Minong Range Copper Co.

Property: 12 miles from Gordon, is in Secs. 11, 12, 13 and 14, T. 43 N., R. 10 W., on the southern fold of the Keweenawan syncline.

Development: by two shafts, deepest 350', sunk at an angle of 36°, on a dark amygdaloidal trap bed carrying small quantities of native copper.

Equipment: includes a 6-stamp mill. Property fully described under title of Minong Range Copper Co., Vol. III., Copper Handbook.

ST. CROIX CONSOLIDATED COPPER CO.**WISCONSIN**

Out of business. For description see Vol. XII.

SHAMROCK MINING CO.**WISCONSIN**

J. Maloney, mgr., Mifflin, Wisconsin.

Officers: H. F. Cochenus, pres., 1536 First Nat'l Bank Bldg., Milwaukee, Wis. P. C. Kolinski, gen. mgr.

Property: 37 acres in Mifflin, said to show a 32' vein, running N. W.-S. E., carrying a 10" to 12" streak of lead-zinc sulphides, averaging 35% zinc, 25% lead. Mine is the old Shamrock & Peni mine on the so-called old 80 tract, mined 100 years ago for lead, recently quarried for glass rock and now for its 10" to 12" of coal black "Jack" ore.

Development: by 340' tunnel, and opened to 28' depth, by quarry, stripping off the "glass rocks." About 800 tons shipped in 1915, that averaged 30% zinc and 10 tons of lead concentrate.

Ore: is treated in 50-ton mill and concentrate goes to DePue smelter. Property worked by double shift 1916. Company took over the Sunset mine, July, 1916.

TIFFANY MINING CO.**WISCONSIN**

Address: 925 Postal Telegraph Bldg., Chicago, Ill.

Inc. 1916. **Cap.,** \$50,000.

Property: 160 acres, leasehold, known as the Tiffany mine, formerly owned by W. N. Tiffany, of Platteville, Wis. Property has been drilled and orebody proven. Claims lie east of the Wilson Mining Co. land.

In June, 1917, company was operating a 200-ton mill.

UNIVERSAL MINING CO.**WISCONSIN**

Address: R. S. Burnett, supt., Cuba City, Wis.

Company is operating zinc mines in the Cuba City district.

VINEGAR HILL ZINC CO.**WISCONSIN**

(Owned by Mark Manufacturing Co.)

Office: Platteville, Wis. W. N. Smith, mgr.; J. A. MacCulloch, gen. supt.

Operates Blackstone, North Unity, Hodge, Graham, Martin, Kittoe, Yendall, Meloy, and Jefferson mines in Platteville district. Ships galena and blende concentrates.

WEST END MINING CO.**WISCONSIN****Inc.** June, 1916, by D. F. Gardner, C. May, L. Hable, Chas. Roselip, Jr., and W. F. Weigle, to lease and operate a zinc mine near Platteville, Wis.**WEST HILL MINING CO.****WISCONSIN**

W. Brown, supt., Platteville, Wis.

Cap., \$20,000. In last eight months of 1915, reported to have made 150% profit on capital stock.

Operates zinc lands in Platteville, Grant Co., extending its holdings by amalgamation with adjoining lands. An important shipper of zinc concentrates. Paid a 10% dividend in March and another in June, 1916.

WISCONSIN ZINC CO.**WISCONSIN**

Subsidiary of the American Zinc, Lead & Smelting Co., which see.

Address: A. W. Plumb, gen. mgr., Platteville, Wis.**Dividends:** 2% quarterly; No. 5 paid May 21, 1917.**Property:** the Winskell, Champion, Longhorn and Thompson mines in the New Diggings, Wis., district. Also has a roasting plant at New Diggings, containing 7 Skinner hearth furnaces, 20' diam., preparing ore for magnetic separation of marcasite from zinc blende. Crude ore averages 2.8% zinc.

In 1917 a 200-ton mill was erected on the Copeland lease, near Shullsburg.

WYOMING

Mines are arranged alphabetically, as State has no great mining center.

ACME CONS. GOLD & COPPER MINING CO.**WYOMING**

Inactive. See Copper Handbook, Vol. XI.

AETNA MINING CO.**WYOMING****Idle. Office:** Merrill, Wis. Mine near Riverside, Carbon Co., Wyo. See Copper Handbook, Vol. XI.**AMERICAN FIREPROOFING & MINING CO.****WYOMING****Address:** Investment Clearing House, Fin. Ag'ts, 513 Denham Bldg., Denver, Colo. A. E. Minimum, pres.; S. E. Coyler, mgr.**Inc.** 1913. **Cap.**, \$10,000,000, shares 10 cents par. Stock was offered at 2c with a guarantee of refund attached should the company's statement not be verified.**Property:** 8 and a fraction claims, 200 acres, in the South Pass mining district, 35 miles from Lander, Fremont Co., Wyo., the nearest railroad, comprising the Jerry Dain and Hidden Hand Fraction group, a bond and lease on the Bobtail, Denver and Bluebird claims, near Lewiston, and control of 120 acres of partially developed mineralized land.**Ore:** quartz, with gold in fissure veins, 15-24" wide; said to average better than \$100 per ton in gold.**Development:** includes shafts 40-70' deep, including 500' of underground workings on the Bobtail claim.**Equipment:** shaft house, blacksmith shop, pumping station, engine, boiler, crusher, electric plant and other machinery.**ANCHORIA COPPER MINING CO.****WYOMING**

Idle several years.

Office: Room 3, Algoma Bldg., Oshkosh, Wis. **Mine office:** Copper-ton, Carbon Co., Wyo. H. O. Granberg, sec.-treas.

Inc. April, 1901, in Wyo. **Cap.**, \$1,000,000, shares \$1 par.

Lands: 4 claims, 80 acres, patented, in the Battle Lake district, developed by a 200' shaft and tunnels of 45' and 60', showing an orebody estimated at 45' width, giving average assays of 17% copper, and from a trace to \$5 gold per ton. Has a 40-h. p. steam plant, with hoist good for 500', 3 power drills and 4 substantial mine buildings of logs.

ANNIE MINING CO.

WYOMING

Mine office: Jelms, Albany Co., Wyo. L. A. Hancock, sec.

Inc. 1903, in Wyoming. **Cap.**, \$250,000, shares \$1 par.

Lands: 100 acres, near Jelm, said to show two 4' contact veins between granite and schist, opened by a 140' shaft and a 138' tunnel, showing copper carbonates and bornite, assaying up to 20% copper and \$10 gold per ton. Idle since 1907, except for representation work performed each year.

AZURITE MINING CO.

WYOMING

Idle. Office: Room 3, Algoma Bldg., Oshkosh, Wis. Arthur Bishop, v. p.; H. O. Granberg, sec.-treas. and gen. mgr.

Inc. Dec. 17, 1904, in Wyoming. **Cap.**, \$1,000,000, shares \$1 par; issued, \$624,650.

Lands: 5 claims, 63 acres, in the Battle Lake district, near Dillon, in Carbon Co., Wyo., showing 3 fissure veins, in gabbro, of 15 to 20' estimated width, opened by 305' of work, including a 65' shaft and 70' tunnel, showing ore giving assays of 18% copper. Company paying taxes yearly.

BIG FIVE COPPER CO.

WYOMING

Main office: Rock River, Wyo. **Mine office:** Arlington, Wyo.

Officers: John F. Pierce, pres.; W. A. McIntyre, v. p.-mgr.; R. W. S. Donell, sec.-treas., with Ralph Booth, and S. Morris, directors.

Inc. 1908, in Wyoming. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; 520,000 shares outstanding. Annual meeting, July 17.

Property: 2 claims, 40 acres near Arlington, Carbon Co., Wyo.; shows small vein of copper ore carrying gold and silver values. Only assessment work done, but management planned sinking to 220' and crosscutting at 175' level at last accounts.

BOSTON & WYOMING COPPER MINING CO.

WYOMING

Idle. Office: care Jas. A. Shinn, Leadville, Colo. **Mine office:** Esterbrook, Albany Co., Wyo.

Inc. Jan., 1903. **Cap.**, \$500,000.

Property: the oldest in the district, includes 120 acres mineral lands and 120 acres miscellaneous lands, taken over from Esterbrook Mining Co. The Esterbrook mine has a 4' fissure vein, traversing diorite, schist and granite, carrying cuprite, chalcopryrite, cerussite and galena, estimated by former owner to average 2 to 4% copper, 25 to 30% lead, 2 to 4 oz. silver and \$1 to \$2 gold per ton, developed by 2 short tunnels and 5 shafts, deepest 335'.

COMMERCIAL GOLD MINING CO.

WYOMING

Office: Centennial, Wyo.

Officers: P. A. Peterson, pres., Canon Falls, Minn.; P. L. Holtum, sec.; B. Holtum, mgr., Centennial, Wyo.

Transfer office: Centennial. Annual meeting, second Tuesday in August.

Inc. 1909, in Wyoming. **Cap.**, \$1,000,000; shares \$1 par; 350,000 outstanding.

Property: 2 patented claims of 96 acres in Centennial mining district. The formation is similar to that of the district, granite, schist, porphyry, quartzite, etc., with N. E.-S. W. trend.

CONGO MINING CO.**WYOMING**

Address: Rawlins, Wyo.

Owens property in Battle Lake district, idle for several years on account of lack of transportation. Mine to be reopened, October, 1917.

CONTINENTAL-MORRIS COPPER MNG. CO.**WYOMING**

Office: Morris, Ill. Mine near Encampment, Carbon Co., Wyo.

Officers: J. H. Rogers, v. p.; Dr. G. A. Leach, sec.-treas.; preceding, with I. F. Hatcher, U. C. Davis, W. A. Thomas, E. R. Joyce, B. C. Hitchcock and B. W. White, directors.

Inc. March 31, 1908, in Wyoming, as a merger of the Continental Copper Mining Co. and Morris Mining Co. Cap., \$2,250,000, increased later to \$5,000,000; shares \$1 par, non-assessable; issued, \$1,750,000. Annual meeting, first Tuesday in February.

Property: 7 claims, patented, 120 acres, in the Battle Lake district, carrying about 50 acres of good pine timber. Claims show schist, with 4 veins, of 13 to 40' estimated average width, traceable 1,500 to 3,000', carrying carbonate and sulphide ore, estimated to average 1 to 8% copper, with small gold and silver values.

Development: includes several shafts and 1,400' of tunnels.

Equipment: includes a steam hoist, good for 500', and 2 buildings. Idle, but resumption planned as soon as property can be refinanced.

COPPER BOTTOM MINING & MILLING CO.**WYOMING**

Inez, Converse, Wyo. Henry Metz, Sr., pres.; Fred Metz, sec.-treas.

Property: the Green Hope mine, in the Hartville district. Laramie Co., is under bond and lease until 1916, to Messrs. Wm. F. Moenke and Geo. Botsford, Sunrise, Wyo. Mine has produced about 125 tons of ore. Company also owns a few copper claims in the region at the head of Broom creek, 15 miles north of Sunrise in Sec. 26, T. 29, N., R. 65 W., on which annual assessment work has been done.

ELENOR MINES CO.**WYOMING**

Address: O. M. Beck, Atlantic, Wyo.

Officers: O. M. Beck, pres.; Nate Wilson, v. p.; F. V. Marsh, sec.-treas.

Inc. 1917, in Wyo. Cap., \$150,000; shares 50c par.

Property: 12 claims about 4 miles N. W. of South Pass and 28 miles south of Lander.

Claims show a well-defined vein carrying copper, gold and silver values.

ELKHORN COPPER MINING CO.**WYOMING**

Property: on Elk Mountain, near Overland, Carbon Co., Wyo., is said to carry a 7' vein of sulphide ore, giving assays of 6 to 20% and claimed to average 7 to 8% copper, with considerable ore in sight. Mine has a shaft and a 460' tunnel, with about 1,000' of drifts. Worked under lease by W. C. Sammons of Saratoga and reported shipping in 1914.

No later returns.

EMERALD MINING CO.**WYOMING**

Idle. Wheatland, Laramie Co., Wyo.

Property: the Cooney Hill mine, formerly owned by the Cooney Hill Gold & Copper M. & M. Co., and the Emerald mine, on Slate creek, showing a prominent gossan outcrop in schist. The Emerald has a 60' shaft in ore, and a 100' shaft bottomed in a gossan showing traces of copper sulphides. No recent report received.

FERRIS-HAGGARTY COPPER MINING CO.**WYOMING**

Inactive. Owns, or did own, the copper mine of this name at Rudefeha, Carbon Co., Wyo. Company also owned \$375,000 of the Penn Wyoming bonds, but as its stock is practically all owned by the Penn Wyoming, its corporate officers and affairs are of no public interest, save as the only valuable mining

asset of the chain of bankrupt corporations, controlled by the Penn Wyoming and its alleged and equally rotten successor, the United Smelters, Railway & Copper Co. The mine itself has been idle for many years. See Penn Wyoming Co.

GOULD MILLING AND LEASING CO.**WYOMING**

Address: B. A. Lathrop, mgr., Centennial, Wyo.

Since 1915 company has been leasing property of the Utopia M. & M. Co. (which see) in the Centennial district.

Development: 5 tunnels have opened copper-gold-silver ore said to average \$15 per ton.

Equipment: erected 50-ton mill, costing \$20,000 in 1917.

HAGGARTY COPPER MINING CO.**WYOMING**

Probably dead. Mine at Rudeheha, Carbon Co., Wyo. L. N. Pennock, former pres.

Cap., \$10,000, increased Nov. 9, 1908, to \$1,500,000; shares \$1 par. Controlled and owned by the United Smelters, Railway & Copper Co. Is a companion of the Ferris Haggarty Co., but like all its sister companies owned by the U. S. R. & C. Co. Only a lawyer can tell which of the two owned the copper mine that has been the bait for so many "investors."

HECLA CONSOLIDATED MINES CO.**WYOMING**

Idle. Office: Henry Schwartz, pres., 308 Masonic Bldg., Denver, Colo. Mine at Hecla, Laramie Co., Wyo.

Inc. 1909, in Wyoming, as a merger of the Hecla Mining Co., Amalgamated Copper Mining & Extraction Co. and Kopper Krown Mining Co. **Cap.,** \$5,000,000; shares \$1 par.

Property: 610 acres, including the Hecla group, 13 claims, 2 patented, and a 35-acre townsite, in the Silver Crown district, 4 miles from Granite Canyon, on the Union Pacific railroad and 7 miles from the Cheyenne Northern line. The Hecla is claimed to show 16 fissure veins, of 8' average width, in schist and granite, of which 3, of 7' average claimed width, carry oxidized and sulphide ores, said to give average assays of 3.4% copper, 3 oz. silver and several dollars in gold per ton, besides nickel, platinum and uranium.

Development: includes a 40' tunnel and 14 pits and shafts of 10 to 140' depth.

The Teddy Roosevelt-Good Hope group, formerly held by the Amalgamated Copper Mining & Extraction Co., comprises 10 claims in the Silver Crown district, 2 miles from the Union Pacific railway and 23 miles from Cheyenne, with about 700' of workings, claimed to show ore giving fair assays in copper.

The Kopper Krown group, about 2 miles S. W. of Hecla and 22 miles W. of Cheyenne, 7 claims, 140 acres and not 154 acres as claimed by the company, has 413' of workings, claimed to show 10,000 tons of sulphide ore blocked out for stoping.

The Hecla mill has 15 stamps, a 50-ton concentrating plant and a leaching plant. The Ohly process, installed in an attempt to save the rare metals, was not a success.

Ore: mainly low in grade, is only in part adapted to concentration, and the mill requires overhauling and adaptation to the ore. With concentration by the Minerals Separation process, on the sulphide ores, property ought to be workable. The history and financial methods of this company and its predecessor are described in Vol. X.

Same management as the Henley Cons. Copper Mines, Wyo.

HENLEY CONSOLIDATED COPPER MINES**WYOMING**

Henry Schwartz, 308 Masonic Temple, Denver, Colo., chief owner.

Property: 25 claims, 500 acres, 25 miles S. W. of Cheyenne, Laramie Co., Wyoming. Developed for 15 years past. Mine has 2 orebodies.

Same management as the Hecla Cons. Mines Co., which see.

HOME RUN COPPER MINING CO.

WYOMING

Office: Rooms 17-18, Postoffice Bldg., Colorado Springs, Colo. Mine near Rudefeha, Carbon Co., Wyo.

Officers: A. L. Bohrer, pres.; J. F. Humphrey, v. p.; Adolph Fehringer, treas.; Wm. C. Robinson, sec., at last accounts.

Cap., \$1,500,000; shares \$1 par.

Property: 180 acres, partly patented, known as the Copper Bell group, near the Ferris-Haggarty mine, having a 350' tunnel showing a vein of 30" to 9' width assaying up to 12% copper, with gold and silver values. Idle.

IMPERIAL COPPER & GOLD MINING CO.

WYOMING

Inactive. Office: 423 Caswell Block, Milwaukee, Wis. Jacob Best, sec.-treas.

Property: 6 claims, 113 acres, patented, near the Penn Wyoming mine, on Upper Cow creek, 12 miles west of Encampment, said to show 2 veins, 1 of 26 to 32' estimated width, being a schist dike. Mine has about 500' of tunnels, developing ore giving assays of 6 to 14% copper, with small gold and silver values. Secretary reports all taxes paid, 1915. Idle in 1915-17.

INDEPENDENCE MINING CO.

WYOMING

Idle. Office: Algoma Bldg., Oshkosh, Wis.

Officers: E. E. Meeleus, pres.; Henry L. Larsen, v. p.; H. O. Granberg, sec.-treas. and gen. mgr.

Inc. June 28, 1904, in Wyo. **Cap.,** \$1,000,000, shares \$1 par, as successor of Leighton-Gentry Mining Co.

Property: 6 claims, patented, 120 acres, 2 miles north of Dillon in the Battle Lake district, shows eruptive metamorphic country rocks, carrying an 11' contact vein between quartzite and diorite.

Development: by 200' incline shaft and 250' tunnel, showing occasional stringers of 3 to 12" width, carrying a little chalcopryite assaying 12% copper, with small quantities of nickel and cobalt and traces of silver and gold. Has steam power, a hoist and several small mine buildings.

ITMAY COPPER MINING CO.

WYOMING

Idle. Office: Rawlins, Wyo. Mine near Rambler, Carbon Co., Wyo. I. C. Miller, mgr.; Albert Bryle, supt., at last accounts.

Property: 4 miles S. of Rambler, is said to have a 20' vein, carrying a paystreak of high-grade ore, apparently undeveloped, and another vein up to 8' in width carrying sulphide ore averaging about 8% copper.

Development: by a 300' shaft. Mine has been a complete failure to date.

JACK POT MINING & MILLING CO.

WYOMING

Idle. Office: Room 3, Algoma Bldg., Oshkosh, Wis.

Officers: H. Thorsgaard, v. p.; H. O. Granberg, sec.-treas.

Inc. Dec. 23, 1903, in Wyoming. **Cap.,** \$1,000,000; shares \$1 par.

Property: 9 patented claims, 180 acres, in the Battle Lake district, showing fissure veins in diorite and chloritic schist, and 2 contact veins, between diorite and porphyry, carrying carbonate and sulphide ores. Two veins, slightly developed, are said to average 14' to 60' width. The smaller vein has averaged 8% copper and \$3 to \$12 gold per ton, the larger vein showing very low-grade copper ore.

Development: 75' tunnel, 100' shaft and 8 pits of 20 to 36' depth, with 411' of workings. Though inactive for many years, company still in existence and reports that all taxes have been paid to date.

KIMBALL MINING CO.

WYOMING

Idle. Address: Kimball, Neb. B. A. Lathrop, pres. and supt., Centennial, Carbon Co., Wyoming. G. W. Forsling, v. p.; A. J. Hull, sec.-treas.

Property: 19 unpatented claims, near Centennial. Has driven 800' of tunnels to develop a quartz vein with gold and silver-bearing copper ores. Management reports that development work has been done in 1915, opening up milling ore that will average about 3% copper and \$3 gold per ton. Nothing available for 1916.

LEIGHTON-WYOMING MINING CO.

WYOMING

Idle. Office: 417 Seventh St., Milwaukee, Wis.

Officers: M. H. Yewdale, pres.; Herman Pereles, v. p.; H. E. Dankoler, sec.; Spencer C. Yewdale, treas.; with A. G. Weissert, S. P. Bjorklund and C. W. Hendricks, directors.

Inc. 1906. Cap., \$1,000,000; shares \$1 par; issued, \$810,000.

Property: 2 patented claims, about 1 mile north of the Ferris-Haggarty mine in the Battle Lake district.

Development: by a 186' tunnel and a 65' shaft.

Equipment: includes a saw mill and a small machinery plant, bought 1909, from the Haskins mine.

LOST CABIN MINING CO.

WYOMING

A. B. Elnick, pres., Lysite, Fremont Co., Wyo. **A. O. Heyer, sec.;** D. Schoening, treas.

Cap., \$150,000.

Property: the Lost Cabin group, in the Boyeson section, is said to carry the Summit vein. Gold, silver and copper ore occurs in quartz veins. Since 1909 assessment work only has been done.

MAGGIE MURPHY COPPER CO.

WYOMING

Office: care Chas. S. Ashley, pres., New Bedford, Mass. Mine near Douglas, Converse Co., Wyo.

Inc. Aug., 1904, in Wyoming. Cap., \$1,000,000; shares \$1 par.

Property: 12 claims, 180 acres, and a 60-acre mill site in Horseshoe canyon, in the Laramie Peak district. Claims show granite, with gneiss and schists, carrying 7 veins between gneiss and mica-schist, one of which ranges 30 to 60' in width and shows covellite, bornite and chalcopryrite, with pyrrhotite ores assaying 1 to 6% copper, 2 to 9 oz. silver and 40 cts. to \$4.50 gold per ton.

Development: includes 114' shaft and various shallow workings. Company has kept up necessary annual assessment work, but has done no development.

NORTH LARAMIE PEAK COPPER MINING CO.

WYOMING

Office: care L. V. Saul, sec., Esterbrook, Wyo.

Mine office: Douglas, Converse Co., Wyo. **H. C. Saul, pres.;** W. A. Saul, treas.

Inc. 1908, in Wyoming. Cap., \$2,000,000; shares \$1 par; fully paid and non-assessable; 500,000 shares in treasury.

Property: 29 claims, 440 acres, patented, in the North Laramie Peak district. Claims show pre-Cambrian schists bordering granite contacts, on which 1,000' of diamond-drill work has proven existence of a flat body of disseminated chalcopryrite ore 40' wide. A shaft has been sunk 100' on a chimney of chalcopryrite ore said to assay 27% copper, 6 oz. silver and \$2 gold, for a total width of 5'. A second shaft, also in ore, will be deepened to 200'.

Equipment: includes 80 h. p. boiler with hoist, Cameron pump, steam power and a 3-drill compressor. Expected to start shipments in 1916. Is a close corporation, entirely owned and financed by Messrs. Saul.

OŠHKOSH-WYOMING MINING CO.

WYOMING

Office: 3 Algoma Bldg., Oshkosh, Wis. Mine near Dillon, Carbon Co., Wyo.

Officers: O. A. Koch, pres.; E. E. Meeleus, v. p.; H. O. Granberg, sec.-treas. and gen. mgr.

Inc. June 20, 1904, in Wyoming. **Cap.**, \$1,000,000; shares \$1 par.

Property: 11 claims, 220 acres, in the Battle Lake district, is said to carry fissure veins in gabbro, of 22' estimated average width, opened by shafts of 32' and 72' and a 22' tunnel, showing chalcopyrite and oxide ores of copper. Idle.

OTEGO MINING CO.

WYOMING

Hecla, Wyo. Officers: Horace E. Adams, pres.; A. G. McGregor, v. p.; Ray E. Lee, sec.-treas.

Inc. in Wyo. **Cap.**, \$5,000,000; shares \$1 par.

Property: 3 claims, about 60 acres, in Secs. 25 and 36, T. 14 N., R. 70 W., in the Silver Crown mining district near Hecla, Laramie Co., Wyo. The Arizona mine is said to show granite and schist cut by an extensively fractured dike of diorite, about 200' wide and 2,000' long, outcropping at surface over a considerable distance.

Ore: at surface is oxidized and carries principally malachite, succeeded at depth by copper sulphides and native copper. Gold values occur disseminated throughout the orebody.

Development: by 160' shaft with 102' crosscut at the 80' level, 260' of crosscuts and drifts on the 130' level, and a 100' tunnel. Mine has been reported on by C. E. Jamison, State geologist of Wyoming (1912), and by Prof. H. C. Beeler (1907).

PARK GOLD MINING CO.

WYOMING

Office: Mining Exchange Bldg., Colorado Springs, Colo. **Mine office:** Centennial, Wyo.

Officers: Henry Sachs, pres.; C. A. Sheetz v. p.; C. B. Garnett, sec.-treas.; P. J. Winters, mgr., with J. A. Barton, directors.

Inc. 1916, in Wyo. **Cap.**, \$700,000; shares \$1 par, 333,250 shares outstanding.

Property: 10 claims, 100 acres, 40 acres being placer ground, in Centennial mining district, Albany County.

Development: work was started in Jan. 1917, and consists of two tunnels, longest 110', and a shallow shaft.

Stock being sold at 10c per share, May 1916, to raise funds for development work and necessary equipment.

PLATINUM MINING & MILLING CO.

WYOMING

Address: 29 So. La Salle St., Chicago, Ill. **Mine address:** Holmes, Albany Co., Wyo.

Officers: Julius Thielman, pres.-mgr.; David Finn, v. p.; Robert Thielman, sec.-treas. D. Mapes, gen. mgr.

Inc. Jan., 1912, in Wyoming. **Cap.**, \$200,000; shares \$1 par, issued \$50,000. Annual meeting, second Monday in January.

Statement of accounts from Aug., 1916, to March, 1917, shows expenditures, \$22,648; income, \$16,200 from stock sales, \$3,351 from ore sales.

Mine was located in 1870 for gold, relocated 1900 for copper and worked 1906 by Rambler Mining & Smelting Co., consolidated 1908 with New Lincoln Copper Co., as Rambler Copper & Platinum Co. The Platinum M. & M. Co. is operating mine under lease profits to be divided between the 2 companies.

Property: the Rambler mine, with 13 claims patented. 260 acres, in the Douglas district. Claims show a fissure vein reported as 20' wide in granite, running N. W. and dipping at 45° E.

Development: includes a 200' vertical shaft with drifting on the vein on the 100' and 200' levels. Total amount of underground work is about 5,000'. Average assays give 2% copper and 0.25 oz. platinum.

Work was begun June, 1912, but neither mine nor mill was operated during 1913, as mill was being remodeled and a 50-ton Peck centrifugal concentrator installed. No shipments were made until 1916.

Production: one carload shipped, 1916, netted \$2,552.

Ore: carried 11% copper, with platinum and palladium values.

Total ore shipped to May, 1917, 5,341 tons, yielding 1,905,925 lbs. copper and commercial values in gold and silver. Mining 7-10 tons of ore daily, 1917.

Equipment: includes a steam hoist.

PLUTO GOLD & COPPER MINING CO.

WYOMING

Idle. Office: 3 Algoma Bldg., Oshkosh, Wis. Mine near Dillon, Carbon Co., Wyo. H. Thorsgaard, v. p.; H. O. Granberg, sec.-treas.

Inc. Dec. 15, 1902, in Wyoming. **Cap.**, \$1,000,000; shares \$1 par.

Property: 11 claims, patented, 220 acres, and a 40-acre mill site, in the Battle Lake district, near the Ferris-Haggerty mine, said to show both fissure veins in quartzite and contact deposits between diorite and quartzite, ranging from 2 to 30' in width, and carrying copper ore, with average assays of 1% copper, a trace of silver and \$3 gold per ton.

Development: by numerous pits of 10 to 20' depth, 5 shafts of 55 to 100' depth, and a tunnel of 1,004' with about 2,000' of underground workings.

Equipment: includes a 40-h. p. steam plant and 3-drill air compressor. Inactive since 1908.

PORTLAND CONSOLIDATED COPPER CO.

WYOMING

Office: 20 Broad St., New York.

Officers: Phil. S. Delany, pres.; Myer Newberger, v. p.; Thos. C. Delany, sec.-treas.; above with Herbert Frankenberger and Wm. H. D'Esterre, directors.

Inc. 1916, in Wyoming. **Cap.**, \$2,000,000; shares \$1 par; 1,136,912 shares outstanding; fully paid and non-assessable. Metropolitan Trust Co., New York, registrar; Company office, transfer office. Stock listed on New York Curb.

Property: formerly owned by the West Virginia-Wyoming Copper Mining Co. and the Portland Copper Mining Co., comprises 203½ acres, 153¾ acres patented, at Encampment, Carbon Co., Wyo., said to cover over a mile along a mineralized zone of diorite and limestone. The Portland group is reported to be traversed for 1,800' by a system of veins, which runs westerly into and through the West Virginia-Wyoming for another 1,800', veins said to vary from 12" to 40' in width, and to average 3% copper and some gold.

Ore: minerals are chiefly pyrite, chalcocite, bornite and malachite.

Development: 2,600' of underground workings, of which 1,650' are on the Portland, consisting of an 1,150' tunnel, drifts and 250' main shaft. Management estimates ore reserves at 300,000 tons of probable mill ore, containing 2-3% copper and 40c gold and 50,000 probable smelting ore, containing 10-25% copper and \$1-\$6 gold per ton. Further development necessary to prove value of the property.

RAMBLER COPPER & PLATINUM CO.

WYOMING

Office: 29 So. La Salle St., Chicago.

Mine address: Holmes, Albany Co., Wyo. Julius Thielman, pres.; Edw. White; v. p.; F. C. Sheldon, treas.; Dorchester Mapes, sec.

Inc. Jan. 21, 1908, in Wyoming, as a merger of the Rambler Mining & Smelting Co., and New Lincoln Copper Co. **Cap.**, \$2,500,000; shares \$1 par; all issued. Has indebtedness of \$100,000, 90% of which is in the form of refunding mortgage notes (bonds) held by stockholders.

Property: leased for 15 years, in 1912, to the Platinum Mining & Milling Co. (which see).

SHAWNEE COPPER MINING CO.

WYOMING

Address: J. M. Bovee, mgr., Shawnee, Okla. **Owners:** J. M. Bovee and A. H. Ikenberry.

Property: 5 claims, unpatented, in Medicine Bow Mts., French Creek district, Carbon Co., Wyo., near New Rambler mine, shows granite and schist cut by a fissure zone 200' wide, carrying \$4.10 gold ore.

Development: by 160' and 210' shafts. A new 1,500' tunnel has been considered. Examinations have been made by H. C. Beeler, J. J. Hinton and other engineers. Ample assessment work is done each year.

SNAKE RIVER CONSOLIDATED MINING CO. WYOMING

Mine P. O.: Columbine, Routt Co., Colo.

Officers: L. A. Pease, pres., treas. and gen. mgr.; A. L. Arnold, sec.

Inc. July, 1906, in Wyoming. **Cap.**, \$5,000,000; shares \$1 par; non-assessable; fully issued, with \$2,500,000 stock assigned to a trustee, for the benefit of the treasury. Annual meeting, second Wednesday in July.

Property: 9 lode claims, 2 patented, 180 acres, and 520 acres of placer claims, unpatented, in Three Forks district, 26 miles S. W. of Encampment, the nearest rail point. Claims show granite and diorite, reported by management to have veins carrying auriferous galena, with strike of N. 25° W., and cross veins carrying copper striking at nearly right angles. The management reports the galena vein system to have an extreme width of 120', with length of 4,500', the paystreak varying from 10" to 54" in width. The galena ore is said to average 10 to 20% lead, free from zinc, with silver and gold values. The copper veins are undeveloped, but show a variety of oxidized ores, at surface.

Development: by pits and shafts, and numerous short tunnels, from 30 to 500' in length, nearly all openings showing ore. The management estimates 5,000 tons of ore blocked out for stoping. Planned raising necessary funds for proper equipment and small concentrating plant at last report.

UNITED SMELTERS, RAILWAY & COPPER CO. WYOMING

Dead. The property claimed by this company is described under the title of the Penn-Wyoming Copper Co., which apparently was the legal owner, and full particulars regarding the entire chain of rotten promotions, including this company, are given in Vol. X, Copper Handbook, under Penn-Wyoming Copper Co.

Judgment for \$2,500,000 secured by Continental & Commercial Trust & Savings Bank, Chicago, Dec., 1913. Bank had loaned money to company taking a mortgage on the property. Several years of litigation were thus ended and the properties of the United Sm., R'y. & C. Co. and its subsidiaries were sold at forced sale, being bought in by the bank.

UTOPIA MINING & MILLING CO. WYOMING

Address: Centennial, Albany Co., Wyo.

Officers: Lee Van Voorhis, pres.; Jas. McCune, v. p.; P. L. Holtum, sec.; Bernard Holtum, gen. mgr.

Inc. 1898, in Wyoming. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; issued, \$875,000. Annual meeting, third Tuesday in August.

Property: 2 claims, 30 acres, unpatented, in the Centennial district, said to show 2 contact veins between diorite and schist, of which 1 averaging 6' in width, is reported to have given assays of 3% copper, 4 to 20% zinc, up to 63 oz. silver and \$44 gold per ton.

Ore: minerals are mainly chalcopyrite, sphalerite, and pyrites. Ore averages \$15 per ton.

Development: by tunnels of 250', 600', 175', 300', and 1,200', with about 2,600' of workings, all in ore.

Equipment: includes a small electrical installation, with electric drill, and 6 buildings. Reopened in 1913; nothing heard about it until 1917, when company stated that property had been leased in 1915 to the Gould Milling & Leasing Co (which see), B. A. Lathrop, mgr. A 50-ton mill costing \$20,000 is being erected.

WESTERN POTASH CHEMICAL CO. WYOMING

Office: E. B. Woodbridge, sec., 1303 Rector Bldg., Chicago, Ill.

Officers: J. W. Boileau, pres.; F. H. Woodbridge, v. p.-gen. mgr.; with E. B. Woodbridge, W. S. Phillips and J. S. Pennington, directors.

Cap., 1,000,000 shares of no value; non-assessable; 530,000 issued

Property: 720 acres in Austin Co., Wyo., said to contain a deposit of alkali clay, 30' deep, containing 5 to 25% potash and 10 to 12% alumina. Scrapers and steam shovel are to be used. A 10 to 100-ton plant has been erected. The salts are said to be soluble in hot water.

WILLIAMS LUMAN MINING CO.

WYOMING

Address: care W. J. Thom, cashier First Nat'l Bank, Buffalo, Wyo.

Mine office: Depass, Fremont Co., Wyo. L. R. Vanhouten, pres.

Inc. May 2, 1908, in Wyoming. **Cap.,** \$2,500,000; shares \$1 par; issued 2,385,000 shares.

Property: 9 claims, patented, 130 acres, 16 miles from a railway, in the Copper Mountain district, shows 8 fissure veins in granite, diorite and altered schists. The main vein, a zone 50 to 60' wide, traceable 3,400', in much altered, crushed and fissured diorite, has a 2' paystreak carrying free gold, copper ore, and native copper in thin sheets and nuggets, ore minerals being cuprite, melaconite, malachite and chalcocite.

Ore: is reported to assay 10% copper, 5 to 10 oz. silver and \$2 to \$8 gold per ton.

Development: by an 820' shaft, showing sulphides on the 800' level, with 2,000' of workings. There also are tunnels of 513' and 300'.

Equipment: includes an 80-h. p. gasoline plant, with a 15-h. p. hoist and a 2-drill compressor. The company is operated as a close corporation, money for development having been furnished by about 10 shareholders only. Property favorably regarded, but needs railroad transportation.

Late in 1916, a 3-year's option was given to Denver people, who have shipped some ore, but no returns are available.

WINONA GOLD-COPPER MINING & MILLING CO. WYOMING

Office: 111 Market Ave., S., Canton, Ohio. **Mine office:** Painter, Big Horn Co., Wyo.

Officers: L. Cavanah, pres. and gen. mgr.; Geo. House, v. p.; Dr. J. H. East, 2nd v. p.; Wm. H. McAloney, sec.-treas., at last accounts.

Inc. 1903, in Wyoming. **Cap.,** \$5,000,000; shares \$1 par; fully paid. Management was changed and company practically reorganized Dec. 12, 1905.

Property: 25 claims, unpatented, 440 acres, in the Sunlight basin, on Silver creek, in Bear Tooth and Sulphur mountains, in the N. W. corner of Big Horn County, about 12 miles E. of the Yellowstone National Park. Claims show granite, porphyry and andesitic breccia, carrying 6 fissure veins with shoots of low-grade copper ore. The ores carry chalcopyrite and chalcocite and are reported to average 7 to 8% copper with about \$3 gold per ton. The principal veins in andesite are known as the Bluff, Malachite and Greenhorn. The Bluff vein is said to be 25' wide with a 12' paystreak of copper ore. The Malachite vein, 10 to 25' wide, has a paystreak of high-grade copper ore, 1½' wide at surface, increasing to 5' at depth.

Development: by 2 tunnels, the lower or main working tunnel, 804' long. Total workings, 1,032'.

Equipment: includes steam and electric power plants and 10 buildings.

WYOMING COPPER & GOLD MINING CO.

WYOMING

Office: Alma, Kan. No representative at former mine office, Encampment, Carbon Co., Wyo. C. B. Henderson, pres.; Al Rohr, v. p.; J. R. Henderson, sec.-treas.

Inc. Sept. 3, 1903, in Arizona. **Cap.,** \$1,500,000; shares \$1 par; non-assessable.

Property: 9 claims, known as the Metal Chief and Jessie group, in Hog Park, in the upper Platte district, 12 miles from a railway.

Claims show granite and gneiss, cut by 2 fissure veins with S.-E. strike, reported by management to average 28 to 35' in width, and to carry copper oxide and carbonate ores, with average assay of 3 to 15% copper, a little silver and \$1.63 to \$3.29 gold per ton. The Metal Chief vein has a 105' shaft and the vein is reported to widen at depth. The Jessie vein has a 175' shaft showing ore of 5 to 10% copper tenor with small gold and silver values.

Equipment: includes a small steam plant with a hoist, steam pump, and 3 buildings.

Development: has been slow for some years past, as the officers have furnished most of the funds, but considerable work has been done annually according to last advice.

WYOMING COPPER MINING CO.

WYOMING

Idle. **Office:** 303 Detroit Free Press Bldg., Detroit, Mich. **Mine office:** South Pass City, Fremont Co., Wyo.

Officers: Charles K. Skinner, pres.; C. F. Remington, treas.; Jas. MacFarlane, v. p. and supt.; C. A. Spalding, sec.; preceding, with Chas. E. Murphy, and Chas. D. Ridgway, directors.

Inc. 1905, in Wyoming. **Cap.,** \$2,000,000; shares \$1 par; non-assessable; issued \$1,375,000. Annual meeting, last Saturday in July.

Property: 12 quartz claims, 240 acres, and a 30-acre placer claim, in the South Pass district of the Wind River mountains, is reported to show a contact zone, between granite and metamorphic rock, proven for one-half mile length by prospect pits.

Development: includes a 500' incline shaft, and several hundred feet of crosscutting. The vein is reported by the former management to show sulphide ore at depth of 72', ore giving assays of 2 to 6% copper, with an average of 1 to 2 oz., and maximum of 20 oz. silver, and \$3 to \$4 gold per ton.

Equipment: includes an 80-h. p. boiler and a 40-h. p. Fairbanks-Morse hoist, with several buildings.

**CANADA
AND NEWFOUNDLAND**

CANADA
AND NEWFOUNDLAND

CANADA

The mining companies of Canada are grouped by provinces and by districts. Cobalt, Porcupine, etc., are therefore described under Ontario. The Pas district, the new copper district of Canada is in Manitoba and the great number of mineral properties of the Pacific Coast region are described in the appropriate districts of British Columbia.

Newfoundland being an independent Crown Colony is in a separate section.

ALBERTA

ATHABASCA MINING CO.

Inc. in Alberta, Can., April, 1914. Cap., \$1,000,000. Hon. G. H. V. Bulyea, Gov. of Alberta, Hon. Chas. R. Mitchell, E. J. Taylor and C. L. Freemann, directors, all of Edmonton.

Property: assets and properties of the Athabasca Mng. Syn. consisting of 800 acres of nickel claims, 160 acres iron claims, on and near Lake Athabasca, near Edmonton, Alberta, Canada.

Ore: nickel-iron-copper. Assays of surface samples showed $1\frac{1}{2}$ to 5% nickel, iron samples ran 66.7% iron, 2.12% silica, .014% phosphorous and .013% sulphur. Copper occurs as bornite. Property operated under lease by A. E. Rand and G. D. Brymner, in 1916-17. Five men employed.

BRITISH COLUMBIA

The mining companies of this province are grouped by districts, except that Vancouver and Vancouver Island properties are put in one section. Readers interested in British Columbia mines should consult the report of the Provincial Mineralogist, issued as Annual Report of the Minister of Mines for the year 1916, obtainable free by writing for it to the Minister, Victoria, B. C.

The Granby (Hidden Creek, or Anyox) and the Tonopah Belmont properties, on the Coast, are described under the Skeena Division.

Companies with Properties in Various Districts in British Columbia

GRANBY CONS. M., SM. & POWER CO., LTD.

BRITISH COLUMBIA

Offices: 718 Granville St., Vancouver, B. C., and 52 Broadway, New York. Mines at Phoenix and Hidden Creek, B. C., and Valdez, Alaska; and other places in B. C. and Alaska. Smelters at Grand Forks and Anyox, B. C.

Officers: W. H. Nichols, pres.; E. P. Earle, W. H. Robinson, Edwin Thorne and F. M. Sylvester (mg. dir.), v. p's.; Henry Bruere, B. Hochschild, W. A. Paine, S. H. Steele and G. W. Wooster, directors; Edward Everett, sec.; H. Harvey, asst. sec.; G. W. Wooster, treas.; H. T. Mahan, asst. sec.; O. B. Smith, supt. of mines; C. M. Campbell, supt. at Phoenix mines; E. E. Campbell, supt. at Anyox mines; W. A. Williams, supt. of smelters; W. B. Bishop, supt. Grand Forks smelter; A. J. Bone, supt. Anyox smelter; N. W. Sweetser, supt. at Alaskan mines; H. J. C. Mac-

Donald, E. J. Conway and J. F. Coats, min. engrs.; Charles Wing, sec. safety-first committee.

Inc. March 29, 1901, by special act of the British Columbia parliament. **Cap.**, \$15,000,000; shares \$10 par; changed, 1906, to \$100 par; \$14,995,075 outstanding. Bonds authorized Feb. 25, 1913, \$5,000,000, first-mortgage, 6%, 15-year, convertible at par. Series A of \$1,500,000 bonds underwritten Feb., 1912, at 96 by Speyer & Co. Bonds redeemable at 105 plus interest after 10 years, 4% to be retired by purchase at \$110, annually; \$2,514,400 outstanding June 30, 1917. Shares listed on Boston Stock Exchange. Boston Safe Deposit & Trust Co., and Lincoln Trust Co., Boston, registrars; American Trust Co., Boston, and Title Guarantee & Trust Co., New York, transfer agents. Annual meeting, first Tuesday in October. Columbia Trust Co., New York, trustee of bonds; Title Guarantee & Trust Co., New York, registrar of bonds.

Company was organized to purchase the property and assets of the Old Ironsides Mining Co., Knob Hill Gold Mining Co., Ltd., Gray Eagle Gold Mining Co., Ltd., Granby Consolidated Mining & Smelting Co., Ltd., and the Grand Forks Water & Light Co., at an aggregate cost of \$12,097,030. Stock to the amount of \$1,402,970 was issued for cash and services rendered.

Comparative General Balance Sheet, years ending June 30:

Assets:

(a) Present rate \$10 per share, payable quarterly.

Properties: include original Granby group at Phoenix in the Boundary district, B. C.; the Hidden Creek mine on Granby bay, Observatory inlet,

B. C.; Copper Key and Belcher groups at Belcher mountain, Wash., taken over, 1910, under a working bond and lease; the Oversight group; the Bonanza mine creek; 30 quartz claims on Granby Peninsula; Mamie and Dean mines on the Kasaan Peninsula; the Midas mine at Valdez, and an option on It mine adjoining the Dean on Prince of Wales Island. Also owns a large interest in the coal mine and coking plant at Crow Nest Pass, and a 100,000-h. p. waterpower plant at Kettle Falls, both together valued at \$2,000,000; a smelter at Grand Forks, operated since 1901, and one at Anyox, blown in 1914. Coal lands are being acquired to ensure a regular supply of coke.

The Phoenix Mines.

C. M. Campbell, supt., Phoenix, B. C.

The Granby or Knob Hill properties at Phoenix, B. C., 43 claims and fractions, 1,050 acres, 15 claims being in the mineralized area, include the Old Ironsides, Knob Hill Victoria, Gray Eagle, Banner, Tip Top, Triangle, Gold Drop, Curlew, Monarch, Tamarack, Monte, No. 13 and others. Claims form a compact tract of about 8,000x9,000' size, carrying 8,000' of the strike of the mineralized zone. The Phoenix property has 2 distinct sets of orebodies. The largest and longest worked are those of the Knob Hill-Ironsides mines; the other one, one-half mile east, is the Gold Drop. The first named has 3 mines with separate crews and equipment.

Geology: of the district is not simple. Paleozoic rocks, limestones, tuffs and argillites overlie beds of fragmental volcanic rocks with small amounts of limestone. These rocks are intensely altered by contact metamorphism, due to igneous intrusions, and orebodies formed in basin-shaped troughs in the zone of mineralization. They are replacements of limestone by garnet, epidote, quartz-calcite, with magnetite and finely-divided copper pyrite. The foot-wall is either jasperoid or limestone; the hanging wall is determined by assays.

The Old Ironside-Knob Hill claims carry the main orebody, the Gold Drop ore deposit being irregular in shape, and of limited size. The main orebody has an approximately N. S. strike, with an eastward dip of 60° at surface and 30° at depth. Ore now being mined at Phoenix yields slightly less than 15 lb. copper and about 84c in gold and silver per ton. The mine is opened by an immense pit, or glory-hole, 400x1,000' in size, which, however, is worked out and present extraction is mainly through tunnels. On the Gold Drop only 80,000 tons of ore remain to be extracted, and the Snowshoe, Curlew and Monarch claims are almost worked out. Practically all reserve tonnage is in the Ironsides.

Development: 5 shafts, the more important being the 300' Aetna shaft, 400' No. 2 shaft, and the 485' Victoria shaft. Principal extraction is by tunnels, including the 250' Knob Hill tunnel; 250' No. 1 Gold Drop tunnel; 1,000' No. 3 Gold Drop tunnel; 2,500' No. 2 tunnel; 3,000' No. 3 tunnel, and 1,500' No. 4 tunnel. The ore stoped is milled through chutes to lower levels, the mine having electric haulage on the 200', 300' and 400' levels, with double-tracked tunnels equipped with 75-h. p. locomotives drawing 10-ton ore cars. Development for 1916 included 14,608' of underground work and 11,392' of diamond-drillings, or about 1,000' per month. Total shipments up to June 30, 1917, have been: above No. 3 tunnel, 6,150,039 tons; Victoria shaft, 5,039,633 tons, and Gold Drop mine, 1,635,754 tons, a total of 12,825,426 tons.

Average cost per ton crushed on cars including all development was \$1.175, an increase of 23.4c. Ore is smelted direct. The mechanical equipment at the mine is fully described, Volume X.

The 3 main haulage tunnels are each equipped with 150-ton crushers, and bins of 2,000 and 3,000 tons capacity. The main crusher house at the portal of No. 3 tunnel, has a 30x42" Farrell-Bacon crusher driven by a

150-h. p. Westinghouse motor, the crusher being capable of breaking masses of nearly a cubic yard in size to chunks not larger than 7 to 8". This crusher was shipped to Anyox, when the properties closed down in August, 1914, following the declaration of war in Europe. A 42" rubber belt conveyor, with capacity of 250 tons hourly, handles the ore. An electric shovel installed in 1915 proved very satisfactory. Operating costs were about \$1.10 per ton crushed in cars at No. 2 tunnel, including development and handling waste.

The mine is connected with the smelter at Grand Forks, 24 miles distant, by 2 railways, the Canadian Pacific and the Great Northern. By means of extensive ore bins at the Victoria shaft and the 3 main tunnels a train of 35 thirty-ton cars can be loaded in 25 minutes or less.

Hidden Creek or Anyox Mines.

E. E. Campbell supt., Anyox, B. C.

The Hidden Creek mine is located on Granby (formerly Goose) bay, Observatory inlet, south of and parallel to Portland canal. It is probably the largest copper mine of British Columbia. The 9 claims cover the top and sides of a hill 920' high, enclosed by 2 branches of Hidden creek and 2 miles from Anyox, the smelter site and seaport town of the company.

The ore occurs as a mass of solid sulphides, pyrite and chalcopyrite, or mixed with country rock in shear zones, in crushed and schistose argillite. The rocks are folded and mashed but are part of the cover of the great granite mass forming the Coast range. There are 2 deposits, one of 25 to 40' wide, traced 1,400' said to average 6%, the other estimated to be 100' wide and of unknown length. Development by diamond drill holes shows the ore to extend 300' below sea-level, a vertical distance of 1,250' below outcrop.

Development: by tunnels with principal workings on the 750' crosscut main tunnel, which is about 450' from the surface.

New work in 1916 totaled 2,333', making a total of 27,439'. Diamond-drilling amounted to 5,873', or 49,464' to date. New electric hoists were installed, also crushing plant, new drills, residences, etc.

Cost of ore delivered on cars was \$1.235 per ton, an increase of 23.9c per ton. Cold weather and high price of mining supplies increased the cost during 1916.

Reserves at June 30, 1917, were estimated at 18,139,163 tons, averaging 1.61% copper. So far, this mine has yielded 2,041,338 tons, of which 760,705 tons was mined in 1916-17.

Company also owns the Bonanza group, adjacent to the Hidden Creek mine. No development work was done on this property in 1916, but erection of compressor, crusher, aerial tram, etc., was commenced.

This mine contains 904,355 tons of 1.6% ore. No work was done in 1917.

Alaskan Mines

Operations during the year ended June 30, 1917, may be summarized as under:

Situation.....	MAME Hadley, S. E. Alaska	IT Kasaan Bay, S. E. Alaska	MIDAS Valdez, S. W. Alaska
Period, months.....	8	12	9
Tons ore shipped to Anyox.....	20,115	14,881	21,019
Copper content, %.....	1.46	4.09	4.12
Gold and silver per ton.....	\$0.36	\$1.68	\$1.55
Total workings, feet.....	8,518	5,114	3,713
Diamond-drilling to date, feet.....	10,875	6,164
Reserves, tons.....	522,560	7,500	44,487
Cost per ton.....	\$3.730	\$5.543	\$5.770

The Mamie ore, containing an excess of iron, is considered a flux. The mine is closed indefinitely, until such ore is needed at Anyox. Under present conditions it cannot be profitably worked. The ore is valuable as a flux, as it is high in lime. So far, the property shows a profit of \$133,827. It is fully equipped. Indications point to the Midas (P. J. Cook, supt.) opening well at depth. Low-grade concentrating ore is being developed and a mill is being considered.

Ore reserves: estimated as follows (June 30, 1917):

Mine	Tons	High Grade		Tons	Low Grade	
		Copper, %	Precious Metals		Copper, %	Precious Metals
Phoenix.....	3,275,996	1.00	\$0.75	300,000	0.65	\$0.60
Hidden Creek.	9,882,183	2.31	0.30	8,257,500	0.64	0.15
Bonanza.....	414,775	2.66	0.30	489,580	0.70	0.15
Mamie.....	93,080	1.39	0.35	429,480	0.81	0.20
It.....	7,500	3.30	1.30
Midas.....	44,487	4.00	1.53
	13,717,021	9,476,560

The total is 23,193,581 tons, against 23,156,000 in the previous year. Total copper contents are 674,191,016 lbs.

Grand Forks Smelter: company's reduction plant at Grand Forks has up-to-date smelting, converting and power plants, with 2,000 acres of land and 68 town lots. Smelter has 4,400 tons daily capacity, being the largest in Canada, and among the largest in the world. Steel storage bins hold 8,000 tons of coke and 13,000 tons of ore. Ore is handled by 4 electric locomotives, each drawing two 2-ton cars, constituting a single charge; the ore being practically self-fluxing, is charged without concentration, or assortment, just as it comes from the mines, with the addition of limestone and fuel.

The 8 blast furnaces are 4x22' in cross-section at the tuyeres. A steel dust chamber, set 22' above the charging floor, is 13' wide, 15' high and 313' long, with a floor of 28 hoppers, having a conveyor underneath for flue dust. Slags now granulated are dewatered, carried on conveying belts to a height of 120' and discharged.

The first-fusion 40% matte is taken in ladles by a 40-ton electric traveling crane to the converter house, which has 3 stands, electrically operated by 25-h. p. motors, with ten 84x126" shells of barrel type. There are 3 mould carriers under each stand and the product is blister copper of 98.5% tenor, containing an average of 18 oz. silver and 4 oz. gold per ton, sent to the Laurel Hill works of the Nichols Copper Co., for electrolytic refining.

The smelter power plant is driven by electricity. Equipment includes 9 small blowers and 2 Connorsville Jumbo blowers, with capacity of 100,000 cu. ft. of free air per minute, driven by two 300-h. p. motors. Converter blast is furnished by an Allis-Chalmers double-cylinder air compressor, with capacity to reduce 10,000 cu. ft. of free air per minute to a pressure of 15 lbs. per square inch, driven by a 500-h. p. direct-connected electric motor.

Mines and smelter in B. C. well described in **Min. & Sci. Press** of Feb. 24, 1917.

Anyox Smelter: in March, 1914, this plant on Observatory inlet was blown in. The plant has 4 furnaces, 52" wide and 30' long, and is the largest pyritic smelter in the world. Daily capacity is from 2,000-2,500 tons. Company has laid out a town, installed water works, electric plant, graded streets, built stores, hospitals, etc.

Recent production: for years ending June 30, except 1916, which is for 9 months ending March 31:

	Ore Tons (a)	Cost Mng.	per Ton Sm.	Lbs. Cu. Tot.	Copper Lbs. per Ton	Silver Oz.	Gold Oz.	Cost Cu. (b)
1917.....	1,490,804	\$1.348	\$1.926	\$3.274	25.27	37,676,368	406,302	25,123 13.7
1916.....	1,929,205	0.99	1.30	2.29	22.36	42,198,083	487,845	44,848 12.30
1915.....	1,098,020	.85	1.19	3.18	23.99	26,638,912	377,881	31,388 10.66
1914.....	1,289,000	.80	1.22	2.73	16.89	23,320,097	435,275	43,882 11.5
1913.....	1,279,869	.75	1.21	2.65	17.68	22,688,614	324,336	47,266 10.6
1912.....	739,519	.77	1.26	2.90	18.01	13,231,121	225,305	33,305 11.1

Custom ore is not included in the 1917 figures.

Cost of producing copper was as follows, in cents per pound:

	Phoenix	Hidden Creek
1917.....	20.80c	11.50c
1916.....	14.25c	10.09c

(a) In 1916 approximately 1½% of ore treated was custom ore. (b) after crediting gold and silver.

Owing to labor troubles in British Columbia there was a decreased output in 1917. In October the yield was 3,259,974 lbs. copper.

Granby is under efficient, progressive management and its future looks bright. Major operations are now conducted at the Anyox property.

AINSWORTH-KASLO DISTRICT

EDEN-CRESCENT MINING CO.

BRITISH COLUMBIA

Address: W. Y. Williams, mgr., Coffee Creek Landing, near Ainsworth, B. C.

Officers: A. L. White, pres.; W. J. Nicholls, v. p.; E. B. McBride, sec.-treas., with W. Y. Williams, C. F. Caldwell and W. H. Button, directors.

Inc. Jan., 1917, in Washington. **Cap.**, \$75,000; shares 5c par; 900,000 issued.

Property: 8 claims near Coffee Creek Landing, on Kootenay lake, near Ainsworth, B. C.

Development: by 2 shallow shafts and 800' tunnel. In Sept., 1917, a crosscut had opened 6' of ore assaying 30% lead and 6 oz. silver per ton.

Prospects are reported by management to be favorable.

FLORENCE SILVER MINING CO.

BRITISH COLUMBIA

Offices: Hutton Bldg., Spokane, Wash., and Ainsworth, B. C.

Officers: F. R. Wolfe, pres. and gen. mgr.; A. F. Kelly, v. p.; D. E. Sanders, sec.-treas.; with W. M. Frost, J. A. Lavender, directors. Chas. Simpkins, gen. supt.

Inc. July 1, 1911, in Washington. **Cap.**, \$1,000,000; outstanding \$900,000; shares \$1 par; non-assessable. Stock transferred at company office. Annual meeting July 3.

Property: 9 claims, crown granted, 370 acres, 3 miles N. of Ainsworth in the Ainsworth mining district. Claims, on the west side of Lake Kootenay, extend west from shore about 2 miles.

Ore: lead, zinc and silver in E. W. fissure veins in quartzite and slate. Three oreshoots have been developed. One oreshoot said to have over 400' of commercial ore. Milling ore said to contain 10% to 20% lead, 8% to 15% zinc and 6 oz. silver per ton.

Development: by the 2,400' No. 2 tunnel with over 5,000' of underground workings at average depth of 700' and 2,100' No. 2 tunnel, 360' lower, and the main working level. Company states there are 300,000 tons ore blocked out, averaging 14% lead, 10% zinc and 4 oz. silver.

Equipment: includes 250-h. p. compressor, 350-h. p. hydro-electric plant and 1,800' aerial tramway from No. 3 tunnel to the mill. The 300-ton concentrating mill on the shore of Kootenay Lake was completed May 1, 1917 and is reported treating 220 tons per day, producing 32 tons of concentrate. Water power is developed at Woodberry Creek, under 350' head. Total cost of improvements to Sept. 1917, \$175,000. Shipments in July, 320 tons valued at \$30,000, with expenses of \$10,000 for the month. A 500' surface tram runs from tunnel portal to terminus of a 1,400' aerial tram that runs to the mill. Mill to be enlarged November, 1917. Gasoline motor of 40-h. p. will haul 10 tons of ore per trip from No. 3 tunnel.

LEO MINING CO.**BRITISH COLUMBIA**

Office: 1005 Eleventh Ave., Spokane, Wash.

Officers: Thos. Hooker, pres.; S. Hanauer, v. p.; G. W. Roche, sec.-treas.; above with W. Merryweather, and W. S. McCrea, directors.

Inc. Aug., 1916, in Wash. **Cap.**, \$50,000; shares 5c par; assessable; 750,000 issued.

Owens 2 claims near Ainsworth, B. C., showing a fissure vein in gneiss-quartzite.

Ore: galena with gold and silver values occurs in a shoot 18" wide. Average assays given as \$80 a ton.

Development: by 2 tunnels, 625' and 1,200' long with 300' of drifts.

Is still in the prospect stage.

NEW CANADIAN METAL CO.**BRITISH COLUMBIA**

S. S. Fowler, Nelson, B. C., mgr. Control is held in France.

Property: the Bluebell lead-silver mine at Riondel, near Ainsworth, B. C.

The deposit is a replacement in limestone, irregular masses of ore following the bedding, with tongues projecting into the foot-wall country of pre-Cambrian sediments.

Development: mine is 600' deep on incline of 35°.

Equipment: includes mill with Blake crushers, rolls, jigs, trommels, Huntington mills, Wilfley and Deister tables. Concentrate contains 48% lead, 12 oz. silver and 3% zinc, which is shipped to Trail.

Production: 250 tons of ore daily.

SILVER HOARD MINING CO.**BRITISH COLUMBIA**

Office: 614 Hutton Bldg., Spokane, Wash., and Ainsworth, B. C.

Officers: Geo. Chew, pres.-gen. mgr.; E. R. Northrup, v. p.; L. R. Hawley, sec.-treas.; W. S. Hawley, asst. gen. mgr.; preceding with A. B. Lee, W. H. Carder and D. T. Fox, directors, all of Spokane.

Inc. in Wash., registered in British Columbia. **Cap.**, \$1,000,000; \$925,000 issued; shares \$1 par. Listed on Spokane Exchange.

Bonds authorized, \$75,000, 10% 1st mtge., due Jan. 24, 1921; int. payable semi-annually; \$25,000 offered for sale in denominations of \$100, \$500 and \$1,000 each, carrying stock bonus of one share treasury stock for every dollar's worth of bonds.

Property: 5 claims, 202 acres, crown-granted, near Ainsworth, which are said to carry the vein mined at No. 1 mine of Cons. M. & M. Co., which is 2,400' away. **Ore:** silver-lead-zinc in limestone; claimed that milling ore averages \$15 to \$25 per ton.

Development: 7,000' of workings. **Ore reserves:** said to be 50,000 tons.

Equipment: includes hydro-electric power, compressor, hoist and concentration mill.

Production: since beginning of operations in 1911 to 1916, reported as 43 cars of ore, assaying 46.9 oz. silver, 4% lead, and 15% zinc per ton, with net smelter returns of \$32,000.

Mine was idle in 1916, but worked by lessees (W. S. Hawley Co.) during 1917. In July a flotation plant was started. Table concentrates contained 65% lead, 45% zinc, and 150 oz. silver per ton. The new plant was expected to add 5% on the lead and zinc, and make a total recovery of 85 to 90%.

UTICA MINES, LTD.**BRITISH COLUMBIA**

Office: Kaslo, B. C.

Officers: V. D. Williamson, pres. and managing director; C. F. Caldwell, v. p.; with W. C. Sivy, R. H. Voorhees and W. Tolnan, directors. C. B. White, mgr.

Inc. in British Columbia. **Cap.**, \$2,000,000; shares \$1 par; non-assessable; 1,600,000 issued.

Operating profits in 1916 were \$72,875. In first quarter of 1917 profits were \$34,119. An initial dividend of 2c. was paid in June, followed by 2c. in September.

Property: silver, lead, zinc holdings in Ainsworth district, B. C.

Development: by tunnels to 1,200' below vein outcrop. Workings cover over 6,000'. In July, 1917, 8' of high-grade ore was opened 1,020' below No. 2 level.

Production: in 1916 was 983 tons of ore, averaging 22% lead and 170 oz. silver; also 75 tons assaying 43% zinc and 145 oz. silver per ton. The total value was \$170,000. Regular shipments are being made to the Trail smelter.

Company is now in a fairly strong position to continue dividends. Costs are high, being \$31.16 per ton in 1916.

WOLVERINE MINING & DEVELOPMENT CO.**B. C.**

Succeeds Kootenay Dev. Co. Ainsworth, B. C. Jere Madden, pres., Rapid River, Mich. J. Cleveland Haas, managing director, and J. F. Carey of Spokane, Wash., director.

Property: the Nicollet group of 14 claims on Kootenay lake, north of Ainsworth and adjoining the Highland and Florence mines (Florence Mng. Co.). Veins in metamorphic rocks are said to carry rich silver-lead ores. A new tunnel was to have been driven in 1916-17.

*ASHCROFT DISTRICT***HIGHLAND VALLEY MINING & DEVELOPMENT CO.****B. C.**

Office: 610 Hutton Block, Spokane, Wash. **Mine address:** Howland B. King, supt., Ashcroft, B. C.

Officers: Frederic Keffer, pres. and gen. mgr.; Sigmund Dilsheimer, v. p.; Chas. G. Hall, sec.-treas.; above, with J. C. Haas, directors.

Inc. 1915, in Wash. **Cap.**, \$1,500,000; shares \$1 par, non-assessable; 984,000 outstanding.

Report for year ending Dec. 31, 1916, shows, receipts from ore shipments, \$16,815; operating expenses, \$2,802; net income, \$14,013.

Company has unpaid balance of \$48,115 to pay on the Chataway and Sanson groups.

Property: the Chataway, Tamarack and Sanson groups, 15 claims, about 600 acres, 28 miles S. W. from Ashcroft, a station on the C. P. R. R. Eleven claims held under bond for \$50,000.

Ore: copper with small silver-gold values, occurs as contact vein between granite and quartz-feldspar porphyry. Vein is from 3-17' in width, and ore has been drifted on for about 400'. Ore carries chalcopyrite in a micaceous gangue. Average assays are 5% copper, with 50c gold and silver.

Development: by 400' tunnel to depth of 130'. Total work, 900' of drifts and tunnels, 300' raises and stopes.

Equipment: includes 1,000' tramway and 50-ton mill using flotation and making a 90% extraction, 1917.

Production: 26 carloads of concentrate shipped from August, 1916, to September, 1917, netting \$68,351. Reserves about 15,000 tons of 5% ore. Is a clean cut and creditable mining promotion.

MINES OF THE COAST DISTRICT

(Excepting Vancouver district and Vancouver Island, which are grouped together)

DRUM LUMMON COPPER MNG. CO., LTD. BRITISH COLUMBIA

Address: S. J. Maloney, Vancouver, B. C.

Directors: J. Pearse, W. Patterson, J. Robertson, Geo. Kent, J. Bratch and P. Matheson, all of Vancouver.

Property: a group of claims, a mile from tidewater, at Miskatlah bay, Douglas channel, halfway between Kitimat and Hartley bay.

Ore: copper glance in quartz gangue, with 1.42 to 74% copper and 0.8 to 14 oz. silver per ton; occurs in a shear zone 75' wide in granite.

Development: by 360' crosscut tunnel, with depth of 150'.

CARIBOO DISTRICT

LIGHTNING CREEK GOLD GRAVELS & DRAINAGE CO., LTD. BRITISH COLUMBIA

Office: C. H. Unverzagt, owner and treas.; 405 Lexington Ave., New York.

Mine address: P. M. Hamlin, supt., Cottonwood, B. C.

Inc. 1896 in B. C. **Cap.,** \$3,000,000; shares \$5 par; 450,000 issued. **Bonds:** \$250,000 authorized; \$150,000 outstanding.

Property: 40 claims, 2,036 acres, or about 20 miles of Gravel beds on Lightning Creek, at Wingdam, B. C., credited with a production of many millions in the 70's and 80's. Shaft, 165' deep, is sunk in gravel to bedrock.

Company is equipping property and expected to start work June, 1917.

GREENWOOD DISTRICT

BRITISH COLUMBIA PHOENIX CO., LTD. BRITISH COLUMBIA

Secretary and office: H. W. Batty, 146 Bishopsgate, London, E. C., England. Geo. S. Waterlow, chairman, and L. C. F. Robson, directors.

Company is a reorganization, July, 1914, of the British Columbia Phoenix Syn., Ltd. **Cap.,** £5,000 in 20,000 shares of 5s each; 6,205 shares issued and fully paid. Shareholders in the B. C. Phoenix Synd., Ltd., received 1 share of 5s fully paid in the new company for 10 shares, 1s each, of the old company.

Properties and interests taken over from the liquidator of the B. C. Phoenix Syn., Ltd., include an interest in the New Velvet-Portland Mine, Ltd., consisting of a mortgage debenture, loans to the receiver and accrued interest, an unsecured debt and also the equity of redemption. The mine was leased for one year from July, 1915. Other properties and interests include mining claims in British Columbia, real estate in Rossland and sundry shareholdings and other interests.

GRANBY CONS. M., S. & P. CO.

See first page of British Columbia mines.

JEWEL-DENERO MINES, LTD.

BRITISH COLUMBIA

Secretary's office: W. Robertson, 71 George St., Edinburgh, Scotland.

Mine office: Greenwood, B. C.

Directors: J. Galloway, chairman; J. E. Rogerson and W. W. Slater. **Inc.** Nov. 22, 1912, in Edinburgh.

Cap., £70,000; shares 5s each; 279,400 shares issued. Authorized bond issue, £12,500, 8%; £11,202 issued.

Property: the Jewel gold mine at Greenwood and the Idaho Alamo mine in the Slocan district, B. C. The Jewel mine is developed to depth of 500' by shafts and crosscuts and started production in 1911. Produced 16,525 tons of ore in 1914, yielding £31,360. In 1915 only development work was done and in 1916 the mine was being operated by lessees. **Equipment:** includes a 15-stamp cyanide mill. Company expects to resume operations on both properties but no 1917 information available.

McKINLEY MINES, LTD.

BRITISH COLUMBIA

Office: Rossland, B. C. Mine near Franklin, Boundary district, B. C.

Officers: B. Lequime, pres.; H. W. Warrington, v. p.; A. M. McKenzie, sec.; C. L. Hammond, managing director.

Property: 4 claims, on the North fork of Kettle river, about 34 miles north of Grand Forks and 18 miles from the Kettle Valley railway terminus.

Ore bodies occur as sulphides and oxides of iron carrying gold and copper. Several tunnels on property. Results of extensive diamond drilling not reported. Claims were under bond and lease to the British Columbia Copper Co., 1912, and a long tunnel driven. James Breen, of Spokane, owns 75% of the stock. The company was promoted by P. A. O'Farrell, who spent \$30,000 supplied by F. A. Heinze, in diamond drilling, before Heinze abandoned the proposition. Property is too inaccessible to work its low-grade ore profitably.

NEW DOMINION COPPER CO., LTD.

BRITISH COLUMBIA

Controlled by B. C. Copper Co.

Mines considered exhausted and of no commercial value. For description, see Vol. XII.

GRAND FORKS MINING DISTRICT

INTERNATIONAL EXPLORATION & DEVELOPMENT CO.

BRITISH COLUMBIA

Address: Jas. McIntire, mgr., 525 Rookery Bldg., Spokane, Wash.

Officers: T. A. Farrell, pres.; S. A. Haynes, sec.-treas., with E. T. Smith, R. L. Smith and J. W. Osborne, directors. Leroy Way, Old National Bank Bldg., Spokane, agt.

Cap., \$500,000; shares \$1 par.

Organized to locate, acquire and develop prospects, eventually disposing of them to operating companies. A 3-yr. option for \$60,000 has been taken on 7 claims near Paulsen, 17 miles from Grand Forks, B. C. Several claims are being exploited 12 miles from Grand Forks.

HAZELTON or OMINECA DISTRICT

AMARGOSA COPPER CO.

BRITISH COLUMBIA

Office: 823 Old National Bank Bldg., Spokane, Wash.

Officers: E. P. Spalding, pres.-mgr.; C. D. Muxen, v.p.; A. M. P. Spalding, sec.-treas., with Oscar Cain and G. A. Henkel, trustees.

Inc. 1916 in Wash.

Property: 7 claims, 300 acres, 5 miles from Hazelton, claimed to cover 3,000' on the strike of a series of veins, from 4-10' wide, carrying copper-silver-gold ore.

Development: by crosscut tunnel, in 200', May, 1917. Management plans further development and installation of compressor plant and power drills.

BUTTE & ROCHER DE BOULE COPPER CO. BRITISH COLUMBIA

Office: 49 East Broadway, Butte, Mont. Branch office: Hazelton, B. C.

Officers: Samuel McConnell, pres.; C. J. Stone, v.p.; J. W. McLane, sec.-treas.; preceding officers, Paul Ozanne and P. J. Jennings, directors.

Inc. 1912 in Arizona. **Cap.**, \$1,000,000; shares \$1 par; fully issued and non-assessable.

Property: the Highland Boy group adjoining, but 1,000' above the Rocher de Boule mine and covering 400 acres on Juniper Basin, Rocher de Boule mountain, Omineca mining district, 3 miles from New Hazelton and 4 miles from the Grand Trunk railroad. Claims show the extension of the Rocher de Boule veins, 2 of which have been opened by tunnels and open cuts. Ore occurs in fissure veins following intrusive dikes of porphyry in granite. Samples from veins 18" to 5' wide, assayed from 1.5% to 5.7% copper; with 0.5 to 0.8 oz. silver and slight gold values.

Property considered promising and worthy of further development.
CASSIAR CROWN COPPER CO. BRITISH COLUMBIA

Office: 601 Empire State Bldg., Spokane Wash.

Officers: I. W. Anderson, pres.; W. C. Miller, v.p.; J. V. Pohlman, sec.-treas.; A. C. Mason and E. Pohlman trustees.

Inc. in 1916. **Cap.** increased from \$1,000,000 to \$1,500,000, shares \$1 par; in treasury, 1,010,000 shares.

Property: five 50-acre mineral claims on Goose Mt., 18 miles S. E. of Telkwa and Aldermere, B. C., and 260 miles from Prince Rupert on Grand Trunk Pac. R. R. A 750' tunnel has been driven and is now, July, 1917, entering the mineralized-zone 240' below the surface. Mineralized area as indicated by surface workings is a sheeted zone of 10' to 12' from hanging wall to foot wall. Average value of ore exposed in all workings is claimed to exceed 7% copper and \$3 gold.

Property: has several shallow shafts and pits all showing copper more or less. One shaft is down 56' and shows ore to that depth. For Geology see Canadian Geological Survey of Cassiar Crown group, for 1915, by J. D. McKenzie.

This property so far as prospected and developed has a promising appearance.

DELTA COPPER CO. BRITISH COLUMBIA

Address: Harrison Clement, Hazelton, B. C.

Property: 25 claims, including the Delta and Chicago, in the Hazelton district, adjoining the Rocher de Boule mine on the east. In Sept., 1917, 6' of ore was said to average 5½% copper. Railroad connection is being made at present.

GOLDEN WONDER GROUP BRITISH COLUMBIA

Owned by W. S. Harris and Dennis Comeau of Hazelton and operated under bond by M. W. Sutherland, 1917.

Property: 3 claims on Rocher de Boule Mt., about 1 mile from Hazelton, said to show a 2½' vein of chalcopryite ore assaying 8% copper. Sinking shaft, September, 1917.

GREAT OHIO COPPER MINE. BRITISH COLUMBIA

Sargent & Munro, owners, New Hazelton, B. C.

Property: adjoins the Butte Rocher de Boule mine and is operated by Jennings and Trimble, under lease and bond. Ore occurs in a well defined fissure vein in granodiorite, traceable at surface for 700'. Main orebody, 4' wide gave assays of 22.5% lead, 9.5% copper, 134 oz. silver, 8.6% zinc and 0.04 oz. gold.

Developed: by 355' tunnel, open cuts and drifts. Ore occurrence and conditions are similar to those in the Rocher de Boule, but further development necessary to determine value of mine.

MONTANA CONTINENTAL DEVELOPMENT CO.

BRITISH COLUMBIA

Address: care J. E. Oppenheimer, c/o Symons Dry Goods Co., Butte,

Mont. Company leased and operated main holdings of Rocher de Boule Copper Co., built tramway, equipped property and turned it over to the latter company in January, 1916. See Rocher de Boule.

ROCHER DE BOULE COPPER CO. BRITISH COLUMBIA

Office: 419 D. F. Walker Bldg., Salt Lake City, Utah. Mine at Hazelton, B. C.

Officers: M. S. Browning, pres.; A. Fred Wey, v.p., and S. A. Douglass, directors. D. J. Williams, mgr.; J. A. Cowan, supt.

Inc. Oct. 15, 1911, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; fully issued, fully paid. Listed on Butte Exchange. Annual meeting, Oct. 20.

Property: 6½ claims, crown grant, 325 acres with 50 acres mill site and 100 acres other lands, in Hazelton district, 9 miles from the Grand Trunk Pacific railroad.

Ore occurs in fissure veins in granite, veins having an E.-W. strike with dip of 60°. Five ore-shoots being developed have average width of 5½', are 3,000' long and proven to depth of 150', according to management.

Development: by shaft and 800' tunnel estimated to have blocked out 25,000 tons of ore averaging 15% copper, 5 oz. silver and \$1.50 gold per ton. Copper occurs principally as chalcopyrite and bornite.

In July, 1917, 5' of 10% ore was opened on 1,000' level of No. 1 vein which had yielded \$1,500,000 up to Jan. 1. This shoot is being explored at 1,200' depth by a 3,000' tunnel, eventually to be driven through the mountain, a distance of 7,000'.

Mine was under lease to Montana Continental Dev. Co. from 1913 to Feb., 1916. Lessees shipped about 17,000 tons of ore, 1915, averaging 7% copper and \$2.50 gold-silver, according to reports.

Output in 1916 was 1,250,000 lbs. copper from 10,000 tons of ore.

Equipped: with 240-h.p. hydro-electric plant, aerial and surface tramways, compressor and saw-mill by lessees who worked mine on royalty basis. Is a good mine with rich ore.

SILVER STANDARD MINING CO. BRITISH COLUMBIA

Office: 506 Winch Bldg., Vancouver, B. C. **Mine office:** W. C. Norrie, New Hazelton, B. C.

Owners: J. W. Stewart, Angus Stewart, D. McLeod, and the estate of late A. L. McHugh.

Gross earnings in 1916 were \$49,000.

Property: the Silver Standard mill, 14 crown grant claims, 700 acres, 7 miles N. of New Hazelton, in Omineca district, said to show 8 fissure veins in calcareous sandstone, dipping 62° and pitching N. 50° E. Veins are from 12 to 72" wide and 3 of them carry profitable ore. Shoots are 100 to 200' long. Ore is a sulphide, mill ore averaging 0.10 oz. gold, 30 oz. silver, 3% lead and 11% zinc.

Development: by 1,300' tunnel and total of 4,000' of workings to 500' depth. Mining is by shrinkage stoping. Reserves are 15,000 tons.

Equipment: includes Jenckes hoist, 350 cu. ft. compressor. Building a 25 to 50 ton concentrator. Additional machinery is to be installed.

Production: 1,880 tons in 3 years; 707 tons in 1916, the latter yielding 660,448 lbs. lead, 269,624 oz. silver and 444 oz. gold. The mine is well located for cheap mining; wood and water are plentiful and railway transportation is within a short distance.

SILVERED-COPPER MINING CO. BRITISH COLUMBIA

Office: 1621 Madison St., Denver, Colo. **Mine Office:** Aldermere, Omineca district, B. C.

Officers: F. Thoman, pres.; C. W. Peaslee, v.p.; C. A. Hubbard, sec.-treas.; C. E. Thoman, gen. mgr.

Inc. March 23, 1908, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; issued, 568,754 shares. Debentures, \$50,000 authorized and un-issued.

Property: 6 claims, 300 acres, in the Hunter Basin, Omineca district, about 15 miles from the railway at Telkwa, shows a bedded agglomerate of volcanic rocks, chiefly diorite, beds standing almost perpendicular and striking N. 35° E. Orebodies occur as true fissure veins in diorite. Ores contain bornite and chalcocite. Three cars ore shipped to smelter in 1914 said to have averaged a little over 100 oz. silver and 5% copper per ton.

Development: by a short tunnel, numerous pits and open cuts, with a total of about 200' of workings.

The mine has no power equipment. A concentrator is planned, but ore reserves should first be developed. The company is pinched for funds, but apparently has a valuable property, which, if handled right, may develop into a paying mine. Idle in 1915, and no information since.

SPOKANE ROCHER DE BOULE MINING CO.

BRITISH COLUMBIA

Officers: P. J. Jennings, pres.; 1314 Addison St., Spokane, Wash. P. A. Brady, v.p.; John J. Jennings, sec.-treas.

Inc. April, 1916. **Cap.**, \$100,000; shares 10c. par; 600,000 shares subscribed by incorporators, balance in treasury.

Property: 7 claims, including Spokane & Washington and has bond on Daly West group near New Hazelton, B. C. Ore so far developed said to carry 7% copper, \$2 gold and 15 oz. silver per ton.

Development planned is 1,000' drift tunnel on vein giving 1,000' back at face and cutting beneath four ore-shoots. \$30,000 to be spent in installing compressor plant, power station on Mission Creek, an aerial tram and wagon road, an ambitious program for this amount of money.

KAMLOOPS DISTRICT

IRON MASK MINE

BRITISH COLUMBIA

Owned by Kamloops Copper Co., at Kamloops, Yale district, B. C.

Shaft is down 780' and diamond-drilling under way. Has 600-ton mill, with flotation unit.

KAMLOOPS COPPER CO.

BRITISH COLUMBIA

General office: 609 First National Bank Bldg., Duluth, Minn. **Mine address:** Kamloops, Yale district, B. C.

Officers: E. G. Wallinder, pres.-mgr.; W. H. Eaton, v.p., with G. Carlson, S. H. Hudson, F. M. Needham, J. J. Eklund, Reiner Hoch, Theodore Michel, Otto Johnson, directors; W. W. Blackshaw, sec., 1412 Tower Ave., Superior, Wis.; Otto Johnson, treas.; John Jenswold, atty; Arthur Wallinder, supt.

Inc. Sept. 7, 1909, in Arizona. **Cap.**, \$3,000,000; shares \$10 par, part paid; 128,561 issued, none preferred. First-mortgage bonds on Iron Mask mine amount to \$210,000; and convertible 6% notes, \$128,500.

Accounts for period of 2 years show revenue of \$337,454 of which ore sales netted \$109,330. Balance at end of September, 1916, was \$77,572. Excess of current assets over liabilities was \$33,840.

Property: 10 claims, 2,041 acres, 228 acres mineral land, including the Iron Mask mine, 4 miles S. W. of Kamloops. The Iron Mask shaft is sunk on a shear zone, mineralized for 20 to 30' in width, with segregations of better grade ore forming a paystreak of variable width, carrying chalcopyrite, associated with magnetite in a chortitic gangue containing orthoclase intercrystallized with copper sulphide. The country rock is a diorite with smeary basic patches of gabbroic material. The Iron Mask

orebody averages 28' in thickness, but is lenticular in shape. The ore averages 5% copper, 0.2 oz. silver and .09 oz. gold per ton. It is troublesome to concentrate by ordinary methods owing to its chloritic and quartz-orthoclase gangue.

The mine shows several orebodies besides the Iron Mask, all of them due to "igneous after effects," and occurring in fresh diorite, filling fissures as replacements along fissures and in patches, the ore consisting of orthoclase, chlorite, epidote and other secondary pneumatolytic minerals, with interlocked chalcopyrite, pyrite, magnetite, etc.

The Erin orebody shows excellent ore and numerous pits at various points on the property all show ore.

Development: includes the 780' Iron Mask shaft and some 16,500' of workings, on 9 levels; the 330' Erin shaft sunk on ore for 300' with 600' of drifts and crosscuts; the 50' Lucky Strike shaft and 3 other prospect shafts. Electric power is obtained from the City of Kamloops power-station at 1c. per kw.-hr.

Ore reserves: of Iron Mask and Erin mines claimed to be 1,800,000 tons of 2½% copper ore. Mine shows a large tonnage of low-grade ore susceptible to concentration by flotation, a unit costing \$35,000, being recommended. The old 160-ton concentrating mill has been enlarged to a 30-ton per hour capacity.

In 1916 considerable crosscutting and raising was done from the 750' level and a crosscut started on that level toward the Erin mine, 1,500' distant.

The Erin vein was cut in 1916, also a strong flow of water, preventing raising for exploration and ventilation. Orebody is a sulphide, apparently extensive.

For 1917-18 a geological survey and sampling of the Iron Mask and Erin mines is planned, with an expenditure of \$10,000 for diamond-drilling.

Equipment: includes one 150 h. p. compressor, one 225 h. p. motor for the "Iron Mask" hoist and 8 smaller motors, 6' double-drum hoist, 3 air compressors of 1,300 cu. ft. capacity, good for 15 drills, an electric-light plant and a sawmill. Transportation is by a good wagon road with steep grades, leading to the railway siding below Kamloops. The management plans a 2½-mile tram, having a drop of 1,100', when financial conditions are better.

Machinery, etc., added during 2 years cost \$24,352.

Production: Oct. 1, 1914, to Sept. 30, 1916, 6,290 tons of ore averaging 3.96% copper and \$1.31 per ton gold and silver; also 1,313 tons of concentrate, containing 10.39% copper and \$1.77 per ton precious metals. Metal yield was 771,199 lbs. copper, 482 oz. gold, and 1,616 oz silver. Ratio of concentration was 7 to 1, with 80% saving, at cost of \$2.75 per ton of concentrate.

It is understood that the English corporation has extended the time for further payments on the property.

KAMLOOPS MINES, LTD.

BRITISH COLUMBIA

Office: 151 Coronation House, 4 Lloyds Ave., London, E. C., Eng. Company in hands of trustees, as property is under lease and bond to the Kamloops Copper Co.

NELSON DISTRICT

DUNDEE MINING CO.

BRITISH COLUMBIA

B. H. Washburn, Ymir, B. C., manager.

Property: the Dundee mine, adjoining the Yankee Girl at Ymir. The property has little ore developed, but is reported to have very favorable prospects for a large tonnage of commercial ore.

EFFANJAY GOLD MINING CO.**BRITISH COLUMBIA**

Address: A. J. Grover, sec.-treas., Hyde Bldg., Spokane, Wash.

Officers: J. A. Irvine, pres.; J. L. Goodwin, v.p.

Company organized in 1916 to take over the Fawn group of claims, under bond. Also leased a 4-stamp mill on adjoining Nugget claim.

The Fawn group is in Sheep Creek district, near Salmo, B. C., and is reported to show an orebody 14" wide carrying from \$21 to \$65 gold per ton.

Development: by tunnel.

EUREKA COPPER MINES, LTD.**BRITISH COLUMBIA**

Address: Nelson, B. C.

Officers: J. J. Malone, pres.; A. B. Ritchie, v. p.; L. B. Reynolds, sec.-treas.

Inc. March 2, 1906, in British Columbia. **Cap.,** \$250,000; shares 25c. par, non-assessable; issued, \$231,250. Property was under bond and lease to B. C. Copper Co., Ltd.

Property: 7 claims, 2 fractional, all except 1 crown granted, approximately 250 acres. Situated 2½ miles from the Canadian Pacific railway, and about 9 miles westerly from Nelson. Claims contain several veins, partly along contacts between limestone and granite, and partly along fracture planes in the granite. One of these veins is developed by shaft, winzes, raises and a 900' crosscut tunnel. Mine is equipped with hoisting and steam-compressor plant. Crosscut adit, driven 1914, failed to disclose any ore and operations were discontinued.

GENERAL MINING, MILLING & LEASING CO.**BRITISH COLUMBIA**

Officers: W. H. Honefenger, pres., Hyde Bldg., Spokane, Wash. W. A. Kelly, sec.; Chas. V. Bobb, mgr., with W. T. McCurry, directors.

Has a lease on the Lucky Strike and Wisconsin mines, on a tributary of Midge Creek, 7 miles W. of Kootenay landing, said to show a 30' vein in Nelson granite, traceable for 3,000'. Ore in pits along vein reported to assay \$25 to \$40 gold and 3 to 7 oz. silver per ton.

Development: 2 tunnels claimed to open up \$1,000,000 in ore, which seems a very high figure. Company said to plan driving a new tunnel at greater depth, to add machinery and an aerial tram. Ore will be shipped to Trail, B. C., or to Tacoma, Wash.

GRANITE-POORMAN MINE.**BRITISH COLUMBIA**

Address: Nelson, B. C. F. H. Skeels, supt.

Spokane and Butte capital purchased this gold mine during 1916. In 1917, a 1,500 cu. ft. compressor and 300-h.p. motor were installed; improvements were also made to mill, increasing capacity to 100 tons daily.

Regarded as a promising producer.

HOBSON SILVER LEAD CO.**BRITISH COLUMBIA**

Address: Box 1123, Spokane, Wash., and Ymir, B. C. **Officers:** George T. Reynolds, pres.; W. L. McEachren, v.p.; W. B. Ward, Jr., sec.-treas.; C. H. Harvey, asst. sec. and treas.; preceding, with J. C. Buchanan, F. R. Monfort and W. A. Buchanan, directors; E. W. Westervelt, supt.

Inc. 1911 in Wash. **Cap.,** \$1,500,000; shares \$1 par; outstanding 1,286,571. Stock transferred at company's office. Annual meeting in January. Operating expenses in 1915, \$30,977.

Property: Yankee Girl mine, 3 claims, patented, 126 acres, at Ymir, Nelson mining district, B. C., said to show gold, silver, lead, zinc ore in contact deposits between granite, slate and schist; strike N. E.-S. W.; dip 60°. One orebody is said to be 90' long, another 400' long. Ore is said to assay \$20 gold, 6.5 silver and 5.5% lead per ton. The main vein, the

Yankee Girl, has been drifted on 300' in No. 4 tunnel; it is said to be 5' to 7' wide and to average \$7.24 gold and 0.77 oz. silver per ton. Another vein the Yukon, is of secondary importance to the Yankee Girl.

Development: 4 tunnels; No. 1, 1,600' long; No. 2, 2,100' long and 400' below the surface; No. 3, 400' long and 175' below No. 2; No. 4, 2,100' long and 600' below No. 2, is driven in the footwall and for the first 1,160' nearly parallels the vein. At No. 4 tunnel level the Yukon vein is estimated to lie 100' N. E. of the tunnel. Company claims to have 400,000 tons ore blocked out. Total underground workings, 6,000'.

Equipment: includes 2 air compressors and a 6,000' tramway. Total output to date, 24,900 tons.

Company plans completing the development of No. 4 tunnel to add a compressor, build a 300-h.p. hydro-electric plant and a 200-ton concentrator.

HUDSON BAY ZINC CO., LTD.

BRITISH COLUMBIA

Office: Salmo, B. C.

Inc. April, 1916, in B. C. **Cap.**, \$5,000,000; shares \$5 par; listed on N. Y. Curb, May 1, 1917. Incorporators were M. W. Bacon, Old National Bank Bldg., Spokane, Wash.; W. E. Cullen, Jr., and associates, who are reported to have secured a 3-yr. lease and bond dating from Sept. 1, 1915, on the property described below. An 18 months' option on the property, acquired by the Butte & Superior Mng. Co. (Hayden, Stone & Co.), for approximately \$1,200,000, in May, 1916, was not exercised.

The Canadian Cons. at one time held a lease and bond on this property for \$500,000, and shipped 3,200 tons of lead carbonate ore containing a small amount of zinc from near the surface. The option was relinquished, due to increase of zinc with depth.

Property: 14 claims, 600 acres, 8 miles S. E. of Salmo, and 25 miles S. of Nelson on the Great Northern Ry. **Ore:** zinc, contains lead values in varying amounts, but no silver. Orebodies occur as replacement deposits along bedding planes in shattered limestone. Orebody cut, but not displaced by diabase dike. Vein is on N. E. slope of mountain, 1,500' above Sheep creek; runs N. 28° W. and dips 85° S. W. It is stripped and stoped for 1,000'.

Development: in Oct., 1917, consisted of a 600' crosscut tunnel, No. 2 tunnel, 200' below the outcrop, said to cut a mineralized zone 300' wide with many veins carrying low-grade zinc carbonates, and one or two of shipping grade. Veins strike N. 28° W., dip 85° S. W. The main vein is 33' in width and averages 10% in zinc, with 4' of 30% zinc ore. For 840' of stope, the vein averaged 9% zinc, 3.93% lead, 18% iron, 2.29% lime. During 1916 it had been drifted on 1,000' north and south with no decrease in size or value. A 100' winze from this tunnel level showed 30' of vein matter and a 10' orebody, 4' which was shipping grade. A lower tunnel, now in several hundred feet, is being driven 1,700' to cut the vein 830' below the outcrop.

Ore reserves: estimated at 225,000 tons in sight, 10% of shipping grade.

Equipment: includes a small water-power plant working under a 300 head to operate the compressor plant. An aerial tram was built from the mine to the foot of the hill, where a mill was to be erected in Summer of 1916. The railroad was to be continued from Salmo to the mill location.

Production: all from development work during the past two years has been about 1,000 tons monthly of carbonate ore. The present management is pushing development work, completing the lower tunnel and adding to the equipment. Production will be increased as soon as pos-

sible. Recent developments show sulphide ore and indicate that the property will become one of the large and profitable producers of the province.

KOOTENAY BONANZA MINES, LTD. BRITISH COLUMBIA

Office: 901 Vancouver Block, Vancouver, B. C.

Officers: W. Finch Page, pres., London, Eng.; A. E. Rand, v.p.; R. S. Lennie, sec.-treas.; preceding, with A. C. Burdick and J. A. Hendry, directors.

Inc. in British Columbia. **Cap.**, \$3,000,000; shares \$5 par; outstanding, \$200,000. Company organized to take over the Silver King mine from the bondholders of the Hall Mining & Smelting Co., Ltd.; the claims of the Kootenay Development Syndicate, Ltd.; Dandy & Ollie Cons. Mines, Ltd., and of the Starlight Mines, Ltd., as well as other properties.

Silver King and Dandy groups of claims were sold to the Silver King Mines, Ltd. The company now holds 34 other claims, comprising the North Star, Great Western Starlight and Irene groups.

KOOTENAY GOLD EXPLORATION CO. BRITISH COLUMBIA

Address: F. H. Skeels, supt., Nelson, B. C.

Company controlled by H. I. Wilson and John MacGuiniss of Butte, Mont., and W. E. Cullen and Robert Carnochan of Spokane, Wash.

Cap. \$1,500,000; shares \$1 par. Stock listed on N. Y. Curb. Registrar & Transfer Co., transfer agents.

Property: the Granite-Poorman mine, 5 miles from Nelson, well situated for economical operations, said to show 5 veins in granite, 4 of which are parallel. Vein filling is quartz, containing 3 to 8% sulphides, as pyrite, chalcopryrite, galena and zinc blende, the last named in small quantities. About 70% of the gold is free. From 1900 to 1912, the mine was worked and the average recovery was \$8 per ton, with about \$3 in the tailings. The Hardscrabble, Poorman and Granite veins have considerable possibilities.

Equipment: 1,500 cu. ft. Sullivan compressor, 20 stamps, Deister Overstrom tables, etc. Ball-mill being installed will raise capacity of plant to 200 tons daily.

MOTHER LODGE SHEEP CREEK MINING CO.

BRITISH COLUMBIA

Address: Sheep Creek, B. C.

Officers: Alex. L. Smith, sec., transfer agent and registrar, Cornwall, Ont.; John McMartin, pres., with L. H. Timmins, Duncan McMartin, John K. Erskine and Wm. Watson, directors; J. R. Rutherford, gen. mgr.

Inc. in Maine. **Cap.**, \$1,250,000; shares \$1 par. A dividend of 11% was declared in Dec., 1915.

Property: at Sheep Creek, West Kootenay district, B. C., shows gold ore in an orebody said to have a maximum width of 35' on 6th level.

Equipment: includes 10-stamp mill and cyanide plant, connected with the mine by a 3,600' aerial tram.

In 1914 ore mined and milled amounted to 20,000 tons; bullion recovered reported as \$100,000. Owing to lack of power the mine has been operating only about 9 months of the year.

No production in 1916. Mine is closed.

QUEEN MINES, INC.

BRITISH COLUMBIA

Address: E. V. Buckley, mgr., Salmo, B. C.

Property: the Queen, Yellowstone and Alexandria mines and a mill-site on Sheeps Creek, near Salmo, said to show several veins containing gold ore. Recent work has been concentrated on the Queen group, developed by 700' shaft with drifts run every 100'.

Equipment: includes 20-stamp mill, handling 50 tons daily and reported making an extraction of 60% of the gold values.

Property was under option to Tonopah Belmont M. Co., in 1916.

Mine credited with total production since 1908 of \$700,000 in gold.

QUEEN VICTORIA MINE

BRITISH COLUMBIA

Owned by the British Columbia Copper Co. Described Vol. VIII., Copper Handbook. Work suspended March, 1915. Costs were \$3 per ton and ore averaged only 1.2% copper; 0.36 oz. silver; trace gold; 36.8% silica; 14% iron, so that no profit could be made. Shipments totaled 7,920 tons.

RECORD MINING CO.

BRITISH COLUMBIA

Address: Exchange Nat'l Bank Bldg., Spokane, Wash.

Officers: John R. Cassin, pres.; W. H. Turner, v.p.; W. R. Orndorff, sec.-treas.

Cap. \$100,000; shares 10c. par; 600,000 issued.

Property: the California mine, about 3 miles from Nelson, said to show a 4-8' vein with 6" shoot of gold-silver-zinc ore, developed to 500' vertical depth. Shipments by former owners reported to total \$50,000. Management plans erecting a 50-ton mill.

RELIEF MINE

BRITISH COLUMBIA

Address: Erie, B. C., and Bayfield, Wisc.

Officers: Frank Stark, pres.; H. J. Wachsmuth, v. p. and treas., with C. R. Liehy, R. J. Nelson and A. D. Westby, directors; F. V. Holston, sec.

Inc. March, 1914, in Arizona. **Cap.**, \$300,000; shares \$1 par; 250,000 shares issued. First Nat'l Bank, Bayfield, Wisc., registrar. Annual meeting 1st Tuesday in May.

Property: 6 claims, patented, 186 acres, on Salmon river, in West Kootenay Nelson mining division, 14 miles N. from Erie, B. C., said to show sulphide ore in a quartz fissure vein in diorite. Vein strikes N.-E. with dip of 85°. Pay ore occurs in shoots, from 50-170' wide, and is said to average \$18 per ton in gold.

Development: to 416' depth by 4 tunnels, each 1,200' long.

Equipment: includes 14-drill compressor, pump, steam power and 75-ton cyanide mill.

Mine is credited with production of \$500,000 and management estimates ore reserves, August, 1917, at 56,000 tons, with 6,500 tons blocked out.

SILVER KING MINES, LTD.

BRITISH COLUMBIA

Office: Trail, B. C. **Mine address:** Nelson, Kootenay Lake, B. C.

Officers: R. H. Stewart, pres.; S. G. Blaylock, v. p.; T. W. Bingay, sec.; W. M. Archibald and R. S. Lennie, directors. Company is owned jointly by the Kootenay Bonanza Co., and the Consolidated Mining & Smelting Co., of Canada, Ltd., in the proportion of $\frac{1}{4}$ and $\frac{3}{4}$, respectively.

Property: 5 claims, on Toad mountain, include the old Silver King mine, formerly owned and operated by the Hall Mining & Smelting Co., Ltd. Mine is opened by a shaft to the 10th level, showing 3 well-defined veins in diabase schist. The ore occurs in those portions of the veins which are intersected by 2 dikes, and in the altered surface zone is principally bornite, with tetrahedrite, iron pyrites and silver occurring in the unaltered zone below. Gold is present in small amounts. Considerable ore was extracted in the past from above the 5th level in the Main vein. The South vein and the K vein are practically untouched. The Main vein is lower in silver, but higher in copper than the South Vein, and the K vein is higher in silver than either of the others, The total ore reserves in

the mine are conservatively estimated at 100,000 tons. Ore in the Main vein has been proven to a depth of 1,130' by diamond drill borings.

Equipment: includes electrical motors of 50-h.p., a 100-h.p. electric pump, an 1,850' tramway, and all necessary mine buildings. Shut down 1915-16. No information for 1917.

YMIR-WILCOX DEVELOPMENT CO., LTD. BRITISH COLUMBIA

Office: J. C. Breese, 1580 Sherman Ave., Evanston, Ill.

Officers: W. S. Mason, pres. and treas. J. C. Breese, sec.; with C. H. Pöppenhusen, E. R. Johnston and B. J. Jayne, directors.

Inc. June 29, 1911 in British Columbia. **Cap.**, \$500,000; shares \$1 par; non-assessable; 400,000 issued.

Property: 6 patented claims, 188 acres, near Nelson, B. C. Examined by Arthur Lakes, Jr. Ore carries gold and some silver. Under development in 1917.

NICOLA DISTRICT

DONOHUE MINES, LTD.

BRITISH COLUMBIA

Address: F. M. Hawkes, or James McKieran, Quilchena, Nicola district, B. C.

Property: Tubal Cain, King William and Joshua mines containing copper, lead, zinc, silver and gold ores. Development has followed veins to 400' in depth.

Equipment: includes a 30-ton mill, with a "balanced rod" mill and Monarch concentrators.

OSOYOOS DISTRICT

OLALLA COPPER MINING & SMELTING CO.

BRITISH COLUMBIA

Office: 305 Colt Bldg., Paterson, N. J. **Mine office:** Olalla, Yale district, B. C.

Officers: Robt. Gaede, pres.; Jos. Bamford, Jr., v. p.; John E. Tylee, sec.-treas.; preceded with Frank A. Blauvelt, Warren N. Conant, Robt. Swinley, H. Chas. Royce and Frank E. Morrison, directors.

Inc. Oct. 19, 1901, in Maine. **Cap.**, \$8,000,000; shares \$25 par. Annual meeting, first Monday in August.

Property: 32 claims, crown-granted, 1,183 acres, and a 92-acre mill, smelter and town site in Olalla, in the lower Similkameen and Keremeos camps, Osoyoos district, 4 miles from a railway. Lands said to show contact deposits between diorite and felsite, with orebodies in both, but mainly in the felsite. Twelve claims adjoin the town site of Olalla, and the Dividend group of 7 claims is 17 miles distant. Vein under development is claimed by management to carry bunchy replacement deposits of chalcopyrite, with garnetite and magnetite gangue, in limestone, near intrusive contacts, assaying 1.5 to 5% copper, a little silver and \$1 to \$7 gold per ton.

Development: by a 70' shaft, and tunnels of 642', 600', 150' and 112', with 1,504' of workings. There is no power equipment. Property now idle, is leased for 25 years to the Yale Development & Construction Co., organized among the stockholders of this company.

YALE DEVELOPMENT & CONSTRUCTION CO.

BRITISH COLUMBIA

Has a 25-year lease on property of Olalla Copper Mining & Smelting Co., which see.

QUEEN CHARLOTTE ISLAND

HERCULES MINING CO.

BRITISH COLUMBIA

Idle. Nearest. P. O.: Jedway, Queen Charlotte island, B. C. Claims are near the Ikeda mine, on Moresby island. Apparently has little or no development.

IKEDA MINES, LTD.

BRITISH COLUMBIA

Ikeda Bay, Queen Charlotte Island, B. C. S. J. Castleman, gen. mgr.; Andrew G. Larson, cons. engr. and supt.

Inc. Sept., 1910, in British Columbia. **Cap.**, \$850,000; shares \$1 par.

Property: the former holdings of the Awaya-Ikeda Co., Ltd., taken over for \$200,000, include 42 claims, 2,100 acres in several groups on Ikeda bay, at the southern end of Moresby island, 3 miles from Jedway, and connected therewith by government rail and telephone. Steamer connection is had with Vancouver, 450 miles distant.

The Lily group, 8 claims, 400 acres, crown patented in 1912, on the southwestern side of Ikeda bay, discovered May, 1898, by Arichika Ikeda, and developed by him until taken over by the present company, Sept., 1910. The group shows limestone and slate cut by dikes of greenstone and diorite, having well defined flat fissures at right angles to and between the main fissures, which are practically vertical, the others being approximately horizontal and of great number. Ore occurs in a series of veins of 2 to 8' width, the largest orebodies lying along the horizontal main fissure. The vein principally developed is of 5 to 30' width, proven for 1,000' in length and about 300' in depth. The ore shoot, up to 20' in width, carries lenses of chalcopryite, averaging, as mined, about 2.5% copper, with a gangue of silicious country rock and occasional stringers of quartzite and limestone. The ore mined by the former owners averaged about 4% copper, 2.2 oz. silver and \$2.25 gold per ton.

The Lily mine has 4 tunnels connected by winzes. No. 3 tunnel, 940' long, has about 5' of chalcopryite of good average tenor and ends in a 40x50' chamber from which considerable ore has been stoped, the ore in the chamber apparently being not the same as that followed in the tunnel, lying about 45' to the N. and found by crosscutting.

Stoping in No. 3 tunnel in 1916 covered an area 100' long by 75' wide, from which 1,060 tons was sent to the Granby smelter and 1,600 tons held for local treatment.

Production: to end of 1910 was about 12,000 tons of ore. Property idle in 1912, save for assessment work on unpatented claims, but was reported as shipping 50 tons of ore monthly to the Granby smelter at Anyox in 1915.

Smelter returns in 1916 totaled 1,060 tons, assaying from 4.80% to 17.48% copper, 0.10 to 0.34 oz. gold, and 1.0 to 3.8 oz. silver per ton.

A mill was to be built during 1917.

TASSOO MINING & SMELTING CO., LTD. BRITISH COLUMBIA

Out of business. Property now owned by F. C. Elliott of Victoria, B. C., and J. E. Cortell of Seattle, Wash.

Mine at Jedway, Queen Charlotte Island, B. C., consists of 12 claims, 850 acres, including a town site on the S. W. side of Tassoo harbor, W. side of Moresby Island. The mine is accessible by steamer direct, or by 5-mile trail from Sewell. Property shows granite cutting limestone, with diabase and trap dikes in both rocks. The ore deposits, in limestone, consist of magnetite containing 62% iron, 2% copper, \$1 gold-silver, 1% lime and 3% silica. The orebody is 107' wide, with 56' of 2.5% ore, balance

1.55% and 23' more of 1%. A 280' adit tunnel, at 1,130' elevation, cuts the orebody.

Shipments to Tacoma smelter total 1,150 tons. A 2,300' aerial tramway connects mine with harbor.

SIMILKAMEEN DISTRICT

BRITISH COLUMBIA COPPER CO., LTD. **BRITISH COLUMBIA**

See Canada Copper Corporation.

CANADA COPPER CORPORATION, LTD. **BRITISH COLUMBIA**

Office: 42 Broadway, New York.

Officers: L. W. Mayer, pres. and cons. engr.; A. J. Ronaghan, v. p.; R. H. Eggleston, sec.-treas.; preceding officers, with exception of R. H. Eggleston, C. H. Burke, August Heckscher, C. A. Starbuck, C. I. Stralem, E. L. Gruver, Newman Erb, Colgate Hoyt, directors. Oscar Lachmund, gen. mgr., and F. S. Norcross, Jr., supt. of mines, British Columbia.

Inc. March 1914, in Virginia. Cap., \$10,000,000; \$5 par; increased Aug. 29, 1917, from \$5,000,000; outstanding Aug. 2 1917, 945,454 shares. New issue convertible bonds, \$2,500,000, dated Jan. 1, 1918. Equitable Trust Co., N. Y., transfer agt.; Empire Trust Co., registrar.

The 1917 increase of capitalization of 1,000,000 shares was to provide 833,333 shares for conversion of the new bonds at \$3 per share, the balance, 166,667 shares, being held for corporate purposes.

On March 20, 1917, company purchased the properties and assets of the British Columbia Copper Co., Ltd., the operating company, by exchange of one of its shares for two of the latter. In May, 1917, there was less than 3% of the capital stock of the B. C. company outstanding.

Amount of old debentures outstanding May 8, 1917, \$63,800 was called for redemption, August, 1917.

The new bond issue is underwritten by Hayden, Stone & Co. and Eugene Meyer, Jr., and is secured by a first mortgage on all the company's property. It provides funds for a new mill, etc., at the Copper Mountain property.

Balance sheet showed capital assets of \$4,828,966, including organization expense, deferred charges, etc., \$140,220; investments, \$4,059,665; purchase of properties, \$10,272; expenditure on properties, \$47,889; cash on hand and in banks, \$15,814; supplies, \$396; mortgage notes of B. C. C. Co., \$540,000; interest accrued on notes receivable, \$14,710; liabilities included accrued interest on and bills payable, \$111,255; accounts payable, \$7,046.

Excluding notes payable and interest accrued thereon due, for advances made to the British Columbia company, under the terms of the mortgage of July 1, 1914, which were cancelled as one of the considerations of the transfer of the properties, the current assets and liabilities of the latter company, on Dec. 31, 1916, were: current assets, including cash, metals, smelter products, supplies, accounts receivable, prepayments, etc., \$314,156; current liabilities including open accounts payable and amounts advanced by banks, \$293,968.

Copper Mountain Properties

Property: the new and most important properties consist of 3,006 acres of mineral and other land located in the vicinity of Copper Mountain, British Columbia, at an elevation of 4,200 feet. Copper Mountain is 9.5 miles due south of Princeton, British Columbia, 307 miles by rail northwest of Spokane, Washington; Vancouver lies 182 miles by rail to the

west of Princeton. A 13-mile branch railroad between Princeton and Copper Mountain will give railway transportation, and a subsidiary of the Canadian Pacific Railroad has agreed to build it at its own expense.

The company also owns and operates its old properties in the vicinity of Greenwood, British Columbia, where the smelter is at present in operation.

Geology: the geological formation at Copper Mountain consists principally of monzonite-porphyry and granodiorite, which rocks carry the ore. This formation has been intruded by a system of light-colored porphyry dikes.

The ore consists of chalcopyrite, bornite and pyrite finely disseminated in the porphyry and granodiorite, carrying recoverable values in gold and silver. The orebodies for the most part evidence themselves at or close to the surface, but occurrence of oxide minerals is rare.

Development: property has been developed in a systematic manner by a large amount of diamond drilling and underground work. There has been executed 118,323' of diamond drilling, 31,738' of surface trenching, 11,836' of drifting, 2,299' of raising, and 859' of sinking.

All ore thus far developed is primary, lying well above the level of the Similkameen River, which passes along the base of Copper Mountain at an elevation of approximately 2,500'. There are only slight evidences of secondary enrichment.

Ore reserves: estimated at 10,000,000 tons of developed ore and 2,000,000 tons of probable ore having an assay value of 1.74% copper, and approximately 35c per ton in gold and silver. Careful geological study suggests the possibility of eventually doubling the present tonnage of assured ore. Company in addition owns several other promising prospects in the locality.

The average grade of ore is derived from bulk samples drawn from the underground workings, and such areas have been thoroughly checked both by drill and groove sampling.

Treatment of ore: a 40-ton flotation test mill was erected at the property and has been in operation during four months in 1917, giving very satisfactory results. Since there is a marked absence of oxidized material in the ores, a recovery of 90% of the copper will be secured in regular operations; actual savings very close to this figure on extended experimental runs have already been obtained. Concentrates assaying 25% copper have been maintained with a concentration ratio of approximately 17 into 1.

For the purpose of estimating earnings, a recovery of 27.4 lbs. of copper per ton of ore is assumed after allowing for a certain amount of dilution by waste rock. As the wall rock is generally light colored dike material, the ore admits of close sorting.

The cost of producing copper is estimated at 9½c per lb. when operating on a basis of 3,000 tons per day. It is possible that this cost figure may be lowered. Approximately one-half of the present ore reserves will be extracted by open-cast mining methods, and all of the ore will be drawn from the mines by means of tunnels.

Equipment: for extraction purposes is well advanced. The greater part of the equipment is of a permanent nature so that the development work at the mine can be readily completed in time for the mill, the design for which is now in hand. The Canadian Pacific Railroad will proceed at once with the construction of the branch railroad, between the present railroad terminus at Princeton and the mill site.

The company also owns some claims on Kennedy Mountain, adjoining the Copper Mountain on the west and across the Similkameen river; 1,777' of diamond drilling and 956' of tunneling having been done, costing \$44,600. Some ore was found, but no continuous orebodies were outlined.

The old property of the company is extensive, about 1,900 acres, of which 80 are smelter and mill sites and the balance mineral lands. Claims held under Crown Grant or U. S. patents. The Boundary Creek properties of the company are the Mother Lode mine, at Greenwood, B. C., the Napoleon mine in Washington, the Queen Victoria mine and Lone Star mine and the Copper Mountain group of claims.

The Eureka group near Nelson, the L. H. group and the Butte claim at Wellington camp, held under option in 1914, were abandoned, as exploratory work was unsatisfactory. A three-fourths interest in the Emma mine was sold for \$55,000 in 1915.

The Mother Lode group of mining claims near Greenwood, in the Boundary district, comprises 339 acres. The copper ore occurs in a contact deposit between limestone and eruptive rocks, largely as altered limestone that has been replaced by massive garnet, magnetite, silica and alumina, together with iron and copper sulphides. Much lime is also present as calcite. All these minerals are present in such proportions as to make the ore practically self-fluxing. Copper occurs exclusively as chalcopyrite, the ore carrying from 1 to 1.75% copper with from 75c to \$2 per ton in gold and silver. The main orebody measures about 160x1,200', running nearly north and south, the greatest width being 260' and the dip about 70° easterly. Diamond drill work is reported to have failed to find an extension of the orebody.

The ore is mined by both quarrying and underground stoping, though the first method is now almost abandoned owing to the depth of the quarries. Due to different mining methods used at different periods, the mine became honeycombed and stoping was impossible. A large blast was set off in Sept., 1913, which was a record for underground work. Number of holes, 4,830; 40% dynamite, 49,550 lbs.; wire, 18.5 miles; estimated amount broken, 400,000 tons. The shaft has four compartments, 2 for the 5-ton skips, 1 for a man cage, and 1 for ladders and pipe lines. On the 2 lower levels ore is hauled by electric motors, and on the upper levels by horses. It is dumped into capacious pockets at the shaft and hoisted to a bin at the head of the shaft, where it is crushed by one of a pair of Farrel crushers, with jaw openings 24x36" and 36x42", respectively. From the crushers it passes to the railway bins over a 200' Robins belt conveyor. At the bin end of the conveyor the ore passes an automatic sampler, which cuts out the daily sample.

Shipments of the Mother Lode mine, now nearly exhausted, were 256,784 tons, averaging 0.945% copper, .034 oz. gold, .16 oz. silver in 1916. It was only possible to operate the smelter profitably because of the high price of copper. High costs were due to taking ore from pillars and caved areas in the mine and also to high cost of labor and supplies.

The Lone Star group of 3 claims, 52 acres, is 8 miles S. E. of Greenwood and is connected with the Canadian Pacific railway at Boundary Falls by a 28,560' aerial tram, having 72 towers of from 15 to 67' in height, with 3 tension and 2 anchor stations. The ore of this mine is contained in two orebodies in a highly altered, eruptive rock now largely altered to a talcose schist. Approximately 300,000 tons have been developed by drilling and other work, the major portion of the area being as yet unprospected. The mine is equipped with a 7-drill compressor driven by an electric motor, the hoist being run with compressed air. The average assay

value of the Lone Star ore is higher than that of other Boundary district ores, but it is silicious, and as it carries alumina as well, it is much more refractory.

Ore reserves: April, 1916, estimated to be 170,000 tons of 1.60% copper. The ore is amenable to wet concentration with subsequent flotation treatment.

The Napoleon mine, about 60 acres, is in the Pierre Lake district at Napoleon, Wash., 7 miles from Marcus. The ore is needed for its sulphur content. Output for 1914 until shut down in May was 5,332 tons, averaging gold 10.94c and silver 0.08 oz. per ton, with copper 0.204%, silica 20.3%, iron 35.3%, lime 5.3% and sulphur 17.7%.

Ore reserves: Jan. 1, 1915, 3,300 tons as floors of stopes. Costs per ton laid down at the Greenwood smelter were \$2.8575.

Equipment: includes 2 compressors of 10-drill capacity, Farrel crusher and a 4,100' aerial tramway to the Great Northern railway. The sulphide ores are capped by 75 to 150' of oxidized ore. To treat this ore a 10-stamp mill has been erected, with a 100-ton cyanide plant. All power is steam, electric lines not having been extended into the district.

The Victoria mine, purchased 1912, comprises 5 claims, about 75 acres, near Nelson, B. C., about 110 miles easterly from Greenwood. Ore is an altered limestone, similar in genesis, nature and mineral contents to the Boundary ores, carrying about 1.26% copper with some silver and gold. Mine is equipped with a 5-drill electrically-driven compressor and the ore is taken to the Canadian Pacific railway, on the bank of the Kootenay river, over a 3,000' aerial tramway. Operations were suspended March, 1914, due to low copper content of the ore, averaging about 0.77 oz. silver, 0.0037 oz. gold, 2.28% copper per ton.

Equipment: the 2,500-ton smelter at Greenwood, 5 miles by rail from the Mother Lode mine, receives its ores over the Canadian Pacific railway, and does a general custom business also. The plant is electrically operated, requiring about 1,600 h. p. A 600-ton sampling mill has a custom ore bin connected with the sampler by a belt conveyor. All ores are coarse crushed at the bins, then pass the samplers, and then go to the receiving bins over a belt conveyor. The cupola building has 3 blast furnaces. The ore bins have a capacity for 12,000 tons ore and 4,000 tons coke. There are 6 Baldwin-Westinghouse electric motors for the charging and slag lines. The slag cars have 25-ton side-dumping ladles operated electrically from the locomotives.

The converter building adjoins the blast-furnace building and has 2 stands, with 84x126" shells, taking matte with from 25 to 55% copper and producing blister copper of 99 to 99.5% copper, carrying 20 to 50 oz. silver and 5 to 10 oz. gold. Stands are tilted by hydraulic accumulators, and shells, matte, etc., handled by a 40-ton, 4-motor traveling crane. There is a 72" silica mill for linings. In the power house are three 300' Connorsville blowers, a Norberg compressor for the converters, and four 300 h. p. motors. There are 3 motor generators furnishing direct current to the railway locomotives and an air compressor for operating furnace gates, steam hammers, etc., and an electrically-operated hydraulic accumulator.

A power transmission line 13.6 miles long was constructed from Princeton, B. C., where a lease on a power plant was secured. A pumping plant with a Gould triplex pump working under a head of 1,700' was installed. Since January, 1917, a 50-ton experimental flotation mill has been placed in operation.

The works have a briquetting plant handling flue dust. Smelting fuel

is coke, costing under \$6 per ton, consumption being about 90,000 tons yearly.

The Greenwood smelter suffered a scarcity of coke in 1912, and for 2½ months but 2 furnaces were running; 740,589 tons was smelted in 13 months ending Dec. 31, 1913, as compared with 608,945 tons for the year ending Nov. 30, 1911; 443,022 tons came from the company's mines; the balance was custom ore. The smelter was idle until July, 1915, when one furnace was put in operation, treating 7,374 tons custom ores and 115,140 tons company ore to Dec. 31, 1915. Output was 1,850 tons of matte, containing 48% copper. In April, 1916, a second blast furnace was blown in and 306,450 tons of dry ore was smelted, of which 23,243 tons were custom ore. 350 men employed in Greenwood mine and smelter.

Production:

Year	Gold, Oz.	Silver, Oz.	Fine Copper, Lbs.	Year	Gold, Oz.	Silver, Oz.	Fine Copper, Lbs.
1905....	26,226	95,410	5,601,309	1911....	31,144	134,266	9,944,987
1906....	20,238	82,193	5,820,651	1912....	25,863	142,025	11,146,811
1907....	24,967	101,114	8,643,133	1913....	26,640	137,052	8,296,902
1908....	13,597	58,204	5,567,355	1914*..	14,442	63,501	4,116,190
1909....	18,244	64,234	6,325,000	1915....	5,417	23,002	1,734,385
1910....	24,962	84,180	7,143,456	1916....	12,366	49,928	5,196,239

*Jan. 1 to Aug. 23.

The following estimates of future operations and earnings is made by the company's president: with the treatment of 1,000,000 tons of ore annually the production is estimated at 27,400,000 lbs. of copper per annum. The earnings per share, assuming 1,778,787 shares outstanding (which allows for the conversion of the \$2,500,000 of bonds), would be as follows on various prices for copper:

Price of Copper.....	15c	16c	17c	18c	20c
Estimated Annual Earnings.....	\$1,507,000	\$1,781,000	\$2,055,000	\$2,329,000	\$2,877,000
Estimated Annual Earnings (per share, all bonds converted)....	\$0.85	\$1.00	\$1.16	\$1.31	\$1.62

It will be seen from the foregoing that the estimated net operating profit of \$1.50 per ton of ore is based on 15c copper, which on the developed and probable ore would represent a total net profit of \$18,000,000, not allowing for amortization. The estimated life of the property based on present ore reserves is 12 years. With the development work now in progress it is expected that the present ore reserves will be substantially increased.

HEDLEY GOLD MINING CO.

BRITISH COLUMBIA

Offices: 42 Broadway, New York, and Hedley, B. C. **Officers:** I. L. Merrill, pres.; W. B. Dickson, v. p.; J. D. Clarke, sec.-treas.; preceding, with W. D. Thornton, E. C. Congdon, G. E. Tener, Marcus Daly and W. E. Corey, directors. Gomer P. Jones, gen. supt., Hedley, B. C.

Inc. Aug., 1909, in Delaware. Is successor of the Yale Mining Co. **Cap.**, \$1,500,000; shares \$10 par; outstanding, \$1,200,000. *To October, 1917.

Property: the Nickel Plate and Sunnyside mines, 31 claims, crown-granted, and a mill site, 1,370 acres in all, on Nickel Plate Mountain, and in Similkameen Valley, Osoyoos mining division, Boundary district, Hedley, B. C. Also owns the Copper Flat property near Silver City, N. M.

Geology: the Hedley ore deposits are of contact metamorphic origin, and occur at contact of dikes and sheets of gabbro in altered limestones; they are irregular in outline, usually have a well-defined boundary on the side of the gabbro, and dip about 24°. Ore occurs in shoots. Nickel Plate shoot is 150' wide, 40' thick, and 1,500' long. Principal ore mineral is arsenopyrite, with which occurs chalcopyrite, pyrrhotite, sphalerite, pyrite, gold and sometimes tetradymite; the valuable content of the ore is gold alone. In the association of gold with arsenopyrite in deposits of this origin the Nickel Plate ore deposits are unique and have no known counterpart in North America.

All ore treated in 1916 came from the Nickel Plate property.

Ore reserves: estimated Jan. 1, 1917, at 399,050 tons, average assay \$9 per ton.

Development: 2 tunnels, 900' and 1,160' long and a 35° incline shaft, 900' deep. Greatest depth of working, at 5,200' elevation, 670' below the outcrop. Shrinkage stoping is used; no timbering required. In 1915 ore opened up on the 700' level was found to be 25' wide, assaying \$12 to \$13 per ton. Below the 700' and separated from it by an andesite sheet, lies another orebody which is said to be as wide as the ore on the 600' and 700' levels, but with values averaging \$15 per ton. New work in 1916 totaled 1,040', in addition to 3,605' diamond drilling.

Ore is transported from the mines to the mill at Hedley by means of electric and gravity tramways; the electric tramway is 1 mile long, while the 45° gravity tramway is 10,000' long, with a 4,000' drop.

Equipment: includes an air hoist, two compressors, each of 2,000 cu. ft. capacity and driven by 440 h. p. motors; also a 200-ton 40-stamp mill equipped with 24 Frue vanners and 12 Deister tables.

Mill was changed, 1916, and cyanidation now precedes concentration.

Electric power supplied by company's hydro-electric plant on the Similkameen river. The dam, located on the river just below its confluence with Twenty-Mile Creek, is of the stoplog type; from it water is conveyed in a flume, 7'x9' inside dimensions, a distance of 15,000' to the forebay, which supplies 2,100 h. p. twin turbines through an 8' steel penstock. Powerhouse has a 1,250 k. v. a. alternating current generator. Work was started on the dam about Jan. 1, 1914, and the whole plant was finished and in operation Jan. 2, 1915. Total cost of plant, \$192,009, charged to capital account.

Recent production:

	Ore Tons	Ave. Assay	Gold Rec.	% Rec.
1916.....	73,491	\$10.65	\$711,997
1915.....	74,625	11.65	796,592
1914.....	78,494	10.80	797,340	94.09
1913.....	70,796	12.03	802,330	94.14
1912.....	70,455	11.19	748,133

Conditions in the lower levels of the mine have changed considerably during the last two years. While the orebodies are larger and stronger and maintain practically the same grade, the specific gravity has increased due to an increase in arsenopyrite, which adds to the cost per ton of ore milled. Concentrate tonnage rose from 3,831 tons in 1913 to 6,218 tons in 1915, and to offset this increase in costs the company installed a cyanide plant. Is a good property and well managed.

JUNE GROUP

BRITISH COLUMBIA

See Copper Mountain Mining & Development Co.

KING EDWARD MINES, LTD.

BRITISH COLUMBIA

Idle. Fairview, Boundary district, B. C.

Inc. 1904, in British Columbia. **Cap.**, \$500,000; shares \$1 par.

Property: 10 claims, 500 acres, in the Similkameen district. Opened by 350' workings to show a sulphide orebody 6 to 10' wide averaging 5% copper.

OREGON & BRITISH COLUMBIA MINING & DEV. CO., LTD.

BRITISH COLUMBIA

Office: 826 Northwestern Bk. Bldg., Portland, Ore. Mine at Copper Mountain, near Princeton, B. C.

Officers: at last accounts, W. J. Peddicord, pres.; Walter T. Woodew, v. p.; G. Evert Baker, sec.-treas.-gen. mgr., with G. B. Tucker, directors.

Inc. Jan. 6, 1906, in Oregon. **Cap.**, \$150,000; shares 10c par; non-assessable; issued, 1,455,000 shares.

Property: 8 claims, crown-granted, 379 acres, well timbered, in the Yale district, B. C. Claims show diorite cut by diabase carrying patches, stringers and disseminations of chalcopryrite, bornite and magnetite, without quartz. The ore carries from 1½ to 3½% copper and is said to show as high as \$4.50 gold per ton.

Development: a 176' tunnel, reported to show 40' of mineralized ground, carrying chalcopryrite and bornite, the last 8' of the tunnel said to show an 8' vein of solid ore, with 18" to 2' of talc gangue. Claims adjoin the Sunset mine and other properties of the British Columbia Copper Co. Management expects to resume development work.

PACIFIC SYNDICATE, LTD.**BRITISH COLUMBIA**

Reported, March, 1917, to have taken over the Voigt property on Copper Mtn., described in Vol. XII. See Similkameen Cons. Copper Co.

SIMILKAMEEN CONSOLIDATED COPPER CO.**BRITISH COLUMBIA**

Property now worked by Pacific Syndicate, Ltd., which see. Company, etc., described in Vol. XII.

SIMILKAMEEN MG. & SM. CO., LTD.**BRITISH COLUMBIA**

Idle. Office: Bank of British North America Bldg., Vancouver, B. C. Mine near Princeton, B. C.

Officers: Fred Buscombe, chairman; W. H. Armstrong, managing director; Chas. F. Law, sec.

Inc. Feb. 8, 1906, in British Columbia. **Cap.**, \$2,000,000; shares \$10 par.

Property: the St. Lawrence and St. George groups, 5 claims, 3 crown granted, about 300 acres, 3 miles from Tulameen City, at the head of Bear creek, a few miles from the Great Northern railway.

Development: 4 shallow shafts of about 50' depth each, besides a short crosscut tunnel and numerous trenches. The work shows a strong ore-body between schist and granite with intrusive porphyry dikes. The St. Lawrence mine has an 8' vein of massive cupriferous iron sulphide, giving average assays of about \$10 per ton in copper, silver and gold. The St. George group shows a 4' vein, carrying ore with quartz gangue, giving average assays of 1.38% copper, 2.08 oz. silver and some gold per ton. Inactive some years.

SKEENA DISTRICT**BABINE BONANZA M. & M. CO.****BRITISH COLUMBIA**

Jas. Cronin, mgr. Owns a group of claims at the head of the Tuchi river in the Babine range, Skeena district, 22 miles by trail from Smithers, on the Grand Trunk Pac. R. R. Orebodies occur on contact of granite porphyry and altered sediments, and in fissure veins, 1' to 3' wide, in the porphyry. Values are in the silver-lead-zinc contents. Average assays show 20 to 60 oz. silver, 11 to 56% lead, 10 to 34% zinc.

Development: several tunnels, longest 400', and shafts, deepest 105'. Property has had only a little development work done during the last few years. It is a promising prospect, but handicapped by its inaccessibility. See Ann. Report, Min. of Mines for B. C., pp. 174, 279.

BELMONT-CANADIAN MINES, LTD.**BRITISH COLUMBIA**

Office: 500 Bullitt Bldg., Phila., Pa.

Inc. 1915, by the Tonopah Belmont Development Co.

Officers: Clyde A. Heller, pres.; K. Kitto, sec.-treas.; C. S. Verrill, resident director in Vancouver; F. W. Holler, supt.

Company exercised an option Jan. 1, 1916, on a gold mine, belonging to Surf Inlet Gold Mining Co., Surf Inlet, Princess Royal Island, B. C., and a new company has been formed, the Belmont Surf Inlet Mines, Ltd., with capital of \$2,500,000, of which the Tonopah Belmont owns 80%, the remaining 20% going to original owners of the Surf Inlet Mines. Belmont Canadian mines will probably be dissolved.

Ore: gold-quartz with iron sulphides. Orebody proven to depth of 1,000'. Average assays run \$12 per ton, in 3 lenses of ore so far developed.

Development: for year ending Mar. 1, 1917, consisted of about 2,595' of tunnel and drifting by machine drills.

Ore reserves: estimated at 385,320 tons developed.

Equipment: power plant, boilers, compressor, office buildings and bunk houses. Plan driving tunnel 2,000' to cut orebody.

Company spent \$150,000 during life of option and \$500,000 installing 300-ton mill, hydro-electric power, and cyanide plant. When in full operation, mine will employ 300 men.

See Surf Inlet Gold Mining Co.

(See Ann. Report of Minister of Mines of British Columbia for 1916, pp. 50 and 435.)

BELMONT SURF INLET MINES, LTD. BRITISH COLUMBIA

Office: 500 Bullitt Bldg., Philadelphia, Pa.

Cap., \$2,500,000. Inc. by the Tonopah Belmont Development Co. of Nevada to take over property of Belmont-Canadian Mines, Ltd. (which see), and Surf Inlet Power Co., two British Columbian corporations owned by the Tonopah Belmont, and which controlled the mine during construction period. Of the capital, 80% will be held by Tonopah Belmont, and 20% by original owners, the Surf Inlet Mines.

Property: gold-copper mine on Princess Royal Island, B. C.

Development: about 7,000' of tunnels. Reserves are given as 385,320 tons, averaging \$11.22 per ton. Ore is somewhat refractory.

Equipment: hydro-electric plant containing 2 turbo-driven 468 k. v. a. generators, 5.65 mile power line, railway, 2 compressors and 300-ton mill (started Sept., 1917), containing gyratory crusher, ball mills, concentrating tables, and Jones-Belmont flotation machines. Table concentration will save 50% and flotation 50% of the recoverable gold content; while 94% of the total gold and 96% of the copper will be recovered in the combined concentrates.

This looks like a future profit maker, and has been well handled thus far.

GRIBBELL ISLAND COPPER CO. BRITISH COLUMBIA

Office: 203 First National Bank Bldg., Bellingham, Wash. Mine at Gribbell Island, Skeena River division, Cassiar district, B. C. Idle since 1906, owing to lack of funds. Fully described, Vol. XI, Copper Handbook.

PORTLAND CANAL TUNNELS, LTD. BRITISH COLUMBIA

E. J. Hearn, sec., 214 Belmont House, Victoria, B. C.

Officers: R. I. Elliott, K. C., pres.; J. A. Mara, R. M. Stewart and J. R. Waghorn, directors.

Inc. Aug. 23, 1912, in British Columbia. Cap., \$700,000; shares 25c par.

Property: 10 claims, Crown granted, near Stewart, Portland Canal, B. C. Company was organized to drive a crosscut tunnel to intersect the vein series of Glacier Creek, previously worked in the Portland Canal and in the Stewart Mining Co.'s properties. The tunnel, over 3,000' long, has so far failed to disclose orebodies of permanent commercial values. Idle since 1914, owing to lack of funds. Being examined with a view to reopening property.

RED CLIFF MINING CO. BRITISH COLUMBIA

Idle. Bankrupt. Mine at Stewart Skeena district, B. C. See description in Vol. XII.

SURF INLET GOLD MINES. BRITISH COLUMBIA

Surf Inlet, Princess Royal Island, B. C. F. W. Holler, supt. Controlled by Tonopah Belmont Mining Co. and operated by Belmont-Canadian Mines, Ltd., which see.

Parent company spent \$723,002 on the purchase and equipment of this property to October, 1917.

Property has a mill in operation, shipments having started October, 1917.

Available and indicated ore reserves are figured at 385,320 tons, averaging \$11.22 in gold.

SLOCAN DISTRICT

BLACK PRINCE MINE.**BRITISH COLUMBIA**

Operated under lease by J. A. Tipping, Slocan City, B. C., Canada.

Ore: silver, in 6" vein, in schist.

Development: by tunnels only. Property is said to have made first shipment in Nov., 1915, and expected to have output of 1 car of ore every 2 weeks. Owing to inaccessibility of property, only the high-grade ore can be profitably mined. Twelve men employed at last accounts.

CORK-PROVINCE MINES, LTD.**BRITISH COLUMBIA**

Office: Kaslo, B. C. Mine at Zwicky, B. C.

Officers: W. E. Zwicky, pres.-gen. mgr.; Henry Giegerich, v. p.; W. H. Burgess, sec.-treas.; preceding with W. O. Miller, G. O. Tierbey, H. Rindal and W. M. Archibald, directors. **Transfer office:** Kaslo, B. C. W. H. Burgess, registrar.

Inc. May, 1915, in British Columbia. **Cap.,** \$1,000,000, shares 10c par, 6,158,005 issued, on bonds, non-personal liability.

Property: 13 claims, 9 crown granted, containing about 580 acres on the S. Fork of Kaslo creek in the Slocan district. Company is the consolidation of the Cork and Province groups.

The orebodies are found in fissure veins in slate. They have an N. E.-S. W. course and 68° dip, the shoots are 6' to 30' wide, with ore containing silver, lead and zinc.

Development: has been by a 1,400' crosscut tunnel, which intersects the Black Fox and the Cork veins, with greatest vertical depth of 300 and 1,300 linear feet of underground work. The Black Fox vein was cut at 700' from the portal and shows a width of 4' to 6' of vein material but no commercial ore. Company will prospect this vein. The Cork vein was intersected at 920' and is said to be stronger and wider than is usual in the district. Four shoots, developed on this vein, are reported to show a width of 8' and a length of 50' to 150'. Ore reserves are said to be 10,000 tons.

Equipment: 100-ton concentrator, hydro electric plant, sawmill, compressor and electric lighting system.

Production: mine yielded 1,206 tons previous to consolidation, and about 850 tons in 1915, which are said to have given net smelter returns of \$30,000. Ore shipments said to average 30 oz. silver and 45% lead. No production reported for 1916.

FISHER MAIDEN MINING CO.**BRITISH COLUMBIA**

Officers: J. L. Prickett, pres.; Wm. Huntley, v. p.; H. S. Stoolfire, sec.-treas., with John O'Connor, directors, all of Spokane, Wash.

Cap., 1,500,000 shares, 10c par; 1,000,000 issued.

Property: the Fisher Maiden group, 7 miles from Silverton, Slocan district, B. C., reported sold to Barney Crilley and J. J. Malone, on a 3-year bond and lease, 1917. Claims said to carry silver-lead-zinc values.

GALENA MINING & MILLING CO.**BRITISH COLUMBIA**

Company was formed to take over the Galena Farm silver-lead-zinc mine in the Silverton district, B. C. The estate of the late Patrick Clark of Spokane holds 75% of the stock, and the A. W. McCune interests of Salt Lake City hold the remainder. P. W. Clark is manager, and A. King in charge of the mill.

Net earnings during the first 11 months of operations were approximately \$200,000. A bond for \$100,000 was paid off, and development and mill construction of \$80,000 also paid.

Ore: averages about 12% lead and 18% zinc. **Development:** exploration has been kept well ahead of milling capacity. For a length of over 300',

the oreshoot is said to average 14' in width. A raise above the 200' level opened 10' of good ore.

Equipment: includes a 100-ton concentrator, erected early in 1916. Daily output of concentrate is 35 tons. Additional tables and flotation machines installed during 1917 raised the capacity to 150 tons of ore daily. Recovery is 90% lead on tables and 80% zinc by flotation. Rolls and Huntington mills do the crushing.

JACKSON BASIN ZINC CO.

BRITISH COLUMBIA

Address: Spokane, Wash. **Mine office:** via Retallack, B. C.

Officers: Volney D. Williamson, A. L. White, W. Y. Williams of Spokane.

Cap., \$2,000,000; shares \$1 par.

Property: Sunset and other claims in the Slocan district, B. C., said to have deposits of high-grade zinc ore.

LUCKY JIM ZINC MINES, LTD.

BRITISH COLUMBIA

Office: 2926 Orillia St., Victoria, B. C.

Officers: A. C. Burdick, pres.; F. J. Walker, v. p.; W. J. Nicholls, sec.-treas.; A. W. Allen, asst. sec.; A. G. Larsen, receiver; H. Lakes, supt.

Cap., \$2,500,000; shares \$1 par; authorized bond issue \$150,000, bearing 7%. Stock listed on Spokane Exchange.

Property: the Lucky Jim Mine at Zincton, B. C., developed by 3,600' of tunnels, drifts, raises and crosscuts. Two promising shoots of zinc ore are developed on No. 5 level. **Shipments:** 780 tons of crude ore in 1913 averaged 46.37% zinc.

Operations were interrupted by lack of funds in the Autumn of 1914 and efforts made to foreclose on the first mortgage of \$62,000, but the Court appointed a trustee to reopen the mine and operations were resumed in 1915. In Dec., 1916, receiver paid off first mortgage and has since been instructed by the Court to pay off the second mortgage.

Concentrating ore is shipped to the Roseberry mill on Slocan lake, owned by the Monitor Mining Co., and to Kaslo; crude ore shipped direct to smelter.

In July, 1917, company was badly involved in litigation with the former manager, G. Weaver Loper and associates, an over-issue of 123,000 shares of capital stock being charged.

NOONDAY MINES CO.

BRITISH COLUMBIA

Office: 704 Paulsen Bldg., Spokane, Wash.

Officers: Bruce White, pres.; R. C. Lammers, v. p.; J. M. Scott, sec.; J. B. White, treas.; with H. S. Burdick, directors.

Cap., \$750,000; shares 25c par; 1,800,000 issued.

Property: the Noonday and other claims near Sandon, B. C.

Development: by tunnels, which have opened 14,000 tons of \$17.50 lead-silver ore. In 1916 openings amounted to 1,850'. Shipments were valued at \$10,000. A long development tunnel is to be driven through the properties.

A promising prospect.

PANAMA MINE.

BRITISH COLUMBIA

H. Giegerich, Kaslo, B. C., owner. The mine, W. of Whitewater, in the Slocan country, is developed by 2,000' of tunnels and drifts to depth of 300', reported to carry a contact vein, from 3-5' wide, that averages 120 oz. silver. Small shipments made to the Trail smelter. Developing with a small force.

RAMBLER-CARIBOO MINES, LTD.

BRITISH COLUMBIA

Address: Three Forks, B. C.

Officers: A. F. McClaine, pres.; Alfred Coolidge, v. p.-sec.-treas., with Dr. B. W. McPhee, J. F. Hall, C. L. MacKenzie, Dr. Johnston Armstrong

and Rev. P. F. Hylebos, directors; A. E. Cable, asst. sec.; J. A. McPhee, asst. treas.

Cap., \$1,750,000; shares \$1 par; all issued. Listed on Spokane Exchange.

Balance sheet of April 30, 1917, showed total receipts of \$189,090, which included: balance forward, \$16,509; ore in transit and at smelter, \$72,513. Disbursements for year ending April 30 were \$167,808, including \$11,097 for development, \$44,375 for mining and \$16,324 for milling expenses. Net earnings for the fiscal year ended April 30, 1917, amounted to \$49,844. On April 30, 1917, the company reported cash on hand \$21,850 and \$10,000 ore at the smelter or in transit.

Dividends: 1915-16, \$52,500; 1916-17, \$87,500. The company is reported as having paid 22c per share in as many consecutive installments prior to suspension of dividends in 1903. Total dividends including Sept. 1, 1917, said to be \$542,500; exact records not available.

Property: 5 crown granted claims, at the head of McGuigan creek, near Three Forks, Slocan mining district, has been operated for many years as a silver-lead-zinc mine and has been extensively developed at depth. On the 14th level at 5,000' crosscut was run, but development there has been disappointing, the orebody evidently not extending that far. Reported in April, 1917, that new orebodies had recently been found on the 600, 800, 900, 1,200 and 1,300' levels south, but the extent of these deposits has not yet been determined.

The product is lead and zinc concentrates and crude lead ore. The crude ore runs from 148 to 165 oz. silver and 50 to 58% lead, while the lead concentrates average from 70 to 100 oz. silver and 32 to 40% lead, and the zinc concentrates run 35 to 37% zinc and about 25 oz. silver.

Development: work from May 1, 1916 to April 30, 1917, amounted to 910'. Ore reserves estimated as sufficient for 2 years' operations. Employs 40 to 50 men.

Concentrator during 1916 treated 18,000 tons of ore, producing 993,751 lbs. lead, 137,329 oz. silver and 388,657 lbs. zinc.

Management is reported as "honest, efficient and extremely conservative," but gives out but little information.

SILVERTON MINES, LTD.

BRITISH COLUMBIA

Offices: A. Martin, sec., 23 Throgmorton St., London, E. C.; G. Stilwell, mgr., Silverton, B. C.

Officers: G. Freeman, chairman; M. S. Davys, F. J. Ferguson, D. H. Gibb, and E. W. Monkhouse, directors.

Inc. Oct., 1909, in England. **Cap.**, £50,000, in 30,000 7% cumulative and 20,000 ordinary shares at £1 each; 28,050 pfd. and all ord. shares issued. Profit of £2,522 in year ended Sept. 30, 1915.

Property: the Hewitt-Lorna Doone mine at Silverton, carrying silver-lead-zinc ores, which are concentrated in a mill having a flotation unit. In 1914, 18,000 tons of ore was mined. The silver-lead concentrate is sent to the Trail smelter.

In 1917 assets were transferred to the Silver Tip Mining & Power Co. **SLOCAN STAR MINES, LTD. (N. P. L.)**

BRITISH COLUMBIA

Offices: 901 Vancouver Block, Vancouver and Sandon, Slocan district, B. C.

Officers: R. S. Lennie, pres.; A. C. Burdick, v. p., with J. B. White, John Elliot, Thomas McPherson, J. M. Harris and J. P. McGoldrick, directors. T. B. Hooper, sec.-treas.; Oscar V. White, gen. mgr.

Inc. in British Columbia, Oct. 20, 1911, under the "Companies Act." **Cap.**, \$2,500,000; issued \$2,175,028; shares \$1 par. Listed in Spokane.

Balance sheet year ending Oct. 31, 1916: Assets total \$2,316,268, in-

cluding property and plant, \$2,054,610; mine exploration as at Oct. 31, 1915, \$99,214; current, \$34,179, and deferred charges, \$128,124. Liabilities include current, \$32,924; debentures, \$91,696, and profit and loss, \$16,619.

Bonds: authorized, \$100,000 4-year 7% 1st mortgage; issued, \$90,000. Dividends: paid in former years, \$542,000.

Property: at Sandon, Slocan district, consists of Slocan Star and Rabbit Paw groups of 12 Crown Granted claims, which formed the subject of protracted and costly apex litigation between the Star Mining & Milling Co., plaintiff, and the Byron N. White Co., in the Supreme Court of B. C. for about 10 years, finally determined by a judgment of the Supreme Court of Canada. Holdings also include a patented mill-site and extensive water rights.

Ore: carries silver, lead, zinc. The main vein, the "Slocan Star," is a strong fissure in slate, traceable over a mile. Vein strikes N. E.-S. W., dips S. 47°, width 6-8', widening out in places to as much as 50'.

Development: 10 main adit levels; No. 10, the lowest is 2,300' long; total workings 13,000'; new work in 1916, 1,610'. Silver-lead ore has been almost all extracted down to 5th level; from 6th level to surface several zinc-siderite orebodies have been left intact as unprofitable under former market conditions.

Ore reserves: recently estimated as 49,000 tons zinc concentrating ore in sight with net value of \$190,000 and 100,000 tons partly blocked ore, valued at \$400,000. Average assay value reported as 3 oz. silver, 1.2% lead, and 10% zinc, or total value of \$11.50 per ton. Costs estimated at \$7, spelter figured at 5c.

Early in 1917 the Silversmith vein was opened for 100' on No. 10 level, where it was 14' wide. Mine was examined by R. H. Stewart of Trail, in Aug. 1917.

Equipment: provided for by the recent bond issue includes, 15-drill compressor, 1,500-h. p. electrical plant, 4,000' aerial tram connecting mill with shipping bins at Sandon and flotation units added to the 100-ton concentrator, increasing capacity to 250 tons. Mill is at level of No. 10 adit.

Production: in 1916: 1,070 tons of crude ore and concentrate averaging 63.1 oz. silver, 59.5% lead, and 7.1% zinc, valued at \$100,539; and 2,008 tons of zinc concentrate containing 34.5% zinc, worth \$30,395; a total of \$130,933. In the third quarter of 1917, shipped ore and concentrates worth \$39,725. Concentrates on hand are valued at \$10,000.

The future of the mine looks favorable now that litigation is ended, transportation is being bettered, and mill capacity increased.

STANDARD SILVER LEAD MINING CO. BRITISH COLUMBIA

Offices: Empire State Bldg., Spokane, Wash., and Silverton, B. C.

Officers: W. J. C. Wakefield, pres.; J. F. Clark, v. p.; Chas. Hussey, sec-treas.; Geo. H. Aylard, gen. mgr., Victoria, B. C., with Henry White, directors.

Inc. Dec., 1910, in Washington. Operated under present management since 1911. Controlled by the Finch-Campbell-Clark estates of Spokane. **Cap.**, \$2,000,000; shares \$1 par; fully paid; non-assessable; all issued. Annual meeting, first Tuesday in May. Security Transfer & Registrar Co., New York, registrar and transfer agent. Listed in Spokane and on New York Curb.

Operating statement for 1916 shows total income of \$905,713, of which \$843,188 was from ore sales. Expenses totaled \$495,636; dividends, \$600,000.

Balance from 1915 was \$336,943, plus \$388,364 profit in 1916, made available \$725,307, of which \$600,000 was distributed, leaving \$125,307 surplus at end of 1916. On June 30, 1917, the balance was \$301,247, after paying dividend of \$100,000.

Dividends: 1912, \$425,000; 1913, \$650,000; 1914, \$475,000; 1915, monthly at rate of 2½% commenced Sept. 10, total for year, \$250,000; in 1916, \$600,000; in 1917 to July, \$200,000, making \$2,600,000 to date.

Under present Canadian taxation laws the company is taxable for 25% of earnings over the 7% allowance. With reported present earnings of \$1,000,000 yearly there would be available for dividends approximately \$785,000 against present dividend requirements of \$600,000.

Property: 10 full claims, 6 fractions, 600 acres, 2 miles N. E. of Silverton, located on Slocan Lake, B. C. The claims carry fissure veins in slate and graphitic schist. Ore carries silver, lead and zinc in a quartz-pyrite gangue. Silver occurs as gray copper and ruby. The orebodies occur in the form of lenticular masses along the vein, varying in width from 1' to 25'.

Development: tunnels numbered from 1 to 7, inclusive, develop the vein to a depth of 800'; tunnel No. 8, now being driven, gives an additional 400' depth. Work in 1915 amounted to 5,749', compared with 9,059' in 1914. Total work to April 1, 1916, aggregated 20,000' of drifts on the vein, raises and crosscuts. **Ore reserves:** not reported, but management claims that reserves guarantee many years of profitable operations.

The vein contains ores which are readily concentrated and which constitute the bulk of the mine's output. There is, however, a large amount of material in the vein in which ruby silver and zinc blende occur as streaks and coatings and in which galena is found in a very finely divided state in graphitic schist and slate. Such ores cannot be treated successfully by ordinary concentration. An experimental flotation plant installed in 1914 was unsuccessful, as the graphite floated off with the metallic particles. In 1916 the plant was rebuilt, using Wyman pneumatic flotation machines, which have given a total recovery of 93-95% of the values in the mill feed. The ore as sent to the mill averages 24% lead, 35 oz. silver and 14% zinc.

Equipment: 150-ton concentrator, hydro-electric power plant on Four Mile Creek and an 8,000' tramway connecting mine and mill.

Production:

	Ore, Tons	Silver, Oz.	Lead, Lbs.	Zinc, Lbs.
1916.....	69,764
1915 (b).....	39,447
1914 (a).....	49,720 (b)	1,050,000	10,000,000	5,000,000
1913.....	13,959	1,081,849	17,988,805
1912.....	9,702	811,823	13,497,260

(a) Approximate production. (b) Gross; tons milled, 44,806 in 1914; 35,920 in 1915.

In 1916 shipment totaled 15,399 tons, which included 1,114 tons crude lead ore averaging 57.58% lead and 94.20 oz. silver per ton; 4,171 tons lead concentrates averaging 63.02% lead and 89.12 oz. silver per ton; 10,114 tons zinc concentrates averaging 43% zinc and 20 oz. silver per ton. Total cost per ton, exclusive of development, was \$5.20 per ton; development charges were 78c per ton ore mined, compared with \$4.33 and \$1.10 respectively in 1915.

STAR MINING & MILLING CO.

SURPRISE MINE.

BRITISH COLUMBIA

Owned by Wm. Kent, Kentfield, Cal. H. L. Hollis, gen. mgr., 1025 Peoples Gas Bldg., Chicago; J. P. McFadden, supt., Sandon, B. C.

Property: 3 crown granted claims, 93 acres, 2 miles N. E. of Sandon, in Slocan mining district, said to show silver, lead and zinc ore in a fissure vein in slate with N. E. strike and dip of 65°. Crude lead ore averages 148

oz. silver per ton, 65% lead, and 7% zinc. Mill feed averages 28 oz. silver per ton, 9% lead, and 16% zinc. Ore reserves not estimated.

Development: by tunnels; main tunnel 3,000' long is 1,000' below outcrop; underground workings total 12,000'.

Equipment: includes an aerial tram, concentration and flotation plant.

Shipments: in 1915 totaled 2,550 tons lead concentrate, 2,740 tons zinc concentrate and 375 tons crude lead ore.

VAN ROI MINING CO.

BRITISH COLUMBIA

Controlled by Le Roi No. 2, Ltd., Rossland, which holds 63,193 ordinary and 10,483 preference shares, out of 90,000 and 30,000 issued.

Office: F. A. Labouchere, sec., 539 Salisbury House, London, E. C., Eng. **Mine office:** Silverton, B. C.

Directors: Lord Ernest Hamilton (chairman); A. B. Dealtry and H. W. Morrison. Alex Hill & Stewart, cons. engrs.; T. J. Lloyd, supt.

Inc. July 9, 1908. **Cap.**, £34,500 in 30,000 £1 pfd. and 90,000 1s. ordinary shares.

Property: the Vancouver group of claims in Slocan district, B. C. Operations were stopped in 1914, but resumed early in 1917 at mine and mill. Ore contains silver, lead and zinc. An option was granted to a syndicate, Dec., 1916.

STIKINE DIVISION

A. B. C. METALS CO.

BRITISH COLUMBIA

See Alaska British Columbia Metals Co.

ALASKA BRITISH COLUMBIA METALS CO.

BRITISH COLUMBIA

Office: 50 Broad St., New York.

Officers: S. I. Silverman, pres.; Chas. S. Cohen, v. p.-mgr.; S. B. Silverman, sec.-treas., with J. D. Trenholme, J. C. Eden and Louis N. Gross, directors.

Inc. Dec., 1915, in Wash. **Cap.**, 1,000,000 shares \$1 par; outstanding 200,000 shares; 500,000 shares held for issue. Transfer agent, 50 Broad St.; Registrar, Metropolitan Trust Co., New York City. Listed on New York Curb.

Company's report for 1915 shows assets of \$1,700,000 which include 400,000 shares Stikine Mining Co., \$400,000; option on 200,000 shares Stikine Mng. Co., \$175,000; 200,000 shares Glenora Mining Co., \$200,000; option on 50,000 shares Glenora Mining Co., \$37,500; Stikine claims \$750,000; machinery, supplies, etc., to make up the balance.

Property: 4 groups of claims in B. C.; company's newest and most important holdings are the Tofino Co.'s mines and the Dewdney group, or Indian Chief mine of the Dewdney Canadian Syndicate; optioned by the Tidewater Copper Co., and bond transferred to A. B. C. Co.

Also owns the Stikine group, 3 claims of the Stikine Mining Co. located 115 miles from Wrangel, Alaska, up the Stikine River, thence 2 miles by trail to claims; elevation, 1,500' to 2,500'. Claims said to have a mineral zone 3,000' wide, running through entire length of claims, with "irregular deposits occurring here and there throughout the entire zone, which lies in a granitic formation." Little work has been done on the claims. Average sample taken from the first 150 tons ore mined said to yield \$35 gold and silver; 12% lead; 16½% zinc per ton.

The Glenora group: 3 claims, located 5 miles from Glenora, 150 miles up the Stikine river from Wrangel, Alaska, said to cover 4,500' along the strike of vein. **Ore:** chalcopryite, containing gold and silver. No work has been done except a little open-cutting.

The Jumbo group, 4 claims, located on Copper Creek, at the end of Tofino Inlet, Clayoquot mining division, Vancouver Island, B. C., said to show 1' to 4' of chalcopryite in a limestone formation, with diabase hanging-wall. **Development:** 65' shaft with 80' drift and several short tunnels.

The Dewdney, or Indian Chief mine of the Tidewater Copper Company at Sydney Inlet, Vancouver Id., is reported to be fully equipped. **Ore:** said to run 50% copper and \$20 in silver. A 300-ton concentration mill was under construction in 1917 to treat the 500,000 tons of 2% copper ore, said to be in sight. There is also said to be a cliff of high-grade ore 40' wide.

The Tofino property shows 4' vein of high-grade ore, which will be mined when a 600' tram line is completed. Company reports "in two tunnels alone there is an estimated profit of two and a half million dollars on the copper ore in sight now. Additional tonnage is being opened up every day." Shipped 600 tons of 4% ore to Tacoma, Dec. 1916. A 3-year contract with the Tacoma smelter calls for 1,500 tons per month. Two shipments made to May, 1917, netted \$17,000. Employs 30 to 40 men.

See Ann. Report Minister of Mines, B. C., 1916, pp. 337 and 361.

TRAIL or ROSSLAND DISTRICT

See Geology and see Deposits of Rossland, B. C., by Chas. W. Dryden. Mem. 77, Canadian Geol. Survey.

CONS. MG. & SM. CO. OF CANADA.

BRITISH COLUMBIA

Secretary and office: J. Kitto, Room 1202, C. P. R. Bldg., Toronto, Ont. **Works office:** Trail, Trail district, B. C.

Officers: W. D. Matthews, pres.; Geo. Sumner, v. p.; Jas. J. Warren, managing dir.; preceding, with E. B. Osler, Chas. R. Hosmer, H. S. Osler, W. L. Matthews, J. C. Hodgson and Wm. Farwell, directors; Robt. Holden Stewart, cons. eng.; Selwyn G. Blaylock, asst. mgr.; T. W. Bingay, compt.; James Buchanan, smelter supt.; J. F. Miller, refinery supt.; M. E. Purcell, supt. Centre Star mines; F. S. Peters, supt. Le Roi mines; J. K. Cram, supt. St. Eugene and Sullivan mines; Fred Chapman, supt. construction at smelter; W. M. Archibald, mines eng.; and E. H. Hamilton, metallurgical mgr.

Inc. 1905 as Canadian Consolidated Mines, Ltd. **Cap.**, \$15,000,000; \$25 par; issued \$10,477,450; increased from \$5,500,000 in 1909 to \$7,500,000, and again in Dec., 1915, to present amount. Company's fiscal year ends Sept. 30. Annual meeting, third Tuesday in December.

Transfer agents: Toronto General Trusts Corporation, and Royal Trust Co., Montreal.

For fiscal year 1916 net profits were \$996,496, and surplus account showed a balance of \$2,278,459. **Dividends:** for fiscal years—\$234,940 in 1906; \$480,005 in 1907; \$66,940 in 1908; \$464,352 in 1913; \$464,376 in 1914; \$464,398 in 1915; \$776,338 in 1916 and 1917, making \$3,677,786 to 1918.

An 8% dividend rate was resumed July 2, 1913, when 2% was paid; changed Jan. 1, 1916 to 10% per annum, payable quarterly.

Sales of refinery products in 1916 amounted to \$7,203,807.

Property: company was formed to take over the following properties, either by direct ownership, or by stock control; War Eagle Consolidated Mining & Development Co., Ltd.; Centre Star Mining Co., St. Eugene Consolidated Mining Co., The Rossland Power Co., and the Trail smelter, formerly operated by the British Columbia Southern railroad. In 1907, the Iron Mask, Idaho and Enterprise mines at Rossland were purchased and the Phoenix Amalgamated Copper Mines, Ltd.; also the Keystone and

Four Ace claims adjoining the Phoenix, located at Phoenix, B. C. In 1910 the company acquired the La Plata, or Molly Gibson group, near Nelson, and the No. 7 group in the Boundary district. In 1911, company purchased control of the Fort Steele Mining & Smelting Co., Ltd., owning the Sullivan silver-lead mine, near Fort Steele; Le Roi Mining Co. at Rossland; the Virginia and Abe Lincoln Mines. In 1915, company purchased the Monte Christo, Paul Boy, Eddie J. and the Iron Horse mines, all at Rossland, and acquired a controlling interest in the Silver King Mines., Ltd., at Nelson. Also the No. 1 and the Highland groups in Ainsworth. In 1913, the Deer Park, Grand Prize and Mabel in Rossland were taken over and the Ottawa Mine near Slocan City purchased. Control was purchased in the Quatsino Copper Co., operating on Vancouver Island.

Late in 1917 the company acquired properties in the Camp McKinley and Fairview districts, near Keremeos, B. C., and Molson, Wash. Properties contain silicious flux.

The **Le Roi-Centre Star** group, on the southern slope of Red mountain, at Rossland, is the principal property. Country rock is a series of effusive and fragmentary volcanics of the Paleozoic age, intruded by an elongated mass of monzonite-porphry. This monzonitic mass, with its adjacent rocks, has been intruded by a large number of nearly vertical dikes, from a few feet to 250' wide, with generally N.-S. trend, the dikes being basaltic, and occasionally slickensided, larger dikes cutting off the veins completely, with the more important orebodies occurring at the points of intersection, and having a series of faults, mainly parallel to the dikes. Ore occurs in shoots of 3 to 50' width, and 50 to 600' length, widening at intersections of veins with dikes. Ore is strongly auriferous and fairly argentiferous chalcopyrite, associated with pyrite, and pyrrhotite with gangue of silicious altered country rock, ore ranging 0.5 to 2% copper and \$8 to \$20, and occasionally up to \$100, gold per ton. Pay shoots extend, in some cases, from wall to wall, and form local enrichments, wall in some cases being very indistinct, and ore shading into the country rock. There are several veins, the more important being the Centre Star, Le Roi and War Eagle, on which the mines are opened, these being shear zones, carrying chalcopyrite disseminated mainly in pyrrhotite, with some pyrite and occasional arsenopyrite.

The Rossland group, which now has a total acreage of about 775 acres, includes the Le Roi, Centre Star, War Eagle and Iron Mask mines, which are practically one, all connected by drifts and crosscuts, with about 56 miles of workings. For fiscal year 1915-16, new openings were 10,290', with 17,271' of diamond drilling. Mines are worked by overhand stoping, partly on the shrinkage system and partly timbered with square sets, cut from round timber. There is an electric haulage throughout, with 13 electric locomotives hauling 2-ton side dumping cars to the underground ore pockets of the Centre Star shaft. The ore pockets are on the hanging-wall side of the shaft, 2 on each level, 1 directly behind the other, the front bin, of 70 tons capacity, being for waste, and the 150-ton back bin for ore.

The water from the lower levels of the Le Roi and the other connected workings is handled through the Centre Star, the pumping equipment consists of a No. 6 Cameron on the 16th level, a No. 7 Cameron on the 14th level, a 4" centrifugal driven by a 50 h. p. induction motor on the 12th, a triplex 7½"x15" plunger driven by a 50 h. p. motor on the 10th, a quintuplex 4x12" plunger driven by a 50 h. p. motor on the 6th, a triplex 7"x10" plunger driven by a 50 h. p. motor on the 5th level, while a 7½"x10" triplex plunger driven by a 75 h. p. motor on the 9th level

Le Roi handles the water from the levels above to the Black Bear adit.

The Centre Star mine has a 2,200' three-compartment shaft, sunk at about 68°, with 16 levels opened, at intervals of 125 to 175'. The shaft timber has been replaced with concrete from the 12th level to the bottom. The Centre Star has 8 or 10 different orebodies, but mining is principally from the Centre Star vein, the ore of which averages 0.6% copper, 0.3 oz. silver and \$8 to \$10 gold per ton. Development in this mine last year was fairly satisfactory.

The mine has a 106' wooden head frame, with 11' sheave wheels, a 24x36" Jenckes-Farrel crusher of 100 tons hourly capacity, driven by a 75 h. p. alternating motor; shaft storage bins of 450 tons capacity, sorting and sampling plant with pan and Link Belt conveyors, carrying ore to the shipping bins of 1,200 tons capacity. The engine room has an 1,100-h.p. 28x60" Nordberg hoist, with two 10' drums of 5' face, good for 10-ton loads to the depth of 3,000' at a speed of 2,000' per minute, using a 1¼" plow-steel hoisting rope, hoist cages 10' high, having hinged bottoms that are turned back when hoisting ore, with 4-ton skips swung under.

Buildings include carpenter shop, smithy and machine shop.

In the Centre Star-War Eagle-Iron Mask group, ore is mined from the 3 Centre Star veins, viz., Main, North and South, as well as from the Iron Mask, War Eagle, Josie, Poorman and Mugwump veins.

The War Eagle 1,300' three-compartment shaft, sunk at 50°, is now used only for handling men, timber and supplies, a 8¼"x12" air hoist having been installed on the No. 2 level for the purpose, after the destruction by fire of the original surface equipment. The War Eagle mine has 11 levels opened.

Exploration in the deepest levels of War Eagle in 1916, obtained no definitely satisfactory results as to the continuation of orebodies existing on No. 16 level.

The Le Roi group is producing ore from the Le Roi main South, Intermediate, North Peyton and Hollywell veins. The Le Roi mine has a 1,650' five-compartment shaft, connected underground with the Star shaft; the Le Roi Workings are also connected on the 15th, 1,650' and 1,850' levels with those of the Centre Star.

A sulphide orebody containing copper was opened in 1916 on the level corresponding with No. 13 in the Centre Star.

The Le Roi shaft is equipped with a Fraser & Chalmers hoist, good for 3,000', and there is also a smaller hoist having 6' drums, two 40-drill air compressors and other necessary equipment.

Electric power for the complete operation of the mines is taken from the Bonnington Falls plant of the West Kootenay Power & Light Co., 35 miles distant, at 60,000 volts, stepped down at the mine to 2,000 volts for distribution and use. The compressor room has a 120-k.w. direct-current generator, driven by an alternating current motor, supplying current at 250 volts for electric motors on surface and underground, and for lighting. Air for drilling is furnished to all the mines through one system. The Centre Star plant has two 40-drill compressors, one a Canadian-Rand Corliss duplex compound 2-stage compressor, with 22" and 40" steam cylinders and 48" stroke, with 28x32" air cylinders, but the steam cylinders have been disconnected, and compressor is rope driven by a 650-h.p. Westinghouse induction motor. The other compressor is a hybrid, built over from an Ingersoll straight-line into a duplex machine having 2 Canadian-Rand cylinders, rope-driven by a 600-h.p. Canadian Westinghouse synchronous motor.

The Le Roi compressor working on the same system is a Rand 2-stage

air compound steam 40-drill machine, with steam cylinders cut out and air cylinders bushed to 3,000 cu. ft. capacity, rope-driven from a 400-h.p. synchronous motor. A second 2-stage air compound steam 40-drill Rand machine is in reserve, with battery of boilers sufficient to drive both machines.

Operations at Rossland, 1915-16 have been extensive, 310,720 tons of gold-copper ore having been shipped.

These mines are broadly gold rather than copper producers.

The **Richmond-Eureka** mine, at Sandon, B. C., has argentiferous lead and zinc ores, developed by tunnels aggregating $1\frac{1}{4}$ miles in length. Ore is transported to bin on C. P. R. R. tracks at Sandon by 4,000' aerial tram.

The **Sullivan** mine, at Kimberly, is a lead-zinc producer, whose ore occurs in replacement deposit, in a fine grained argillaceous quartzite. Ore is a mixture of fine grained galena zinc blende and iron sulphides, the ore shoot showing a maximum stope width of 125'. **Development:** principally by tunnels and raises. Workings total $6\frac{1}{4}$ miles. Production: 1916, 91,130 tons, double that in 1915.

Equipment: consists of an hydraulic installation, comprising 30' concrete dam, 5,000' of 30" wood stave pipe delivering water under a head of 200' to 3 Pelton wheels operating a 120-k.w. alternating current generator, 2,200 volts, and driving a 3,000 cu. ft. Rand 2-stage compound steam air compressor, steam cylinders disconnected. An auxiliary steam plant of sufficient capacity to operate the machine at full load was installed to provide against water shortage. Electric current from the 120-k.w. generator is carried to the mine over 7,000' transmission line. There is also an auxiliary air plant at the mine comprising a 6-drill, 2-stage compound steam Rand air compressor, and sufficient boiler capacity to operate.

A 6,000' aerial tramway carries ore from the mine rockhouse to the loading bins on the C. P. R. R. tracks. About 100 men are employed.

The **Molly Gibson** mine, bought 1910, formerly owned by Molly Gibson Mining Co., Ltd., and later by La Plata Mines, Ltd., has a regular fissure vein in granite containing highly argentiferous lead-zinc ore. Developed by over two miles of tunnels. An aerial tram 2 miles long connects the mine and mill, while a second, five miles long, connects mill and loading bins, 5 miles from Kootenay lake. The mine is equipped with 100-ton mill, operated by water power, and two air compressors. Employs a small force. Mill was not operated in 1916.

The **St. Eugene** mine, at Moyie, has produced over 1,000,000 tons of silver-lead ore. The mine has about 20 miles of workings, is equipped with a 500-ton mill, but considerable of its equipment has been dismantled. Now being operated by a small force and shipments of crude ore are regularly made.

No. 1 Group, at Ainsworth, 400 acres, has a contact deposit between dolomite and a dark lime schist. The ore consists largely of oxides of iron, zinc and lead in a silicious lime gangue. Principal value is in silver. Development, by tunnel and winze, totals $1\frac{1}{2}$ miles. Equipment includes a 2-stage, 11x16x18" Jenckes air compressor, driven by belt from 150-h.p. 2,080-volt motor, power being supplied from a 350-k.w. generator at Highland Mill, Cedar Creek, 9,000' distant; and an aerial tram, connecting mine ore bins with loading bins, on shore of Kootenay lake. Storage capacity at mine and lake bins is about 700 tons.

Highland Group, 240 acres, has a series of fissure veins. Ores are silver-lead and development is by $2\frac{1}{2}$ miles of tunnels. Equipment includes 6-drill air compressor, driven by water power, and a single rope aerial tram 4,000' long, connecting mine ore bins with 150-ton mill at Kootenay lake.

Power for mill is from a 350-k.w. generator, driven by a Pelton wheel under a head of 1,000'.

The **Ottawa** mine has a fissure vein in granite. Development by $\frac{1}{2}$ mile of tunnel and winze. Principal metal is silver, associated with copper, lead and zinc sulphides, some barite in gangue.

The **Silver King** mine on Toad mountain, back of Nelson, purchased in 1912, was unwatered in 1913, the surface plant repaired, machinery installed and made ready for production. The mine works well mineralized fissure veins in granite, yielding high-grade silver-copper ores. Development by $3\frac{1}{4}$ miles of tunnels and winzes. Equipment includes single rope aerial tram $4\frac{1}{2}$ miles long, connecting ore bins at mine with shipping bins on C. P. R. R. tracks at Nelson, 2 single stage straight line Ingersoll air compressors, driven by motors, a double drum-gearred electric hoist, using current at 220 volts and a 7"x10" triplex plunger pump. Mine not operated in 1915-16; all development operations have been curtailed after outbreak of European war.

The **Trail Smelter**, located near the International boundary line, treats both copper and lead ores and does an extensive custom business in addition to treating the company's ores. Smelter was closed down in Nov., 1917, on account of labor troubles.

There are two sampling mills, equipped with crushers and Vezin samplers; No. 1 mill, for copper ores, has 200 tons hourly capacity; No. 2, for lead ores, has 100 tons hourly capacity.

The smelter has a calcining department, and blast-furnace departments for copper and lead. All the copper ores are bedded and hauled from the beds by electric locomotives to the charge bins, and from charge bins to the blast furnaces. The lead ores for roasting department are delivered to beds by a system of belt conveyors and drawn from these beds by a belt conveyor over an electric scale to the roasters.

The calcining department consists of three 22' 6" 7-deck Wedge roasters, and five 26' Godfrey roasting furnaces. The roasted ore is sintered in 34 Huntington-Heberlein sintering pots and 2 Dwight-Lloyd sintering machines, fumes being passed through the Cottrell electric precipitator.

The 1,800-ton copper smelter has 5 blast furnaces, largest 45"x420", all taking a 32-oz. cold blast. Ore was treated crude in the blast furnaces, making a first-fusion product of 10 to 15% copper tenor, which is cooled, crushed and smelted with silicious ore and 4% coke to a matte of 35% copper, and shipped to Tacoma for conversion. Two 12' Great Falls type converters were installed during 1916, and in future all matte will be converted here.

The 350-ton lead smelter has one 45x180" and three 45x180" blast furnaces, with mechanical feed, taking mainly calcined ores, crude lead ores being roasted in seven 26' Godfrey furnaces, which reduce the sulphur from the original tenor of 16% to only 8%, and these calcines are re-roasted in fifteen 9' Huntington-Heberlein sintering pots, yielding a product carrying only $4\frac{1}{2}\%$ sulphur. The fully sintered ore, carrying 30 to 50% lead, is smelted in the blast furnaces, each making 50 to 85 tons of lead bullion daily, with about 4% matte fall. This matte is roasted and again put through the blast furnaces, and slags are granulated. Blast furnace gases are passed through a Cottrell precipitator.

In connection with the smelters is an electrolytic lead refinery, handling anodes cast from the silver-lead bullion. This plant, of 100 tons daily capacity, was the first electrolytic lead refinery ever built, and uses the Betts process. The lead is of exceptional purity, with average assay of about 99.997%, which means that a short ton of lead carries only about 1 oz. of impurities, which is marvelously successful work.

The silver refinery, taking silver sludge from the electrolytic lead tanks, has a water-jacketed reverberatory furnace for the production of doré metal, and the necessary kettles, tanks and bluestone plant for parting the precious metals with sulphuric acid, also furnaces for melting and casting the silver and gold bullion. Products are silver 0.999 fine, and gold 0.995 fine.

An electrolytic zinc plant was erected in 1916, and is now producing from 25 to 50 tons of spelter daily. The Sullivan and other mines supply the ore.

The process is similar to that used at Anaconda, Mont., but is the direct result of the operation of an experimental plant treating ore from the Sullivan mine and producing 1,000 lbs. of zinc per day.

Power for the reduction works is electric throughout, brought 30 miles from Bonnington falls, on the Kootenay river, received at the transformer station at 22,000 volts, and there stepped down to 550. The installed electric capacity gave a revenue producing load of 11,152 h.p. during 1916. No. 2 power house was enlarged. A 20,000 h.p. distributing station was erected at Smelter, B. C.

Blast is supplied at 32 oz. for all furnaces, by one No. 9, and one No. 9 1/27, one No. 11 and one 400 cu. ft. Root blower, and one 200 cu. ft. Connersville blower.

The works have a central heating station and well-equipped machine, carpenter, boiler and electrical shops. The assay office, which handles an unusual variety of work, in great detail, is exceptionally commodious and well equipped.

In the past three years the smelter has had many betterments, both in the lead and copper smelting departments. In 1915 these included an additional lead furnace, charge bins equipped with conveyors and weighing hoppers for the lead furnace department, wash houses for the men, an additional 20-ton crane in the roasting department, new lead ore sampling mill, copper converters with necessary equipment, beds for bedding copper ores, and additional tanks at the lead refinery.

In 1916 a briquetting plant was added to the lead smelter; lead sampling mill was completed, and an ore bedding system. The sulphuric acid plant was erected, with 15 tons daily capacity; also the hydrofluosilicic acid plant. For casting copper anodes a reverberatory was built. A 17-ton electrolytic copper refinery was completed.

Production:

Year	Tons, Ore Smelted	Gold Oz.	Silver, Oz.	Lead, Lbs.	Copper, Lbs.	Zinc, Lbs.

1909.....	114,920	2,443,475	43,675,077	4,637,631
1908.....	121,380	2,224,888	32,157,139	4,004,468
1907.....	69,186	1,100,271	20,380,083	3,433,310

Considering that the Centre Star and War Eagle mines were reported worked out when taken over, the company has made a signal success. The management is enterprising and thoroughly competent.

Company at present is the only one in the world producing electroly-

tically refined copper, gold, lead, silver and zinc at one plant, also making sulphuric acid, hydrofluosilicic acid, and manganese dioxide. Trail is a metallurgical center using the latest processes known.

Owing to labor troubles in November and December, 1917, production for this year will be reduced.

FIFE MINES, LTD.

BRITISH COLUMBIA

Address: Rossland, B. C. Chas. Dempster, gen. mgr..

Property: the Hattie Brown claim at Rossland and the Dykehead, Ben Hur, Three Bells, and Fife claims at Fife, near Christina lake, 12 miles E. of Grand Forks, Boundary district, B. C. Claims show a vein up to 30' in width, carrying about 6' of smelting ore, with a balance of concentrating grade, developed by a glory hole, an 80' shaft and a main tunnel having a 235' winze.

Ore: contains chalcopryrite, carrying gold and silver values, claimed to average 3 to 6% copper and \$4 to \$8 gold per ton.

Equipment: includes necessary mine buildings and a 5-drill Rand air compressor. Property considered promising. Idle.

LE ROI NO. 2, LTD.

BRITISH COLUMBIA

Secretary's address: F. A. Labouchere, 539 Salisbury House, London Wall, London, E. C., England. **Mine office:** Rossland, Trail district, B. C.

Directors: Lord Ernest W. Hamilton, chairman; A. B. Dealtry, H. G. T. Hawes, H. W. Morrison and Major C. H. Campbell. Ernest Levy, mine mgr.; Alex. Hill & Stewart, cons. engs.

Inc. June, 1, 1900, in Great Britain. **Cap.,** £600,000; shares £5 par; fully issued and fully paid. Dividends: 5s in 1901; 5s in 1902; 2s in 1904; 3s in 1905; 8s in 1906; 3s in 1907; 6s in 1908; 6s in 1909; 6s in 1910; 5s in 1911; 1s in 1912; 2s in 1915-16. Total dividends to end of 1916 were £2 12s per share, or £312,000. For fiscal year ending Sept. 30, 1916, and presented March, 1917, there was a loss of £12,860, after writing off £13,024 depreciation, and £26,475 on misc. shares and bonds. Balance carried forward, £22,327.

Costs: for mining, 1916, were \$5.25 per ton; smelting, \$6.60, which, after adding development and depreciation charges, total \$15.12 per ton, as compared with \$12.22 in 1915.

Property: 120 acres, including the Josie No. 1 and Annie mines, on Red mountain; also 8 claims near the old mine, 2 claims near the Velvet mine, and 5 claims in the Ymir district of British Columbia.

Company is developing the adjoining Giant-California mine by diamond-drill and tunnel. 7,433' of the drilling has been done and a total of \$41,994 spent to date on property.

In 1915-16, 273 tons of ore were shipped at a cost of \$4.88 per ton.

Ore: Josie mine has 5 main veins. Ore is mostly chalcopryrite, associated with pyrite and pyrrhotite, in a silicious gangue, averaging 2.25% copper, 0.45 oz. gold, and 1 oz. silver per ton. Giant-California mine has three of the Josie veins. Ore averages 0.48% copper, 0.14 oz. gold, and 0.25 oz. silver per ton.

Development: by the 1,300' Josie main shaft, and by 3 tunnels, 2 on the Josie and 1 on the Poorman claim. New underground openings made were 3,729' in 1914; 4,092' in 1915; also 7,434' of diamond-drilling.

Apart from some high-grade shoots, results generally were not especially good.

Equipment: includes a 150-h.p. electric hoist, a machine shop, framing shop, smithy, superintendent's dwelling, etc.

The mill, across a small gulch from the Josie shaft, is of 50 tons rated daily capacity, having Blake and Gates crushers, 2 Chilian mills, 3 Jencke

sizers, and 6 Wilfley tables. An Elmore oil concentrator, fully described Vo. IV., was installed 1903, proving a technical, but not a commercial success, and was superseded by Wilfley tables. Concentrates average 0.59% copper; 0.83 oz. silver and 1.02 oz. gold per ton.

In 1916, mill treated 2,730 tons of ore assaying 0.24% copper and 0.13 oz. gold.

Production: largest copper production was 3,001,027 lbs. in 1902. Recent production has been as follows:

Year (a)	Tons, Ore Prod.	Copper, Lbs.	Gold, Oz.	Silver Oz.
1916*.....	19,231	730,015	7,258	17,675
1915.....	15,681	870,268	7,961	23,788
1914.....	29,679
1913.....	35,553
1912.....	507,499	14,157	12,281
1911.....	864,500	22,725	19,219
1910.....	970,966	26,447	24,078

*Ore ran \$20.625 per ton from the Josie mine.

(a) Fiscal year ending Sept. 30.

Property considered valuable and management good.

ROSSLAND KOOTENAY MINING CO., LTD. BRITISH COLUMBIA

Idle since 1904.

Office: 325 Crown Court, Old Broad St., London, E. C., Eng. **Mine office:** Rossland, Trail district, B. C.

Officers: C. Williamson Milne, chairman; Dr. G. Schack-Sommer and Lionel W. Harris, directors; W. S. Gregg, sec.

Inc. May 17, 1902, in Great Britain, as a reconstruction of Rossland-Great Western Mines, Ltd., and Kootenay Mining Co., Ltd. **Cap.**, £150,000; shares £1 par; issued, £148,607.

Property: 171 acres, at Rossland carrying auriferous and argentiferous copper ores, of low grade, and 113 acres placer at West Kootenay. The company also owns 2,615 shares of the Santa Eulalia Development Co., Ltd., owning the Nueva Chihuahua property at Santa Eulalia, Chih., Mex. Revolutionary conditions have prevented any work for several years in Mexico.

SILVER CROWN MINING CO.

BRITISH COLUMBIA

Office: 505 Rookery Bldg., Spokane, Wash. **Mine office:** Trout Lake, B. C.

Officers: Fred Hamilton, pres.; A. C. Bartels, v. p.; A. Herman, sec-treas., with Geo. Skore and H. C. Weyerhoist, directors.

Inc. Feb., 1917, in Washington. **Cap.**, \$125,000; shares 10c. par; assessable; 852,250 issued.

Property: 3 claims, 150 acres, in West Kootenay mining division, B. C.

Geology: fissure vein in granite and limestone, dipping 45° and pitching N. W. Shoots are from 18 to 36" wide. Ore contains silver and lead, assaying \$125 per ton.

Development: by 1,300' tunnel to depth of 550'.

Production: in 1917 was \$65,000.

BOWENA COPPER MINES, LTD.**BRITISH COLUMBIA****Office:** 417 Rogers Bldg., Vancouver.**Officers:** D. McCallum, pres.; F. B. Lewis, v.p.; C. M. Oliver, sec.-treas.; preceding officers are directors.**Inc.** May, 1913, in B. C. **Cap.**, \$300,000; shares \$1 par; outstanding, \$247,000. Annual meeting Dec. 13. Spent \$17,003 in development work to date.**Property:** 3 claims, 150 acres, crown-granted, on the east side of Bowen Island, 12 miles west of Vancouver, said to show disseminated copper ore assaying 1.9% copper and containing gold and silver.**Development:** 170' tunnel, which management claims has blocked out 10,000 tons ore. Trial shipment (tonnage not given) sent Ladysmith smelter in April, 1917, ran 3.3% copper, \$2.40 gold and 1.16 oz. silver per ton and netted \$14.18 per ton.

Alexander Sharp, E. M., reports 8,000 tons of 1.8% ore and G. S. Eldridge, Provincial assayer, Vancouver, finds the 10 dumps run 2.42% copper.

A 50-ton concentrator is to be built.

BRITTANIA MINING & SMELTING CO., LTD.**BRITISH COLUMBIA**

All outstanding stock has been acquired by the Howe Sound Co., which see.

BRITISH AMERICAN MNG. CO., LTD.**BRITISH COLUMBIA****Office:** 2616 Chicago Ave., Minneapolis, Minn.**Officers:** H. J. Peterson, pres.; E. E. Harnish, v. p.; O. L. Company is successor of Quatsino Copper Co.**Inc.** Sept. 15, 1916, in British Columbia. **Cap.**, \$1,000,000; shares at \$5 par value.**Property:** Elk Mountain, near Elk Lake, Quatsino Mining Div., Vancouver Island, B. C. Ore shoots carry chalcopyrite with gold and silver values in magnetite. The shoots occur in fissures with dip of 40° that cut through diorite. Property is being developed through 1,000' tunnel, by a 250' winze and by 1,000' of underground workings, having greatest depth of 500'. Mine has 6x8' single drum hoist, 300 cu. ft. compressor and water power. Operating expenses were \$14,000 in 1916.**HOWE SOUND CO.****BRITISH COLUMBIA****New York office:** 734 Fifth Ave. **Mine office:** Britannia Beach, B. C.**Officers:** G. B. Schley, pres.; J. W. D. Moodie, v. p. and gen. mgr.; E. J. Donohue, sec.-treas.; preceding officers, D. G. Marshall and E. B. Schley, directors; C. P. Browning, mine supt.

Inc. 1903, in Maine. **Cap.**, \$3,000,000; shares \$1 par; 1,984,150 issued. Bonds, \$5,111,000, twenty year, 6%.

Balance sheet: for 1916 showed assets of \$12,702,834, which included plant and property, \$10,947,169; and current assets, \$1,755,665; current liabilities, \$961,141; profit and loss account, \$3,018,689. **Operating statement** shows total operating profit, \$2,802,767; depreciation and interest, \$1,227,906, leaving a net profit for 1916, of \$1,574,861, as compared with \$194,238 for the previous year. Over \$1,000,000 was expended in 1916 for construction and equipment.

Property: all the stock of the Britannia Mining and Smelting Co., Ltd., which in turn, owns its subsidiaries, the Britannia Power Co. and the Howe Sound Power Co.

Also 53,800 shares of the total issue of the El Potosi Mining Co., which, in turn, owns a large majority of the stock of the Chihuahua Mining Co.

Britannia Mining & Smelting Co., Ltd.

Property holdings at end of 1916, shows 250 crown granted mineral claims and 17 beach lots of 11,639 acres; 198 mineral claims of 9,000 acres; 8 timber licenses of 4,366 acres; a total of 25,005 acres. During the year, \$63,000 was spent on prospecting, surveying, crown granting, etc.

The orebodies consist of a series of roughly parallel lenses of chalcopyrite and pyrite in schist, and large masses of silicious material through which chalcopyrite and pyrite are irregularly disseminated. The bulk of the work during 1916 was confined to the series of lenses, the average grade for the year being 2% copper. All the orebodies developed thus far are confined to about 100 acres, the remainder of the company's holdings being but little prospected.

Development: by large glory holes and by a number of tunnels at elevations below the outcrop of 500', 600', 700', 850' and 1,050', the latter being known as the 1,000' level. A new low-level tunnel, 4,336' long, completed July, 1913, to this distance, but which will eventually be driven on through the mountain, gives a depth of 2,200' on the orebody and 1,200' below the old workings. It is now the main working tunnel and is known as the 2,200' level. At 3,922' from the portal a raise was driven to the 1,050' level and later enlarged to a 3-compartment shaft. Tunnels 9'x13' are also being driven at the 2,700' and 4,100' levels, the intention being to make them part of the future transportation system whereby the ore will be taken underground to the top of the mill, the portal of the 4,100' tunnel being just above the mill bins. The distances already driven are 1,431' and 1,678', respectively, at a cost of \$103,000. Underground work in 1916 totaled 19,705' as compared with 2,595' in 1915.

Ore reserves: estimated Jan. 1, 1917, in Britannia mine: broken ore in stopes has been increased 339,730 tons, increasing the total stored to 919,322 tons of 3.08% copper; total ore developed, 6,462,780; probable ore, 6,756,350; possible ore, 4,616,050; total, 18,754,502 tons. Average grade is given as 1.97% copper.

Equipment of the shaft includes a double-drum electric hoist on the 1,050' level and a Gates crusher in the rock-raise between the 1,050' and 2,200' levels, placed on the 1,800' level and run by a 75 h. p. motor. This rock raise, 200' east of and connected with the shaft, serves as a storage bin for ore, with capacity of 4,000 tons above the 1,800' level and 2,000 tons below the 1,800' level. The raise is lined with 12" by 12" timbers. Electric motors haul the ore from the chute to the portal of the tunnel. From the portal the ore is hauled 3 miles by electric railway to head of a 33% incline, 5,500' long, vertical drop of 1,450', which leads to the bins of the concentrator at the water's edge. Other similar raises, to be equipped with

crushers, are being driven in different localities to give flexibility to the operation.

By system of dams, intakes and pipe lines, Britannia Creek has been harnessed to produce over 8,000 h. p. during most of the year, and it is expected that the work done in 1917, to develop Furry Creek, will produce over 2,500 h. p., which will be increased by additional installations in the future. As reserve power, there is a steam turbine plant of over 3,000 h. p. capacity located at the beach.

Equipment: includes 8 compressors, some driven by water wheels, some by steam, and some by either steam or water-generated electricity, with total capacity of nearly 20,000 cubic feet of free air per minute.

The four units of the new mill are in operation, and although originally designed to handle 2,000 tons daily, are enabled by improvements and additional machinery to care for 2,500 tons. The old mill, originally capable of treating 800 tons daily, will be dismantled and all available units transferred to the new mill. This will bring the capacity of the new mill to approximately 3,000 tons.

In general the system of milling consists of coarse crushing, jigging by Hancock jigs, fine crushing in tube mills and Hardinge mills, and flotation in Minerals Separation machines. The ratio of concentration for 1916 was $9\frac{1}{2}:1$, and the average recovery was $91\frac{1}{2}\%$. Shipments of concentrates to the smelter, resulting from mill operations, amounted to 55,186 dry tons and assayed per ton, .014 oz. gold; 1.67 oz. silver; 14.76% copper; 3.22% zinc.

There are 2 townsites in connection with the company's operations, one at Britannia Beach, on the shore of Howe Sound, and the other, known as the Mine Townsite, laid out at the portal of the new tunnel. It has all necessary buildings for equipment and men, the mine buildings being the best and most comfortably equipped in British Columbia. There is a large company store at Britannia Beach.

When the new mill is operating at full capacity the company estimates costs per ton as follows: Mining, 50c; milling, 35c; transportation, 5c. These are exceptionally low, and it is doubtful if they can be attained. Total tonnage milled in 1915, 212,158 tons; cost per ton, \$0.63; mining costs, including development and crushing, \$1.77 per ton. Concentrates assayed 15.04% copper, 1.67 oz. silver and 0.013 oz. gold. Net cost of producing copper said to be 7.3c per lb.

Production was suspended Oct., 1907-1910. Production since 1909 is as follows:

	Copper, Lbs.	Gold, Oz.	Silver, Oz.	Total Value
1916.....	16,288,835	791	91,905	(a)\$6,042,538
1915.....	9,058,045	397	50,306	1,616,133
1914.....	11,841,232	213	68,515	1,640,379
1913.....	13,167,000	89	72,300	2,052,188
1912.....	14,300,000	76,500	2,383,285
1911.....	8,685,000	46,000	1,074,334
1910.....	520,000	1,000	7,500	64,000

(a) includes lead and zinc values.

The Britannia proved a hard problem to handle for years, but has made money under the present management, which is thoroughly capable. A successful future seems certain, and the results are a tribute to the far-seeing judgment and persistency of Mr. G. B. Schley.

Mexican properties: the El Potosi and Chihuahua mining companies

comprise 415 acres, in the Santa Eulalia mining district, 18 miles from Chihuahua City, where the company's narrow gauge railroad connects with the National Lines of Mexico. The Santo Domingo, the producing claim of the Chihuahua Mining Co. adjoins the 200 acre claim of the Potosi Company. Other claims are within a two mile radius of the Santo Domingo. A new cave of ore was discovered in Nov., 1916, which, with another extensive deposit forms an orebody 100' wide at the north end, 400' at the south, 600' on its dip, and still strong in the floor. Making allowance for the tonnage shipped during the year, 75,000 tons have been added to the ore reserve. About 5,200' of development work were done in 1916.

The production of the mines was shipped to the A. S. & R. Co.'s plant. The mine workings and development for the past 2 years have been in charge of Mexican foremen; the American organization of the company, owing to disturbed conditions, were drawn out of Mexico and held in El Paso under pay. W. J. Quigley is manager in charge of operations.

COPPER MOUNTAIN MG. & DEV. CO. BRITISH COLUMBIA

Office: 5406 Union Ave., South Tacoma, Wash. Mine near Quatsino, B. C. Reported sold, 1917. Fully described Vol. XII.

LADYSMITH SMELTING CORPORATION, LTD.

BRITISH COLUMBIA

Address: F. A. Sieberling, Goodrich Tire & Rubber Co., Akron, Ohio.
Operating office: Col. W. L. Stevenson, mgr.; H. W. Aldrich, gen. supt., Ladysmith, Vancouver Island, B. C.

Property: 1,247 acres, including 13 claims, crown granted, 342 acres, a 45-acre smelter site and 800 acres timber lands. Owns the Ladysmith Smelter, and mineral lands on Mt. Sicker, purchased from the Tyee Copper Co., in Dec., 1916, for \$275,000.

The Tyee mine, on Mt. Sicker, in the Somenos district, 11 miles N. W. of Duncans, and about 80 miles from Victoria, yielded only 1,200 tons of ore 1907, and has been idle since. The orebody was rich, but shallow, and although it was explored thoroughly, nothing of value was found.

Smelter: known as the Ladysmith works, is well located, on a 45-acre site on Oyster harbor, and treated custom ores from as far N. as Alaska and as far S. as Mexico. The smelter was remodeled and practically rebuilt 1909-1910. There is a 40x210' wharf, having an electric hoist, connected, by an elevated incline trestle, with the smelter bins, which are of 5,400 tons capacity. The works are terraced throughout, permitting handling of material by gravity, and have a capacity of 500 tons daily.

The furnace building has 42x120" and 48x160" Allis-Chalmers blast furnaces, of 200 and 300 tons daily capacity, respectively.

Smelter production was 3,604,474 lbs. copper in 1903; 5,045,000 lbs. in 1904; 3,039,398 lbs. copper, 103,474 oz. silver and 5,952 oz. gold in 1905; 3,173,431 lbs. copper in 1908; 2,148,058 lbs. copper in 1909; 45,758 tons of ore, yielding 3,392,901 lbs. copper, 41,128 oz. silver and 10,041 oz. gold in 1910. In 1911, 42,030 tons of custom ore were treated. Closed down, 1911.

The 250-ton mill was remodeled and flotation installed, 1917.

LASQUETI ISLAND MINING CO., LTD. BRITISH COLUMBIA

Vancouver, B. C.

Officers: R. A. Mather, pres.; A. D. Tennant, v. p.; John D. Mather, sec.; Geo. E. Winter, treas.; Percy Williams, mgr., at last accounts.

Inc. 1910. Cap., \$500,000; shares 25c par.

Property: 3 claims, 150 acres, on Lasqueti Island, on the S. W. end of Texada Island, on the Gulf of Georgia, 55 miles from Vancouver.

Development: by a tunnel, on a 20' vein known as St. Joseph, having 4

paystreaks, of 6 to 24" width, said to carry ore averaging 10% copper and \$20' gold per ton.

Closed down.

LITTLE BILLY OPERATING CO.

BRITISH COLUMBIA

Van Anda, Texada Island, B. C. J. C. Taylor, supt.

Property: the Little Billy mine is said to have an orebody of 8' estimated average width, developed by a 260' shaft, with a 35' headgear.

Equipment: includes an 80 h. p. boiler, single-drum hoist, and a 5-drill air compressor. There is a crude concentrating mill, with sorting tables, and a 500' trestle with double-track gravity tram to a shipping bunker on tidewater. The Granby Co. did some prospecting on the property in 1914. Idle since.

MARBLE BAY MINE

BRITISH COLUMBIA

Owned by Tacoma Steel Co., which see.

MINNEAPOLIS & TEXADA COPPERITE CO., LTD.

BRITISH COLUMBIA

Offices: 1311 Washington Ave., N., Minneapolis, Minn., and Vananda, Texada Island, B. C.

Officers: C. F. Stremel, pres.; E. E. Rorem, 1st v. p.; John Kraft, 2nd v. p.; A. E. Barker, sec.; Wm. Bofferding, treas.; above, with Eden Schmidt, Hilmer Olson, B. F. Laffin and W. H. Curtis, directors.

Inc. in Ariz. Cap., \$1,000,000; shares \$1 par; 400,000 issued.

Property: 5 claims, 240 acres, on Texada Island, 47 miles N. W. of Vancouver, said to show 2 main veins, the Swan and the Paxton, containing copper ore with gold and silver. Paxton vein is said to be traceable 1,500' on surface. Three of properties held under lease have been purchased and paid for. Claims show good ore in 25 test shafts.

Development: 200' shaft, with 300' of drifting; also a number of test pits. On Alladin claims, shaft is being sunk to reach contact of 2 veins at 500'. Considerable mill ore extracted in this work, reported to average 4% copper, 2% lead, and \$5 per ton in gold and silver.

MOUNT SICKER & B. C. DEV. CO., LTD.

BRITISH COLUMBIA

Idle. Office: 30 George Square, Glasgow, Scotland. Fred I. Smith, chairman; John D. Steel, sec.

Inc. Oct. 20, 1898, in Great Britain. Cap., £125,000; shares £1 par. Lands are on Mt. Sicker, Vancouver Island, B. C.

NORSEMEN EXPLORATION CO.

BRITISH COLUMBIA

Office: 1048 McKnight Bldg., Minneapolis, Minn. **Mine office:** Alladin Camp, Vananda, Texada Island, B. C.

Officers: E. E. Rorem, pres. W. H. Curtis, v. p.; C. A. McKenzie, sec.; Allen T. Rorem, treas.; B. F. Laffin, A. E. Barker and Eden Schmidt, directors; Robt. Forbes, cons. engr.; Jas. Forbes Sr., supt.

Inc. in Arizona. Cap., \$500,000; shares \$1 par; issued, \$375,000.

Property: 23 claims, 1,200 acres, 730 patented, on Texada Island, B. C., is heavily timbered and shows contact deposits between limestone, granite and diorite. Copper occurs as chalcopyrite and bornite, with gold and silver values. The Capsheaf claim has an 80' vertical shaft, said to show 10' of ore, carrying 14% copper and \$11 in gold in samples reported as taken from surface down to 59'. Ore expected by manager to average 4% copper and \$6 gold and silver. Test shafts along the vein for several hundred feet show a continuity of the vein, and crosscutting is said to have proved it to be about 25' wide. The Cameron claim, adjoining the Texada iron mine, owned by the Puget Sound Iron Co.—on which extensive development is now in progress, has a capping of magnetic iron with large lenses of chalcopyrite. The vein is reported to be over 180' wide.

An open cut on the face of the Iron mine is 8 to 10' from the line of the Cameron claim, which rises to a height of about 170'. The Cameron is thought to average 4% copper. The Aladdin claim carried silver-lead ores. It has a 212' vertical shaft with about 250' of crosscutting. The Aladdin, De Ore, and Blizzard claims are leased to the Minneapolis & Texada Copperite Co., Ltd., which is now developing. The company's Em and Hazel Ruth claims lie close to and are on the same vein as the Cornell mine.

Company's property runs about 4 miles along the various veins, convenient to tide water transportation and about 20 miles from a smelter. During the past year considerable prospecting has been carried on proving several new and promising veins. Management is conservative and the property considered promising.

PTARMIGAN MINES, LTD.

BRITISH COLUMBIA

Address: care H. H. Johnson, Victoria, B. C.

Property: 8 claims at 5,300' elevation, 15 miles inland from the mouth of Bear River, on Bedwell Sound, Vancouver Island. Considerable development work was contemplated on this property, but all work was suspended shortly after the outbreak of the European war.

Claims are on Big Interior mountain and show gossan outcrops underlain by chalcopyrite-magnetite ore.

QUATSINO COPPER CO.

BRITISH COLUMBIA

Dead. Succeeded 1916 by Coast Copper Co., which see.

TACOMA STEEL CO. BRITISH COLUMBIA & WASHINGTON

Office: Provident Bldg., Tacoma, Wash. **Mine offices:** Van Anda Island, B. C., and Darrington, Snohomish Co., Wash.

Officers: Joshua Pierce, pres.; E. M. Shelton, v. p.; A. Y. Eastman, sec.-treas. and gen. mgr.; Alex Grant, supt.

Inc. with cap. \$5,000,000, reduced later to \$3,000,000. Paid a \$35,000 dividend April 2, 1907.

Property: a mine at Darrington carrying gold-copper ore, idle for some years, 4,000 acres of coal-bearing properties in Washington, 208 acres of iron ore lands on Redonda Island, B. C., and the Marble Bay mine, 640 acres, crown-granted, near Marble Bay harbor, at the northern end of Texada Island.

The Marble Bay mine, about one-fourth mile from the Cornell and Copper Queen mines, has ore of similar nature occurring as lenticular shoots, carrying argentiferous chalcopyrite, with bornite, in a garnetiferous marble near a contact between diorite and limestone. The mine is developed by a 1,350' three-compartment shaft, showing, on the lower levels, a vein of 18' width, with copper values unchanged and gold values gaining with depth. Recent development work mainly between the 1,200' and 1,300' levels.

Development: work in 1916 was mainly by diamond drill, boring between 13th and 15th levels at 1,160' and 1,360' vertical depth, respectively. Full descriptions of mine workings and geology will be found in Annual Rept. of Minister of Mines of British Columbia for year 1916, pp. 351-3.

Equipment: includes steam and electric power, with 5 Lidgerwood hoists, 5-drill Ingersoll-Rand, small Canadian-Rand and 10-drill Allis-Chalmers-Bullock air compressors. Buildings include a power house, machine shop and there is a wharf, on Marble Bay, having large ore bunkers, connected with the mine by a ground tram. In connection with the mine there is a limestone quarry and 4 kilns, with daily capacity of 300 bbls. of lime.

Production: shipped mainly to the Tacoma smelter, was 6,237 tons of ore, yielding 293,269 lbs. fine copper in 1907; 11,438 tons of ore, estimated to

have yielded 1,250,000 lbs. fine copper, in 1909; 22,500 tons averaging 5% copper in 1911; 17,870 tons in 1912; 12,600 tons in 1913, containing 2,216 oz. gold; 22,400 oz. silver; 1,031,009 lbs. copper.

Mine considered valuable and management good.

TYEE COPPER CO., LTD.

BRITISH COLUMBIA

Smelter and assets sold in Dec., 1916, to the Ladysmith Smelting Corporation, Ltd., which see.

Office: 80 Bishopsgate St., London, E. C.

Officers: T. H. Wilson (chairman, with J. A. D. Hancke, H. Von Berg, directors. W. Gardner, sec.

Inc. April 4, 1900, in Great Britain. Cap., £180,000, increased 1901 from £120,000; shares £1 par; fully issued and paid.

Accounts: for year ending April 30, 1916, show a debit balance of £124,098; cash, £523; debtors, £18,519; creditors, £1,985. Reserves for royalties owing, £17,333; mortgage on property, £20,000.

Dividends: 10%, or 2 shillings in 1904; 10% in 1905; 5% in 1906; 7½% in 1907; none since.

VAN ANDA COPPER & GOLD MINES CO., LTD.

B. C.

Inactive. H. W. Treat, gen. mgr., and L. Goodacre, trustees; Jas. Raper, agt., Van Anda, B. C. Company is presumably still alive, but not operating.

Property: 20 claims, crown granted, 840 acres, including the Cooper Queen and formerly the Cornell mines has been bonded from time to time to various operators who have held it for short periods. Property was under option to the Granby Cons. M. & S. Co., Ltd., in 1914, but option not exercised.

The Cornell mine has lenses of rich ore, mainly hornite, with some chalcopyrite along a diorite limestone contact. The deposit has one main ore-shoot, 150' long and 30' wide and two lesser shoots. No commercial ore has been found below the 360' level, though extensive drifting was done on the 460' level. The Copper Queen ores are similar in character and occurrence. See Texada Id., B. C., by R. G. McConnell, Geol. Survey Canada Memoir 58, 1914, pp. 56-64.

The Copper Queen shaft is 600' deep with a winze 240' deep on the 500' level.

WESTERN MINING & DEVELOPMENT CO.

BRITISH COLUMBIA

An organization of Fred J. Rowland's of Spokane, Wash.

Inc. July, 1915, to take over the Yreka group, Quatsino Sound, Vancouver Is., B. C., but succumbed to infantile paralysis.

YALE DISTRICT

ARGO MINING & TUNNEL CO., LTD.

BRITISH COLUMBIA

Office and mine: Greenwood, Yale district, B. C.

Officers: Ole Lofstad, pres. and gen. mgr.; A. S. Black, sec.-treas.; preceding officers, John Williamson, Jerome McConnell and Oscar Hartman, directors.

Inc. June 10, 1909, in British Columbia. Cap., \$125,000; shares 25c par.

Lands: the Argo Mine, near the British Columbia smelter, developed by 1,150' tunnel, at a vertical depth of 500', with portals about 500' from track of the Canadian P. R. R. A vein of milling quartz, 10' wide, shows in face of tunnel, a 4' body of concentrating ore, on the foot-wall, talc. Property under development and expected to make shipments to smelter in 1916. Four men employed at last accounts.

AUFEAS MINES, LTD.

BRITISH COLUMBIA

Idle and no replies to letters sent to Hope, B. C. See Vol. XII.

MANITOBA.

The Flin-Flon Lake district attracted much attention during 1916 and 1917 because of the large size and richness of the copper deposits found there. It is situated 650 miles N. W. of Winnipeg and 90 miles N. W. of The Pas, northern Manitoba, so that transportation is expensive. Several well known American exploration companies are developing properties, but little is as yet known regarding the results of their work.

According to J. W. Callinan at the Pas, ore worth \$45,000,000 has been proved in two properties by drilling. The rocks are greenstones, conglomerates, etc., intruded by quartz-porphyry dikes and masses. The ores are sulphides and carry copper, gold and silver, with some zinc.

CALUMET-CORBIN MINES CO.**MANITOBA**

Main office: 35 Congress St., Boston, Mass. **Mine office:** Gold Lake, Manitoba, Can. Wm. Bracken, pres.; J. K. Heath, v. p.; Erik Hunecker, sec.-treas.; preceding officers are the directors.

Inc. Jan. 11, 1915, in Me., as a reorganization of the Calumet-Corbin Mng. Co. **Cap.**, \$2,500,000; shares \$1 par. Paul Revere Trust Co., Boston, registrar. Shares in the old Calumet-Corbin Co. are exchangeable on certain terms for those of the new company. Listed on Boston curb.

Company has a lease on the Gold Seal and Gold Pan claims, 102 acres in Gold Lake mining district, Manitoba, Can. Free gold occurs in a vein of gray quartz, in porphyry and schist. Samples evidently not representative of the quartz as a whole, are reported to show from \$600 to \$4,880 per ton gold with no silver contents. Property is a prospect on which development work is said to have begun 1916.

It appears that the Gold Lake lease covers a swamp in which quartz is found. Such quartz exposures are known at a great many places in Western Canada, but so far as known none of them are now commercially worked.

The New Era mine near Idaho Springs, Colo., taken under lease for \$150,000, was lost through default of semi-annual payments of \$7,500 in 1914, with local debts of \$10,000. The Montana holdings were previously abandoned.

It appears that the company has no real property and its stock represents nothing but paper whose only value is that it is saleable at about 5c per share to Curb speculators. The sponsors for the stock are apparently interested in stock dealing, not mining, and caveat emptor applies to all stock buyers.

DOMINION GOLD MINING CO.**MANITOBA**

(See Calumet-Corbin Co.) **Office:** 802 Pioneer Bldg., St. Paul, Minn.

Officers: Bernard Noon, pres.; J. P. Fetsch, v. p.-treas.; Jas. E. Liebe, sec.; with N. L. Watson and George Warner, directors.

Inc. Oct. 5, 1915, in Ariz. **Cap.**, \$2,500,000; outstanding Dec., 1915, \$1,500,000; shares \$1 par. Registrar & Transfer Co., New York, registrar and transfer agt. Cash on hand, Nov. 8, 1915, \$5,500. Listed on New York curb as a prospect. Outstanding shares, 1,500,000, used in the purchase of property. Of this amount 1,000,000 shares were set aside to be given to stockholders of the Calumet-Corbin Mines Co., of Maine, in exchange for stock of that company, received by them in exchange for stock of the old Calumet-Corbin Mining Co., of Ariz., when the reorganization was effected early in 1915. "Reason for the gift of this stock to the stockholders of the Calumet-Corbin Mines Co. is stated by those giving it to be because they feel a certain measure of responsibility for the failure of the old Calumet-Corbin Mining Co., to make good, and because their efforts to

bring it to a successful issue through its reorganization into the Calumet-Corbin Mines Co. failed." If the whole 1,000,000 shares are exchanged it will make the Dominion Gold Mining Co. a stockholder of the Calumet-Corbin Mines Co. to that extent.

Property: 6 claims, 280 acres, held by location, not contiguous, in the Gold Lake mining district, 100 miles N. E. of Winnipeg, Manitoba. Nearest P. O. is Manigotagan, at mouth of Manigotagan River, on eastern shore of Lake Winnipeg. Mine reached by boat to Manigotagan from either Selkirk on Red River, 23 miles north of Winnipeg, or from Gimil, or Icelandic Riverton, on the Gimil branch of the C. P. R. R.

The Gold Seal and Gold Pan claims, which were said to belong both to this company and to the Calumet-Corbin, are reported "abandoned 1915" at the office of the New York Curb.

The property is practically undeveloped. The country generally is covered by a swamp. Claims are said to show quartz veins "well exposed at the surface, except where covered by the swamp," and to contain considerable free gold. Management intends to do development work on the veins, ascertaining if veins and values continue to depth. Stock is a rank gamble.

GREAT SULPHIDE CO.

MANITOBA

Address: D. C. Jackling, Hobart Bldg., San Francisco, Cal.

Property: the Hammill mine at Flin-Flon lake, 90 miles N. W. of The Pas, northern Manitoba. On the surface the lode is said to be 2,000' long and near the lake 300' wide, assaying in places \$10 per ton in gold, silver and $1\frac{1}{4}\%$ copper.

Drilling in 1916-17 is said to have proved over 3,000,000 tons of \$10 ore; while 30,000,000 tons is considered a possibility, if not a probability. Water power is abundant and is an offset to expensive transportation.

MANDY MINING CO.

MANITOBA

Address: H. C. Carlisle, supt., The Pas, Manitoba, Can.

Subsidiary of the Tonopah Canadian Mines Co. (holds 85% of shares), which is controlled by Tonopah Mining Co., of Nevada, with head office at Bullitt Bldg., Philadelphia, Pa.

Property: at Schist lake, north of The Pas, Manitoba. About 20,000 tons of high-grade (20%) copper ore developed in a shoot 200' long. Shaft 100' deep. Shipments being made to Trail, B. C. Property promising with great possibilities.

NORTHERN MANITOBA MINING & DEV. CO.

MANITOBA

Controlled by Makeever Bros., New York.

Property: the Mooschorn and Rex gold claims on Herb lake, via The Pas, northern Manitoba. In August, 1917, an 80' shaft in the former had opened 30" of ore, while at 110' in the latter there was 49" of \$36 ore.

A 40-ton mill, copper plates and concentrators were being erected 1917, also 2 boilers, 55 h. p. engine, compressor and houses.

STAR LAKE GOLD MINES, LTD.

MANITOBA

Office: 509 Merchants' Bank Bldg., Winnipeg, Manitoba, Can.

Officers: W. R. Milton, pres.; J. H. Hicks, sec.; J. W. Harris, treas.; with E. R. Potter and John Smith, directors.

Inc. Nov., 1915, to purchase the property of the Penniac Gold Reef Mines, Ltd. Terms of purchase were as follows: owners agreed to take 333,333 shares of stock and to set aside 33,333 shares for development purposes. Stockholders in the Penniac Mines to receive 200,000 shares and to pay to the Star Lake \$25,000 to liquidate liabilities of old company, amounting to \$15,000, and leave a surplus for development work. Star Lake Co. agreed to have \$100,000 in treasury within 6 months from Nov., 1915, otherwise vendors could cancel agreement. 125,000 shares offered to public at \$1 par.

Cap., \$1,000,000; shares \$1 par; non-assessable; 500,000 issued. "An extraordinary 'speculative investment' is offered to the public for a limited number of 6% preferred shares at par, to be redeemed later at 15% above par," is the wording of a recent circular.

Property: 6 patented claims, 200 acres, on Star Lake, eastern Manitoba, said to show a quartz vein in a shear zone of Keewatin conglomerate near a contact between granite and schist. Vein minerals include quartz, gold-bearing pyrite and arsenopyrite. Samplers cut for 10 to 15' across the vein said to carry \$3.50 to \$5.80 per ton. The Penniac company is reported to have spent \$100,000 on development work, consisting solely of test pits and a 90' shaft, said to disclose two lodes. The main shear zone is said to be 200' wide, with two main and several lesser parallel quartz veins with strike N. 35-45° E. and dip N. W., all showing gold values in payable quantities. Property reported on by Prof. R. C. Wallace, University of Manitoba; W. H. Jeffrey, W. J. Tretheway of Toronto, and J. Tait Milliken of Colorado.

Development: by 95' shaft and 150' tunnel. Reserves estimated at 3,000,000 tons.

Equipment: includes a 5-ton mill, office and several buildings. Management plans extensive development and banks on platinum content of the ore to make large profits.

NEW BRUNSWICK.

EASTERN CANADIAN COPPER CORPORATION, LTD.

Office: 14 St. John St., Montreal, Quebec, Canada.

Officers: Howard R. Richey, pres.; E. A. Baynes, v. p.; with Chas. Brandies, A. M. Vici and E. A. Reilly, directors; A. H. Thomson, treas.; Geo. W. Dow, sec.

Inc. Dec. 28, 1915, in Ottawa. **Cap.,** \$990,000; shares \$10 par; 30,000 shares deposited in escrow with Security Trust & Registrar Co., New York, transfer agt. and registrar, for the benefit of the company. Listed on New York Curb.

Statement of March 1, 1916, shows assets of \$990,000 mining rights in St. John Co., inclusive of buildings and equipment. Free of debt.

Property: covers 1 sq. mile, including the Vernon copper mine on the north shore of the Bay of Fundy, St. John Co., New Brunswick, reached by both the Intercolonial and C. P. R. R. to Sussex and thence by driving 32 miles to Goose Creek. Can also be reached from St. John, N. B., by boat, being 45 miles E. of St. John and 1¼ miles from Goose Creek Harbor. Holdings on a steep mountain rising 550' above the bay are said to show copper ore. Country rock is diorite, schists and slates, crossed by diabase dikes.

Development: 7 tunnels, from 50' to 170' long, said to show a quartz-calcite vein, containing bornite and chalcopyrite, 45' long where exposed in lower tunnel, 6'-10' wide, and assaying 13.4% copper; tunnel No. 4, 45' E. of No. 1, is said to show several quartz veins, "ramifications of the vein exposed in the above 3 tunnels." The other 3 tunnels are inaccessible at present.

Equipment: includes a shipping dock, blacksmith shop and quarters for the men, but little mining equipment.

Company was planning to renew development work in 1916 with the object of attaining "an average daily output of 100 tons of ore," a feat which was not accomplished, we assume. No later information.

INTERCOLONIAL COPPER CO.

NEW BRUNSWICK

Office: P. O. Box 294, Pawtucket, R. I. **Mine office:** Dorchester, Westmoreland Co., N. B.

Officers: Darius L. Goff, pres.; T. J. Edwards, sec.; F. J. Powers, treas. **Inc.** 1899 in Arizona. **Cap.**, decreased, 1906, to \$2,000,000, shares \$5 par, in preferred and common shares, latter with restricted voting privileges.

Property: 250 acres freehold and 1,100 acres held by leasehold from the Crown, show a blanket vein carrying carbonate and sulphide ores, claimed to average 3 to 4% copper. Has shafts of 40', 75' and 150', also a 1,500' drainage tunnel, with about 8,000' of underground workings.

Works include a 200-ton concentrator, leaching plant and electrolytic refinery. The electrolytic plant has 550 lead cathodes and 550 lead anodes, 22x33" each, giving a plating surface of 5,000 sq. ft., for the deposition of electrolytic copper. Plant also includes tanks for precipitation of metal on scrap iron. Reduction plant proved unsatisfactory after making about 50 tons fine copper.

In 1916 the property was leased to the National Chemical Co. (F. B. Homer, treas.), 248 Mt. Vernon St., West Newton, Mass. Lessee is erecting a flotation plant under direction of W. E. Greenawalt, of Denver. The mine is reported to be in better condition than for years and was producing 50 tons of 3% ore per day in July, 1917. Lessee supplied money needed and gives half the profits to the lessor.

NOVA SCOTIA.

BRADFORD MINES, LTD.

NOVA SCOTIA

Halifax, Nova Scotia.

Officers: E. F. Heffler, pres.; A. E. Abrams, v. p.; W. C. Milner, sec.-treas.; with Paul Sigel, Jr., 37 Wall St., New York, and G. J. Partington, Halifax, directors.

Inc. Oct. 3, 1914, in Nova Scotia. **Cap.**, \$500,000; shares \$1 par; outstanding, 440,000 shares. Transfer office and registrar, Security Reg. & Transfer Co., New York. Listed on New York Curb.

Property: at Sheet Harbor and Tangier, Nova Scotia, contains ore with gold and silver values.

CAPE BRETON COPPER CO., LTD.

NOVA SCOTIA

Mine near Coxheath, Cape Breton Co., N. S.

Cap., \$2,000,000.

Property: the old Coxheath mine and adjoining lands, 10 miles from Sidney, Cape Breton, shows several cupriferous veins, of which the principal, averaging 10' width, traverses felsite and diorite, carrying argentiferous and auriferous chalcopryrite, in a silicious gangue, ore averaging about 4.5% copper. Deepest shaft, 420'. Idle many years.

CHETICAMP COPPER CO., LTD.

NOVA SCOTIA

Idle. Office: 37 Sackville St., Halifax, N. S. **Mine office:** Cheticamp, Inverness Co., N. S.

Officers: Edward Staris, pres.; John W. Regan, sec.-treas.; Milton V. Grandin, supt., at last accounts.

Inc. May, 1904, in Nova Scotia. **Cap.**, \$3,000,000; shares \$1 par, as a merger of the Eastern National Copper Co., Ltd., and 3 other corporations.

Property: 950 acres, freehold, also a 200-acre mill and smelter site, 1,000 acres timber lands, and 200 acres water frontage, with a government license for exploring and locating mines on 50 sq. miles.

Property shows a mineralized zone, in micaceous schist, of 350' width, traceable 1½ miles, carrying 4 orebodies, of which 3 are developed by a 200' shaft and by tunnels of 25', 35' and 115', claimed by company to show 250,000 tons of exclusively sulphide ore, averaging 2.5 to 3.5% copper, 18% lead, 30 oz. silver and \$2 to \$30 gold per ton. Nearest railroad is 38 miles, but

mine is 5 to 6 miles only from tidewater. Property considered promising, though estimates of tonnage and values are excessive.

DOMINION MINING CO.**NOVA SCOTIA**

Tangier, Halifax Co., N. S. W. J. Prinsk, mgr. Company owns a gold mine at Tangier. Production, 1914, amounted to 419 tons ore, yielding 57 oz. gold.

GOLDENVILLE CONSOLIDATED MINING CO., LTD.**NOVA SCOTIA**

Agency: 185 Summer St., Boston, Mass. **Mine office:** Goldenville, Guysboro Co., N. S., Can.

Officers: D. E. Makepeace, pres.; D. S. Howard, v. p.; E. B. Estes, sec.; J. A. Floyd, treas.; foregoing, with A. C. Post, J. A. Sherman, W. E. Bremner, G. F. Rooke, G. A. Bridges and H. N. Wright, directors.

Inc. June 16, 1916, in Nova Scotia, as a reorganization of the Goldenville Mining Co., Ltd. **Cap.**, \$2,400,000; shares \$1 par; 2,000,000 outstanding. Bonds authorized, \$60,000; \$32,000 outstanding.

Property: 501 acres on St. Mary's river, Goldenville, N. S., said to show narrow quartz veins in quartzite, with E.-W. course. Pay ore occurs both as shoots and streaks. Gold is coarse.

Development: by vertical and incline shafts to 750' depth. Workings total 5,200'.

Equipment: 50 h. p. electric hoist, 1,000 cu. ft. compressor, turbo-pump, 40 stamps (20 dropping) using amalgamation. Seems a promising mine, but results are withheld.

Production: 41,854 tons to 1917. No yield given, but recovery is 90%.

GOLDENVILLE MINING CO., LTD.**NOVA SCOTIA**

Reorganized in 1916 as the Goldenville Consolidated Mining Co., Ltd., which see.

GREAT BRAS D'OR MINING CO.**NOVA SCOTIA**

Baddeck, Victoria Co., N. S. **Mine office:** Middle River, Victoria Co., N. S. D. J. Patriquin, mgr. Operates a gold mine. Last production reported was 775 tons ore, yielding 262 oz. gold.

LAKE COPPER MINING CO., LTD.**NOVA SCOTIA**

Idle. **Office:** care Dr. H. Mackay, New Glasgow, N. S. **Mine office:** Polson's Brook, Antigonishe Co., N. S. A. G. Baillie, gen. agt.

Inc. Jan., 1908. **Cap.**, \$2,500,000; shares \$1 par.

Property: 6,400 acres, on Polson lake, said to show a vein 5' thick, traceable a mile and carrying auriferous and argentiferous copper ore. Mine has a 103' shaft with 554' of workings.

LOON BROOK MINING CO., LTD.**NOVA SCOTIA**

Office: 1 Leys Ave., Letchworth, Herts, Eng. **Mine office:** Montague, N. S. E. Romilly Smith, mgr.

Operating a gold property and 10-stamp mill with cyanide unit in Montague district, N. S.

Production: for year ending Sept. 30, 1914, was 118 tons of ore, which yielded 400 oz. gold.

No recent returns.

TOMMY BURNS GOLD MINES, LTD.**NOVA SCOTIA**

Controlled and operated by Tommy Burns Gold Mining Co., which see. Was a promotion of Pope and Cheppu, who failed, 1917.

Property: 134 acres, $\frac{1}{2}$ mile from Brookfield, the nearest R. R. station, said to show a fissure vein, $2\frac{1}{2}$ - $3\frac{1}{2}$ ' wide, running E.-W., with dip 30° , and traceable at surface for 900'.

Development: by 108' shaft, sunk on the vein and drifts on the 50' and 100' levels.

Equipment: includes a 5-stamp mill, boiler, hoist and pump. A pleasing prospect.

According to T. A. Rickard, who made a report on the gold deposits of Nova Scotia for the provincial government, none of the Nova Scotia gold deposits can be relied upon to carry their values to any great depth.

WENTWORTH COPPER CO., LTD.

NOVA SCOTIA

Idle. **Address:** Wentworth, Cumberland Co., N. S.

Inc. 1907, to acquire lands, bought at foreclosure sale, of the Cumberland Copper Co. Company apparently holds property for speculation purposes as no work has been done since purchase.

WEST GORE ANTIMONY CO.

NOVA SCOTIA

Address: N. O. Carpenter, mgr., West Gore, N. S.

Property: the Rawdon mine, opened 1884, worked intermittently until Oct., 1914, and regularly since then. Company is closely allied with the St. Helen's Smelting Co., Manchester, England, which refines the product.

The main deposit is up to 4' wide and has been opened for 200' on one level. The ore consists of stibnite and native antimony, associated with pyrite, quartz and calcite. Country rock is a soft slate.

Development: by shafts, the main one, 502' deep, with a 332' winze below this level.

Production: about 1,200 tons of ore monthly, yielding 110 tons of concentrates containing 38 to 45% antimony.

ONTARIO

This section includes the Ontario mining companies of Algoma, Massey and other districts. Cobalt, Porcupine and Sudbury districts are grouped in separate sections immediately following this one.

ALEXO MINES, LTD.

ONTARIO

Address: Porquois Junction, Ontario.

Officers: Maj. E. F. Pullen, pres.; G. F. Hanning, v. p.; H. N. Roberts, sec.-treas., with Capt. Frank Pullen, Alex. Kelso, Maj. C. W. Allen, directors. Wm. Anderson, mgr.

Inc. Jan. 3, 1913, in Ontario. **Cap.**, \$40,000; shares \$1 par; 30,005 shares issued.

Property: the Alexo mine, in Dundonald twp., Timiskaming district, discovered in 1908 and active work starting in 1912. The ore, a nickeliferous pyrrhotite, averages 4% nickel and is shipped to the Mond Nickel Company's smelter.

Development: by 200' shaft, crosscuts and drifts.

Production begun in 1913, amounted to 8,288 tons in 1916, totaling to date, 34,650 tons. About 20 men employed.

ALGOMA CUSTOM SMELTING & REFINING CO., LTD. **ONTARIO**

Idle several years. **Works office:** Thessalon, Algoma, Ont. See Vol. XI, Copper Handbook.

ALGOMA STEEL CORPORATION

ONTARIO

Subsidiary of the Lake Superior Corporation.

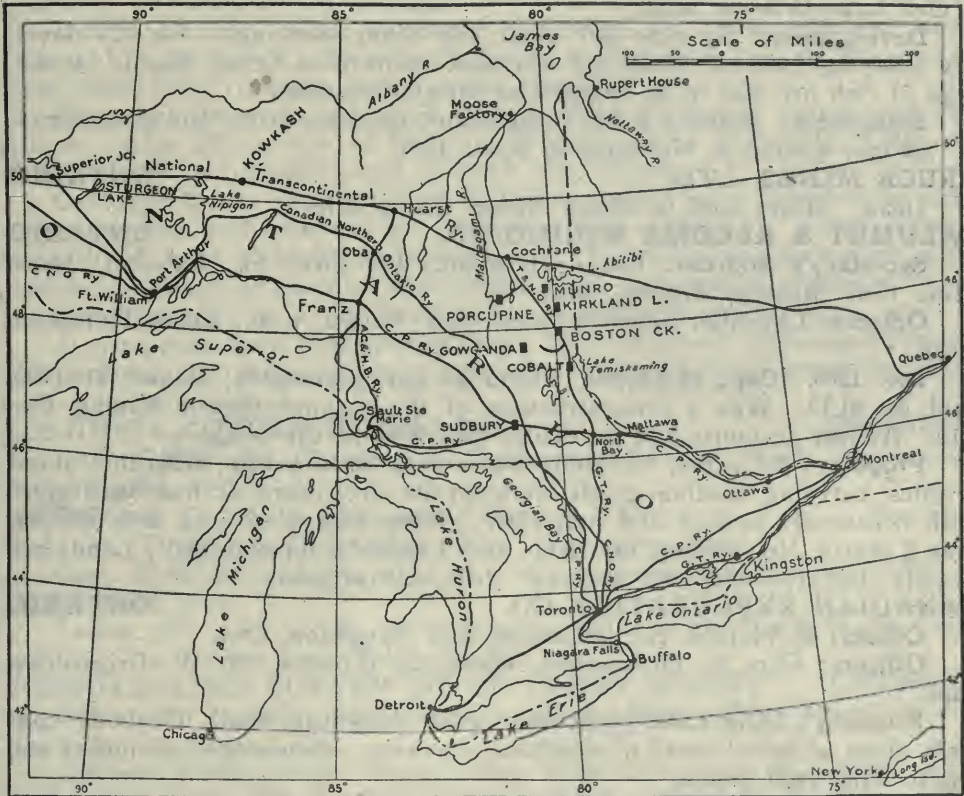

Gen. office: Sault Ste. Marie, Ont. **Secretary's office:** Traders' Bank Bldg., Toronto, Ont. J. Frater Taylor, pres. and gen. mgr.; Chas. E. Duncan, gen. supt.

Property: the Helen and Magpie iron mines, old producers, at Michipicoten, Ont., with blast furnaces at Sault Ste. Marie. The Helen, opened in 1899 and developed to vertical depth of 641'. is a steady producer of iron ore, which occurs as goethite with some hematite.

The Magpie, opened up in 1911, is developed by a 4-compartment shaft to depth of 250', with main levels at 125' and 205'. The orebody, mainly

siderite, is said to be 50' wide over a distance of 1,500' and when roasted makes a fair Bessemer ore.

Production: at the Magpie, 208,163 gross tons in 1916, with total production since 1913 of 424,816 tons; at the Helen, 85,241 gross tons iron ore and 6,624 gross tons pyrites in 1916, with total shipments since 1900 amounting to 2,409,971 gross tons iron ore and 40,690 gross tons pyrites. The Helen high-grade sulphur ore is mixed with Magpie raw ore and roasted, product being a very desirable Bessemer ore, which runs 52% iron and 0.044 phosphorus. Employs about 250 men when working to capacity.

MAP SHOWING MINING DISTRICTS OF ONTARIO

ALLIE ISLAND COPPER MINE.

ONTARIO

Office: 225 Water St., Kenora, Ont., Can. Owned by F. W. Moore et al.

Property: 4 claims, the S 777, K 312, K 314 and K 315, 156.64 acres in all, at the east end of Allie Island, about 15 miles from Kenora.

Geology: claims cover an outcrop of serpentine, or chlorite-schist, carrying small pellets or crystals of native copper. Country rock is dolomite, altered traps and greenstones. Ore body claimed to be ½ mile long with a maximum width of 700'.

Development: is surficial only, 40' and 20' pit holes, showing ore in bottom. Ore said to average 1½% copper. Owners plan development work.

BOSTON-PARRY SOUND COPPER CO.

ONTARIO

Mine office: Parry Sound, Parry Sound district, Ont. Inc. June, 1908, in Maine. Cap., \$1,000,000; shares \$1 par.

Property: 200 acres, in the vicinity of the Willcox and McGowan

mines. Idle some years, but owners are well-to-do and expect to reopen property some day. Is a close corporation.

BRANT MINES, LTD.

ONTARIO

Address: W. M. Macdonald, mgr., Gowganda, Ontario.

Officers: J. C. Cohoe, pres.; E. L. Goold, v. p.; O. Hall, sec.-treas., with F. L. Mapes, W. H. Whittaker, C. W. Leeming and C. H. Waterous, directors.

Inc. 1917, in Ontario. **Cap.**, \$1,500,000; shares \$1 par; 1,000,000 issued.

Property: 87 acres, formerly owned by the Mapes-Johnston Silver Mines Co., in Meickle township, in Silver Lake district, and near the Miller Lake-O'Brien mine.

Development: by new 350' shaft and other workings. On 320' level, ore assaying 2,000 oz. silver per ton was reported as being mined. A car-load of rich ore was to be shipped as soon as possible.

Equipment: includes hoist, compressor, machine-drills, and accessories.

Shares quoted at 57c early in Nov., 1917.

BRUCE MINES, LTD.

ONTARIO

Dead. Mines sold to Mond Nickel Co. in 1915.

CALUMET & ALGOMA MINING CO.

ONTARIO

Secretary's address: Lucas Hermann, 109 Fifth St., Calumet, Mich. Mine near Massey, Algoma, Ont.

Officers: Christian Schenck, pres.; Jos. Vertin, v. p.; Lucas Hermann, treas.

Inc. 1905. **Cap.**, \$1,000,000; shares \$5 par, assessable; issued, \$100,000, paid in, \$1.75. Was a reconstruction of the Copper Queen Mining Co., Ltd. At last accounts had no debts, with \$600 in the treasury.

Property: 957 acres, freehold, shows a 45' fissure vein, traceable about 3 miles, carrying medium-grade chalcopryite ore, more or less auriferous, with occasional bornite and malachite, giving assays of 5 to 25% copper. Has 2 shafts, No. 1 being 138' deep, and 2 tunnels, longest 195'. Lands are heavily timbered and well watered. Idle several years.

CANADIAN EXPLORATION CO.

ONTARIO

Offices: 28 Victoria Sq., Montreal, and Naughton, Ont.

Officers: Geo. E. Drummond, managing director; R. W. Brigstocke, supt.

Property: Long Lake gold mine, near Naughton, Ont. Orebody consists of an elliptical mass of quartzite, carrying considerable mispickel and pyrite with gold values.

Development: 225' shaft with levels at 80 and 180', and development below the 180' by means of a winze.

Equipment: 20-stamp mill, daily capacity 120 tons, cyanide plant, and compressor and steam-power. Employs about 100 men.

Production: 5,800 oz. gold in 1913; has been operating since, but production figures not available. Present method of treatment said to have increased profits.

CANADIAN SMELTING & REFINING CO.

ONTARIO

Office: Orillia, Ont.

Officers: J. B. Tudhope, pres.; Geo. Hayward, treas.; W. L. Vail, sec.; M. B. Scott, metallurgist; C. Doolittle, supt.

Inc. Oct., 1914, in Canada, and took over the assets of the Canada Ref. & Sm. Co.

Works at Orillia have been partially rebuilt and an additional blast furnace added. Capacity of the cobalt refining department has been increased to 2 tons of oxide per day. Products shipped are refined silver and arsenic, and the oxides of cobalt and nickel. Company employs 75 men.

CART LAKE SILVER MINES, LTD.**ONTARIO**

Operated the Gould lease on Cart Lake during 1914 with a production of 150,000 oz. silver. Production for 1915 not available. Ore came from the extension of the Seneca-Superior vein.

Development: in 1914 amounted to 1,003'. No. 2 shaft is 195' deep with 400' of workings on the 185' level, at last accounts.

CHENEY COPPER CO., LTD.**ONTARIO**

Office: 5-7-9 Melinda St., Toronto, Ont.

Officers: D. M. Robertson, pres.; R. P. Gouch, v. p.; G. Taylor, sec.-treas.; preceding with J. S. King, G. P. McCallum, J. L. Coffee and G. Waldron, directors, all of Toronto.

Inc. in Ontario. Cap., \$2,000,000; shares \$1 par, fully paid and non-assessable. No bonds. Security Transfer & Registrar Co., 66 Broadway, New York City, registrar and transfer agent.

Property: 700 acres, of which 400 are held by Crown patent and the balance under Mines Act of Ontario, 28 miles from Thessalon, Ont., on C. P. railway and 40 miles east of Sault Ste. Marie.

Geology: Lands show a series of three parallel veins exposed by outcrops, trenches and open cut for 1½ miles, with width of 4' to 12'. Strike is north 16° west with dip of 75° to south. Veins are mostly quartz with pockets or lenses of specular iron, iron pyrites and copper minerals.

Development: by a 105' shaft and crosscuts and surface pits.

A promotion by a firm of New York brokers whose extravagant statements about the property are at variance with the facts given by their consulting engineer.

COLUMBIA COPPER MINING CO.**ONTARIO**

Idle. Office: 510 Chamber of Commerce, Detroit, Mich. Mine near Parry Sound, Ont.

Officers: Dr. A. H. Côte, pres.; Dean S. Fleming, v. p.; S. S. Southerland, sec.; Dr. W. P. Dick, treas.; Alex. Dick, cons. engr.

Cap., \$3,000,000; shares \$1 par, non-assessable. Authorized, 1910, a \$10,000 bond issue.

Lands: 200 acres, adjoin the McGowan claim of the Parry South Copper Co., 1 to 2 miles from Parry Sound.

CONSOLIDATED COPPER CO. OF PARRY SOUND.**ONTARIO**

Office: 705 Palladio Bldg., Duluth, Minn. Mine office: Parry Sound, Parry Sound district, Ont.

Officers: Robt. Forbes, pres.; Robt. Millard, v. p.; J. G. Harris, sec.-treas.; preceding, with A. C. Le Richeux, Frank Cox, E. E. Rorem, Dr. J. D. Budd and C. J. Jackes, directors.

Inc. Feb., 1902, in Ontario. Cap., \$5,000,000; shares \$1 par; issued, about \$3,100,000. No stock for sale.

Lands: 1,500 acres, patented, carry considerable standing timber, in Foley, McDougall, Hagerman and Cowper townships. Part of property formerly was held by Hattie Belle Gold, Copper & Nickel Co. and the Valentine Mica Mining Co.

Ores: occur as contact deposits between slate and quartzite, and as fahlbands, ore being mainly chalcopryrite, with occasional bornite and chalcocite, mainly low in grade, but with occasional seams of high-grade ore. There are 18 different orebodies, shown by test pits and stripping, of which 4 are somewhat developed. The fahlbands are said to show a width of more than 1,000', carrying 7 bands of fairly good ore, of 200' estimated aggregate width, between which is low-grade ore, part of which may be amenable to concentration. Ores assay 1.5 to 12% copper, 3 oz. silver, and in a few cents up to \$8 gold per ton.

Development: by 180' vertical shaft, and about 25 pits of 10 to 100' depth. The Spider Lake mine has a shaft house, and steam hoist good for 500', with necessary mine buildings. A considerable orebody has been exposed by trenching.

The Lefex mine, about 220 acres, has shafts of 90' and 40', showing nothing of particular promise. The Lefex has an iron gossan, carrying up to 2% copper and \$2 to \$3 gold per ton. A 600-lb. test shipment, from the 65' level, returned 30% copper, and various samples have shown from 1.5 to 3% nickel, and from nothing to \$20 gold per ton. Property is now under option for development.

The land situated in the township of McDougall, Ont., has been sold to an operating company, the consolidated company retaining a large interest. Shipments of mica are expected to be made in 1917.

CORDOVA MINES, LTD.

ONTARIO

Office: Sun Life Bldg., Toronto, Ont., Canada. **Mine office:** Cordova Mines, Peterboro Co., Ont.

Officers: P. Kirkegaard, pres.; Wm. H. Price, v. p.-treas.; Edw. Willan, sec.; with C. M. Kirkegaard and M. Garvey, directors.

Inc. 1911, in Ontario. **Cap.**, \$500,000; shares \$5; \$50,000 in treasury. Company is operated as a close corporation.

Property: 678 acres, owned in fee simple, in Belmont Twp., Peterboro county. Ore occurs in diorite in veins, said to be from 4'-30' wide and from 50'-400' long, carrying quartz, calcite and iron sulphides.

Development: shafts of 160', 400' and 500' depth, with a total of 6,000' of underground workings.

Equipment: the rock and shaft houses and the mill were wiped out by fire, March, 1917. Buildings for a counter current decantation cyanide plant are being built. Ore is said to be well adapted to that process; two 1,500' compressors, hydro-electric power plant developing 900 h. p., pumps and 1,800' tramway. Power plant was enlarged in spring of 1916. Company has no appreciable ore reserve.

DELORO SMELTING & REFINING CO., LTD.

ONTARIO

Deloro, Ont., Can. Toronto office, C. P. R. Bldg.

Officers: M. J. O'Brien, pres.; Thos. Southworth, v. p.; S. B. Wright, gen. mgr.; S. F. Kirkpatrick, cons. metallurgist; F. A. Bapty, sec.-treas.

Company is the successor, 1917, of the Deloro Mng. & Reduction Co., with same officers and management.

Owns a smelting plant and refinery at Deloro. Output consists of bar silver, arsenic, nickel oxide and metal, cobalt oxide and metal. Also manufactures "stellite," a high-speed cutting metal.

Company aims to finish all products at the Deloro plant. Employs about 250 men.

DOMINION MOLYBDENITE CO.

ONTARIO

Address: Wilberforce, Ont.

Organized by J. J. Gray, W. J. L. MacKay, P. J. Dwyer and Dr. Lowrey.

Property: at Wilberforce, Ont. Reported in August, 1917, that development had exposed a large deposit of molybdenite, for which a mill is being erected.

GALETTA MINE

ONTARIO

See James Robertson, Ltd.

HERMINA MINING CO.

ONTARIO

Office: 109 5th St., Calumet, Mich. **Mine office:** Massey, Ontario, Canada.

Officers: Edw. J. Hall, pres.; Chas. Schenk, v. p.; Lucas Hermann,

sec.; W. B. Anderson, treas.; preceding, with Ole Olson, Frank Schroeder, Paul Tritschler, J. S. Pickell and T. H. Pollack, directors.

Inc. June, 1903, in Ontario. **Cap.**, \$2,500,000; shares \$12.50 par; \$8 paid and \$4.50 assessable. Total assessments to date, \$2.35 per share; 71,000 shares issued. Annual meeting, fourth Tuesday in June.

Property: 1,040 acres near Massey, Ont., on which shafts were sunk and ore developed. In 1910 company extracted small quantities of copper, but has been idle since then.

HURONIAN BELT CO., LTD.

ONTARIO

Office: 310 Dominion Express Bldg., Montreal, Canada.

Officers: F. H. Hamilton, chairman; with E. Turk, E. T. McCarthy, H. B. Hooper, directors.

Inc. March, 1914, in Ontario. **Cap.**, £200,000. Company acquired, in 1914, all the interests of the Huronian Belt Syndicate, Ltd.; controls the North Thompson Gold Mine, Ltd. Also has claims in Northern Ontario and near Great Slave Lake.

The Siberian Syndicate, Ltd., of England, has a substantial holding in this company and in a report states that over 100,000 tons of ore has been developed to No. 5 level in its Porcupine property.

INTERNATIONAL MOLYBDENITE CO., LTD.

ONTARIO

Address: J. L. Murray, Renfrew, Ont., pres.; G. P. Grant, mgr.

Has a mine and 100-ton plant for concentrating molybdenum-bearing ore near Renfrew; also a refinery at Orillia for making molybdenum compounds. Electric furnaces are used.

Production: in 1916, was 24 tons of molybdenite from 2,350 tons of ore, which averaged 1.3% MoS₂.

JAMES ROBERTSON, LTD.

ONTARIO

Address: Montreal, Can.

Mine at Galetta, Ont.

Owns the Galetta or Kingdon lead mine on Chats Island, in the Ottawa river, 5 miles E. of Arnprior, Ont. Mine shows a 10' fissure vein in a fault in schistose rocks. The ore consists of galena, disseminated in clusters and crystal aggregates in crystalline calcite and barite.

Developed: by two shafts, 1,000' apart.

Property: has a concentrating mill and a small lead smelter blown in October, 1916, and turning out 15 tons of lead daily. (See W. E. Newman, Lead Mining & Smelting at Galetta, Ont., Trans. A. I. M. E., Oct., 1917.)

KENYON COPPER MINES, LTD.

ONTARIO

Address: Massey, via Sudbury, Ont.

Property: the Massey mine, discovered in 1900, was equipped with an Elmore flotation plant, which was unsuitable. Mine acquired from the Massey Station Mining Co. and reopened in 1917, and Callow flotation plant started in July. Daily capacity of mill, 200 tons.

Geology: an area of quartzitic greenstone tuff schists, in contact with gneiss and granite. Ore contains chalcopyrite with pyrite, magnetite and specularite, in white, milky quartz, and occurs in a sheer zone parallel to the schists.

Development: to 530' depth. At 3 places No. 1 shaft is 76° incline and has 7 levels, showing step-faulting of surface. Vein changes to one straight body at depth. Ore is 4' wide, averaging 3½% copper for all workings.

KING EDWARD MINE

ONTARIO

Owned by J. S. Dobie and Mary C. Dobie, Thessalon, Ont.

Property: 1,000 acres, patented, in Rose Township, includes Sec. 14 and

part of 11 and 24. Openings on areas are a mile apart. The two properties, King Edward and Canada Verdi, adjoin, and are a mile long. The latter claim shows a 16' vein, said to be traceable 2 miles, in diabase; it has steep southerly dip, and carries ore streaks, one 3' thick showing 3% copper and 2 oz. gold. Examined 1915 by C. G. Bateman and C. Rollins.

Development: by shaft and numerous shallow pits. Was under option to King Edward Mining Co. Idle in 1916.

MAPES-JOHNSTON SILVER MINES CO.

ONTARIO

Property acquired late in 1917 by Brant Mines, Ltd., which see.

MASSEY STATION MINING CO., LTD.

ONTARIO

Office: 801 Dominion Bank Bldg., Toronto. Mine near Massey, Ont.

Officers: Wallace Nesbitt, pres.; S. H. P. Pell, v. p.; Britton Osler, sec.; preceding, with Robt. Means Thompson and Miss I. M. Innes, directors.

Inc. April 24, 1901, in Ontario. **Cap.,** \$300,000; shares \$100 par; non-assessable; fully issued. Company is said to have expended about \$300,000 on development and equipment.

Property: 840 acres, crown granted, including 480 acres timber land, in Salter township, Sudbury district, about 3 miles from a railway. Lands show schist and quartzite carrying lenticular orebodies in E.-W. zones with 75° dip. There are 3 parallel lenses, 2 developed averaging 10' in width in an ore zone traceable about a mile. Ore carries finely disseminated chalcocite and gray copper ores in quartzose gangue changing in depth to bornite, and that in turn to chalcopyrite, estimated by management to average 3 to 5% copper and \$1 to \$2 gold per ton, with about 50,000 tons in sight.

Geology: described by F. C. Lincoln in Eng. & Min. Jour. of Aug. 4, 1917.

Development: by a 600' shaft and 150' tunnel.

Equipment: includes a 200 h. p. steam and electric plant, with 2 Lidgerwood hoists, a 6-drill compressor and 15 buildings.

The ore not being adapted to wet concentration, owing to excessive sliming, a 50-ton experimental mill was built, using the Elmore vacuum oil flotation process, with Blake and centrifugal crushers and 3 Jenckes and Wilfley tables. Property closed down in 1909 owing to failure of mill to make expenses.

Property was acquired by the Kenyon Copper Mines, Ltd. (which see), at the beginning of 1917. An experimental Callow flotation unit is being tried out, and company contemplates installation of a larger plant, hydro-electric power.

METALS CHEMICAL, LTD.

ONTARIO

Address: Welland, Ont. J. H. Charles, mgr.

Operates a plant for the treatment of cobalt ores, near Welland.

Equipment: includes two blast furnaces, two roasting furnaces, one reverberatory furnace, 22 leaching vats, 12 filter-presses, one crystallizing plant, 2 bag-houses. Electric power is used. Company employs 85 men. Output is silver, arsenic, oxides of cobalt and nickel, and various cobalt and nickel salts.

METALS MNG. CO.

ONTARIO

See Sheldon Mng. Co.

MILLER LAKE O'BRIEN MINE

ONTARIO

K. D. Woodworth, mgr., Gowganda, Ont. Is a privately owned property and has been one of the leading silver producers in the Gowganda district. Vein said to be 10' wide and to contain five 5" streaks assaying 3,000 oz. silver per ton. Developed by shafts; No. 2, the deepest, 450', at last accounts.

Equipment: includes hoists, 20-drill compressor, and a mill; a hydro-electric plant between Gowganda and Burke Lakes is equipped with 2 turbines and a 900 h. p. generator.

Production: 52 tons of high-grade ore in June, 1917.

Considerable ore reported blocked out in 1916.

NICHOLS CHEMICAL CO., LTD.

ONTARIO

Subsidiary of General Chemical Co.

Office: 222 St. James St., Montreal, Canada.

Officers: E. S. Pincott, mgr.; H. V. Smythe, mine supt.

Property: the Northern Pyrites mine on Vermillion Lake at North Pines, Ont., Canada, shows veins averaging 45' in width for 1,000' in length, with strike N. E. and dip 55° N. W. Mine said to have the largest pyrite deposit under development in Canada.

Equipment: includes 2-mile Leschen aerial tramway, Lambert hoist, compressor and concentrating mill. Shipments to the United States are made via Graham on the Grand Trunk Pacific R. R. and the Great Lakes. Employs 130 men. Company does not publish financial or statistical reports. Property reported on by Walter Harvey Weed.

Output in 1915 was about 95,000 tons of pyrite.

NORTHERN PYRITES CO.

ONTARIO

Property owned by the Nichols Chemical Co., which see.

ORE CHIMNEY MINING CO., LTD.

ONTARIO

Office: 100 Clyde Block, Hamilton, Ont. **Mine office:** Northbrook, Frontenac Co., Ont.

Officers: A. E. Fletcher, pres.; F. E. Misener, v. p.; O. E. Dore, sec.-treas.; preceding, with C. H. Siple, Capt. W. D. McClinton, H. A. Baldwin, R. W. Thomas, Chas. Zinn and S. A. Fletcher, directors. W. G. Anderson, gen. mgr.

Inc. Oct. 11, 1909, in Ontario. **Cap.**, \$600,000; shares 40c par; non-assessable. Annual meeting, last Tuesday in October. The property was bought of the president for 850,000 shares of stock.

Property: 500 acres, in the Eastern Ontario mining district, 50 miles from Kingston and about 11 miles from Kaladar, the nearest C. P. R. R. station. Claims show conglomerate, quartzite and schist, and are reported by the management to have a vertical interbedded, jasper vein, the so-called "iron formation" 2' to 18' wide on the surface, with hornblende (amphibolite) schist on the hanging to N. E. and conglomerate and quartzite to S. E., and a basaltic footwall.

The vein shows gold and silver values in an ore carrying galena and chalcopyrite.

Development: by 403' shaft, with total workings of 2,000'. Crosscut at 400' is reported to have disclosed a vein of sulphide ore carrying galena.

Equipment: includes three 100 h. p. tubular boilers, two 1,000 cu. ft. compressors, a hoist, 20-stamp mill with amalgamating plates, tables and a magnetic separator. The mill capacity is about 200 tons a day. Company expected to start milling in Autumn of 1917.

ORE EXTENSION MINING CO., LTD.

ONTARIO

Vineland, Ont., Canada.

Officers: David Fretz, pres.-mgr.; S. Spiece, v. p.; Geo. Laws, sec.-treas., with J. O. Moore and S. R. Lupton, directors.

Inc. Nov. 1, 1913, in Ontario. **Cap.**, \$1,500,000; shares 50c par.

Transfer office: 354 Hudson St., Buffalo, N. Y. Annual meeting, 2nd Thursday in January.

Property: 167 acres at Northbrook, Lennox and Addington counties, Ontario, said to show gold-silver-lead-zinc-copper ore, in six veins, from a

few feet to 40' wide, in diorite and schist. Developed by a 2-compartment shaft 53' deep. Work retarded owing to lack of working funds. A prospect.

PARRY SOUND COPPER MINING CO., LTD.

ONTARIO

Office: 500 Germania Life Bldg., St. Paul, Minn. Mine office: Parry Sound, Ont.

Officers: Frank Johnson, pres.; Otto Monson, sec.-treas.; preceding, with John Ogren, A. Linderholm and F. X. Benning, directors.

Inc. March 23, 1899, in Ontario. Cap., \$5,000,000; shares \$1 par; issued, \$4,500,000. Liabilities are given at \$45,000 floating indebtedness, and a \$3,000 mortgage at 6% on 200 acres of land. Annual meeting, second Tuesday in August.

Property: 10 claims, 1,000 acres, one-half freehold and one-fifth held subject to a \$3,000 mortgage, on the eastern shore of Georgian bay, property including the McGowan and Wilcox mines.

The Wilcox mine has outcroppings of 4 parallel veins in a width of about a quarter mile, with a 145' shaft on a 20' vein in granite-gneiss, traceable 1,000', carrying auriferous and argentiferous bornite, assaying 2.8 to 11% copper. There also is an opencut, 20x150', 18' deep, showing 3% chalcopryite.

The McGowan mine has shafts of 100', 100' and 250', and a 150' crosscut tunnel, showing bornite and occasional chalcopryite, with quartz gangue. A smelter shipment of 240 tons of selected ore returned 17% copper and \$5 per ton in combined gold and silver values.

Equipment: includes a 10-stamp mill, hoisting machinery and several buildings. Idle, but management plans further work.

Reported to have sold the Wilcox mine, Sept., 1917, for \$30,000.

SUPERIOR COPPER CO., LTD.

ONTARIO

Idle. Office: Sault Ste. Marie, Ont. Mine office: Superior Mine, via Algoma Central Railway, Algoma, Ont.

Officers: G. R. Nicholson, pres.; C. H. L. Jones, v. p.; Emory W. Clark, sec. and treas., with E. L. Fisher, Capt. John Mitchell, Geo. T. Arnold, J. W. Staley, Geo. Kemp and Capt. Benj. Boutell, directors.

Inc. Sept. 13, 1901, in Ontario. Cap., \$3,000,000; originally \$1,500,000; increased, 1903, to \$2,000,000, and again July 29, 1907; shares \$10 par; issued, \$2,402,160. The company was organized with non-assessable stock, but a special act of the provincial parliament of Ontario rendered the stock assessable. Total assessments to Dec. 31, 1910, were \$132,080.52. Security Trust Co., Detroit, registrar and transfer agent. Annual meeting, second Thursday in June.

Property: 11 claims, crown granted, 800 acres, in an unorganized mining district of Algoma, shows granite and chloritic schist carrying fissure veins of 10' and 70' estimated average widths, traceable 7,000'. The quartz veins carry chalcopryite with a little chalcocite, estimated by the management to average 4% copper, 1 oz. silver and 40c gold per ton.

Development: amounting to 1,233', includes a 400' shaft and 949' tunnel with 5 shallow shafts, a 189' tunnel and many surface cuts.

Mine is reported to show 4,000' tons of ore on the dump, with 140,000 blocked out, apparently a serious over-estimate.

Equipment: includes a 150 h. p. steam plant, 12-drill compressor engine house, changing house, boarding house, machine shop, smithy, office, store and dwellings, and a 50-ton concentrator.

The mine has been idle since Dec., 1908.

TIP TOP MINE

ONTARIO

Col. S. W. Ray, owner, Port Arthur, Ont. Mine near Kashaboiwe, Thunder Bay district, Ont.

Property: 4 claims, freehold, 336 acres, locations K62, K63, K64 and K65, 6 miles by rail S. W. of Kashaboiwe station, Canadian Northern railway. The claims are near Round Lake, near Moss Twp., and show schist, greenstone and quartz porphyry of Keewatin age, with folded quartzite cut by quartz porphyry dikes. The ore occurs disseminated in dikes of flesh-colored felsite and quartz porphyry. There are several lenses of this chalcopryite and pyrite ore, stoped for 8 to 25' wide and 70' long, giving average assays of 7% copper, 5 to 12 oz. silver and \$1 to \$2 gold per ton.

Development: by a main incline shaft, dipping 70° N. of 208' depth, with about 900' of workings, on 4 levels, about 190' of drifting on each level. This work is estimated to show 45,000 tons of ore, of 4 to 6% copper, on a vein ranging up to 60' width.

Equipment: includes a 150 h. p. steam plant, with 50 h. p. hoists, and a 6-drill Ingersoll-Sergeant air compressor. See Ontario Bureau of Mines Report, 1911, p. 209.

Shipping 50 tons of ore daily in May, 1917.

TWO LAKES COPPER MINING CO., LTD.

ONTARIO

Idle. Office: Oil City, Pa. Mine office: Sowerby, Algoma, Ont.

Officers: Dr. E. L. Dickey, pres.; S. F. Amsler, v. p.; D. G. Bailey, sec.; J. C. Wilkins, treas.; F. W. Bailey, gen mgr.; preceding, with J. W. Russell, C. W. Coulter, G. W. Freeman and Edw. Schwabenbauer, directors.

Inc. Oct. 12, 1906, in Ontario. **Cap.**, \$500,000; shares \$1 par; non-assessable; issued, \$270,000. Annual meeting, first Tuesday in November.

Lands: 8 claims, 1 fractional, 300 acres, freehold, including the Robinson and Tupper mines, 8 miles from Thessalon, and 4 from a railway. The property shows pre-Cambrian rocks, slate, conglomerate and greenstone, carrying a number of fissure veins, of which 3, under development, are of 2 to 10' estimated average width, carrying sulphide ores of about 4.5% copper, with small quantities of silver and gold.

Development: by shafts of 50', 25' and 10'.

Equipment: includes a 60 h. p. boiler and 35 h. p. hoist. There are 8 small buildings. At last reports the management was planning further development as soon as the financial situation improved, but is apparently still adhering to a "watchful waiting" policy.

WASAPIKA GOLD MINES, LTD.

ONTARIO

Address: Isbell, Plant & Co., Standard Bank Bldg., Toronto, Ont.

Cap., \$1,000,000; shares \$1 par.

Property: the Ribble claims, near Wasapika Lake, in the Sudbury division, Ont. Examined in March, 1917, by G. R. Rogers, who reported that the main vein is a contact between andesite and rhyolite porphyry. Ore is gray quartz with a schistose filling impregnated with iron pyrite, with some free gold. So far 1,800' of ore, averaging 49" wide, is reported to have been uncovered; 18 samples in one section gave \$10.40, and 58 in another gave \$8 per ton. Reserves were estimated at 3,077 tons of \$9 ore, plus 7,173 tons if a shaft is sunk 80' and drifts driven.

In Sept., 1917, 10 men were employed sinking a shaft.

MINING COMPANIES OF COBALT AND VICINITY

ADANAC SILVER MINES, LTD.

ONTARIO

Office: Standard Bank Bldg., Toronto and Cobalt, Ont., Can.

Officers: H. E. Larkin, pres.; J. P. Bickell, treas.; D. McArthur, sec. with C. M. Bushnell, A. A. Sangster, directors. Geo. O. Randolph, supt.

Inc. March, 1915, in Ont. **Cap.**, \$2,500,000; shares \$1 par.

Property: In Coleman Twp., Cobalt district, Ont., adjoins the Temiskaming, showing smaltite, niccolite and a little silver.

Development: by 400' shaft. Work now concentrated on vein at 400' level. Property is in the prospect class.

ALADDIN COBALT, LTD.

ONTARIO

Address: Frank F. Fuller, sec., 638 Salisbury House, London Wall, London, E. C., Eng. **Mine address:** Cobalt, Ont.

Directors: D. H. Herbert, Chairman, Lt. Col. Chas. Gold, Capt. C. R. E. Jorgensen, and S. B. Peech.

Registered April 23, 1913. Acquired all the capital of the Aladdin Cobalt Co., Ltd., registered in Canada with a capitalization of \$500,000, shares \$5 par. Canadian shareholders received 5 fully-paid £1 shares for every two \$5 shares held.

In addition the Canadian company was allotted 58,000 fully-paid shares in order to enable it to acquire 1,160,000 shares, \$1 each, in the Chambers-Ferland Mng. Co., Ltd. Shares have since been issued for the acquisition of remaining outstanding shares of the Chambers-Ferland Co. at the rate of one fully-paid £1 share for every twenty Chambers-Ferland shares. For services rendered in organization of the company, 134,351 shares were allotted to H. B. Sedgwick and C. R. Jorgensen.

Cap., £500,000; shares £1 par; 499,993 shares issued. Stock is to be listed on Toronto Exchange. Balance sheet for fiscal year ending April 30, 1916, shows expenditures, £12,432 and a deficit of £28,758.

Aladdin Cobalt Co., Ltd.

J. A. McVichie, mgr. Balance sheet for fiscal year ending April 30, 1916, shows. **Assets:** £511,598, which includes property £453,608; plant and buildings, £14,419; ore on hand, £18,962; cash, £22,297. **Liabilities:** capital stock, £103,092; sundry creditors, £7,406; reserve, £398,027. Operating profit for the year amounted to £2,618.

Dividends: ½% paid Jan. 24, 1916; 2% paid Feb. 28, 1917.

Property: adjoins the Nipissing at Cobalt, Ont., and is supposed to have the extension of the Nipissing vein system. Faulting has made necessary a thorough system of crosscutting.

Ore: silver, in veins of calcite. Property supposed to have good chances of becoming a large producer, but the output has been comparatively small.

Development: work on the whole has been disappointing. Late in 1915 a 3" vein of high-grade silver ore was cut in a winze from the 350' level and stoping on this vein on the 426' level has yielded some shipping ore. Up to Sept., 1916, the vein has been drifted on for over 42'. The winze is 750' from the shaft and 37' from the Nipissing boundary line. A crosscut was started, Oct., 1916, from the main shaft on the 425' level to connect up with No. 15 crosscut north at this level and is expected to cut the Nipissing No. 64 vein about 400' from the west line of the property. Total development from May, 1915, to Sept., 1916, amounted to 3,046', of which 2,634' was drifting and crosscutting.

Equipment: new equipment installed includes double-drum hoist, 125-ton crusher, 125-h. p. boiler, ore bins and an ore house with engine.

Production: for fiscal year ending April 30, 1916, amounted to 72,363 oz. Estimated production from May 1, 1916, to Sept. 30, 1916, amounted to 390,523 oz.

ALGUNICAN DEVELOPMENT CO.

BAILEY COBALT MINES, LTD.

ONTARIO

John L. Woods, pres.; Floyd Weed, supt.

Inc. Aug. 15, 1906, in Ontario. **Cap.,** \$5,000,000, shares \$1 par. Trust &

Guarantee Co., Ltd., Toronto, Can., transfer agt. and registrar. In 1914 company, being deeply in debt, including about \$90,000 owing to E. A. Benson, former president, a permanent liquidator was appointed. A Protective Committee was formed by Buffalo stockholders to guard their interests. It is said that E. A. Benson, former president, and other promoters issued 4,250,000 shares of stock to themselves, retaining 750,000 in the treasury for financing the property. This promotion stock, it is claimed, was disposed of, and the treasury stock remained unsold, with the foregone result of such practice. Company now in hands of liquidators.

Reorganization Committee: Because of the financial condition of the company and appointment of liquidators by Supreme Court of Ontario, the following consented to act as a committee and prepare the plan for reorganization: Albert G. Wheeler, Jr., chairman, Wm. E. Stevenson and H. S. Langdon, with Walter Laier, sec., 22 William St., New York. Lawyers' Title Insurance & Trust Co., New York, is depository.

Reorganization Plan: The plan issued by the above committee is dated Oct. 13, 1914, and provides for the formation under the laws of the Province of Ontario of a new company with \$600,000 capital stock, of a par value of \$1 a share. Holders of existing stock consenting to plan shall receive one share of new stock for each ten shares of old. The remaining new stock shall be offered for subscription to stockholders at par, in proportion to their present holdings. New company shall have the power to issue 6% First Mortgage bonds covering its property to Edwin A. Benson, of Chicago, in payment of judgment of \$90,789 held by said Benson against the company.

The proceedings brought by the Protective Committee of Buffalo against the former directors of the Bailey Company in Canada resulted in a default judgment being obtained by the liquidators, all of these directors being Americans and none of them appearing in the proceedings. The Buffalo committee has requested the liquidators to institute like proceedings in the United States, which they have up to the present time refused to do.

The judgment obtained by E. A. Benson was purchased by the Profit Sharing Construction Co. of New York, and the Reorganization Committee, headed by A. G. Wheeler, Jr., is negotiating with the Profit Sharing Construction Co. as the owner of the judgment, for the purpose of bringing about a reorganization. The Buffalo Protective Committee has opposed this action which is responsible for the delay. The Reorganization Committee is also negotiating for the purchase of a mill in the event of a reorganization being made.

Property: 38 acres, adjoining the Penn Canadian mine in Coleman Twp., Nipissing district. Several veins have been opened up, from which shipments have been made at different times. Developed by shaft. Lowest workings on the fifth, or 280' level. In 1913 underground work totaled 1,370'.

Property in charge of caretaker since 1914.

BEAVER AUXILIARY MINES CO.

ONTARIO

Three-quarters of stock is held by Beaver Cons. Mines, Ltd., which see. H. Donaldson, supt.

Property: 120 acres, at Elk Lake, Ont., carries silver ore, mainly of milling grade. **Development:** 330' main shaft, crosscuts and drifts. **Equipment:** hoist and surface buildings.

BEAVER CONS. MINES, LTD.

ONTARIO

Lumsden Bldg., Toronto, Ont. **Mine office:** Cobalt, Ont.

Officers: F. L. Culver, pres.; F. C. Finkenstaedt, v. p.; H. E. Tremain, sec.-treas.; preceding officers, Wm. T. Mason, F. L. Lovelace, W. E. Stevenson, J. H. Black, directors; J. W. Moffett, supt., c/o Beaver Mine, Cobalt.

Inc. Feb., 1907. **Cap.** \$2,000,000; shares \$1 par, fully paid, all issued.

Union Trust Co., Toronto, and Security & Registrar Co., New York, transfer offices. Annual meeting in April.

Earnings in 1916 were \$499,690, compared with \$351,124 in 1914. Balance sheet of Feb. 28, 1917, showed assets of \$2,780,819, which included accounts receivable, \$7,042, due from smelters, \$90,316, ore on hand or in transit, \$62,-876, Beaver mine, \$1,000,000, Beaver Auxiliary Mines stock, \$143,250, Temiskaming Mng. Co.'s stock, \$12,207. Liabilities showed accounts payable, \$15,271, depreciation account, \$118,376, profit and loss balance, \$639,822. Company expended \$113,967 on capital account and had bullion in storage and due from smelters aggregating an estimated value of \$154,193, Feb. 28, 1917.

Dividends: \$60,000 paid in 1914; \$120,000 in 1915; \$60,000 in 1916.

Property: 2 claims, patented, 60 acres, in Coleman Twp., Cobalt district, adjoining the Temiskaming mine, and 120 acres, James Twp.; also 12 months' option from Nov. 1, 1915, on Kirkland Lake Mining Co., Teck Twp., and a $\frac{3}{4}$ interest in the Beaver Auxiliary Mines Co.

Ore: silver, cobalt, and arsenic in narrow calcite veins, in diabase and the Keewatin formation. Ore occurs as high-grade in pockets and shoots, or as milling o e.

Development: by vertical shaft, 1,650' deep at end of 1916, which encountered the diabase-Keewatin contact at a depth of 1,570'. During 1916, underground work totaled 6,619'. Ore extraction was kept at a minimum, due to low price of silver.

The discovery of high-grade ore in 1916 on the 1,600' level, the deepest occurrence of such ore at Cobalt, may make a new mine of the property. All other development work in 1916 was above the 700' level.

Equipment: includes a 150-ton concentrator, giving an extraction of about 80%, blacksmith shop, dwellings, etc.

Production:

Year	Tons Milled	Tons Concts.	Oz. Ag. in Concts.	Total Oz. Ag. Prod.	Earnings
1916.....	34,766	394	340,549	566,964	\$499,690
1915.....	30,093	474	349,900	746,310	351,124
1914.....	26,724	348	415,707	900,000	158,465
1913.....	25,256	324	379,764	762,699	168,630

The company made a third payment on its option on the stock of the Kirkland Lake Gold Mining Co., September, 1917, leaving \$75,000 to be paid. This company owns 362 acres of mineral land in Kirkland Lake district, but development is confined to the 35-acre McKane lot, showing a ledge with free gold, traceable 1,100'. The shaft was deepened from 70' to 600' with 166' drift at 160'. On the 300' level a crosscut and 207' of drifting opened a 5' vein of \$11 ore with 10' of porphyry assaying \$7 per ton between it and a second 12' vein averaging \$12.80 per ton. On the 400' level an orebody 110' long was opened for 120', proving up 11,660 tons of ore valued at \$209,600. Total ore developed in mine is valued at \$350,000.

BUFFALO MINES, LTD.

ONTARIO

Office: 14 Wall St., New York. **Mine office:** Cobalt, Ont., Can.

Officers: Chas. L. Denison, pres.; Robt. W. Pomeroy, v. p.; H. B. Crandall, 2nd v. p.; G. C. Miller, sec.-treas.; preceding, and A. W. Johnston, directors; M. A. Golden, asst. sec.; Thos. R. Jones, supt.

Inc. 1906, in Ont. **Cap.**, \$1,000,000; shares 75c par; listed on N. Y. Curb. U. S. Mortgage & Trust Co., transfer agent. Transfer offices: Imperial Trust Co., Toronto, and U. S. Mortgage & Trust Co., New York. Registrar, Imperial Trust Co., Toronto. Annual meeting in May.

The Buffalo has been one of the largest producers in Cobalt, yearly output

being about 2,000,000 oz. It is said that the greater part of the high-grade ore has been mined, but there remains a large tonnage of low-grade ore capable of being worked at a profit.

Income statement: year ending April 30:

	Total Income	Net	Dividends	Surplus	Total Surplus
1916.....	\$439,757	\$231,344	\$230,920	\$610,889
1915.....	372,260	79,690	\$50,000	27,158	379,968
1914.....	858,825	386,990	660,000	270,218(a)	352,810
1913.....	1,258,864	891,193	650,000	233,450	623,028

(a) Deficit.

Balance sheet for year ending April 30, 1916, shows: assets of \$1,738,996, which includes cash and accounts receivable, \$16,986; ore and bullion, \$605,311; plant and equipment, \$204,309; mining rights, \$907,092; liabilities include notes and accounts payable, \$108,351.

Property: 40 acres, in the town of Cobalt, includes the Buffalo mine.

Development: vertical shafts. Total work to Nov. 1, 1916, comprised shaft work, 2,009'; drifting and raising, 19,389'; stoping, 2,914,192 cu. ft.

Ore reserves: estimated Oct. 31, 1916, as 21,188 tons of broken ore and 24,587 tons unbroken ore, and 8,000 tons in stock pile containing a total of 1,288,375 oz. of silver. In addition, company estimates 1,780,000 oz. in tailings.

Production: years ending April 30:

	Tons Milled	Oz. Ag. per Ton	% Rec.	Tons Cyanided	Oz. Ag. per Ton	% Rec.	Tot. Prod. Oz. Ag.
1916.....	30,079	19.8	8,078*	25.46	684,274
1915(a).....	51,667	19.50	72.22	8,385	9.86	82.26	822,791
1914.....	77,616	25.31	76.14	13,388	10.13	77.80	1,637,809
1913.....	55,783	45.83	82.64	10,320	15.45	74.70	2,235,853

(a) Concentration mill and cyanide plant closed for 4 months.

*Treated by flotation, not cyanidation.

About 13,465 pounds of high-grade ore went direct to refinery, thus making a total of 705,055 oz. produced. Mechanical concentration is being converted to oil flotation to treat 600 tons daily.

CALUMET & MONTANA CONSOLIDATED MINING CO. ONTARIO

Office: Cobalt, Ont.

Officers: H. A. Oswald, Minneapolis, pres.; Jas. A. Patterson, v. p.; John Boyle, sec.-treas.; above with W. W. Sloan, C. H. Collins, Wm. Weichel, directors. Geo. G. Thomas, gen. mgr.; W. W. Mulholland, supt.

Inc. 1912, in South Dakota. **Cap.**, \$5,000,000; shares \$10 par; outstanding, 200,000 shares. Annual meeting, second Tuesday in October.

Company is a reorganization of the Calumet & Montana Mining Co., which see. At last accounts the company had one claim of 51 acres in Coleman Township, Cobalt, Ont., said to show fissure veins in diabase carrying silver ore. Developed by 225' vertical shaft with 500' of underground workings. In June, 1916, operations were reported to be in full swing and ore hoisting to have begun.

CARIBOU COBALT MINES CO.

ONTARIO

Offices: 61 Broadway, New York, and Cobalt, Ont.

Officers: Herman Cook, pres.; F. M. Loper, v. p.; E. H. Westlake, sec.-treas., with J. H. Susmann and Sam A. Lewisohn, directors.

Inc. Sept. 29, 1913, in Maine. **Cap.**, \$1,000,000; shares \$1 par, all out-

standing, of which 837,498 shares were owned by the Kerr Lake Mining Co., Aug. 31, 1915. The Caribou Cobalt Mines Co. owns the entire capital stock of Cobalt Comet Mines, Ltd., which is the operating company.

CASEY-COBALT MINING CO., LTD.

ONTARIO

Office: Balfour House, Finsbury Pavement, London, E. C., Eng.

Officers: W. R. P. Parker, pres.; J. P. Watson, v. p., with G. M. Clark, R. E. G. van Cutsem and Graeme Watson, directors.

Inc. in April, 1907, in England, to acquire 99,995 fully-paid shares of \$1 each, being the entire issued capital, with the exception of 5 shares of the Casey Cobalt Silver Mng. Co., Ltd., of New Liskeard, Ont. Consideration was 199,993 in fully-paid shares, vendors agreeing to provide £15,000 working capital. Company paid total dividends of \$203,249 to end of 1914.

CASEY COBALT SILVER MINING CO., LTD.

ONTARIO

Head office: 15-20 Traders Bank Bldg., Toronto. **Mine office:** New Liskeard, Casey Township, Ont.

Officers: W. R. P. Parker, pres.; J. P. Watson, v. p., with G. M. Clark, Capt. R. E. G. van Cutsem and Lieut. Graeme Watson, directors. John W. Shaw, mine engr. Company controlled by the Casey Cobalt Mng. Co., Ltd. q. v.

Property: 40 acres in Harris Twp., and the Casey-Cobalt mine in Casey Twp., 9 miles N. E. of New Liskeard.

Development: work totaled 2,194' in 1916. On Aug. 22, 1916, a disastrous bush fire swept across the property during a high wind storm, and destroyed all surface property, including the mill. Rebuilding and dewatering have been carried on as rapidly as possible.

CHAMBERS FERLAND MINING CO., LTD.

ONTARIO

See description under Aladdin Cobalt, Ltd.

COBALT COMET MINES, LTD.

ONTARIO

Office: 61 Broadway, New York, and Cobalt, Ont. Same officers as Caribou Cobalt Mines Co., which company owns the entire capital stock of Cobalt Comet Mines, Ltd.

Inc. April 16, 1913, in Ont. **Cap.**, \$1,000,000; shares \$5 par; all outstanding. Annual meeting, 2nd Thursday of Feb.

Property: 2 part claims, patented, in Coleman Twp., Temiskaming mining district, formerly known as the Drummond mine.

Ore: silver in fissure veins, occurs in shoots of variable widths. Ore minerals are native silver and cobalt-nickel sulpharsenides.

Development: by two shafts, 100' and 200' deep.

Equipment: includes an air hoist, electric pump, compressed air and electric power. Employs 50 men.

Production: in 1916 amounted to 203,777 oz. silver. Practically all ore in sight has been removed and future earnings depend on further discoveries of ore. Low-grade ore is treated by the Dominion Reduction Co.; high-grade ores are shipped.

COBALT PROVINCIAL

ONTARIO

Cobalt, Ont. Adjoins Nipissing. Reopened Sept., 1917, by John Redington, who is sinking a shaft on a vein at S. W. end of tract. Reserves estimated at 148,000 oz. silver.

Inc. Nov. 24, 1906, in Ont. **Cap.**, authorized and outstanding, \$4,000,000; \$5 par. Toronto General Trusts Corp., transfer agt. Annual meeting in December. Listed on Toronto Stock Exchange and New York Curb. Owns entire \$4,000,000 (par \$5) stock of the Coniagas Reduction Co., Ltd., which handles this company's product. Also controls the Redington Rock Drill Co. and the Mines Water Supply Co., Ltd., besides owning 6,054 shares of \$1 each, of a total issued of 40,000 shares of stock of the Wabi Iron Wks., Ltd.

Income Account, Fiscal Year Ending Oct. 31

Year	Gross Income	Net Income	Dividends & Bonuses	Surplus for Year
1915-16.....	\$1,192,424	\$840,791	\$600,000	\$240,791
1914-15.....	1,013,513	658,730	600,000	58,730
1913-14.....	1,407,877	968,387	1,320,000	351,613(a)
1912-13.....	2,186,664	1,693,583	1,640,000	53,583
1911-12.....	2,172,967	1,676,953	1,440,000	236,953
1910-11.....	1,947,566	1,612,464	1,440,000	172,464
1909-10.....	1,010,414	752,389	240,000	512,389
1908-09.....	691,678	473,534	360,000	113,534
1907-08.....	727,195	501,718	440,000	61,718

(a) Deficit. During year ending Dec. 31, 1914, paid 33% in dividends and bonuses. Total dividends paid to Oct. 31, 1916, \$8,440,000.

Balance sheet as of Oct. 31, 1916, shows assets, \$5,583,027, which includes: mine, \$3,985,700; machinery, plant and buildings, \$228,913; Coniagas Reduction Co., Ltd., stock, \$249,400; cash in bank and on hand, \$226,472; ore in transit, \$257,999; accounts receivable, \$22,307; silver account, \$525,362. Liabilities include surplus, \$1,363,430.

Property: the Coniagas mine, 40 acres on the townsite of Cobalt, Coleman Twp. In 1915 the company purchased 198 acres of Lot 15, Con. 1, Bucke Twp., known as the Agaunico mine, in which considerable development work was done a few years ago on a promising vein of cobalt and nickel ore. No work is now being done save on the Anchorite property in Deloro Twp. The Coniagas mine contains a large number of small but very rich veins carrying silver with small amounts of nickel, cobalt and arsenic. Bought Maidens McDonald property, adjoining the Ankerite, for \$20,000 in September, 1917.

Development: totaled 29,712' of underground workings Oct. 31, 1916. This included shafts 875', drifting 17,611' and 9,527' of crosscutting. Underground work for year ending Oct. 31, 1916, amounted to 1,974', as compared with 2,735' in preceding year. Development work was confined to following of small stringers and development on the 4th level. No important new orebodies were developed during the year, though considerable tonnage of low-grade ore was disclosed.

Ore reserves: Oct. 31, 1916, estimated as 134,852 tons containing 5,943,000 oz. silver and 117,000 tons of sand tailings and 40,000 tons of slime tailings which contain 859,500 oz. silver. A re-survey of the mine and re-estimation of ore reserves has given a much lower estimate. In 1915 it was 215,995 tons, containing 12,894,380 oz. silver.

Mill: 60 stamps, daily capacity 160 tons and a small cyanide plant. The cyanide plant was built to cyanide about 6 tons per day of low-grade canvas table concentrates and decomposed gouge from the mine, whereby an estimated daily saving of \$100 per day will be made. For year ending Oct. 31, 1916, mill treated 56,973 tons ore, an average of 3.04 tons per stamp per 24 hours, compared with 55,437 tons, an average of 3.02 tons per 24

hours for the previous year. Mill heads averaged 25.76 oz. silver per ton, compared with 23 oz. for the previous year.

There were shipped during the year 1916, 492 tons dry weight of high-grade concentrates averaging about 2,276 oz. silver per ton and 152 tons of low-grade slime of about 330 oz. silver per ton. A recovery of 131 tons of slime concentrates was made by canvas table plant and contained 26,986 oz. silver. Cyanidation of these concentrates began February, 1916, and 87.3 tons of about 206 oz. silver per ton were cyanided; also 889 tons of mine slimes of about 82 oz. were treated. This contained 81,916 oz., from which 71,731 were recovered. Three and a half tons of precipitates averaged 20,494 oz. silver per ton; 193 tons of 2,716 oz. per ton were shipped from the mine.

Number of men employed in mine and mill averaged 120.

Production (for Year Ending Oct. 31)

Year	Tons Mine Ore	Tons Concls.	Cost per Oz. Silver		Ounces Silver	Price, Oz. Silver
			(a)	(b)		
1916.....	193	648	15.24c	4.27c	1,773,286	63.11c
1915.....	267	607	13.62c	3.25c	2,002,053	49.25c
1914.....	485	688	12.44c	3.58c	2,497,394	56.75c
1913.....	735	1,034	8.76c	4.32c	3,252,566	60.55c

(a) Includes all expenses except shipping, smelting, refining and marketing charges which are under (b). Total production of mine to Oct. 31 amounted to 23,935,729 oz.

Ore and concentrates are treated by the Coniagas Reduction Co., Ltd., which see below.

Coniagas Reduction Co., Ltd.

Entire stock issue owned by the Coniagas Mines, Ltd., except 6 shares of stock issued to directors to qualify.

Inc. in Canada. **Cap.**, \$250,000; shares \$100 par.

Owns a smelter and refinery at Thorold, Ont. R. L. Peek, supt.

During fiscal year ending Oct. 31, 1916, company shipped 3,952,672 oz. silver and treated 3,183 tons ore dry weight. Company produces silver, arsenic and the oxides of cobalt and nickel. An average of 122 men employed in 1916.

The cyanide mill erected in 1916 and 250-ton flotation plant finished 1917, but to be enlarged, assures continued production and dividends for some time to come.

Coniagas is one of the big producers of Cobalt, having yielded 27,000,000 oz. silver and paid \$8,740,000 in dividends in 11 years. Ore reserves of Coniagas, Jan. 1, 1917, were 7,000,000 oz. of silver.

CROESUS GOLD MINES, LTD.

ONTARIO

Address: J. M. Cohen, mgr., Cobalt, Ont., Canada.

Officers: D. M. Steindler, pres.; E. L. Steindler, sec.-treas., also directors.

Inc. Sept. 21, 1912, in Ontario. **Cap.**, \$2,000,000; shares \$1 par; 200,000 issued; non-assessable. Is a close corporation, finances not published. Stock owned by Dominion Reduction Co.

Property: the Walsh & Dobie claims in Munro township, Ont., Canada.

Geology: quartz vein in diabase. Gold occurs free and in sulphides. Spectacular gold ore exposed on Dobie outcrop was protected by steel plate and locks.

Development: by 350' incline shaft. Rich ore opened recently at 300'

and 500'. Shaft produced \$1,000 for each foot in sinking. Gold is all coarse and free.

Equipment: includes 50-ton mill, with Hardinge mill, picking belt and amalgamation plates.

Produced \$1,000,000 in first 6 months' operation.

CROWN RESERVE MINING CO., LTD.

ONTARIO

Offices: Dominion Express Bldg., Montreal, Que.; 59 Victoria St., Toronto, Ont., and Cobalt, Ont.

Officers: John W. Carson, pres.; W. J. Gear, 1st v. p.; J. G. Ross, 2nd v. p.; Jas. Cooper, sec.-treas.; preceding officers, C. A. Smart, J. W. Ross, A. G. Gardner, R. W. Reford, F. S. Meighen, Ziba Gallagher, directors; S. W. Cohen, gen. mgr.

Inc. Jan. 16, 1907, in Canada. **Cap.**, \$2,000,000; \$1 par; outstanding, Jan. 1, 1916, \$1,999,957, of which \$231,143 is held by trustees for the benefit of the company and bears no dividends. Crown Trust Co., Montreal and Toronto, transfer office and registrar. Annual meeting, fourth Wednesday in January. Listed on Montreal Stock Exchange. Dealt in on unlisted department of Toronto Stock Exchange and on New York and Boston curbs.

Dividends: 20% in 1908; 71% in 1909; 60% in 1910-12; 48% in 1913; 24% in 1914; 8% in 1915; 5% in 1916; total dividends to Jan. 1, 1917, \$6,190,849.

Balance sheet for 1916 shows assets of \$2,839,957, which includes mining lands, plant and equipment, \$2,032,366; supplies, \$2,613; ore in transit and on hand, \$34,500; cash, \$191,182; investments in other companies and properties, \$571,533; accounts receivable, \$37,184. Liabilities show: accounts payable, \$10,446; surplus, \$770,534. The property accounts, which stand at \$2,032,366, were slightly written down. It appears that, according to the last balance sheet, the company had net quick assets of something like \$837,010 applicable to the stock, or about 42c per share.

Income Account Essentials—Years Ended Dec. 31

* Includes \$144,000 (1913, \$308,877) profit on Porcupine Crown, Ltd., investment.

† Deficit.

The Crown Reserve Co. owns 60% of the stock of the Porcupine-Crown Mines, Ltd., from which it received \$144,000 in dividends in 1915. It owns jointly with Kerr Lake Mining Co., Ltd., the Drummond Fraction property from which it received a profit of \$9,844 in 1916. It also operates the Silver Leaf mine of the Silver Leaf Mining Co., Ltd.

The company has paid total royalty to the government of \$880,315; this was at a 10% rate. Beginning Jan. 1, 1916, only the regular tax of 3% is levied.

Property: original holdings at Cobalt consist of 23 acres in Kerr Lake, developed by the Crown Reserve mine, which has been one of the heaviest producers in Cobalt, but the end of this property is in sight. The company co-operated with the Kerr Lake Mining Co. in the draining of Kerr Lake, but results were disappointing to Crown Reserve in that no new valuable veins were found. The pumping out of the lake made it possible to obtain ore containing over 2½ million oz. silver, which otherwise could not have been extracted, and the small veins discovered, not in themselves of great importance, are sufficient to pay for the whole cost of the opera-

tion. Total amount of mud and water removed to Jan. 1, 1916, was about 700 million gallons.

Development: in 1916 amounted to 3,200', making 32,786' to date.

Production—Years Ended Dec. 31

Year	Ore Prod. Tons	Silver Prod. Gross Oz.	Gross Value	Net Value	Results per Ounce

Totals..	8,772.77	19,361,006	\$10,608,109	\$10,067,722	54.78	15.73	39.05

Development during 1916 showed that conditions on the lower levels under the diabase sill were disappointing; but an important discovery was made on the N. side of the property, a raise above 500' level, cutting conglomerate at 170' above the level. This is 60' deeper than previously for this formation, which produced the large orebodies in the Crown Reserve. Possibilities are good for new shoots. The mine should continue to show a small profit for some time to come; this, in addition to the assets on hand at the time of dissolution, would seem to warrant somewhat better prices for its stock than those now prevailing of between 25c and 30c per share. The future of the Crown Reserve Mining Co. beyond the life of the two mines it now controls, depends upon its ability to acquire new properties. It was in following this policy that in 1915 it exercised an option on the property of the Globe Cons. Mining Co. in Trinity Co., Cal. (see Globe Cons. Lease, Inc.), but as results were not satisfactory, work was stopped. An option on gold claims in the Boston Creek district of Ontario was given up, owing to poor developments. About 90% of the shares in the Reward mine, Inyo Co., Cal., was purchased. There is \$250,000 of refractory ore blocked out, and with a flotation plant the mine is being operated at a profit. A return of purchase price is assured, and a good profit on the investment. A joint option is held with the Dominion Reduction Co. on the Cochrane mine at Cobalt.

Crown Reserve is financing the Newray mine in the Porcupine district.
DOMINION REDUCTION CO., LTD. ONTARIO

Offices: 42 Broadway, New York City, Cobalt, Ont.

Officers: D. M. Steindler, pres.; Mortimer B. Davis, v. p.; E. P. Steindler, sec.-treas., with A. A. Allen and H. Victor Brayley, directors. P. L. Blodgett, supt.

Inc. 1912, in Ontario. **Cap.**, \$2,000,000; shares \$1 par; \$1,600,000 outstanding. Nearly all stock is held by the directors.

Company took over the Nova Scotia mill at Cobalt. Mill has 40 stamps, rated capacity 200 tons per day, and treats custom ore, including low-grade ore from the Kerr Lake and Crown Reserve mines, with which the mill is connected by an aerial tram. All ore is purchased outright and reduced to bullion; payment is made in cash or in bullion. Company also owns and operates the property of the Croesus Gold Mines, Ltd., in

Munro Twp., 50 miles E. of Porcupine; has an interest in the St. Anthony, or Thunder mine, at Sturgeon Lake, and operates the Nova Scotia mine.
GENESSEE MINING CO., LTD. **ONTARIO**

Head office: Cobalt, Ont. **Executive office:** 442 Powers Bldg., Rochester, N. Y. L. F. Steenman, mgr.

Officers: R. H. Gorsline, pres.; C. F. Crandall, v. p.; Alexander Russell, sec.-treas.; above, with A. H. Drury, C. D. Van Zandt and L. F. Steenman, directors.

Inc. 1915, in Ontario. **Cap.**, 1,000,000 shares; \$1 par.

Company has a 6 years' lease on the U. S. claim, north of the north claim of the Chambers-Ferland. Property has been idle 6 years, but recent developments in the Chambers-Ferland have given hope to the Genessee management, which intends to sink 60' shaft to 600' depth. This shaft shows a 4" vein of low-grade silver ore.

At the end of Sept., 1917, the vertical shaft was down 572' towards the contact. Crosscutting and driving was started during July. As the Beaver and Temiskaming mines in this district have opened good ore on the lower contact, the Genessee should stand a chance.

GLEN LAKE COBALT MINES, LTD.

ONTARIO

Inc. July 9, 1914, in Ont. Has a lease on the Foster mine of the Foster Cobalt Mng. Co., Ltd., about 40 acres on and under Glen Lake, Ont. An oreshoot, small but high-grade, was found on the 50' level in March, 1916. A long crosscut has been run from the old Foster shaft out under Glen Lake to within 40' of the Bailey line. The management expects to run another crosscut parallel to the Bailey line with the hope of finding extension of the Bailey veins.

Company is operating on a royalty basis of 15% for 200 oz. ore and under, and 25% for higher grade ore.

HARGRAVE SILVER MINES, LTD.

ONTARIO

Office: Excelsior Life Bldg., Toronto, Ont. **Mine address:** Cobalt, Ont.

Officers: Geo. H. Sedgwick, pres.; Jas. Ritcheson, sec.; J. T. Shaw, mgr.

Inc. 1908, in Ontario. **Cap.**, \$2,500,000; shares \$1 par; all issued. Stock listed on New York Curb.

Property: 40 acres in Porcupine district and 40 acres in Cobalt district, adjoining the Kerr Lake mine on the east and on the south, and said to carry the extension of the Kerr Lake No. 3 vein. Drifting on this vein reported to have disclosed ore assaying 5,000 oz. silver per ton.

Development: by two shafts connected on the 255th level with approximately 1 mile of lateral workings.

Under former management property is credited with production of 500,000 oz. silver. The workings are to be deepened to 500'.

Recent work has been on the 125' level. About 30 men employed. Shipping about 1,000 tons of dump ore to the Dominion Reduction Works, October, 1917.

Cobalt mine was closed down at the end of 1913 after a report made by the former manager, who stated that all known orebodies had been exhausted down to 375' depth. After three years, in January, 1917, when silver prices rose to 70c, mine was reopened and some very rich ore found at 75', 375' and 250'.

HUDSON BAY MINES, LTD.

ONTARIO

New Liskeard, Ont.

Officers: Geo. Taylor, pres.; A. A. McKelvie, v. p., with Thos. McCamus, F. L. Bapst, W. H. Kinch, S. S. Ritchie and C. L. Sherrill, directors. F. L. Hutchinson, sec.-treas. G. G. Thomas, mgr.

Inc. July 16, 1909, in Ontario, to acquire from the Temiskaming & Hudson Bay Mining Co., silver properties at Cobalt; it is the operating company of the latter. **Cap.**, \$3,500,000; shares \$1 par, outstanding Sept. 1, 1915, \$3,200,050. Controls Dome Lake Mining & Milling Co., Ltd., through ownership of 894,045 shares.

Balance sheet for year ending Aug. 31, 1917, shows assets, \$3,374,825, which includes: mining claims, at Cobalt, \$2,953,228; at Gowganda, \$44,900; claims in Teck & Lebel Twp., \$18,193; plant, concentrator and equipment, \$43,318; accts. receivable, \$80,465; ore on hand, \$43,147; 894,045 shares Dome Lake M. & M. Co. stock, 187,506; stock of Mines Water Supply Co., \$2,943.

Liabilities show: accts. payable, \$4,102; bills payable the Temiskaming & Hudson Bay Mng. Co. and Dome Lake M. & M. Co., \$67,936; wages due, \$2,503; capital stock, \$3,200,050.

Receipts, 1917, were \$190,993, ore sales giving \$189,696. Expenditures were \$96,043, leaving a profit of \$94,949, plus balance of \$5,284 from 1916, a total of \$100,233.

Dividends: total to 1916, \$778,909; last one of 2½% paid Aug. 31, 1913.

Property: 9 claims, 340 acres, at Cobalt. No. 1 mine was re-opened in June, 1916, and stoping operations started. Several promising veins were found carrying high silver values, and are being further developed, 1917.

Ore reserves: estimated at 8,299 tons milling ore with silver content of 107,614 oz.; against 13,000 tons and 260,000 oz. in the previous year. During 1916-17, 1,652' of new work was done.

No. 2 mine was closed down in March, 1916, after \$10,000 had been spent in development work. If examination of property proves satisfactory, work will be resumed.

No work was done on the Gowganda property, and only assessment work on claims in Lebel & Teck Twp. and Kirkland Lake.

Company acquired additional interest in the Ferguson mine, now owning two-thirds. Property adjoins the Lake Shore mine on the east, and is one-half mile west of the Tough Oakes mine.

For work done at the Dome Lake M. & M. Co., Ltd., see under that title.

Production: the mill treated 18,247 tons of 17.3 oz. ore, extracting 262,864 oz. silver. The recovery was 83.2%, at a cost of 14.5c per oz.

KERR LAKE MINES, LTD.

ONTARIO

Succeeds Kerr Lake Mining Co., which see.

KERR LAKE MINING CO.

ONTARIO

Office: 61 Broadway, New York.

Officers: Adolph Lewisohn, pres.; Sam A. Lewisohn, v. p.; E. H. Westlake, sec.-treas., with J. J. Steindler, D. M. Steindler, S. S. Rosenstamm, J. Parke Channing, J. H. Susmann and Wm. B. Joyce, directors.

Inc. Sept. 14, 1905, in New York. **Cap.**, \$3,000,000; shares \$5 par; all outstanding. Federal Trust Co., Boston, Bankers Trust Co., New York, transfer agts.; Equitable Trust Co., New York, Old Colony Trust Co., Boston, registrars. Annual meeting, 4th Monday in September. Stock listed on Boston and Toronto Exchanges; traded in on New York and London Curbs.

Is holding company, owning stock of Kerr Lake Mining Co., Ltd., of Ontario, the operating company. Company was dissolved Nov. 12, 1917, and shareholders are to get stock, share for share, in Kerr Lake Mines, Ltd., a Canadian corporation, to own entire assets of present company. This plan avoids present double and unnecessary taxation.

Balance sheet as of Aug. 31, 1917, shows: assets, \$3,018,211, which includes Kerr Lake Mining Co., Ltd., stock, \$3,000,000; 150,000 shares Wettlaufer Lorrain Silver Mines, Ltd., stock \$7,500; 837,400 shares Caribou

Cobalt Mines Co. stock, \$8,125; and cash, \$2,586. Current liabilities include: reserve, \$1,250; Kerr Lake Mng. Co., Ltd., \$2,000; profit and loss, \$7,760. Total receipts for the year were \$726,175, of which \$666,000 was received in dividends from the Kerr Lake Mng. Co., Ltd. Expenditures totaled \$21,175.

Dividends: paid quarterly at the rate of 20% annually, last payment of 5%, June, 1917. Payments have been as follows:

1917.....	\$1.15	1910.....	\$2.00
1916.....	1.00	1909.....	1.15
1915.....	1.00	1908.....	.75
1914.....	1.00	1907.....	.40
1913.....	1.00	1906.....	.22½
1912.....	1.65	1905.....	.02½

A special dividend of 15c per share was paid on Aug. 10, 1917, to be devoted to Red Cross work; included in above total. This makes 237%, or \$7,110,000.

Company is a holding company owning the entire stock issue of the Kerr Lake Mng. Co., Ltd., and controls the Cobalt Comet, Ltd., through majority stock ownership in the Caribou Cobalt Mines Co., the holding company for the former. The operating companies are separately described.

KERR LAKE MINING CO., LTD.

ONTARIO

Office: 61 Broadway, New York. H. A. Kee, gen. mgr., Cobalt, Ont. Is controlled through ownership of entire stock issue by Kerr Lake Mng. Co., of New York, which see.

Balance sheet of Aug. 31, 1917, shows assets: \$1,875,350, which includes mining property, \$80,000; ore on hand, sold and in transit, \$335,141; cash, \$658,292; short term bonds, \$202,150; Kerr Lake Mng. Co. of New York, \$2,000; liabilities: 400 shares of capital stock at par, \$100, \$40,000; accts. payable, \$20,530; accrued wages, \$6,340; reserve for outstanding liabilities and taxes, \$97,434, leaving a surplus balance of \$1,711,045 after payment of \$666,000 in dividends.

Dividends: to August, 1917, amounted to \$7,117,000. Payments are at the rate of \$1 per share annually. Total proceeds from ore sales were \$1,887,118; operating expenses were \$297,303 for production and development; \$170,766 for shipment and treatment, \$14,892 for general expenses; written off on property acquired, \$83,078. Operating profit for the year was \$1,343,474.

Property: one patented claim and two fractional claims, 57 acres in Coleman Twp., Nipissing district, Cobalt, Ont., Can. For description of geological features see Nipissing Mines Co. The ore occurs in several small vertical fissure veins in Huronian slate and conglomerate. The veins and ore are characteristic of the Cobalt district. The oreshoots vary from a few feet to 400' in length and occur in an area of about 8 acres.

Development: comprises several vertical shafts, deepest 487', with a total of 51,450' of underground workings. New development for the fiscal year, 1917, amounted to 3,105', compared with 4,057' in 1916.

During 1916, the winze on the Keewatin vein was sunk 150' below No. 6 level. No. 9 level, the lowest, is 475' below the surface. The entire winze is in Keewatin formation below the diabase contact, and work on No. 7, 8 and 9 levels shows the vein to be weaker and less mineralized as it leaves the contact, so possibilities below No. 6 are not good. Ore is probably confined to the diabase near or above the contact. Results of explorations at No. 7 shaft were fairly satisfactory. In stoping, the Fleming vein was

found to be 30' wide in places, the Main East 20', and No. 10, 15 and 8 came together to form a stope nearly 100' wide.

During 1917, raises on the Keewatin vein above No. 6 level only exposed encouraging ore, which is to be explored near the contact. Work on No. 15, McDonald southeast and Fleming veins at No. 7 shaft resulted satisfactorily. On the 175 and 225' level, various veins developed from good to disappointing ore.

Thirteen veins contributed to the 1917 output of 1,729,889 oz. of high-grade ore; No. 10 yielding 20%; No. 3 Lake, 12%; Fleming, 17%; Main East, 6%, and McDonald, 5%. Old stope fillings on No. 3 were partly drawn, producing 12,466 oz. of high-grade ore and 1,441 tons of 20 oz. ore. Dumps were also profitably worked, giving 4,080 tons of 17 oz. ore. A total of 55,376 tons of rock was hoisted in 1916.

Drummond Fraction claim was operated in a small way, mostly on a smaltite vein in the lake basin, yielding 67,112 oz.

Ore reserves: in about 15 veins and dumps are estimated at 2,221,500 oz. of high-grade and 52,400 tons of 25 oz. ore, a total of 3,120,000 oz. silver, which is 720,000 oz. less than in 1916, the latter 345,000 oz. less than in 1915.

Production: for year ended Aug. 31, 1917: 347.3 tons ore averaging (with bullion), 4,455 oz. silver, 57.30 tons averaging 498.39 oz., 303.6 tons averaging 469.81 oz., and 31,281 tons of mill ore containing 26.26 oz. silver per ton. Shipping ore yielded 1,729,889 oz. of the total, 2,551,346 oz. silver. Cobalt yield was 89,454 lb. silver. Cost of production was 26.75c per ounce.

Equipment: includes 12-drill air compressor, 10x12 Jenckes hoist, sorting and jigging plant of 125 tons daily capacity, fully equipped machine shop and a pot melting furnace to melt the rough metallics into bullion, installed in 1915.

Property: is apparently exhausting ore reserves, although in 1917 they were not decreased to the full extent of production, and new veins are not likely to be found, although stoping widths have increased and the lake bottom is producing ore. The physical condition appears to have improved compared with 1916. Silver output in Aug., 1917, was 200,855 oz.

LA ROSE CONSOLIDATED MINES CO.

ONTARIO

Office: 260 St. James St., Montreal, Quebec.

Officers: D. Lorne McGibbon, pres.; Shirley Ogilvie, v. p.; Edwin Hanson, v. p.; S. J. Le Huray, sec.-treas., with E. W. Nesbitt, V. E. Mitchell, W. M. Dobell and W. A. Black, directors.

Inc. May 22, 1908, in Maine. **Cap.,** \$7,500,000; shares \$5 par; 1,498,627 shares issued. Bankers Trust Co., New York, Toronto Gen. Trust Corp. and Montreal Trust Co., transfer agts. Guaranty Trust Co., of New York, Toronto Gen. Trusts Corp. and Montreal Trust Co., registrars. Annual meeting last Monday in April.

Owns entire capital stock of the La Rose Mine, Ltd., Lawson Mines, Ltd., and Violet Mng. Co.; also 7,262 shares of University Mines, Ltd.

The report of La Rose Cons. Mines Co. for the year ended Dec. 31, 1916, shows: Total receipts, \$328,000; dividends, \$299,725; balance, \$28,275; administration expenses, \$26,428; surplus, \$1,847; previous surplus, \$7,569; total surplus, \$9,416.

The balance sheet as of Dec. 31, 1916, shows:

Assets: stock of subsidiary companies, \$7,493,135; distribution, \$2,153,214; furniture and fixtures, \$1,537; due from La Rose Mines receivable in January, 1917, \$80,000; cash in banks and on hand, \$6,278; total, \$9,734,165.

Liabilities: Capital stock, \$7,493,135; depreciation, \$2,153,214; dividends payable Jan. 20, 1917, \$74,931; surplus, \$12,884; total, \$9,734,165.

Dividends: total to Feb., 1917, \$7,235,410. Present rate 5c quarterly.

Production: total to 1917, 35,820 tons, yielding 23,727.329 oz. silver, with net smelter returns of \$12,000,405.

Results of 1916 operations compare with previous year as follows:

	Prod. Oz.	Net	Cost	Net Sell.			
	Silver	Value	per Oz.	Price	Net	Dividends	Surplus
				per Oz.	Profit		
1916...	740,065	\$449,734	46.39c	64.89c	\$164,774	\$299,725(4%)	\$740,353*
1915...	1,135,142	526,996	31.64c	50.88c	230,662	299,725(4%)	937,490
1914...	1,368,247	637,555	37.2c	53.92c	217,979	749,313(10%)	1,040,380

*Combined surplus of holding and operating companies.

Indicated earnings for first 6 months in 1917 are \$62,875. Net cash on hand, July, 1917, \$640,181.

Property: 6 patented claims, 359 acres, in Nipissing district, Cobalt, Ont., include the La Rose, Princess, Lawson, University and Fisher-Eplett, all practically worked out. Work was discontinued in 1914 on the Princess and Fisher-Eplett claims after extensive development work failed to locate new orebodies, but exploratory work continues on the La Rose and Lawson. The new shaft was down 350' and 256' of diamond drilling from this level to reach the Keewatin formation was done, 1916. Development work totaled 7,982' in 1916.

(For geology of district see description of Hollinger Gold Mines, Ltd.)

Company has options on a copper mine in New Brunswick, the Hurd gold mine, in Kirkland Lake and on the Maidens MacDonald gold mine in Porcupine.

Production: 740,065 oz. silver in 1916 was from mine dumps, pillars, walls and backs of old stopes. The same sources will yield a revenue in 1917, but La Rose is a liquidating proposition unless valuable new properties are acquired.

LORRAIN CONSOLIDATED MINING CO.

ONTARIO

Officers: D. M. Steindler, pres.; J. Cohen, mgr.; J. G. Harkness, supt., Cobalt, Ont., Canada.

Mark Harris & Co., Standard Bank Bldg., Toronto, Can., are underwriters of 250,000 shares of stock.

Property: at Cobalt is said to show a vein 5-8" wide of calcite and smaltite on which 260' shaft has been sunk. At about 65' vein dipped out of shaft but it was again found at 263'. No commercial ore encountered yet.

Development: work in progress, 1917, but stock is considered a speculation pure and simple.

McKINLEY-DARRAGH-SAVAGE MINES, LTD.

ONTARIO

Offices: Canada Life Bldg., Toronto and Cobalt, Ont.

Officers: J. R. L. Starr, pres.; Thos. W. Finucane, v. p.; J. H. Spence, sec.; Harper Sibley, treas.; Jos. S. Hunn, asst. treas.; with H. W. Sibley and G. L. Thompson, directors; T. R. Finucane, mgr.

Inc. 1906 in Ontario. **Cap.,** authorized \$2,500,000; issued, \$2,247,692; shares \$1 par. Traded on New York Curb.

Comparative General Balance Sheet:

Assets: McK.-D.

	Mine & Plant	Sav. Mine & Plant	Bennett Claim	Current	Inv., etc.	Total

(a) McKinley mine, \$238,216; Savage mine, \$22,208. (b) McKinley mine, \$320,367; Savage mine, \$8,483. (c) McKinley mine, \$649,205; Savage mine, \$166,820.

Dividends: 2% in 1907; 9% in 1908; 10% in 1909; 15% in 1910; 50% in 1911; 50% in 1912; 32% in 1913; 18% in 1914; 12% in 1915; 12% in 1916; 9% to July 1, 1917. Total 226%, or \$5,011,336.

Property: 1 claim, 40 acres, the McKinley-Darragh mine, located at southern end of Cobalt Lake; 1 claim, 40 acres, the Savage mine, on the east side of Cart Lake; 40 acres in Bucke Twp., the Bennet claim. The McKinley-Darragh, which adjoins the Nipissing and La Rose holdings, has been the most important producer; deepest workings are at 400', where the contact with the Keewatin formation is exposed.

Ore reserves: estimated at end of 1916 to contain 1,714,302 oz. of silver, compared with 1,871,280 oz. Jan. 1, 1916. Reduction in reserves is due to exhaustion of the Savage mine.

Costs at the McKinley-Darragh mine:

	Tons Milled	Mines	Costs Mill	Mktg.	Total
1916.....	62,676	\$1.98	\$0.95	\$1.08	\$5.15
1915.....	50,912	1.78	0.93	1.01	4.71

1913.....	48,761	2.44	1.39	1.88	7.37

Per cent extraction on all ore milled: 86.9 in 1913; in 1914, 85.1 on McKinley ore and 64.1 on Savage ore; 80.9 in 1915.

Recent production.

	Ounces Silver Shipped			Cost	Profit
	McK.-D.	Savage	Total	per Oz.	per Oz.
1916.....	1,055,996	\$0.4073	\$0.2664
1915.....	803,717	256,419	1,060,136	.2871	.221
1914.....	1,051,925	208,121	1,260,046	.313	.231
1913.....	1,672,431	556,066	2,228,497	.223	.369

Total ounces silver shipped to Jan. 1, 1917: 16,239,657.

The mill recovered 82.39% of the 14.79 oz. ore treated. A flotation plant for slimes was successfully operated, while one for old tailings was erected recently.

Silver realized 27c per oz. more in 1916 than in the previous year, but

mining costs rose so sharply that the profit per ounce only increased from 22 to 26½c.

Silver and gold properties in Northern Ontario were examined for the company, but none were considered worth buying.

Future of McKinley-Darragh-Savage has been brightened by developments at depth, and property may continue dividends for some time yet.

Development: work in McKinley amounted to 4,097' in 1916. Previously, 250' was considered the full depth of profitable lodes, but a winze sunk on the Cobalt Lake fault to 400' proved that the Keewatin contact was much deeper than supposed. Ore has been developed on the 300 and 400' levels. Footage in the Savage totaled 1,177'; this mine is practically worked out.

MERCER SILVER MINES, LTD.

ONTARIO

Offices: 103 Bay St., Toronto and Cobalt, Ont.

Officers: Harry Worth, pres.; F. W. Zoller, v. p.; R. F. Segsworth, sec.-treas.; with R. F. Robertson and W. E. Segsworth, directors. A. C. Bailey, supt.

Inc. July, 1915. **Cap.**, \$1,000,000. Company is closely identified with the Seneca Superior Mines, Ltd. Has a 10-year lease from the Peterson Lake Co., on property adjoining the Seneca-Superior, formerly leased by Gould Cons. Mines, Ltd. The Peterson Lake Co. will receive 25% royalty on smelter returns.

MINING CORPORATION OF CANADA, LTD.

ONTARIO

Office: Traders Bank Bldg., Toronto. **Mines and works:** Cobalt, Ont.

April 1, 1914, the Mining Corp. of Canada acquired the mining properties formerly operated by the Cobalt Townsite Mng. Co., Ltd., Cobalt Lake Mng. Co., Ltd., City of Cobalt Mng. Co., Ltd., and the Townsite Extension Mines, Ltd., total area, 183½ acres, at Cobalt. In 1915, the property of the Little Nipissing Mining Co., 40 acres, was acquired. On Jan. 1, 1917, business and assets of Canadian Mng. Corp'n. were acquired.

Officers: Sir H. M. Pellatt, pres.; J. P. Watson, 1st v. p.; W. P. P. Parker, 2nd v. p.; with G. M. Clark, R. E. G. van Cutsem, D'Arcy Weatherbee and Gracme Watson, directors. W. W. Perry, sec.; C. E. Watson, mgr., Cobalt; M. F. Fairlie, mill mgr.

Inc. March 20, 1914. **Cap.**, \$2,075,000; shares \$1 par; all issued; 1,911,319 shares were held by the Canadian Mining Corp., Ltd., in liquidation.

Capital increased to \$8,300,250, shares \$5 par, in 1917.

Balance sheet for 1916 shows production worth \$3,276,006; operation, \$1,362,126; head office (including \$233,162 taxes, etc.), \$293,624; dividends, \$570,625; leaving \$1,049,631 balance, plus \$1,167,376 balance from 1915 and \$230,574 dividends and interest, making amount carried forward to 1917, \$2,447,581.

The new company paid 12½c per share on March 15, 1917, with 25c bonus, making \$622,519.

Owens entire capitalization, \$250,000, of Cobalt Reduction Co., Ltd., operating a 300-ton mill and 140-ton cyanide plant.

Dividends: paid by this company to Mining Corporation were \$171,516 in 1916.

Ore: silver, occurs in narrow calcite veins in Huronian conglomerate and Keewatin formation. The high-grade ore assays 1,919 oz. silver per ton, the mill ore, 30 oz. silver per ton.

Development: three mines, the City, Lake and Townsite are worked. Exploration in 1916 totaled 14,789', at cost of \$15.41 per foot. Total openings are over 19 miles. Some diamond-drilling was done last year. Underground work cost \$3.87 per ton. Costs in all departments in 1916 totaled

\$13.43 per ton, or 34.46c per oz. of silver, against \$10.15 and 29.57c in 1915, due to increased cost of supplies. Prospects for the Townsite are not very promising, but exploration of new areas in the other mines should reveal orebodies.

Ore reserves: estimated at end of 1916 as 743.7 tons of ore, containing 1,729,800 oz. of silver and 64,008 tons containing 1,505,200 oz., a total of 64,751.7 tons with 3,235,000 oz. silver, compared with 101,135.3 tons and 3,937,995 oz. in 1916. Tailings contain 1,900,000 oz. additional.

Company examined 65 properties in North America during 1916.

Production: ore is treated at the Cobalt Reduction Co. plant. The Lake mill was shut down in July, 1916. Tonnage treated by both plants was 114,392, at cost of \$4.12 per ton. Extraction was 88.73%, the ore yielding 2,993,279 oz. silver; treated 763 tons of high-grade ore yielding 1,464,162 oz. The total silver recovery in 1916 was 4,457,441 oz. Total since 1908 is 23,129,040 oz. Flotation of tailings is a success in the district, thereby making these a valuable asset.

NATIONAL MINES, LTD.

ONTARIO

Operating, under lease, the King Edward mine, which see. Development underway at 1,000' depth and flotation plant erected to treat ore and tailings.

NIPISSING MINES CO.

ONTARIO

Company's assets and business acquired in Sept., 1917, by the Nipissing Mines Co., Ltd., of Ontario.

Office: 165 Broadway, New York. **Mine office:** Cobalt, Ont., Canada.

Officers: E. P. Earle, pres.; Richard T. Greene, sec., with W. H. Brouse, David Fasken, August Heckscher, R. B. Watson, directors. P. C. Pfeiffer, treas.; R. B. Watson, gen. mgr.

Inc. April 6, 1906, in Maine. **Cap.**, \$6,000,000; shares \$5 par; all issued.

Transfer agents: Bankers Trust Co., New York; Old Colony Trust Co., Toronto. **Registrars:** Liberty National Bank, New York; State Street Trust Co., Boston; Toronto Gen. Trusts Corp., Toronto. Annual meeting, last Monday in April. The Nipissing Mines Co. is a holding company, owning the entire stock issue of the Nipissing Mining Co., Ltd., which see.

The annual report, dated Dec. 31, 1916, shows total receipts, \$1,843,036, including \$1,835,000 dividends on stock of Nipissing Mining Co., Ltd., and expenditures, \$1,829,897, including \$1,800,000 paid in 4 quarterly dividends (30%). Assets, Jan. 1, 1917, total \$6,613,139, including capital stock, Nipissing Mng. Co., Ltd., \$6,000,000; dividends receivable from Nipissing Mng. Co., Ltd., \$610,000; cash, \$3,139.

Dividends: paid quarterly; 2 of 5% and 2 of 10% in 1916. Total since 1906 is 259%, equal to \$12.95 per share, or \$15,540,000.

NIPISSING MINES CO., LTD.

ONTARIO

Inc. Sept., 1917, in Ontario. **Cap.**, \$6,000,000; shares \$5 par, all issued.

Company took over assets and business of the Nipissing Mines Co., of Maine, which controls the Nipissing Mining Co., Ltd. (both of which see.) Officers are same as the Maine corporation.

NIPISSING MINING CO., LTD.

ONTARIO

Controlled by Nipissing Mines Co., Ltd.

Office: 165 Broadway, New York, and Cobalt, Ont., Canada. Is controlled through ownership of entire stock issue by the Nipissing Mines Co., which see.

Officers: David Fasken, pres.; E. P. Earle, v. p.; with W. H. Brouse, R. T. Greene and R. B. Watson, directors; A. T. Struthers, sec.; P. C. Pfeiffer, treas.; R. B. Watson, gen. mgr.; Hugh Park, mgr.; J. Johnston, mill mgr.; J. J. Denny, research dept.; Charles Butters, cons. met. engr.

Inc. 1904, in Ontario. **Cap.**, \$250,000; shares \$100 par; all issued.

1914....	2,516,065	2,558,733	971,112	1,587,621	1,235,000	343,715

Dividends: paid to July 20, 1917, total \$16,240,000, equal to 264%.

Property: 8 claims, 846 acres at Cobalt, Ontario, Canada, has over 100 fissure veins, from ½" to 12" in width, occurring in Huronian conglomerate or Keewatin formation. The ore is silver with cobalt and arsenic.

Development: total work in 1916 amounted to 9,128' as compared with 10,496' in 1915. There are 10 working shafts on the property. The lowest, or No. 64 shaft is 1,003' deep. No further work was done there in 1916. Exploration in various parts of the property failed to discover any new veins of importance, but vein 490 opened well. On No. 5 level there is a shoot 500' long, 5 to 6" wide, averaging 800 to 1,000 oz. per ton. There is also 8 to 10' of milling ore containing 30 to 40 oz. per ton. Reserves in this vein are about 2,000,000 oz. silver. Shaft 73 produced most of the ore treated during 1916. Ore reserves here amount to over 4,000,000 oz. silver.

On the Cobalt Lake fault, shaft 81 was sunk to the Keewatin formation and crosscuts were driven to the fault at 425 and 520' below the collar. A total of 2,265' of work was done. There is a strong vein along the fault, with considerable cobalt and some rich ore, but nothing that can be considered an ore-shoot has been found. During 1917 to June, 1,500' had been driven on the vein along this fault at 425' and 520' depth.

Mining costs were \$3.165 per ton in 1916.

Ore reserves: Jan. 1, 1917, 167,394 tons, assaying 55 oz. silver per ton, or 9,153,139 oz. in all.

Equipment: includes a high-grade mill, a low-grade 40-stamp mill, cyanide plant, air compressors, power house, hoists, tramway etc. Flotation plant of 10 Callow cells is treating tailings. The high-grade mill treated 1,064 tons of Nipissing ore assaying 1,800 oz. per ton, while the low-grade mill treated 76,957 tons of 31.96 oz. ore. Recovery was 86.76%, at a cost of \$4.60 per ton, an increase of 69c per ton.

Recent Shipments

	Ore, Tons	Gross Oz. Silver	Gross Value Silver, Cobalt, Nickel & Arsenic Paid For	Net Value Received
1916.....	2,139	3,819,769	\$2,737,569	\$2,686,488
1915.....	191.9	4,623,958	2,422,791	2,381,463
1914.....	434.2	3,999,862	2,226,430	2,207,428
1913.....	1,328.6	4,844,169	2,945,335	2,920,714

In July, 1917, yield was 344,925 oz., valued at \$272,490.

Cost of producing an ounce of silver in 1916 was 24.135c equal to \$12.529 per ton of ore treated. The total cost was \$2.51 per ton higher than in 1915, due to advanced prices of supplies, taxes, and insurance.

Production: since 1904 totals 45,029,007 oz. silver, realizing \$26,168,029 gross and \$24,846,968 net.

Nipissing is the largest company and has the best holdings at Cobalt, and manages to maintain its reserves, the past year showing an increase. With silver at \$1.05 per oz., a profit of 75c can easily be made.

NORTHERN CUSTOMS CONCENTRATOR, LTD. ONTARIO

Office: 702 Excelsior Life Bldg., Toronto, Ont. A. J. Young, pres.; E. J. Booth, v. p.; F. J. Bourne, sec.-treas.-gen. mgr.; A. S. Holmes, supt.; F. J. Bourne, cons. engr.

Operates a 200-ton, 80-stamp concentrating mill north of the La Rose mine, at Cobalt, Ont.

O'BRIEN MINE, THE. ONTARIO

M. J. O'Brien, Cobalt, Ont., owner. J. G. Dickenson, mgr.; D. W. McLeod, supt.

Property: 15 claims, patented, 560 acres, privately owned, at Cobalt and Gowganda, Ont. The O'Brien mine has been a steady silver producer for many years and is reported to have 4 years' ore reserves in sight, 1917.

Ore: occurs in conglomerate and Keewatin diabase and contains silver, cobalt, arsenic, nickel and copper values.

Development: by 6 shafts to depth of 660', with 7 miles of crosscutting, raising, drifting and stoping.

Equipment: includes 200-ton cyanide mill and 200-ton concentrator.

The mill treated 51,892 tons of ore in 1914. **Shipments:** 1,237,345 oz. silver. Royalty paid to government was \$5,898 in 1914, with total payments to date of \$700,966.

Results of operations and production not made public.

PARAGON-HITCHCOCK MINES, LTD. ONTARIO

Address: Collingwood, Ont., Canada. **Mine office:** Wabun, Ont.

Officers: Donald McKay, pres.; W. R. Hitchcock, v. p.; David Melville, sec.; W. T. Herrington, treas.; E. H. Hitchcock, C. W. Pitt, W. A. Hamilton, R. Fregehen, J. P. Welsh and T. R. Gilpin, directors

Inc. Feb. 12, 1917, in Ontario. **Cap.** \$1,100,000; shares \$1 par; 200,000 issued, non-assessable.

Property: 2 claims in Willet and 4 claims in Tudhope Twp., Ont., adjacent to the Cobalt district, with total area of 245 acres. Four claims are ½ mile from the T. & N. O. Ry., and 2 claims are 3 miles from this line, the two groups being 4 miles apart. Reported on in 1911 by A. M. Campbell, in 1913 by E. B. Rider and C. M. Ross, and in 1917 by W. H. Jeffrey.

Geology: the Hitchcock property is a heavily-timbered, low-lying tract, with diabase showing as the only rock exposure. Four well-defined silver-bearing veins can be traced through this outcrop. No. 1 vein has been un-

covered for some distance and is considered the strongest. Shaft on this is 110' deep and a drift is said to show some native silver. At the W. end No. 1 joins No. 4 vein. Sinking to 270' is recommended.

At the Paragon, shaft is 160' deep with 2' of good silver ore showing at 94'.

Equipment: boiler, steam hoist, and compressor, pump, and camp accessories.

Is a prospect in a district with a fair production. More money is necessary for development. Some of the circulars issued are peculiar in that they digress from their real object far too much.

PENN CANADIAN MINES, LTD.

ONTARIO

Office: 1011 Chestnut St., Philadelphia, Pa. **Mine office:** Cobalt, Ont.

Officers: Wm. J. Haines, pres.; R. B. Haines, sec.-treas.; with J. D. Haines, E. C. R. Laidlaw, S. D. Wright, A. S. Elliott, directors; B. Neilly, supt.

Inc. 1912 in Ontario. **Cap.,** \$1,500,000.

Property: the Cobalt Central Silver mine at Glen Lake, in Cobalt district.

Development: by 22,152' of drifts, crosscuts, raises and winzes. About 800' of diamond-drilling was done to May, 1916.

Equipment: includes mill with 6 Wilfley tables, ball mills, and a 75-h. p. motor. The mill treated 24,510 tons of ore during fiscal year ending April 15, 1915, and shipments to American and Canadian smelters amounted to 448 tons.

1915.....	191,156	9,826	60,557	140,424

*Net loss.

Dividends: fiscal year ending April 30, 1915, Nos. 1 to 4 inc., \$168,127; April 30, 1916, Nos. 5 to 8 inc., \$168,127, Nos. 9 to 11 inc., \$126,096. Last one, March, 1916, at rate of 1¾% quarterly.

Property: 224 acres underlying Peterson Lake at Cobalt, almost surrounded by holdings of the Nipissing Co. The most important lease was that of Seneca-Superior, now exhausted. Company is operating the Mercer, Reliance and Peterson Lake mines, the last named in the Nova Scotia section. All leases given by company have now expired.

Development: the Peterson Lake area has been prospected through shafts Nos. 2 and 3 and the Nova Scotia territory opened up; several veins have been found here, but to date commercial ore has not been found in paying quantities. During the year new work totaled 3,556'.

Production: in 1913, 1,230,732 oz. silver; in 1914, 1,608,550; in 1915, 2,230,295; in 1916, 11,204 oz.

The company's property has been well prospected in Nova Scotia territory, but the Little Nipissing & Susquehanna tracts are promising and a large part of the company's ground under Pearl Lake is still unexplored.

In April, 1917, work was started on the Susquehanna section at extreme N. E. end of lake and management hopes to cut the lower contact at 1,000' depth where new orebodies may be found.

Mine was practically closed down from Feb. to April, 1917, when entire management changed. The managing director and Mr. Frank C. Loring believe property can again be made profitable.

PITTSBURG AND LORRAIN SYNDICATE.

ONTARIO

J. A. Rice, mgr. Property: the Currie Mine, adjoining the Wettlaufer, in South Lorrain, Ontario, Canada, said to show rich silver ore in pockets.

Development: is by shaft, to 300' level. Diamond-drilling to 900' depth, 1917. Has leased the Wettlaufer 25-ton mill.

RIGHT OF WAY MINES, LTD.

ONTARIO

Office: Central Chamber, 46 Elgin St., Ottawa, Ont.

Officers: E. Seybold, pres.; A. W. Fraser, v. p.; E. A. Larmouth, sec.-treas.; with C. J. Booth, directors. D. H. Angus, mine mgr.

Inc. Sept. 11, 1909, in Ont. Cap., \$2,000,000; shares \$1 par; outstanding \$1,685,500. Transfer office: 46 Elgin St., Ottawa, Ont. Annual meeting in February.

Annual report for 1916 shows gross receipts \$96,084; operating expenses, \$55,372; leaving a net profit of \$40,712.

Adding the previous balance, etc., there was available \$45,926. Depreciation and general expenses reduced this to \$33,267; less \$25,282 for 3 dividends, leaving \$7,985 carried forward to 1917.

Stock selling around 5c per share, 1916, sold in the boom days as high as \$10.50. The company has paid 66½% on the old capital of 500,000 shares and the new capital of 2,000,000 shares.

Property: 3½ acres, adjoining La Rose mine in Cobalt and mining rights under 3½ miles of the right of way of the T. & N. O. Railway. The production of silver for a few years was important, but during the last two years little rich ore has been mined or discovered.

Development: mine is opened up to the 365' level. In 1916 a winze was sunk 50' below the 365' level to prospect the Cobalt Lake fault. So far, results are promising.

Production: in 1916 was 225 tons of high-grade ore, concentrates and metallics, containing 145,064 oz. silver.

SENECA SUPERIOR SILVER MINES, LTD.

ONTARIO

Office: 103 Bay St., Toronto, Can.

Officers: S. H. Worth, pres.; F. W. Zoller, v. p.; R. F. Segsworth, treas.; with W. E. Segsworth and A. H. Dewey, directors. R. H. Lyman, mine mgr.

Inc. Sept. 29, 1911, in Ontario. Cap., \$500,000; \$1 par; 478,884 shares issued.

Dividends: total \$1,579,817, or 326%. The last published costs were 15.77c per oz. of silver produced.

Company had an 8-year lease on part of the Peterson Lake property at Cobalt, Ont. Mine exhausted in 1916, after producing \$2,191,280 between Jan. 31, 1913, and Dec. 31, 1916.

For full description see Vol. XII.

SHAMROCK CONSOLIDATED MINES, LTD.

ONTARIO

Cobalt, Ont. **Officers:** P. Kirkegaard, pres.; Malcolm Lang, v. p., with Jos. Montgomery, Louis Wintner and Wm. H. Price, directors. A. M. Bilsky, mgr. **Cap.**, \$1,000,000.

Company was formed to reopen the Shamrock mine at Cobalt; considerable development work was done on the property a number of years ago. No recent returns secured.

SILVER LEAF MINING CO., LTD.

ONTARIO

Inc. 1906, in Ont. **Cap.**, \$5,000,000; shares \$1 par. Owns the Silver Leaf mine, adjoining the Crown Reserve property at Cobalt, and was considered a good prospect at one time. It has not been an important producer and has proven a great disappointment. Mine is operated by Crown-Reserve Mining Co., Ltd., which see.

TEMISKAMING MINING CO., LTD.

ONTARIO

Office: 810 Lumsden Bldg., Toronto. **Mine office:** Cobalt, Ont., Can.

Officers: F. L. Culver, pres.-gen. mgr.; W. T. Mason, v. p.; R. Graham, sec.; H. E. Tremain, treas.; with W. E. Stevenson, F. L. Lovelace, J. H. Black, H. E. Tremain and F. C. Finkensstaedt, directors; J. W. Moffitt, supt.

Inc. 1906 in Ontario. **Cap.**, \$2,500,000; shares \$1 par; nonassessable; all issued. Company office, Toronto, transfer office. Union Trust Co., Ltd., Toronto, registrar. Annual meeting in March. Listed on Standard Stock Exchange, Toronto.

On Dec. 28, 1917, a meeting of company was to be held to authorize purchase from Beaver Consolidated Mines of 871,525 shares of Kirkland Lake Gold Mining Co., stock at 40c a share, being 50% of the Beaver company's interest. Money is to be advanced equally with the Beaver to continue development and equipment at the Kirkland Lake.

Dividends: 15% in 1908; 6% in 1909; 11% in 1910; 9% in 1911; 12% in 1912; 3% in 1913; none in 1914; 3% in 1915; 9% in 1916 and 12% in 1917 to Oct. 24. Total to date is \$1,984,000.

Comparative General Balance Sheets:

Assets—

	Current	Property	Constr'n	No. Dome	Hospital	Total
1916.....	\$579,599	\$2,427,802	\$259,168	\$320,408	\$2,120	\$3,589,097

1914.....	146,649	228,071	*81,422	85,621
1913.....	438,455	320,881	117,574	196,920

*Deficit.

Properties: in which the company is directly or indirectly interested: Daigle claim, 20 acres; Gans property; McDonald claims, 40 acres in North Cobalt; Peterson claim, 40 acres; Osland claim, 40 acres: also 40 acres each in McCool, Cook and Barnet townships; the Morrison claims, commonly called the Red Jacket and the North Dome property in the Porcupine mining division. The Red Jacket claim was leased 1916 to a syndicate which unwatered it.

PORCUPINE DISTRICT

Mining companies of the Porcupine District, including Kirkland Lake, Swastika and Boston Creek.

ACME GOLD MINES, LTD.

ONTARIO

See Hollinger Cons. Mines, Ltd.

APEX PORCUPINE MINES, LTD.

ONTARIO

J. A. Jacobs, Traders Bank Bldg., Toronto, Can.

Inc. 1911. **Cap.**, \$2,000,000; shares \$1 par.

Owns 80 acres in southern Tisdale Twp., Porcupine district, Ont., showing pyrite and free gold. Shaft 108'. Shut down 1912-17.

AURUM MINES, LTD.

ONTARIO

Office: 420 Bank of Hamilton Bldg., Toronto, Ont., Canada.

Officers: Sir Henry M. Pellatt, pres.; Col. J. B. Miller, v. p.; with W. B. Reid, A. E. J. Blackman and A. H. Jeffrey, directors. C. H. Manaton, sec.; H. M. Asling, treas.

Inc. in Ontario. **Cap.**, \$1,500,000; shares \$1 par; 800,000 shares outstanding.

Property: 2 patented claims, 80 acres, adjoining the Croesus mine, in Munro Township.

Ore: occurs in quartz and schist veins in basalt, dipping N. W.-S. E.; average value of the gold contents is as yet undetermined. Mine examined by W. J. Trethewey and A. G. Kirby, who recommend diamond drilling in attempt to pick up the Croesus vein.

BOSTON CREEK GOLD MINES, LTD.

ONTARIO

H. D. Symmes, mgr., Boston Creek, Ontario. F. M. Richardson, pres.-mgr., with Ex. Lieut. Gov. Spriggs of Montana and W. B. Albright, directors.

Inc. late in 1916 to take over the holdings of the R. A. P. Syndicate, financed by Sherwin-Williams Paint Co. interests, who spent \$250,000 on the property. **Cap.**, \$2,000,000; shares \$1 par.

Property: 21 claims, 100 acres, in Boston Creek township, 45 miles N. W. of Cobalt and 382 miles N. of Toronto and crossed by the T. & N. R. R. **Ores:** simple gold-quartz, like those of Porcupine, occur in two parallel master veins, 250' apart. The Kenzie vein is of replacement type in a "pillow lava" or greenstone; a few inches to 5' wide, showing spectacular free gold in fine grained greenish quartz, with associated iron and copper pyrites, galena and molybdenite.

Development: by 300' shaft with drifts on vein at 100', 200' and 300' and a winze to 400' level. Brokers letters claim \$1,500,00 worth of ore blocked out and that the company is sacking high grade ore. Equipment includes gasoline and electric hoists and buildings, etc., for 40-50 men employed.

Property considered good and directors are as high grade as the ore, but the stock offered at 50 cts., boosted to \$1.50 and declining to 60 cts., June, 1917, is so extravagantly lauded by various brokerage houses as to beget and foster suspicion.

Property will, it is believed, eventually be a milling proposition, ranking well with the various Porcupine companies.

BURNSIDE GOLD MINES, LTD.

ONTARIO

Kirkland Lake, Ont. Inc. July, 1913, in Ont.° Cap., \$3,000,000.

Is a subsidiary of the Kirkland Lake Proprietary, Ltd. Owns claims adjoining the Tough-Oakes gold mine at Kirkland Lake.

CANADIAN MINING & FINANCE CO., LTD.

ONTARIO

Office: 85 Bay St., Toronto Can.

Company is not now engaged in any mining operations, simply owning a few claims. The several companies that it managed were formed into the Hollinger Consolidated Gold Mines, Ltd., which see.

DAVIDSON GOLD MINES, LTD.

ONTARIO

Porcupine, Ont. Gordon Crean, pres.; D. R. Thomas, mgr.

Property: 5 claims, developed by 350' shaft and claimed to show a 5½' quartz vein, assaying \$7.20 in gold. Diamond drilling below 300' level in 1917.

DOBIE MINES, LTD.

ONTARIO

Office: 201 Inspector St., Montreal. H. E. Carmichael, mgr., Porcupine, Ont.

Officers: Frank C. Armstrong, pres., 25 Broad St., New York; S. J. LeHuray, sec.-treas., 260 St. James St., Montreal. Directors: F. C. Armstrong, Geo. C. Loveys, Donald D. Fish, B. Osler, and W. A. J. Chase.

Inc. March 27, 1911, in Ont. Cap., \$1,500,000; outstanding, \$1,200,000. Of the issued stock, \$1,100,000 was given to the owners in payment of the property and \$100,000 stock was purchased by the Tisdale Gold Mng. Co., to provide funds for development purposes. Transfer agents: Toronto General Trust Corp., Toronto; Investment Trust Co., Montreal. Listed on Toronto Standard & Mining Exchange, and traded in on the unlisted department of the Toronto Stock Exchange, and on the New York and Boston curbs.

Balance sheet, March 31, 1917, shows \$31,087 in bank and on hand, and \$63,042 spent on development.

Property: 17 claims, crown patented, in Tinsdale Twp., Ont., taken over from the Tisdale Gold Mng. Co., Ltd. No work was done in 1916.

DOMES EXTENSION MINING CO.

ONTARIO

Head office: 36 Toronto St., Toronto, Ont., Can. H. C. Anchor, supt., South Porcupine, Ont.

Officers: W. S. Edwards, pres.; J. S. Tomenson, v. p.; Alex Fasken, sec.-treas., with J. S. Wilson, A. S. Wigmore, directors.

Inc. Jan., 1911, in Ont. Cap., \$3,000,000; par \$1; 2,300,000 shares issued. Annual meeting in May. Listed in Toronto and on New York curb.

Balance sheet of March 31, 1917 shows, cash \$62,286, receipts from stock sales \$542,994. Cost of buildings and plant, etc., \$42,248. Operating expenses at mine, \$135,288. General expense, \$19,895. Miscel. receipts, \$2,373.

Property: 198¼ acres adjoining Dome Mines, Ltd., on the east, in the Porcupine district. Dome Mines, Ltd. took an option on the property, effective until Oct. 15, 1917. Basis of exchange is 50 shares Dome Extension for one of Dome Mines, the Dome Extension to be allowed to develop on its own account.

Development: 3 shares over 200' deep and about 10,000' of underground workings, said to have opened a considerable tonnage of low grade ore.

In 1916 Dome Mines, Ltd., did about \$16,000 worth of development work on the property, including 211' of drifting on the 600' level and 6,661' on surface. From existing limited development it appears that profitable orebodies

must be sought at a depth of 1,400' or more. Diamond drilling being done, 1917.

DOMELAKE MINING & MILLING CO., LTD. ONTARIO

New Liskeard, Ont., and South Porcupine, Ont. **Officers:** Geo. Taylor, pres.; A. A. McKelvie, v. p.; with Thos. McCamus, S. S. Ritchie, F. L. Bapst, S. J. Dark and Chas. L. Sherrill, directors; F. L. Hutchinson, sec.-treas.; Ralph Regnell, mgr.

Inc. Aug. 26, 1912. **Cap.,** \$2,500,000; shares \$1 par, reduced to 500,000 shares, Feb., 1913; increased to \$1,000,000 in Feb., 1914, and to \$2,000,000 in 1915. All issued. Hudson Bay Mines Ltd. took up its full allotment of 1,000,000 shares. Trusts & Guarantee Co., Ltd., Toronto, transfer office. Annual meeting 2nd Monday in Feb. Listed in Toronto and on New York curb.

Statement for year ending Jan. 1, 1917, shows receipts from ore shipments \$18,322; expenditures, \$111,451 which includes \$79,688 for development work.

Reported 1917, that company plans increasing its capitalization to \$3,000,000.

Property: 3 claims, patented, 120 acres, in Tisdale Twp., Porcupine. Gold ore occurs in shoots as replacement deposits. Veins have strike of N. 10° E. and dip of 70°. Recent work is said to prove that the mineralized zone traverses the company's property instead of dipping into property on the north. Country rock is basalt.

In Feb., 1917, the vice-president reports that an over-estimate of values and tonnage in the mine was made by the former manager. The new manager is resampling the mine as the records are not considered accurate or reliable.

The principal work for 1916 was the development of the No. 1 vein on the 300' and 400' levels proving oreshoots of fair milling grade west of the main crosscut and showing that the vein is faulted, with movement along the dike as well. The manager finds that in view of the encouraging results in a winze below the 400' level and the large acreage of unprospected ground, that a further expenditure for prospecting and development is warranted.

Development: by 460' shaft with over 14,000' of workings. In 1916, 5,750' of work was done. Reported stoping No. 3 vein on 400' level Sept., 1917. Reserves at end of Aug., 1917, were reported as 9,089 tons, assaying \$9.23 per ton.

Equipment: includes Vulcan hoist, compressor and 200-ton mill. A 100-ton cyanide plant has been installed.

Production: during 1916, 7,700 tons of ore, of which 6,540 tons were milled, yielding a bullion return of \$18,267. The milling cost was \$14,345.

The property has not been as successful as hoped for, but the management believes that continued active development will prove the mine to be valuable.

DOMELAKES, LTD. ONTARIO

Executive and financial departments: 43 Exchange Place, New York City. **Head office:** 36 Toronto St., Toronto, Ontario, Canada. **Mine address:** H. P. De Pencier, supt., South Porcupine, Ont.

Officers: J. R. De Lamar, pres.-treas.; W. S. Edwards, 1st v. p.; C. D. Kaeding, 2nd v. p.-gen. mgr.; H. P. De Pencier, 3rd v. p.; Alex. Faskert, sec.; A. H. Curtis, asst. treas.-sec., preceding, except H. P. De Pencier and C. D. Kaeding, with Andrew V. Stout, A. H. Curtis, G. C. Miller and J. S. Wilson, directors.

Inc. March 23, 1910, in Ont. **Cap.,** authorized \$5,000,000; outstanding \$4,000,000; shares \$10 par. Guaranty Trust Co., New York, and Trusts & Guarantee Co., Ltd., Toronto, transfer agents. Bankers Trust Co., New York, and Toronto Genl. Trusts Corp'n, Toronto, registrars. Annual meeting, 2nd Tuesday in June. On June 23, 1915, the New York Stock Exchange listed \$3,500,000 of the capital stock with authority to add \$500,000 on official notice of issuance and payment in full.

Dividends: present rate, 10% payable quarterly. On Sept. 1, 1915, initial

quarterly dividend of 50c. per share was paid; continued until reduced in June, 1917 to 25c quarterly. Dividend passed in Sept. Total dividends to date, \$1,400,000.

Comparative General Balance Sheet: years ending March 31:

Assets						
	Bldg. Equip., Construction, etc	Inven- tories	Current	Ins. Unexpired	Int. Accrued	Total
1917.....	\$4,457,192	\$301,121	\$677,357	\$5,191,375
1916.....	4,050,798	172,518	806,794	\$102,348(a)	5,132,458
1915.....	3,724,070	102,921	377,623	1,642	\$1,854	4,208,110
1914.....	3,753,878	97,025	232,039	1,796	1,143	4,085,884

Liabilities						
	Cap. Stock	Accts. Pay.	Taxes Accrued	Accident Fund	Surplus	Total
1917.....	\$4,000,000	\$47,792	\$22,665	\$697,051	\$5,191,375
1916.....	4,000,000	93,050(b)	14,636	5,132,458

1914.....	3,500,000	92,580	2,308	\$4,476	486,520	4,085,884

(a) Includes undistributed development expenditures, \$98,506. (b) Includes pay-rolls, \$37,670.

Operations for 1916-17 include \$2,171,785 from bullion sales with operating expenses of \$1,241,862. Total output to April 1, 1917, 1,302,832 tons, yielding \$7,781,669.

Profit and Loss Statement: years ending March 31:

	Gross Earnings	Net Earnings	Int., Disc. and Exch.	Balance	Dev. Deprec. and Improv.	Surplus
1917.....	\$2,194,311	\$929,922	\$22,526	\$952,449	\$221,369	\$731,079
1916.....	1,778,959	889,365	23,015	912,380	370,518	541,861
1915.....	1,055,497	481,620	6,878	488,498	309,920	178,578
1914.....	1,204,597	750,633	2,695	753,328	295,631	457,696

Property: 6 claims, 240 acres, in Tisdale Twp., Ont. The geology is fully described in report of Ont. Bureau of Mines, 1915. Ore is white quartz carrying free gold and auriferous pyrite, occurring in a stockwerk of veins and stringers netting schists of pre-Cambrian age. The orebody is large, being over 100' across in places and has been proven by diamond drill work for 500' or more. The original outcrop, a dome-shaped hillock about 30' high, showed so much free gold at one place that it was called the Golden Stairway.

Company has an option on 5 adjoining claims belonging to the Dome Extension Mining Co., effective until October, 1917. Basis of exchange is 50 shares of Dome Extension for one of Dome Mines. About \$16,000 was spent in development work on these claims in 1916. Diamond drilling in progress, 1917.

Ore occurs in large irregular masses, entirely without walls and extremely uneven in values. It is found on or near the contact of an igneous rock (porphyry) and sedimentaries and is capped by slate. Development has proven the existence of quite as good ore at 700' and in diamond drill holes at 1,150' vertically below the surface, as that mined on the surface and in the upper levels.

Development: there are 2 working shafts, one 850' deep, with 8 levels. Underground work has been distributed over a zone 1,500' long and 400' wide. For year ending March 31, 1917, new development work totaled 7,051' and diamond drilling footage totaled 11,423'.

Ore reserves: estimated April 1, 1917, as 2,250,000 tons, average grade \$5.32 in gold per ton, or a total value of \$11,979,000 compared with the estimate of the previous year of 2,600,000 tons of \$6.20 ore.

Equipment: includes a crusher on the 5th level, automatic loading hoppers, 5-ton cars and 4-ton skips. Shrinkage stoping system is used.

Company owns a very complete mill and cyanide plant of 1,500 tons daily capacity, enlarged to present size in 1916. Over \$400,000 was spent in new equipment and improvements, 1916, stamps being replaced by ball mills.

Water is obtained from Porcupine Lake by means of 2 electrically-driven 4-stage turbine pumps. Electric power is obtained from Wawaitin Falls, 13 miles from the property. Three-phase current is supplied over the Company's transmission line at a pressure of 12,000 volts, stepped down to 550 volts by three 600-k. w. Westinghouse transformers.

Production and costs since milling started, March 23, 1912, for fiscal year ending March 31st:

Year	Tons Milled	Value Per Ton	Rec. %	Costs per Ton			
				Mining	Reduct.	Gen.	Total
1917.....	459,530	\$4.73	92.98	\$1.44	\$1.05	\$0.30	\$2.70
1916.....	347,640	5.50	92.88	1.22	1.01	.32	2.56(b)
1915.....	248,550	4.68	90.6	1.38	1.12	.46	2.97(b)
1914.....	145,305	8.77	94.51	1.86	1.69	.64	4.19
1913.....	101,812	10.72	95.63	1.31(a)	2.35	1.29	4.95

(a) Does not include development. (b) Reduction due to larger units of operation, improved methods, and greater efficiency.

Cost of producing an ounce of gold has risen from \$10.30 in 1915-16 to \$11.82 in 1916-17 and to \$14.18 in March and April, 1917. The bullion produced in 1917 was \$2,171,784.

* Operations for 1916-17 were curtailed by labor shortage in mine development work, but an orebody 119½' wide, averaging \$17.15 per ton, was cut by a diamond drill hole and a crosscut extended out to it on the 700' level. This will, it is hoped, increase the grade of ore mined which averaged below \$5 a ton compared with \$8 at the Hollinger, \$6 at the Schumacher, \$10 at the Porcupine Crown and Porcupine V. N. T. properties.

In April, 1917, operations were further curtailed, the mill treating but 28,900 tons yielding \$132,000, compared with 36,500 normally, or \$175,000 and 39,600 tons in Jan., producing \$181,000. The 1,500-ton mill treated only 963 tons daily in April, owing to lack of labor, but was run full capacity in Sept.

The Dome is a long lived mine with liberal orebodies which will be profitably mined for many years to come. It can continue its current dividend of \$1 a year for a decade unless forced to shut down temporarily for lack of labor in 1917.

Owing to increased cost of supplies and labor shortage, the company, early in Dec., 1917, decided to suspend milling during the winter. The new shaft, 800' deep, will be sunk deeper, and diamond-drilling continued.

HARGRAVE SILVER MINES, LTD.

Has holdings in the Porcupine district. See same title in Cobalt section.

HOLLINGER CONSOLIDATED GOLD MINES, LTD. ONTARIO

Offices: 85 Bay St., Toronto, and Timmins, Ont.

Officers: Noah A. Timmins, pres.; John McMartin, v. p.; D. A. Dunlap, sec.-treas.; P. A. Robbins, managing director; above with L. H. Timmins and J. B. Holden, directors.

Inc. 1916, in Ontario. Cap., \$25,000,000; shares \$5 par; 4,920,000 issued, Jan. 1, 1917.

Toronto Genl. Trusts Corp. and Montreal Trust Co., transfer agents. Guardian Trust Co. and Montreal Safe Deposit Co., registrars.

Dividends: initial dividend of 1% paid July, 1916; 1% quarterly paid to March, 1917, when rate was decreased to 1% every 8 weeks; June, 1917, dividends suspended. Company is a consolidation of the Hollinger Gold Mines, Ltd., Acme Gold Mines, Ltd., Millerton Gold Mines, Ltd., and Claim 13,147 of the Canadian Mng. & Finance Co., Ltd.

Stock was issued as follows: 200,000 shares in treasury; 2,400,000 to Hollinger shareholders; 2,100,000 to Acme shareholders; 100,000 to Canadian M. & F. Co. shareholders.

Shareholders in Acme, Millerton and Canadian M. & F. companies were to receive full dividends from Jan. 1, 1916, on Hollinger Consolidated stock issued to them; amounting to \$720,000 in June, 1916. Owing to increased labor costs and scarcity of labor, operations resulted in a deficit and company sold 120,000 shares to shareholders at \$6.50, proceeds being used to pay the \$720,000 indebtedness.

Income and expense account for 1916: gold-silver production, \$5,073,401; misc., \$212,461; total, \$5,285,862.

Operating expenses, \$2,134,539; dividends, \$3,126,000; taxes, \$144,063; depreciation, \$150,000; total, \$5,554,601. Deficit for year, \$269,591.

Property: 11 claims, 440 acres, patented in Tisdale Twp., Porcupine. The chief rock of the entire area consists of basalt in the S. E. portion and the common greenstone of the Keewatin series in the N. W., while between these two areas, approximately 2,000' apart, lies an area of basalt schist and an area of greenstone schist, which have been intruded by a quartz-feldspar porphyry. The porphyry has not, except near its marginal contacts with the older rocks, proved of value as a source of gold, yet it is believed that its occurrence has had some definite influence upon the mineralization and concentration of gold values in the older rocks. It is within the area between the basalt and the greenstone that the gold bearing veins are found; 54 veins had been found on the Hollinger property up to 1915, and 12 had been reached by underground workings. Orebodies consist of quartz veins and country rock containing gold and pyrite. Veins are not fissures with well defined walls; the fissuring has been very irregular; a vein consisting largely of quartz in one place may consist of quartz veinlets and intervening schist a short distance away. In No. 1 shaft the veins are practically vertical.

Ore reserves estimated Dec. 31:

	Tons	Value	Estimated Gross Value
1916*	3,938,540	\$8.68	\$34,185,535
1915(a)	1,846,000	9.65	17,824,800
1915	1,600,800	10.02	16,031,600
1914	1,162,960	11.49	13,358,420
1913	845,300	13.71	11,604,800
1912	664,540	17.48	11,271,400
1911	462,000	22.14	10,230,000

* *For consolidated properties.

(a) Reserves refigured for consolidation purposes.

Development: by shafts to depth of 1,250' on the old Hollinger claim; No. 8 shaft on the Millerton was deepened and a 4' vein encountered carrying \$15 gold ore. The Acme being developed by shafts Nos. 9 and 11. Claim 13,147 was idle, 1916.

Development during 1917 has been very extensive. Approximately one mile of underground work is being done per month, and development work is being pushed forward at one hundred different faces. Every level from the

surface to 1,250' is being opened up and about 40 machines are engaged on the work, with the result that it is expected the ore reserves at the end of the current year will show a considerable increase. Heretofore reports on ore reserves at this mine did not include anything below the 900' level, and the decision to resume developments at the 1,250' depth is of interest.

Total work done, 1916, was 20,280'. Average number of men employed in 1916 was 1,056, against 735 in 1915 and 546 in 1914.

Mill: 100-stamps and cyanide plant, with daily capacity of 3,000 tons. The ore is easily treated; practice is to crush by stamp and to regrind in tube mills, preparatory to cyanide treatment.

Power: obtained from the central power plant built by the C. M. & F. Co.

Recent production and costs (costs are per ton of ore milled):

	Tons Milled	Average Value	Milling Costs	Mining Costs	Assay Tailing	Values Recovered
1916.....	601,854	\$8.84	\$2.188	\$0.969	\$0.40	\$5,073,401
1915(a).....	334,750	10.11	2.18	9.99	.40	3,169,813
1914.....	208,936	13.676	2.70	1.220	.56	2,719,354

(a) In addition there was milled 106,486 tons Acme ore at a cost of \$1.09 per ton.

Operating costs are greatly affected by the war; the price of explosives in Feb., 1916, was sufficient to add 15c per ton to the mining costs; milling costs per ton were increased 7c, due to advanced price of zinc dust. It is expected that greater economies in operations will partly offset the increased cost.

Company has been working against great odds owing to lack of skilled labor and increased cost of supplies. A comparison of costs shows but a slight increase, but this is due to the economies made possible by the consolidation of the different properties. Under normal conditions management expects to be able to reduce working costs from 40c to 50c per ton.

JUPITER MINES, LTD.

ONTARIO

Succeeded, 1915, by the McIntyre-Jupiter Mines, Ltd., which see.

KENEBEC SILVER MINES, LTD.

ONTARIO

Address: W. H. Jeffrey, mgr., Temiskaming district, via Cobalt, Ont.

Development: on the Veteran claim, 2 veins have yielded some high-grade silver ore. Ore occurs in Keewatin formation.

Equipment: includes boilers, hoist, and 5-drill compressor.

KIRKLAND LAKE EXPLORATION, LTD.

ONTARIO

Office: Pinners Hall, Austin Friars, London, Eng.

Officers: C. H. Villiers, pres.; H. J. Hollingsworth, and R. D. La Bere, directors. E. C. Wheeler, sec.

Inc. Jan., 1914, in England to acquire mining properties in Ontario, Canada. **Cap.**, £150,000; shares £1 par; 26,000 issued. On June 30, 1916, assets included stocks and bonds at cost, £10,320; interest in the Kirkland Lake district, £1,650. Organization expenses, £5,498; exploration, etc., £12,001; cash, £116.

Property: in Swastika district, near Porcupine, Ontario, Can., and an interest in claims adjacent to the Tough Oakes mine. Is a holding company, inactive during the war.

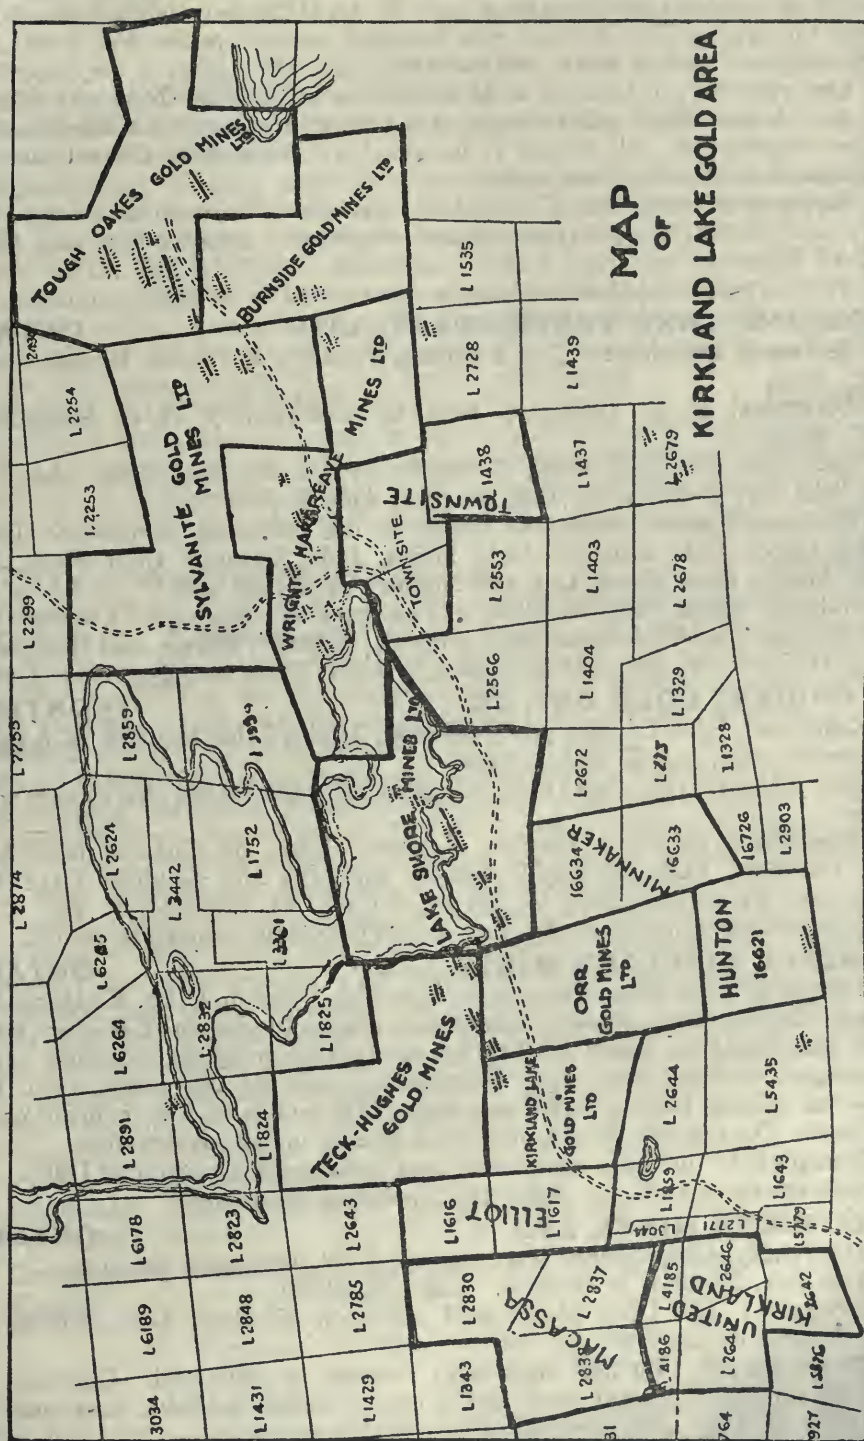

KIRKLAND LAKE GOLD MINING CO., LTD.

ONTARIO

Address: Kirkland Lake, Ont., or c/o Beaver Consolidated, Cobalt, Ont.

Cap., \$2,000,000; shares \$1 par; 1,830,526 issued.

Property: under option to the Beaver Consolidated Mines, Ltd., of Cobalt, since Oct., 1915. In Dec., 1917, the Temiskaming Mining Co. of Cobalt acquired 871,525 shares of Kirkland Lake at 40c from the Beaver Consolidated.

Development: shaft sunk 700', with levels every 100'. On No. 1 level the vein was opened for 166'; on No. 2 it was faulted; on No. three, 5', 10' and 12' of ore was cut, assaying from \$7 to \$12.80 per ton; on No. 4 there is 220' of ore; on No. 5 some rich ore was opened; while No. 6 was satisfactory. In 2 years, work totaled 4,608'.

Ore reserves: estimated at \$1,000,000, including 8,000 tons of \$10 ore on dumps. A new shaft will be sunk at a better location and a 150-ton mill is to be constructed. All money is provided by the Beaver Consolidated and Temiskaming Mining companies.

Equipment: includes steam plant, electric motors, double-drum hoist, 4, 10 and 12-drill compressors, shops, residences, assay office, and 150-ton mill to be ready by June, 1918.

This property appears to have a future, and is in good hands.

KIRKLAND LAKE PROPRIETARY, LTD.

ONTARIO

Secretary and office: J. J. Sneddon, Finsbury Pavement House, London, E. C., Eng.

Directors: H. G. Latilla, A. Burt, C. A. Foster, J. D. G. Simpson and G. F. Wyatt.

Inc. Nov. 27, 1913. **Cap.**, £200,000; shares £1 par; 75,000 issued and fully paid. First annual meeting was held Aug. 3, 1915.

Company's assets consist of shares in the following companies: Tough-Oakes Mines, Ltd., Burnside Gold Mines, Ltd., Sylvanite Gold Mines, Ltd., Teck-Hughes Gold Mines, Ltd. and Sudbury Syndicate, Ltd.

Balance sheet Feb. 28, 1916, shows general expenses, £13,882; cash, £63; debtors, £19,824; loans and interest, £59,448; shares and interests in properties at cost, £82,101; creditors, £11,221; loans and interests, £89,950.

KITCHIGAMI GOLD DEV. CO.

ONTARIO

Officers: John Daniell, pres., Calumet, Mich.; John MacRae, v. p.; Chas. Chynoweth, sec.; Jas. T. Fisher, treas.

Inc. 1915, in Ariz. **Cap.**, \$300,000; shares \$2 par; 100,000 shares subscribed at 25c.

Property: 160 acres, Gordon McGuire claims, on Goldfish lake, Morissette township, Ont., Kirkland district, adjoining the Goldfish Lake Gold Mine Co. Ground acquired on advice of Chas. W. Botsford, E. M.

Some diamond-drilling was done in 1916, without important results.

LA BELLE KIRKLAND MINES, LTD.

ONTARIO

Property: the Gibson group of claims at Goldfish Lake, Kirkland Lake district, Cobalt, Ont., shows molybdenite and gold ore in Keewatin formation. Developed to depth of 350' by shafts and crosscuts, showing several 2' stringers of high-grade ore. Encountered fault on this level, April, 1916. Diamond drilling totaling 5,000' was done 1916 and is said to indicate one to 700' depth. On the 100' level a promising vein is under development.

Equipment: includes compressor and hoist good for depth of 1,000'.

Suspended operations, July, 1917, pending financing.

LAKE SHORE MINES, LTD.

ONTARIO

Haileybury, Ont. Harry Oakes, pres.; J. W. Morrison, sec.-mgr.

Inc. Feb. 25, 1914, in Ontario. **Cap.**, \$2,000,000.

Property: the Lake Shore gold mine, on Kirkland Lake, adjoins the Teck-Hughes on the east.

Development: by 300' shaft with crosscut at 200' level. One vein has been developed to bottom level and 2 others, under the lake, have been cut by drift. In July, 1917, a strike of ore was reported at a point 150' in the drift. Values are gold.

Equipment: includes 7-drill compressor. About 30 men employed.

LA MINE D'OR HURONIA, LTD.

ONTARIO

Three Rivers, Quebec.

Officers: Chas. Lafond, pres.; P. V. Ayotte, v. p.; A. Lebrun, sec.-treas.; E. H. York, gen. mgr.

Property: 4 claims, 177 acres, in McVittie Twp. and in Gauthier Twp. Swastika district, Ont., Can., 18 miles from Dane.

Development: by 3 shafts, 102', 75' and 45' deep, a 300' tunnel and 125' of drifting on the 50' level.

Equipment: includes mill and hydro-electric plant. Power is transmitted to the mine from the Goldfields mine at Larder Lake. Total gold production to date amounts to \$7,064. About 40 men employed.

McINTYRE EXTENSION MINES, LTD.

ONTARIO

Property and assets of this company purchased by McIntyre Porcupine Mines, Ltd. (which see), by payment to minority shareholders of 294,000 shares in exchange for 955,501 shares of McIntyre Extension Mines, Ltd. See Vol. XII for description of property, and history of company.

McINTYRE-JUPITER MINES, LTD.

ONTARIO

Property and assets of company purchased by the McIntyre Porcupine Mines, Ltd. (which see), by payment to minority shareholders of 316,298 shares of McIntyre Porcupine Mines, Ltd., in exchange for 943,893 shares of McIntyre-Jupiter Mines, Ltd. See Vol. XII for description of property and of organization.

McINTYRE-PORCUPINE MINES, LTD.

ONTARIO

Offices: Royal Bank Bldg., Toronto, and Schumacher, Ontario.

Officers: J. P. Bickell, pres.; H. M. Pellatt, v. p.; with W. J. Sheppard, J. B. Tudhope, H. D. Symmes, E. F. B. Johnston and G. E. Drummond, directors. M. P. Van der Voort, sec.-treas.; L. J. Pashler, asst. sec.; R. J. Ennis, gen. mgr.; J. E. McAllister, mine supt.; A. Dorfman, mill supt.

Inc. March 16, 1911, in Ontario. **Cap.,** \$3,000,000; shares \$1 par; outstanding, \$2,986,985. Capital increased to \$4,000,000, shares \$1 par, in 1917, when company purchased properties and assets of McIntyre Extension Mines, Ltd., and McIntyre Jupiter Mines, Ltd. Payment amounted to 610,298 shares for both mines. McIntyre-Porcupine shares issued total 3,610,283. The capital of the three amalgamated companies was \$7,500,000, \$7,398,878 issued.

Toronto General Trusts Corp. and Security Transfer & Registrar Co., New York, transfer agents and registrars. Annual meeting, first Monday in February. Traded in on New York Curb and Standard Exchange, Toronto.

Funded debt: first mortgage 7% 5-year gold bonds, due Aug. 15, 1918; interest February 15 and August 15, at office of the trustee, Toronto General Trusts Corp. Coupon, \$500, registrable as to principal. Authorized \$250,000; redeemed, \$158,000; unissued, \$41,500, purchased \$39,500; outstanding, \$11,000. One-fifth of issue may be redeemed at par and interest at end of first year, and the whole or any part of the balance of outstanding bonds at 105 and interest at end of second year.

Dividends: initial dividend of 5% paid Feb. 15, 1917; also 5% May 31, 1917, total \$361,028.

Comparative General Balance Sheet: year ending March 31st—

Assets:

	Plant and Equip.	Capital Devel.	Investments	Disc. on Sec. Sold	Current	Total
1917(b).....	\$4,432,250	\$100,000	\$319,530	\$4,851,780
1916.....	2,921,991	209,508	175,036	\$211,992	151,963	3,670,490
1915(a).....	2,799,035	209,508	214,492	104,670	3,327,705

(a) 15 months, ending March 31. (b) 15 months, ended June 30, 1917.

Liabilities:

	Capital Stock	Bonds	Current	Reserves	Profit and Loss	Total
1917.....	\$3,610,283	\$11,000	\$87,597	\$400,996	\$741,903	\$4,851,780
1916.....	2,999,985	31,000	111,989	144,466	383,050	3,670,490
1915.....	2,986,985	54,500	114,704	4,989	166,527	3,327,705

Comparative Operating Account: year ending March 31—

	Receipts	Disbursements			Profit and Loss Account
		Mine	Mill	Miscel.	
1917(b).....	\$1,693,040	\$526,200	\$159,005	\$285,185(c)	\$725,790
1916.....	775,821	265,622	102,389	80,286	327,524
1915(a).....	749,234	319,203	101,354	95,923	232,752

(a) 15 months, ending March 31. (b) 15 months ended June 30, 1917. (c) Includes depreciation, \$114,764.

Property: located on the south, west and north sides of Pearl Lake, Tisdale Twp., comprises 347 acres, of which 113 acres are under Pearl Lake and Gillies Lake. The area added by acquiring the Extension and Jupiter mines was 127 and 79 acres, respectively. The immediate object of amalgamation was to secure the right of operating through the Extension main shaft for deeper exploration of the McIntyre property on N. side of Pearl Lake. Recent work revealed large orebodies at 1,000' depth in both mines.

An option is held on the Plenaurum property of 120 acres, adjoining the Jupiter section.

Geology: the north and south sections of the property show areas of altered volcanic schist, basalt and associated lavas; between them there is a broad band of schistose quartz porphyry. Veins are classified in the following systems: veins in the basalt and gray schist and veins in the contact between the quartz porphyry and gray schist on the south side of Pearl Lake; No. 5 vein and veins in the contact zone paralleling the north contact between the quartz porphyry and the basalt on the north side of Pearl Lake, veins in the quartz porphyry.

Exploration has shown that the best deposits of gold occur in the altered volcanic schist, at or near the contact with the quartz porphyry; development in the quartz porphyry away from the contact has not shown much gold. Orebodies are lenticular in form and very irregular; the ore shoots consist of quartz more or less interbanded with mineralized schist. The location of orebodies has been rendered difficult by the presence of compression faults which have displaced portions of the ore as much as 130'.

Eighty per cent. of ore milled is heavily mineralized schist.

Development: by shafts to 1,000' depth, amounting to 44,651' to end of June, 1917; also 19,920' of diamond drilling. A report issued in Sept., 1917, states that exploration continues to be most satisfactory. On 1,000' level the main vein has been opened for 1,150', of which 900' is high-grade milling ore. At depth of 1,387' the drill has cut this vein, where it is 19' wide, assaying \$25.30 per ton. Veins in the McIntyre-Jupiter property are from 24 to 50" wide, with rich stringers running out into the walls along the joint planes.

Ore reserves: due to form and occurrence of orebodies, it is impracticable to attempt to block out ore in the usual manner.

Date	Tons	Average Value	Total Value
June 30, 1917.....	443,617	\$11.14	\$4,943,034
Mar. 31, 1916.....	201,920	11.12	2,247,128
1915.....	109,693	7.79	854,436.

Reserves were considerably enlarged by acquiring the Extension and Jupiter mines, and subsequent development.

Equipment: property is well equipped with hoisting and milling facilities, the latter including a 525-ton cyanide plant. The ores yield 95% of their gold content to the simple treatment of grinding in cyanide solution and giving them a short period of agitation. Treatment was described by A. Dorfman in Aug., 1917, Bulletin of Canadian Mining Institute.

Production:

	Tons	Value	Rec.	Costs per Ton			Profit
	Milled	per Ton	%	Mine	Mill	Tot. Optg.	per Ton
1917(c).....	195,307	\$10.00	95.4	\$2.99	\$0.89	\$4.78	\$5.22
1916(a).....	105,758	7.71	95.6	2.51	.96	4.28	3.09
1915(b).....	85,654	8.87	94.4	3.72	1.18	6.02	2. 5
1913.....	31,979	7.85	89.8
1912.....	14,500	7.00	75.0

(a) Year ending March 3. (b) 15 months, ending March 31. (c) 15 months ended June 30, 1917.

Mine development during the past 3 years has shown steady improvement. The lower levels so far as opened up have proven to be as productive as the upper levels, while lateral development on the upper levels has cut new orebodies. The results of the underground work, together with the addition of adjoining properties, assures a productive life to the company, and the making of another large producer for Porcupine.

MILLER INDEPENDENCE MINES, LTD.

ONTARIO

Address: Boston Creek, Northern Ontario.

Inc. Nov. 17, 1915, in Ont. Cap., \$500,000.

Property: in the Boston Creek district.

Ore: consists of white quartz, with some pyrite, galena and telluride, in fine grained pillow lava and hornblende. On the hanging wall of the vein is a feldspar-porphry dike. Gold occurs with the minerals. A Nissen stamp mill and oil flotation plant were erected in 1916.

NEWRAY MINES, LTD.

ONTARIO

Office: 55 Yonge St., Toronto, Ont., Canada.

Officers: C. Millar, pres.; H. W. Drayton, v. p.; C. P. Charlebois, mgr.

Inc. in Ont. Cap., \$1,500,000; shares \$1 par; 1,200,000 issued. Imperial Trust Co., Toronto, transfer agent.

Is a reorganization of the Rea Consolidated Gold Mines, Ltd.; shares exchangeable at the rate of 1½ shares in the new company for every share of Rea Consolidated stock.

Statement for 1916 shows cash in banks \$13,312, less current liabilities. \$7,904. Receipts in 1916 totaled \$31,757, of which \$31,050 was from sale of "donated" stock. Expenses were \$20,530, of which \$6,588 was spent in drilling and prospecting, and \$3,091 on plant.

Property: North ½ of lots 6 and 7, Concession III, about 320 acres, comprises the Rea mine, at Porcupine, Ont., 1½ miles from Schumacher, the nearest railroad station. Mine was operated in 1914 under lease by the Porcupine-Aurum Mng. Co. The veins are well-defined quartz fissures, strike N. E. and dip N. W.; ore-shoots occur as lenses in and along shear zones.

Development: 2-compartment vertical shaft, sunk 420' on vein, with levels at 200, 300 and 400'. On the 200' level 390' of drifting was done. The oreshoot is cut and displaced by a fault at depth of 240'; below the fault the vein is not of the same character nor does it show ore. The orebody above the fault was stoped out for about 300' in length, 4½' wide, and 200' in

depth and is said to have produced 19,500 tons of ore, averaging \$11 per ton.

In Nov., 1916, the diamond drill was down 900', and is said to have cut 12' of quartz showing free gold at 630' vertical. A crosscut on the 400' level, 985' from the shaft, opened 5' of ore in Aug., 1917.

Equipment: includes 10-stamp mill, which is to be considerably enlarged, Sullivan hoist, 6-drill compressor, pumps and boiler.

Production: mill treated 11,607 tons of ore yielding \$125,000 in bullion in 1915. It resumed treatment in May, 1917, but recent returns are not available.

Property reported on by C. H. Poirier, June, 1916.

An immense quantity of literature has been published about this mine, mostly in the interest of speculators. Evidently, the management is trying hard to make it a large producer.

In Nov. 1917, property was taken under control by the Crown Reserve company of Cobalt.

NORTH DOME MINING CO.

PORCUPINE CROWN GOLD MINING CO.

ONTARIO

Offices: Dominion Exp. Bldg., St. James St., Montreal, Que.; 59 Victoria St., Toronto, and Timmins, Ont.

Officers: J. W. Carson, pres.; W. I. Gear, 1st v. p.; J. G. Ross, 2nd v. p.; above with C. A. Smart, J. W. Ross, A. G. Gardner, R. W. Redford, F. S. Meighen, Ziba Gallagher, James Cooper, directors. James Cooper, sec.-treas.; John Reid, asst. sec.-treas.; Samuel W. Cohen, Cobalt, Ont., gen. mgr.; M. W. Summerhayes, mgr.

Inc. in Oct., 1913. Cap., \$2,000,000; shares \$1 par. Crown Trust Co., Montreal, registrar and transfer agent. Traded on New York Curb.

Balance sheet of Dec. 31, 1916, showed net profit for the year \$270,430, making total with balance brought forward of \$542,445; dividends, 12%, absorbed \$240,000, other accounts \$25,360, leaving surplus of \$277,085.

Statement for half year ending June, 1917, shows income from bullion sales, \$245,031; expenses, \$120,852, leaving profit of \$124,180.

Dividends: 3% quarterly has been paid since 1914. Total to Aug., 1917, \$840,000. In August directors decided to suspend dividends on account of shortage of labor due to the war which prevented keeping development ahead of production.

Property: one patented claim, 40 acres, at Porcupine, Ont., shows quartz ore with free gold and sulphides in veins in schist. Orebody is 5' wide and 1,100' long. Vein strikes N. and has dip of 70° S.

Development: by 900' vertical shaft. New work in 1916 totaled 1,753' with 4,156' of diamond drilling. Ore mined by shrinkage stoping.

Ore reserves: management reports 97,000 tons of ore blocked out, valued at \$1,050,000.

Equipment: includes 150-ton cyanide mill. Costs per ton for 1916 were: mining, \$2.17; hoisting and tramping, 43c; mill operations, \$1.10; power, heat and maintenance, 90c; general mine expense, 53c; administration, depreciation, insurance and taxes, 34c; total, \$5.47.

Production:

	Tons Treated	Value per Ton	Extraction	Net Value Bullion
1916.....	51,273	\$12.11	97.14%	\$571,652
1915.....	41,326(a)	14.46	97.70%	613,565
1914.....	40,857	17.18	97.26%	689,151

(a) In addition there was treated 5,093 tons from impounded tailing of the first amalgamation mill, assaying \$3.15 per ton, extraction 85.77%.

Some high-grade ore was opened up on the 800' and 900' levels, 1916, but the prospects of finding new veins are not favorable since the quartz porphyry throughout the Western portion of the property has been proven non-productive. Milling operations being carried on, October, 1917, at a rate sufficient only to pay expenses.

PORCUPINE EXCELSIOR MINING CO., LTD.

ONTARIO

Porcupine, Ont., Canada.

Officers: P. Cameron, pres.; Wm. Duncan, sec.; G. L. Wheeler, asst. sec.

Property: claims, Nos. 13890, 13891 and 900 P. in Shaw Twp., Nipissing district, Ont., formerly owned by the Tommy Burns Mining Co.

PORCUPINE MINES SYNDICATE

ONTARIO

Care Mark Harris, Mutual Life Bldg., Buffalo, N. Y. Is a new scheme of the above named promoter and his associates, who are too well known in the United States.

Will acquire the Cross Veteran location, 160 acres, in Tisdale Twp., Porcupine district. Not regarded favorably.

PORCUPINE PREMIER GOLD MINING CO., LTD.

ONTARIO

Office: G. W. Fields, treas.-gen. mgr., 53 State St., Boston, Mass. B. M. Walton, supt.

Inc. in Mass. Cap., \$1,000,000; shares \$1 par. Traded on Boston Curb.

Property: 40 acres in Whitney Twp., 110 acres in Deloro Twp., Porcupine district, Ont., Can. Also said to own Standard group of about 110 acres, south of Dome Lake property. Is reported, 1916, to have bought the Virtue mine near Baker, Oregon.

Development: on the Porcupine property consists of two shafts, one 200' deep, with drifts and crosscuts. Mines are in the prospect stage and are outside of the proven belt, but are regarded as worthy of prospecting. Company's promoter is also treasurer and general manager.

PORCUPINE VIPOND MINES, LTD.

ONTARIO

Merged, 1916, into Porcupine V. N. T. Gold Mines, Ltd., which see.

PORCUPINE V. N. T. GOLD MINES, LTD.

ONTARIO

Office: 50 East 42nd St., New York.

Mine office: Schumacher, Ontario, Canada.

Officers: Henry H. Ward, pres.; H. A. Poillon, v. p.; Chas. C. Dickson, v. p.-treas.; H. F. Karst, sec.; C. H. Poirier, mgr., with L. A. Sorenson, and J. A. Carey, directors. H. W. Heine, supt

Is a merger of the Porcupine Vipond and North Thompson Mine companies. **Inc.** 1917.

Property: about 160 acres, adjoining the Hollinger on the west, in the Porcupine mining district, Ontario, Canada. Claims show several veins, one cut on 600' level reported to average 20' in width and to carry \$15 gold ore.

Ore: gold quartz, occurs in fissure veins, said to be 3'-10' wide, which

run N. E.-S. W. and are vertical. Pay ore occurs in a shoot 900' long. Formation is an amygdaloidal basalt.

Development: by 600' shaft.

Ore reserves: in the Vipond, April 1, 1916, estimated at 68,145 tons in place, valued at \$8 per ton, and 22,850 tons already broken, but not pulled, averaging \$6.25 per ton, a total of 91,000 tons, valued at \$688,600.

Equipment: includes hoist, 2 compressors, hydro-electric and steam power, and 140-ton mill, which employs the continuous decantation process and is equipped with Buchanan crusher, 6' Hardinge ball mill, classifiers, Dorr agitators and Dorr thickeners. New 400-ton mill to be erected.

Production: treating 100 tons daily, Aug., 1917.

PRESTON EAST DOME MINES, LTD.

ONTARIO

Office: 7 Melinda St., Toronto, Ont., Canada.

Officers: Lt. Col. D. M. Robertson, pres.; Gordon Taylor, sec.-treas., with C. L. Sherrill, R. T. Shillington and D. L. White, Jr., directors.

Inc. 1911, in Ont. **Cap.**, \$3,000,000; shares \$1 par; 2,500,000 shares outstanding. Stock listed on New York Curb. Toronto General Trusts Corp'n, Toronto, transfer agents.

Property: 3 claims, patented, in Tisdale Twp., Porcupine, Ont., adjoining the Dome Mines, Ltd.

Ore: which occurs in narrow veins in quartz-porphyry, carries coarse gold, associated with pyrite and zinc-blende. Company is idle, pending outcome of further development on the Dome Mines property. Secretary reports a small cash balance on hand.

R. A. P. SYNDICATE

ONTARIO

Succeeded, 1916, by the Boston Creek Gold Mines, Ltd., which see.

RAPP MINING DEVELOPMENT & PROSPECTING CO. ONTARIO

Address: Boston Creek, via Krugersdorf on the Ont. Northern Ry.

Property: the original "find" at Boston Creek shows a gold-bearing quartz vein on which shaft has been sunk.

Equipment: includes hoist, compressor, etc.

REEVES-DOBIE MINES, LTD.

Reported incorporated June, 1917, to develop the Reeves-Dobie group at Gowganda. **Cap.**, \$2,000,000.

SCHUMACHER GOLD MINES, LTD.

ONTARIO

Head office: 85 Bay St., Toronto, Ont. **Mine office:** Schumacher, Porcupine district, Ont.

Officers: F. W. Schumacher, pres.; F. L. Culver, v. p.; with J. Y. Murdoch, H. E. Tremain and O. G. Manby, directors; F. A. Hammond, sec.; E. S. Davis, treas.; S. A. Wookey, mgr.

Inc. July 16, 1914, in Ontario. **Cap.**, \$2,000,000; shares \$1 par; 1,750,000 issued, plus 100,000 sold July, 1917.

Balance sheet for year ended June 30, 1916, shows assets totaling \$1,857,532, including property \$1,393,970; plant and equipment, \$127,526; development \$121,237; current assets, \$49,799; and discount on shares \$165,000. Liabilities included current \$37,300; and surplus \$69,935.

Revenue from bullion, etc., was \$163,992, of which \$31,933 was profit.

Property: the Schumacher mine, adjoining the McIntyre on the W. for $\frac{1}{8}$ mile and the Acme of the Hollinger Consolidated for $\frac{3}{8}$ mile, Porcupine, Ont.

Development: surface showings are numerous and extensive. No. 1 vein is 1,150' long and from 50 to 60' wide. It is considered that the ore zone is 1,000' wide, running E. and W. Openings to date total 8,880' to 600' depth. Two orebodies cut on the 600' level by diamond-drill have not been mined yet.

Reserves: were estimated at 64,900 tons, worth \$6.11 per ton. The main

shaft was to be sunk to 1,000' in Sept., 1917, and No. 4 shaft, 1,400' E. of main shaft, to 400'.

Equipment: hoist, 25-drill compressor, boilers, shops, 150-ton plant containing Hardinge and tube mills, and 300-ton continuous decantation cyanide plant.

Production: Oct. 1, 1915, to June 30, 1916, 30,120 tons of ore yielding \$161,949.

Early in July, 1917, property was closed for a period of 51 days to over-haul mine and plant. In September work was in full swing again.

Property apparently has a good future, judging by nearby mines.

SYLVANITE GOLD MINES, LTD.

ONTARIO

Subsidiary of Kirkland Lake Proprietary. Chas. A. O'Connell, mgr., Kirkland Lake, Ont.

Inc. June, 1913, in Ont. **Cap.**, \$2,000,000.

Owns the Wright and Robbins claims adjoining the Tough-Oakes gold mine, Kirkland Lake. Work to date has been chiefly surface exploration.

Letters returned in 1917.

TECK-HUGHES GOLD MINES, LTD.

ONTARIO

Office: Bankers Trust Bldg., 14 Wall St., New York. **Mine office:** Kirkland Lake, Ont.

Officers: C. L. Denison, pres.; R. W. Pomeroy, v. p.; A. D. Crooks, sec.; H. C. Clarke, treas.; also directors. L. W. Ledyard, supt.

Inc. in Ontario. **Cap.**, \$2,000,000. **Bonds:** \$250,000.

Statement for year ended Aug. 31, 1916, showed an expenditure of \$52,455, and \$156,485 total to that date. Current assets were \$96,987, and current liabilities \$4,484.

Property: 4 miles from Swastika, in Kirkland Lake district, Ont.

Development: by 600' shaft. At 400' the vein is said to be up to 30' wide. Exploration is reported as being entirely satisfactory.

Equipment: hoist, 10-drill compressor, and plant, including ball and tube mills, cyanidation by counter current decantation, and Oliver filter. Electric power is supplied by the Northern Ontario Light & Power Co. of Cobalt, whose transmission line is 65 miles long.

Production: commenced March, 1917, and up to July the total was 5,121 tons ore, yielding \$37,853. The ore varied from \$4.84 to \$9.66 per ton, and the mill is treating 40 tons daily.

Is one of the promising mines of the Kirkland Lake district.

TEMISCAMING & HUDSON BAY MINING CO., LTD.

ONTARIO

Address: New Liskeard, Ont., Can.

Officers: Geo. Taylor, pres.; A. A. McKelvie, v. p.; with T. McCamus, John Dunkin, F. L. Bapst, W. H. Kinch, Chas. L. Sherrill, directors; F. L. Hutchinson, sec.-treas.; D. A. Mutch, mgr.

Inc. July 29, 1903, in Ontario. **Cap.**, \$25,000; shares \$1 par; outstanding \$7,761. Annual meeting, last Tuesday in October. Company is a holding corporation, whose operating company is the Hudson Bay Mines, Ltd., which in turn controls Dome Lake Mining & Milling Co., Ltd.

Balance sheet for year ending Aug. 31, 1916, shows: assets \$2,956,599, which includes, stock of Hudson Bay Mines, Ltd., 580,000 shares, \$2,900,000; cash, \$2,113; Hudson Bay Mines, Ltd., account receivable, \$49,673; Gowanda claims, \$4,500; furniture, \$313. Liabilities include: outstanding capital stock, \$7,761; balance, loss and gain account, \$2,948,838.

For year ended Aug. 31, 1917, assets totaled \$2,853,180, including 556,000 Hudson Bay Mines shares, \$2,780,000; accounts receivable, \$66,096; cash, \$2,302. Liabilities include capital \$7,761, and balance at credit of loss and gain account, \$2,845,419.

Dividends: during 1915-'16 one 300% dividend was paid, bringing total dividends paid since incorporation in 1903 to 25,000%, or \$1,940,250. Operations are described under titles of the subsidiary companies.

TISDALE GOLD MINING CO., LTD.

ONTARIO

Inc. Oct., 1910, in Ont. **Cap.**, \$500,000 shares \$5 par. See Dobie Mines, Ltd.

TOMMY BURNS GOLD MINING CO.

ONTARIO

Address: H. B. Hatch, Porcupine, Ont.; and Phil. Moore, Brookfield, Nova Scotia.

Officers: W. E. Beattie, pres.; L. M. Myers, v. p.; with V. Marone and J. Fairbrother, directors. A. W. Young, sec.-treas.

Inc. in Del. **Cap.**, \$3,600,000; shares \$1 par; Registrar & Transfer Co., 32 Nassau St., New York, registrar and transfer office.

Owens all but 5 shares of stock of the Tommy Burns Gold Mines, Ltd. Balance sheet of Jan. 31, 1916, shows no other assets besides this stock and \$5,000 cash. Balance sheet of the same date for the Tommy Burns Gold Mines, Ltd., gives this stock a value of \$99,995 and shows \$4,000 cash and total development expense of \$5,645.

See Tommy Burns Gold Mines, Ltd.

Canadian Mining Manual considers this a too much advertised company. Its promoters deserve credit for gall and nerve, but nothing more.

TOUGH-OAKES GOLD MINES LTD.

ONTARIO

(Subsidiary of Kirkland Lake Proprietary, Ltd.) **Office:** 119 Finsbury Pavement, London, E. C., Eng. **Mine office:** Kirkland Lake, Ont.

Officers: G. R. Bonnard, chairman; R. Simpson, E. H. R. Trenow, directors. C. O. Connell, mine mgr.; H. J. Almond, sec.

Inc. in England, Jan., 1914. **Cap.**, £500,000; shares £1; 230,007 outstanding. Organized to acquire 426,388 fully paid shares of company of same name registered in Canada, with a capital of \$3,000,000 (£600,000), in \$5 shares, together with an option to January 31, 1915, on a further 85,555 shares at 15s each and 85,555 at 20s. To September 30, 1915, £44,997 cash and £30,000 in fully paid shares had been paid on account of shares of which 66,781 had been delivered, and in the annual report, December 31, 1916, it was stated that legal proceedings were still in progress regarding delivery of further shares in the Canadian company. According to latest reports, litigation has not been terminated, but 280,555 more shares are in Court in England.

Cash on hand, Sept. 30, 1916, was \$5,860.

During 1915, two dividends of 2½% each were paid by the Canadian company and during 1916 four dividends of 2½% each.

For details of property see Tough-Oakes Mining Co., Ltd.

TOUGH-OAKES MINING CO., LTD.

ONTARIO

Office: Kirkland Lake, Ont.

Officers: C. A. Foster, pres.; Chas. O'Connell, mgr.

Inc. 1913, in Ontario. **Cap.**, \$3,000,000.

Earnings in 1916 were \$707,114, of which \$260,668 was profit. Dividends absorbed \$260,750, and with other deductions, there was a loss of \$104,667.

Dividends: to July, 1917, total \$391,125.

Property: 185 acres in the Kirkland Lake district, Ont., being the principal gold producer in that region.

Development: by shafts to 500' depth. Reserves are estimated as worth \$1,000,000.

Ore: is 85% hard feldspar-porphry, the remainder quartz with some conglomerate and graywacke.

Equipment: complete, with 120-ton mill using ball and tube mills and

counter current decantation cyanidation. Cost of treatment is \$2.43 per ton. Twenty machines are employed underground.

Production: in 1916 was 33,171 oz. gold and 13,051 oz. silver, from 39,863 tons of ore and tailing. In June, 1917, output was \$2,000 daily.

Company employs 200 men, is the only dividend payer in the district, and has a good future under present management.

UNITED KIRKLAND GOLD MINES, LTD.

ONTARIO

Address: Kirkland, Ont.

Officers: R. T. Shillington, pres.; W. G. Ellis, v. p.; H. A. Day, sec.-treas., with Levi Dodge and Ed. Kert, directors.

Inc. in Ontario. **Cap.,** \$2,000,000; shares \$1 par; 1,000,000 issued.

Property: 135 acres near the Teck-Hughes mine, Kirkland Lake district, Ont. Geologic conditions are said to be similar to adjacent producers.

Development: by surface prospecting; No. 1 shaft being sunk in September, 1917.

Company may have fair prospects, but has received considerable advertising by brokers.

WEST DOME CONSOLIDATED MINES

ONTARIO

Office: Traders Bank Bldg., Toronto.

Officers: Sir Henry M. Pellatt, pres.; Hugh Blair, v. p.; C. H. Manaton, sec.-treas., with J. A. Murry, A. M. Hay, and G. A. Stimson, directors.

Inc. 1915, in Ontario to take over property and assets of the West Dome Mines Co. **Cap.,** 3,000,000 shares; \$1 par; 2,000,000 shares offered in exchange for 3,000,000 shares in the old company, leaving 1,000,000 in the treasury to provide funds for development. Annual meeting in April. Listed on New York Curb and in Toronto.

Property: 176 acres adjoining the Dome mine on the W. in Tisdale Twp., Porcupine, Ont. Idle from 1912 to 1915 after fire destroyed surface equipment worth \$75,000.

Development: by 70° incline shaft, 365' deep, sunk on a quartz vein that averages 5' in width and in some places 8'. Eight veins have been found by diamond drilling, which cost \$30,000, to a depth of 1,800'. Work is being concentrated at 300' depth. Reserves in Sept., 1917, were estimated as worth \$2,000,000, the ore valued at \$6.17 to \$8 per ton.

Equipment: includes 12-drill compressor, electric motors and transformers, 4 boilers, drills, etc. A mill is now contemplated.

The Dome has a large probable tonnage and is expected to make a big mine.

WRIGHT-HARGRAVES MINING CO.

ONTARIO

Address: Kirkland Lake, Ont.

Development: by 2 main shafts, 300' deep. At 100' depth there is said to be 12' of \$30 gold ore. In October, 1917, the vein, where cut, at 300' depth, showed indications of making ore.

Ore: high-grade silver, containing arsenic and smaltite. Assays on shipments average from 500 to 6,000 oz. silver per ton. Deposits occur at contact of the Keewatin formation with a diabase sill. Pay ore is found in shoots.

Development: by vertical shaft. Greatest depth is 1,600' and total extent of workings over 4 miles. Reserves total 15,734 tons. In the first half of 1917, new development aggregated 2,750' including 117' of shaft sinking. Drilling at the North Dome amounted to 1,700', finding ore at depth. Work is suspended at this mine for a while owing to scarcity of labor.

Diamond drilling has proved that another contact occurs below the diabase sill at a depth of about 2,000'. In April, 1917, the main shaft

reached 1,600' depth, and was connected with the Beaver adjoining, where over 1,000 oz. ore had been opened at the lower contact. In July, prospecting for ore under the diabase sill was still underway.

Equipment: includes a compressor for 20 drills, a Nordberg hoist with 6' drums and a capacity of 2,500', and 150-ton, 40-stamp mill, equipped with concentrating machinery. Concentrates averaged 953 oz. silver per ton in 1916. Plant treated 32,897 tons.

Total cost of production, 1916, was 26.4c per oz. silver.

Mill tailings amounting to 150,000 tons, averaging 4 oz. silver per ton, are held in reserve, and will probably be treated by flotation.

The Temiskaming was in poor physical and financial condition early in 1914. Since then a profit of \$943,044 has been made by present management.

About July, 1917, H. B. Wills, a broker and M. Morgenstern, a shareholder, are alleged to have accused the management of distorting reports to shareholders. As a result the mine was examined by Balmer Neilly of the Penn-Canadian mines. He estimated 11,572 tons of positive ore broken, about 4,000 tons less than official reserves. Shareholders were not satisfied and Douglas Mutch of the Hudson Bay mine was employed to examine the mine. He estimated 10,816 tons of all classes of ore, containing 393,800 oz. silver. Little new ore is being developed. Exploration at 1,600', or lower contact, does not warrant further expenditure. This report generally vindicates the management.

This controversy is unfortunate, for while the Temiskaming is not a large mine, it seems to be carefully handled, is highly profitable, and though it has no great future, it may pay dividends for some time to come.

THUNDER MINING CO., LTD.

ONTARIO

Address: Dominion Reduction Co., 42 Broadway, New York. Julius Cohen, mgr.; H. H. Lavery, supt.

Inc. Oct. 7, 1916, in Ontario. **Cap.**, \$2,000,000; shares \$1 par; 1,610,000 issued.

Property: the St. Anthony Gold Mining Co.'s ground at Sturgeon Lake, Ont., held jointly by the Dominion Reduction Co. (66%), Kerr Lake Mining Co. (22%) and Wettlaufer-Lorrain (12%).

Considerable development has been done by the above owners.

TRETHEWEY SILVER-COBALT MINE, LTD.

ONTARIO

Office: 1601 Royal Bank Bldg., Toronto. **Mine office:** Cobalt, Ont.

Officers: S. R. Wickett, pres.; J. B. Tudhope, v. p., with Gordon Taylor, J. B. Bickell, W. J. Sheppard and T. E. Leather, directors; L. J. Pashler, sec.-treas.

Inc. 1906, in Ontario. **Cap.**, \$2,000,000; shares \$1 par; non-assessable; outstanding, \$1,000,000. No bond issues. Annual meeting, February. Toronto General Trust Corporation, transfer office. C. E. Robin, registrar. Listed on New York Curb.

No financial statement for 1915 is available, operations having been suspended for most of the year, owing to the low price of silver. For the seven months ended Dec. 31, 1916, gross earnings were \$156,746 and operating expenses were \$92,083.

Dividends: total, 113% of outstanding capital stock. Last dividend of 5%, paid Dec., 1916.

Condensed balance sheet: Dec. 31, 1916 shows assets, \$1,117,358, with liabilities as follows: cap. stock, \$1,000,000; accounts payable, \$13,223; credit of rev., \$104,135.

Revenue in 1916 was \$156,747, of which \$155,771 was from silver; profit was \$64,664.

Property: one patented claim, 40 acres, Coleman township, Cobalt district; also owns control in Rochester Mines, Ltd., of Cobalt. Ore deposits yield silver and cobalt and occur between conglomerate and diabase. Pay ore occurs in shoots. Average of all ore milled in 1916 gave 16.3 oz. silver.

Development: by vertical shaft, greatest depth about 230' and total linear extent of workings, 24,970'. Mining costs, \$3.34 per ton.

Equipment: compressors, hoists and other necessary mining machinery besides a 30-stamp concentrating mill with a capacity of 100 tons daily.

Total output to date, about 6,000,000 oz. silver.

Company spent \$35,956 during 1916, in prospecting other properties. Operates under lease the Rochester Mine at Cobalt, the Rochester to get 20% of the net profits.

A 100-ton flotation plant being erected in Sept., 1917, to treat slime dumps which contain 65,000 tons of 4.7 oz. material.

Production: in 1916, the mill treated 18,541 tons of 16.3 oz. ore at a cost of 1.59 per ton.

The Northern Custom Concentrators, Ltd., offered to buy the Trethewey property in 1916; the latter's directors recommended the sale, but shareholders voted it down. As the Beaver, adjoining the Rochester, has rich ore at 1,600', the latter has additional speculative value. Trethewey should be very profitable while present high silver prices continue.

UNIVERSITY MINES, LTD.

ONTARIO

Is a subsidiary of the La Rose Consolidated Mines Co., which see.

WETTLAUER-LORRAIN SILVER MINES, LTD.

ONTARIO

Office: 61 Broadway, N. Y. **Mine office:** South Lorrain, Ont.

Officers: H. Lockhart, Jr., pres.; D. M. Steindler, v. p.; E. H. Westlake, sec.-treas.; the foregoing, and T. L. Herrmann, J. H. Susmann, W. J. Magavern, W. H. Clipsham, J. L. Mitchell and Herman Cook, directors. H. A. Kee, mgr.

Inc. Nov., 1908, in Ontario. **Cap.**, \$1,500,000; \$1 par; non-assessable; outstanding, 1,416,590 shares. Annual meeting, fourth Monday in January. Bankers' Trust Co., New York, and Trust & Guarantee Co., Ltd., Toronto, transfer offices; Security Transfer & Registrar Co., New York, registrar. Listed on New York Curb.

Operations ceased in 1913, owing to exhaustion of ore, and efforts to find other bodies in the property practically abandoned. Treasury contained \$129,153, which will be used for prospecting and purchase of other property. Examination of other properties planned for 1917.

During 1916 the company's properties were operated under a lease to the Comfort Mining & Leasing Co., Ltd., and royalties amounting to approximately \$8,250 were earned. The lessee assumed all expenses, and performed some development, but no important discoveries were made. The lease expired on Feb. 17, 1917, the lessee not having availed itself of the privilege to renew. In September, the Pittsburg Lorrain company took over the mine, and is to treat the low-grade dumps.

With respect to the option which was held by this company jointly with the Kerr Lake Mining Co., Ltd., on the properties of the St. Anthony Gold Mining Co., Ltd., at Sturgeon Lake, Ontario, considerable exploration was done in conjunction with the Kerr Lake company, this company bearing one-third of the expense. The Wettlaufer decided to participate in the venture only to the extent of a one-ninth interest, and a new corporation was formed under the name of the Thunder Mining Co., Ltd., in which corporation the title to the property is now vested. Shares in this new company representing its interest have been received by the Wettlaufer.

MINING COMPANIES OF THE SUDBURY DISTRICT

BRITISH-AMERICAN NICKEL CORP., LTD.

ONTARIO

Office: 507 Royal Bank Bldg., Toronto, Ont. **Mine office:** Nickelton, via Sudbury, Ont.

Officers: J. H. Dunn, pres.; W. A. Carlyle, v. p.; W. H. Coade, sec-treas.; E. P. Mathewson, gen. mgr.; F. J. Brulè, chief engr.; E. Hibbert, supt. of mines; F. B. Prescott, supt. of const.; T. N. Hay, purch. agt.

Inc. Aug., 1913, Canada. Cap., \$20,000,000 common stock, all issued; \$6,000,000 first mortgage bonds, 6%, all issued; \$10,000,000, 6% debenture stock authorized, of which \$3,500,000 has been issued; \$14,000,000 stock and \$3,000,000 bonds held by British Government, out of \$29,500,000 issued.

Property: In the Sudbury nickel district, Ontario, the Corporation owns 17,590 acres, of which 12,590 acres are within a mineral bearing zone, the balance being non-mineral and required for smelter townsites, etc. Included in the above are the following mines: Murray, Whistle, Wild Cat, Jackson, Nickel Lake group, W. D. 16, Elsie, Gertrude, Victor, Lady Violet and Falconbridge. Lands contain 21 known orebodies, 7 of which have been developed. The company has spent \$850,000 on diamond drilling from 1907 to 1913.

The Whistle mine has been developed and is ready for production, but the Murray mine, having shown a much larger orebody has been selected as the property on which the first work is to be concentrated. In all, the company has developed by diamond drilling over 13,000,000 tons of ore, 9,000,000 of which is in the Murray mine, which is about 4 miles N. W. of the town of Sudbury.

The surface works contemplated at the Murray mine and now in course of construction will consist of electric hoist, rock crushing and sorting house with a capacity of 3,500 tons of ore per day, and electrically driven air compressors and the usual shops and change house. The corporation is now diamond drilling at the Murray mine to determine the extent of the orebody, with a view to larger operations than at first contemplated and the sinking of another shaft. At the Murray mine a 2,000' three-compartment shaft was sunk 700', but the mine was closed down in August, 1914. Work was resumed on this property under new management, August, 1916, and is now being pushed.

The plans made for the smelter in 1913 have been considerably improved and enlarged. The present design provides for the construction of 4 blast furnaces with hearths 50x300", 7 Pierce-Smith converters, 13x30', to be erected in a modern plant with full equipment of cranes, flues, stacks, bins, shops, power house and tramming system, all machinery to be operated by electricity. An electrolytic refinery, using the Hybinette process for the separation of copper and nickel and the precious metals from the matte, will be constructed adjacent to the smelter and will have a capacity of about 10,000 tons nickel per annum. The site chosen for the smelter and refinery is about one mile west of the Murray mine shaft. Preliminary work at the site is now underway.

It is the intention of the management to have all employees reside in the town of Sudbury, and cars or suburban trains will be provided for their transportation. The mines are connected with the Canadian Pacific, the Canadian Northern Ontario and the Algoma Eastern railroads.

CANADIAN COPPER CO.

ONTARIO

Subsidiary of International Nickel Co.

General office: 43 Exchange Place, New York. **Mines and smelter office:** Copper Cliff, Ontario. Mines in the Sudbury district.

Officers: A. D. Miles, pres.; F. S. Jordan, 1st v. p.; Andrew Squire, 2nd v. p.; J. L. Ashley, sec.-treas.; A. D. Miles, W. A. Bostwick, F. S. Jordan, Andrew Squire and F. S. Whitcomb, directors; G. E. Sylvester, asst. to the pres.; J. L. Agnew, gen. supt.; J. C. Nicholls, mine supt.; Wm. Kent, smelter supt.; T. W. Rawlins, metallurgist; Frank Ludlam, gen. pur. agt.; E. Horton Jones, chief engr.

Inc. Jan. 6, 1886, in Ohio. **Cap.**, \$2,500,000; shares \$100 par. Licensed in Canada, by special act of Parliament. Controlled through entire stock ownership by International Nickel Co. The Canadian Copper Co. is the world's largest producer of copper nickel ores and copper nickel matte. Ore was discovered 1884, mining commenced 1886, and smelters were started in 1888.

Property: about 18,000 acres, mostly on the south range of the Sudbury nickel belt. The ore consists of a mixture of chalcopyrite, pyrrhotite and pentlandite in a norite gangue. The ore may be massive sulphides, as in the Creighton mine, or disseminated sulphides scattered through the gangue, as in Cr  an Hill mine. For geology, see Eng. & Min. Jour., Vol. 101, No. 19.

Total ore production is now being obtained from Creighton and Cr  an Hill mines, distant from Copper Cliff by rail, respectively 8 and 19 miles.

The Creighton mine is developed by 3 incline shafts, the maximum vertical depth of hoisting at present being 1,000'. Open pit mining was the principal system until 1912, since which time underground stoping has been almost exclusively carried out, the mine being fully developed to the 12th and partly developed to the 16th level.

The new No. 3 shaft, which was put into commission in July, 1917, has 5 compartments, incline 55  . All ore is now hoisted through this shaft. No. 2 shaft is used for handling men and supplies only. No. 1 is being dismantled. Tramming is done by electric locomotives, with 4-ton cars, on the main levels.

Primary crushing of ore is carried out underground at one main-level station. The crusher is the jaw type, 42"x30" and is set at 6". Shafts are equipped with electrically-driven hoists operating in balance, mechanical appliances being in use for quick loading of skips. The handling of men in the mine is provided for by separate hoists.

The opening of the new No. 3 shaft also marked the completion of an elaborate new surface equipment, including combined headframe and rock-house, hoist house, change house, and office building, warehouse, work shops, oil-storage, etc. All these buildings are of concrete, steel and brick, fireproof construction.

In the new rock-house, which has a capacity of 500 tons per hour, secondary crushing is carried out, with screening and hand sorting on picking belts, in successive stages. Concrete bins of 3,000 tons capacity are situated under the picking belts. There is an extensive system of yard tracks and sidings, with a hump for gravity switching of cars.

The main ore hoist is electric, and is operated on the Ilgner system, with capacity for hoisting 9-ton skips at 2,500' per minute; present skips hold 7 tons. The mine is served with 4 compressors, 3 of 5,000 cu. ft. capacity, and one of 2,500 cu. ft., giving total capacity for about 175 drills. Production of ore from this mine is 3,500 tons per day, with 1,200 to 1,400 employees.

Crean Hill mine, about 2 miles east of Victoria mine, is opened by a 4-compartment shaft, 780' deep, the first 300' at an angle of 57° and the remainder at an angle of 71°. The daily production is about 450 tons of sorted ore with stoping in progress as present down to the 5th level.

Surface equipment consists of rock house for crushing and sorting ore, power house containing 3 compressors, suitable for operating 65 drills, workshops, warehouses and necessary housing facilities for employees.

No. 2 mine, situated at Copper Cliff, is developed to the 11th level, at a depth of 860', and produces about 200 tons of sorted ore per day. Surface equipment at No. 2 mine is similar to that at Crean Hill.

A quartz quarry about 15 miles south of Copper Cliff produces the necessary silica used for fluxing. This quarry is operated during the summer months, when the output is so arranged as to provide the necessary storage of crushed quartz for the winter's requirements.

All the mines are operated by electric power, which is transformed to 2,200 and 550 voltage. A subsidiary corporation of The International Nickel Co., known as the Huronian Co., has a hydro-electric installation at High Falls on the Spanish River, about 30 miles from Copper Cliff, utilizing an effective head of 85', which yields about 10,000 k.v.a. The current is transmitted at 35,000 volts.

Ore from the Crean Hill mine is sent to the smelter; ore from the Creighton mine goes mostly to the roast yard about 13 miles from Copper Cliff, and in part to the smelter. The yard is about 7,500' long and is served by four tracks. It contains space for 122 roast beds. Fuel is wood. The ore is re-loaded from the beds by steam shovel and taken to the smelter in 50-ton drop-bottom steel cars, from which it is dumped into bins 30'x600'x23' deep.

The blast furnace building contains 7 furnaces, 5 of which are 4' 2"x17', one 4' 2"x21' 3", and one 4' 2"x25' 6". Four of the furnaces are now 18' deep, a 3' 6" jacket having been inserted between the upper and lower tiers to lower the settlers sufficiently to receive molten converter slag. No. 8 furnace is under construction.

The jackets, except the top row, are of cast iron with a grid of cooling pipes cast in. The lower jackets are 8' 6" in height and carry 2 tuyeres 6" in diam.; there are 8 jackets on each side, thus making 16 tuyeres at 12¾ centers on each side of a 17' furnace. The center line of tuyeres is 3' 10" above the sole plate. The upper jackets of steel plate are 6' in height. The furnace building is served by two 50-ton and one 25-ton cranes.

The charge is a mixture of raw and roasted ores, which as a rule, is self-fluxing, but which can be adjusted as required, by the admixture of quartz or limestone. About 11.5% coke is used on the charge. The slag carries about 32.5% silica and is sent to the dump in standard gauge slag pots of 225 cu. ft. capacity. Matte from the blast furnace is taken to the converter building, which is parallel to the blast furnace building, and 60' away. This matte averages 24% CuNi.

The reverberatory department contains a fine grinding plant, 4 Wedge roasters and 2 reverberatories, one working. This department is served by a high level track 70' above the main yard, and has steel storage bins of 126,000 cu. ft. capacity for ore and fuel. The ore is ground in ball mills and roasted in Wedge furnaces. These are 22' 6" diameter, have 7 roasting hearths and 1 drying hearth, producing calcines containing 8% sulphur. The reverberatory charge consists of a mixture of calcines, green ore fines

and fine dust. Ore is fed along the side and end walls of the reverberatory from a continuous trough shaped bin, served by a charge car, and drops into the furnace through feed pipes in such a manner that the side walls are continually protected by a blanket of fresh charge. The furnace smelts about 500 tons charge in 24 hours. It burns pulverized coal, which is crushed so that about 75% will pass 200 mesh and is blown in by fan blast; about 100 tons a day is consumed, and has proved entirely satisfactory. The slag is skimmed from the front of the furnace into 25 cu. ft. iron pots. Matte is tapped from the front near the slag skimming door. It averages 23% CuNi.

The matte from both departments goes to the converter building, which is served by two 50-ton cranes of 55' 8" span with 20-ton auxiliary hoist. Matte is charged into 5 basic converters of the horizontal type 37'x10' diam., using about 8,500 cu. ft. free air per min. A mixture of quartz and mine rock which carries a little ore is used for flux.

The operation is conducted exactly as in the conversion of copper matte, but is stopped as soon as the iron is eliminated. Final product contains 24% copper, 55% nickel, and 0.5% iron. Slag contains 28% silica, and 4% copper-nickel, most of which is recovered by passage through blast furnace settlers. Matte is cast into iron molds, broken up, and sent to the refinery of The International Nickel Co., at Bayonne, N. J. On completion of The International company's Canadian refinery, now under construction at Port Colborne, Ontario, on Lake Erie, matte will be sent there for treatment.

Production: of the Canadian Copper Co., in 1916 was approximately 63,000 tons of finished matte. Company employs directly about 3,500 men.

CANADIAN MINING CORPORATION, LTD.

ONTARIO

Liquidator: V. Layman, Balfour House, Finsbury Pavement, London, E. C. England.

Company is in process of voluntary liquidation, shareholders to receive for each £1 share, a fully paid \$3 share of the Mining Corporation of Canada, which see.

Dividends: 2½% Nov. 25, 1914; 2½% March 31, 1915; 2½%, interim, Oct. 14, 1915.

DOMINION NICKEL-COPPER CO., LTD.

ONTARIO

Property taken over by British-American Nickel Corporation, which see.

INTERNATIONAL NICKEL CO.

ONTARIO

General office: Constable Hook, Bayonne, N. J. Executive office: 43 Exchange Place, New York.

Officers: E. C. Converse, chairman of the board; E. F. Wood, 1st v.p.; J. R. De Lamar, 2nd v.p.; J. L. Ashley, sec.-treas.; foregoing, with W. N. Cromwell, A. Jaretzki, W. E. Corey, Wm. T. Graham, W. A. Bostwick, W. H. Brownson, Charles Hayden, Thomas Morrison, and S. Prosser, directors.

Inc. Sept., 1912, succeeding International Nickel Co. and Colonial Nickel Co., the former absorbing the Canadian Copper Co., which owns the great nickel-copper mines and smelters of Sudbury, Canada.

Cap., \$8,912,000. 6% non-cumulative preferred stock, \$100 par. and \$41,834,000 common stock, \$25 par. The authorized share capital is \$12,000,000 and \$50,000,000, respectively.

Stock is listed on the New York Stock Exchange. Bankers' Trust Co., New York, transfer agent. New York Trust Co., New York registrar.

Surplus.....	1,974,320	3,566,793	3,398,466

* Equal to \$2.68 per share on \$41,834,600 common stock (par value \$25), against \$3.64 for six months to Sept. 30, 1916.

The net quick assets, or excess of current assets over current liabilities, amounted to \$12,063,584 on Dec. 31, 1917, as compared with \$8,531,147 on Mar. 31, 1916.

Dividend Earnings: regular dividends of 6% have been paid upon preferred stock since 1906, and varying rates have been paid on common since 1909. Stockholders received 10½% in 1913, 10% in 1914, 10% stock and 17½% cash in 1915; in 1916, 8%, in 1917, 24% paid June 1. Present rate is 24% per annum, payable quarterly, M. J. S. and D. 1. Since the expansion in 1912, the International Nickel Co.'s earnings have averaged about 12% yearly for its common shares. Actual percentages are 11.79% for year ending Mar. 31, 1913; 11.2% in 1914; 13.32% in 1915; 32.2% in 1916, and 37.1% in 1917. The large increase in earnings does not seem to be entirely due to war conditions.

The copper-nickel properties consist of mines with an estimated developed reserve of 20,000,000 tons, smelting plants at Copper Cliff, Canada, handling 3,500 tons daily, separating and refining plants at Constable Hook and Camden, N. J. Company also absorbed the Orford Co., Anglo-American Iron Co., Vermillion Mining Co., American Nickel Works, Nickel Corporation of Great Britain, and the Société Minière Calédonienne.

Production: company is said to control the world's production of nickel, which is 60,000,000 to 70,000,000 lbs. per year, selling at present at 50c. to 55c. per lb. It also produces about 35,000,000 lbs. copper annually, and 1916-17 profits from this source are larger than normal, though its price has remained practically stationary.

With reference to this, it may be said that shareholders began to chafe under the price-level (35c. per lb.) of its nickel, and asked directors to raise the selling price, they having adopted the policy of not increasing the price to customers. In March, 1917, the directors acquiesced, and made the price 40c.

War requirements for nickel have been less of a factor than generally supposed, the big expansion having taken place in developing new uses for the metal. Company has adopted policy of increasing earnings through development of new uses for the product. When the war is over International Nickel ought to retain most, if not all of its present large earning power. The number of shareholders increased from 7,145 in 1915-16 to 9,252 in 1916-17.

Company's mines are described under Canadian Copper Co.

At Port Colborne, Ontario, near the Lake Erie entrance of the Welland Canal, the International Nickel Co. is erecting a refinery which will cost \$5,000,000. To Mar. 31, 1917, the sum of \$1,046,740 had been spent on it. Completion is set for the end of 1917. The initial capacity is to be 15,000,000 lbs. of nickel.

One of the reasons for building a new plant in Canada, instead of enlarging the existing refinery at Bayonne, N. J., was on account of the agitation started in Canada soon after the war commenced. It was stated that nickel, produced from Canadian mines refined in the United States, was finding its way to Germany, also that enemy shareholders were interested in International Nickel. These accusations were apparently groundless, but a great deal of politics was made of the debate in Canada. (A Nickel Commission was appointed by the Canadian Government, the report being handed in early in 1917. It discussed the refining of nickel in Canada, ore reserves of the Sudbury area—70,000,000 tons of proved ore—New Caledonian deposits, and those of Norway, etc. The cost of producing nickel from New Caledonian ore was 19c. per lb., before the war.) Eventually, after considering the whole question, International Nickel acquired the new site in August, 1916, and rushed completion of the new refinery. International has a strong rival in the nickel field, namely, the British-America Nickel Corporation, Ltd., (which see) also erecting a refinery in Ontario.

Company is subject to war taxes in both countries, but is expected to earn dividend requirements despite this.

MOND NICKEL CO., LTD.

ONTARIO

Secretary's address and sales office: D. O. Evans, 39 Victoria St., London, S. W., England. **Mine office:** Conniston, Ontario. **Works office:** Clydach, Glamorganshire, Wales.

Directors: R. L. Mond, chairman; Bernhard Mohr, gen. mgr.; E. J. Griffith, Saxton W. A. Noble, Sir Robert Hadfield, Emile S. Mond, Dr. Carl Langer, Robt. Mathias and Sir Edmund Walker. C. V. Corless,

Canadian mgr.; Oliver Hall, mines supt.; A. Sharp, supt. Garson mine.

Inc. Sept. 20, 1900, in Great Britain. **Cap.**, £600,000, increased July, 1908, to £850,000; in £500,000 cumulative 7% preferred shares, £5 par; £300,000 ordinary shares, £1 par, and £50,000 deferred shares, £1 par; total issued capital, £750,000. Reorganized July 22, 1914, with authorized capital of £2,400,000, in shares of £1; 500,000 being in 7% cumulative preferred shares; 1,000,000 in 7% non-cumulative preferred shares, and 900,000 ordinary shares. All except £520,000 of the non-cumulative shares has been subscribed and called up; £375,000 5% first mortgage debenture stock and £500,000 6% redeemable debenture stock has been issued. For fiscal year, 1916, profits were £322,589.

Dividends: 7% has been paid regularly on preferred shares; dividends on ordinary shares: 6% in 1905; 10% in 1906; 12½% in 1907; 15% in 1908, 1909 and 1910; 16¼% in 1911 and 1912; 21¼% in 1913; 35% in 1914; 20% in 1915 and 1916, on new capital. Dividends on deferred shares were 18% in 1906; 33% in 1907; 48% in 1908, 1909 and 1910; 55% in 1911 and 1912; 85% in 1913. Reserve fund, £150,000. Cash balance, April, 1916, £22,321. Net profits, £111,320 in 1909; £114,107 in 1910; £140,803 in 1911; £146,650 in 1912; £191,047 in 1913; £248,088 in 1914; £285,282 in 1915, and £306,460 in 1916.

Property: about 14,000 acres in the Sudbury district and mining rights on about 12,000 acres near to and including Bruce Mines. Mines in the Sudbury district include Levack, Garson, Victoria, Worthington, Frood Extension, Kirkwood and North Star. Only the first four named worked at present. Mines in the Bruce Mines area consist of several openings grouped under the general name of Bruce Mines. The former group produces copper-nickel ore and the latter quartz-copper ore, used as flux in the converters. For geology of the Sudbury nickel-copper deposits, see Eng. & Min. Jour., Vol. 101, No. 19, and Vol. 102, No. 2.

The Levack mine, purchased in 1913, is being opened up by a 5-compartment shaft 400' deep.

Garson mine has a 3-compartment 800' shaft. Present deepest level is at 600'. Extraction to date has been almost exclusively from the upper 400', where a large tonnage still remains to be extracted.

Victoria mine is one of the deepest mines in Canada. The bottom level is over 2,300' vertically from the shaft collar, and the 3-compartment shaft, the sinking of which is nearly continuous, is now over 2,400' deep.

Worthington mine, now about 500' deep, produces a mixture of very high-grade ore and rock, which is subjected to close sorting. The orebody is a brecciated basic dike and not typical of the Sudbury deposits. For geology see Economic Geology, Vol. X, No. 6. The Worthington is developed by a 3-compartment shaft.

The purchasing and opening of the Levack mine, 1913, caused the closing down of several properties, including Frood Extension mine, which had been opened up to a depth of 1,000' by a 4-compartment shaft.

The copper-nickel ratio of the ore from these mines differs quite widely, but the production from the various mines is usually so arranged as to give close to an evenly balanced copper-nickel matte.

The old smelter, near the mines, has been abandoned, and a new 1,500-ton smelter, erected 1912, at Conniston, Ont., was blown in May 15, 1913.

Equipment: includes 2 Allis-Chalmers water-jacketed copper blast furnaces, 50"x240", and 2 Pierce-Smith basic converters with shells 10' in diam. and 25' 10" long. Ores are smelted and bessemerized to a copper-nickel matte averaging about 82% copper and nickel, which is shipped to the company's refinery at Clydach, in Swansea Valley, South Wales, where

the metals are separated and the nickel is refined by the Mond Process.

The copper-nickel matte from the smelter is dead-roasted and treated with dilute sulphuric acid, which permits the extraction of about 65% of the copper and 2% of the nickel. The residue, after drying, assays 45 to 60% nickel, and is treated in charges of 500 kgs. with water-gas, in a reduction tower, at a temperature of about 300° C. This tower has shelves and the ore is moved from shelf to shelf by automatic rakes, the lower shelves being cooled. After treatment in the reduction tower the charge is transferred to a volatilizing tower and treated with carbon monoxide at a temperature of about 100° C. The residue therefrom is returned to the reducing tower and the charge goes forward and back between the 2 towers for 10 to 15 days, and when 60% of the nickel has been volatilized, as nickel carbonyl, the residue of the charge is returned to the roasting furnace. The nickel carbonyl is treated in a decomposing apparatus, wherein the metal is recovered in granules, assaying 99.4 to 99.8% nickel, and the copper is turned out as bluestone.

All the Canadian plants are up-to-date and operated electrically by power from 3 hydro-electric plants, 2 of which are the property of the Lorne Power Co., a subsidiary of the Mond Nickel Co. The growth of the company's operations within the past 5 years has been phenomenal.

The mine output for 1911 was 163,352 tons, 117,658 tons in 1912 and 408,638 tons in 1915.

Production is not reported by the company, but unofficial estimates two years ago placed the annual output at about 4,000,000 lbs. fine copper and 5,000,000 lbs. nickel, with a possible maximum production of 10,000,000 lbs. copper and 15,000,000 lbs. nickel.

QUEBEC

ALBERT COPPER CO.

QUEBEC

Office: 25 Broad St., New York. **Mine office:** Capelton, Sherbrooke Co., Que. Was organized to take over the mining interests of the Nichols Copper Co. in Quebec and is controlled by that company.

The Albert mine, 640 acres at Capelton, carries lenses of chalcopyrite and pyrite, assaying up to 5% copper and 38% sulphur. Development is by 6 shafts, 4 under 500' depth each, with one of 800' and one of 2,000', the mine having upwards of 5 miles of workings.

The works at the Albert mine include a 150-ton concentrator, a smelter and an acid plant. The chemical works, completed, 1907, at a cost of about \$1,000,000, with capacity of 150 tons of commercial sulphuric acid daily, are among the most complete in existence manufacturing sulphuric, nitric and hydrochloric acids and glauber salts. The cinder remaining from the burning of cupriferous pyrite for sulphuric acid is smelted in a small blast furnace producing 1 to 2 tons daily of matte assaying up to 40% copper, with small silver contents, shipped to the Laurel Hill works for refining, and copper production is estimated at 350,000 lbs. yearly.

ASCOT MINING CO.

QUEBEC

A close corporation owning an old copper mine near the Eustis mine. See Vol. XII. In Ascot township, Sherbrooke Co., Que.

CANADIAN WOOD MOLYBDENITE CO.

QUEBEC

Address: Harvey Fitzsimmons, mgr., 14 Metcalf St., Ottawa. H. E. Wood, Denver, Colo., part-owner.

Property: near Quyon, Pontiac Co., Que.

Development: open cuts opened molybdenite in reddish gneissoid granite. The ore is principally finely disseminated in flakes of 1/2" or less, and is hand sorted.

Equipment: includes 60 and 150-ton mills, using crushers, dryers, ball mills and Wood flotation machines. Ore containing as low as 1% MoS₂, gives 75 to 80% recovery.

Production: from March, 1916 to March, 1917, over 5,500 tons of 2% ore had been mined. At present over 250 tons of 2½% ore is being treated weekly.

EAST CANADA SMELTING CO., LTD.

QUEBEC

See Weedon Mining Co., Ltd.

EUSTIS MINING CO.

QUEBEC

Office: Eustis, Sherbrooke Co., Quebec, Can.

Officers: W. E. C. Eustis, 131 State St., Boston, Mass., pres., sec.-treas.; F. M. Passow, supt.

Inc. 1878, in Quebec, and operated as a close corporation.

Property: near Sherbrooke, carries 4 parallel interbedded lenses of cupriferous pyrite, in talcose schist crossed by diorite dikes, the cupriferous belt being traceable for 2 miles. The orebody is worked through an inclined shaft to a depth of about 3,450' on the incline, with an average dip of 45°. Lenses are 3 to 60' in width, averaging about 2.5% copper, up to 60 cts. per ton in combined gold and silver values, and 40% sulphur, but with considerable variations, ore occasionally carrying up to 50% sulphur. Footwall vein, or lens 4 to 20' thick, 50 to 100' long. Main vein 20 to 60' thick, 100 to 120' long. Shaft vein, 3 to 15' thick, 50 to 100' long. No. 1 vein 2 to 25' thick, 20 to 120' long. Footwall and shaft lenses richest in copper, averaging 4 to 8% while others carry 2½% copper with 42 to 48% sulphur. Property is primarily a producer of pyrite, for the sulphuric acid trade.

Development: the mine, opened 1870, and producing for 30 years, has a 7x7' crosscut tunnel, 1,000' long and a 3,000' shaft, sunk at 20 to 45°, with double skip tracks. The mine is dry, most of the water coming from surface and the upper stopes, but the limited quantity of mine water is very acid, and contains copper in solution, which is precipitated as cement copper on scrap iron as it leaves the tunnel, through which it is conducted by a launder. Mine is served by the Boston & Maine railway. About 150 men are employed in the mine and mill.

There is a 400-k.w. hydro-electric power plant on the Coaticook river, 2 miles from the mine. The main plant has 2 alternators mounted on the same shaft and run in parallel, driven by turbine water wheels. There is one 375- k.w. generator direct-connected to the water wheels running at 450 r.p.m. The power is generated at 2,200 volts. The electric efficiency is 90 to 93% and efficiency of water wheels is 60 to 80%, according to load.

Equipment: includes a 150-h.p. Westinghouse electric hoist, good for 3,500' depth, and two 8-drill, 2-stage, Rand air compressors, 1 run by steam and 1 by electricity.

The 300-ton mill, three-fourths mile from the mine, is connected therewith by an electric tram, equipped with three 3-ton cars. The mill has a 150-h.p. electric equipment. Ore is dumped onto grizzlies, coarse ore falling to the sorting floors and conveyor belts, where hand-picked and cobbled. Ore sufficiently rich for shipping is reduced to 2½" size, and concentrated ore is reduced to ⅛" size, by crushers and ball mills, going thence to an 8-compartment classifier with spigots discharging to 8 Wilfley tables. Middlings from coarsest tables are returned to ball mills and from finer tables, to the re-crushing department.

Both the power plant and mill were burned down in 1916, but have been rebuilt.

Selected ore and concentrates are shipped to various acid works, and

there burned for sulphur, the cupriferous cinder remaining then being shipped to the Norfolk smelter, where treated for copper. Production is about 30,000 tons of cupriferous pyrite yearly.

NORTON, A. O.

QUEBEC

Office: Coaticook, Quebec. A. O. Norton, owner and mgr.; W. Jenkin, mine supt.

Property: 600 acres, freehold, except 150 acres, title covering only mining rights, includes the Suffield, King, Silver Star, and Marrington mines, in Ascot township, 7 miles from Sherbrooke, with railroads within 2 miles on either side.

The mines show 3 lenses, of 3 to 20' width, 1 proven to depth of 400', estimated by owner to average 4 to 5% copper, from a trace to 10% zinc, 5 to 25 oz. silver, and \$1.50 gold per ton. The King mine has a 165' incline shaft with about 500' of workings. The Suffield mine has a 350' shaft with about 1,200' of workings, showing ore with an average of about 4%, and combined gold and silver values of \$2 to \$12 per ton, with about 25% sulphur. The Marrington mine, 100 acres, 1½ miles from Suffield, and about 1 mile from Capelton, is opened by a 260' shaft with about 400' of drifts, developing a lens about 75' wide at surface, said to carry at depth 5 to 7' of good ore. Little development work has been done since Aug., 1914, and no shipments have been made from the property.

Equipment: includes a steam plant, 100-h.p. boiler, a 50-h.p. double cylinder steam hoist and a straight-line air compressor. Property considered promising.

WEEDON MINING CO., LTD.

QUEBEC

Office: 263 St. James St., Montreal. **Shipping office:** 11 Broadway, New York. L. D. Adams, gen. mgr.

In 1915 acquired the property of the East Canada Smelting Co., at Weedon from the Precious Metals Corporation of New York. Controls the Zinc Co., Ltd., which operates a lead and zinc mine at Notre Dame des Anges, Portneuf Co., Quebec; also the Canadian Zinc Products Co., Ltd., which operates a zinc oxide plant at Notre Dame des Anges.

Property: 375 acres in Wolff county, Province of Quebec. Has produced 260,000 tons of cupriferous pyrite ore, mined for sulphur as well as copper in the last 6 years. Average assay is 3.3% copper, 40.8% sulphur, trace of lead, 0.77% zinc, 0.5 oz. silver, and 20c. gold per ton. Market price is about \$9 per ton.

Geology: ore occurs in two lenses in schist. Main orebody is 570' long and from 15 to 45' wide, with dip of 45° N. E., and course N. 37° E.

Development: by two shafts 700 and 900' deep, and 9 levels driven to the limits of the ore.

Reserves: on January 1, 1917, were about 200,000 tons.

Equipment: 2 air hoists (60-h.p.), one 150-h.p. electric hoist, 2 compressors, (one electrically driven, 1,600 cu. ft. capacity), and all necessary buildings, shops, etc.

The zinc mine is developed by one 300' shaft. It is equipped with a 150-ton concentrating mill using tables, flotation unit, and magnetic separation. Produces zinc concentrates containing 42% zinc and lead concentrates averaging 60% lead, 65 oz. silver, and \$13 gold per ton.

Transportation: at copper mine 3½ miles of aerial tram to railroad, costing 7c. per ton.

At zinc mine there is 4 miles of teaming. Mining costs at copper mine in 1916, including development and all overhead charges were \$2 per ton. Complete cost at zinc mine for concentrates, f.o.b. cars, was \$6 per ton of crude ore.

Production of copper in 1916, 5,640,000 lbs.

SASKATCHEWAN

BEAVER LAKE GOLD MNG. CO.

SASKATCHEWAN

Prince Albert, Saskatchewan, Canada. Frank Kisbey, sec.

Property: in April, 1914, the company acquired 32 claims of the Prince Albert Expl'n Co., located on the north shore of Beaver Lake, 118 miles from Le Pas, the nearest R. R. point, is on the Can. Northern Ry., out of Winnipeg.

Development: has been done on the Prince Albert claim where, at the contact of the Huronian schist and Laurentine diorite, a 48" quartz outcrop can be traced for a considerable distance. A 70' incline shaft, sunk on the vein, is said to show a 4 to 5' vein averaging \$16 in gold and 2 oz. silver per ton. Company was planning development work at last accounts.

YUKON TERRITORY

ATLAS MINING CO.

YUKON

Presumably dead as in Feb., 1916, company holdings were taken over by the Yukon Copper Co., Ltd., a Canadian company, which see.

CANADIAN KLONDYKE MINING CO., LTD.

YUKON

Is a subsidiary of the Consolidated Goldfields of South Africa, Ltd.

Address: Dawson, Yukon Territory.

Officers: Jos. W. Boyle, pres.-mgr.; J. W. Boyle, Jr., v.p.- acting mgr., with J. J. Boyle, F. A. Tilton and Jas. McDougall, directors. John Kennalley, Jr., sec.; L. H. Titus, gen. supt.; Allan McIntosh, dredge supt.

Inc. March 5, 1913, in Canada. **Cap.**, \$8,000,000; shares \$5 par; \$6,000,000 issued. Bonds authorized, \$1,798,000; all outstanding. Annual meeting 1st Tuesday after 2nd Monday in May.

Property: 151 placer claims and Hydraulic Lease No. 18, about 26,000 acres, in the Klondyke Valley, with total production to date of \$11,000,000 and estimated reserves of 115,000,000 cu. yds.

Company operates 4 bucket dredges with aggregate capacity of 40,000 cu. yds. per day. During 1916, the dredges handled 18,302,610 cu. yds.

Equipment: includes 10,000-h.p. hydro-electric power plant and six steam shovels.

Management plans installing oxy-acetylene plant, electric furnace and additional shop equipment.

On Nov. 22, 1917, the Granville Mining Co. (which see), the bond-holding company, applied at Dawson for a receiver for the Canadian Klondyke Mining and Canadian Klondyke Power companies.

GRAFTER COPPER MINING CO.

YUKON

Geo. Armstrong, E. A. Dixon, J. P. Whitney, Robert Law, and W. C. Pedlaw, owners.

Property: 1 claim, crown-granted, 50 acres, elevation 3,822', 1 mile N. of the Arctic Chief, near White Horse, Yukon, Can., has a 7-mile wagon road to the terminus of the White Pass & Yukon R. R.

Mine lies in an area of alternating bands of limestone and diorite, with aplitic cross dikes. **Ore:** consists of magnetite containing bornite and chalcopryrite, with a garnet-augite gangue. Ore is estimated to carry 8% copper and \$3 gold per ton. Mine opened 1900, but idle until 1907, has a shaft of about 90' depth, with 150' of workings, including some stopes nearly to the surface.

Equipment: includes steam power. Estimated 200 tons of high-grade copper ore on dumps. Operations resumed and mine unwatered in 1915. Has shipped over 15,000 tons of 6% copper ore to Tacoma smelter since then.

GRANVILLE MINING CO., LTD.**YUKON**

Head office: 8 Old Jewry, London, E. C., England. **American office:** 233 Broadway, New York.

Officers: F. A. Govett (chairman), M. H. Orr-Ewing, A. C. Beatty, H. L. Sapte, W. Trask, Lord Brabourne, A. N. C. Treadgold, H. C. Hoover, J. S. Wetzlow, directors; J. Bradshaw, sec.

Inc. Aug. 11, 1911, in England. **Cap.**, £1,500,000; shares £1 par; 1,410,000 shares outstanding.

Acquired in 1911 from A. N. C. Treadgold, placer gold properties in the Yukon, for £206,000 cash, £100,000 debentures, and 1,200,000 shares. Certain of the properties were sold to the Canadian Klondyke Mining Co. (which see), which guarantees the Granville company a minimum income of \$240,000 per annum up to Feb. 28, 1928, on stock and shares held by the Granville.

Assets consist of \$1,646,000 6% convertible debentures and \$2,175,000 shares (out of \$8,000,000) in the Canadian Klondyke (bonds are convertible at par; if converted, Granville holds 49% of the Canadian Klondyke); \$1,200,000 6% debentures (out of \$1,500,000) in Canadian Klondyke Power Co., Ltd. (a large electric power producer in the Yukon); and 1,015,000 shares in the North-West Corporation, Ltd.

Apparently the Granville company was behind in meeting its obligations, as in April, 1917, a receiver was appointed by the British Court, on the motion of the Gold Fields American Development Co. (which see), a holding company that acquired the American interests of the Consolidated Gold Fields of South Africa, Ltd. Granville raised funds from the Gold Fields American for exploitation. The receivership was asked to protect secured creditors from possible actions by unsecured local creditors of the Canadian Klondyke Mining and Power companies, and to prevent forfeiture of the North West company's claims. Under the trust deed the trustees should have had deposited with them bonds and securities of the Canadian companies, but Granville had failed to do this and interest payment was in default. The general aspect is complex and some reorganization must be arranged.

On Nov. 22, 1917, the Granville Mining Co., the bondholders, applied to the court at Dawson for a receiver for the Canadian Klondyke Mining and Canadian Klondyke Power Companies, alleging failure to issue bonds for a loan of \$1,350,000, or to pay interest thereon, etc. The Granville company will not stop Canadian Klondyke's operations, but wants an adjustment and steady payments of obligations.

YUKON COPPER CO., LTD.**YUKON**

Address: White Horse, Y. T.

Officers: Dr. Alfred Thompson, pres.; W. D. Greenough, v. p., White Horse, Y. T.; Jas. Smiley, sec.-treas., Ottawa, Can.

Inc. Nov., 1915, in Canada. **Cap.**, \$200,000; shares \$100 par; all issued. Company took over holdings of the Atlas Mining Co.

Property: 10 claims, 720 acres, in the valley of Porter creek, 4 to 7 miles west of White Horse, include the Pueblo group of 420 acres, and the Carlisle group of 300 acres.

The Pueblo concession, located 1899, was sold to the White Horse Copper Co. That company immediately bonded it to the British American Corp'n, who relinquished bond in 1901, and property reverted to locator, H. E. Porter. In 1906, the Yukon Pueblo Mines Co. of Spokane, bought the concession, transferring it in 1911 to the Atlas Mining Co., controlled by Greenough Bros. of Spokane.

Geology: the Pueblo orebody is an irregular shaped mass 400' long

and 200' wide, running N. W.-S. E. and raking north. It is enclosed in crystalline limestone, near a granite contact, and apparently the limestone replaced by the orebody was cut by granite dikes, traces of which remain. There also is a porphyry dike of 3 to 4' width, crossing the orebody, decomposed and showing copper stains. Ore is essentially cupriferous hematite, varying in texture from compact to coarse, with some alteration, and with irregular silicification. The copper sulphides in the hematite have been largely altered into carbonates, oxides and silicates, only a little chalcopyrite having been found to depth of 100'. Principal ore mineral is malachite, disseminated in hematite, with considerable chrysocolla, and some cuprite occurring in veinlets and small masses. Ore ranges from 1 to 10% in copper, and 700 tons of roughly sorted ore sent to the Crofton smelter, carried 5% copper, 1.25 to 2 oz. silver and some gold per ton.

Development: by a 400' shaft and 28 prospect diamond drill-holes, totaling 3,796'. Employed 100 men at last accounts.

The Carlisle mine, 2 miles from the Pueblo, has a vein 15' wide, with a high-grade paystreak up to 4' in width of bornite and chalcopyrite. Developed by shafts of 50' and 137'.

Equipment: includes steam power, a 10-drill air compressor and necessary mine buildings. Mine has a spur line to the White Pass & Yukon railway, built 1910.

Production: 1914, shipped to the Tacoma smelter, was 250 tons of ore per day from the Pueblo mine. Property considered promising. Nothing recent available.

YUKON GOLD CO.

See same title under United States section.

NEWFOUNDLAND

ANGLO-NEWFOUNDLAND DEV. CO.

NEWFOUNDLAND

Address: Grand Falls, Newfoundland. Mining properties transferred to Terra Nova Properties, Ltd., which see.

BUCHAN'S MINE

NEWFOUNDLAND

P. O.: Millerton, N. F. Wm. Scott, supt.

Property is owned by the Terra Nova Properties, Ltd., and described under that name. This company is a subsidiary of the Anglo-Newfoundland Development Co., which has a timber and mineral concession over about a million acres in the center of the island, near Grand Falls and has built largest pulp paper plant in the world, and mining is merely a side issue.

Idle.

GREAT NORTHERN COPPER CO.

NEWFOUNDLAND

Idle. **Office:** 11 Broadway, New York City. **Mine office:** Twillingate, Newfoundland.

Officers: H. R. Warnock, pres.; H. G. Terry, v. p.; A. E. Randall, sec.; Obadiah Hodder, treas. and gen. mgr.; preceding officers, W. L. George and W. J. Devison, directors.

Inc. 1905. **Cap.,** \$100,000; shares \$1 par. Company was combined with Notre Dame Copper Co. and Hodder Supply Co. of Pittsburg, in 1912. Reorganized Jan., 1917, and inc. in South Dakota with cap. of \$5,000,000; shares \$1 par; 3,010,135 issued.

Lands: 526 acres, freehold, on Twillingate, North Island, on the eastern coast of Newfoundland, in the vicinity of the Tilt Cove mine. Company claims a vein 163' wide, uncovered for one-half mile and tested to depth of 200', carrying chalcopyrite, averaging 2.9% copper. Management

estimates ore reserves of 9,000,000 tons with 500,000 tons blocked out.

Ores: of this district, as developed elsewhere, average about 4% copper, 50% sulphur and \$1.50 gold per ton, and are somewhat bunchy, with sphalerite frequently found in connection with the chalcopyrite. Mine is worked opencast.

Equipment: includes steam power and a hoist, with a tram line and 2,000-ton ore bins on the sea. Has 1,500-ton coarse crushing plant and is installing 150-ton concentrator, 1917.

HYDRO-ELECTRIC SMELTING CO.

NEWFOUNDLAND

Developing an old copper property on Little Bay, Newfoundland, operated by a British company, 1878-1890. Driving adit, about 500' in June, 1917.

REID-NEWFOUNDLAND CO.

NEWFOUNDLAND

St. Johns, N. F. Owns a copper property at New Bay, N. F., now idle. Property was under development in 1907, but has never been a producer. Company owns the railroad and steamship lines of Newfoundland.

TERRA NOVA PROPERTIES, LTD.

NEWFOUNDLAND

Secretary and office: E. A. Sursham, Fleetway House, Farrington St., London, Eng. **Mine address:** Millertown, Newfoundland. Mayson M. Beeton, chairman; William Scott, supt., at Grand Falls, Newfoundland. Is a subsidiary of the Anglo-Newfoundland Development Co.

Company owns rights over about 2,500 sq. miles, held by 99-year lease, in the central part of Newfoundland, surrounding Long lake. The principal property is Buchan's River mine, about 5 miles W. of the lake on the N. shore. Ore occurs in sericitic schists, formed of volcanic grits, the vein having strike of N. 51° E. and dipping about 30°.

Development: consists of a 370' shaft with several levels, having long drifts on the vein. The one orebody thus far found varies from 5 to 10' in thickness, is 350' long, horizontally, and 370' in downward extension. The ore is a complex sulphide carrying 2.36% copper, 8.14% lead, 20.38% zinc, 6.70 oz. silver and \$2.72 gold per ton.

Examined and reported on by W. H. Weed.

YORK HARBOUR MINE

NEWFOUNDLAND

Idle. **Former address:** York Harbour, Birchy Cove, Bay of Islands, N. F. The mine, 4,000' from the bay, at elevation of 1,000', carries cupriferous pyrite. The ore is compact and close-grained with 2% to 4.5% copper and 38 to 41% sulphur, the sulphur being valuable for the manufacture of acid.

Development: by 360' main shaft sunk at an angle of 72° to the S. E., practically the same as the dip of the ore lenses. Levels are opened at 60' intervals, with drifts driven S. W., along the strike of the orebodies.

Equipment: included a 250 h. p. steam plant, with a 50 h. p. Flory hoist and an 8-drill Norwalk high-altitude air compressor. Company supposedly bankrupt and property has been closed down for years.

MEXICO

MEXICO

MEXICO

MEXICO

Owing to unsettled political condition of the country and the various massacres of mining men in the revolutionary states of the nation, the mining industry has been greatly depressed for four years past, and many formerly prosperous companies have stopped work, while others have maintained merely nominal operations.

In 1916 the Carranza government peremptorily ordered all mining companies to resume work under penalty of confiscation of property. This action, combined with the doubling of taxes, the imposition of export taxes and the prohibition of gold exports, even in base bullion, and demanding the return of 25% of all silver exported, have so crippled the mining industry as to make one wonder whether it is worth while owning even a proven mine across our southern border line. To add to these taxes and onerous impositions, the new Mexican constitution contains a clause making partners, or profit sharers, of each mine employee and a provision for 3 months' wages to be paid a discharged employee, while the merits of the case are being considered by an enquiry commission. All this has made the mine manager's job a worrying one.

The active mining companies of this country are grouped by states. Owing to the great difficulty of getting letters to or from our correspondents in Mexico, the descriptions are in some cases old and many companies have no doubt been omitted.

AMERICAN SMELTING & REFINING CO.

See same title under United States mines.

EXPLORATION CO. OF ENGLAND & MEXICO, LTD. MEXICO

In liquidation, 1917.

EXPLORATION CO., LTD. MEXICO

H. F. Wreford, sec., 24 Lombard St., E. C., London; P. L. Foster, 61 Broadway, New York.

Directors: R. T. Bayliss, chairman and managing director; J. H. M. Shaw, managing director; J. R. Maguire, J. E. D. Ryder, G. D. Smith and O. E. Warburg.

Registered March 21, 1904, to acquire the assets and undertakings of a company of same name, registered June, 1896, except certain assets and liabilities which had been acquired by the Exploration Assets Co., Ltd. The company carries on a general financial business and holds interests in the South African Real Estate Trust, Ltd., Tomboy, El Oro, Santa Rosa, Buena Tierra, Greene-Cananea Copper, Chile Copper, Natomas Cons. and other concerns, and has floated the Mexico Mines of El Oro, Ltd.

Cap., £750,000; shares £1 par; reduced Nov., 1916, to £375,000; shares 10s par. For every 5 old shares, holders received 3 fully paid shares and £2 of the Assets Company's debenture stock.

Dividends declared by former company: 1896, 2s; 1897, 2s 6d; 1898, 2s 6d; 1899, 3s; 1902, 1s. Dividends paid by present company: 1905, 1s; 1906, 1s; 1907, nil; 1908, 1s; 1909, 1s 6d; 1910, 1s; 1911, 1s; 1912, 1s 6d; nil in 1913, 1914 and 1915; 1s in 1916.

For year ending Dec. 31, 1916, there was a net profit of £3,251, making with balance forward, £97,457; cash, £16,498; sundry debtors, £7,366; investments, £617,863.

INTERNATIONAL COOPERATIVE HOLDING CO. MEXICO

Letters returned from Las Cruces, New Mexico. Branch office: 203-4 Mills Bldg., El Paso, Texas.

Officers: J. I. McCullough, pres.; L. M. Stiles, v. p.; F. W. Campbell, sec.-treas; above with J. C. White and Albert Runkel, directors.

Cap., \$250,000; shares, \$10 par.

Purpose of company is to acquire control of, or options on mining properties in Mexico, to be held until business is re-established in that country, then sell them or organize subsidiary companies to operate them.

Company's prospectus states that mines should be cheaply acquired, and it is only a matter of time until dividends are paid.

In view of recent happenings in Mexico this concern will find that properties cannot be held, but must be worked.

STATE OF AGUASCALIENTES**ASIENTOS MINING CO. MEXICO**

Mine office: Asientos, Ocampo, Aguascalientes, Mex. Chas. Adler, v. p.; Abram Rapp, gen. mgr.

Inc. 1898, in Delaware. **Cap.**, \$1,000,000; shares \$10 par; non-assessable; fully issued.

Lands: 190 acres, including the Nopensada and Alta Palmira mines, which are antiguas, and the Veta Grande and Refugio mines. The Nopensada, said to have been a considerable producer in early days, carries mainly slightly argentiferous copper ore, of about \$40 per ton average value. The Alta Palmira mine, having a 450' shaft, produces auriferous and argentiferous copper ore. The Refugio mine shows ore carrying up to 10% copper and 1,100 grams silver per metric ton, with small gold values. Idle owing to revolutionary disturbances.

Equipment: includes a 150 h. p. steam-plant and hoist.

FORTUNA, S. A.; COMPANIA MINERA LA. MEXICO

Aguascalientes, Mex. **Mine office:** Tepezalá, Ocampo, Aguascalientes, Mex.

Officers: Geo. B. Wardman, pres.-gen. mgr.; O. F. Westlund, v. p.; De Witt Crevelling, sec.-treas. Alberto Pez, supt.

Inc. 1902. **Cap.**, 200,000 pesos; shares 100 pesos par.

Property: 20 hectares, including La Fortuna and adjoining mines.

Development: by 2 tunnels and a 100-meter blind shaft, mines having a vertical depth of 200 meters and greatest horizontal length of 600 meters of workings, showing mainly oxidized argentiferous copper ores of good average tenor in both metals. Has animal power and employs 200 men normally. Idle owing to revolution.

STATE OF BAJA CALIFORNIA**BOLEO; COMPAGNIE DU MEXICO**

U. S. office: 303 Market St., San Francisco, Cal.

Secretary and office: M. Georges Odier, 56 Rue de Province, Paris, France. Mine at Santa Rosalia, Sur, Baja California, Mex. Albert Mirabaud, pres.; Charles La Forgue, managing director: William d'Eichtal, Maurice Ephrussi, Marquis de Montaigu, Henri Puerari, Ernest Tambour, Charles de Wendel and Alex. Tombelaine, directors. Ernest Michot, director-general; R. Plonin, mgr. M. Michel Berger and André d'Eichtal, auditors.

Inc. May 16, 1885, in France. **Cap.**, f12,000,000; shares f100 par. There are also 46,000 founders' shares. Is controlled jointly by the French house of Rothschild and the Banque Mirabaud, and owns a considerable share interest in the Compagnie d'Inguaran. Is exempt, until Dec. 17, 1925, from all federal and local taxes, except stamp taxes; is exempt, until 1935, from export and import duties on fuel consumed; is exempt, until 1942, from custom duties and local duties.

Balance sheet of Dec. 31, 1915, published May, 1916, shows: assets, f37,119,557, which includes: works, f1,000,000; ore and copper matte, f6,198,029; supplies on hand and en route, f5,792,483; live stock, f488,267; cash on hand and in banks, f7,233,532; notes receivable, f5,799,642; acct's receivable, f10,214,122. Liabilities include: stock outstanding, f12,000,000; reserve fund, f8,517,189; acct's payable, f8,335,418. Operating profit for 1915 was f7,941,489, as compared with f4,587,442 in 1914.

By a fixed rule 5% of the profit goes into the reserve fund, 8% to the ordinary shares and 2% of the remainder to the directors. Of the balance then left, 77% goes to the ordinary shares and 23% is divided among 46,000 "founders" shares. The result is that ordinary stockholders get 73½% of the profit, founder shareholders 19½% and directors 2%.

Dividends: f62.5 in 1901; f62.5 in 1902; f104.16 in 1903; f135.41 in 1904; f200 in 1905; f312.5 in 1906; f200 in 1907; f25 in 1911; f36 in 1912, with f34.1 for founders' shares; f35 in 1913, with f21 for founders' shares; f22 in 1914, with f10.90 for founders' shares; f40 in 1915, with f24 for founders' shares.

Property: 11 groups of copper claims, 20,000 hectares, granted by the Mexican government, also 598,600 hectares of grazing lands south of the mines. Principal groups are the Soledad, Providencia and Purgatorio. Lands include 5 known copper deposits of importance, the copper-bearing formation covering 3,000 hectares, with possibilities of further extensions.

Geology: the ore occurs in a formation of Tertiary conglomerate, sandstones and tuffs, the cupriferous tuffs overlying conglomerates of eruptive rock pebbles, and being surmounted by argillaceous tuffs, all traversed by fissures. The ores comprise a remarkably varied series of oxidized copper minerals in which the metal occurs in combination with silver, lead, cobalt, manganese and other metals. The prevailing oxide is melaconite, more or less mixed with manganese and iron oxides; and the prevailing sulphides below water level are covellite and copper glance. The following rare minerals are peculiar to this deposit: boleite, an oxychloride of lead, copper and silver; cumengeite, oxychloride of lead and copper; fosgeneite, a chlorocarbonate of lead; spherocobaltite, a carbonate of cobalt. Practically every known oxidized ore of copper occurs here, as well as those of lead, manganese and iron. Gypsum is abundant and native sulphur occurs. All minerals occur in an unctuous, decomposed tuff, locally called soap-clay. There are 3 cupriferous beds, the upper averaging about 3' in thickness, the middle 2 to 3', and the bottom 2 to 10'. The middle bed carries oxide and carbonate ores in oolitic concretions, known locally as boleos; hence the name of the mine. The lowest bed, partly below the water line, carries sulphide ores, as well as oxides and carbonates. This bed, No. 3, has been the chief source of ore supply of the property. It has averaged 1 meter in thickness, but varies from a few inches up to 16' in different parts of the property. The ore is disseminated through the tuffs in thin, irregular veins, with clay gouge, and has a marked concentration toward the bottom of each bed, where the ore forms compact layers of 6 to 12"

Development: the main workings are 15 to 200 meters above sea level, the mine being opened by numerous tunnels, and by 7 shafts of the following depths: Sombrero, 98 meters; Carmen, 53 m.; Purgatorio, 55 m.; Cen-

tral, 156 m.; Amelia, 48 m.; Santa Rita, 86 m.; San Juan, 86 m. The mine is extensively developed.

Owing to the peculiar nature of the mine, all drilling is done by hand, the ore is hand-sorted, and about half is machine-briquetted at a cost of only about \$0.8 per ton, the argillaceous gangue serving as a natural binder.

Equipment: the mine has complete steam and electric plants, generating upwards of 2,500-h. p. from steam engines, of which 2,000-h. p. is transformed by two 500-k. w. 3-phase current generators and two 250-k. w. 3-phase generators. The electric plant, at Santa Rosalia, furnishes power for hoisting, traction engines and a lighting system having 50 arc lights and a number of incandescent lamps. The company is courageous in installing new machinery. The climate is tropical, and the country extremely arid. Potable water is brought from a reservoir on the Yaqui plateau, through a 16,074-meter pipe line, having pumps at Santa Agueda and Santa Rita. The mines and works are connected by a 30-kilometer private railway, equipped with 9 locomotives and 250 cars.

The smelter, rebuilt 1901 and 1906, has 12 water-jacket blast furnaces, of 200 to 250 tons capacity each, 6 with 12 and 6 with 15 tuyeres each. There are 6 large Root blowers, driven by three 175-h. p. compound engines. Sea water for jackets is supplied by a duplex pump of 2,400 cubic meters hourly capacity, operated by a 250-h. p. engine. Electric locomotives on the slag line dump molten slags into moulds in rough holes in the ground, and, after cooling, the masses of slag are dumped over the end of the breakwater, serving a useful purpose in its extension. Fuel for smelting was German coke and English coal, and patented coal briquettes are used for general fuel. The first fusion product is a matte of 60 to 65% copper tenor, blown up to black copper of 93 to 94% average tenor, production being about two-thirds matte and one-third black copper. Matte and bars are shipped to England and France for refining, the management believing this preferable to adding a converter plant.

The works at Santa Rosalia include a 2-story power building, of steel, concrete and brick, and extensive machine shops, capable of handling all classes of mining work, the company occupying a singularly isolated position.

The harbor of Santa Rosalia has breakwaters of 650' and 2,500', with a 340-meter jetty and 2 new wharves, the dock having an area of 15 hectares, with breakwaters composed of large blocks of slag. The harbor works include a dredge and three 200-ton lighters used therewith. The port handled only 47,879 tons of freight in 1915, as compared with 148,536 tons in 1914. The company owns two steamers, plying between Santa Rosalia and the eastern coast of Mexico. These boats were seized by the Revolutionists in 1914, but later were returned to the company. Copper is shipped to Europe on the steamers of the *Compagnie Chargeurs Reunis*.

The towns of Santa Rosalia has a population of 9,500, of whom 200 are Europeans, dependent solely upon the mines and works, and is controlled absolutely by the company. The town is well laid out, and has 4 general stores, warehouses, saw mill, church, 4 school houses, theater, amphitheater and market. The company gives free medical and surgical attendance, medicines and an excellent hospital service to employees.

The labor question has given considerable difficulty, owing to the scant population of Lower California, necessitating the importation of workmen. Wages average about 2 pesos daily for miners.

In 1915 the company employed 3,360 men. Almost all hand labor is Mexican with some Yaqui Indians. Europeans are only employed as foremen and for special work.

Production: 29,120,000 lbs. in 1910; 27,686,400 lbs. in 1911, and 28,336,000 lbs. in 1912. The production of ore mined for 1911 was 355,100 tons of 3.47% ore; 364,850 tons of 3.51% ore in 1912; 371,300 tons in 1913; 324,000 tons in 1914; 316,800 tons in 1915. The smelter handled 356,700 tons of ore in 1911; 360,000 tons of ore, yielding 12,650 tons of copper in 1912; 374,350 tons, yielding 3.47% or 13,000 tons copper in 1913; 324,000 tons, yielding 3.53% or 11,480 tons of copper in 1914; 317,000 tons, yielding 3.62%, or 11,500 tons of copper in 1915.

Railway transported 607,088 tons, in 1914, as against 675,743 tons in 1913. Reserves of ore amount to 6 years' supply.

The company's policy of secretiveness, concerning mine operations together with its refusal to permit inspection by visiting engineers and geologists, has made it impossible to give detailed information concerning a unique ore deposit and its exploitation. The property is one of exceptional merit and has been ably managed for many years. Company has been able to continue operations despite revolutionary disturbances in Mexico.

Producing at rate of 1,600,000 lbs. of 3% copper ore monthly, 1917.

ESMERALDA COPPER MINING & SMELTING CO. MEXICO

Idle. Mine near Santa Catarina del Norte, Baja California, Mex., known as La Esmeralda, is opened by shaft, with considerable development.

ESPERANZA MINING CO. MEXICO

Sec. and office: E. W. Nicholson, 801 Land Title Bldg., Philadelphia, Pa. **Operating office:** P. O. Box CCC, San Diego, Cal. Mine near Ensenada, Baja California, Mex. Geo. P. Brown, gen. mgr.

Property: 83 hectares, and 40 acres miscellaneous lands, on Cedros island, on the Pacific coast, shows diorite, cut by veins having 3 lenticular ore shoots carrying carbonate and sulphide ores, estimated by company to average 40' width, 300' depth and 1,100' length, and to contain an average of 2.5% copper, 3% zinc, 2 oz. silver and \$3.50 gold per ton.

Development: about 8,500' of workings, showing 150,000 tons of low-grade ore, with about 100,000 tons blocked out for stoping. Has produced about \$450,000 from shipments to the Denver, Pueblo, San Francisco and Tacoma smelters.

In 1915, unsettled conditions in Mexico necessitated closing down the property.

GULF COPPER CO. MEXICO

Head office: Phoenix, Ariz. Mine at Angeles Bay, Gulf of California, Mex.

Cap., \$1,000,000; shares \$1 par. J. H. Baker, pres. and gen. mgr.; G. E. Anthony, mgr. engr.; J. H. Loudon, directors.

Property: 40 hectares, about 100 acres, at north end of Angeles bay, 140 miles N. W. from Guaymas and about 90 miles S. W. from Port Lobos. Claims show siliceous schists cut by porphyry dikes and a vein running N. W., dipping at 45° and varying from 5 to 42' in width.

Ore: black oxide and sulphide of copper said to average 4.7% with trace of gold and silver.

Development: by tunnels with 1,363' workings, including winze sunk on vein 175'. Has shipped 300 tons, 25% picked ore, and has several thousand tons of low-grade ore on dump. Property considered promising if properly financed and handled. Presumably idle.

SAN JUAN REDUCTION CO. MEXICO

San Antonio, Baja Calif. Paul Knapp, gen. mgr.; J. C. Puttner, mine mgr.; David Lawrence, mill supt. Operates a mine yielding gold-bearing arsenopyrite ore, 5 miles E. of Triunfo.

The reduction plant has dry rolls, Hardinge mills, roasting furnaces and cyanide tanks.

WEST MEXICO MINES CO.**MEXICO**

Office: Wm. G. Krape Inv. Co., Gas & Electric Bldg., Denver, Colo.
Mine office: San Antonio, Baja California.

Officers: W. G. Krape, pres.-mgr.; D. H. Lawrence, v. p.-supt.; H. C. Van Norman, sec.; T. Williams, treas.

Inc. Jan., 1912, in Arizona. **Cap.**, \$3,000,000; shares \$1 par; non-assessable; outstanding 1,985,000 shares. Annual meeting 1st Wednesday in January.

Property: 3 claims, about 30 acres, in the San Antonio district, 38 miles S. of La Paz, Lower California, Mex. Veins are both fissure and contact, containing gold and silver. Pay ore occurs in shoots and streaks, the main orebody varying from 3' to 14' wide. Sulphides appear at 275' depth.

Development: by inclined shaft, greatest depth being 340' and extent of lateral workings 5,000'. Company claims to have 15,000 tons in reserve with a gross value of \$400,000.

Equipment: includes a 3-stamp concentrating mill.

Production: total production said to be \$20,000 from 6 shipments of ore assaying \$192 to \$326 per ton.

In 1914 the Wm. G. Krape Inv. Co. was selling this stock at "12½c per share, fully paid and forever nonassessable" on the installment plan, a recommendation that is a warning to all but the most foolish.

STATE OF CHIHUAHUA**ALMOLOYA MINING CO.****MEXICO**

Office: 46 Cedar St., New York. **Mine office:** Baca, Chihuahua, Mex.

Officers: Nils O. Bagge, pres.; W. H. Schlofield, v. p.; C. I. Morey, sec.-treas.; preceding officers and W. M. Jermyn, directors; Victor C. Joslyn, mine mgr.

Inc. 1903, in Arizona. **Cap.**, \$2,000,000; shares \$1 par, in \$800,000 participating noncumulative 10% preferred stock, and \$1,200,000 common stock, all outstanding. New York Trust Co., registrar. Holds title to lands through Minas de Almoloja, S. A., a Mexican corporation.

Property: 177 hectares, including the San Enrique group adjoining the Cigarrero mine, and 4 other groups, about 4 miles from Baca, in the Allende district, with rail transportation over a standard-gauge line to the Cigarrero mine.

The Sierra de Almoloja is an isolated mountain range, about 9 miles long and 2 wide, carrying limestone beds of the Comanche series of the Lower Cretaceous, extensively fractured by several systems of faulting, with shear zones of 50 to 90 metres width, principal zones being the north-east system, of Eocene age, of which the most prominent is the San Pedro fault zone, and the N. 40° W. system of Miocene age, which are the sources of large and rich ore chambers, the most important orebodies occurring at the intersection of these faults. Lands adjoin the Cigarrero mine on the northeast, and carry the extension of the San Pedro fault, proven by diamond-drilling to occur between the 800' and 900' levels.

Development: several shafts, deepest 700', and 4 tunnels, longest 1,600'. Present development is confined to the San Enrique and Exploradora groups, having 1,186' of shafts and winzes, with 2 main and several shorter tunnels, and a total of 4,400' of workings.

Equipment: includes gasoline and air power, with one 15-h. p. and two 60-h. p. hoists. Property will use commercial electric current as soon as available.

Ore so far found has been in pockets, in leached shear zones, carrying

low copper values, which are expected to increase at depth, with about 30% lead, 700 grams silver and 8 to 80 grams gold.

Development: work has been almost entirely along the San Pedro fault which shows ore in depth. Revolutionists practically stopped all work in 1913, holding the superintendent for ransom in April and stopping mail and telegraphic service. Work will be resumed when conditions are again stable.

ALVARADO MINING & MILLING CO.

MEXICO

Offices: Richard Fay Parker, sec. and asst. treas.; 60 State St., Boston, Mass.; W. J. Freeman, asst. treas., Mills Bldg., El Paso, Texas. **Mines and reduction plant:** Parral, Chihuahua, Mexico; T. G. Hawkins, Jr., asst. mgr.

Officers: A. J. McQuatters, pres. and gen. mgr.; Gordon Dexter, v. p. and Ch. of Board; J. Dudley Clark, treas.; R. F. Parker, sec. and asst. treas.; with S. R. Kaufman, F. W. Clifford, N. M. Kaufman, Junius Beebe, Herbert Dumaresq, Dr. Leonard Wheeler, and Frederick Parker, directors. Wm. J. Freeman, asst. treas.; T. G. Hawkins, Jr., asst. gen. mgr.; D. V. Fennessy, cons. engr.

Inc. 1910, in Maine. **Cap.**, \$6,000,000; shares \$5 par. Bonds, \$935,500, 1st mtge., 6% convertible, matured Jan. 1, 1916, extended to Jan. 1, 1926. Old Colony Trust Co., Boston, Mass., transfer agent; State Street Trust Co., Boston, Mass., registrar.

No recent report made up as all records were destroyed by Mexican soldiers in 1916.

Comparative General Balance Sheet.

Assets:		Power	Cons. &	Stock		
	Property	Plant	Devel.	Discs.	Current	Total
1915.....	\$5,355,935	\$100,000	\$1,099,388	\$20,000	\$536,310	\$7,111,634
1914.....	5,355,935	100,000	910,616	30,073	371,495	6,768,120
Liabilities—						
	Cap.	Bonds	Res. for	Misc.		
	Stock	Notes(a)	Bond	(b)	Current	P. & L.
			Conv.			Surplus
						Total
1915.....	\$4,305,025	\$996,700	\$665,333	\$124,730	\$355,191	\$664,655
1914.....	4,305,025	1,007,100	665,333	129,000	289,354	371,603
						6,768,120

(a) Bonds, \$935,500; (b) includes power plant No. 2, \$92,000.

Comparative Operating Statement.

	Gross Earnings	Oper. Costs	Oper. Profits	De- ductions	P. & L. Surplus
1915.....	\$1,296,631	\$871,156	\$425,475	\$132,423	\$293,052
1914.....	871,156	650,629	412,567	243,046	169,521

Property: at Parral, Chih., includes the Presena, Las Cruces, and Palmilla groups of mines, the latter including the famous Palmilla mine of Pedro Alvarado. These are old mines which were worked in former days by Mexicans.

Ore: silver, gold. New work in 1915 totaled 13,409', said to have increased ore reserves by 250,000 tons. Total reserves not reported.

Company operates a 400-ton cyanide plant; a 50-ton flotation mill was recently built. Employs, when working, over 1,000 men. Electric power obtained from the Mexican Northern Power Co.

Production:

	Ore to Mill Metric Tons	Gms. Per Ton		Contents	
		Silver	Gold	Silver-oz.	Gold-oz.
1915.....	128,612	530.2	1.19	2,192,444	4,932
1914.....	82,728	548.1	1.06
1913.....	118,383	570.1	0.79

In 1914 company lost 131 days of operating time; in 1915 operations covered 93.2% of the total time; loss was due mainly to shortage of fuel which had to be transported chiefly from El Paso on special trains operated by the company.

1916: due to political disorders in Mexico company's properties were operated only 42% of the year. Tonnage milled for the year, 53,119 metric tons, containing 886,559 oz. silver and 723 oz. gold.

The Villista forces occupied Parral on November 5th, 1916; seized the cyanide mill and mines, which they operated for 15 days, producing 45 bars of gold and silver bullion; 96 additional bars were stolen and the property robbed to the extent of \$300,000. Many of the office and operating records were destroyed, therefore the company was unable to make its annual statement.

Owing to the very large increase in ore reserves, the capacity of the cyanide mill will be increased from 400 to 600 tons per day and the necessary machinery purchased. Present ore reserves, 500,000 tons. Company will resume operations Oct., 1917.

ARADOS COPPER CO.**MEXICO**

Address: 25 Broad St., New York. Clarence W. Hoyt, pres., 79 Milk St., Lowell.

Property: about 2,000 acres were taken over 1910 from Chihuahua Copper Co., Quo Vadis Copper Co., and include a number of adjoining claims privately owned.

The Chihuahua group has several shallow shafts, and 9 tunnels with about 1,500' of workings, estimated by management to show several thousand tons of ore.

The Quo Vadis and other groups show numerous contact veins between limestone and porphyry, ranging from 2 to 40' in width, development work said to have yielded enough ore shipped to pay for machinery in use on these properties, ore averaging better than 5% copper.

Idle several years owing to political disturbances, but president writes that property will be vigorously and systematically developed as soon as conditions in Mexico warrant. Company is controlled by strong interests who are successful copper producers, and stock is privately held by a few people.

Equipment: includes a 25-h. p. hoist, good for 500', and small Gardner air compressor and necessary mine buildings.

AURORA Y ANEXAS; CIA. MINERA LA, S. A.**MEXICO**

The Cia. Minera Aurora y Anexas, owned by the late Ernesto Madero and brother, has worked for several years past, the Aurora mine, with 160 hectares in the Cuchillo district, near Coyame, Chihuahua and the Justicia copper mine, 4 miles east of Marquez station on the Kansas City, Mexico & Orient railroad. These properties were purchased from Don Francisco Diaz in 1908.

Owing to the revolution it is impossible to get recent information.

BATOPILAS MNG. CO.**MEXICO**

Address: 50 Broad St., New York City. Mine office: Batopilas, Chihuahua, Mex.

Officers: F. D. Merchant, pres.; Sam'l Elliott, N. F. Palmer, v. ps., preceding officers, Jas. Marwick, Geo. W. Field, Alton B. Parker, Gates W. McGarrah, Louis H. Scott, Walter M. Brodie, Geo. Rowland, E. L. Stevens, all of New York. F. A. Drury, Worcester, Mass.; Robt. M. Currier, Boston, directors; E. W. A. Jorgensen, sec. and asst. treas.; L. H. Scott, treas.; John R. Harbottle, gen. mgr.

Cap., \$9,000,000; shares \$20 par; outstanding \$8,931,980; nonassessable. **Bonds:** authorized \$1,000,000, 1st mtge. 6's, dated Dec. 1, 1887, for 15 years, outstanding \$367,900. Bonds were extended to Dec. 1, 1917, with provision that 10% of amount outstanding at that time, \$45,900, should be retired each year, beginning in 1908. Shares are listed on the New York and Boston Stock Exchanges. Annual meeting 3rd Tuesday in April. Union Trust Co., New York, and State St. Trust Co., Boston, transfer offices. Farmer's Loan & Trust Co., New York and Old Colony Trust Co., Boston, registrars.

A concession from the Mexican government was granted April 12, 1886, to A. R. Shepherd for 20 years, covering 61 sq. miles of the richest mineral district in and around Batopilas, together with water rights of the Batopilas River. This concession was assigned to the Batopilas Mng. Co., which was organized Oct. 13, 1887, in New York, as a consolidation of 6 companies, Cons. Batopilas Silver Mng. Co., New Giral Silver Mng. Co., Descubridora Cons. Silver Mng. Co., Camuchin Cons. Silver Mng. Co., Valenzuela Cons. Silver Mng. Co., Animas Silver Mng. Co.; other mining properties were also purchased. The concession expired in 1906, and was renewed for 10 years, expiring May 31, 1916. It gave the company full mining rights over the area mentioned, the company being required to purchase outright at least 100 hectares, 240 acres, per year.

Balance sheet as of Dec. 31, 1914, shows assets, \$12,794,479, of which amount \$12,485,435 represents mines, real estate, buildings, equipment, etc., and \$207,322 current assets; current liabilities \$37,258, accrued liabilities \$24,950. Total surplus Dec. 31, 1914, \$3,365,771. Oct. 15, 1915, the company had cash in New York banks, \$87,247.

Property: located around the town of Batopilas, in the Andres del Rio mining district, in the extreme southwestern part of the State of Chihuahua, Mexico. When 1913 began the company had titles in the silver zone for 865 hectares, and in the auriferous zone, 20 miles up the river, for 64 hectares. On account of the revolution it has been impossible, during the last 3 years, to comply with the provisions of the contract and time allowances have been granted. In addition the company owns 130,000 acres of ranch and timber lands.

Ore: native silver occurring with calcite in veins, which are mainly in diabase. Some of the veins have contained very rich ore. The San Miguel property contains many veins, some of which have been worked for more than 100 years. The main veins are the San Antonio, Cancio, Cinco de Mayo, Diablo, Carmen, and Veta Grande now worked out. During 6 months in 1913 the average assay for low grade ore from the San Miguel mine, which produces $\frac{3}{4}$ of the silver output, was 9.27 oz. per ton, while the ore from the Porfirio Diaz Tunnel group averaged 6.55 oz. per ton. High-grade ore produced during 8 mos., 609 tons, averaged 411 oz. per ton.

Development: over 10 miles of adit levels and 77 miles of workings. The principal mines are the Porfirio Diaz Tunnel on the Todos Santos Group, the San Miguel mine, El Escritorio, and El Camuchin. Work at El Escritorio and El Camuchin was unsatisfactory in 1913 and they were closed down.

Equipment: the Hacienda San Antonio contains 100-stamp mill with a

daily capacity of 40 tons, electric light plant and air compressor, all run by Pelton wheels capable of furnishing 550-h. p. The San Miguel Hacienda contains a 25-stamp mill for high-grade ores, cyanide plant, amalgamating pans, refining plant, a roasting and lixiviation plant for concentrates, with a daily capacity of 8 tons, machine shop, foundry, office buildings, dormitories, boarding house, etc.

Power obtained from the Batopilas River by means of a dam 764' long and an aqueduct 9,900' long. The water after being used in the San Antonio plant, is siphoned under the river and runs to the San Miguel Hacienda, where 32-h. p. is developed by turbines.

Production and profits have been as follows:

Year	Tons Ore Treated	Oz. Silver	Operating Profits
1915.....	156,862
1914.....	6,630	188,087	\$ 10,556
1913.....	20,887	374,174	60,068
1912.....	34,032	564,398	80,046
1911.....	33,073	516,688	17,409(a)
1910.....	43,612	730,697	106,258(a)

(a) Deficit.

During the last 3 years the Mexican revolution has interfered with the operation of the company, the mines were worked only about 8 mos. of each year with a consequent reduction of output. The future of the property depends upon new development and the acquisition of a new mine.

At a special meeting called in Aug., 1916, company's charter was amended, authorizing the management to conduct mining operations in the United States.

BUENA TIERRA MINING CO., LTD.

MEXICO

T. D. Pillans, sec., 11 Cornhill, London, E. C. Eng.

Directors: R. T. Bayliss, chairman; Lord Arthur Butler, W. McDermott, J. H. M. Shaw; R. M. Raymond, cons. engr.; A. C. Brinker, gen. mgr.

Cap., 330,000 shares, £1 par; all issued and fully paid. Reg. Feb. 10, 1912, in England, to acquire from the Exploration Co. of England and Mexico, Ltd., the Buena Tierra mine, 89 acres, in the Santa Eulalia district, Chihuahua, Mex., 15 miles S. E. of Chihuahua. Purchase price was £300,000, payable £178,201 cash, £121,799 in fully-paid shares. Property reported on by R. T. Bayliss and R. M. Raymond. Dividends paid, 2 shillings per share.

Ore: principally lead and zinc carbonates assaying 10 oz. silver, 15% lead and 25-50% zinc. There is also a low-grade mixed sulphide. Ore-bodies occur in limestone lying almost flat, but instead of following the fissures, spread out into flat beds near them, their average width is 30', average thickness, 40'. The Chorro orebody has a depth of over 1,000'. Developed orebodies are most numerous at 450' depth, but most of the mines have ore down to a depth of 1,300'. Ore reserves estimated early in 1915 at 300,000 tons.

Development: by shafts; Buena Tierra shaft is 1,400' deep. Raises are put up from the levels at intervals of 75-200' and the ore is mined in small bunches, little powder being required and practically no timber.

The Mexican revolution has interfered with production during the past few years and property has not been operated steadily. Lead ore is shipped to the A. S. & R. Co.'s smelter at Chihuahua or El Paso and the zinc ore to the United States.

Development costs are high, due to difficulty of finding orebodies. If a daily tonnage of 300 tons can be maintained, conditions are good for low costs.

In Sept., 1916, Pres. Carranza of Mexico issued a decree enforcing the working of all mining properties under penalty of confiscation, with certain exceptions. Exemption for the Buena Tierra Co. has been applied for.

MEXICO

Control obtained in Jan., 1916, by Howe Sound Co., which purchased 53,800 shares out of a total outstanding capitalization of 60,000 shares.

Property. in Santa Eulalia district, Chihuahua, adjoins property of Chihuahua Mining Co., nearly all of whose stock is owned by El Potosi. Is one of the oldest producers of silver-lead ore in the district, said to have paid dividends for many years, and to have large ore reserves. Idle at present due to disturbed conditions in Mexico.

EL RAYO MINES CO.

MEXICO

Subsidiary of the Mines Co. of America, which see.

IGNACIO RODRIGUEZ RAMOS, S. A.; COMPANIA MINERA

MEXICO

Property "confiscated" by Gen. Villa, 1915, and operated by Sr. F. R.

Quijano, Chihuahua City, Chih., Mexico. Shipments 1915 to Granby Mining & Smelting Co., St. Louis, held up by Villistas, and smelter agent unjustly jailed. No direct information received.

Property: 129 hectares, covering the mineral zone of the Sierra Almoleya. The geological conditions greatly resemble the Santa Eulalia camp. Ore occurs in limestone, in lenses, one having a width of 70' and length of 140', ore said to average 5% copper, 25% lead, 6% zinc, 15 oz. silver and \$8 gold per ton. Values are mainly in silver-lead ores, though chalcopryrite occurs as a by-product.

The mine is extensively developed to a depth of 300 meters, by an 800' shaft and 2 main tunnels, with much rich ore in sight.

Equipment: includes steam and electric power, with steam hoist and air compressor. A 3-stamp experimental mill is connected with the mine by a 4,000' incline tram.

INTERNATIONAL GOLD & COPPER MINING CO.

MEXICO

Idle. Mine office: Guaynopa, Chihuahua, Mex. J. C. Peterson, pres. Company took over lands formerly held by International Cons. Smelting & Mining Co., known as the Utah mine, in Guaynopa canyon. Claimed by former owners to have a 90' vein, with an 8 to 12" pay streak carrying high-grade chalcopryrite, assaying 5 to 8% copper, with good silver values. Mine has several short tunnels. Idle on account of revolution, but regarded unfavorably for other reasons. No recent returns secured.

LAS VIGAS MINING CO.

MEXICO

Dead. Property controlled by A. McKenzie, 66 Broadway, New York.

Mine at San Sostenes, Coyame, Iturbide, Chihuahua, Mex., consists of 74 hectares, said to show upturned Cretaceous sandstones and shales with interbedded copper lodes, occurring as impregnations and replacements in sandstone. Four veins last under development are reported to average 7 to 12' width, and to give average returns of 7.5% copper and 3 oz. silver per ton, mainly from disseminated bornite and chalcopryrite, with occasional oxidized ores and native copper.

Development: by shafts of 61', 98', 125' and 212', with various levels; also 3 short tunnels. Workings estimated to develop 160,000 tons of ore.

Equipment: includes steam power, a hoist, an air compressor, and a 100-ton concentrator. Buildings include an office, store and 19 dwellings. Ore was hauled, 43 miles, to Las Trancas stations, by a Buffalo-Pitts traction engine. Reported under option to English parties, 1916.

LLUVIA DEL ORO MINING CO.

MEXICO

Is a close corporation, owned and controlled by B. F. Yoakum, John Scullin of St. Louis, Mo., and the estate of Jas. Campbell. Fred G. Farish, mgr.

Property: in the Andres del Rio Mtns., Chihuahua, Mex., consists of the Lluvia del Oro gold mine, a mill, cyanide plant and hydro-electric plant.

MINES COMPANY OF AMERICA

MEXICO

Office: 115 Broadway, New York City.

Officers: John Lambert, pres., Chicago; W. E. Reis, v. p.; W. H. Aldridge, 2nd v. p.; A. T. Black, 3rd v. p.; H. S. Black, treas.; J. D. Tooker, sec. and asst. treas.; preceding, with W. L. Ellwood, W. B. Thompson and W. H. Smith, directors; Chas. Biesel, gen. mgr., El Paso, Texas.

Inc. Dec., 1902, in Me., as a holding company. Owns entire capital stock of the Creston Colorado Co., 99% of capital stock of Dolores Mines Co., 99½% of capital stock of the El Rayo Mines Co., and 33⅓% of the La Dura Mill and Mining Co., of which company the Dolores Mines Co.

owns 33½% and the El Rayo Mines Co. 33½%. Also owns the Chihuahua-Esperanza Gold Mining Co., and the Consuelo Mining, Milling & Power Co. Cap., \$9,000,000; outstanding, Dec. 31, 1916, \$8,648,013; shares \$10 par. Authorized capital stock increased 1910 from \$2,000,000, and par value shares from \$1. Of the new stock \$4,000,000 was set apart to acquire the \$2,000,000 stock of the Dolores Mines Co., and \$2,499,100 was appropriated to acquire the \$714,040 stock of the El Rayo Mines Co. U. S. Mortgage & Trust Co., New York, transfer agent. Guaranty Trust Co., New York, registrar. Annual meeting, first Wednesday after first Saturday in November, at Augusta, Me.; books close 10 days in advance. Stock listed on New York Curb.

Dividends: total paid to Dec. 31, 1916, amounted to \$4,958,600, including a dividend in 1906 in stock of the Dolores Mines Co. No dividends were paid in April, July or Oct., 1912, owing to revolutionary conditions in Mexico; in January, 1912, 1½% was paid. Dividends resumed in January, 1913, with payments of 1¼%, which rate was also paid in April and July, 1913; no payments since.

Comparative Cons. General Balance Sheet, Dec. 31

Assets:	Prop. Investments	Plant & Equip.	Claims Against Mex. Govt.	Current Assets	Total	
1916.....	\$8,577,309	\$1,051,632	\$393,544	\$641,302	\$10,744,466	
1915.....	7,911,712	1,050,660	392,859	732,089	10,087,322	
1914.....	7,951,718	1,041,639	382,920	960,848	10,337,126	
Liabilities:						
Cap. Stock Out-standing	Sub. Co.'s Stock Out.	Suspense Account	Cur. & Wk'g Accts. Pay.	Surplus & Res.	Total	
1916.....	\$8,648,013	\$622,864	\$273,414	\$ 225,020	\$ 975,154	\$10,744,466
1915.....	8,376,583	23,604	302,202	56,358	1,328,573	10,087,322
1914.....	8,376,583	23,624	291,314	90,743	1,554,861	10,337,126

Operating receipts for 1916 were \$100,892; operating expenditures, \$248,619, leaving an operating loss of \$147,727, compared with profit of \$71,037 in 1915. Adding general expense and taxes, the loss in 1916 was \$173,419.

Ore reserves: on Jan. 1, 1917, estimated total ore of the company's properties had a gross value of \$5,824,670, an increase of \$402,801, based on gold at \$20 and silver 75c per oz.

Companies controlled by Mines Company of America:

Chihuahua-Esperanza Gold Mining Co., Mexico

Owned by Mines Company of America.

Property: adjoining that of the Dolores Mines Co., Chihuahua, on the west, consists of 3 claims, 304 acres. Company also owns 10,000 acres of timberland 5 miles north of Dolores.

Geology: formation is similar to that of the Dolores. Veins occur as rhyolite fissures in dikes; 3 vein-systems exist. Development amounts to 502'. Ore reserves said, to total 2,500 tons worth \$15 per ton. La Esperanza mine has great possibilities.

Consuelo Mining, Milling & Power Co., Mexico

Control owned by Mines Company of America.

Property: adjoins that of the Dolores Mines Co., west of Madera, in Chihuahua, on the south and east, and consists of 77 pertenencias, 190

acres, and a half interest in 9 pertenenencias, 22 acres, also a water right on the Tutuca River. The formation is similar to that of Dolores. No systematic development has been done; the value of the ground is prospective.

Creston Colorada Co., Mexico

Controlled through entire stock ownership by Mines Company of America. **Mine office:** Torres, Sonora, Mex.

Officers: John Lambert, pres.; W. E. Reis, v. p.; A. T. Black, 2nd v. p.; H. S. Black, sec.-treas.; J. D. Tooker, asst. treas.; John Lambert, W. E. Reis, J. H. Hoyt, H. A. Kelly, G. von den Steinem, directors.

Inc. February, 1902, in Ohio. **Cap.**, authorized and outstanding, \$100,000; par \$100. Annual meeting, 1st Saturday in November.

Property: 27 claims, 828 acres, commonly known as "Minas Prietas" (Black Mines), in Sonora, at La Colorada, a station on the narrow-gauge Mexico Union Ry., 12 miles east of Torres, on the Southern Pacific R. R. of Mexico, and 200 miles south of Nogales, Ariz. The mines have been worked for 100 years and have produced regularly during the last 33 years. Gross production estimated at over \$112,000,000.

The property is divided into 4 different mines: the Creston, Colorada, Amarillas-Grand Central and Verde. The claims contain a number of producing veins, and cover the latter for 8,000' along their strike. Company also owns surface rights to 7,000 acres land, including the mining claims. It also owns a water right on the Matape River.

Ore: veins have a general E.-W. strike, dip N. 55° to 90°, and vary in width from 3' to 40'. Larger orebodies occur principally in diorite, metamorphic rocks and quartz porphyry. The Creston ore, or east end ore, is a highly fractured quartz. The Colorada is a harder quartz. Sulphides of silver, iron, lead and zinc occur from the surface down. Streaks of high-grade sulphide shipping ore are occasionally found. The Verde ore is a hard quartz, at times very refractory. The Amarillas-Grand Central ore is a highly oxidized quartz, containing free gold in places. Average values in ores, as milled, are said to be 60% gold and 40% silver.

Development: in 1916 totaled 2,075', compared with 2,578' in 1915. Work was divided as follows: Creston mine, 1,473'; Colorada mine, 226'; Amarillas-Grand Central mine, 376'.

Ore reserves: estimated Jan. 1, 1917, as 190,350 tons, average assay \$4.93 per ton, or a gross value of \$937,591, as compared with 200,300 tons, average assay \$4.89 per ton, the previous year; gold figured at \$20 per oz., silver at 75c per oz. The Amarillas-Grand Central mine has one dump of tailing containing 280,000 tons which will be retreated.

Equipment: at the Creston mine includes steam hoisting and compressor plant, foundry, etc., a large Gates crusher receives the ore from the mine; at the Colorada cyanide plant, which receives Creston ore over a 3,200' aerial tramway, and the Colorada ore over an 800' incline tramway; at the Amarillas-Grand Central mine includes steam operated hoisting and compressor plants, electrically-driven crushing plant; also a 450-ton cyanide plant, which receives ore from the Creston, Amarillas and Colorada over aerial tramways. A pumping plant, 18 miles from the mines, on the Matape River, supplies water for all purposes through a 5" pipe.

Mill and cyanide plants: in 1916 extensive shut-downs were in order, due to revolutionary disturbances. The Amarillas-Grand Central unit was operated 48 days and treated 14,550 tons of ore. Extraction amounted to 73.8%, 20.5% by concentration and 53.3% by cyanidation.

Production:

Year	Creston Mine, Tons	Colorada Mine, Tons	Am.-G. C. Mine, Tons	Old Tail- ing, Tons	Total Tons	Value per Ton
1916.....	12,400	2,150	14,550	\$5.65
1915.....	98,662	18,854	10,365	3,469	131,350	4.80
1914.....	94,655	18,090	10,887	3,243	126,875	4.67

The Colorada mine has ore below 400' justifying further work. Creston-Colorada was closed at last accounts.

Dolores Mines Co., Mexico

Controlled through ownership of 99% of capital stock by Mines Company of America. Same directorate.

Inc. Nov., 1903, in Mex. **Cap.**, authorized and issued, \$2,000,000; full paid and non-assessable; par \$5. No bonded debt. U. S. Mortgage & Trust Co., New York, transfer agent. Guaranty Trust Co., New York, registrar. Annual meeting, first Tuesday in December. Listed on New York Curb.

Entire capital stock of this company was formerly owned by an English company called Dolores, Ltd.; dissolved Feb. 25, 1908, by exchange of stock, share for share, of Dolores Mines, Ltd. The company owns 33½% of the La Dura Mill & Mining Co.

Property: 17 contiguous claims, 250 acres, in Chihuahua, west of Madera, a station on the Mexico Northwestern Ry., about 250 miles S. W. of El Paso, Texas, and 200 miles N. W. of the city of Chihuahua. Mines are reached over a 45-mile trail, requiring 5 to 7 days' time for pack trains. Company also owns 3 detached mineral claims, 126 acres, near Dolores, and all surface rights to 12,500 acres, also a water right on the Tutuaca river. The main group, as shown by developments to date, contains 4 main vein systems, known as the Alma, San Francisco, West San Francisco, Washington and Arco Iris dikes, covered for 8,000' on the strike of the Alma vein system, 4,000' on the San Francisco vein system, 3,800' on the West San Francisco, 1,000' on the Washington, and 2,600' on the Arco Iris vein system.

Geology: vein systems consist of rhyolite dikes in andesite; the veins are fissures in these rhyolite dikes, strike north and dip 55° to 90°. Ore-bodies occur at or near intersections of side fractures and within the boundaries of the dike. The Dolores ore is a very hard quartz, containing about 2% sulphides of iron, silver and occasionally lead and traces of zinc. Values in ore are approximately 40% gold and 60% silver.

Development: in 1916 totaled 1,795' as compared with 2,833' in 1915; all done by hand and above the 500' level. The 600' and 700' levels are under water.

Ore reserves: were estimated Jan. 1, 1917, as follows:

	Tons	Value per Ton	Gross Value
Ore in place.....	135,628	\$13.80	\$1,873,335
Broken Ore.....	13,595	14.10	191,668
Total.....	149,223	\$13.83	\$2,065,003

Compared with 125,663 tons of \$14 ore with gross value of \$1,768,693 on Jan. 1, 1916. Values are based on \$20 per oz. for gold and 50c per oz. for silver.

Equipment: includes steam-operated crushing, concentrating and cya-

niding plants, also compressor and hoisting plants, machine shops, etc. A steam-driven Reidler pump, $2\frac{1}{2}$ miles east of the mine on the Tutuaca river, supplies all necessary water. Electrical equipment to supplant steam power is in place. A 30-mile transmission line connects Dolores with Madera; line is designed to carry 3-phase, 60-cycle current of 33,000 volts. Power will be furnished by a generating plant built near Madera, to consist of three 320 k. w. generators, driven by 3 Diesel type oil engines of the "Snow" make. It is the intention to double the capacity of the milling plant, which now has 25 stamps and four 5' Bryan mills.

In the re-modeled mill a 15x24" Blake crusher will replace 3 small machines; belt conveyors will be installed and steel ball mills will replace stamps and Bryan mills. The complicated flow-sheet will be simplified.

The milling plant was not operated in 1916 on account of the revolution. When operating, extraction is about 87%, 18% by concentration and 69% by cyanidation. Bullion is marketed in Maurer, N. J. Concentrates are shipped to the El Paso smelter.

Company employs about 365 men under normal conditions, only 17 being Americans. The small amount of development work done in 1916 gave good results.

The orebody found in unprospected ground in 1915 opened well on the 400 and 500' levels. The shoot is now 265' long, with indications of greater length. Management expects to reduce power costs by over 300% when the plant is running by electricity and to double the milling capacity. The future of Dolores looks promising.

El Rayo Mines Co., Mexico

Controlled through ownership of 99½% of capital stock by Mines Co. of America. Same directorate. Mine office: Santa Barbara, Chihuahua, Mex.

Inc. Feb. 13, 1906, in Maine. **Cap.**, \$1,000,000; outstanding \$714,040; shares \$2 par. No bonded debt. Annual meeting, second Tuesday in February. Listed on New York Curb. Company is the American holding company for the El Rayo Mining & Development Co., S. A., a Mexican corporation. Owns the Descubridora Mining & Development Co. and Bueno Vista Gold Mining Co., also 33E..D%OTAA...6 UIG,nRy. cmfwyp Co.

Property: 21 claims, 766 acres, in the State of Chihuahua, S. W. of Santa Barbara, the terminal of a branch line of the Mexican Central Railway. Mines can be reached from Santa Barbara over an 8-mile trail. Company also has a 14-year lease on about 12 square miles of timberland, adjoining the mining property. El Rayo is at an elevation of 7,200' above sea level. The mining claims cover the N. S. strike of the producing veins for over 2 miles.

Ore: gold, silver in fissures in rhyolite. Veins dip from 50° to 90° and the filling varies from a friable and oxidized quartz at the north end to a harder sulphide-bearing quartz at the center and south end of the property. The north end contains about 4% sulphides, chiefly iron, with traces of lead and zinc. Copper sulphides are found occasionally. Values in the ore as produced during 1915 are, approximately, 74% gold and 26% silver. The orebodies consist of a number of irregularly shaped lenses, greatly varying in width and values. They occur principally at the intersection of side fracture with main fracture.

Development: total underground workings amount to 78,268'. In 1916, 282' was done during the limited time of operations, divided as follows:

Adela mine, 276', El Rayo mine 6'. The Adela mine covers 4,700' of the vein system at the north end. The El Rayo mine covers 2,300' of the vein system, and adjoins the Adela on the south. The Descubridora mine covers 5,000' of the vein system on the extreme south end of the property. A 6' vein has been opened by winze 126' below 1,300' level of the Descubridora mine. The waste filling system of stoping is used.

Ore reserves: were estimated Jan. 1, 1917, as follows:

	Tons	Value per Ton	Gross Value
Ore in place.....	65,210	\$11.58	\$755,283
Broken Ore.....	13,328	10.77	143,542
Total.....	78,538	\$11.44	\$898,825

Compared with 75,038 tons of \$10.48 ore with gross value of \$786,825 on Jan. 1, 1916. Values are based on \$20 per oz. for gold and 50c per oz. for silver.

Equipment: includes a 1,950 cu. ft. steam operated compressor plant. A 2-mile aerial tramway furnishes the necessary fuel, lumber and mining timbers.

Mill: includes 160-ton crushing, concentrating and cyaniding plants. From the storage bin at the portal of the 1,100' level of the Adela mine the ore is trammed 1,300' in 6-ton cars to the mill storage bin. Course of ore through plant is as follows: from bin through 9"x15" Blake crusher, set at 1" discharge; undersize by conveyor belt to bin, by Challenge feeder over conveyor belt to one set of 16"x36" Traylor rolls, discharge to 2 sets of 14"x30" Traylor rolls; to classifier; overflow to tables, oversize in closed circuit returned to 7"x14' tube mill; discharge to classifier, overflow to tables, oversize in closed circuit returned to tube mill. Pulp treated by cyanide solution. Resulting bullion and also the concentrates are marketed in the U. S.

Power: electrification of entire plant is under way. Electricity will be furnished, under contract, by the Cia. Agricola y de Fuerza Electrica del Rio Conches, S. A., from their plant at La Boquilladam, about 70 miles from El Rayo.

Extraction has been as follows:

Year	Conct. & Flotation	Cyanidation	Total
1916—No output.			
1915.....	20.7%	63.3%	84%
1914.....	(a) 14.0%	66.0%	80%
1913.....	(a) 12.0%	77.0%	89%

(a) By concentration alone.

Flotation by the Callow system was proven a success. During the last month's operations recoveries were 42.7% by cyanidation and flotation and 47.6% by cyanidation.

Due to revolutionary conditions the property was closed down Sept. 9, 1915, to be reopened when practicable. Work has been carried on under most adverse conditions, but at a profit. When operating under normal conditions the company employs 15 Americans and about 385 Mexicans.

La Dura Mill & Mining Co.

Office: 111 Broadway, New York City. **Mine office:** La Dura, Sonora, Mex. **Cap.,** outstanding, \$1,000,000. The Mines Co. of America, Do-

lores Mines Co. and El Rayo Mines Co., each own one-third of the capital stock.

Property: 4 individual mines—Gloria-Fortuna and La Dura, on the east bank of the Yaqui river, Sonora; California and Prieta, $1\frac{1}{2}$ miles N. E. of the former. The mines are near La Dura station on the Cananea, Yaqui River & Pacific Ry., which leaves the main line of the Southern Pacific of Mexico at Corral station, 325 miles south of Nogales, Ariz. Mines are connected with railroad by aerial tram.

Ore: silver, copper, lead, in 5 main veins; the California, Prieta, Gloria-Fortuna, West Floria and La Dura veins. The Prieta and Gloria veins, from 6" to 4' wide, occur in andesite, strike N. W.-S. E. and dip 30° S. W. Ore is a white quartz containing sulphides of silver, copper, lead, iron and zinc. It occurs in lenses in terraces formed by frequent faulting. Most of the ore requires milling.

Ore reserves: estimated Jan. 1, 1917, as 16,015 tons, average grade \$54.80 per ton.

Only the Prieta and Gloria mines have been operated since they were acquired by the company. The Prieta has a 3-compartment shaft, 1,040' deep. The Gloria is operated through a 1,600' incline shaft and a 700' vertical shaft, connected with the former, on the 500' and 700' levels. Stoping has proved persistence of veins in spite of faulting.

Equipment: in 3 units as follows: the Prieta-Gloria steam-operated compressor and hoisting plants; the Gloria-Fortuna-La Dura steam-operated compressor, hoisting, milling and generating plants; pumping plant, stores, offices, and shops located half way between the two groups of mines. A transmission line from the Gloria-Fortuna plant furnishes power for pumping.

The mines employ under normal conditions, 8 Americans and about 225 Mexicans. Owing to the revolution the property was closed down in September, 1913, but will be reopened as soon as it is safe to do so. Accumulated products are stored in the bottom of the mine under water. Mines Company of America seems to have several good properties, is well managed, and ought to make large profits when conditions are better in Mexico.

PARCIONERA CONSOLIDATED MINING CO.

MEXICO

Address: Jos. S. Qualey, pres., 25 Pine St., New York City. **Mine office:** Santa Eulalia, Chihuahua, Mex. Ernest Henderson, sec. Is a close corporation, shares \$100 par.

Property: a silver-lead mine, with some copper. Idle on account of Mexican revolution.

RIO PLATA MINING CO.

MEXICO

Office: 654 W. 51st St., New York.

Officers: H. W. Miller, pres.; Archibald Nesbitt, v. p.; Jas. H. Lee, sec.-treas., with Geo. F. Parker, Jos. J. Bonneau, L. Bonneau, John C. Hanson, W. E. Green, Jos. Coult, R. N. Brundage, L. O. Hedden, David W. Shanks, directors.

Inc. April 7, 1906, in Arizona. **Cap.**, \$2,000,000; shares \$5 par; outstanding \$1,872,590. Stock transferred at company's office. New York Trust Co., New York, registrar. Annual meeting in January, at Phoenix, Ariz. Protocolization of the company completed Oct. 15, 1910.

In 1911 company acquired control of the Trinity Cons. Hydraulic Mining Co. in California.

Comparative General Balance Sheet (Year Ending Nov. 30)

Assets:	Prop- erty	Cal. Mine Investm's	Treas. Stock	Cash	Other Current	Total

(d) Deficit.

Dividends: initial dividend, 1½%, paid Dec., 1909; quarterly dividends, 2%, from March, 1910, to Dec., 1911, inclusive; none in 1912; Feb. 1, 1913, 1%; none since.

Property: the lands and reduction works formerly owned by the Cia Minera de Rio de Plata, S. A., of Mexico, includes 187 acres mining land, 2,700 acres ranch and timber lands and water rights, located 6 miles S. of Guazapares, Chihuahua, and 350 miles from El Paso. Holdings include the Santo Nino, David, Santa Teresa, Santa Barbara, Cleopatra, La Ultima and Enrique silver mines. The ore occurs in the Santa Barbara fissure vein, dipping 17°, with average width 4 to 6'.

Development: by tunnels, with about 3,000' of workings. Claimed to have \$2,000,000 in ore blocked out.

Equipment: includes hydro-electric plant and an auxiliary steam plant, 25-stamp mill, 60-ton concentrator and an 80-ton cyanide plant.

Operations have been greatly interfered with on account of the revolution.

RIO TINTO COPPER CO.

MEXICO

Office: Perry Payne Bldg., Cleveland, Ohio. **Mine and works office:** Terrazas, Chihuahua, Mex.,

Officers: James Corrigan, gen. mgr.; H. A. Eye, supt.; Capt. M. D. Murray, mine supt.; H. L. Schneider, smelter supt.; J. M. Baker, smelter foreman; F. W. Topken, master mechanic.

Inc. in Ohio, holding property through a subsidiary Mexican company, and is operated as a close corporation under the control of Corrigan, McKinney & Co. The Rio Tinto Mexicano mine and works were bought 1908, for a price said to have been \$187,500, and this company also took over the property formerly held by the San Rafael Copper Mining Co.

Property: about 25 miles north of Chihuahua City, comprises a main tract of 153 hectares, and a smaller tract of 6 hectares, including nearly all the developed mineral property of the Terrazas camp, except a few lead mines. The larger tract includes the Rio Tinto mine, and properties formerly worked by the Rio Tinto Mexicano Mining Co., Boston & Mexican

Mining Co., Dragoon Mining Co. and San Rafael Copper Mining Co. The principal properties are the Rio Tinto Mexicano, San Rafael, Promontorio, Verde and Colombia mines, all connected underground. The company also owns the Savanarola group, at Savanarola, about 50 miles south of Chihuahua and 35 miles west of Ortiz, carrying silver-copper and lead ores.

The Rio Tinto Mexicano mine was opened 1860, closed 1902, and reopened 1905; and has been owned and operated by a number of different mining companies until purchased by the present company from Messrs. Enrique and Juan A. Creel.

Geology: the mine shows contact deposits between limestone and altered andesite, there being 5 known orebodies in a metamorphic zone traced 1,500 metres, the orebody, with a minimum of 2', maximum of 100', and average of about 20' width, being erratic but of very large extent. Ore also occurs between the bedding planes of limestone, near a large quartz ledge, and the orebodies, while erratic in size and occurrence, are connected and practically continuous. The limestone has an average dip of 45° N.-W., and the property has also some silver-lead ore. Ore near surface is mainly oxidized, but sulphides occur below. The oxidized ores range 2 to 5% in copper tenor, with traces of lead and zinc, with an average of about 3% copper, 2 to 4 oz. silver and 30 to 75c gold per ton. The gangue is mainly limestone, somewhat garnetiferous. Extensive diamond-drill borings show good orebodies.

Development: by a number of shafts to a depth of 440'; has about 3 miles of workings. The ground is firm, breaking well and requiring no timbering, pillars having been removed to give chambers up to 100' square.

The San Rafael mine has 2 shafts, the deeper being a 440' two-compartment shaft, known as the Verde. The Promontorio mine has 2 new shafts, nearly 1,000' apart, the main Promontorio shaft being 350' deep, with a surface gravity tram to ore bins. The Promontorio also has 2 old shafts. The Colombia mine has a 275' shaft, with about one-half mile of workings. Miscellaneous shafts include the Bronce of 120', Pedernal of 180', San Martin of 100' and Vinagre of 100'.

Equipment: includes steam and gas power. The San Rafael main shaft has two 100 h. p. boilers and a 100 h. p. hoist, with 4-drill and 14-drill air compressors. There are 5 gasoline hoists of 6 to 22 h. p. at various other shafts.

Ore is carried from mines to smelter by a mile long narrow-gauge railway, equipped with a 6-ton Porter locomotive and 5-ton iron ore cars.

Smelter: at Terrazas, 1 mile from the mine, connected by a one-half mile spur with the main line of the Mexican Central railroad, has two 300-ton 42x192" blast furnaces. The converter department has 1 stand and 3 shells, with a 40-ton electric traveling crane and a relining plant. The power plant has a 250 h. p. compound engine, direct-connected to a No. 8 Connersville blower, and a 100 k. w. generator supplies current for the other machinery.

Production: 1906-1910 inclusive amounted to 9,150,000 lbs. copper; 27,000 metric tons smelted averaged 2.5% copper, mining cost being \$3.50 per ton, and smelting cost \$3.50 per ton, or a cost for finished copper of 12.5c per lb. The ore, though low grade, exists in large quantities, and the mine bids fair to become a producer, capable of making 1,000,000 lbs. fine copper monthly.

The mine and smelter operated more or less continuously throughout 1912 and 1913, despite the revolutions which stopped almost all mining operations in this part of Mexico, but the intolerable conditions since then have kept it closed.

SAN FRANCISCO MINES OF MEXICO, LTD.

MEXICO

Parral, Chihuahua, Mex. Harold A. Searle, sec., 65 London Wall, London, E. C., Eng. Rt. Hon. Earl of Denbigh, chrm. board of directors.

Inc. March 27, 1913, in England. **Cap.**, £650,000; outstanding £350,000; shares £1 par. **Bonds:** £200,000 convertible first mortgage debentures, in denomination of £100 and £20 each; int. payable April and October 1, was paid to Oct. 1, 1914; payment of the next six half-yearly instalments has been postponed for a period of 3 years so that in each of the 6 half years ending Oct. 1, 1920, a year's interest will become due, and on the postponed interest 6% interest will be allowed.

Accounts for period ended Sept. 30, 1916, showed mine expenditure, £44,269; cash, £50,698; creditors, £2,608, and accrued debenture interest, £25,080.

Property: a group of silver, gold, lead and zinc mines, 194 acres, 14 miles from Parral, formerly worked by the San Francisco del Oro Mining Co., Ltd. Examined by Knox and Allen, New York. Property covers nearly 1½ miles on the strike of the San Francisco vein, a fissure lode in limestone. The oreshoot worked has a length of 2,600' with minimum width of 5½'; 4th level is in primary ore; ore minerals are galena, blende, pyrite and chalcopyrite.

Development: by 3 shafts and 5 levels; deepest shaft, 484'.

Ore reserves: estimated at 390,000 tons; average grade, 21 oz. silver, 1.4 dwt. gold per metric ton, 12.5% lead and 17.4% zinc. The ore is delivered to the mill by aerial tram. Many mistakes were made in the original design and construction of the mill, but present management has started to reconstruct it, adding flotation equipment, and when rebuilt it will have a daily capacity of 200 tons.

The property has been forced to suspend operations intermittently as a result of the Mexican revolution.

SAN TOY MINING CO.

MEXICO

Office: Oliver Bldg., Pittsburgh, Pa.

Officers: Joseph Dilworth, pres.; C. A. Blanchard, v. p., with Wm. L. Abbott, R. R. Brown, G. A. Deitch, D. L. Gillespie, Geo. E. McCague, Eugene Murray, J. C. Slack and D. B. Gillies, directors. Edward Hoopes, sec.-treas.; W. V. Paterson, asst. sec.

Inc. 1901, in Maine. **Cap.**, \$7,000,000; shares \$1 par; outstanding \$5,750,000.

Dividends: 6% in 1911; 1% in 1912; 2% in 1913; none since. Colonial Trust Co., Pittsburgh, transfer agent. Commonwealth Trust Co., Pittsburgh, registrar. Annual meeting, third Monday in February at Augusta, Me. Stock listed on Pittsburgh Stock Exchange and New York Curb. Shortly after flotation of the company stock sold up to \$1.25 per share; it has since sold down to 11c.

(a) After deducting \$10,597, cost value of 526 tons ore on hand, Dec. 31, 1912. (b) Deficit.

Property: 5 claims, the Bustillos, La Fortuna, Independencia, Juarez and La Central, in the Santa Eulalia district, 12 miles S. E. of Chihuahua, adjoining the Potosi Mine of the Howe Sound Co.

Ore: lead, silver, occurring in chimneys and "mantas" (beds or blankets) in limestone. For detailed description of geology of the district, see Trans. A. I. M. E., Vol. LI (pp. 57-99).

Reported in June, 1917, that the American Metal Co. had bought the San Toy mine.

On Jan. 23, 1917, company secured control in a lease and option on the Bonney M. Co.'s property, 5 claims in the Virginia district, 5 miles S. W. of Lordsburg, New Mexico. The Lawrence Mining Co. previously held the lease, the San Toy paying \$50,000 for 35/60 of the former's shares. The full price is \$200,000, but the Lawrence M. Co. can abandon its right at any time without liability. Three shafts, 221', 340' and 398' deep, have opened copper-silver-gold ore in commercial quantities. Lessees late in 1916 netted \$10 per ton.

Development: the 2,060' La Central, 1,401' Alta, Juarez and Galdeano shafts, last two out of commission. New work totaled 2,396' in 1913, and 2,410' in 1914. In 1915 La Central shaft was sunk 400' and a small amount of drifting and crosscutting done in addition to 5,000' of diamond drilling, which was without any specific result.

Comparative Statement of Operations:

	Ore, Tons	Silver, Oz.	Silver, Oz. p. t.	Lead, Lbs.	Lead, %	Average Net Value Silver, Oz. Lead, Lb.

1909.....	25,509	1,410,630	47.8	1,810,397	3.1	50.77c	1.66c

Ore is shipped to the smelter of the A. S. & R. Co., at Chihuahua. The political disturbances in Mexico have seriously hampered operations during the last three years; work was continued in a desultory way until September 9, 1915, when all American employees returned to the U. S. Operations will be resumed as soon as practicable.

SANTA MARIA MEXICO MINING ASSOCIATION **MEXICO**

Idle. Mine near Parral, Chihuahua, Mex. Wm. G. Gruber, pres. and gen. mgr.; Arthur H. Gruber, sec. and treas.

Inc. in Wisconsin. Cap., \$250,000; shares \$1 par.

Property: 50 claims, La Lolita, La Viola and Santa Clara groups, in the Galeana district of the San Blas mountains.

Development: is on La Lolita group, which has shafts of 75' and 150', showing oxidized ores, shipments from which are said to have averaged 15% copper.

SIERRA CONSOLIDATED MINES CO.

MEXICO

Office: 1400 Alworth Bldg. Duluth, Minn.

Officers: J. B. Cotton, pres.; Robert Linton, v. p.; F. R. Kennedy, sec.-treas.; H. B. Paull, auditor.

Directors: T. F. Cole, J. B. Cotton, and L. D. Ricketts, term expires 1918; C. d'Autremont, Jr., F. R. Kennedy and H. B. Paull, term expires 1919; Robert Linton, E. R. Grochau and J. F. Bankerd, term expires 1920.

Inc. Aug. 18, 1909, in Arizona. **Cap.**, \$5,000,000; shares \$10 par; issued 76,500 shares, full paid, at \$10 each, \$765,000; and 223,500 shares, part paid at \$6 each, \$1,341,000; total outstanding \$2,106,000. Stock transferred and registered at company's office, 120 Broadway, New York. Annual meeting, first Tuesday after first Monday in May. Stock listed on New York Curb and traded in on Boston Curb.

Balance Sheet: as of Dec. 31, 1916:

Assets:		Liabilities:	
Sierra Mng. Co., S. A.—Stock Account.....	\$1,452,602	Capital Stock.....	\$2,106,000
Sierra Mng. Co., S. A.—Loan Account.....	604,029	Accounts Payable.....	60

Loss and Gain.....	30,382		
Suspense Items.....	1,892		
Total.....	\$2,155,060	Total.....	\$2,155,060

To further finance the company at this time there was authorized in 1915 the execution of a collateral trust mortgage for \$1,000,000, and the issuance thereunder of notes dated Oct. 1, 1915, payable on or before 3 years after date with interest at 6% per annum; notes to be issued in denominations of \$100 and multiples thereof. This company owns the entire capital stock of the Sierra Mining Co., S. A., which see below.

Sierra Mining Co., S. A.

Principal office: Ciudad Jurez, Chihuahua. Mines and works at Ocampo, district of Rayon, Chihuahua, Mex. This company is the Mexican title-holding and operating corporation for the Sierra Cons. Mines Co.

Officers: Jos. B. Cotton, pres.; Robert Linton, v. p. and gen. mgr.; H. O. Flipper, sec.; F. R. Kennedy, treas.; H. B. Paull, auditor; and Enrique N. Seyffert, comisario.

Inc. Dec. 11, 1908, in Mex. **Cap.**, 25,000 shares at \$20 each (Mexican currency).

Balance sheet: as of Dec. 31, 1916, shows assets, \$856,850, including property, \$243,074; current, \$35,717; equipment, etc., \$70,287; loss and gain, \$407,772. **Liabilities:** include capital, \$250,000; Sierra Cons., \$603,534; and accounts payable, \$856,850.

Property: at Ocampo, 110 miles from Temosachic, a station on the R. G., S. M. & P. R. R., covers about 50 square miles; also owns over 60,000 acres of timber land in the same district, including water rights and timber thereon; also owns real estate in Ocampo, together with valuable water rights and mill sites, mining concessions and rights. The company had reopened several of

the old mines on the property and had done about 13,000' of work when they were forced to cease operations in March, 1912, due to the revolution in Mexico. No work has been done since, but property will be reopened on short notice when conditions in Mexico permit. There are said to be six ore-shoots now developed that will produce 100,000 tons of ore, averaging \$12 per ton in gold and silver. The silver-bearing mineral of the ore is practically all argentite, with some associated gold, in a siliceous gangue; the ledge-matter is an andesitic breccia cemented with quartz.

Equipment: includes the old El Salto 20-stamp mill. Machinery for the first unit of a 40-stamp mill is on the ground. Power is furnished by a 300 h. p. steam-electric power plant, at Durazno, 6 miles N. E. of Ocampo.

STATE OF COAHUILA

COAHUILA MINING & SMELTING CO., LTD.

MEXICO

Office: 614 Penobscot Bldg., Detroit, Mich. **Operating office:** Apartado 72, Monterey, N. L., Mex. **Mine office:** Jimulco, Viesca, Coahuila, Mex.

Officers: H. T. Ambrose, pres.; Frank J. Llewellyn, v. p.; Walter E. Parker, sec. and gen. mgr.; Archibald Cattell, treas.; preceding, with J. Kirby, Jr., Sidney B. Cohn and C. F. Jennings, directors; J. C. Treadwell, supt.; Alex. McCormick, mine supt.; Harry Reed, mill supt.

Inc. Jan., 1902, in Mexico. **Cap.**, \$500,000 gold; shares \$1 par; non-assessable, fully issued.

Dividends: 10% in 1902; 6% in 1904; 29% in 1905; 30% in 1907; 10% in 1909 and 16% in 1910, a total of 101%, or \$505,000. Annual meeting, first Wednesday in February.

Lands: include holdings in the Mapimi, Viesca and San Juan de Guadalupe districts. Properties include the Santa Maria, Sultana and other mines at Jimulco, carrying auriferous and argentiferous copper and lead ores, opened by a 700' main shaft, and a 1,000' main tunnel, with steam and electric power. The Alberto mine, in the Mapimi district, was said to have made regular shipments of high-grade ore to the Mapimi smelter, 1910. A 250-ton smelter, with steam and electric power, connected with the mines by rail, was blown in, early 1903, but was idle, 1909-13. The revolution in Mexico has practically stopped all mining in Coahuila and the mines are closed down until peace and safety again prevail.

CONTINENTAL MINING CO.

MEXICO

Mine office: San Antonio, Texas.

Officers: Otto Wahrmund, pres.; C. T. Priest, San Antonio, v. p.; S. G. Newton, sec.

Inc. April, 1905, as a reconstruction of Continental Copper Co. **Cap.**, \$1,000,000; shares \$10 par. Is closely allied in ownership and management with the Jimulco Mining Co.

Property: the Panuco mine with 65 hectares, opened in 1700 and worked at intervals since. Property was bought from the Panuco Copper Co., under whom it was badly mismanaged.

Ore: deposit is a chimney of breccia, cemented by metallic sulphides, mainly chalcopryite, but with a little chalcocite, in a quartz gangue, the country rock being granitic. The ore is reported to average about 3½% copper.

Company owns a 40-mile railway, from Monclova to Panuco. Old company invested about \$1,000,000 in the property and improvements. Largest production, under former ownership, was 1,466,059 lbs. fine copper in 1902, and a small production was secured, July-Nov., 1907, by present company, estimated at 1,250,000 lbs. copper. Mine considered promising, though low in

grade, and management good. Closed down since 1913, on account of danger to life and property by revolutionary bands.

INTERNATONAL ORE CO.**MEXICO**

F. E. Salas, mgr., Saltillo, Coahuila, Mex.

Company operates a small zinc plant handling 40 to 45 tons of concentrates per day in two 300 retort furnaces.

MAZAPIL COPPER CO., LTD.**MEXICO**

Office: 47 Peter St., Manchester, England. **Mine address:** Saltillo, Coahuila, Mex.

Directors: Alfred Crewdson, chairman; R. R. Crewdson, W. A. R. Heaven, Jacob Higson, Chas. Hopkinson and Jas. Wm. Purcell; R. H. Jeffrey, mgr.

Inc. Feb. 18, 1891, and reincorporated April 21, 1896, in Great Britain. **Cap.** increased 1903 to £300,000, shares £10 par, and again increased 1912 to £500,000; shares £1 par; issued, £422,490. **Debentures:** £120,000, at 6%. Has paid several dividends: 20% in 1910; 20% and a 5% bonus in 1911; 30% cash and 50% bonus in 1912.

Company does not care to give details concerning its mining operations. It owns and operates the Coahuila and Zacatecas railway, running from Saltillo to Concepción del Oro, 2 smelters and various mines, employing over 4,000 men normally. Op rations were suspended June, 1913, by the Mexican revolution, but were resumed in a small way in March, 1917.

Property: about 850 hectares of mineral land in 4 principal groups. The Aranzazú and Cabrestante mines, carrying copper ores, are the most important; the San Elijio, Naranjera, Cajón, San Francisco and Protero mines, carrying silver-lead ores, and the Promontorio group, producing mainly fluxing ores. Copper ores occur in irregular masses, in limestone, near granite-porphry contacts.

The various mines of the company have 83 different shafts and tunnels, many of which are small and worthless, remaining from old operations, with upwards of 25 miles of workings.

The smelters are at Concepción del Oro and Saltillo. The first named, of about 800 tons daily capacity, has 4 copper furnaces. The Saltillo smelter, built 1906, has a lead plant of 300 tons daily capacity and does a general custom business, as well as treating ores of the company. There are 3 blast furnaces and 1 reverberatory furnace. Transportation is by 4 aerial trams.

The Ferrocarril Coahuila y Zacatecas has 166 kilometres of main line.

Production: 1912, was 13,556,208 lbs. copper, 15,024,485 lbs. lead, 8,463,536 lbs. zinc, 1,572,012 oz. silver and 15,560 oz. gold.

SALTILLO, S. A.; COMPANIA MINERA DEL.**MEXICO**

Office: Primera de Galeana No. 2, Saltillo, Coahuila, Mex. Mine near Mazapil, Zacatecas, Mex. Lic. Miguel Cárdenas, pres.

Inc. June 15, 1899, in Mexico. **Cap.**, 100,000 pesos; shares 100 pesos par; fully paid.

Dividends: were 10,000 pesos in 1907; 15,000 pesos in 1908. Annual meeting, Jan. 31, each year.

Property: the Jesus Nazareno mine with 116 acres of mineral land and 2,099 hectares of miscellaneous lands, in the Nazareno mining district of Mazapil, 10 miles from a railway. The mine has an orebody carrying auriferous lead and copper sulphides sufficiently developed to produce 1,000 metric tons of silver-lead ore monthly.

Equipment: includes 5-mile private tram line, and 135-h. p. gas and electric plant. Presumably closed down owing to Mexican revolution.

TORREON, S. A.; COMPANIA METALURGICA DE.**MEXICO**

Torreón, Viesca, Coahuila, Mex.

Officers: at last accounts, Col. Carlos Gonzales, v. p.; Lic. Pragedise de la Peña, sec.; Lic. Pedro Torres Saldeña, treas.

Inc. June, 1901, in Mexico. **Cap.,** 4,000,000 pesos; shares 100 pesos par.

Property: a number of lead mines and several partly-developed copper mines in northern Mexico.

Smelter: of 1,250 tons rated daily capacity, is connected with all railway lines entering Torreón, treats the large production of the company's own mines and also does an extensive general custom business on gold-silver, lead and copper ores.

Equipped: with 10 blast furnaces, including eight 100 metric ton silver-lead stacks, and two 250-ton copper stacks, the blast furnaces using mechanical charging. There are 8 reverberatory roasters, for lead matte, which is calcined on 2 Dwight-Lloyd sintering machines and remelted. The works have a converter plant of 30 tons daily capacity. Water is furnished by 3 large wells. The works employed about 600 men.

Property was operated throughout 1912, but was forced to close down during the fighting that continued in this district, and has only been operated intermittently since 1914.

STATE OF DURANGO

AMAZON GOLD CO.

MEXICO

Mine office: Chacala, Durango, Mex. Jas. T. Dugan, pres.; Edward B. Sowers, mgr.; J. S. Wilkinson, supt., at last accounts.

Mine: known as the Candelaria, has auriferous, argentiferous and bismuthiferous copper ores.

Equipment: includes a Bryan mill, 6-ton chlorination plant and 10-ton smelter. Closed down and no reports received owing to Mexican revolution.

AMERICAN-MEXICO MINING & DEVELOPING CO.

MEXICO

Office: Watertown, S. D. **Mine office:** Velardena, Cuencame, Durango, Mex.

In July, 1915, company had debts amounting to \$14,518, and creditors began action for appointment of receiver. Is not regarded favorably. See description by Horace J. Stevens in Vol. X.

AVINO MINES, LTD.

MEXICO

Idle. Office: 638 Salisbury House, London, E. C., Eng. **Mine office:** Gabriel, Durango, Mex. Lionel W. Harris, chairman; Edw. Hooper and A. Glencross, directors; F. F. Fuller, sec.; Hooper, Speak & Co., cons. engrs.

Inc. March 6, 1909, in Great Britain. **Cap.,** £100,000, in 1,000,000 priority shares and 1,000,000 deferred shares of 1s par; issued, 500,000 priority shares and 978,429 ordinary shares. Was a reconstruction of Avino Mines of Mexico, Ltd., which was reorganized Feb. 24, 1903, as successor of company of same name, organized Feb. 13, 1899, which was the successor of Avino Syndicate, Ltd. Present company took possession of property Aug. 1, 1909. Stockholders of old company were given 1 ordinary share, par 1s, full paid, for each fully paid £1 share of the old company, with the right to buy priority stock at par, share for share. After payment of 200% on priority shares, they rank equally with ordinary shares. Shares are listed on the London Stock Exchange.

Accounts for year ending June 30., 1916, show a loss of £867, leaving a debit balance of £1,558; cash, £1,506; ore in transit, £5,350; ore on dump £2,123; calls in arrears, £250; creditors, £2,146; unpaid salaries, £2,284.

Lands: 166 acres, and a 350-acre dam site, 10 miles from Gabriel, on the Mexican International railway, the nearest rail point.

Property: includes Socavon mine, which has a 900' shaft and 1,050' tunnel, with several large tajos or pits, 1 being nearly 400' in width and of considerably greater length.

Ore is a complex mixture of auriferous and argentiferous lead and copper sulphides.

Production: for 14 months to June 30, 1910, was 43,350 long tons of ore, of which 17,937 tons was rejected and 18,094 tons shipped, yielding 910,499 lbs. fine copper, 261,000 oz. of silver and 993 oz. gold, giving a profit of £4,338. Operations during 1912 were seriously interrupted by revolutionary disturbances. As the present mill is not successful the company has been shipping ore to smelters, at such times as the revolutionary troubles in Mexico permitted. All work was stopped in April, 1913. During 1912-13, 6,199 tons were sorted out for shipments, of an estimated value of £21,840.

Ore reserves: are reported June, 1913, as 113,167 tons, averaging 1.8% copper, 9.7 oz. silver and \$6 gold per ton.

Equipment: includes a steam and a 300-h. p. electric plant, operated by a gas engine.

The mine has managers and ought to make money, when peaceful conditions once more prevail in Mexico.

BACA ORTIZ; COMPANIA RESTAURADORA DE MEXICO

Mine office: Tepehuanes, Santiago Papasquiario, Durango, Mex. Property is the Candelaria mine, carrying auriferous and argentiferous copper ore. Idle on account of revolution, 1912-17.

CARMEN COPPER CO. MEXICO

Idle. Office: 56 Pine St., New York. **Mine office:** Mineral del Carmen, El Oro, Durango, Mex. Geo. Moeser, pres.; R. D. Kent, sec.; F. C. Alley, special agt.

Inc. in New York. **Cap.,** \$750,000; shares \$50 par.

Property: includes El Carmen mine, 160 hectares, and a considerable acreage of miscellaneous lands, 45 miles from Rosario, the nearest rail point. The mine carries silver-bearing copper ores, with considerable development. Mill has 40 stamps, 3 crushers and Frue vanners.

EL ORITO MINING & MILLING CO. MEXICO

Officers: Wm. Grote, pres., Elgin, Ill.; A. W. Church, v. p.; C. R. Hopson, sec.; J. A. Waterman, treas.; with J. A. Rovelstad, E. S. Eno and F. H. Ackemann, directors. Robt. F. Fitz, mgr., P. O. Box 275, Los Angeles, Cal.

Inc. May 10, 1910, in Ariz. **Cap.,** \$500,000; shares \$100 par; outstanding, \$432,500. Annual meeting, third Monday in May.

Properties: 233 pertenencias, free milling gold property, at Penon Blanco, and 144 pertenencias, copper property, at Velardena, Durango, Mex.

Development: one vertical and one incline shaft, depth 375' with deepest workings at 475'. Total underground workings 1,500'.

Equipment: includes a 17-ton 3-stamp mill. Mines closed down owing to revolution, but management states operations will be resumed as soon as permissible.

ESPERANZAS MINING CO. MEXICO

Idle. Mine at Estación Symón, San Juan de Guadalupe, Durango, Mex. Joseph Steel, gen. mgr., at last accounts. **Cap.,** \$200,000.

Property: includes the Montaña de Cobre, Esperanza and other claims.

GUANACEVI TUNNEL CO. MEXICO

Letters returned from 55 Liberty St., New York. Mine at Guanacevi Santiago Papasquiario, Durango, Mex.

Inc. 1904, in Arizona. **Cap.,** \$3,000,000; shares \$5 par.

Property: in hands of trustee until conditions in Mexico permit of financing company sufficiently to carry on the extensive development planned.

Lands: 22 properties, about 700 hectares, including timber rights and original concessions, said to possess large bodies of gold and copper ore. The mine has 3 shafts, of 100' depth each, with tunnels of 1,250' and 1,400', the main

tunnel, 7x9', planned to be driven about 3 kilometers, management estimating that in this distance a large number of veins carrying lead and copper ores should be cut, the tunnel being estimated as likely to cost about \$250,000.

The Mexican Western railroad from Tepehuanes to Guanacevi should add materially to value of property.

The L. Diamond Co., of Boston, was never a representative of this corporation, but a number of brokers bought stock and combined to unload on the public at unduly high prices. Debts amounted to \$150,000 in 1912 and have since increased.

Idle.

LUCIA MINING CO.

MEXICO

Office: 15 William St., New York. **Mine office:** Pánuco de Coronado, San Juan del Rio, Durango, Mex. H. M. Hubbard, v. p.; Myra B. Martin, sec.-treas.

Inc. 1900, in West Virginia. **Cap.**, \$25,000; shares \$5 par. This company is controlled by the San Luis Mining Co. and its property is described under that title.

NATIONAL MINES & SMELTER CO.

MEXICO

Office: Magee Bldg., Pittsburgh, Pa. **Mine office:** Magistral, Durango, Mex.

Officers: S. H. McKee, pres.; Wm. L. Curry, v. p.; John S. Eberman, sec.-treas.; Renald Ailes, financial agt.; E. A. Kennedy, supt.

Inc. 1911. **Cap.**, \$2,500,000; issued, 1,700,000 shares. Authorized \$400,000 collateral income bond issue; issued, \$375,000. Company owns all the stock of the Santa Maria del Oro Mines Co., which company purchased property of the Lustre Mining & Smelting Co. from old stockholders, paying for same in stock and bonds of the National Mines & Smelters Co.

Property: the Magistral and Cocinera mines, 32 claims, 441 hectares, 1,089 acres of mineral lands, 397 hectares of mill and smelter sites, besides miscellaneous lands and leasehold timber lands. The Magistral mine is developed by 3 tunnels and 9 shafts and has a large body of slightly cupriferous pyrite with quartz and limestone gangue, carrying 0.5 to 5% copper, probably averaging under 1% copper, 1 oz. silver and 15 to 20 grams gold per metric ton.

The Cocinera mine developed an ore shoot 1,000' long, 15' wide and said to average \$10 in gold and copper with a little silver. Depth over 600'.

Ore reserves: in this and the Azurite mines are estimated by the management at 190,000 tons, developed in new ground since 1911. The old company claimed reserves of 185,000 tons in other and entirely distinct orebodies, in 1910.

Equipment: is complete, including a central power plant having two 360-h. p. Koerting and two 350-h. p. Crossley gas engines, one 200-h. p. and three 400-h. p. gas producers, a 2,300-volt 3-phase generator, two 6-drill Ingersoll-Rand air compressors and 10 hoists of 100 to 300-h. p. The 40-stamp mill, 750-lb. heads, has Huntington mills, 1 Ball mill and 10 Frue vanners.

The smelter has 6 blast furnaces, including two 150-ton hot-blast furnaces and three 200-ton furnaces, air for blast being heated by waste gases in a specially-designed MacDonald hot-blast heater. Shipping matte sent to the A. S. & R. Co. at Aguascalientes amounted to 8,000 tons, averaging 15-17% copper, \$155 gold and \$4 silver per ton.

The old company apparently spent a million dollars or so for installation before the mines were sufficiently developed to provide the ores necessary to keep the various plants running and in 1907-08 became financially embarrassed. The mines are not yet on a profitable basis, but with the new concentration plant, built in 1915, as the result of tests made by Henry E. Wood & Co., of Denver, it is expected that the property will yield a satisfactory return on the investment, as soon as operations become normal in Mexico.

PENOLES MINING CO. (CIA. MINERA DE PENOLES). MEXICO

Office: 61 Broadway, New York. Smelting works and mines at Mapimi, Durango, Mex. H. S. Mulliken, mgr. Controlled by the Metallurgische Gesellschaft of Germany.

Cap., 4,000,000 pesos, increased 1910 from 250,000 pesos; shares 100 pesos par. Has paid \$6,500,000 in dividends.

Property: the Ojuela mine with silver-lead ores in limestone, the San Juan mine, Paloma mines and options on the Cabrillas and Mariposa mines. Company produces iron, lead and silver, with a little copper as a byproduct.

Development: by shafts and tunnels to depth of 3,000', showing porphyry, diorite, lime and shale. The main veins strike N. W. with 45° dip. Twenty-two veins are traceable at surface, showing only carbonates or oxides of iron of little value down to 300'.

Equipment: includes steam and electric power, hoist, a 5-mile narrow-gauge railroad connecting the mine with Mapimi and a 1,500-ton smelter.

Company actively producing ore 1917, and enlarging its mineral holdings.

SAN LUIS MINING CO.**MEXICO**

Office: 15 William St., New York. **Mine office:** Panuco de Coronado, Durango, Mex.

Officers: David F. Beggs, pres. and treas.; C. P. Jacobs, F. C. Hanford, W. B. Raymond, Wm. T. Read and Walter S. Logan, directors; Myra B. Martin, sec.

Inc. 1900, in West Virginia, and cap. increased, 1905, to \$3,000,000; shares \$1 par. First dividend, 1%, was paid Jan., 1906, and a second dividend was paid July, 1916, both unearned. Direct title to this property is held in the name of Lucia Mining Co. Annual meeting, last Tuesday in February.

Property: 225 pertenencias, 500 acres, and a 25-acre mill site, in the San Lucas and Panuco de Coronado districts of Durango. The mineral property shows limestone and porphyry, carrying fissure veins and contact deposits, estimated by the management to average 3% copper, 12% lead, 1% zinc, 35 oz. silver and \$4 gold per ton, mainly from sulphide ores. The mines were discovered 1650, and worked more or less irregularly until 1830, when closed on account of water and Indian troubles, remaining idle until reopened, 1901, by the present company.

The **Potosina** mine is said to show, at the western end, a considerable body of ore of smelting grade and a large quantity of milling ore.

The **San Gonzalo** mine, 450' deep, has a vein showing mainly low-grade ores carrying silver values above, with copper on the lower levels, and is also reported to have a 2' vein carrying 25 kgs. silver per ton, with some gold.

The **Sidney** has a 2' vein of galena, giving assays up to 45% lead, 4 oz. silver and 3 grams gold per metric ton, opened by a shallow shaft, but has been idle for some years on account of water.

The **San Lucas** mine, 19 hectares, about 35 miles N. W. of Gabriel, is an old property claimed to have nearly 2 miles of workings, carrying mainly lead and zinc ores, and is idle.

The **San Pablo** mine has parallel veins said to carry 6 to 36" paystreaks of sulphide ore, giving assays up to 16% copper, 360 oz. silver and 14 grams gold per ton.

Development: is by an abandoned incline shaft and a 175' vertical shaft, latter equipped with headgear and hoist.

Equipment: includes steam plants, claimed to aggregate 750 h. p. with 6 hoists and 2 air compressors of 12 drills combined capacity. Buildings include a machine shop, carpenter shop, smithy, offices, 4 general stores and a large number of dwellings for workmen, with a total of 175 buildings. The mill has 2 crushers, 1 jig and 4 Bartlett tables. Concentration seems to have proven more satisfactory than leaching.

The Trinidad leaching mill, of 120 tons claimed daily capacity, has 2 calcining furnaces and apparently treated only about 40 tons of ore daily, when in operation.

Idle on account of revolution.

SAN MATEO, S. A.; CIA MINERA.

MEXICO

Idle. Velardena, Durango, Mex. Carlos Michaud, pres.

Inc. 1911, as successor of the Hileta Gold & Silver Mining Co.

Property: 72 acres, including the Santo Tomas, Bolsa and other mines, and a 60-acre mill site. Claims are reported to show 5 fissure veins in limestone and porphyry, having a generally E.-W. strike.

Development: one vein of 12" to 3' width is developed by a 1,600' tunnel, with 6,000' of workings, carrying ore said to average 1% copper, 6% lead, 36 oz. silver and \$10 to \$50 gold per ton.

Equipment: includes steam and gasoline hoists, good for 1,000' each, and a 3-drill air compressor. There are 9 buildings. Shut down several years on account of political conditions.

STATE OF GUANAJUATO

CUBO MNG. & MLG. CO.

Office: 1025 Peoples Gas Bldg., Chicago, Ill.

Officers: H. L. Hollis, pres.; W. C. Boyden, v. p.; Alfred Cowles, treas., A. Hunter, sec.

Property: located in the towns of Cubo and Villalpando, 6 miles from Guanajuato, Mex.

Equipped: with 250-ton cyanide mill.

GUANAJUATO CONS. MINING & MILLING CO.

MEXICO

Office: 15 Broad St., New York, and Guanajuato, Gto., Mex.

Officers: Fred G. Corning, pres.; Robt. Mulford, v. p.; C. Van Rensselaer Cogswell, sec.-treas.; preceding, with R. A. Walker, W. Lawrence Green, Chas. G. Molin, Sidney Green, all of New York, and Geo. A. McGlone, Charleston, W. Va., directors.

Inc. 1899, in West Virginia. **Cap.**, \$3,000,000; outstanding, \$2,830,920; shares \$5 par; \$169,080 of the unissued stock has been set aside to retire the outstanding 7% bonds. State St. Trust Co., Boston, transfer agent. Old Colony Trust Co., Boston, registrar. Annual meeting in Jan., at Charleston, W. Va. Listed on Boston Stock Exchange and dealt in on New York Curb.

Bonds: authorized \$300,000; outstanding \$128,000 convertible debenture 7's, dated Jan. 2, 1904, due Jan. 2, 1924. Interest Jan. 2 and July 2, at New York office of company. Coupon and registered bonds, \$100, \$500 and \$1,000; convertible at 120 into stock at par; 10% of net earnings is set aside for redemption of this bond issue. Coupon No. 22, due Jan. 2, 1915, on the debenture bonds, was payable on May 15, 1915, but No. 23, due July 2, 1915, was deferred until further notice. Trustee, Columbia Trust Co., New York.

Dividends: 1¼%, 6¼c per share, paid July 31, 1906; 1½%, 7½c per share, Oct. 31, 1906; none since.

Balance sheet Dec. 31, 1913, the last reported, showed assets of \$3,495,586, which included mines, plants, etc., \$3,136,890; supplies, \$78,896; cash, \$96,996. Liabilities included: 6% bonds, \$5,000; refunding notes, \$53,800; surplus, \$200,000; sinking fund, \$28,409; undistributed profits, \$45,019; notes payable, \$10,466.

Income account for 1913, last reported, showed: Receipts—bullion and concentrates, \$670,142; expenditures, mining, etc., \$302,452; ore bought, \$176,585; treatment charges, \$39,186; bullion expense, \$23,413; taxes, etc., \$26,674; total, \$568,312. Gross profit, \$101,830. Deduct: bond interest, \$13,412; depreciation,

\$33,427; bond redemption reserve, \$5,494; total, \$52,333. Net profit, \$49,498; undistributed profit forward, \$45,522; total, \$95,019. Forward to surplus accounts, \$50,000. Undistributed profit, Dec. 31, 1913, \$45,019.

The company owns a large interest in the Carmen-Guanajuato Gold Mining Co.

Property: owns a number of silver-gold mines in the Guanajuato district; of these the Sirena is the oldest, having been worked for 100 years. Under normal conditions it has a monthly output of 7,500 tons milling ores. **Ore:** silver-gold, with value mainly silver. Vein varies in width from 3' to a maximum of 200'. Ore reserves of the Sirena mine were estimated 1913 as 800,000 to 1,400,000 tons blocked out, pillars and fill; Penafill lease, 180,000 tons.

Development: by shafts to depth of about 1,000'.

Equipment: includes 80-stamp mill, cyanide and electrical plants.

The revolution has greatly interfered with operations during the past few years, the property having been run on half time for a large part of the time.

GUANAJUATO DEVELOPMENT CO.

MEXICO

Office: 50 Broad St., New York. **Corporate office:** Jersey City, N. J. Mine office at Guanajuato, Gto., Mexico.

Officers: Willard P. Reid, pres.; C. A. Decker, v. p.; P. E. Sharpless, v. p.; W. H. Porter, sec.-treas.; preceding, with Jas. T. Potter, Wright Johnson, Wm. B. Field, F. B. Medbury, John A. Martin, directors; John Pritzl, asst. treas.

Inc. Feb. 24, 1906, in New Jersey. **Cap.**, \$300,000 com. and \$600,000 pfd.; decreased June 24, 1916, from \$1,000,000, 6% cum. pfd.; \$3,000,000 common; shares \$100 par. Preferred stock has preference as to assets and is subject to call at par and accrued dividends on any semi-annual dividend date. Stock transferred at company's office. Annual meeting, first Thursday after first Monday in April, at Jersey City, N. J.

Dividends: preferred, paid semi-annually Jan. and July 1, from 1906 to 1910, inclusive, none since.

Company controls the Pinguico Mines Co., Mexican Milling & Transportation Co. and Peregrina Mining & Milling Co. Properties are located at Guanajuato, Gto., and are held under Government titles by leases, options, etc.

Ores: gold-silver bearing quartz found in veins cutting bedded volcanic tuffs and intrusive rocks.

Company refuses to supply information.

Peregrina Mining & Milling Co.

Controlled by Guanajuato Dev. Co. Same officers, with P. E. Sharpless, W. W. Blackman, H. J. Milligan, Delavan Smith, W. B. Field and J. A. Martin, directors.

Inc. Feb. 21, 1905, in New York. **Cap.**, authorized and issued, \$1,000,000, 7% cum. pfd., and \$2,000,000 common. **Shares:** preferred, \$100; common, \$10. Annual meeting in April in New York.

Dividends: preferred paid 3½% in 1905; 1906 to Sept. 1, 1910, inclusive, 7% per annum; none thereafter until April 15, 1915, when 3½% as paid. Common none. Preferred dividends payable March 1 and Sept. 1, at 27 William St., New York. Last one, of 5% paid April 15, 1916.

Balance sheet for year ending Dec. 31, 1915, shows assets \$3,347,712, which included: property account, \$2,978,677; cash \$96,547; accounts receivable, \$31,646; metal pending settlement, \$72,805; supplies, \$30,339; investments, \$43,444; deficit, \$94,365. Liabilities include: current liabilities, \$6,282; accrued preferred dividends, \$338,333.

Profit and loss account for 1914 showed: balance, surplus, Dec. 31, 1914, \$281,224; 1915 earnings, \$55,557; total, \$336,801. Of this accrued preferred divi-

dends absorbed \$338,333; accrued pfd. dividends paid, \$35,000; depreciation, \$57,833; total, \$431,166; deficit, at end of 1915, \$94,365.

Property: about 175 acres, which include a group of old producing silver mines near Guanajuato. Output under normal conditions, 13,000 tons per month. **Ore reserves:** estimated Jan. 1, 1916, at 65,000 tons.

Equipment: includes milling and cyanide plants. Ore milled in 1915, 46,403 metric tons, with an operating profit of \$62,868. Revolutionary conditions have greatly hampered mining operations during the past few years.

Pinguico Mines Co.

Controlled by the Guanajuato Dev. Co.; same directorate. **Inc.** Sept. 13, 1906, in New Jersey. **Cap.**, authorized and outstanding, \$1,000,000 6% cum. pfd. and \$500,000 common, reduced from \$2,000,000 and \$5,000,000 respectively June 24, 1916. Shares: preferred, \$100; common, \$10. Preferred stock has preference as to assets and is subject to call at par, and accrued dividends on any dividend date. Stock transferred at company's office. Annual meeting, first Tuesday after first Monday in April at 15 Exchange Place, Jersey City, N. J. Fiscal year ends Dec. 31.

Dividends: preferred, 1907, to Oct., 1913, inclusive, 6% per annum; none reported since. Common, none. Preferred payable April and Oct. 1 at 27 William St., New York.

Property: 5 claims, 300 acres, covering 3,200' on the main Pinguico vein, near Guanajuato, Gto. **Ore:** silver-gold. **Development:** Pinguico shaft, 800' deep, and the Fortuna, 670' deep, with several miles of underground workings. **Equipment:** includes a 40-stamp mill and a cyanide plant. Capacity, under normal conditions, about 8,000 tons per month.

Political disturbances have interfered with operations during the past few years.

The Mexican Milling & Transportation Co. built and operates the 2 miles of railroad connecting the mine and the mill. The Guanajuato Dev. Co. refuses to give out any information.

GUANAJUATO REDUCTION & MINES CO.

MEXICO

Columbus, Ohio. Mines and mills at Guanajuato, Gto., Mex.

Officers: C. L. Kurtz, pres., Columbus, Ohio; Wm. G. Moore, v. p.; Geo. D. Bounton, v. p., Philadelphia; C. J. Kurtz, sec.-treas.; preceding, with C. J. Schlaechter, Wm. D. Sherrerd, Robt. T. Moore, Geo. W. Chase and L. O. Bailey, directors. W. G. Wheaton, auditor; H. P. Smith, gen. mgr.; F. L. Hudson, resident mgr.

Inc. 1904, in Colorado, as a consolidation of several silver and gold mines in the Guanajuato district. **Cap.**, \$7,500,000; shares \$100 par. Stock transferred at company's office, Columbus. Empire Trust Co., New York, registrar. Annual meeting, first Tuesday in Feb. at Colorado Springs, Colo.

Bonds: authorized \$3,000,000; outstanding, \$2,800,000, first mortgage 6%, 20-year, \$100, \$500, and \$1,000 gold bonds, dated July 1, 1904, due July 1, 1924; interest Jan. 1 and July 1, at office of the trustee, Empire Trust Co., New York.

Bond interest was deferred Jan. 1, 1915, and operations temporarily suspended in Aug., 1916, due to the revolution in Mexico and also to the inability to secure cyanide and other supplies.

The company was unable to convert its product into cash on account of the Mexican revolution and defaulted, July 1, 1914, interest on its first mortgage 20-year 6% bonds; this interest was paid in Jan., 1915. To Aug., 1915, the interest due Jan. 1 and July 1, 1915, had not been paid.

Comparative Income Account, Years Ended Dec. 31

	Gross Earnings	Operating Expenses	Net Earnings	Bond Interest	Balance for Year
1916.....	\$525,553	\$375,531	\$150,022	\$168,000	(b)\$17,978
1915.....	489,724	366,417	123,307	168,000	41,693
1914.....(a)	1,459,435	1,297,529	161,906	168,000	6,094
1913.....	1,149,176	839,674	310,813	168,000	141,502
1912.....	1,004,290	693,477	310,813	168,000	142,813
1911.....	930,280	648,247	282,033	168,000	113,033
1910.....	931,562	618,067	313,495	168,000	145,495

(a) Includes deduction of \$64,191 for conversion of accounts from 2 to 1 ratio to U. S. currency. (b) Deficit.

Cash balance, Dec. 31, 1916, was \$243,825, including \$93,803 from 1915.

During 1916 operations were more seriously affected by the revolution in Mexico than in any previous year. The causes were political, financial, transportation, labor, supplies, and withdrawal of staff. Instead of a normal 225,000 tons being treated, the quantity was only 61,030 tons, not 30%.

Property includes the Valenciana mine, practically idle in 1916.

Tepeyac mine: on which little development was done. Produced, in 1916, 1,708 tons (metric) averaging 363.4 grams silver and 3 grams gold. Cost was \$1.762, and profit \$3.031 per ton.

Maravillas—Cata mine: good ore opened in 1915 was further developed. Produced 4,764 tons containing 282.5 gm. silver and 2.84 gm. gold. Cost, \$1.576; profit, \$1.803.

Cata shaft: in 1916 the mine yielded 779 tons of 369.8 gm. silver and 2.7 gm. gold ore, at \$1.917 cost and \$2.925 profit per ton.

Mellado mine: during 1916 the Santa Margarita vein supplied the company's best ore, the yield being 11,561 tons, assaying 261.5 gm. silver and 2.32 gm. gold. Cost, \$1.286; profit, \$1.612 per ton. Contractors mined 3,276 tons from the principal workings.

Kurtz shaft: the 1916 output was 10,304 tons of 238.6 gm. silver and 2.54 gm. gold ore. Cost, \$1.037; profit, \$1.681 per ton.

Rayas shaft: during 1916 exploration cut high-grade stringers, rich in gold. In the Bautista hanging-wall lode is 6,000 tons averaging 700 gm. silver and 6 gm. gold per ton. Precautions were rendered necessary by ore thieves.

Garrapota mine: 1916 work revealed nothing special of note. Output was 5,032 tons at cost of \$1.204 and profit of \$2.203 per ton.

The average cost of all underground work was \$1.444 per ton.

Ore reserves: estimated as 141,452 tons blocked out, 245,665 tons probable ore, 483,327 tons on dumps, total 870,444 tons carrying 206 oz. silver and 2.03 gr. gold per metric ton.

The mill treated 64,030 tons of ore, 76% of which came from the mines, remainder from dumps. Average grade was 245.7 gm. silver and 2.49 gm. gold. There was also treated 1,095 tons of concentrate. Recovery was 80.18% of the silver and 85.33% of the gold. Cost of treatment was \$1.675 per ton, including \$1.266 for cyaniding (46c above normal). Silver was 15.637c per oz. higher than in 1915.

Equipment: includes the 180-stamp Bustos mill and the Flores cyanide plant. Crushed ore from the mill is sent through a 6,000' 8" pipe line to the cyanide plant.

Under normal conditions this property should be highly profitable.

PROPRIETARY MINES COMPANY OF AMERICA**MEXICO**

Office: 15 Broad St., New York.

Officers: D. C. Catlin, pres.; E. J. Page, v. p.; Chas. E. Pope, 2nd v. p.; C. W. Pope, sec.-treas.; above with Horace E. Parker, Wm. A. Robinson, Jr., Robt. V. Norris and W. B. Cogswell, directors.

Inc. 1907, in Nevada. **Cap.**, \$3,000,000; shares \$5 par; \$2,250,500 issued. **Bonds:** authorized, \$750,000, 6% convertible; outstanding, \$703,400. New York Trust Company, registrar. Stock transferred at company's office. Annual meeting, second Monday in June. Is a holding company, controlling through stock ownership the Mineral Development Co., and the Providencia M. & M. Co. of Guanajuato, Mexico.

Latest financial report available, year ending May 31, 1914, shows assets: property, \$2,249,000; stock, bonds and notes of subsidiary and other companies, \$560,542; accounts receivable, \$31,076; cash, \$5,427; furniture, \$313; accounts since organization of company, \$132,632; loss and gain, \$8,700. Liabilities, amounting to \$3,737,193, include outstanding stock, \$2,250,500; outstanding bonds, \$703,400; stock exchanged for Min. Dev. Co. shares, \$6,380; accounts payable, \$5,996; contingent, \$21,417.

The 1915 annual report contains a reference to necessary "additional financing" when the orebodies of the Nueva Luz mine have been more thoroughly developed and when political conditions in Mexico permit the reopening of the Tajo de Dolores mine.

Mineral Development Company

H. Vincent Wallace, gen. mgr., Guanajuato, Mex. **Cap.**, \$1,000,000; shares \$1 par; \$800,000 issued.

Property: the Nueva Luz mine, the La Planta and Torre mines. La Nueva Luz mine, adjoining the Valenciana, is developed by a 2,035' shaft and a 1,130' crosscut, driven through the Veta Madre, below the Valenciana workings, which cut 3 veins reported to be from 5' to 32' wide, and to carry iron pyrite, zinc blende, lead sulphide, chalcopryite, silver and gold. The 3rd vein intersected 1,069' from the shaft was 5' wide, and assayed 480 grams silver, $\frac{1}{4}$ gram gold and 10% zinc, per ton. Management plans drifting on the lowest level and diamond drilling to ascertain dimensions of these orebodies. Although the general manager, an Englishman, remains at the property, it is doubtful if active development work can be continued at the present time.

Providencia Mining & Milling Co.

Cap., \$1,250,000, of which \$250,000 is 7% preferred, convertible at 110, and \$1,000,000 common stock, 250,000 shares common in treasury.

Property: the Tajo de Dolores mine at Guanajuato, Mexico. The mine was closed down in April, 1914, and the outlook for an early resumption of operations is not bright. The 200-ton mill and cyanide plant has been leased for 3 years to the Cubo Mining & Milling Company for a yearly rental of \$20,000 U. S. currency and an option to purchase at \$100,000. Interest at the rate of 6% is charged until the option is exercised; rent paid is credited to purchase price. The Cubo Co. agrees to mill Tajo de Dolores ore for a period of 7 years at cost plus 10% until exercise of option and at cost plus 20% thereafter. The lease becomes operative when supplies can be shipped into the camp.

Company reported, March, 1917, that it was active, but no report of operations is ready.

SAN LUIS; CIA. BENEFICIADORA**MEXICO**

San Luis de la Paz, Gto., Mex. Owns the Ojo de Agua smelters. Idle.

STATE OF GUERRERO**PACIFIC COPPER CO., LTD.****MEXICO**

Address: F. C. Stephens, P. O. Box 1656, Mexico, D. F. **Mine office:** Petatlan, Galena, Guerrero, Mex.

Officers: Dr. W. S. Cockrell, pres.; Thos. Milan, v. p.; J. P. Taylor, sec.; H. J. Morden, treas.; F. C. Stephens, gen. mgr.; preceding, with J. N. Gilbraith and Carlos Eisenmann, directors.

Inc. May 16, 1906, in Mexico. **Cap.**, 10,000,000 pesos; shares 100 pesos par; non-assessable; fully issued. Company holds direct title to its property through the Compania de Cobre del Pacifico, and is in turn controlled through stock ownership by the Pacific Copper & Pyrites Co.

Property: 1,000 pertenencias, 2,471 acres, known as El Rey del Cobre group, near the Rio Murga, in La Union district, 10 miles north of Petatlan and about 28 miles N. E. of Zihuatanejo, the nearest port. The property shows contact deposits in metamorphic schist, the main lode having a N. E. strike, traceable 3 miles. No. 3 orebody, reported to have a maximum width of 197', carrying lenses of cupriferous pyrite, is developed by 2 crosscut tunnels, drifts and raises to depth of 234' below the outcrop. No. 5 orebody, about 1 mile to the S. E., has only been slightly developed; the nature of the ore in both is said to be identical. Ore is estimated to average 1.5% copper and 40c in silver and gold per ton, with 48% sulphur and 42% iron.

Development: by "A" shaft of 109', "B" shaft of 70', El Socavon drift tunnel of 400', No. 3 crosscut tunnel of 404', No. 4 crosscut tunnel of 486', No. 5 tunnel of 243', and No. 1 tunnel of 407', with a total of 3,050' of workings.

Ore reserves: estimated at 3,000,000 tons of ore blocked out, Jan., 1916.

Equipment: includes a hoist, not installed, good for 1,000' depth, and a small air compressor. There are about 35 buildings. Property lies in a very rugged country and is reached only by trails.

The property has been under development several years. Development work continued without interruption from the warring factions in the present revolution until 1915. Company is planning to build a railway to Zihuatanejo and to add equipment at the mines. The mine, though of low grade, apparently contains large orebodies and is considered promising.

PACIFIC COPPER & PYRITES CO.**MEXICO**

Office: 1429 Monadnock Blk., Chicago. John Howard McElroy, pres.; C. B. Greenleaf, sec.; Eugene Atkins, treas.

Inc. 1913, in Maine. **Cap.**, \$7,500,000; shares \$50 par. Is a securities-holding company, controlling the Pacific Copper Co., Ltd., through ownership of over two-thirds of that company's outstanding share capital.

RIO GRANDE & DOLORES SILVER MINING CO., LTD. MEXICO

Office: 37 Old Jewry, London, E. C., Eng. **Mine office:** Mineral de Guadalupe, La Union, Guerrero, Mex. Lieut.-Col. A. B. Haig, C. M. G., and Brooke Mockett, directors; A. Kitching, sec.

Inc. Dec. 11, 1877, in Great Britain. **Cap.**, £17,000; increased, Aug., 1881, from £10,000; shares £10 par, in £10,000 ordinary shares and £7,000 cumulative preference shares, fully issued and fully paid. After the pay-

ment of a 10% dividend on preference shares, remaining profits are divided equally. Debentures, £10,000, at 10%.

Property: La Nava mine, at Guadalupe, carrying copper ore, with values mainly in silver, developed by shaft and tunnel.

Equipment: includes steam and water power, with a 20-ton mill and leaching plant. Property employs about 100 men, normally, but for several years active operation has been prevented by the Mexican revolution.

STATE OF HIDALGO

ANTIMONY CORPORATION

MEXICO

Address: Room 1209, 71 Broadway, New York City.

Officers: Chas. F. Rand, pres.; Jos. S. Fay and Olof Wenstrom, v. p's.; Chas. F. Smith, sec.-treas.; preceding, with Freeman Hinckley, Robt. A. Manning and Geo. Tyson, directors. Olof Wenstrom, mine mgr.

Inc. Feb. 15, 1916, in Delaware. **Cap.**, \$1,000,000; shares \$5 par; 100,000 preferred; issued 10,000 preferred, 100,000 common, no bonds. Company organized to take over a deposit of jamesonite, a lead antimony ore, on one of the properties of the Cortez Associated Mines Co., in Zimapan, Mexico.

Property: 48 hectares, 120 acres patented, Zimapan, State of Hidalgo, Mex., said to show ore carrying jamesonite, consisting of 50.8% lead and 29.5% antimony, and carrying silver. The occurrence is fully described by W. Lindgren, and W. L. Whitehead, Econ. Geol., July, 1914, p. 435, and R. W. Raymond, E. & M. Journal, Jan. 2, 1915, p. 9.

CORTEZ ASSOCIATED MINES

MEXICO

Office: 53 State St., Boston, Mass. **Mine Office:** Jacala, Hidalgo, Mex.

Officers: Joseph S. Fay, pres.; Olof Wenstrom, v. p.; Freeman Hinckley, sec.-treas.; preceding officers, Wm. R. Fay, Robt. A. Manning and Philip W. Wrenn, directors.

Inc. Jan. 3, 1910, in West Virginia. **Cap.**, \$1,500,000; shares \$3 par, non-assessable; issued, \$825,000. Company began business with \$275,000 cash, and Dec. 31, 1915, had on hand \$675,000 cash loans and accounts receivable. Boston Safe Deposit & Trust Co., transfer agent. Stock is listed on the Boston curb. Annual meetings, first Tuesday in March.

The Cortez Associated Mines is primarily a development and holding company, formed to explore and develop mining properties until they are ready to produce, and then to promote an operating company. Lands, 1,079 pertenencias, 2,666 acres, in 4 groups, in the districts of Jacala, Zimapan and Ixmiquilpan, about 20 miles distant. The lands include the entire old mining camp of Jacala.

Zimapan is 85 miles north of Mexico City and Jacala is 35 miles N. E. of Zimapan, this place being 43 miles from Sayula on the National railroad. The Pachuca-Zimapan R. R., under construction, has been completed to Ixmiquilpan.

The Jacala property shows thickly bedded blue limestone intruded by granular monzonite with alteration along the contact and mineralization of the metamorphosed limestone by copper and silver-lead sulphides. The intrusive mass is $1\frac{1}{4}$ miles long and 700' wide. The contact zone carries numerous orebodies showing chalcopyrite and magnetite below the 300' zone of oxidation.

Careful exploration has shown that most of the ore shoots are low in copper and carry but 1 to 3 oz. in silver. At the Santa Maria ore shoot, the copper ore is found in a narrow chimney of 4 or 5% ore; in the Humboldt and Abeja, there are a few thousand tons of 4% ore. Main develop-

ment is by the Cortez 1,770' tunnel, which has opened up about 35,000 tons of pyritic ore containing magnetite and chalcopryite, the average copper contents being 1.72%. Several hundred thousand tons may possibly be developed here, and as the ore contains 50% iron, it will be valuable for a flux.

The Humboldt, Cortez, Abeja and Santa Maria show promise of making producing mines. The Humboldt has a magnetite-garnet outcrop, explored by the 1,304' Humboldt tunnel with drifts and a 130' incline winze, mostly in ore. The Santa Maria 394' shaft has developed a body of soft, leached copper-bearing gossan of 6,000 sq. ft. area. This shaft will connect with the Humboldt tunnel.

The Abeja shaft, 50', sunk 1912 through altered limestone to porphyry contact, shows massive, porous magnetite with chalcocite and oxidized copper minerals. This work will connect with the Cortez tunnel. The Gallo mine, east of the Humboldt, has a 350' shaft, connecting with the Humboldt tunnel, 1,055' from the portal.

Small silver-lead replacements in limestone also occur at Jacala, but the Carmen mine is the only one of promise. This is a well-known old producer, 1½ miles north of Jacala, that yielded 40 oz. silver-lead ore for many years. The mine workings are on the contact between limestone and porphyry and have developed a replacement chimney of silver-lead ore in limestone, worked by an incline shaft to a depth of 900'. The company's new work has not yet cut the downward continuation of this ore shoot.

The San Nicolas group includes the Soledad and Ensino Largo mines. The Ensino Largo, 6 miles from Jacala, shows irregular replacements of rich silver-lead ore in crystalline limestone developed by a 900' tunnel. This tunnel will also develop the Soledad mine. Production from the Ensino Largo mine in 1912-13 was 72 tons, valued at \$99 per ton.

Zimapan lies in a broad, arid valley with the 4,000' deep Moctezuma canyon 9 miles west and the 3,000' deep Toliman canyon 6 miles west. The mines lie in the Toliman canyon and on the ridge between it and the Moctezuma river. The ore deposits appear around a large intrusion of monzonite porphyry either as contact deposits carrying copper, or silver-lead deposits in the surrounding limestone, especially along fissures and intrusive dikes. The latter form pipes, or chimneys, either vertical or inclined. The copper properties at this place are practically undeveloped, but a contact deposit showing disseminated copper pyrite, zinc blende and galena, promises to develop a large tonnage.

The Sirena lead-antimony mine lies 9 miles north of Zimapan. Ore occurs as a replacement deposit, in Cretaceous limestone, cut by a porphyry dike, and apparently follows the bedding of the limestone, dipping about 40° S. The ore is massive and consists of pyrrhotite, arsenopyrite, blende and jamesonite, forming an orebody 700' long and 30' thick.

Ore reserves: estimated at 1,000,000 tons of lead-antimony ore averaging 8% lead and 4% antimony. Examination of this property has been made by Waldemar Lindgren and W. L. Whitehead. See *Economic Geol.*, Vol. IX, No. 5.

On Jan. 20, 1916, the company voted to sell the Sirena property to the Antimony Corporation, organized by Chas. F. Rand. The Cortez company receives 90,000 shares common stock, of which 50,000 shares are to be donated as treasury stock, to the Antimony Corp., and will be given as bonus to subscribers to preferred stock at the rate of one share of common stock bonus for every two shares preferred stock. See Antimony Corporation.

Property has been closed down since 1913, owing to revolutionary disturbances.

GRANADENA MINING CO.**MEXICO**

Closed down by revolution. Mine at Santa Barbara, Hidalgo, Chih., Mex., produces silver-lead ore with a small amount of copper. Fully described Vol. X.

HIDALGO COPPER MINING & SMELTING CO.**MEXICO**

Office: Avenida 16 de Septiembre No. 26, Mexico D. F. Mine and works office: Zimapan, Hidalgo, Mex.

Officers: Sydney Ludlow, pres.; Ricardo T. Sobey, v. p.; R. A. Mills, sec.; Hedley Ludlow, treas.; preceding, with George A. Camphuis and W. H. Armstrong, directors; Hedley Ludlow, gen. mgr.; Jas. H. Armstrong, supt.; Plenio Lopez, engr.; Halarion Diaz, chemist.

Inc. Aug. 14, 1907, in Arizona. Cap., \$2,000,000; shares, \$10 par, in \$1,000,000 preferred and \$1,000,000 common stock. Annual meeting, third Monday in August.

Property: 44 mines, 500 acres, with a 500-acre mill site, said to carry copper ores, with small amounts of lead ore. Lands show monzonite-porphry and limestone, with contact orebodies. Copper ores are estimated by the company to average 2.8% copper and 800 grams silver per ton. The mines have a great variety of ores, including copper oxides and carbonates, carbonate and sulphide ores of lead, argentite and chalcopyrite.

Development: by shafts and tunnels, with a total of 3,000 meters of workings, estimated to show 50,000 tons of ore, with 20,000 tons blocked out for stoping.

Equipment: includes a small steam plant and 16 buildings. Company employs about 800 men at the mines and works.

The 50-ton smelter, at Zimapan, 5 miles from the mine, receives ore by pack-train. Copper production is 20% matte, sent to the Aguascalientes smelter. Lead smelter running, 1913, after many years' idleness, on ore from Nevada group of mines, averaging 25% lead and 900 grams silver. Company plans further development of Purisima, Camino and Concordia groups, and was installing oil engines and electric light, etc., at smelter. Probably closed down, owing to disturbed conditions in Mexico. No recent returns secured.

PACHUCA; COMPANIA BENEFICIADORA DE**MEXICO**

See Santa Gertrudis Co., Ltd.

REAL DEL MONTE Y PACHUCA; COMPANIA DE**MEXICO**

Subsidiary of the U. S. Smelting Ref. & Mining Co., 55 Congress St., Boston, Mass. Salvador M. Cancino, pres.; D. S. Calland, director. Mines at Pachuca and Real del Monte, Hidalgo, Mex.

Inc. 1867, in Mexico, with 2,554 capital shares; all but 20 owned by the U. S. Sm. Ref. & Mng. Co.

The first discovery of ore was made shortly after the Conquest of Mexico by the Spaniards, and several of the principal properties were in large production prior to 1780, and at the time of the visit of Baron Van Humboldt in 1790 constituted the most important silver producers in the Western Hemisphere.

Property: 180 mining claims, 1,736 hectares or 4,270 acres, and approximately 26,000 acres agricultural land, at Real del Monte, 7 miles from Pachuca.

Geology: of the district is extremely simple, as all veins are fissures in a uniform, deep-seated andesite boss which constitutes the entire rock mass for an area of over 100 square miles. While there are superficial capping rocks of other nature, they have no relation to the veins. Vein filling is quartz with a little calcite. The total mineral content of the veins

is never more than four or five per cent. and aside from the silver and gold minerals is almost wholly composed of iron pyrite with insignificant sprinklings of lead and zinc sulphides.

Development: by over 150 shafts, and the tunnels, drifts, etc., now open and accessible, aggregate over 100 miles in length. Past workings have embraced over 50 operating mines on the company's property, but the principal operations at present are confined to eight, worked through 16 shafts extending to surface and numerous interior shafts devoted to handling of men and materials. The deepest workings extend to a depth of 625 meters (2,050') below the surface and the average depth from which ore is handled approximates 1,300'.

Ore reserves: owing to the heavy expense of pumping, the reserves of ore actually blocked have been held for several years past at about $1\frac{1}{2}$ years of full production rate. During the past year entirely new developments have importantly added to this ratio. The eight operating mines referred to embrace a relatively small proportion of the known mineral bearing territory and operations are assured for many years to come.

Ores are transported from the shafts by electric surface haulage or aerial tramways to two cyanide plants, one of 800 tons daily capacity in the Real dei Monte district, the other 1,200 tons daily capacity for the Pachuca district. Approximately, 90% of the silver values and 96% of the gold are extracted by the cyanide process and by concentration. About 20% of the total recovered values are in the form of concentrates which are shipped to custom smelters; the balance in the form of doré bullion which is exported. A 50-ton Minerals Separation flotation plant was erected at the Omitlán cyanide plant in 1917.

Production: during 1915 amounted to 390,000 tons of ore averaging 13.9 oz. of silver and \$1.48 gold per ton. The average cost for the first nine months of 1915 was \$4.16.

In spite of Revolutionary activities and the fact that during several periods the properties have been completely cut off by rail and telegraph from the outside world for months at a time, operations have never been stopped and the entire organization, Mexican and foreign, has been held together. There have been no labor troubles of importance at any time and the only causes for cessation or reduction of operations have been due to difficulties in getting supplies on account of transportation causes. The plants are at present operating at about one-third of rated capacity.

SANTA GERTRUDIS CO., LTD.

MEXICO

(Controlled by Camp Bird, Ltd.)

Office: 1 London Wall Bldgs., London, E. C., Eng. A. A. Kelsey, sec.
Directors: F. W. Baker, chairman; L. Clerc, F. A. Govett, F. H. Hamilton, G. dePass, O. deRivaud.

Technical committee: J. A. Agnew, L. Chevillon, Wm. J. Cox, cons. engr. Hugh Rose, gen. mgr.

Departmental heads: general, C. A. Lantz; mining, T. C. Baker; accounting and purchasing, E. J. Craig; electrical, F. H. Walsh.

Inc. Dec. 31, 1909, in England. Cap., £1,500,000; increased Jan., 1911, from £1,275,000; shares £1 par; all issued and fully paid. (Camp Bird, Ltd., owns 1,126,901 shares.)

Company organized to acquire from Camp Bird, Ltd., an option to purchase the controlling interest in the Compania Minera de Santa Gertrudis y Guadalupe, owning the Santa Gertrudis gold and silver mines, for \$9,000,000 Mexican currency, approximately £922,130. Consideration for the option was £222,869, payable £20,000 cash and £202,869 in fully paid shares; the vendors also agreed to provide subscribers for 1,072,131 shares at par, and

to provide £150,000 working capital, and also the purchase price of £922,130, the preliminary expenses to be repaid to vendors out of the first profits.

The name of the operating company is **Compania de Santa Gertrudis, Inc.** Jan., 1910, in Mexico. **Cap.**, \$250,000. Hugh Rose, gen. mgr. The company formed to treat the ores is known as **Compania Beneficiadora de Pachuca, inc.** in Mexico. **Cap.**, \$500,000. Hugh Rose, gen. mgr. All shares in both these companies are owned by Santa Gertrudis Co., Ltd.

Balance Sheet: (year ending June 30).

Assets:

	Property & Equip.	Invest- ments	Cash	Miscel.	Total
1916.....	£1,019,343	£431,739(b)	£100,982	£17,253	£1,569,317
1915.....	1,019,601	503,507(a)	99,459	17,722	1,640,289

(a) Includes: Cost of shares in Cia. Ben. de Pachuca, and Cia. de Santa Gertrudis, S. A., £252,100; Cia. de Santa Gertrudis, S. A., £2,459; Cia. Ben. de Pachuca, S. A., current account, £136,434; shares in Amistad y Concordia Aviado and Recuperadora, £93,762; shares in the Messina Transvaal Dev. Co., Ltd., Messina. Zoutpansberg, Transvaal, South Africa, £18,750.

Liabilities:

	Capital	P. & L. Acct.	Miscel.	Total
1916.....	£1,500,000	£22,030	£47,287	£1,569,317
1915.....	1,500,000	130,394	9,895	1,640,289

(b) Includes: Cost of shares as in (a), £252,100; Cia. Ben. de Pachuca, current account, £66,611; shares in Amistad as above, £99,277; and shares in Messina, £13,750.

Profit and Loss Account: for year ending June 30, 1916, shows receipts of £76,854, which includes £70,000 dividend declared by Cia. Ben. de Pachuca, S. A. Balance forward, £70,057, to which is added amount brought forward June 30, 1915, £55,393; total £125,450, of which dividend No. 5 of 1s. per share, paid June 30, 1916, absorbed £75,000; tax reserve £23,000; special reserve, £5,000; directors' extra remuneration, £421, leaving £22,030 carried forward.

Dividends: 15% in 1911-12; 15% in 1912-13; nil in 1913-14, owing to unsettled conditions in Mexico and Europe; 5% in 1914-15, paid Nov. 27, 1915, and 5% for 1915-16, paid June 30, 1916.

Property: 626 acres in the Pachuca mining district, State of Hidalgo, about 62 miles from Mexico City, examined by W. J. Cox, R. J. Frecheville, F. J. Pope and E. E. Chase. The ore carries silver-gold values in large fissure veins or crush zones, 50' to 100' wide in andesite. The great ore-shoot is 3,000' long, 18' thick and 600' high and prongs extend upward from the 800' or 900' level, but do not reach the surface.

Development: by shafts with extensive underground workings. New work in year ending June 30, 1916, totaled 14,865'.

A feature of work in 1916 was the discovery of highly mineralized wall rock on the hanging wall of the north vein on No. 14 and 16 levels. On No. 14 it was 45' wide and on No. 16, 42'. On No. 11 level the shoot was 102' long, assaying \$1.79 gold and 16.6 oz. silver across 4½' and on No. 14 it was 118' long, containing \$1.15 gold and 10 oz. silver across 7' of ore.

Ore reserves: estimated June 30, 1913, 1914, 1915 and 1916, respectively, at 1,047,000, 1,194,000, 1,287,000, 1,214,000 tons, the last with an estimated recoverable content of 66,964 oz. gold and 13,392,981 oz. silver, recovery figured at 90%. At normal rate of production the present reserves would be sufficient for about 3½ years. Operating expenses under normal conditions about 18s. 6d. (\$4.44) per ton. For mining and milling practice, see Trans. A. I. M. E., Aug., 1916, pp. 1,295-1,332.

Equipment: includes a 60-stamp mill and cyanide plant; wt. of stamps, 1,550 lbs. Mill also contains 10 tube mills; capacity, 25,000 tons per month. Crushing commenced June 14, 1911.

Production: (years ending June 30).

	Tons	Value	Gold, Oz.	Silver, Oz.
1916.....	277,616(b)	£379,651	12,550	2,286,450
1915.....	211,669(a)	249,728	10,727	2,000,856
1914.....	293,836	498,754		
1913.....	263,554	631,718		

(a) Operations were at 52.7% normal rate. (b) 56.6%. Ore averaged 33s 4d. (\$8). The recovery was 92.85%.

During June, 1917, 27,550 tons of ore was treated for \$41,063 profit. In the second quarter of this year, 85,705 tons yielded a mine profit of \$115,157. The mill operated at 86.5% capacity, but 100% capacity was expected during the third term.

Flotation is being tried on a working scale to see how far cyanidation may be eliminated. K. & K. machines are used, followed by Callow cells for cleaning concentrate.

Santa Gertrudis is a big mine, and if conditions allowed, it would make large profits, especially with silver at present prices.

STATE OF JALISCO

AGUILA CONSOLIDATED MINING CO.

MEXICO

Address: 185 Summer St., Boston, Mass.

Officers: D. E. Makepeace, pres., Attleboro, Mass.; E. B. Estes, sec.-treas.

Inc. 1917 in Arizona. **Cap.**, \$1,200,000; shares \$1 par. Company is a re-organization of the Aguila Amalgamated Mining Co., described Volume XI. and which succeeded the Mazeppa Cons. Mining Co. Stockholders in the old company were given the option of exchanging their holdings on a basis of 1 share of new for each 5 shares of old and payment of 4c per share of new stock.

Property: near Cinco Minas, said to have one-half mile of workings and to show ore assaying from \$100 to \$160 per ton, mainly in gold and silver. Development work resumed in 1917.

AMAJAC MINES CO.

MEXICO

Address: Guadalajara, Mexico. W. L. Barclay, pres.; J. I. Higbee, v. p.; W. J. Pentland, gen. mgr.; C. A. Sidler, sec.-treas.

Inc. Dec. 16, 1910, in Delaware. **Cap.**, \$2,500,000; shares \$1 par. Company was formed for purpose of purchasing the Refugio, Animas, and Tres Estrellas mines in the Hostotipaquillo district. Later an option was taken on the Trinidad and Mexicano mines.

Property: the Refugio mine, 125 acres, was worked for 25 years prior to its acquisition by present owners, down to the 500' level. The main vein has a width of 5' to 15' with well-defined walls. Ore is said to carry gold and silver with average assay value of \$15.00 per ton. The Animas property, 144 acres, lies west of the Refugio and is apparently on the same vein. The ore is said to contain 20 ounces silver and \$3 to \$5 gold per ton.

Development: at both mines is by means of tunnels, the Animas having over 2,500' of workings. The Tres Estrellas property, 120 acres, is a mile from the mill and has not been developed at depth.

Equipment: includes a 15-stamp mill and a 50-ton cyanide plant in course of construction. Hydro-electric power is used. The revolution in

Mexico has interfered with operations and the mines have only been worked intermittently since 1914.

AMPARO MINING CO.

MEXICO

Office: 541 Drexel Bldg., Philadelphia, Pa. **Mine office:** Etzatlan, Jalisco, Mexico.

Officers: A. F. Bracher, pres.; W. H. Kister and A. S. Miller, v. p.'s; Henry Freund, treas.; with J. H. Stopp, P. C. Evans, E. A. Noppel, J. H. Scott, L. H. Adler, Jr., and C. K. Smith, Jr., directors. J. S. Williams, sec.; J. H. Howard, gen. mgr.; W. Howard, asst. mgr.

Inc. 1902. **Cap.**, \$2,000,000; shares \$1 par; reduced from \$3,000,000 in 1907.

Balance sheet for 1916 shows total assets of \$4,009,195, including \$2,478,-897 for property and plant, \$1,377,538 current (\$798,925 cash) and \$152,760 miscellaneous. Current liabilities at end of 1916 were \$428,056.

The income was \$1,297,236 gross, mostly from bullion and concentrate. Net profit was \$456,970. Dividends absorbed \$400,000. Mexican taxes amounted to \$120,675, plus \$20,665 for revolution expenses. American taxes totaled \$7,524. In Aug., 1917, \$60,000 was paid in dividends.

Property: includes the Canada, La Union, San Juan, Amparo, San Domingo and Natividad mines, and Rancho Embocado of 4,390 pertenencias, 7 to 9 miles S. of Etzatlan, State of Jalisco.

Development: through general shaft to depth of 1,300'. New work in 1916 totaled 10,501'. Prospects at 1,100' are good, but at 1,300' ore is spotty. The ore contains gold and silver values with sulphides.

Ore reserves: of positive, probable, and prospective ore were 750,000 tons in 1908, 695,000 in 1909, 712,773 in 1910, 706,635 in 1911, 724,099 in 1912, 502,746 in 1913, 447,500 in 1914, 393,610 in 1915, and 472,350 in 1916; over 70% being positive in 1916. Shrinkage stoping is practised, resulting in reduction of costs.

Equipment: electrically driven throughout, including hoist, compressors, pumps, sorting plant, crushers, 50 stamps, 4 tube mills, concentrators, Dorr classifiers, Pachuca tanks and 3 Oliver filters; also a ranch for supplying meat, corn, vegetables, etc.

Production: 50,000 tons in 1908; 63,398 in 1909; 68,217 in 1910; 73,793 in 1911; 92,365 in 1912; 104,330 in 1913; 87,320 in 1914; 114,166 in 1915; and 99,040 tons in 1916.

In 1916 the ore assayed 9.95 grams (0.32 oz.) gold and 320 grams (10.26 oz.) silver per ton. The extraction was 75.6% and 78.9% of gold and silver by cyanidation, 18.4% and 9.2% by concentration, and 91.1% of the total contents. Flotation is to be tried in place of cyanide.

Costs were \$1.34 for mining, 14c for transport and crushing, \$1.86 for treatment, 48c for selling, 43c general, \$1.22 for taxes, 21c for revolution and 30c for miscellaneous, a total of \$5.98 per ton milled. Results are given with commendable detail.

Although the revolution hindered operations in 1916, results were almost normal and appear to be improving.

AYUTLA SMELTER

MEXICO

Owned by Carrizo Copper Co., at Ayutla, Autlan, Jalisco, Mex.

EL FAVOR MINING CO.

MEXICO

Offices: Makeever Bros., Journal Bldg., Boston, Mass., and 170 Broadway, New York. Mine at El Monte, Hostotipaquillo district, Jalisco, Mex.

Officers: Sanford Makeever, pres.; Dr. H. D. Meredith, v. p.; J. L. Makeever, treas.; M. M. Makeever, sec.; Walter Neal, gen. mgr.

Inc. July, 1906, in Ariz.; protocolized, 1906, in Mexico. **Cap.**, \$3,500,000; shares \$1 par. Stock not listed. After 6 years of development work, mine-paid total dividends of \$210,000 in 1913-1914. Property said to represent investment of \$1,000,000.

Property: 476 acres mineral land and extensive surface areas at El Monte, 75 miles N. W. of Guadalajara, Jalisco, Mex. A branch line of the Southern Pacific R. R. runs to Quemada, near the mine, and the Chapala Hydro-Electric Co. furnishes power for \$50 per h. p. Mine shut down May 24, 1914, owing to Mexican revolution.

Vein reported as 10' to 14' thick with shoots of bonanza silver-gold ore workable to 1,300' by tunnels. Mine said to have 3 miles of underground workings open to 800' level. Mining costs reported to be 24c per ton.

Equipment: includes 150-ton silver cyanide plant, equipped with 20 stamps, crusher, tube mills, Dorr classifiers and thickeners, Oliver filters, Pachuca tanks, Wilfley tables. Extraction was only 54% of \$18 gold-silver ore, owing to manganese, but recent improvements are claimed to ensure nearly 90%. Total production to date reported as \$1,500,000.

KEYSTONE MINING CO.

MEXICO

Office: Shamokin, Penn. Is a reorganization of Keystone Copper Smelter Co., of Philadelphia, and is the holding company for the Mexicana Co., Tapalpa district, Jalisco, Mexico. W. H. Childs, gen. mgr.

Lands: about 100 hectares, in 5 groups, in Tapalpa, including the Mexicana, America and Palma groups; also timber rights to 50,000 acres of adjoining lands. Principal development is on La Mexicana group, 82 hectares, 15 miles west of Tapalpa, mine having a 200-metre crosscut tunnel, cutting 4 veins, with about 1 mile of workings. Veins are fissures in porphyry, averaging 5' width, carrying auriferous and argentiferous chalcopryrite, sphalerite and pyrite.

Equipment: includes steam and electric power and 30-ton mill. The entire plant was enlarged and remodeled and resumed operations in Jan., 1912. Presumably idle, 1915-17, owing to unsettled conditions in Mexico. Letters unanswered.

LA REGINA MINING CO.

MEXICO

Office: 2120 W. Tioga St., Philadelphia, Pa. **Mine office:** San Martin Hidalgo, Jalisco, Mex.

Officers: Chester P. Ray, pres.; F. W. Schmidt, v. p.; A. W. Brackmeyer, sec.-treas.; M. J. Slattery, gen. mgr.; John P. Delaney, supt.

Inc. Nov. 1, 1909. **Cap.,** \$1,000,000; shares \$1 par, as successor of Philadelphia Copper & Gold M., M. & Smelter Co. Debentures, \$200,000 authorized; issued, \$62,000.

Property: 73 hectares, including the San Vicente, La Perla, La Fe, La Concha, Ajax and other mines, shows veins of 3 to 25' width, carrying auriferous and slightly argentiferous chalcopryrite. The mine has 4 tunnels, at 150' intervals, and a 465' shaft. The Ajax mine shows a 12' vein, estimated to average 4% copper, 2 oz. silver and \$1.33 gold per ton. La Estrella del Norte mine has a 260' tunnel.

Development: property as a whole has 8 shafts, of 100' average depth, with a total of about 1,000' of workings, claimed to put in sight 125,000 tons of auriferous copper ore. Development in recent years has been confined to the gold-silver vein, said to show at depth of 115', ore averaging 2 oz. silver and 15 grams gold per ton.

Equipment: includes a steam hoist and air compressor, at the San Vicente group. The mill has a 25-ton Elspass mill, 25-ton experimental cyanide plant, Huntington mill and 3 Pachuca tanks. Idle on account of political disturbances in Mexico.

Material changes impending, 1917, and secretary deems it inadvisable to give particulars at present time.

MAGISTRAL-AMECA COPPER CO.

MEXICO

Office: 201 Hibernian Bldg., Los Angeles, Cal. **Mine office:** Ameca, Jalisco, Mex.

Officers: H. L. Percy, pres.; Fred M. Lyon, v. p.; Geo. C. B. Robinson, sec.-treas.; Jas. P. Harvey, gen. mgr., and H. N. Manington, directors; Percy A. Babb, cons. engr.

Inc. May 20, 1909, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; issued, 1,255,300 shares. Holds direct title to lands through Magistral-Ameca Copper Co., S. A., inc. in Mexico. Annual meeting, second Wednesday in November.

Property bought of Las Moras Copper Mining Co. for \$100,000 by Messrs. Patrick Clark, Jas. P. Harvey, H. L. Percy and Fred M. Lyon, Mr. Clark selling his quarter interest to his associates for \$55,000.

Property: 74 pertenencias, 185 acres, known as the Mina Magistral, on the Hacienda Hegira, 8 miles S. W. of Ameca, has veins in diorite that are cut by porphyry dikes. The veins occur on dike contacts and show outcrops of silicified rock with quartz stringers and hematite. The vein varies from 4 to 25' in thickness and carries lenticular orebodies connected by mere films of quartz or fissures with wall rock impregnated with chalcopyrite. The Magistral ore shoot occurs where 3 veins intersect. The ore carries copper sulphides and averages from 4 to 7% in copper with about \$2 in combined gold and silver values.

Development: by 321' shaft, planned to be deepened to 350', and by tunnels with about 1 mile of openings, March, 1913, developing copper ground for width of 5 to 50', said to assay 4 to 8% copper. The Magistral was worked many years ago for bluestone, used by neighboring mines in the process of treating silver-lead ores.

Equipment: includes two 80 h. p. high-pressure boilers and a 150 h. p. tandem compound engine, with hoist good for 500', at the Magistral. The mines are connected with Ameca by a good wagon road, 8 miles long, with a 1½% grade, built with the idea of using it for railway tracks in the future. About 100 men are employed.

The concentrator was rebuilt, 1914, but owing to disturbed conditions in Mexico, operations have been greatly interfered with. No recent returns securable.

MASCOTA COPPER CO.

MEXICO

Office: 513 Germania Life Bldg., St. Paul, Minn. **Mine office:** Ameca, Jalisco, Mex.

Officers: Chris D. O'Brien, Sr., pres.; J. M. Bowler, v. p.; Byron J. Mosier, sec.-treas.; Chris D. O'Brien, Jr., gen. mgr., at last accounts.

Inc. June, 1908, in Arizona, as successor of Independence Mining & Smelting Co. **Cap.**, \$1,500,000; shares \$1 par.

Lands: 46 hectares, said to include an antigua mine, in the Guachinango division of the Mascota district, 24 miles from the Mexican Central line. The claims show an 8' fissure vein in porphyry, said to be traceable about 2,000' and proven to depth of 486'. The ore is reported to average 5% copper, 7 oz. silver and 6 grams gold per ton.

Development: includes 300' shaft and 375' tunnel, with 4,825' of workings, estimated to show 40,000 tons of ore, with 28,000 tons blocked out for stoping.

Equipment: includes 50 h. p. steam plant, with 3-drill Sullivan air compressor, a 25-ton wooden stamp mill, with 10 Allis-Chalmers gravity stamps, and a small concentrator, equipped with 2 Overstrom tables, a vanner, 4 slime tables and a sizer. Operations suspended on account of revolution. Still idle, 1917.

MEXICANA MINING CO.

MEXICO

Is the operating subsidiary company of the Keystone Mng. Co., of Shamokin, Pa., which see.

MOLOLOA MINING CO., LTD.**MEXICO**

Hostotipaquillo, Jalisco, Mex.

Officers: W. G. Miller, pres.; F. G. Stevens, managing director; W. M. Mathews, treas. and gen. mgr.; Edw. Fenley, supt., at last accounts. Inc. 1908, in Canada. **Cap.**, \$250,000.

Property: 130 hectares, include antiguas opened by the Spaniards in the 16th century, reopened in 1904. Said to have been abandoned by former owners because of vein faulting. Several fissure veins in andesite carrying gold-silver ore were worked in 1914 and shipments made to the El Favor mill.

SAN FELIPE MINING CO.**MEXICO**

Hostotipaquillo, Jalisco, Mex. Col. N. Z. Seitz, pres. and gen. mgr. Inc. 1902, in Arizona. **Cap.**, \$1,000,000; shares \$1 par.

Property: includes a 50-ton mill. The company is said to have paid dividends from stock sales and was considered by Horace J. Stevens as a rank bit of stockjobbery. Idle and probably defunct.

VOLCANCILLOS MINES**MEXICO**

Letters returned in July, 1917, from Avenida Borbon No. 6, Autlan, Jalisco, Mex.

Property: 28 pertenencias, 70 acres, and a 10-acre mill site, with 100 sq. miles of timber lands, held under a government concession in the Cacoma district, including the Volcancillos and adjoining mines. The Volcancillos group, 12 miles W. of Autlan, shows diorite-porphyry dikes, with contact deposits 5 to 80' wide, the largest one containing chalcopryrite ore assaying 4 to 15% copper, 4 oz. silver and nearly \$5 gold per ton.

Development: includes a 300' two-compartment shaft with about 1,000' of workings and several tunnels, 1 having a back of about 150' but still in the oxidized zone. The mine is estimated by the management to show about 100,000 tons of ore. The ore deposit, discovered 1860, was opened by Edward Blake, was operated under bond and lease for a while by the Cacoma Mining & Smelting Co., but reverted to Mr. Blake and still remains in his family.

Equipment: includes a steam plant with 40 h. p. hoist, good for 1,000' and a 10-ton mill and smelter, now abandoned. The ore from the Volcancillos is sold to the local Indians, who have been metal workers from time immemorial. The natives buy the crude ore, paying 4c per lb. for the copper content. They crush and concentrate the ore, smelting the concentrate in little furnaces, making copper cakes which are skillfully fashioned into pots, kettles, and other articles.

MEXICO, D. F.

EL ORO MINING & RAILWAY CO., LTD.**MEXICO**

Offices: 24 Lombard St., London, E. C.; 61 Broadway, New York. T. Dundas Pillans, sec.

Directors: R. T. Bayliss, chairman; H. W. Barnett, Capt. H. V. Hart Davis, Alfred Naylor, L. Breitmeyer, P. L. Foster, J. H. M. Shaw, R. M. Raymond, managing director in Mexico. **Staff:** A. F. Main, gen. mgr.; F. Jenkin, asst. mgr., El Oro, D. F., Mexico.

Registered, July 27, 1899, in London, to acquire the capital stock of the American Mng. Co. and the American Railroad & Lumber Co., the former owning the El Oro Gold & Silver mine in the El Oro district of Mexico, and the latter owning the railroad connecting the mine with the Mexican National Ry. Purchase price was £886,072; paid £820,084 in cash and £65,988 in stock. The two American companies have since been dissolved.

Cap., £1,150,000; outstanding, £1,147,500; shares £1 par. Annual meeting in October. Listed on London Stock Exchange.

Accounts for fiscal years ending June 30:

	Bullion Recovered	Railway Receipts	{Deprec.	Loss on Exch.	Deprec. of Invest's	Profit
1915....	£75,541	£7,944	£25,000	£20,444	£21,343	£78,398 (d)
1914....	415,436	35,497	25,000	23,242	103,690

(d) Deficit, which, with £34,229 provision for income tax and £1,202 written off improvements, deducted from credit balance forward, left £77,240 carried forward; cash, £120,238; treasury bills, £19,805; bullion, £2,171; debtors, £7,203; investments, £26,643; creditors, £50,483.

No statement of accounts was rendered at company meeting in Dec., 1916, owing to non-receipt of mine accounts.

Dividends: Aug., 1900, from profits to June 30, 1900, 5%; 1900-01, 11¼%; 1901-02, 15%; 1902-03, 15%; 1903-04, 7½%; 1904-05, nil; 1905-06, 12½%; fiscal years ended June 30, 1907 to 1911, inclusive, 15% each; 1911-12, 12½%; 1912-13, 10%. Nil since, due to political disturbances. Total dividends to July, 1913, £1,783,625.

The El Oro Mng. & Ry. Co., Ltd., owns 42,687 shares (par £1) of the stock, and £14,000 7% debentures of the Suchi Timber Co., Ltd., which declared a dividend of 5% on June 30, 1913.

Property: the San Antonio, San Rafael, Trianon, Diamante, Ofir, and Carmen No. 2 claims, 786 acres, at El Oro, 100 miles northwest of Mexico City. In 1912-1913, the adjoining Ofir claim, 11½ acres, was bought for £130,000 cash. This claim controls the rights of the San Rafael vein in depth.

Ore: values are mainly in gold. Orebodies vary in width from 10' to 60'.

Development: by shafts from 1,500' to 1,600' deep.

Ore reserves: June 30, 1913, estimated as 448,053 tons, value \$8.11 gold and 3 oz. silver per ton, total value \$9.90 per ton; compared with 301,934 tons, value \$9.26 per ton, on June 30, 1912.

Equipment: includes a 200-stamp mill, 8 tube mills and a cyanide plant. Crushing was continued with 100 stamps until April, 1914, when, owing to revolutionary disturbances in the district, all operations were

suspended. Milling on a small scale was resumed Oct. 1, 1914, but had to be again suspended in Feb., 1915.

Mine and mill operations were resumed Oct., 1916.

Recent production for fiscal years ending June 30:

Year	Tons Milled	Value	Costs	Profit	Yield
1913.....	433,708	\$5.04	\$3.59	\$1.45	\$2,188,723
1912.....	387,157	5.75	3.79	1.96	2,228,190
1911.....	360,294	6.63	3.90	2.73	2,389,340
1910.....	316,138	8.10	5.17	2.93	2,562,705
1909.....	285,181	8.56	5.42	3.14	2,442,374

ESPERANZA, LTD.*

MEXICO

Office: No. 1 London Wall Bldgs., London, E. C., Eng. **Office of American company:** 54 William St., New York.

Directors: R. J. Frecheville, chairman; F. W. Baker, F. M. Crisp, W. F. Fisher, A. A. Kelsey. C. L. Johnson, sec.

Reg. Oct. 6, 1903, in Great Britain. **Cap.,** £455,000; shares £1 par; all issued and credited, except seven, as fully paid. Acquired by agreement with the Guggenheim Exploration Co., and the Venture Corporation, Ltd., 449,800 shares of \$5 each, all the capital except 200 shares, in the Esperanza Mng. Co. of New York, inc. in New Jersey and owning gold and silver mines covering 384 acres, adjoining the El Oro mine at El Oro, Mexico. Purchase price, £454,993 in fully paid shares.

Financial report for 1915 shows a profit of £28,692, making with balance brought forward, £32,929; dividends absorbed, £20,498; taxes, £7,612, leaving £4,818 balance to be carried forward.

Esperanza Mining Co., the American company, had \$412,665 cash and \$347,560 realizable assets; current liabilities, \$88,238, for the two years ending Dec. 31, 1915.

Dividends: now paid semi-annually: 1903-04, 10%; 1904-05, 14 months, 82½%; 1906, 160%; 1907, 105%; 1908, 70%; 1909, 25%; 1910, 30%; 1911, 30%; 1912, 15%; 1913, 10%; 1914, 5%; 1915, 5%, interim, paid July 31.

Ore: gold and silver in veins from 3' and 5' to over 50' wide.

Development: total underground workings amount to 159,969', of which 4,502' were done in 1915. The limits of the San Carlos vein have been ascertained and no additional ore was found. On the Descubridora vein, 1,953' of work were done besides 290' of diamond drilling in hole No 20 on the 7th level. The Descubridora shoot showed about 8,000 tons of ore, Jan., 1916, and drilling has proven the presence of ore in the ground lying east of the San Rafael vein.

Work on the San Rafael vein on the 14th and 15th levels was discouraging, values being too low to warrant exploitation. Some of the ore contains lead and zinc. Further diamond drilling may be done.

Over half the 1916 development work was done on the upper levels of the San Rafael and old West veins where additional low-grade ore was opened up. On the Sirio, the shaft was dewatered and old workings reopened.

Ore reserves: estimated Jan. 1, 1916, as 156,000 dry metric tons of developed and probable ore, which should yield an approximate working profit of \$532,000 gold. Estimate, which shows a slight increase over figures of previous year, does not include old stope filling, nor 200,000 tons of sand tailing, estimated to yield \$200,000 gold.

Equipment: includes 120-stamp mill, tube mills and a cyanide plant.

Production:

Year	Tons Milled	Value per Ton	Costs per Ton	Profit per Ton	Rec. %
1915.....	22,684(c)
1914.....	166,212(b)
1913.....	207,281(a)
1912.....	229,076	\$7.31	\$6.01	\$1.30	80
1911.....	272,235	6.17	4.43	1.76	88

(a) Includes 121,438 tons of tailing. (b) Includes 45,237 tons of tailing. Mill was closed down from April 21 to Aug. 31, 1914, due to revolutionary conditions, and in Feb., 1915, the plant was again closed down. A little development work was done during the year. (c) Production for January and February, 1915, was 22,684 tons with a gross value of \$143,486. Working profit amounted to \$57,304.

Other properties are being investigated with a view to prolonging the life of the company. An interest has been secured in the Anglo-Colonial Co., Ltd.

Mine was closed down Feb. 25, 1915, owing to revolutionary disturbances and milling operations could not be resumed during the year.

ESPERANZA MINING CO.

MEXICO

Office: 25 Broad St., New York. Controlled by Esperanza, Ltd., which see.

MEXICO MINES OF EL ORO, LTD.

MEXICO

Offices: 2 St. Helen's Place, London, E. C., and 18 Rue Laffitte, Paris.

Directors: E. M. Clarke, Don Guillermo de Landa y Escandon, F. J. Fournier, H. Higgins, and Sir R. J. Price, M. P. F. L. Allan, resident manager, El Oro, Mexico; J. Vincent, asst. mgr.; C. R. Pinder, cons. engr.

Reg. Oct. 14, 1904, in England. **Cap.,** £210,000; shares £1 par; increased from £180,000 in July, 1914; 180,000 shares issued and fully paid; 30,000 to be issued for acquisition of the Nolan properties. Shares were being issued in Feb., 1917.

Financial statement for year ending June 30, 1916, issued Feb. 17, 1917, showed that owing to suspension of operations due to the revolution, there was a loss of £21,855. Balance forward on June 30, 1916, was £59,073, compared with £91,127 the previous year.

Dividends: including bonuses—

Year	Year
1907-08..... 5s.	1911-12..... 16s.
1908-09..... 12s. 6d.	1912-13..... 18s.
1909-10..... 14s.	1913-14..... 18s.
1910-11..... 16s.	

Property: company was formed to acquire by agreement with the Exploration Co., Ltd., 26.63 hectares, 65.79 acres, total with surface rights, 75 acres, adjoining the Esperanza mine, near the town of El Oro, Mex. The land, formerly held by the Mexico Venture Syndicate, Ltd., includes the Mexico gold and silver mine.

The properties of the Compania Miniera de Oro Nolan were acquired in Jan., 1915, for 30,000 fully paid shares.

The ore is gold-silver, occurring in fissure veins.

Development: by shafts. The North shaft is 1,547' deep, the South shaft, 1,687'.

Ore reserves: June 30, 1916, were estimated at 505,300 tons, containing \$10.40 gold and 6.4 oz. silver per ton.

Equipment: includes a 40-stamp mill, 7 tube mills, and a cyanide plant.

Milling operations started in Oct., 1907, were suspended in April, 1914, owing to revolutionary conditions. In year ending June 30, 1915, the mill worked 5 months. At the end of 1915 the mine was producing a limited tonnage, but supplies were rapidly becoming exhausted, with little prospect of obtaining transportation for more.

Ore treatment was resumed in Aug., 1916, and to end of December the quantity handled was 31,000 tons. In Feb., 1917, 7,300 tons yielded \$167,000, of which \$106,500 was profit.

	Tons		Value	Costs	Profit
Production	Milled	Yield	per Ton	per Ton	per Ton
1914-15.....	30,825	£84,650
1912-13.....	158,395	1,669,540	\$10.5	\$4.1	\$6.5

Officers: Frederick Moser, pres.; Geo. H. Walsh, Jr., treas.; A. P. Stramler, supt.

Cap., \$2,000,000; shares \$10 par. Holds lands through Ario Copper Co., S. A. **Inc.** April 13, 1907, in Mexico. **Cap.,** 500,000 pesos.

Property: 126 hectares, including the Flora, Roma, Bohemia, San Antonio and San Valentin mines, old properties showing silver and copper ores, about 5 miles from the Inguaran mines, on the projected line of the Morelia y Tacambaro railway, partly constructed.

Development: principal work is on the Flora and Bohemia mines, with 7 shafts aggregating 500' depth, and 12 tunnels aggregating 2,600' length. La Roma has ore assaying up to 25% copper. Equipment includes steam and gasoline power.

Patzcuaro, 70 miles distant, is the nearest railway point.

INGUARAN; COMPAGNIE D'

MEXICO

Office: 56 Rue de Provence, Paris, France. **Mine office:** Inguarán, Ario, Michoacán, Mex. Ch. Laforgue, gen. mgr.; Maurice Armand de Lille, agt.; J. L. Philips, supt.

Inc. Jan. 15, 1898, in France. **Cap.,** 12,000,000 francs, shares 500 francs par. Is controlled jointly by the French house of Rothschild and the Banque Mirabaud; a considerable portion of the company's stock is owned by the

Companie du Boleo. Property is said to have cost 1,500,000 pesos, and company reported to have expended about \$8,000,000 thereon, which is undoubtedly overestimated.

Property: 185 hectares, and a mineral zone of 5,000 additional hectares, in the Tacambaro district 70 miles north of the Balsas river, Michoacán, lying on the plateau of the volcano Jorullo, 1,500' above the plains.

Geology: the Inguarán mountain is traversed by a dike 2,000 to 3,000' wide, of fine-grained pink granite, or granodiorite sprinkled with grains of copper glance and copper pyrite. This dike is traceable several miles across country. The granite rock is sprinkled with specks of chalcocite and chalcoppyrite forming a disseminated, or so-called porphyry deposit whose payable ores occur in belts or bands in the dike. Proven depth of the ore is about 300 meters, at which point it apparently cuts off.

Development: by a 2,500' tunnel and 2 main shafts, deepest 350', with levels opened at 80' intervals. Both ore and country rock are exceedingly firm, little timbering being required. Estimates of size and value of the orebodies vary greatly, but the best authorities estimate an average of 3.25% copper, with 2,000,000 to 3,000,000 metric tons of ore blocked out. The ore is not well adapted to wet concentration as the metallic sulphides are firmly interlocked with the granitic minerals, but it is admirably adapted to treatment by froth flotation of the Minerals Separation Co., and apparently could be put about 8 or 10 into 1.

The Inguarán was the particular bugaboo of the copper situation at the end of the nineteenth century, the exigencies of the buyer's demanding that there always be some mine, just about to begin production, that can make several hundred million pounds of copper yearly at a merely nominal cost. The Inguarán has a large body of low-grade ore, but it is not equal in quantity or quality to that of several of our other "porphyry" coppers.

The property has been idle some years and cannot become a serious producer until rail connections are secured; judging from the very leisurely progress of the past decade it will become a large producer about the time that Gabriel blows his horn.

MICHOACAN RAILWAY & MINING CO., LTD.

MEXICO

Address: G. A. Mitchell & Co., secretaries, 2 Suffolk Lane, Cannon St., London, E. C., England. **Mine office:** Angangueo, Michoacán, Mex. **Works office:** Ocampo, Zitacuaro, Michoacán, Mex. G. A. Mitchell, C. H. Potter, W. J. H. Moll, and T. B. R. Scott, directors.

Inc. Jan. 29, 1889, in Great Britain. **Cap.**, £105,364; shares £1 par, in £21,015 "A" non-cumulative 7% preference shares, £12,190 "B" non-cumulative 7% preference shares, £70,745 ordinary shares, and £1,414 founders' shares; issued £99,370. Debentures, £27,090 of 5% prior lien bonds, and £103,000 of 4% mortgage bonds. Is £61,800 in arrears of interest on mortgage bonds. The railway rights originally held have been disposed of to the Michoacán & Pacific Railway Co., in which the company has a £60,000 share interest in addition to £18,600 bonds held.

Report for 1914 shows income, £3,343 and loss of £5,188; for 1915, £1,554 income with loss of £5,825.

Property: 537 hectares known as the Angangueo silver mines, opened by tunnels and variously reported to have 14 to 30 kilometers of workings, was leased, 1909, for 10 years, to the American Smelting & Refining Co., and this lease has been extended until July, 1933, at a minimum annual rent of \$50,000 (Mexican) and ½ the net profits.

Conditions in Mexico resulted in intermittent work by the A. S. & R. Co. The Government operates the railway to a limited extent.

STATE OF NUEVO LEON

MONTEREY MINING, SMELTING & REFINING CO., S. A. MEXICO

(Compania Minera, Fundidora y Afinadora, S. A.) Monterey, Nuevo León, Mex. Juan M. Weber, general manager. **Cap.**, \$8,000,000; shares \$100 par.

Property: includes the Ocampo and Santa Elena mines, at Mineral de la Mula, carrying gold, copper and lead ores; La Cruz y Anexas mines, at Pánuco de Coronado, carrying silver-lead and copper ores; the Cinco de Mayo group at Lampazos, Nuevo León, producing iron fluxing ores; and a mine at Naica, Chihuahua, Mex.

Company operates a lead smelter and silver-lead refinery, in direct competition with the American Smelting & Refining Co., at Monterey. The smelter also handles small quantities of copper, which is disposed of in the form of matte.

Production: 1912: was 13,919,107 kgs. lead, 238,555 kgs. silver and 3,158 kgs. gold. Probably idle since revolution started in Mexico.

MONTEREY SMELTING & REFINING CO.

MEXICO

Monterey, Nuevo León, Mex. Controlled by American Smelting & Refining Co., which see.

STATE OF OAXACA

LA FORTUNA MINING CO.

MEXICO

Idle. **Office:** 221 Colorado Bldg., Washington, D. C. **Mine office:** Apartado 21, Ocotlan, Oaxaca, Mex.

Officers: C. E. Miller, pres.; Wm. H. Brown, first v.p.; E. D. Stinson, 2nd v.p.; Amos Tyree, sec.; W. H. Brown, treas., at last accounts.

Inc. 1906 in South Dakota. **Cap.**, \$250,000; shares \$10 par; non-assessable; outstanding, \$230,000.

Property: 30 hectares, known as the Treadwell group, about 3 miles from Ocotlan and one-half mile from the Oaxaca-Taviche branch of the Mexican Southern railway, shows a well-defined nearly vertical fissure vein of 2 to 12' width, cutting bedded andesite tuffs, greatly leached and oxidized to depth of 300'.

Development: by a 400' vertical shaft, with 700' of workings, two 100' prospect shafts and 4 tunnels of 700' aggregate length. Workings show chalcopryrite, with quartz gangue, estimated by company to average 4.5% copper and 200 grams silver per metric ton. Some ore was shipped returning 14% copper and 600 grams silver per metric ton.

Equipment: includes a 30 h. p. boiler, hoist and a small air compressor for hammer drills.

Is a copper mine, whose silver output is a by-product only. Idle since 1912 owing to conditions in Mexico.

SAN MARTIN y ANEXAS, S. A.; COMPANIA MINERA. MEXICO

Office: Aptdo 145, Oaxaca, Mex. **Mine office:** San Martín de los Cansecos, Oaxaca, Mex.

Officers: Frank M. Leonard, pres. and gen. mgr., 312 E. 2nd St., Tucson, Ariz.; Lic. Jesús Acevedo, v. p.; Ranulfo Bravo, sec.-treas. and supt.; preceding with Frank J. Woods and Alfredo Castillo, directors, at last accounts.

Inc. Jan. 15, 1907, in Mexico. **Cap.**, 400,000 pesos; shares 10 pesos par. in 35,000 fully paid shares and 5,000 assessable shares, issued 37,995 shares.

Property: 53 pertenencias, including El Billeto de Banco, King Dodo, La Liga, Las Virginias, La Maria and La Roseta mines, about 10 miles from Ocotlan. Property shows diorite cut by a 6' vein carrying silver ore assaying 5 kgs. silver and 50 grams gold per ton.

Development: a 160' shaft, on the Maria, an 80' shaft on the Billeto de Banco and a 350' tunnel on La Liga claims.

The political conditions in Mexico have stopped operations, but company keeps up tax payments and keeps watchmen at the mine. Property considered promising.

TEZIUTLAN COPPER CO.

MEXICO

Inc. in New Jersey. **Cap.**, \$1,000,000; shares \$100 par. Is controlled, through ownership of entire stock issue, by Teziutlán Copper Mining & Smelting Co., which see. Fully described Vol. V, Copper Handbook.

TEZIUTLAN COPPER MINING & SMELTING CO.

MEXICO

Offices: 82 Beaver St., New York. **Mine offices:** La Aurora, near Teziutlan, Puebla, Mexico; and Tjutla, Oaxaca, Mexico.

Officers: S. W. Reynolds, pres.; C. J. Peabody, v. p.; D. C. Brown, v. p. and gen. mgr.; R. E. Safford, sec.-treas.; with E. W. Gould, Jr., R. H. Cromwell, W. F. Gillesby and Isaac Jackson, directors.

Inc. April, 1905, in New Jersey. **Cap.**, \$10,000,000; shares \$100 par. Controls, through entire stock ownership, the Teziutlán Copper Co., and has a close working agreement with the Compañía Metalúrgica Mexicana. State Street Trust Co., Boston, transfer agent. Annual meeting, first Thursday in June.

Dividends: have been paid as follows: \$100,000 in 1903; \$350,000 in 1904; \$495,216 in 1905; \$800,000 in 1906; \$800,000 in 1907; \$300,000 in 1908; none in 1909-10; \$400,000 in 1911; \$400,000 in 1912 and \$300,000 in 1913; none since on account of revolution in Mexico, causing suspension of work.

Property: La Aurora and Ocote mines, the former with 4,500 acres, 12 miles from Teziutlán, and about 130 miles E. of the City of Mexico, with a 16-acre smelter site, and 2,500 acres of miscellaneous lands, including La Chignautla limestone quarry, about 3 miles from the smelter. The climate is equable, and the mines are surrounded by fine arable lands, with an adequate supply of good labor.

Los Ocotes group, 240 hectares, bought Oct., 1905, is 2½ miles N. of San Martín, Ejutla, Oaxaca, Mex., and includes the San Juan mine, which is one of the few copper properties that has paid for development from production, since inception, and in addition, has given a profit, the mine having been a steady producer since 1900. This property shows 4 fissure veins, in porphyry. The one worked in the San Juan mine varies from 2 to 30' in width and has lenticular shoots of quartzose-chalcopryite ore without zinc, antimony, arsenic or bismuth. The ore averages 4 to 5% copper, and 15 oz. silver per metric ton, with a trace of gold, and the mine has produced considerable ore carrying up to 11% copper and 4 kgs. of silver per metric ton.

Development: by 4 shafts, 1 for ventilation. The San Juan or main is 830' deep, and is connected on the 7th level with the Dolores shaft, 200 meters to the N., of 164 meters depth having 9 levels. The San Francisco shaft, 475 meters S. of the San Juan, is not yet connected with the main workings. The mine is quite dry, making only about 25,000 gals. of water daily. Ore reserves were estimated March, 1912, at 1,000,000 tons.

Equipment: at the San Juan mine of Los Ocotes group includes steam, gas and electric power, with steam hoists good for 500 meters depth, at the San Juan and Dolores shafts, and a 6-drill Rand air compressor. There also is an old mill erected by the former owners near the San Juan shaft.

The company owns a private narrow-gauge railway, of 12 miles length, from La Aurora mine to Teziutlán, where connection is had with the Inter-oceanic Railway of Mexico. This line has 2 Shay mountain-climbing locomotives, with a Rogers switch engine at the works. A railway is projected from Teziutlán to the port of Nautla, on the Gulf of Mexico, a distance of 100 miles, which would give a direct outlet, and reduce transportation charges, which are very high at present.

The company has 2 aerial tram lines, the lower of 50 metric tons hourly capacity, carrying ore and limestone, and the upper, of 15 metric tons hourly capacity, with automatic loading and dumping devices, carrying limestone only.

A new 500-ton concentrating mill at Aire Libre, Puebla, Mex., electrically operated, and of the most modern and complete equipment, was practically completed at end of 1913, when all work had to be suspended on account of revolutionary conditions.

Smelter: 17 kilometers from Teziutlán, was remodeled and blown in April 8, 1910. Buildings are of concrete and steel and the flow of material is by gravity throughout. Ore is brought from the mine in trains of 4 cars each, passing over a gravity tramway equipped with scales and dumped in two rows of six 250-ton ore and flux bins, having pneumatic gates. There are two 500-ton blast furnaces, doing semi-pyritic smelting, requiring about 7½% charges of coke, charged by cars taking current from a third rail, with motors mounted on the axles, ore being dumped into 65-ton charge hoppers above each furnace. Each hopper is divided into 6 vertical sections, for half the height, each section having 2 gates, operated hydraulically by banks of levers in front of the furnace, permitting charging to any part of each furnace desired, as charging can be done at 10 different points independently. The discharge of the water-jacket piping is visible. The furnaces have 11' circular settlers, of 4' 6" height, with 18" linings, provided with cooling pipes. Under the furnace floor is a 4x7' concrete-lined slag tunnel, which also cares for drainage, slags being granulated and washed out by a jet of water into the river, the launder having a 45' fall. A 10' steel balloon flue leads from the furnaces to the 150' steel stack, of 14' diameter, set on a 30' concrete base.

The converter department, occupying an extension of the furnace building, has a 30-ton electric crane, of 40' span. There are 2 stands and six shells, with fusible discs, tilted electrically. Blister copper is cast into 110-kg. pigs, in tilting moulds carried on trucks, and converter bars, averaging 98.6% in copper tenor, are exported through Vera Cruz for refining at the Perth Amboy works in New Jersey.

The power plant at the smelter has 5 Connorsville blowers of 10,000 cu. ft. capacity each, driven by 100-h. p. individual motors, for furnace blast, and a 40x42" Nordberg double blower, rope-driven by a 350-h. p. motor, for converter blast. There are 2 hydro-electric power plants and the cost of

electric power is figured at \$14 per h. p. year, exclusive of interest and insurance. The 1,000-h. p. hydro-electric installation at the smelter takes water from the Totoyic or Xolat river, through a 3,600' flume, under a head of 150', the company having a government concession for 2,500 liters of water per second from that stream. The second hydro-electric power plant, on the Atexcaco river, 9 kilometers from the smelter, has about 3,000 h. p. available, partially developed by a 1,500-k. w. hydro-electric plant of 4 units, driven by Pelton wheels under a head of 1,340', delivering current at 6,000 volts, which is carried by double transmission lines, each of capacity adequate for the entire load, and stepped down to 440 volts in a transformer station at the smelter.

Production: 6,788,404 lbs. fine copper in 1902; 6,786,488 lbs., in 1903; 7,512,252 lbs. copper, 286,012 oz. silver and 3,057 oz. gold in 1905. The plant has a capacity of about 12,000,000 lbs. fine copper yearly, and was producing early 1911, at the rate of nearly or quite 1,000,000 lbs. fine copper monthly. Employs 2,500 men when working at capacity. The Teziutlán is the most promising and successful copper mine in southern Mexico, and management is considered good. Closed down since 1913, owing to Mexican troubles.

In July, 1917, it was reported that coke and other supplies were being sent to works for resumption of smelting.

STATE OF PUEBLO

AJUICHITLAN MINING & MILLING CO.

MEXICO

Address: Monterey, Mexico. Mines located in district of Toliman, State of Queretero, Mexico, about 25 miles northeast of Bernal station on the National railway, are reached by coach over good roads from Tequisquiapam.

Ore: is gold-silver, occurring in veins in shale. Vein has well defined walls, an average width of 9 metres, and dips east 50°. Average assay of ore from upper level is \$8 per ton, with \$4 to \$6 ore on the level 50 metres below. Ore is blocked out for 50 metres above upper level, company claiming to have 250,000 tons of \$7 to \$12 ore blocked out in the workings. There is a 65-ton mill on the property, water being obtained from a shaft in the arroyo. Output not reported. Mail returned in 1917.

PUEBLA SMELTING & REFINING CO.

MEXICO

Office: 35 Nassau St., New York. **Mexican office:** Isabella Catalica No. 33, Mexico City, Mex. **Mine office:** Cuyuaco, Pueblo, Mex.

Officers: Harvey C. Garber, v.p.; H. H. Nieman, sec.; B. P. Thom, treas.; preceding, with P. W. Luper, Wm. B. Reed, Jr., and I. W. Lofland, directors.

Inc. Oct., 1912, in Delaware. **Cap.**, \$5,000,000; shares \$5 par; non-assessable. Debentures, \$1,000,000 at 6%. Guaranty Trust Co., New York, registrars. Owns a 72% stock interest in the Cia. Minera Explotadora El Magistral y Anexas, and also sundry lands acquired from the Bankers Mining & Development Co., for \$4,250,000 in stock and bonds of the Puebla Smelting & Refining Co.

Property: 28 claims, 1,600 acres mineral lands, 120 acres timber lands, 800 acres coal lands, a 25-acre smelter site and 100 acres miscellaneous lands in the Magistral district.

Ore: property shows limestone porphyry and diorite, orebodies occurring as contact deposits between limestone and diorite, and as replacements in the limestone. Ores carry oxides and carbonates of copper with small quantities of silver bromides, sulphides and free gold in the oxidized

zone. The deeper workings show chalcopyrite associated with hematite having garnetiferous quartz gangue in the sulphide zone.

Development: by numerous tunnels of from 200 to 750' with about 6,700' of workings, showing ore said to average 3.5% copper, 70 grams silver and 1.5 grams gold per ton.

Equipment: company claims to have a power plant consisting of two 400 h. p. Babcock & Wilcox water-tube boilers, a 300 h. p. Allis-Corliss engine, a 200-h.p. Hughes-Philips Corliss engine, and a 225-k.w. Westinghouse generator.

Due to the revolution the property has not been operating since 1913.

MEXICANA; COMPANIA METALURGICA.

MEXICO

Offices: 82 Beaver St., New York, and No. 26, Ave. 16th de Septiembre, Mexico City, D. F.

Officers: D. C. Brown, 1st v.-p.; C. J. Peabody, 2nd v.-p.; R. E. Safford, sec., asst. treas., preceding with H. H. Dean, G. F. Peabody and R. H. McCarter, directors.

Inc. 1890, in New Jersey. **Cap.**, \$4,000,000; shares \$100 par; fully issued; in \$1,000,000 cumulative 8% preferred stock, \$1,250,000 guaranteed 6% second preferred stock, and \$1,750,000 common stock.

Bonded debt \$2,774,700 first gold 5s. dated July 1, 1901, due July 1, 1931; interest A. and O.I. at company's New York office. Coupon (principal may be registered) \$1,000, and registered in multiples of \$100. Guaranty Trust Co., New York, trustee. Authorized \$3,000,000, of which \$732,700 held alive in sinking fund. Subject to call at 110 and interest. Sinking fund, 2% per annum of amount outstanding; bonds so purchased being kept alive and the interest thereon added to the fund. Interest paid without deduction for normal income-tax.

Guaranty Trust Co., New York, registrar. No dividends to date.

Property: interests are extensive, including control of numerous subsidiary mining, transportation and land companies, among the more important being the **Sombrerete Mining Co.**, and the **Mexican Lead Co.**, at Sombrerete, Zacatecas, Tex., the **Montezuma Lead Co.**, **Alvarez Lead & Timber Co.**, **Mexican Mineral Railway Co.**, and **Potosi & Rio Verde Railway Co.**

The **Veta Rica** mine owned outright at Sierra Mojada, is an important silver-lead producer. Development is by a 600' shaft.

Other important producers are the silver-copper mines at **Concepcion del Oro**, State of Zacatecas. The **San Pedro** and **San Pablo** mines at Monterey are also important producers of lead and the mines of the San Pedro district at San Luis Potosi are heavy producers of silver, gold and lead ores, constituting the main supply of ore for the company's custom smelter, at San Luis Potosi.

The **smelter**, treating about 1,000 tons daily, has a modern equipment, including 12 furnaces for the reduction of gold, silver and lead ores, and a special copper department of 100 tons daily capacity. The works have steam and electric power, and employ about 1,000 men. In addition, there has lately been completed the Carmen 250-ton cyanide plant for cyanidation of lower grade ores from the San Pedro mines.

The company is a large producer of lead and silver, with outputs of

copper and gold, secured mainly as by-products, and is active and enterprising in the rejuvenation of old properties and the development of new mines.

NATIONAL METALLURGICAL CO.

MEXICO

(A subsidiary of the American Smelting & Refining Co.)

Office: 120 Broadway, New York. **Smelter** at Matehuala, San Luis Potosi, Mex.

Inc. Aug., 1901, in Colorado. **Cap.**, \$1,000,000; shares \$25 par. Bonds have been retired. Annual meeting, last Tuesday in July.

The principal mines of the Matehuala district, San Luis Potosi, Mexico, are connected with the smelter by a 7-mile narrow-gauge railway.

The smelter, connected by a spur, with the Mexican Central railway, receiving ore by rail and burros, has 3 blast furnaces with a 30-ton reverberatory furnace used for flue dust. Product is matte, averaging 45% copper, 50 to 200 oz. silver and 1 oz. gold per ton, shipped to the Aguascalientes smelter for conversion.

MEXICO

Office: 10 Cinco de Mayo, San Luis Potosi, Mex. **Mine office:** Matehuala, Catorce, San Luis Potosi, Mex. **Pedro Barrenechea**, pres.; **Edgardo Mead**, sec.; **W. B. A. Dingwall**, gen. mgr. at last accounts.

Inc. in Mexico. **Cap.**, 240,000 pesos; shares 25 pesos par. From 1895 to 1904 inclusive, the mines yielded 11,327,210 pesos worth of ore, and the company paid 5,778,270 pesos dividends therefrom.

The mines, which are extensively developed, carry gold and silver-bearing copper and lead ores, with values mainly in silver and lead, the gold and copper being by products. The ores are mined to depth of 1,500'.

Equipment: includes steam and electric power. The reduction plant includes a 300-ton concentrator with Blake crushers and Chilean mills, and a smelter with two 40-ton furnaces. Company employed about 1,500 men, but closed down 1913, on account of revolution.

TIRO GENERAL DE CHARCAS MINE

MEXICO

Mine address: Charcas, San Luis Potosi, Mex. Owned by Cia. Metalurgica Nacional de Matehuala, controlled by the American Smelting & Refining Co. Mine was formerly owned by the Cia. Minera del Tiro General, S. A.

Property: 72 pertenencias, 178 acres, with 46-acre mill site, and 50-acre farm, in the Venado district. The mine, an antigua, discovered 1583, was worked on a small scale for 3 centuries, and in a larger way since 1859. It shows 2 main ore zones, carrying fissure veins in porphyry, near a limestone contact, with a generally E.-W. strike and dip of about 70°. The N. vein, of 3 to 8 meters width, with known length of 500 meters, is opened to depth of 1,361', showing chalcopryite and sphalerite estimated by the management to average 2% zinc, 430 grams silver and 8 grams gold per metric ton. There are 9 tunnels, 4 reported by the management to be of 656' each, and 5 of 1,312' each, the mine having 13,123' of workings. The mine and works, when operating normally, employ about 1,200 men.

Equipment: includes a 700-h. p. steam plant, with hoists of 100-h. p. and 175 h. p. and a 10-drill air compressor, and some use is made of malacates at the shallower shafts. Buildings include an engine house, combination smithy and carpenter shop, machine shop, general store, office, laboratory, warehouses, a hospital, 5 dwellings for officials, and accommodation for 40 Mexican families. There is a 10-stamp mill and a 150-ton concentrator, having Blake crushers and 5 sets of rolls, with trommels and other necessary equipment. The mill has 10 Sutton, Steele & Steele pneumatic dry concentrators, treating

sulphide ores and giving a preliminary lead concentrate, cut out from the final zinc concentrate, the latter being a 45% zinc product, secured largely from rosin jack.

Officers: R. A. Thomas, pres.; A. E. Pomeroy, 1st v. p.; C. J. Heyler, 2nd v. p.; J. R. Thomas, sec.; A. M. McDermott, supt; preceding with E. R. Jeffrey, A. J. McDermott, W. W. Thomas and A. Gleason, directors.

Inc. May, 1902, in Arizona. Cap., \$5,000,000; shares \$1 par, nonassessable; issued, \$3,155,534. Is protocolized under laws of Mexico. Owns 45% of the stock issue of Los Platanos Development Co. Annual meeting, first Monday in October.

Property: 269 hectares, some distance from a railway, on both sides of the Rio Fuerte, in El Fuerte district of Sinaloa and Urique district of Chihuahua. Orebodies are claimed to be large, occurring as contact deposits between diorite and limestone and porphyry and limestone, with fissure veins in granite and quartzite carrying gold and silver. Property includes several antiguas.

Shipments of 1,062 tons of ore, to the Aguascalientes smelter, gave returns of 19.5 to 28% copper, with gross values of \$127,915.44 and net values of \$47,940.61.

A 100-ton smelting plant, purchased 1911, has been received, but not installed, owing to revolutionary disturbances in Mexico. Company awaiting peaceful conditions before resuming operations.

Officers: A. M. McDermott, pres. and gen. mgr.; C. F. Iredell, v. p.; J. L. Davidson, sec., with R. E. Small and W. W. Thomas, directors. E. B. Hosford, mine supt.

Inc. Dec., 1909, in Arizona. Cap., \$1,200,000; shares \$10 par, nonassessable; issued, \$280,000. Operates through Cia. Exploradora de Los Platanos, S. A., inc. in Mexico. Merchants' Trust Co., Los Angeles, transfer agt. Annual meeting, first Monday in October.

Property: 96 acres, bought of Choix Cons. Mining Co., Ltd., 3 miles from Choix, and 40 miles from Fuerte, the nearest rail point. The eastern extension of the Kansas City, Mexico & Orient railway is planned to pass within 10 miles of mine.

Property shows diorite, cut by dikes of andesite, crossed by shear zones, of 30 to 100' estimated width with length of 2,500'. These zones carry ore shoots connected with a system of cross-fractures. The upper portion of one vein shows flakes of native copper, near surface, succeeded by a leached zone. The other vein is entirely leached near surface, except for occasional copper stains, and small bunches of ore. Ore is estimated by management to average 7% copper, 1.5 to 2 oz. silver and 60c to \$1.50 gold per ton.

Development: includes 1,500' of workings, estimated by the management to show 12,000 tons of ore. Records of 1,093 tons of ore shipped show average returns of 21.8% copper and 5.5 oz. silver per metric ton. The discard from these shipments, about 7,500 tons, is estimated to average 4% copper and 1.5 oz. silver per ton.

Equipment: includes a hoist, and several buildings. Idle several years owing to unsettled conditions in Mexico.

SAN LUCAS COPPER CO.

MEXICO

See El Magistral Copper Co.

SINALOA SMELTING & REFINING CO., S. A.

MEXICO

Subsidiary of the Pacific Smelting & Mining Co.

TAJO; MINAS DEL.

MEXICO

Mine at Rosario, Sinaloa, Mex. Owned by the Bradbury Estate, Bradbury Bldg., Los Angeles, Cal. Is one of the great gold-silver mines of Mexico, showing a big fissure vein in andesite, developed to 1,000' in depth. Working \$8 ore from old fills and pillars, above 600' level, 1916. Has a very complete equipment with 1,000-k. w. gas producer-electric plant.

The mill was handling about 250 tons per day, 1916. In June, 1917, milling was restricted by shortage of cyanide.

WEST COAST MINING & SMELTING CO.

MEXICO

Idle. **Office:** 30 Church St., New York. Mocorito, Sinaloa, Mex. Howard L. Haines, pres.; Chas. M. Hicks, sec.

Inc. 1906, in Maine. Cap., \$2,500,000; shares \$1 par; nonassessable; in \$500,000 of 7% cumulative preferred stock and \$2,000,000 of common stock.

Property: 6 groups, 387 acres, 5 to 20 miles from Mocorito, and 12 to 40 miles from Carbo. Principal property is Los Tajos group, 357 acres, showing andesite, cut by narrow fissure veins of 4' average width that are said to carry chalcoprite ore. The River mine, has a 150' shaft, on a vein of 5 to 8' reported width, carrying ore said to average about 5% copper and \$3 per ton in gold and silver.

Equipment: a 70 h. p. steam plant, a small compressor and 6 drills. The 30-ton experimental concentrator has a Blake crusher, 2 rolls, 2 Bartlett tables and 3 screens. The smelter, at the mine, has a 50-ton water-jacket blast furnace.

STATE OF SONORA

ABUNDANCIA MINING CO., S. A.

MEXICO

Address: Puerticitos, via Cananea, Sonora.

Inc. May, 1912, in Mexico, by O. L. Neer of Douglas, Ariz.; Apollo Fuller, of Boston, and W. C. Webster, Los Angeles.

Property: lease and bond on the Abundancia claim, 30 hectares, 5 miles west of Cananea on west slope of mountain. Formerly held by West Cananea Mining Co. and later bonded by Copper Queen Consolidated Mining Co., relinquished 1909. Was shipping from 150 to 200 tons monthly of 9% ore from open cuts and tunnels at last accounts.

AMERICAN-MEXICAN SMELTING & REFINING CO.

MEXICO

Is a subsidiary company of the Pacific Smelting Co. T. C. Kirkland,

mgr., Fundicion, Sonora Mex. Idle owing to revolutionary conditions during most of 1914-16.

ANITA COPPER MINES CO., S. A.

MEXICO

Office: Fundicion, Sonora, Mex. Geo. M. Ryall, pres.; T. C. Kirkland, asst. gen. mgr.

Inc. 1904 in Mexico, and now controlled by Pacific Smelting & Mining Co. Sub. Pacific Sm. & Mng. Co.

ARNOLD MINING CO.

MEXICO

Mine office: Santa Cruz, Sonora, Mex. E. D. Arnold, pres.; A. O. Koppes, mgr.

Property: the Del Pilar mine, about 35 miles N. W. of Cananea, developed by a 400' shaft, showing ore said to carry 10% copper. Employs about 25 men. Property was reported sold to the Manhattan Development Co., for \$88,000, May, 1913. No recent information obtainable.

BONANZA MINING CO.

MEXICO

Office: Cananea, Soñora, Mexico.

Officers: Geo. Kingdon, pres.; C. T. Knapp, v. p.; Geo. Young, sec. treas.; Casey Stites, asst. sec.; preceding officers and M. J. Elsing, directors. Is the operating Mexican corporation of the Superior Bonanza Mining Co., which see.

Inc. June 7, 1904, in Mexico. **Cap.**, authorized and issued, 10,000 pesos; par value of shares \$1 (Mexican). Holds title to the mineral properties of that company, located near Imuris, Sonora, Mex., consisting of 198 pertenencias, or approximately 491 acres. Controlled through stock ownership by Greene Cananea Copper Co. Purchase was made in 1911, but the mine has not been worked since that time. Contains a silicious ore, low in copper content, but with notable quantities of gold. Was purchased to provide a reserve of flux for the iron in the Cananea ores.

BOSTON SONORA MINES CO.

MEXICO

Inc. about Dec., 1911, in Arizona, by Thomas Patterson, Wm. A. Clark, H. C. Wilderson, James V. Howard and Royal B. Young, all of Massachusetts. **Cap.**, \$1,000,000; shares \$5 par.

Property: at Cananea, Mexico, includes several claims near the Calumet-Sonora (Carnegie Lead & Zinc Co.) ground, crossed by several replacement veins showing bunches of good ore in the shallow pits and prospect shafts thus far put down. Is a prospect only.

BUFA MINING, MILLING & SMELTING CO.

MEXICO

Idle. **Office:** 1030 I. N. Van Nuys Bldg., Los Angeles, Cal. Mine at La Bufa, Sahuaripa, Sonora, Mex. Wm. E. Richardson, pres. and gen. mgr.; H. A. Sibbet, v. p.; Baron W. Riley, sec.; Frank R. Richardson, treas.

Inc. 1902, in Arizona. **Cap.**, \$1,500,000; shares \$1 par. Has paid 5 dividends, last being \$60,000, July, 1905.

Property: 123 acres, a 10-acre mill site, and 5,000 acres ranch lands, showing 6 fissure veins, of which 2 under development average 4' width, opened by a 600' incline.

Ore: said to give average assays of 10% copper, 10% lead, 4% zinc, 150 oz. silver and \$2.50 gold per ton, from argentiferous tetrahedrite and copper sulphides.

Development: shafts of 300' and 600', and a 225' tunnel, with 8,000' of workings and about 20,000 tons of high-grade ore said to be blocked out, with a considerable amount of low-grade ore on the dump, for eventual treatment.

Equipment: includes a 120 h. p. plant at the mine, with 2 hoists, 2

Rand air compressors and 7 power drills. Mine buildings include several small shops, a store, sawmill and about 20 dwellings.

The 35-ton concentrator has a small sampling mill attached. There also is a 20-ton leaching plant.

The smelter, at the mine, receives ore by gravity tram. Equipment includes 10-ton and 25-ton reverberatory furnaces, built of silica brick, made on the ground. Fuel is inferior wood, cut on the premises. Product is a matte carrying 50% copper, 600 to 800 oz. silver and 1.5 oz. gold per ton, shipped, by burro, to Aguascalientes, via Guaymas, for refining, some rich ore being shipped also. Production, 1906, was about 750,000 lbs. fine copper. Management said to be waiting for peace to resume operations.

CADENA DE COBRE MINING CO.

MEXICO

Address: care C. A. McDonald, sec., Bisbee, Ariz. Mine office: Sahuaripa, Sonora, Mex.

Officers: Emil Marks, pres.; C. H. Holz, v. p.; M. Newman, treas.; R. F. Koehler, J. Pennypacker and John Treu, directors; Arthur Houle, cons. engr.

Inc. Jan. 5, 1905. Cap., \$1,000,000; shares \$1 par. The former directors issued to themselves 550,000 shares of stock, and when this was learned the old board resigned and suit was brought, resulting in the cancellation of the stock so issued, it having been a grab, pure and simple.

Property: 84 hectares, in Los Chinos mountains, on the Yaqui river, shows iron outcrops up to 300' in width.

Development: by the 96' Bisbee tunnel, showing ore assaying 4 to 25% copper, with small gold and silver values, and 2 shorter tunnels. Idle on account of revolutionary disturbances in Mexico. Property was fully reported on by Arthur Houle, E. M.

CALUMET-SONORA MINING & MILLING CO.

MEXICO

Bonds foreclosed, Feb. 13, 1915, and property sold to R. P. Burgan for \$82,000. New company organized as Carnegie Lead & Zinc Co., which see.

CANANEA CONSOLIDATED COPPER CO.

MEXICO

Owned by Greene Cons. Copper Co., which is controlled by the Greene-Cananea Copper Co., which see.

CANARIO COPPER CO.

MEXICO

Address: Hon. J. B. Wright, Tucson, Ariz.

Officers: J. P. Harvey, pres.; F. O. Schellenberg, v. p.; Hon. J. B. Wright, sec.; E. J. Chapman, treas., and William McDermott, directors.

Inc. in Arizona. Cap., \$2,000,000; shares \$1 par; 600,000 issued. Registrar & Transfer Co., New York, transfer agent; Commercial Trust Co., New Jersey, registrar. Company owns all the capital of El Canario Copper Co., of Mexico, which see.

CARACAHUI MOUNTAIN COPPER CO., LTD.

MEXICO

Office: 3222 Jefferson St., Kansas City, Mo. Mine near Llano, Magdalena, Sonora, Mex.

Officers: M. H. Greene, pres. and gen. mgr.; Chas. M. Howell, v. p.; H. J. Sprink, sec.-treas.; preceding officers, T. McClure, J. C. Brewer, Thos. James and Wm. R. Berryhill, directors.

Inc. May 20, 1907, in Arizona. Cap., \$1,500,000; shares \$1 par, non-assessable; issued \$964,000. Annual meeting, first Tuesday in June.

Lands: 2 groups, 50 hectares, 9 miles S. E. of Llano, said to show 20 paralled veins in granite, 8 in a cross section of about 250', reported as 4 to 60' in width, and traceable 1 mile, carrying cuprite, malachite and chalcocite. Ore said to average 10 to 40% copper, 4 to 40 oz. silver and \$2 to \$10 gold per ton.

Development: by shafts of 50' and 410', and a 195' crosscut tunnel.

Equipment: includes a 40 h. p. boiler and 8x10" hoist good for 1,000' depth, with smithy, superintendent's house and 6 dwellings for workmen. Idle since 1910, but company has no bonded indebtedness, pays all taxes and expects to resume work as soon as peace is restored in Mexico.

CARMAN CONSOLIDATED COPPER CO.

MEXICO

Mine near Arizpe, Sonora, Mex. Joseph Backus, of Virginia, Minn., pres., reported to have taken over the property for an indebtedness of \$50,000 in 1916 and to be planning organization of new company.

Inc. 1906. Cap., \$500,000, increased to \$750,000; shares \$2.50 par. Held title to lands through Compania de Oro y Plata, S. A., inc. in Mexico.

Lands: 351 pertenencias, 877 acres, in 9 groups, in the vicinity of the Pedrazzini and Chispas mines, show several strong veins, with 1,911' of workings. The Carman and Don Placidio groups have dumps carrying about 1,100 tons of ore, claimed to average 4.65% copper, 62.2 oz. silver and 0.21 oz. gold per ton. The Blanca Rosa group gives ore assaying up to 16.8% copper, 77 oz. silver and 0.42 oz. gold per ton. The Maria group has given ore assaying 3% copper, 107 oz. silver and 1.32 oz. gold per ton. Los Toros group has given ore assaying 4.2% copper, 29% lead, 38 oz. silver and 0.03 oz. gold per ton. Shipments to El Paso smelter have given returns ranging from \$82.98 to \$4,575.79 per ton.

CARNEGIE LEAD & ZINC CO.

MEXICO

Offices: Mills Bldg., El Paso, Tex., and Palladio Bldg., Duluth, Minn. **Mine office:** J. H. Sanford, Jr., mgr., Aptdo. 265, La Mesa, Cananea, Son., Mex.

Officers: R. P. Burgan, pres.-gen. mgr., 716 Oliver Bldg., Pittsburg, Pa.; Jesse Norton, v. p.; C. A. Williams, sec.; W. W. Wells, treas., with D. T. Helm, J. F. Edmonds, J. H. Sanford, Jr., and C. W. Stilson, directors.

Inc. 1915, in Arizona. Cap., \$500,000; shares \$5 par; 64,749 shares outstanding. **Transfer office:** 510 Sellwood Bldg., Duluth, Minn. Annual meeting June 12. Company is a reorganization of the Calumet-Sonora Mining & Milling Co., described in Vol. XI, which defaulted on payment of interest on the bond issue. Bonds were foreclosed Feb. 13, 1915, and on Feb. 27 the property was sold for \$82,000, to R. P. Burgan, who immediately organized the present company. Shareholders in the Calumet-Sonora Co. were allowed to subscribe for stock in the new company for from 10 to 15% of their holdings in the Calumet-Sonora Company.

Debentures: \$100,000 authorized; \$33,800 issued July, 1917; balance offered stockholders Nov., 1917, in 25% payments, 3 months apart.

Financial statement of March 31, 1916, gave current assets as \$717,070 with \$77,570 assets in excess of liabilities. Statement of receipts gave total of \$125,321, of which \$89,756 was from treasury stock; disbursements amounted to \$116,214 leaving \$9,107 on hand, included were: \$59,500 Carnegie Nat'l Bank; \$12,364, Cananea Cons. Copper Co.; bonds \$17,800 and legal expense \$2,000. Receipts from concentrates April 1 to June 1, 1916, were \$78,364.

Property: 8 claims, Catalina, Chivera, Morena, Norton, Diamante, Sultana, Topo Chico, and Zenith, comprising 255.3 hectares or 631 acres, about 2½ miles N. W. of Cananea, shows fissure veins cutting both diabase and the more recent volcanic tuffs which form the foothills and table lands of the Cananea mountains. Many of these veins show as mere discolorations, or bleaching of the rock, but in places widen into broad masses of leached, silicified ledge matter, resembling the outcrop of the Duluth Cananea. Three veins have been opened by underground workings.

The Chivera mine has thus far been the chief producer of the company.

It has an inclined shaft, 625' deep, with levels at 60', 200', 300', 400', 525' and 625'; developing a well-defined fissure vein in indurated volcanic breccia, or tuff, of varying width that opens out into an orebody 300' long and 150' wide, composed of large and small angular blocks of country rock cemented by argentiferous galena, chalcopyrite and sphalerite, with less abundant tetrahedrite, mixed with quartz. The orebody is in places a glittering mass of galena, but as a whole is a complex mixture of lead, copper and zinc sulphides, the mill feed carrying 4.7% lead, 0.4 to 0.8% copper and 9% zinc. The ore minerals disseminated through the mass of breccia above the 525' level, appear to be concentrating in a narrower ore shoot, 300' long and 50 to 60' wide on this level.

Development: enlarging shaft to 3 compartments from 400' to surface. Loading pockets are planned to facilitate the loading of the ore. Churn drilling is contemplated. Development work reported from Jan. 1 to April 1, 1916, as 620'.

Equipment: includes an electric hoist, a 1,435 cu. ft. electric driven Rand compressor, General Electric motors for all machinery, a 36x24" Farrel crusher, a new set of Allis-Chalmers rolls, 3 Deister slime tables and ample storage bins. Machinery is run by electric current supplied by the Cananea Cons. Copper Co. at 2½ c. per k. w. hour.

Ore is hauled over a surface tram to the concentrating mill. Latter is an old mill, brought from Missouri and altered for local conditions, but a makeshift at best. In this mill the silver-lead ore is taken out and the middling containing zinc and copper are sent to the dry, or electrostatic mill. Tailings average 0.21% lead, 0.12% copper and 0.77% zinc. The dry mill contains Huff electrostatic separators, which separate the copper from the zinc. Concentration is 8.5 into 1, being 87.9% of the lead, 74.8% of the zinc and 70% of the copper in the ore; the lead concentrates carry 33 oz. silver per ton, averaging 70% lead. Shipments of concentrates on hand or in transit up to June 13, 1916, was reported as a total of 1,659.44 tons; lead 592.14 tons; zinc 747.21 tons; copper 320.08 tons.

In addition to the workings mentioned, there is the No. 2 Catalina shaft, now idle and dismantled, 225' feet deep, vertical, with levels at 70', 110', 145' and 212', exposing an oreshoot 2½ to 6' wide and as much as 60' long, but cut by cross faults and not continuously minable. The ore shoot has been practically mined out to the 145' level, yielding about 1,800 tons of antimonial copper-lead ore carrying zinc. This ore is higher in value than that now milled. The vein expands west of the mine into a large outcrop which is the most promising surface exposure seen on the company's property and warrants deep exploration.

The company has a large acreage, at least 2 very promising surface outcrops and a dozen or more fissure veins and should, with proper development, become a large producer of low-grade complex ores. The treatment problem has been solved; total mining and milling costs reduced to \$4.50 per ton and the property splendidly equipped for work. Company plans putting a raise through from the 625' level to surface for ventilation; also sinking to the 700' level.

Plans are drawn for a new concentrating plant and company plans to go ahead with the building of this mill and also a railroad spur to connect the mill and mine. The company will spend \$400,000 on its new improvements. The mill will have a capacity of 500 tons daily and should raise the recovery above 80%, the present recovery. Plans include jigs, tables and oil flotation for slimes and tailings.

Ore reserves estimated October, 1917: broken ore 75,000 tons; ore developed 405,000 tons, with large bodies of probable ore not included in above.

CHICAGO EXPLORATION & DEVELOPMENT CO. MEXICO

Address: Mina Mexico, Sonora, Mex. W. E. Pomeroy, mgr.; Geo. Squire, smelter supt.; Chas. Gercken, mine supt.

Property: 45 miles N. E. of Tonichi, the end of a branch line of the S. P. de M. R. R., produces silver-copper ore and concentrates.

CIENEGUITA CONSOLIDATED MINES MEXICO

Office: 25 Broad St., New York. Is a reorganization of the Cieneguita Copper and Cieneguita Securities companies.

Officers: James F. Whitney, pres., August Gauch, v. p.; R. C. Davenport, sec.; preceding, with Theodore Martin, Geo. D. Christy, C. Trumbull and F. W. Hunt, directors.

Property: 1,100 hectares, about 40 miles S. W. of Sahuaripa, Sonora, is covered by rhyolitic rocks, mostly fragmental and cut by a diabase dike. The Chipiona and the Cargona groups lie close together and the Ostimuri-Tayapa group about 2 miles to the S. E. The rocks are cut by vertical veins, 1 reported to be from 3' to 50' wide, traceable 3 miles and to carry ore shoots averaging about 2½% copper and 40 oz. in silver.

Development: mainly by tunnels, one of 1,200' with 2 shallow shafts and a total of about 3 miles of workings. These workings are not sufficient to block out any large amount of ore, but show that the property has merit and may develop into a large mine.

Equipment: includes 100-h. p. steam plant, a 6-drill compressor and all necessary mine buildings and houses for employes.

A small smelter has Blake crushers and rolls, a 75-ton calcining furnace and two 50-ton reverberatory furnaces, burning wood. Smelting plant inadequate and poorly adapted for the ore. Idle, pending restoration of peace in Mexico.

CONSOLIDATED SONORA MINES CO. MEXICO

C. P. Shaver, sec., care Bank of Thibodaux, Thibodaux, La. Operating office: Douglas, Ariz. Mine near Fronteras, Sonora, Mex. Jas. Beary, pres.; Chas. P. Shaver, sec.-treas.; Chas. McHenry, supt.

Cap., \$3,500,000; shares \$1 par. Is a close corporation.

Property: 1,140 hectares, slightly timbered, on both sides of the Fronteras river, about 25 miles S. E. of Douglas, shows numerous outcrops of ore carrying lead, silver and gold.

Development: on the Mary L. claim includes a crosscut tunnel, intersecting a vein at 425' and a 325' shaft sunk at this point on the vein, is all in ore with 125' of drifting on the 50' level and a 430' drift on the 300' level. Shipments to the Douglas smelter, though profitable, did not pay mining and development costs and mine was closed down, Jan., 1913, on account of repeated depredations at the property and danger to the men from the revolutionary disturbances. Still idle, Dec., 1917.

CONSUELO MINING, MILLING & POWER CO. MEXICO

Subsidiary of the Mines Co. of America, which see.

COPETE CONSOLIDATED COPPER CO. MEXICO

Office: 15 William St., New York. **Mine office:** Francis C. Nicholas, mgr., Box 394, Nogales, Ariz.

Officers: Wm. T. Read, pres.; F. C. Hanford, v. p.; Myra B. Martin, sec.-treas.; preceding, with Ralph Melczer and John C. Morrow, directors.

Inc. March, 1906, in West Virginia. Cap., \$1,000,000; shares \$1 par, non-assessable; issued 549,170½ shares. Annual meeting, first Wednesday in March.

The company was organized to develop the property formerly owned by the Copete Mining Co., under an agreement with that company, title to the property being vested in the Melczer Mining Co., legalized in Mexico, and the entire stock issue of which is held by the Copete Consolidated Copper Co.

Property: 120 pertenencias, comprising the Last Chance, Copetito, Jalisco, Santiago, and El Copete claims, about 173 acres, at El Copete, Sonora, shows an immense gossan capping, apparently the remnant of a great blanket vein, the greater part of which has been eroded away.

Development: by several tunnels and a 615' shaft with about 7,000' of workings. Ores are mainly gold with considerable iron pyrites and some copper, giving average assay values of \$6 per ton. The bottom of the ore zone seems to have been reached at about 300'. Idle, owing to revolutionary disturbances.

It is believed that those in control of the company will use every effort to bring the enterprise to a successful issue and the past may be considered a closed chapter. Those interested in the history of the company will find it given in Vols. X and XI, The Copper Handbook.

COPETE MINING CO.

MEXICO

Office: 15 William St., New York. Myra B. Martin, sec.

Inc. 1900, in West Virginia. **Cap.**, \$5,000,000; shares \$5 par. Owned stock of the Melczer Mining Co., transferred, 1906, to Copete Consolidated Copper Co., which see.

CRESTON COLORADO CO.

MEXICO

Subsidiary of the Mines Co. of America, which see.

CUBAÑA CONSOLIDATED COPPER CO.

MEXICO

Idle. Mine near Arizpe, Sonora, Mex.

Inc. Jan. 6, 1903, in Arizona. **Cap.**, \$500,000; shares \$1 par.

Lands: 244 hectares, bought for \$20,000; show 6 orebodies, of 4' to 20' width, of which 3, carry estimated values of 12% copper, 10 oz. silver and \$2 gold per ton.

Development: 6 shafts, deepest 102', and a number of tunnels, longest 250' and 575', with a total of 1,415' of underground openings. Mine is about 30 miles from Cananea. Sample carload smelter shipments returned 23% copper, with fair gold and silver values. Property considered promising.

DEMOCRATA CANANEA SONORA COPPER CO.

MEXICO

Office: Fourth National Bank Bldg., Cincinnati, Ohio. Mine at Cananea, Sonora, Mex.

Officers: H. H. Hoffman, pres.; C. E. Hoffman, v. p. and gen. mgr.; Herbert H. Hoffman, treas.; H. W. Santen, sec.; preceding, with R. C. Swing, directors.

Inc. May 8, 1905, in Arizona. **Cap.**, \$3,000,000; shares \$10 par; issued \$2,869,970. Central Trust Co., registrar. Annual meeting, last Tuesday in May.

Property: 18 hectares, 44.5 acres, lying between the Capote and Veta Grande, in the heart of the Greene Cananea mines. Orebody is of contact metamorphic origin, consisting of a breccia of fragments of altered limestone, cemented by quartz, bornite and copper pyrite, in a fracture zone 50' wide in limestone. The orebody lies about 300' north of the Democrata shaft and also outcrops in 2 patches of garnet rock surrounded by diorite porphyry, good carbonates being mined at the surface.

Development: comprises a 600' shaft and 1,600' tunnel, with 2 other shafts of 90' and 180', together with 3 tunnels of 300', 110' and 60', aggregating 5 miles of underground workings. On the 500' level, the known orebody proved to be larger than previously estimated and the stopes yielded 5% ore. The East orebody near the Kirk mine, developed by tunnel workings, has also materially increased the proven ore reserves. Average assays at present are 3½% copper and 1.5 oz. silver per ton.

Equipment: includes electrically-operated hoist and air compressor, power being obtained from the Cananea Consolidated Copper Co. Smelter contains 3 blast furnaces of 250 and 300 tons daily capacity, making 36% matte. A converter and electric power plant being installed, July, 1917.

Property was closed down Sept. 1, 1907, to Sept., 1912, since which time the mine operations have been intermittent due to the Mexican revolution. Work was resumed in 1915. When in full operation company employs 500 men.

Production: in 1916, 8,950,600 lbs. copper; 306,000 oz. silver; 1,265 oz. gold. Property is a valuable one.

DOLORES MINING & DEVELOPMENT CO.

MEXICO

Address: care J. E. Dawson, pres., Oakland, Cal.; J. F. Torney, sec.

Inc. Jan., 1910, to take control of the Empire Mining Co., S. A., a company protocolized in Mexico, which owns the Major Domo claim, 5 miles from Cananea, Sonora, Mexico, and 7 other properties, including the Golden Cross silver mine, Magdalena district, Sonora, Mex. See Empire Mining Co.

DULUTH-MOCTEZUMA MINING CO.

MEXICO

Office: Room 610, Lonsdale Bldg., Duluth, Minn.

Officers: Geo. H. Crosby, pres.; Cassius Bagley, v. p.; A. O. Rabideau, sec.; all of Duluth.

Inc. 1909, in Minnesota. **Cap.**, \$500,000; shares \$10 par; \$300,000 issued.

Has no holdings of any kind. Mexican holdings forfeited on account of excessive taxes. Minnesota iron lease sold for enough to clear up indebtedness on same.

DULUTH-SONORA COPPER CO.

MEXICO

Office: 809 Sellwood Bldg., Duluth, Minn. Mine near Cananea, Sonora, Mex.

Officers: B. Silberstein, v. p.; R. P. Burgan, 2nd v. p., with W. D. Underhill, sec.; Theron H. Hawkes, treas.; preceding, with Geo. M. Tallant and A. F. Norton, directors. P. C. Probert, mine and smelter supt. and purch. agt.

Property: about 3,621 acres, embracing a part of the former holdings of the Calumet & Sonora Co., and the South Cananea, or Mitchell, property. The latter shows a strong vein with wide silicious outcrop and has been developed by a 400' shaft and some underground work, but an examination of dumps fails to show ore. Norton shaft, one-fourth mile distant, now filled with water, is said to be 293' deep and to show good ore, but none is seen and outcrop is unpromising. Remainder of property considered of questionable value. Property has been examined by Verne A. Hart and Walter Harvey Weed. Idle since 1910. Is a prospect only.

EASTERN CANANEA DEVELOPMENT CO.

MEXICO

Idle. Mine about 18 miles N. E. of Cananea, Sonora, Mex. John Martin, supt., at last accounts.

Property: said to show copper sulphide ore, developed by shaft, is held under lease and bond from M. L. Fay, of Duluth, Minn., who controls the Fay Cananea Copper Co., which owns the mine through the Cananea Eastern Mining Co., S. A., a Mexican corporation. No returns secured.

EL CANARIO COPPER CO.

MEXICO

Owned by Canario Copper Co., which see for officers.

Address: Hon. J. B. Wright, sec., Tucson, Ariz.

Property: the El Canario mine, 15 miles E., and the Lillie and Lillie Segunda mines, 3 miles W. of Nacozari, Sonora, Mexico. The El Canario adjoins La Caridad of the Moctezuma Copper Co.

Development: El Canario ore carries copper in the form of enargite. The main vein is said to be large, made up of "disseminated, replaced and enriched porphyry." A 400' tunnel, in a vertical depth of 300', has cut 15' of sulphide ore and was expected to cut the main orebody within 50'. Shipments to Douglas were expected to be made early in 1918, and a 300-ton flotation plant has been designed.

The Lillie mine is considered to be one of the richest and most promising in the district. The vein outcrops boldly for several thousand feet and is 3 to 50' wide; it has a footwall of quartzite. Development is by 3 tunnels; No. 3 will gain a depth of 600' on dip of the vein, and was expected to enter the ore zone within 500' from portal. A winze below No. 1 tunnel opened 45-53% copper ore, with fair gold contents. Three carloads of 22% ore had been sent to Douglas to Nov. 30, 1917, but 40% ore is to be shipped. This ore is packed by burros to Nacozari at a cost of \$2.50 per ton. A compressor is to be erected.

The Lillie Segunda adjoins the Lillie on the S. and E. It is said to have a

"gigantic porphyry orebody, 1,000' wide and about 6,000' long." The company's engineer is reported to have said, "I fully believe that Lillie Segunda is one of the most extensive and highest grade disseminated porphyry coppers that has ever been discovered in North America." The deposit is being developed by shafts.

Company apparently has three promising properties, about which the management is highly optimistic.

ELENITA DEVELOPMENT CO.

MEXICO

Office: 1400 Alworth Bldg., Duluth, Minn.

Officers: Henry B. Paull, pres.; E. J. Maney, v. p.; F. R. Kennedy, sec.-treas.; preceding, with Thos. F. Cole, C. d'Autremont, Jr., I. B. Joralemon, directors.

Cap., originally \$200,000, was increased, 1907, to \$400,000; shares \$10 par; paid in, \$7; issued 27,310 shares. Owns entire stock issue of the Lomita Mining Co., S. A., a Mexican corporation that holds direct title to the land.

Property: the Bonanza de Cobre mine, 1,628 acres, at Cananea, lies north of the smelter and extends to a point nearly opposite the Puertecitos mines of the Greene Cananea.

Development: by 2 shafts and 5 tunnels, mine being wet at slight depth and giving, as far as developed, mainly silver-lead and zinc ores with a little copper. Property inactive since early in 1913.

EL GLOBO MINING & MILLING CO.

MEXICO

Mine near Nacozari, Sonora, Mex.

Inc. 1905, in Arizona. Cap., \$400,000; shares \$10 par.

Property: 80 hectares, about 20 miles east of Nacozari, the nearest rail point. Mine has a shallow shaft and a 1,600' crosscut tunnel, cutting a vein with a back of about 1,000'. Ore values are mainly gold and silver.

Equipment: includes a 25-h. p. electric plant, with a 15-stamp mill having 2 Wilfley tables and a small cyanide plant.

Idle many years.

EL TRIUNFO CONSOLIDATED MINING CO.

MEXICO

Idle. Mine office: Bacoachi, Arizpe, Sonora, Mex.

Officers: A. C. Charlot, pres. and gen. mgr.; Dr. S. Newton Leo., v. p.; A. L. King, treas.; preceding, with T. B. Johnstone, Albert Reineman, Julius G. Miller, Henry Stern, Wm. H. Freystadt, I. Neuberger, A. H. Wand, D. Powdermaker, Dr. Moritz Gross, Adolph Oltmann and John H. Brown, directors; John Martin, supt.

Inc. in Arizona. Cap., \$2,000,000; shares \$1 par. Property is held through a Mexican corporation with cap. of 10,000 pesos, shares 100 pesos par, entire stock issue of which is owned by El Triunfo. Annual meeting, 1st Monday in October.

Property: 136 acres, in 12 different groups, principal property, about 4 miles from the Picacho mines, about 8 miles S. W. of Bacoachi, 2 miles from the Sonora river and about 75 miles by wagon road from Cananea. Lands carry 5 orebodies, of 2' to 5' average claimed width, said to be traceable 2 miles, and to carry azurite, malachite, bornite, chalcopyrite and chrysocolla, all silicious, and occasional native silver, with a claimed average value of 5% copper, 25 to 600 oz. silver and \$3 gold per ton.

Development: about 7,000' of workings, main shaft 400' deep, connecting with a tunnel for extraction. There are 5 shafts, 6 tunnels and various open cuts. The main vein is a fissure of 4' to 5' width, and practically vertical dip, carrying oxidized ores to shallow depth, succeeded by sulphides.

Equipment: includes a 90-h. p. steam plant at the mine, small sawmill, 50-ton reverberatory furnace and 26 buildings. Wells provide water for boilers and potable use.

A 50-ton mill has a 25-h. p. steam engine and 4 Behrend tables, with a 3-mile pipe line to the Sonora river, where there is a small pumping station.

Company paid a dividend of 1% in Aug., 1911. During 1912, company operated its smelter (reverberatory), shipping matte to El Paso, running

\$625 per ton. Closed down since 1913 on account of unsettled political conditions and insecurity of property rights during revolution.

Smelter was blown in in 1908 and shut down after a few days; again blown in in 1911. Transportation facilities are poor, nearest railroad station being at Cos, 38 miles distant by mule trail.

EL VAN COPPER CO., S. A.

MEXICO

Mine near Nacozari, Sonora, Mex. Property not operated for several years and several claims forfeited to government for non-payment of taxes.

EMPIRE MINING CO.

MEXICO

Last Address: Dolores Mining & Development Co., P. O. Box 533, Sta. L., Oakland, Cal. Mine address: care Ben Bound, supt., Cananea, Sonora, Mex. Company is the Mexican holding company of the Dolores Mining & Development Co.

Cap., 10,000 pesos.

Property: 95 hectares, including the Major Domo copper mine, a few miles from Cananea. A 200' shaft is reported to show a N. E.-S. W. vein, 2½' to 3' wide. Company also owns the Dolores, Empire, Bonanza, Spanish, Golden Cross and Providencia, silver-gold properties, amounting to 65 hectares, in the Magdalena district, Sonora, Mex. Planned erecting a 3-unit Pittman mill at the Golden Cross property, 14 miles S. W. of Cananea. No recent reports received. Presumably idle.

ESMERALDA COPPER CO.

MEXICO

Has no representative at former mine office: Llano, Magdalena, Sonora, Mex. F. C. Emery, pres.; W. D. Fredericks, mgr., at last accounts.

Property: 88 hectares, has about 300' of workings, showing copper ore, with silver said to increase at depth. Presumably idle.

ESQUER y CIA; ALEXANDER

MEXICO

Idle. Mine at Baroyeca, Alamos, Sonora, Mex. J. J. Esquer, mgr., at last accounts.

Property: the Mexicana, Esperanza and other mines, developed by shafts and tunnels, carries auriferous and argenteiferous copper ores.

FAY-CANANEA COPPER CO.

MEXICO

Probably dead. Last Address: 2105 East Superior St., Duluth, Minn. Mine near Cananea, Sonora, Mex. Described in Vol. XII.

GARRETSON-SAHUARIPA CO.

MEXICO

Idle: Mine at Calera, Sahuaripa, Sonora, Mex. W. H. Farnsworth, pres.; Laurens Enos, v. p.; W. H. H. Davenport, sec.; D. B. Sherman, treas.; John A. Moore, supt., at last accounts.

Inc. 1903, in Arizona. Cap., \$600,000; shares \$100 par, non-assessable; issued, \$450,000.

Property: 96 hectares, and 14,000 acres of surface rights, about 30 miles S. E. of Sahuaripa, includes La Calera mine, having 6 orebodies, 2 under development, of 3' to 6' width, estimated by company to average 2% copper, 45 oz. silver and \$14 gold per ton, which is interesting, if true. Mine has about 1,200' of workings.

The smelter, 1 mile from the mine, receiving ore by pack trains, has a 50-ton 29"x48" Garretson pyritic water-jacket blast furnace, burning charcoal and wood, which apparently has not worked well. Idle awaiting construction of the Sonora Central railway from Tonichi, which has been surveyed to pass through this property.

GREENE CANANEA COPPER CO.

MEXICO

Office: 42 Broadway, New York.

Officers: W. D. Thornton, pres.; John D. Ryan, v. p.; Jos. W. Allen, sec.-treas.; E. J. Dudley, asst. sec.; W. S. Harper, asst. treas.; H. B. Paull, aud.; Myron M. Parker, Philip L. Foster, W. D. Thornton, Jas. McLean, Wm. E. Corey, John D. Ryan, Jos. B. Cotton and Jos. W. Harriman, directors.

Inc. Dec. 26, 1906, in Minnesota. Cap., \$60,000,000; shares \$100 par; issued \$50,000,000. New York Trust Co. and Old Colony Trust Co., Boston, transfer agents; Bankers Trust Co., New York, and State Street Trust Co., Boston, registrars. Shares listed on the New York and Boston Stock Exchanges.

The Greene Cananea is a securities holding company only, but it is practically the only one in which the public now own shares. The relations of the company with its subsidiaries is as follows: Greene Cananea Copper Co., controlled by stock ownership, the Greene Cons. Copper Co., a West Virginia corporation, and the San Pedro Copper Co., S. A., a Mexican corporation. The Greene Cons. Copper Co. owns nothing but the entire capital stock of the Cananea Cons. Copper Co., S. A., Mexico. The Cananea Cons. Copper Co., S. A., and the San Pedro Copper Co., S. A., own, jointly, the property formerly held by the Indiana-Sonora Copper & Mining Co. The company also owns the Superior Bonanza Mining Co. and through this, the Mexican operating company, the Bonanza Mining Co., S. A. The subsidiary corporations named are listed and described elsewhere in this volume, so far as organization, finances and officers are concerned, but the physical properties are described here because the properties are operated together and no description would be complete, or easily understandable, if the properties were described separately. The Cananea Duluth, Cananea Central Copper Co., America Mining, Cananea Development, Sierra de Cobre Mining and Indiana Sonora companies, are all dissolved.

The Greene Cananea Copper Co. was organized for the purpose of acquiring the outstanding capital stock of Greene Cons. Copper Co. and Cananea Central Copper Co. To that end there was authorized to be issued 2,500,000 full paid shares of the aggregate par value of \$50,000,000.

The Greene Cananea exchanged its shares for the stock of the two subsidiary corporations on the basis of $1\frac{1}{2}$ shares for each share of Greene Consolidated, and $1\frac{2}{3}$ shares for each share of Cananea Central. By this transaction the corporation has become the owner of 961,398 shares out of 1,000,000 outstanding shares of Greene Cons. Co.'s stock and has acquired all of the 600,000 full paid shares outstanding of the Cananea Central stock. The privilege of exchanging the balance of the Greene Cons. Copper Co.'s stock not owned by the Greene Cananea Copper Co., is still open, the exchange basis being $\frac{3}{10}$ of a share of Greene Cananea stock, par value \$100, for each share of Greene Cons. Copper Co.'s stock, par value \$10 and stock is reserved for such exchange.

In June, 1917, shareholders in Greene Consolidated voted to sell their assets to Greene-Cananea for \$21,000,000, and to dissolve their own corporation. This is estimated to save \$300,000 per annum. The basis of sale was one share of Greene-Cananea at \$100 par for each two shares of Greene Consolidated at \$10 par. All but 2,000 shares were exchanged on Aug. 15, 1917. The San Pedro Copper Co. is also to be dissolved. Cananea Consolidated will eventually become the only operating concern for Greene-Cananea, the only holding company.

On July 18, 1913, par value of the shares was changed from \$20 to \$100 per share. All shares of \$20 par value have been exchanged for shares of \$100 par value, with exception of 6,931 shares, so that there are now issued and outstanding: 486,851 shares, \$100 par; 6,931 shares, \$20 par; 191.8 shares, \$100 par, the latter represented by fractional scrip which was issued when par value of shares was changed and which scrip is not entitled to dividends but which is exchangeable in aggregates of \$100 for full shares, making a total outstanding capitalization of \$48,842,900.

Dividends:

	Rate	Par Value	
		Shares	Amount
1917(a).....	\$6.00	\$100	\$2,930,526
1916.....	7.00	100	3,418,947
1915.....	...	100
1914.....	2.00	100	972,645
1913.....	1.25	100	1,093,143
1912.....	0.75	20	1,819,877

(a) includes dividends paid Aug. 27. Present rate \$8 per annum.

Income for 1916 was \$3,435,879, all from dividends of subsidiaries and interest on deposits.

Cananea is a community of 16,000 inhabitants, located 40 miles south of the international boundary line, on a branch railway of the Southern Pacific lines of Mexico.

The ores from all of the mines of the various companies are treated at the works of the Cananea Cons. Copper Co., S. A., the principal Mexican corporation, producing blister copper. The yield in 1916 was 62,250,067 lbs. copper, 11,692 oz. gold, and 1,975,734 oz. silver.

The following description covers all of the subsidiary companies of the Greene Cananea Copper Co.:

Property: mineral lands held under title from the Mexican government amount to 14,062 hectares, or approximately 34,738 acres. The surface lands owned by the company comprise 130,414 hectares, or approximately 322,123 acres. All of the mines, works, offices, warehouses, stores, etc., of the company are located on its own land and in addition the company owns valuable residence properties in Cananea, which are occupied by its local officials and employees.

Geology: the producing mines of the company are situated in the Cananea mountains, which rise from the headwater valleys of the San Pedro and Sonora rivers in northern Sonora. The mines are distributed along a mineral belt, or series of belts, about 6 miles long, in a N. W.-S. E. direction, and about 2 miles wide. The oldest geological formation of the Cananea mountains is pre-Cambrian granite, which is overlaid by Cambrian quartzite, in turn overlaid by Cambrian limestone. Breaking through these rocks, and covering much of the mineral belt, is a series of eruptives of Tertiary age, in which 12 different rocks may be recognized, one, a bedded tuff, the others massive. Three main classes of ore deposits may be recognized: (1) Deposits containing secondary chalcocite together with iron pyrite either massive or disseminated along shear zones in diorite porphyry; (2) Contact deposits containing chalcopyrite associated with iron pyrites and some zinc blende in a matrix of altered limestone; (3) Disseminated chalcopyrite associated with zinc blende in a diorite porphyry breccia.

The principal producing mines of the Cananea property are the Cobre Grande, Kirk, Veta Grande, Oversight, Capote, Chivatera, Sierra de Cobre, Eureka, Elisa, Henrietta and Puertecitos mines. Also owns the Cananea Duluth and American mines. The Henrietta and Eureka mines were idle in 1916.

The **Cobre Grande** mine was the original mine of the Cananea Consolidated Copper Co. Idle for some years; has been worked for ore to be used in the converters. The ore occurs in a strong and wide vein traversing both altered limestones and igneous rocks.

The **Kirk** mine is situated in an extensive area of highly-altered limestone capped with diorite porphyry and cut in pieces by small, irregular dikes and intrusions of the same material. The ore is not adapted to concentration and it is necessary to hand-pick it as mined. The sorted ore carries a desirable high percentage of lime and iron. In 1916 large additions were made to the lean fluxing ores developed in 1915.

The great mines of Cananea are the **Veta Grande**, **Oversight** and **Capote**, which have had large bodies of high-grade ore and now have large bodies of direct smelting ore and also contain great deposits of concentrating ore. This ore and the associated first-class ore contains copper in chalcocite, disseminated through diorite porphyry in broad shear zones. Ore reserves in these mines were considerably increased, especially in the Veta Grande.

The Capote mine differs from the Veta Grande and Oversight in that the ore occurs not only disseminated in diorite porphyry but also in the underlying granite. There are 3 principal ore shoots connected by continuous ore on the various levels. The ore in the upper levels is chiefly chalcocite, but the new shoot now being developed, consists of massive pyrite with primary chalcopyrite and bornite in granite. This mine has

attained a depth of 1,050', and has ore on each level from the 1st to the 10th. The Capote mine yields both concentrating and direct smelting ores. A new 5-compartment shaft was completed to the 12th level in 1916, to provide an outlet for the new orebody on the lower levels, and has been completely equipped.

Much of the ore is large pyrite, a mass on the 5th level, 220' long with a maximum width of 100', carries over 2½% copper, but there is much leaner ore in the mine which is unprofitable at present.

The **Chivatera** has a large body of oxidized ore containing about 2% copper, but averages 12-15 oz. silver and some gold. As the orebody now stands it contains several years reserves on the basis of 150-200 tons daily production, and there is a considerable territory lying ahead of present exploration that gives promise of important development. There was a decrease in ore opened in 1916, but its grade was higher.

The **Sierra de Cobre** property was acquired by purchase from the Phelps-Dodge interest several years ago, and since its acquisition has proved to be one of the largest and most profitably productive mines of the Greene Cananea Copper Co.

The ore from this mine occurs in limestone. Fissures extending out from the "Eureka" fault have acted as channels for mineralizing solutions, making ore along the veins and for a considerable distance into the walls, replacing the limestone by pyrite and chalcopyrite along the bedding planes. There appear to be notable bodies of heavy sulphides on and below the level of the Combination tunnel which passes through this property to the Elisa mine, and these are now being developed with very satisfactory results. The Sierra de Cobre property also has an extensive area of undeveloped ground lying in the limestone areas, along which smelting ore has been found in the Kirk mine and elsewhere.

The Elisa mine contains a number of lenses of ore lying approximately parallel to a nearly vertical fault between limestone and the diorite porphyry. These lenses occur in the limestone at the fault and back of it for a distance of 150', along a zone some 1,500' in length. The ore consists of a garnet matrix containing chalcopyrite and iron pyrites. It is a very desirable ore for the smelter, being more than self-fluxing, containing about 20% of lime in addition to the iron. Recent developments in the Elisa mine have been exceedingly satisfactory and a large amount of first-class ore has been opened up on the deeper levels. The ore from this mine is now delivered through the Combination tunnel to bins at the Capote mine.

The **Henrietta** is a small mine whose ore occurs on a contact between diorite porphyry and quartz porphyry. The orebodies are not large and the ore is silicious. New development work in the vicinity of Henrietta has not yet shown workable orebodies.

The **Puertecitos** mine and the town of that name are located at the N. W. end of the mineral belt and at the terminus of the narrow-gauge railroad of the company. The Puertecitos mine ore deposit has a great outcrop of limestone altered by contact metamorphic action to lime-iron-garnet rock and containing carbonates of copper and some chalcopyrite and bornite. Large areas of this outcrop contain enough copper to warrant mining, which is carried on by means of large quarries. The ore as mined is not sufficiently rich to be sent direct to the smelter but has to be broken and hand-sorted, yielding about 4 tons of waste material to each ton of ore.

Recently a large amount of underground development work has been done at Puertecitos with highly satisfactory results, the ore being fit for direct smelting; the mine is developed sufficiently to yield 450 tons a day if needed.

The **Elenita** mine, one of the earliest producers of the camp, located southwest of Puertecitos, has been reopened with a view to again putting it in the producing class. The ore from the mine is similar to that of Puertecitos.

The **Cananea Duluth** mine has an orebody about 1,200' long with a maximum width of 200'. This orebody is a neck of diorite intruded in bedded tuffs. The intrusion is shattered, altered and for 200' to 300' below the surface is impregnated throughout with pyrite and copper minerals. On the 600', the lowest level, the central portion is not commercial; the values being concentrated around the border of this long canoe-shaped orebody. The ore carries good silver and gold values, with about 2% copper. Practically all of the product of this mine is concentrated before smelting. The shaft is being sunk below 600'.

The **American** mine, idle since 1907, produced only such ore as was obtained through development work. Not fully developed, though there are sufficient indications of ore occurrences to warrant a resumption of development operations. Mine has a 3-compartment shaft to the 100' level and ore bins of 900 tons capacity.

• **Development:** total development work since the organization of the company, Dec., 1906 to 1917, is 524,294', which does not include 279,200' done under previous management. Development work done in 1916 amounted to 57,549', compared with 7,870' in 1915 and has kept well ahead of mining.

Equipment: power is delivered from a central power plant located at the smelter, and electrical power is used exclusively except for the steam pumping plant at Ojo de Agua. The power house, also containing the boiler plant, contains three 1,500 k. w. horizontal Curtis turbines, delivering current to the switchboard at 2,300 volts. The entire electrical equipment of turbines and engines has a capacity of 5,850 k. w. alternating current and 500 k. w. of direct current. Electrical energy is transmitted to various parts of the camp at from 2,300 to 11,000 volts. The furnace blast is supplied by 7 Curtis engines and 1 piston blower, having a combined capacity of 176,000 cu. ft. of free air per minute. The blast is conveyed to the furnace through a pipe 6' in diameter. Converter blast is supplied by 5 blowing engines having a total piston displacement of 55,000 cu. ft. of free air per minute, and is conveyed to the converters through two 30" pipes. In the power house there is also one 6,000-cu. ft. capacity Ingersoll-Rand compound condensing air compressor, furnishing air to the mines for drilling and other purposes; also one 1,200-cu. ft. Ingersoll-Rand compressor, used to furnish air for ramming converter lining and for sundry pneumatic tools around the works.

The report for 1916 states that the power plant is overloaded, and plans are under consideration for increasing its capacity.

There are eleven boilers, with a total capacity of 4,260 b. h. p. Crude oil, imported free from the United States, under a Federal concession, is used as fuel. The waste-heat boiler plant nearby consists of 8 water-tube boilers having a combined nominal capacity of 2,450 b. h. p., heated by the waste gases of 2 reverberatory furnaces. In connection with this waste-heat plant there is a battery of 4 Green economizers, consisting of 288 tubes each. All boilers are equipped with Foster superheaters. The feed water is carefully measured after a simple treatment for the removal of scale-forming material, and is fed to the boilers by means of electrically-operated plunger pumps. The power house is equipped with 2 counter-current barometric condensers, each having a separate water pump and separate dry air pump. All engines are operated condensing excepting those whose exhaust is used in heaters.

The principal water supply of the company comes from Ojo de Agua, 9 miles from the town, where a pumping plant, with water-tube boilers, using crude oil as fuel, runs a Reidler high-duty compound condensing engine delivering 1,500,000 gals. of water per day against a pressure of 967'. A 10" main connects the pumping plant with a 600,000 gal. tank located on a hill near the concentrators. The Ojo de Agua water is used exclusively for domestic purposes and for feed water for the boilers and is delivered under substantial working pressure. A very well equipped fire department, with a complete system of mains to pressure tanks, is main-

tained. Water from the mines is delivered to the concentrator through wooden pipes and is there used in milling operations.

At the Sierra de Cobre mine, in the Capote basin, there is an Ingersoll-Rand air compressor having a capacity of 2,500 cu. ft. of free air per minute, which is directly connected to a 2,300-volt A. C. motor. This machine is used to boost the pressure in the mains in the outlying districts. Fuel oil is stored in 3 main tanks with a capacity of 10,000 bbls. each.

The main shops near the smelter include machine, boiler, blacksmith, foundry, pattern and electric shops, all well-equipped, up-to-date, and served by both standard and narrow-gauge tracks. A large warehouse, for the company's supplies, and a framing mill, in which timbers for all of the mines are framed, are located on the southern slag dump.

The concentrating department has a capacity of 2,800 tons per day, and consists of a crushing plant, sampling mill, 2 concentrating mills, a settling system and a slime plant. The concentrator is now being remodeled and oil flotation system added.

The crushing plant has storage bins holding 2,000 tons, ore from the mines being delivered in Ingoldsby side-dump cars of 30 tons capacity each. From the storage bins ore is fed to a 30" conveying belt by automatic feeder. This belt delivers the ore to 2 grizzlies, inclined at 48° with 1" openings. The screened ore falls on an 18" conveyor, transferring it to a 24" conveyor, taking it to the mill bins of 4,800 tons capacity.

The oversize from the grizzly goes to two 36" picking belts, where first-class ore and also pieces of wood and steel are sorted out. The ore left on belt is then delivered to crushing bins and fed by automatic plunger feed to five 10x20" Blake crushers of the Cananea type, which reduce the ore to 1½" size. This crushed ore passes to 16x36" rolls, breaking to pieces that which passes a 2" ring. This product is delivered to a 24" conveyor, which delivers to the mill bins, together with the grizzly undersize. The crushing plant is electrically driven and has a capacity of 2,000 tons per 10 hours. An automatic sampler at the head of the 24" conveyor cuts one-fortieth of the total ore, which is ground and automatically cut to sample. All rejects drop to elevator and return by conveyor to mill bins.

No. 1 mill consists of 2 sections of 600 tons capacity each. No. 2 mill is a steel structure, containing 2 sections of 800 tons capacity each. The mills are supplemented by a settling system and a slime plant containing 100 vanners. The 2 mills have practically the same flow sheet, although in Mill No. 1 fine grinding is carried further in rolls.

The ore from the 4,800-ton storage bins is fed by automatic feeders into each section. Concentration begins on all material finer than 2" ring. The course of the ore in all 4 sections is as follows:

The ore is delivered to two ⅝" trommels, the undersize passing to two ⅜" trommels. The undersize of the latter goes to two 3/16" trommels and the undersize from these to four 2 mm. trommels. The various coarse sizes from screenings are passed to Hartz jigs, and all tailings from jigs coarser than ⅜" ring are passed through rolls, elevated and returned to screen, so that no material coarser than ⅜" goes to the Hardinge mills. The coarser material is concentrated on 20 concrete Hartz jigs in each section. The jig tailings finer than ⅜" pass to 3 Hardinge mills and are ground to about 2 mm. The discharge from the Hardinge mills is deslimed in a drag belt classifier, the coarser sands are classified, the resulting product being treated on 30 tables. The very fine sands and slimes are treated on 36 vanners. Tailings from tables and vanners are settled out and sent to the slime plant for further treatment.

The tailings, containing a gross value of nearly \$2 per ton in copper, silver and gold, are impounded in a coarse tailings dam, the slime settling above the dam. The clear water is pumped back for re-use in the mills but is first passed through precipitating tanks, where the dissolved copper is precipitated and recovered. The concentrates are delivered in narrow-gauge cars to the spreading beds.

Flotation being incorporated in the treatment, it was found necessary

to grind all the ore to pass 48-mesh, necessitating the use of more machinery than formerly, such as Hardinge mills, using steel balls, filters, Dorr thickeners, etc. Flotation as applied to Cananea ores was more or less experimental, which is another factor in increased costs. Installation of flotation plant well advanced in June, 1917.

All ores, concentrates, fluxes and secondaries for blast-furnace treatment are weighed and delivered to the main receiving bins by the company's narrow-gauge railroad. The bin system consists of 11 wooden and 8 steel bins, having a combined capacity of about 3,000 tons. From the receiving bins all material is discharged on a conveyor belt, which passes through the sample mill on its way to the spreading bed plant. In the sample mill the ore is crushed to about 4" through a 24x36" Farrel crusher. One-tenth of the ore stream is cut out and passes through a 10x20" crusher of the Cananea type; one-tenth of this is cut and passed through a Gates gyratory crusher, then one-fifth is cut and passed through a set of 17x27" rolls, when the final sample is cut out, amounting to about one-four-thousandth of the original material. This final sample is quartered down, dried and prepared for the laboratory. The reject from the sample mill is elevated back to the main conveyor system. All material is sampled in this manner with the exception of concentrates, which are hand sampled.

The ore after passing the sampling mill is conveyed to the spreading beds and distributed evenly over the entire length of the bed by an overhead belt which is automatically tripped. The bedding plant is of steel construction, being 453' long, and 198' wide, and contains 3 ore beds of about 9,000 tons capacity each. The composition of each bed is known in advance and in this way an even mixture is assured to the furnaces. When a bed is completed it is reclaimed by a machine which advances into the face of the pile and discharges on to a conveyor which delivers the mixed charge into bins over the blast furnaces, each bin having a capacity of 75 tons. The reclaiming machine has a capacity of about 175 tons per hour. The charge is dropped by gravity from the 75-ton bins above the furnaces into measuring hoppers holding 2,000 lbs. There are 5 such hoppers to each furnace, and these are discharged either directly into the furnace or on to the feed floor by means of arc gates.

The blast furnace building contains 8 blast furnaces, 48x210" at the tuyeres. There are 4 settlers, 10' 5"x19' inside of brick lining, each settler serving 2 furnaces. The slag overflows continuously into self-dumping slag cars of 45-cu. ft. capacity. Trains of 6 to 8 cars are hauled to the dump by electric locomotives. The matte is tapped from the settlers into 66-cu. ft. cast-steel ladles and transferred to the converters by electric cranes.

The gases from the furnaces are discharged into a steel balloon flue, thence through 2 cross-flues and 2 goose-necks into the main brick dust chamber. From here the gases pass through a flue to another chamber, thence to a brick-lined steel stack. All flue dust is drawn from the dust chamber and balloon flue into small cars and trammed to the reverberatory furnaces. The coke bins at the west end of the furnace building have a capacity of about 3,000 tons.

The roaster building contains ten 18' six-hearth McDougal calciners. There is a special bedding plant for the roasters, consisting of 4 bins of 500 tons capacity and 2 beds of 3,000 tons each. The mixed roaster charge is reclaimed and delivered by conveyor belts into 60-ton bins over and charging into the roasters. The roaster product is hauled by electric motor in 5-ton cars to the reverberatory furnaces.

The reverberatory plant consists of two 19' 6"x100' oil-fired furnaces. The waste gases fire three 300-h. p. and five 250-h. p. boilers placed parallel, and then pass through 4 units of Green economizers containing 1,152 tubes, thence through a brick flue 130' long to a stack 12' 6" in diameter by 152' in height. The slag is skimmed into 112-cu. ft. electrically-tilted slag cars and hauled to the dump by electric locomotive. The matte is tapped into 66-cu. ft. ladles and hauled to converter buildings in ladle cars, from which it is transferred to the converters by electric cranes.

The converter building contains 3 electric cranes of 40, 50 and 60 tons capacity, 6 electrically-operated stands of the Great Falls type of converter, with 7 basic-lined shells, 12' in diameter, for same.

The copper from the Bessemer converters is poured into the ladles of 2 straight-line electrically-operated casting machines, each equipped with tilting ladles of 66 cu. ft. capacity. Each machine has a chain of 39 molds, casting bars weighing about 260 lbs., dumping into bosh from which they are removed by drag conveyor to the bullion platform. The bar bullion is then stacked by an air-operated radial crane, picked up on trucks, weighed, and loaded into standard-gauge railroad cars. The converter slag is skimmed into ladles, transferred by crane to slag cars, hauled by electric motor to pits and reclaimed by a 10-ton steam shovel. It is then delivered in narrow-gauge cars to the receiving bins of the main spreading bed system.

The converter gases pass through balloon flues of steel construction and enter into a steel dust chamber, with a circular arch roof having a 13' radius. The gases then pass to a steel stack 12' in diameter by 125' high.

The daily capacity of the entire reduction works is 3,600 tons of gross charge.

In 1916, dust-bins were constructed at the blast-furnaces, dust and fine-ore bins at the roasters, and fettling system at the reverberatories.

The company owns and operates 36 miles of standard and narrow-gauge railway, including branches, spurs and sidings. The narrow-gauge line is double-tracked from the smelter to Capote basin, and laid with 50-lb. steel rails. The equipment includes 2 standard-gauge and 9 narrow-gauge locomotives, all oil burners, and about 140 cars, most of which are 25 and 30-ton steel ore cars. The railway system has direct rail connection with the Nogales and Naco branches of the Southern Pacific Lines of Mexico, and by this line with the El Paso & Southwestern railroad at Naco, Ariz.

The Cananea Consolidated Copper Co. operates practically all of the public utilities in Cananea. Its Public Service Department operates the water system; an electric light system; a telephone system operating 200 drops and approximately 450 telephones; and sundry other minor public utilities. The company's Mercantile Department operates a lumber yard, a large department store located near the smelter and 9 branch stores scattered throughout the various camps. The rental properties of the company include 619 buildings, consisting of rooming houses for its employees, residences, bunkhouses, etc.

Production: output and earnings since beginning of operations:

	Tons Mined.	Mng. Cost per Ton.	% Cu.	Copper, Lbs.	Silver, Oz.	Gold, Oz.	Cost per Lb. Cu. Cents	Earnings

(a) July 31, 1906. (b) Aug. 1, 1906—Dec. 31, 1907. (d) First half.

In 1915 the concentrator treated 79,642 tons ore at a cost of \$0.8263 per dry ton. The smelter treated 220,049 dry tons ore at a cost of \$2.7146 per ton.

The property was closed down in Aug., 1914, due to revolutionary conditions in Mexico; operations started in June, 1915, were suspended in Oct., resumed again in December, 1915, and were continuous to June 22, 1917, when work was suspended again. This time the trouble was a dispute over taxes, which in 1916 amounted to \$1,156,754, which was paid to the Mexican Government. Recently the Cananea company abandoned 7,702 mining claims to escape the excessive taxes demanded. No notification

to the Government was necessary, but the Department of Finance said taxes must be paid on these claims, otherwise the company could not export metals produced. This resulted in a shut-down, which still existed, Dec., 1917; but steps are being taken for resumption of operations.

Future possibilities of Greene-Cananea as a constructive copper are great and are unappreciated at the present time.

Cananea Consolidated Copper Co.

Mines and works: Cananea, Sonora, Mexico. C. E. Mills, pres. and gen. mgr.; Geo. Young, sec.-treas.; Casey Stites and W. S. Harper, asst. sec'ys; T. Evans, traffic mgr. and purch. agt.; G. W. Prince, smelter supt.; F. J. Strachan, mill supt.

Inc. Sept. 30, 1899, in Mexico. **Cap.**, 20,000 pesos, shares \$1 gold par. Entire stock owned by Greene Consolidated Copper Co., the C. C. C. Co. being merely the operating company, holding direct title and right to operate the property, as is necessary under the laws of Mexico. Description of the property owned by this company is given under the title Greene-Cananea Copper Co., which corporation absorbed the Greene Consolidated Copper Co., now dissolved.

In addition to the properties owned by the Cananea Consolidated Copper Co. previous to the formation of the Greene-Cananea Copper Co., it now owns an undivided three-fifths interest in the properties formerly owned by the Indiana Sonora Mining Co., and it also owns a controlling interest in the Superior Bonanza Mining Co., which company's properties are located near Imuris, in the State of Sonora, Mexico.

No separate financial statement of the Cananea Cons. Copper Co. is issued, but the combined balance sheet of the Greene Cons. Copper Co. and the Cananea Cons. Copper Co., S. A., as of Dec. 31, is as follows:

Assets:	Prop. & Equip.	Current	Copper On Hand	Supplies	Total
1914.....	\$10,010,029	\$4,253,403	\$228,123	\$689,767	\$15,181,322
1915.....	10,055,191	5,188,334	105,662	535,219	15,884,405
1916.....	10,279,182	8,511,793	248,202	844,555	19,899,462

Liabilities:	Capital Stock	Current	Reserves	Miscel.	P. & L. Surplus	Total
1914.....	\$10,000,000	\$243,358	\$281,006	\$29,585	\$4,628,373	\$15,181,322
1915.....	10,000,000	270,997	102,906	19,523	5,490,979	15,884,405
1916.....	10,000,000	727,728	263,942	8,300	8,899,492	19,899,462

Total income in 1916 was \$16,859,771; total expenditures were \$9,951,-258. In 1916 there was mined 1,143,508 tons domestic ore at a total cost of \$2.61 per ton. The yield per ton was 2.258% copper, 1.368 oz. silver, 0.008 oz. gold.

Greene Consolidated Copper Co.

Company was organized and controlled by Col. Wm. C. Greene and his friends until Feb. 18, 1907. The early history of the company fully given in Vol. X. Absorbed in July, 1917, by the Greene-Cananea Copper Co. (which see), which always held 95% of Greene Cons. stock. Paid total dividends of \$13,044,400 to 1917.

San Pedro Copper Co., S. A.

A Mexican corporation; subsidiary of the Greene Cananea Copper Co.

Officers: Geo. Kingdon, pres.; H. B. Paull, v. p.; Geo. Young, sec.-treas.; J. W. Allen, asst. treas.; Casey Stites and W. S. Harper, asst. sec'ys.; L. D. Ricketts, gen. mgr.

Directors: L. D. Ricketts, Geo. Kingdon, H. B. Paull, Geo. Young, Casey Stites.

Inc. July 28, 1906, in Mexico. **Cap.**, 5,000 shares; \$10 par (Mexican); all issued and outstanding. The entire capital stock is owned by the

Greene Cananea Copper Co. Balance sheet Dec. 13, 1916, shows assets, \$1,873,052, which includes property and equipment, \$1,032,200; current, \$820,852. Liabilities: capital stock, \$25,000; current, \$883,060; surplus, \$964,992. Total income in 1916, \$1,417,650; expenditures, \$764,671.

Dividends paid in 1916 amounted to \$100,000.

Principal mines are the Cananea Duluth and America; also owns the following claims: America Copper Belt, El Oriente, Las Dos Naciones, Seguro, Square, Swansea and owns a 40% interest in the Sierra de Cobre mines, the other 60% being owned by the Cananea Cons. Copper Co., S. A.

Owing to increased taxation, company's holdings in 1917 were reduced to 1,324 acres. Ore bins and rail extensions were made. The Cananea-Duluth shaft is being sunk below the 600' level. Development totaled 12,755'.

Production: 1916, 86,851 tons of ore, at a cost of \$3.04 per ton. The yield per ton was 2.919% copper; 1.916 oz. silver; 0.016 oz. gold. Cost of production was 11.082c per lb. of copper. (See Greene Cananea Copper Co.)

GUERRERO MINING CO.

MEXICO

Is the Mexican incorporation of the Victor Mining & Smelting Co., which owns 2 properties in Magdalena district, Sonora, Mexico, 10 miles S. W. of Cananea. Properties about one-half mile apart, contain 15 and 32 pertenencias, respectively.

HARRIS COPPER CO.

MEXICO

Sold its property, La Caridad group, to the Moctezuma Copper Co., of Phelps, Dodge Corp'n, Feb., 1916. Company has no assets.

HERMOSILLO COPPER CO.

MEXICO

Office: 914 Columbus Savings & Trust Bldg., Columbus, Ohio. **Operating office:** Aptdo, 98, Hermosillo, Sonora, Mexico.

Officers: J. L. Zimmerman, pres.; C. P. West, v. p.; R. D. Wood, sec-treas.; preceding, with A. J. Rusling, F. E. Resler, L. A. Clark, E. C. Plyley, Gilbert Holmes and Dr. H. W. Whitaker, directors. Jas. Penman, gen. mgr.

Inc. Feb. 13, 1909, in Mexico. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; issued, \$1,031,052. Authorized bond issue, \$200,000 of 7% convertible gold bonds; amounts outstanding Dec., 1915, \$24,100.

Company was a reorganization of the Verde Grande Copper Co., whose old shareholders were given new stock, share for share, by paying 25c cash per share.

Property: about 1,300 acres, with 200 acres of mill and smelter sites, in the Hermosillo district, about 28 miles N. W. of Hermosillo, consists of 9 claims, reported by the management to carry porphyry and lime cut by granite. The Picacho and Verde Grande have contact deposits in limestone, near igneous intrusives, carrying oxidized ore giving assays of 6% copper, 8 oz. silver and \$1 gold per ton. La Cobriza group and La Verde have contact deposits between granite and quartzite, of 30' to 60' claimed width, traceable 7,000', carrying auriferous and argentiferous copper ore said to assay 5.5 to 20% copper, with gangue of talcose limestone. Company reports 7 orebodies under development of 10 to 100' width, averaging 5.44% copper, 8.66 oz. silver and 75c gold per ton.

Development: 20 shafts and tunnels with over 7,000' of workings, reported to show over 200,000 tons of ore.

Equipment: consists of a 100-ton Allis-Chalmers blast furnace, a 30-h. p. hoist, 6-drill compressor, etc. Smelter is 1½ miles from principal workings.

Owing to the Mexican revolution the work done for the past few years has been mainly churn drilling. Company expects to operate smelter and vigorously develop mine when peace is restored.

Making tests on ore with oil flotation process, with the intention of installing plant.

INTERNATIONAL COPPER ORE CORPORATION

MEXICO

Office: 424 Scarritt Bldg., Kansas City, Mo. A. M. Conard, pres., Nogales, Ariz., at last accounts; his record is enough to discourage any

ordinary investor. **Mine office:** Noria, Sonora, Mexico. Is the Mexican operating corporation of the Sonora Copper Smelting Co.

INTERNATIONAL MINES DEVELOPMENT CO.

MEXICO

Main office: 523 Los Angeles Investment Bldg., Los Angeles, Calif.
Eastern office: Room 1606, 20 Broad St., New York.

Officers: Max Muller, pres.; P. Schabarum, v. p.; N. S. Haughwout, sec.-treas.; above, with Augustin Freese, H. J. Wendler, S. A. Josephi and C. F. O'Brien, directors. A. C. Barke, mgr.

Cap., \$3,000,000; shares \$1 par; \$2,400,000 issued. Stock listed on New York Curb.

Property: the Santa Rita, Santa Gertrudis, Santa Ana and El Carmen mines, 160 acres, in Sonora, Mexico, about 200 miles from Bisbee, Ariz. Company also reported to have a 5-year option on the Ash Peak mine near Clifton, Arizona. The Mexican properties have been silver-gold producers in the past, but have not been developed; owing to revolutionary conditions will probably remain undeveloped for some time to come. Their position is aggravated by being in the Yaqui zone. The Santa Rita is an "antiqua," or old Spanish mine. It was worked by a 1,500' open-cut and numerous narrow drifts, etc. The veins contain a number of pockets of rich ore. Seventeen adobe furnaces were kept in blast in the early times. The future of all the Mexican mines of this company, which are close together, lies in the treatment of large bodies of fair-grade milling ore amenable to cyanidation.

Company is to do new work, 1918. Stock quoted at 15c, Sept. 2, 1917.

JUANITA MINING CO., S. A.

MEXICO

Office: Sellwood Bldg., Duluth, Minn. **Operating address:** Bisbee, Ariz.

Officers: Martin Pattison, pres.; Byron M. Pattison, v. p. and mgr.; Lemuel E. Shattuck, sec.-treas.

Property: about 1,000 hectares, known as the Juanita group, adjoining the Carnegie L. & Z. Co. property, 3 miles N. W. of Cananea, is traversed by several narrow fissure veins in volcanic tuff beds. These veins carry small oreshoots with chalcopryrite, galena and sphalerite. No. 1 shaft is 220' deep and there also is a 75' shaft. Work suspended since 1912 owing to political disturbances in Mexico. Is an undeveloped prospect.

LA COBRIZA DE COBRE

MEXICO

Address: Rafael Elias, Cananea, Sonora, Mexico.

Property: 14 claims, adjoining Carnegie L. & Z. property on S. E., shows several veins in bedded volcanic tuffs with complex, silicious lead-copper-silver ore. Developed by 200' shaft with short drifts in ore.

LA COBRIZA MINING CO.

MEXICO

Office: 19 S. LaSalle St., Chicago, Ill. L. A. Weyburn, sec. Mine at Noria, Sonora, Mexico.

Officers: Sam'l Kerr, pres.; J. E. Bentley, treas.; with J. H. Strong and F. C. Emery, directors. Robt. Mitchell, gen. mgr.

Inc. June 5, 1905, in Arizona, and legalized in Mexico. **Cap.,** \$250,000; shares \$1 par, increased Mar. 15, 1917, to \$1,000,000; shares \$1 par; 500,000 pfd. shares with dividends of 10% cumulative and 10% bonus, but without voting power. 241,252 shares issued.

Lands: 142 hectares, 350 acres, in the Altar district near Puerto, 7 miles west of Noria. Property shows several contact deposits of nearly vertical dip, between limestone, quartzite and granite. The main orebody under development is reported by company as of 40' average width, traceable 1,500' on surface, carrying carbonates to depth of about 100', underlain by chalcopryrite ore averaging 6 to 8% copper, 4 to 6 oz. silver and \$1.50 gold per ton.

Development: by shafts of 200' and 520', and a short tunnel, management reporting 7,500' of workings. Property idle, 1912, but resumed work in Oct. 1913, on the 500' level, opening up a vein said to be 4' wide and to show ore assaying from 3-15% copper. Plans sinking a 3-compartment shaft and erecting concentrator.

Equipment: includes a 300-h. p. steam plant, with a new hoist, installed 1912, and a 10-drill air compressor. There are 20 buildings, including an engine house, shops, store, office and about 15 dwellings. The smelter has a 100-ton Macdonald hot-blast pyrite furnace and is operating steadily. Management estimated 70,000 tons of ore in the mine.

LA DURA MILL & MINING CO.

MEXICO

See Mines Co. of America, under Chihuahua.

LA REINA UNION MINING & REDUCTION CO.

MEXICO

Mine near San Javier, Hermosillo, Sonora, Mexico. Property includes the Mimbres mine, said to show a fissure vein carrying lenses of complex lead-copper-sulphide ore with gold and silver values.

Development: by shaft, cut a vein that assayed from 15 to 30 grams gold and 400 grams silver per ton.

Equipment: includes steam and electric power, and an air compressor. Idle owing to revolution in Mexico.

LA UNION CONSOLIDATED COPPER CO.

MEXICO

C. B. Bell, Douglas, Ariz., owner.

Property: 660 acres, in Cerro Tordillo section of the Ajo mountains, W. of Fronteras, Sonora, Mex., shows a 3' to 20' vein traceable a mile, that carries high-grade copper, gold, silver, zinc ore. Orebody is a contact deposit in lime and porphyry formation, ore occurring in shoots.

Development: by 5,000' of tunnels and shafts to depth of 500'. Shipments of 1,500 tons were made to April, 1914, averaging 15% copper, 15 oz. silver and 0.1 oz. gold. The property was worked in 1882-86, acquired by present owner in 1906, and considerable work done in 1912-13-14.

Company gave up property in 1914, and C. B. Bell plans resuming operations when peace is restored in Mexico.

LUCKY TIGER-COMBINATION GOLD MINING CO.

MEXICO

Office: 1012 Baltimore Ave., Kansas City, Mo. **Mine office:** Esqueda, Sonora, Mexico.

Officers: J. Z. Miller, Jr., pres.; W. A. Moses, v. p.; O. V. Dodge, sec.; H. Vanderslice, treas., with E. D. Fisher, F. D. Whiting, G. M. Smith, W. G. Catron, J. E. Hutt, John Kelley, C. M. Bush, J. T. McCormick and A. E. Mosier, directors. L. R. Budrow, gen mgr.; R. T. Mishler asst. gen. mgr.; J. W. Malcolmson, cons. engr.

Inc. March 16, 1903, in Arizona. **Cap.**, 800,000 shares; \$10 par; 715,337 shares issued. Annual meeting, 3d Monday in March. Company owns the entire capital stock of Tigre Mining Co., S. A.

The combined balance sheet for 1916 of the Lucky Tiger Combination Gold Mining Co. and The Tigre Mining Co., S. A., shows total assets \$6,628,591, which includes mining property \$5,615,542; plant, machinery, equipment, \$372,744; inventories, \$126,330; product on hand and in transit, \$253,652; cash, \$169,616; liabilities include capital stock, \$7,153,370; current liabilities, \$161,694. Total receipts for the year's operations were \$1,624,817, including \$1,614,207 from ore sales; total expenditures were \$979,697; depletion of property, depreciation, plant and equipment, \$461,938; net realization, \$645,120.

Dividends: paid since organization of the company:

Year	Number	Amount
1916.....	77-85	\$515,042.64
1915.....	69-76	493,582.53
1914.....	58-68	715,337.00
1913.....	46-57	450,662.31
1912.....	40-45	336,208.39
1911.....	30-39	357,601.10
1910.....	18-29	429,000.00
1909.....	6-17	409,500.00
1908.....	1- 5	71,500.00

Total \$3,778,432.97

Property: the El Tigre mine, 6 claims, 622 acres, at El Tigre, Montezuma district, Sonora, Mex., shows gold-silver-lead-copper ore in fissure veins traversing rhyolite. Ore is a silicious sulphide occurring in vein 25' wide, proven for 4,000' in length, and running N.-S. with average dip of 65°. Developed by 1,000' incline shaft and 5,000' tunnel, with about 13 miles of underground workings. Ore is mined mostly by overhand shrinkage.

Equipment: includes electric power, 25-h. p. electric hoist, 250-ton concentrating mill and cyanide plant. Reported extraction in 1916 was 93.6%, concentrates averaging 2.17 oz. gold, 683 oz. silver, 2.93% copper, 11.4% lead. Experiments with flotation have been satisfactory, and a plant was to have been erected. Decreased cyanide consumption and lower costs are said to result from flotation.

Production: 83,000 tons in 1912; 90,000 tons in 1913; 88,000 tons in 1914. Ore averages 31 oz. silver, 0.01 oz. gold.

Company has been able to continue operations and shipments more or less regularly, notwithstanding disturbed conditions in Mexico during the past years.

MANHATTAN DEVELOPMENT CO.

MEXICO

Owens Arnold Mining Co. property near Santa Cruz, Sonora, Mexico.

MANHATTAN EXPLORATION CO.

MEXICO

Office: 52 Broadway, New York. **Mine:** at Hermosillo, Sonora, Mex.

Officers: John M. Bishop, pres., Washington, D. C.; A. H. McCarthy, v. p.; T. Addison Bell, sec.-treas.; preceded with Gen. Jas. S. Clarkston and Wm. Tierney, directors.

Inc. Feb. 6, 1909, in Maine. **Cap.**, \$2,000,000; shares, \$100 par; \$1,806,000 outstanding. Company is a close corporation.

Property: 18 titled properties near La Dura in the Yaqui River district, central Sonora. Two of the properties, the Promontorios, silver-lead and the Mesita, copper-silver-lead ore, had just reached the shipping stage when the Mexican revolution stopped all operations, May, 1912. Company expects to resume operations as soon as country is once more safe.

MARIA MINING CO.

MEXICO

Office: 516 Providence Bldg., Duluth, Minn.

Officers: Joseph Backus, pres., Virginia, Minn.; Jas. A. Butchart, sec.-treas.; with Thos. F. Brady, Martin Trehwella and Thos. A. Armstrong, directors.

Cap., \$500,000; shares, \$1 par.

Property: the Carmen mine, in Arizpe mining district, Sonora.

Ore: silver, gold, in veins in andesite and rhyolite.

Development: by shaft; greatest depth 350', with 3,000' of underground workings. Has been idle 4 years, owing to the revolution, but resumed work in Feb., 1917. Rich silver ore being extracted in August, but on account of bandits, work was again suspended.

MELCZER MINING CO.

MEXICO

See Copete Consolidated Copper Co.

METAL DE COBRE; COMPANIA MINERA

MEXICO

Mine near San Antonio de la Huerta, Ures, Sonora, Mex.

Inc. in Mexico as holding company of the Rio Yaqui Copper Co.

MEXICAN EXPLORATION & MINING CO.

MEXICO

Controlled by Pacific Smelting & Mining Co.

MEXICAN METALS CO.

MEXICO

Office: 35 Congress St., Boston, Mass.

Officers: Geo. E. Keith, pres.; Geo. H. Woodman, v. p.; Sumner M. Teele, sec.; Harold C. Keith, treas.; with Eldon B. Keith, directors.

Inc. Aug. 16, in Arizona. **Cap.**, \$5,000,000; shares \$5 par; assessable; 655,373 issued; \$2.55 paid.

Company succeeded the Arizpe Mines Co. and holds title to property through the Moctezuma-Arizpe Development Co., legalized in Mexico.

Old Colony Trust Co., registrar; Federal Trust Co., transfer agt. Annual meeting, second Monday in September.

Mexican property near Cananea, Sonora, Mex., closed down in autumn of 1914. After geological survey of property made by J. M. Little, checked by A. H. Rogers, Boston, and Franklin W. Smith, of Bisbee, it was decided to sell or abandon such property as directors considered unworthy and to purchase new properties. Fully described Vol. XI, Copper Handbook.

An option has been secured on a property at Cripple Creek, Colo., where development work is under way.

MEXICO MINING, REFINING & EXPLORATION CO. MEXICO

Office: 501 I. W. Hellman Bldg., Los Angeles, Calif.

Officers: Wm. T. Calderwood, pres and gen. mgr.; Dr. Chas. B. Nichols, v. p.; F. C. Lamb, sec.-treas.; preceding with E. B. Lovie, C. A. Neil, L. A. Davis and A. A. Snodgrass, directors. B. A. Ogden, supt.; A. Wainwright, engr.

Inc. 1905, in Arizona. Cap., \$5,000,000; shares \$1 par; non-assessable. Annual meeting, second Monday in April, at Nogales, Ariz.

Property: 260 acres, El Creston de Cobra mine, about 35 miles west of Hermosillo, shows dolomite and garnite and is an antigua dating from the eighteenth century. The property carries 4 orebodies, of which 2, reported by company as of 30' average width, and traceable 1,400', carry copper ores averaging 4% copper, 8 oz. silver and \$1 gold per ton.

Development: by 8 shafts, deepest 300', and 4 tunnels with 1,000' of workings, estimated by the company to show 100,000 tons of ore.

La Cobriza mine, at Soyopa, is said to show a 16' vein with a 7' pay-streak, carrying copper-silver ore.

Equipment: includes 235-h. p. steam plant, 2 hoists, 6-drill air compressor, and 20-ton mill. Company was planning to erect a 100-ton smelter, but revolution has probably interfered. No recent information secured.

MINA MEXICO MINING CO. MEXICO

Office: 1,025 Peoples Gas Bldg., Chicago, Ill.

Officers: Potter Palmer, Jr., pres.; H. L. Hollis, v. p. and man. dir.; E. F. Bryant, sec.-treas.

Property: at Mina Mexico, district of Sahuaripa, Sonora, Mexico. Has small mill and smelter.

MINERAL DEVELOPMENT CO. MEXICO

See Proprietary Mines Co. of America.

MINNEAPOLIS COPPER CO. MEXICO

Office: 525 Plymouth Bldg., Minneapolis, Minn. Mine address: Cumpas, via Nacozari, Sonora, Mexico.

Officers: J. W. Christy, pres.; James Thompson, sec.; F. A. Guice, gen. mgr.

Inc. June, 1906, in South Dakota. Cap., \$1,000,000; shares, \$10 par; non-assessable; also inc. in Mexico as Minneapolis Copper Co., S. A., the South Dakota corporation being a holding company. Is operated in the United States under the title of Minneapolis Copper Development Co., the reason for which has not been explained.

Property: 277 hectares, about 30 miles S. E. of Cumpas. Property carries several fissure veins, in andesite, with N. E. strike, of which 4, under development, are of 5' to 8' estimated average width, carrying tetrahedrite, estimated by company to average 10% copper, with traces of lead and zinc, 5 to 40 oz. silver, and \$1 and upwards in gold, with occasional very high assays.

Development: property has been under development continuously with a small force, since the company took it in 1906. The 155' Fryer shaft develops a 4' vein carrying ore said to average about 9% copper and 20 oz. silver per ton. The Archipelago mine, the principal property, has a 250' incline shaft, and the mine as a whole has about 8,000' of workings, mostly in ore.

Equipment: includes a 35-h. p. gasoline hoist and 5 buildings. There is also a 75-ton smelter, built in 1912. Transportation is by wagon-road to Cumpas, freight being carried in two 90-h. p. gaso-electric trucks.

Being operated under lease, 1917, by Samuel E. Greenidge, of Douglas, Arizona.

MOCTEZUMA COPPER CO.**MEXICO**

Fully described under title of Phelps Dodge Corporation.

NACOSARI CONSOLIDATED COPPER CO.**MEXICO**

Address: P. O. Box 64, Douglas, Arizona. Mine office: Pilares de Nacozari, Sonora, Mex.

Officers: John G. Alexander, pres.-gen. mgr.; R. R. Humphrey, v. p.; B. R. Russell, sec.; Roy Hiatt, treas.; with Geo. S. Howard, Geo. Motz and Y. Soto, directors. Fred Alexander, mine and mill supt.; A. H. Ger-neth, purch. agt.

Inc. July, 1907, in Arizona. Cap., \$3,000,000; shares, \$5 par; fully paid and non-assessable; issued 535,000; 16,000 shares in treasury, Oct. 1, 1917; 15,000 shares sold for \$2.50 each in 1917. Annual meeting, second Monday in July.

Property: 15 claims, 360 acres, lying in 2 groups, adjoining the Pilares mine of the Moctezuma Copper Co. on the N. and W. and partly on the S. The Galera, or southern group shows andesite and brecciated rhyolite cut by several large veins carrying sulphide ores with gold-silver-copper-lead and zinc values. The Copper King or northern group shows a big red reef, 600' wide, of brecciated, silicious vein matter outcropping, evidently an extension of the Pilares deposit.

The Galera group is opened by a working tunnel, 2,600' long, in April, 1917.

Development: to date, 10,500', including shafts, crosscuts, tunnels.

In 1917, a double-compartment shaft was sunk 400' on the San Pablo claims and drifts were started from No. 2, 3 and 4 stations, opening up stopes of silver-copper-lead ore, 10' to 12' wide, the ore netting about \$100 per ton as shipped to smelter at El Paso.

A 100-ton mill, using fine-grinding machinery, Wilfley tables with National riffles and K. and K. machines for oil flotation, was put in operation in Sept., 1917.

In tuning up mill in Sept., low-grade ore put through mill produced two carloads of concentrate assaying \$100 per ton; two more were expected, Oct. 12.

NORTHERN SIERRA MADRE MINING CO.**MEXICO**

Address: D. E. Alexander, Humboldt Savings Bank Bldg., San Francisco, Cal. Mine near Soyopa, Sonora, Mex.

Officers: Chas. K. Blender, pres.; Carlo Giovannetti, v. p.; John O'Donnell, sec.; Fred Townsend, treas.; preceding, with D. E. Alexander, Fred Trevarrow and E. C. Curtis, directors. F. R. Luckhardt, gen. mgr.

Inc. Aug. 2, 1901, in California. Cap., \$300,000; shares, \$1 par.

Property: 167 acres, including La Reina de Cobre and Providencia copper mines and El Colosus silver-lead mine, 25 miles west of Suaqui de Batuc. Le Reina shows diabase, shale and limestone, carrying orebodies of oxidized and sulphide ores, with quartz gangue, estimated to average 15.5% copper, 20% lead, a trace of zinc, 73 oz. silver and \$8 gold per ton.

Development: by 633' of workings. Management estimates 4,854 tons of ore in sight, with 3,214 tons blocked out for stoping. Closed down owing to Mexican revolution.

PACIFIC SMELTING & MINING CO.**MEXICO**

Office: 20 Broad St., New York. Mine and smelter office: Fundicion, Sonora, Mex.

Officers: Melbert B. Cary, pres.; Geo. M. Ryall, v. p.; Nelson S. Haughwout, sec.-treas.; preceding, with Ronald E. Curtis, Howard McWilliams and Charles E. Wetmore, directors. Thornton C. Kirkland, asst. gen. mgr.

Inc. Oct. 6, 1909, in Maine. Cap., \$8,000,000; shares, \$5 par, issued in \$1,737,850 convertible cumulative 7% preferred stock and \$6,262,150 common stock; all issued. United States Corporation Co., New York, registrar. Annual meeting, third Monday in January, at Augusta, Maine. Listed on New York Curb.

General balance sheet: Dec. 31, 1916, shows property and securities, \$8,409,848; furniture, etc., \$200, and cash and accts. receivable, \$161,311, last item showing \$1,032 reduction, the others identical with 1915 statement. **Liabilities:** \$8,000,000 for stock, \$239,609 accts. payable, compared with \$237,972 in 1915, and \$333,750 surplus, compared with \$333,581 in 1915.

Holdings: company controls the Douglas Copper Co. and Mexican Exploration & Mining Co. by ownership of 98% of the capital of each company. These constituent companies hold practically the whole of the capital of 3 other Mexican companies. The subsidiary Mexican corporations are the Anita Mines Co., Yaqui Mining Co. and the following smelting companies: Compania Metalurgica y Refinadora del Pacifico, S. A., owning the Fundicion smelter; the Mexican American Smelting & Refining Co., S. A., owning the Guaymas smelter and the Sinaloa Smelting Co., holding the Mazatlan, or Sinaloa smelter concession.

Anita Copper Mines Co., S. A., owns the Anita Consolidated, Baroyeca, London, Julia and Maria claims, 330 acres, belonging to the Anita mine, 25 miles north of the Fundicion smelter and the station of that name on the Southern Pacific Railroad of Mexico. This mine has been developed to a depth of 900' on the dip of the vein and is said to show ore reserves above the 7th level, amounting to 55,000 tons, that average \$2.58 gold, \$1.17 in silver and 3.99% copper.

Geology: the Anita (or El Cobre mine), has a shear zone of 115' width, with a diorite foot and trachyte, or rhyolite hanging wall. The shear zone, traceable for several thousand feet, with N.-S. strike and dip of about 45° W., carries ore in 5 lenses, or chimneys, the principal one being opened from the surface down to the 8th level, branching into 2 parts at the 6th level. Faulting, cross-faulting and brecciation occurs with displacements up to 200'. The ore is partly metasomatic replacement of diorite, and partly a contact metamorphic deposit. It contains the usual oxide minerals succeeded in depth by chalcopyrite.

Development: consists of a 900' inclined main shaft, No. 1, with 9 levels opened and about 7,415' of workings. There are also 4 other shafts. The management plans further work as soon as enough basic custom ore is available to supply a suitable furnace mixture. Courtenay de Kalb reported that his examination showed about 55,000 tons of ore blocked out, with good indications for development of further orebodies.

The surface equipment consists of 2 cross-compound 2-stage Rand compressors of 3,000-cu. ft. combined capacity; a Risdon second-motion duplex hoist, 14x21"; three 150-h. p. boilers; generator for light and power; rock-crushers, picking tables, shops, assay office, office buildings, warehouses, dwellings, supplies, etc.

El Cobre ranch owned by the company has approximately 10,000 acres of wood and timber land.

The Pirita mine, of the Anita Copper Mines Co., embraces Pirita No. 2 and Pirita No. 3 claims, 81 acres, located 5 to 7 miles from Victoria station on the Southern Pacific Railroad of Mexico. The mines contain a considerable tonnage of pyritic ore having small values in gold, silver and copper, but the deposit has not been extensively developed on account of poor transportation, though in time it will become of value to the company for fluxing purposes.

Yaqui Mining Co., S. A., owns 10 mining properties in Mexico, which are as yet but partly developed. The Rosamond and Aurora mines each have about 800' of development work, exposing a fair tonnage of commercial copper-silver ore. The company also owns a number of slightly-developed prospects and some old mines nearby.

Compania Metalurgica y Refinadora del Pacifico, S. A., owns the Fundicion smelter and other properties. The smelter was built originally to treat the ores of the Anita mine and to do general custom business. The smelting plant has a capacity of 350 tons a day, but was designed and in part equipped for 3 times that amount. The plant has one 42x160' blast furnace, sampling mill, power house, shops, administration buildings, etc.

A railway connects all departments. Electric plant furnishes current for both lighting and power purposes, and all machinery excepting yard locomotives is motor driven. The plant is of modern design and in excellent condition.

The mine is 23 miles from a railway, and ore is hauled to the smelter by Saurer motor trucks. The road is good for 18 miles and bad for 5 miles, frequently muddy, with grades up to 12%.

The L'Aime lime quarry, located 2 miles from the railway near Victoria station, has 75 acres of limestone forming a hill 250' high, 300' wide and approximately 3,000' long. The rock is an excellent smelting flux, averaging but 1.2% silica, with about \$1 in gold; it was because of this gold content, determined by a special Government commission, that the company secured it as mineral land.

The Fundicion smelter was in blast for 9½ days in May, 1908, treating 300-tons charge daily, but owing to tap jacket troubles, about 15% of the value of the tonnage smelted was tied up in cleaning. As a result of this run, 3 carloads of matte, amounting to 73.5 tons, were shipped to the Nichols Copper Co. for refining. The shipment contained, as per report, 27,868 oz. silver, 172.2 oz. gold and 67,993 lbs. of copper and returned a net value of \$26,869.12. Mr. W. B. Budrow, who was the smelter superintendent at the time, and who had been connected in a similar capacity with several of the Guggenheim smelters, referring to the operation of the furnace, stated: "The performance of the furnace during this operation was very satisfactory, both from a metallurgical and economical point of view. The matte produced was clean and averaged over 46% copper, and notwithstanding the fact that it carried high values in both silver and gold, the slag losses in those metals were quite low."

Mexican-American Smelting & Refining Co., S. A., owns the Guaymas smelter with 250 acres, at Batuecas, a suburb of Guaymas, on tide water, lying between the Bay of Guaymas and the Southern Pacific Railroad of Mexico. The plant was originally erected by William C. Greene, founder of the Greene-Cananea Copper Co., and not having been operated for some years will need extensive alterations.

The Sinaloa Smelting & Refining Co., S. A., owns a concession from the Government for a smelter at Mazatlan, or elsewhere in the State, for a period of 20 years from the 27th day of April, 1906, and is particularly exclusive in its terms.

The smelters have been closed down since 1910.

Reported 1917 that Anita mine was working and shipping 50 to 100 tons a week, of high-grade copper-silver ore.

PHELPS, DODGE CORPORATION

See same title under United States mines.

PICACHO MINING CO. (CIA. MINERA DE PICACHO) MEXICO

J. S. Douglas, Cananea, Sonora, and associates, owners.

Property: 35 miles south of Cananea, has a deposit of cupiferous silver ore that has been under development since about 1909 and has been shipping ore to the Copper Queen smelter at Douglas.

PIEDRAS VERDES y ANEXAS; COMPANIA MINERA. MEXICO

Alamos, Sonora, Mex. Angel Almado, pres., at last accounts.

Property: about 15 miles N. W. of Alamos, and 2 miles north of the Rio Mayo, includes the Piedras Verdes, Union and Sonora mines, having a mineralized zone of about 1 mile width, and 4 miles length. Claims show red schists carrying copper carbonate stains at surface, with quartz dikes and numerous dioritic intrusions, the veins outcropping 10 to 40' in width and carrying considerable oxidized ore of good grade, with occasional native copper in masses of considerable size.

Development: by a 350' shaft and a 375' tunnel. Some churn drilling was done by the General Development Co., 1910.

Equipment: includes steam power, and a small matting furnace. Presumably idle.

PLATA-FINA MINING & DEVELOPMENT CO.**MEXICO****Office:** Pomona, Kansas. **Mine office:** Alamos, Sonora, Mexico.**Officers:** E. G. Swayze, pres.; Dr. L. R. King, v. p.; C. N. Emery, sec.; E. A. May, treas.; T. P. Brinegar, mgr.; above with J. M. Nolan, A. P. Elder and J. W. Churchill, directors.**Inc.** March, 1911, in Arizona. **Cap.**, \$500,000, reduced to \$300,000; shares \$2 par; 114,720 shares issued.**Property:** Plata-Fina group, 9¼ hectares; Cacharamba group, 8, Otilia group, 10 hectares, and 2 new properties, about 100 acres in all, 4½ miles from a railway, in the Alamos district, shows several contact veins between granite and porphyry, in a zone 40' wide. Is said to have 6 oreshoots developed, all about 6' wide and carrying native silver in copper carbonate and chalcocite. Ore blocked out is given as 15,000 tons in the Arapes mine, estimated to be worth \$40 a ton.**Development:** by 5 shafts, deepest 115', with about 3,000' of underground workings. Development work is being done in spite of the revolution, about \$8,000 having been spent in 1916. All drilling is done by hand. Shaft will be sunk to 300' depth, 1917.**PROMONTORIO CONSOLIDATED MINING CO.****MEXICO****Office:** 99 John St., New York. **Mine office:** Lampazos, Moctezuma district, Sonora, Mex.**Property:** 11 groups, 1,410 acres, 3 miles from the forks of the Yaqui river; also a 12,000-acre ranch and the Marguerite and Inez claims, adjoining the mineral lands. Includes the Promontorio mine, 35 miles S. E. of Moctezuma, and about 30 miles from the nearest railway at Tonichi, an antigua, said to have produced the copper from which were cast the bells on the old church at Moctezuma, built 1640. During the American Civil War some bornite from this mine was packed on mules, 40 miles to Guaymas and shipped to Swansea for smelting.

The claim shows diorite, granite and limestone, carrying orebodies in a shear zone between granite and diorite, with high-grade bornite and low-grade disseminated chalcopryite ore. The low-grade zone is upward of 200' in width, with a granite footwall, also carrying low-grade impregnations of copper.

The Inez mine shows a large gossan, mined for flux, underneath which is cupriferous pyrrhotite, carrying small gold and silver values, and the Inez is also said to have another orebody of promise, carrying auriferous and argentiferous copper ore.

Closed down since 1913.

QUINTERA MINING CO., LTD.**MEXICO****London secretary and Office:** J. G. Mills, 8 Crosby Square, London, E.C., England. **Paris office:** 1 rue des Mathurins, Paris, IXe, France. **Mine:** at Aduana, Alamos, Sonora, Mex. Jacques F. Kulp, chairman; A. Dubois, S. Einhorn and Ernest May, directors.**Inc.** May 4, 1888, in Great Britain. **Cap.**, £52,000, increased Nov. 18, 1901, from £40,000; shares £1 par, fully paid; all issued.**Annual meeting** in June. Shares listed on the Paris coulisse. **Accounts for calendar year 1916**, submitted July 5, 1917, showed £840 loss; total deficit, Jan. 1, 1917, £19,956; reserve fund, £26,623. Operations suspended since 1911, owing to Mexican revolutions.**Dividends:** 25% in 1900; 22.5% in 1901; 17.5% in 1902; 17.5% in 1903; 7.5% in 1905; 11.25% in 1906, and 5%, or 2s. 3d. in 1907; none since.**Property:** 26 claims, 134 hectares, in the Alamos district, Sonora, and in the Fuerte district, State of Sinaloa, Mex., with ranches of about 7,400 acres. The mining property consists of 4 groups, the Quintera and Libertad, Azulaques and Constancia, Minas Nuevas, Cotera and Porvenir, and the Rosario group. Only the Quintera has been worked by the present owners.

Some 40 to 50 years ago a Frenchman owned this and the Rosario, a lead-silver property on Rosario mountain, where the States of Sonora, Sinaloa and Chihuahua touch. He had worked the Rosario extensively, the

ore being a lead carbonate containing much silver, and finally went to Paris, mortgaged both properties to the Egyptian-Paris Bank for \$250,000 and skipped out to South America. He has never been heard from since. After the bank acquired the properties, for many years they sent engineers out each year to examine and report. Finally, about 30 years ago, after several had reported favorably upon the Quintera, work was commenced.

The vein is strong on the surface, 18 to 20' wide, and has granite on the east and dark andesite on the west. It showed low silver values on the surface and 2 to 3% lead. With depth the value of the ore improved and under efficient management, the mine paid \$50,000 to \$100,000 yearly in dividends, notwithstanding that the general mill management was expensive.

The ore is 20 to 30' wide in the deeper levels and assayed 40 to 50 oz. in silver, the lead being replaced by 8 to 9% copper ore as depth increased. This copper ore was sorted out and smelted on the ground using mesquite charcoal at a cost of one-half cent per pound. The mine is on a hill 700' above the mill, and an aerial tram was put in to bring the ore to the mill. A shaft 500' deep was sunk at the north end of the property, from which a drift was driven 1,300' south and a winze sunk, ultimately to a depth of 1,000' below the surface. All ore was hoisted twice and trammed 1,300', when an adit from the mill 2,000 to 2,500' long would have tapped the winze 200' below the long drift, and the ore could have been trammed in cars direct to the mill. Even when the new shaft was sunk from the surface, this was done near the old one, instead of raising from the winze on the 500' level. At 1,500', the vein split. One branch was followed to the east in the granite; it contains no ore of value. A few hundred feet north of the shaft the main vein enters the granite on both sides and becomes barren. At the south end of the property the ore-shoot appears to be dipping into the Promontorio. Property considered valuable, but in consequence of the unsettled state of affairs in Mexico, the property is shut down indefinitely.

RICHFIELD COPPER CO.

MEXICO

Office: 812 Mears Bldg., Scranton, Pa.

Officers: Dr. J. K. Bentley, pres.; Dalbys L. Fickes, sec.; Otto Robinson, treas.; preceding, with Harry Witter, R. H. Gay, Geo. Stark, John Hershberger, Philip Robinson, J. A. Schadt, R. E. Mikesell, W. O. Smith, J. H. Wood and Jacob Huffer, directors.

Inc. 1902, in Arizona, as successor of Richfield Mining Co. **Cap.**, \$5,000,000; shares \$1 par; issued, 4,000,000. Bonds, \$250,000, authorized, at 6%; issued, \$230,000. Scranton Trust Co., registrar. Annual meeting, 2nd Saturday in October.

Property: 1,300 acres of mineral property, with timber and ranch lands, total holdings 26,512 acres in the Ures district. The Dos Naciones group, 12 miles east of Tuape and 35 miles from a railway, is said to have 7 contact deposits between granite and limestone, of 10' to 60' estimated average width.

Development: includes about 10,000' of underground work, showing oxidized ores and chalcopryrite, reported by present management to average 4 to 15% copper, 7 to 40 oz. silver and \$2 to \$5 gold per ton. A body of good ore was reported at a depth of 350'.

Equipment: includes two 25-h. p. hoists and a 5-drill air compressor, several mine buildings and an 80-ton water-jacket smelter.

Shipments to the American Smelting & Refining Co. and Phelps, Dodge & Co. ran 9 to 10% copper, 10 to 32 oz. silver and \$2 to \$5 gold per ton. Management has been prevented from operating during the last years owing to revolutionary disturbances in Mexico; but plans resuming work when able.

SAN ANTONIO COPPER CO.

MEXICO

Address: Geo. J. Eisele, sec.-treas., Iron Mountain, Mich. **Mine office:** San Antonio de la Huerta, Sonora, Mex.

Officers: Otto C. Davidson, pres.; Dr. J. A. Crowell, v. p.; preceding,

with John Uno Sebenius, D. M. Clemson, Hon. Richard C. Flanagan, E. G. Kingsford and W. H. Johnston, directors; John E. McIntyre, supt.

Inc. Sept. 23, 1908, in Arizona. **Cap.**, \$2,500,000; shares \$10 par; issued, \$1,000,000 full paid and \$1,000,000, with \$3.50 paid on the latter. Direct title is held through the San Antonio Copper Co., S. A., inc. April 12, 1908, in Mexico, with all stock owned by this company. Annual meeting, 2nd Monday in April.

Property: 9 groups, about 7,500 acres, with 2,000 acres about 3 miles from San Antonio de la Huerta, near the Yaqui river. The property was worked 1862 in a small way.

Lands show a mineralized zone of 200' to 500' width. Ore includes high-grade oxides and carbonates, with sulphides of good average tenor, there being a considerable quantity of chalcocite, giving assays up to 11% copper.

Development: consists of 20 tunnels with 15,000' total workings, opening 7 separate orebodies in 2 tunnels, with 4,000' of workings in ore. Mr. Dwight E. Woodbridge estimated, March 4, 1910, that the San Antonio had exposed on one plane, 300,000 tons of ore, figured conservatively, averaging 7% copper, with very low values in the precious metals, and that the newer tunnels should increase this tonnage five-fold. Railway connections to within 2.2 miles of the main tunnels were secured, 1910, and will be extended to the tunnel mouth as soon as peace prevails again. Operations suspended on account of revolutionary disturbances since August, 1917. Property considered promising.

SAN XAVIER COPPER CO.

MEXICO

Idle. San Xavier, Sonora, Mex.

Officers: C. C. Rountree, pres.; Wm. Foster, sec.; W. C. Laughlin, mgr.

Inc. in Arizona. **Cap.**, \$1,000,000; shares \$1 par and holds direct title to lands through the Cia. Minera de Cerro Verde, S. A., inc. in Mexico.

Property: 1,440 pertenencias, 3,500 acres, 80 miles east of La Colorado in the Hermosillo district, Sonora; also 300 pertenencias lying 24 miles to the southward and about 4 miles north of the Yaqui river.

Letters returned in 1917.

SILVER SEAL MINING CO.

MEXICO

Mine at Pilaes de Teras, Sonora, Mex. Fred O. Colsen, lessee at last accounts.

Property: includes El Aguaje mine, 12 miles east of Nacozari, showing a fissure vein in andesite rock cut by granite and carrying narrow pay-streaks of gray copper, chalcopryite and galena ore. The mine has yielded ore assaying up to 15% copper and 20 oz. silver per metric ton. Property worked intermittently during recent years.

SOMBRERETILLO MINING CO., S. A.

MEXICO

Was controlled by the Sonora Central Mines Co., now out of business.

SONORA CENTRAL MINES CO.

MEXICO

Fully described Vol. XI, Copper Handbook. Passed away; foreclosure proceedings took place about 1913, but provided no cash for the bondholders, so they took the property. No reorganization of the Sonora Central was made, but a new company was formed, known as the Alamos Dev. Co.; E. M. Board, v. p., 1510 Dayton St., Chicago; Walter Strong, sec.-treas.; 1638 So. Michigan Ave., Chicago, Ill.

SONORA CHIEF MINING CO.

MEXICO

Idle. Office at last accounts: 219 Argyle Bldg., Kansas City, Mo. Mine near Suaqui de Batuc, Sonora, Mex.

Officers: Jas. E. Crosby, pres.; Dr. Moses T. Runnels, v. p. and treas.; R. A. Bruns, sec.; preceding, with C. D. Stoll and I. D. Waggener, directors.

Inc. July 18, 1904, in Arizona. **Cap.**, \$1,500,000; \$1 par.

Property: the Phoenix and Lakeside groups, 464 acres. The flotation was, it is believed, a crooked one. The property has no such showing as reported and described. Such veins as exist are tiny streaks a few inches wide, which in places contained very high-grade ore, chalcocite and perhaps whitneyite. Its location, on the far side of the Yaqui river, is such that even a remarkably good showing would not have been worth development at

the time the company was active. The property is totally devoid of merit. Idle several years.

SONORA COPPER MINING CO.

MEXICO

Idle. Office at last accounts: 895 So. Clarkson Ave., Denver, Colo.

Officers: Edward J. Wilcox, pres.; H. L. Peebles, v. p.; Fred W. Webber, sec.; C. A. Parker, treas., and L. J. Stark, directors.

Inc. May 17, 1910, in Colorado. Cap., \$10,000; shares \$1 par.

Property: 10 claims, 4 miles from San Felipe, in the Arizpe district, Sonora, and 62 miles from Posa on the S. P. R. R., developed by 820' of underground workings, showing a 12' vein, with some complex silver-lead-zinc ore.

SONORA COPPER SMELTING CO.

MEXICO

Idle. Last address: 424 Scarritt Bldg., Kansas City, Mo. Mine office: Noria, Sonora, Mex.

Officers: A. M. Conard, pres. and gen. mgr.; J. M. Lowe, v. p.; C. E. Kroh, sec.; W. R. Moore, treas.; preceding with J. G. Burnley, F. E. Reed, E. E. Axline, J. E. Kramer and Chas. L. Irons, directors.

Inc. June 25, 1908, in Arizona. Cap., \$3,000,000; shares \$10 par.

Company supposed to have been organized as successor of the Sonora Copper Co., but apparently owns only a 50% stock interest in that company, and title to the Mexican property is held in the name of the International Copper Ore Corporation, which is controlled, in some manner, by this company, the corporate relations being neither clear nor satisfactory. Annual meeting, 3rd Tuesday in December.

Property: about 500 acres, including the Cobre Grande, 123 acres, 3 miles east of Noria, the principal mine, is not considered worthy of the money spent upon it and the past history of the president is such that the company is regarded with much suspicion.

SONORA DEVELOPMENT CO.

MEXICO

Office: 601 New Ridge Bldg., Kansas City, Mo. Mine office: Cumpas, Sonora, Mex.

Officers: Charles M. Williams, v. p. and act. pres.; Col. Geo. M. Bowie, v. p.; John W. Amerman, sec.; W. A. Rule, treas.; with A. A. Potter, B. H. Rule, and A. D. Fetterold, directors; Y. Soto, Sonora agent.

Inc. in Arizona. Cap., \$2,500,000. Company absorbed the Goodlander Mining & Milling Co.

Property: 167 hectares, including the Nacozari Copper Queen, Don Genario, La Gran Republica, and Lady Goodlander, copper, silver, lead and zinc; Pittsburg group of 7 properties, silver; La Madrugada and El Nocturno, copper and silver; and Wostenholm, gold and silver. La Gran Republica is leased to James Nolan of Nacozari, shipping ore to Douglas, Ariz. The Nacozari Copper Queen, 65 acres, between Pilares de Nacozari and Bella Union mines of Moctezuma Copper Co., contains some remarkably rich ore.

As conditions appear to be more favorable under Governor Calles, company hopes to resume early in 1918.

SONORA EXPLORATION CO.

MEXICO

Estación Yzabal, Sonora, Mex.

Property: formerly held by the Florida Copper Co., in the vicinity of the El Tigre mine includes El Temblo, Last Chance, Texas, and other properties, carrying gold and silver-copper ore, developed by shaft.

Equipment: includes steam power and an air compressor. Idle.

SONORA MINING & DEVELOPMENT CO.

MEXICO

Office: 207 Spitzer Bldg., Toledo, Ohio. Works office: Toledo, Sonora, Mex.

Officers: A. E. Klauser, pres.; H. R. Klauser, v. p. and gen. mgr.; J. G. Meilink, sec.-treas.; and A. V. Baumann, directors.

Inc. 1904, in Arizona. Cap., \$5,000,000; shares \$1 par. Company operated in Mexico under the name of the Yaqui Smelting & Refining Co., S. A., which is incorporated in Mexico; cap., 100,000 pesos. Company is exempt from the payment of property tax for 20 years and also enjoys a 50%

reduction on the state tax for 20 years. International Trust Co., Boston, registrar; Frederick R. Tibbetts, Boston, transfer agent.

Property: about 154 hectares of mineral property, and 1,000 acres miscellaneous lands, including a smelter site and town site. Mine is reached by a branch of the Southern Pacific Railway, and company has a government concession for construction of an aerial tram line of 40 kilometers length. Lands are in San Antonio de la Huerta, San Javier and San Onavos, about 80 miles east of Torres and about 60 miles below Campo Santo Niño. The principal property is the Veta Grande mine, about 10 miles from the smelter, said to show a gossan 40' wide, outcropping for a quarter mile. Property also includes the Almeda, Plomosa, Isabella, Moctezuma, San Francisco, Caballos, Ferruginosa, Independencia and Gerberina mines, carrying mainly gold-silver-copper ores, with some auriferous silver-lead ore.

Equipment: the reduction works include a sampler, smelter and power plant, with necessary adjuncts. The 150-ton smelter has a 36" circular Allis-Chalmers blast furnace, for use interchangeably on lead and copper ores, and a smaller furnace for copper only. The power plant includes two 80-h. p. water-tube boilers, 2 engines, an Erie high-speed engine and a No. 7 Connorsville blower, for furnace blast. The lead refinery building has a softening furnace, refining furnace and 2 desilverizing kettles, operating on the Parks process. The silver refining plant includes 2 cupel furnaces, with blast attachments, 1 bullion furnace, 1 muffle furnace, and necessary pots and moulds, with a bullion vault. Idle since 1910.

SONORA-PACIFIC MINING CO.

MEXICO

Noria, Sonora, Mex. Ira E. Bowers, gen. mgr. Inc. 1911, as the successor of the Llano Copper Co.

Property: 10 groups, 526 hectares on Caracahui mountain, 3 miles east of Noria, the nearest rail point, also 5,000 hectares of ranch lands. Lands show limestone cut by intrusions of diorite and porphyry, with a quartz vein of 3' to 50' estimated width, traceable 6,000' on the company's claims, which is reported to show bunches of ore carrying chalcocite, bornite and chalcopyrite, with a little native copper, that will average about 7% copper, 6 to 10 oz. silver and \$2 to \$5 gold per ton, as developed.

Development: consists of the 105' No. 1 shaft, No. 4 shaft of 800', and No. 7 shaft of 600', with tunnels of 50', 200', 577' and 750'. Orebodies developed so far are too small and too few for commercial production.

Equipment: includes a 125-h. p. steam plant, with 2 hoists, and a 6-drill Ingersoll-Rand compressor. Presumably idle. Unfavorably regarded.

SUPERIOR BONANZA MINING CO.

MEXICO

Controlled through stock ownership of 60,000 shares by Greene Cananea Copper Co.

Office: Cheyenne, Wyo. **Head office:** Cananea, Sonora, Mex.

Officers: George Kingdon, pres.; John Cuddihy, v. p.; C. Sites, v. p. and sec.; J. V. Montague, treas.-asst. sec.; J. F. Carmichael, asst. treas.; with A. E. Peterman, A. S. Cox, A. C. Cole and W. L. Thomas, directors.

Inc. in Wyoming, Aug. 31, 1907. **Cap.**, \$1,250,000; shares \$10 par; 74,923 issued. Owns the entire capital stock of Bonanza Mining Co., S. A.

TECOLOTE COPPER CO.

MEXICO

See West Coast Smelting & Refining Co.

THARSIS-YORK CO.

MEXICO

Address: Thomas Pryor, 850 Putnam Ave., Brooklyn, N. Y. **Mine office:** Nacozari, Sonora, Mex.

Officers: Herbert E. Young, v. p.; Thomas L. Pryor, sec.; Willard T. Carleton, treas.; preceding, with R. C. Heath, E. C. Williams, W. R. Sparrell and Wm. J. Maloney, directors.

Inc. April 29, 1909, in Delaware. **Cap.**, \$1,000,000; shares \$5 par; fully paid and non-assessable; issued 145,761. Boston Safe Deposit & Trust Co., registrar and transfer agent, Boston, Mass. Annual meeting, 2nd Wednesday in April.

Property: 12 claims, 1,015 acres, in 6 groups, the Esquina, the main group, adjoining and lying between the Nacozari Consolidated Copper Co.

and the Pilares mine of the Moctezuma Copper Co., with 1 shaft near the boundary of the latter. There are several attractive orebodies on the property, 3 partly developed.

The Esquina claims carry a dike-like mass of red-stained mineralized porphyry, similar to the outcrop of the Pilares orebody and on the same line of fracturing. This outcrop is 600' wide and extends across the claims. Like the Pilares it has a footwall of white rhyolitic breccia, a hanging wall of andesitic breccia, and the lode filling is an altered, sericitized, silicified and mineralized rhyolite, supposedly with copper and iron sulphides below water level.

Development: includes considerable prospect work, with shafts of 168' and 170', latter planned to be sunk to 300' with tunnels of 330', 107', 268' and 485', the mine having about 1,500' of workings. The company was driving a crosscut tunnel to cut the lode at 800' in and to drain the bottom of the 168' shaft and continue across the ore zone. This mineralized belt has thus far shown only bunches of ore, but is expected to develop ore similar to that of the Pilares mine.

Equipment: includes an 80-h. p. electric plant, with a 25-h. p. hoist and a 3-drill air compressor, and the company has the use of the shops of the Moctezuma Copper Co. Was forced to close down in 1914, owing to revolutionary disturbances, and has been idle since then. Property considered promising and development well planned.

TIGRE MINING CO., S. A.

MEXICO

See Lucky Tiger Combination Gold Mining Co.

TRANSVAAL COPPER MINES CO. OF UTAH

MEXICO

Formerly Transvaal Mining Co. of Utah.

Mine and works office: Cumpas, Sonora, Mex.

Officers: Louis J. Hauck, 433 Dayton St., Cincinnati, Ohio, pres.; Theo. M. Foucar, 1st v. p.; Percy Andrae, 2nd v. p.; Alfred Vogeler, sec.-treas., with Louis Hehman, W. C. Geis, Leo G. Cloud, Bernhard Freiberg and J. J. Haas, directors.

Inc. Aug. 4, 1917, in Utah, as a reorganization of the Transvaal Mining Co. of Utah, which was a reconstruction of the Transvaal Copper Co. **Cap.**, \$4,000,000; shares \$5 par. Annual meeting 1st Tuesday after 1st Monday in May.

Property: 3,500 acres of mineral land, including a 50-acre smelter site with 75-acre townsite adjoining; La Piedra Verde ranch of 15,000 acres and an interest in the San Nicolas Tolentino ranch, 26,000 acres, including timber and grazing lands.

Geology: company's holdings cover the heart of a mountainous district showing widespread rock alteration with acid stream waters, bleached and iron-stained areas, and "chimneys" or "pipes" of silicified breccia. The tract shows granitic exposures, part of an underlying batholith, cutting recrystallized volcanic breccias, baked by contact action. In the Transvaal mines, both granite and this cover of fragmental rock are cut by irregular mineralized fractures along which orthoclase, carrying chalcopyrite, fluorite, chlorite, and calcite have been deposited by pneumalytic action. The "pipe" or "chimneys" of brecciated material cemented by quartz, are mostly barren, but in some cases, as at La Verde and Cobre Rico, contain workable copper ores. It is a peculiar type of deposit and resembles the Calumet-Copper Creek deposits of Arizona, the Kamloops mine in British Columbia and the neighboring Washington mine, 4 miles W. of the Cobre Rico property.

Extensive drilling at La Verde, or the Transvaal mine proper, has developed a great tonnage of low-grade primary ore, averaging 1½% copper and estimated by the management at 3,000,000 or more tons, which will doubtless be treated some day by flotation methods. The drills have shown the ore to extend to a depth of 1,100'.

Development: the Cobre Rico mine has 2 shafts, No. 1 of 100' and No. 2 about 140' deep, with several tunnels and about 16,400' of workings, including diamond drilling developing several orebodies in a mass of brecciated rock, locally called trachite. Ore is estimated to average about 2% copper, 1 to

2 oz. silver and a trace of gold. Management estimates 2,500,000 tons available in this mine.

The Transvaal or Verde mine has shafts, 318' and 210' deep, former the main working shaft with about 5,000' of drift and crosscut work including several tunnels. This development has opened up considerable low-grade ore carrying chalcopyrite which can only be treated by concentration. Development near the mine by diamond-drill work has shown the existence of a large body, or bodies, of primary ore, the cores varying from a trace up to 17.85% copper and 46.8 oz. silver for 2' at 1,032' depth. About 10,000' of drill work had been done up to March, 1913, which shows that the orebody is somewhat irregular in shape and spotty in character but of fair average value.

Equipment: at the Verde shaft includes two 80-h. p. boilers, a steam hoist and air compressor. The water supply at this mine is bad, owing to its acidity. Management estimates between three to four million tons of concentrating ore available at this mine.

The Buckeye mine has about 10,000' of tunnel work, on a blanket vein of 6" to 4' thickness, showing ore reported to have given average returns of 12% copper and 8 to 10 oz. silver, with a trace of gold. There are about 5,000 tons of high-grade ore left in the mine and a considerable amount of low-grade ore of no present commercial value. The mine, however, has been thoroughly explored in the bottom, or lower tunnel level and the ore shoot found to have played out.

The San Nicolas mine is a silver property about 8 or 10 miles from the Transvaal. It shows a vein along an igneous contact varying from 1' to 4' in width, carrying silver-lead ore said to change to copper in the lower workings. The mine is reported to have yielded 6,000 tons of 60 oz. silver ore and still has between 2,000 and 3,000 tons of 50-oz. silver ore, but is locally regarded as practically worked out, though the limited amount of development work does not disprove the downward extension of the ore shoot. It is regarded as a promising prospect, especially for lateral development.

The Ultima Chanza mine has a 300' incline shaft and a 100' winze, with about 5,000' of workings, developing a fissure vein of 10" to 42" width. The management estimates 50,000 tons of ore in sight, averaging 10% copper, 5 oz. silver and a trace of gold. This property is a good, but small mine, needing further development. Equipment includes a steam plant and hoist.

The Guadalupe mine carries cupriferous iron ore, used for flux.

The nearest rail station is at Nacozari, 30 miles north, but the Cananea, Rio Yaqui y Pacifico railway has surveyed a line to within 9 miles of the smelter. The company has built about 35 miles of wagon roads and 25 miles of trails at a cost of \$50,000, with a maintenance charge of about \$5,000 yearly.

The main camp is at La Verde, 25 miles S. W. of Cumpas, where mining operations are centered. There are 20 buildings, including 3 power plants, machine shop, carpenter shop, smithies at the principal mines, 2 laboratories, a boarding house, general store, with a branch store at the smelter, a hospital, and several dwellings.

Smelter: at Cumpas, at an average distance of about 25 miles from the mines, was located at that point because of a good site and ample water supply, both lacking at the mines. Equipment includes a 125-ton 42"x120" El Paso Foundry & Machine Works water-jacket blast furnace, with room for 2 additional furnaces of the same size. There is a reverberatory furnace, variously rated by the company as of 20 to 50 tons daily capacity, and the works have a sampling mill, capable of sampling ore to feed 3 furnaces. The smelter power plant includes three 80-h. p. Babcock & Wilcox boilers, an Allis-Chalmers tandem-compound engine and a Connersville blower. This smelter was blown in, May 1, 1906, treating ores from the Buckeye and San Nicolás mines and doing a little custom business, producing matte shipped to the Laurel Hill works of the Nichols Copper Co., that was reported by the company as averaging 37%-40% copper, 100-140 oz. silver

and 0.1-0.5 oz. gold per ton. The smelter was blown out, Oct., 1907, and has been idle since.

From May 1, 1906, to Nov. 3, 1907, a period of 18 months, the smelter, in operation about two-thirds of the time owing to scarcity of freighting outfits, smelted 18,550 tons of ore having an average assay tenor of about 10% copper and 8 oz. silver for copper ore, and 2% copper and 60 oz. silver for silver ore, making 3,089 tons of matte, yielding 2,178,855 lbs. fine copper, 407,607 oz. silver and 240 oz. gold.

The extensive development work done on the property since 1909, shows the existence of small veins of rich ore and large deposits of low-grade ore. The property is a valuable one and will be worked on a large scale when given the rail connections now lacking, but absolutely essential to the successful exploitation of the ores.

TRANSVAAL MINING CO. OF UTAH

MEXICO

Reorganized as Transvaal Copper Mines Co. of Utah, which see.

TRENTON-SONORA MINING CO.

MEXICO

Mine office: Tarachi, Sonora, Mex.

Property: 4 miles S. of La Calera, includes the San José, Santa Edvigés, El Porvenir and other mines, carrying copper ores, with values mainly in silver. The San José mine is reported to show an 18" paystreak of highly auriferous chalcopyrite.

Development: by a 200' shaft, sunk on the vein, equipped with a hoist. There is a mill and a smelter. Probably idle owing to Mexican revolution.

UNITED MEXICAN MINES

MEXICO

Idle. Mine near La Verde via Cumpas, Sonora, Mex. O. L. Neer, mgr., Douglas, Ariz.

Property: 40 miles S. of Nacozari, includes the Veta Grande and Cerro Gordo groups, near the Transvaal mine.

Mines show rhyolite, granite and porphyry, with several orebodies occurring in fissure veins, and as breccia deposits between trachite and granite. Ores are copper sulphides.

VICTOR MINING AND SMELTING CO.

MEXICO

Office: 315 Schultz Bldg., Columbus, Ohio. **Mine address:** Cananea, Sonora, Mex.

Officers: S. D. L. Jackson, pres.; M. F. Cole, v. p.; F. P. Jackson, sec.-treas.; preceding, with J. S. MacLean, W. H. Sartain, C. Thornton, Chas. Schindler and C. A. Stillwagen, directors; W. A. Woodlief, fiscal agt.

Inc. May 9, 1905, in Arizona. **Cap.**, \$1,500,000, increased 1907, from \$1,000,000; shares \$10 par; issued, 90,000 shares. Title to property is held through the Guerrero Mining Co., legalized in Mexico. Annual meeting, 2nd Monday in January.

Property: 47 pertenencias, in 2 groups in the Magdalena district, about 12 miles S. W. of Cananea. The property shows fissure veins in granite-porphyry intruding sedimentary rocks. The veins are strong and well defined, very silicious and high in iron content.

Development: by a shallow shaft and 5 short tunnels, with a total of about 1,500' of workings, showing high-grade copper ore with small gold and silver values, in 2 veins of about 4' and 70' width, the wider vein showing evidences of considerable leaching. The mine has no power or equipment. Property closed down in 1914 owing to revolutionary disturbances in Mexico.

Mine was ordered sold at receiver's sale; Sept. 11, 1916, at Nogales, Ariz., but such sale could not be legal in Mexico.

WASHINGTON MINES DEVELOPMENT CO.

MEXICO

Office: Douglas, Ariz. **Mine office:** Washington Mine, via Huepac, Sonora, Mex.

Officers: F. O. Bostwick, pres.; Geo. Cass, v. p.; Albert Sames, sec.-treas.

Inc. 1911, in Arizona. **Cap.**, \$1,500,000; shares \$10 par; issued 130,000 shares.

Property: 27 claims, patented, 76 acres, with options on 200 acres additional in the Arizpe district, 60 miles from Nacozari, the nearest rail point. Claims show several big "pipe" ore deposits composed of brecciated rhyolite in dacite. Ore is reported to average 3.2% copper, 0.35% tungstic acid; 1.5 oz. silver and 25 oz. in gold.

Development: by 3 tunnels and 2 air shafts with a total of about 6,000' of workings said to show 600,000 tons of ore blocked out for stoping. Company plans development at depth by sinking a winze from No. 2 tunnel level, 313' below the outcrop, and expects to add 4 additional levels to the workings with the funds in hand.

Equipment: includes a small steam plant with hoist good for 500' and 50-ton concentrator. A mill was being erected in 1916 to treat tungsten ores.

Property promising, but needs railroad transportation for profitable working. Reported under option 1917 to Henry Hovland of Duluth.

WEST COAST SMELTING & REFINING CO.

MEXICO

Office: C. H. Kittredge, treas., 30 Church St., New York.

Property: at Tecolote, via Carbo, Sonora, Mex.

YAQUI CANYON COPPER CO.

MEXICO

Idle. Former offices: 408 Gumbel Bldg., Kansas City, Mo., and Suaqui de Batuc, Ures, Sonora, Mex.

Officers: at last accounts, A. J. Davies, pres.; S. M. Major, v. p.; W. T. Kerr, sec.; Frank B. Foster, treas.

Inc. in Ariz. Cap., \$2,000,000; shares \$1 par.

Property: 60 pertenencias, 148 acres, known as the Todos Santos and Great Republic mines, and a 50-acre smelter site, has contact deposits between limestone and porphyry, two under development, of 10' estimated average width, carry copper and lead ores, former said to assay 7% copper and 50 oz. silver, and latter 15% lead and 30 oz. silver, with a trace of gold. The principal property is an antigua.

Development: by 4 tunnels and 7 or 8 shafts.

Equipment: includes a steam plant, air compressor and a small smelter, with a 10-ton reverberatory furnace. Presumably idle as the region in which the mine is situated is notoriously unsafe since the Mexican revolution began.

YAQUI COPPER CO.

MEXICO

Office: 1 Madison Ave., New York. **Mine office:** Suaqui de Batuc, Ures, Sonora, Mex.

Officers: Wm. Sauntry, pres.; Dr. A. E. Magoris, v. p.; Hon. Geo. E. Green, sec.-treas., at last accounts.

Inc. 1902, in West Virginia. Cap., \$5,000,000; shares \$1 par.

Property: originally claimed to be 6,032 acres of mineral territory, and 119,284 acres of timber and grazing lands, also water rights to 25 miles of the Yaqui river, the mining lands being in the vicinity of Suaqui de Batuc, Campo Santo Nino, in the Sierra Madre, 120 miles from Hermosillo. Property is claimed to show antigua workings, iron ore and indications of coal. In June, 1906, the Montana de Cobre Co. was said to have acquired 1,000 pertenencias formerly held by the Yaqui Copper Co.

Development: begun, 1901, is by 2 shafts and 8 tunnels, and so far as can be learned the mine has shown practically no ore. Improvements include an engine and boiler house, office building and store.

The company was promoted with \$10,000 offices, magnificently furnished, in which visitors were royally entertained and given handsome ore samples. Company's literature was untruthful, its representations gross exaggerations, and its property practically valueless. It caused as much misery and harm as any mining fraud ever perpetrated. See Vol. VIII of Copper Handbook for full description.

Letters returned unanswered in Oct., 1916.

YAQUI MINING CO., S. A.**MEXICO**

Fundicion, Sonora, Mex. Geo. M. Ryall, pres., care Jonathan Club, Los Angeles, Cal. Inc. in Mexico.

Owned by Mexican Exploration & Mining Co., controlled by Pacific Smelting Co. Property is described under latter title.

YAQUI SMELTING & REFINING CO., S. A.**MEXICO**

San Antonio de la Huerta, Ures, Sonora, Mex. Is the Mexican operating company of the Sonora Mining & Development Co., and described under latter title. Fully described Vol. VIII of the Copper Handbook.

ZAMBONA DEVELOPMENT CO.**MEXICO**

Idle. Mine office: Minas Nuevas, Alamos, Sonora, Mex.

Officers: R. R. Coleman, pres. and treas.; Wm. S. Cranz, v. p.; C. W. Hayes, sec., at last accounts. Is supposed to be owned by Pacific Smelting Co.

Property: includes the Zambona, Purisima and San Antonio mines, said to have produced about \$7,000,000 worth of ore, in the past, carrying native silver, argentite and chalcocite, with values largely in silver. Developed to depth of 730', and by a long crosscut tunnel. There remain about 200,000 tons of low-grade disseminated ore on the dumps, available for milling and cyaniding.

Equipment: includes a steam and electric plant, a 30-stamp mill having 4 Huntington mills and 3 tube mills, and a 100-ton cyanide plant. Idle and company probably dead.

STATE OF TEPIC**LA JARA GOLD MINES CO.****MEXICO**

Idle. Office: J. W. Dunham, 501 Fifth Ave., New York.

Officers: W. P. Dunham, pres.; E. G. Thomas, v. p.; J. W. Dunham, sec.-treas.

Inc. in Maine. Cap., \$3,000,000; shares \$1 par; non-assessable; 2,500,000 issued. Is the holding company of La Jara Gold Mines Co. of Mexico. Organization and titles are certified by H. L. McNair, attorney, 120 Broadway, New York.

Property: the old Natividad group of claims, 298 acres, at La Jara, territory of Tepic, Mexico. Examined by C. E. Gillette, E. G. Thomas, U. S. York and I. J. Hall. Claims said to show several large quartz veins in andesite carrying gold-silver ore. Openings are mostly by tunnels. Mine was under development until July, 1916, when conditions in Mexico became impossible and mine was left in charge of a Mexican superintendent. Reported late in October, 1917, that property would be reopened as soon as conditions warranted.

In 1917, company acquired an option on the Jim Crow-Imperial group of patented claims, about 123 acres, in the Steeple Rock district, New Mexico, about 7 miles E. of Duncan, Ariz. Said to have made ore shipments in the past running from \$22 to \$500 a ton in gold and silver.

STATE OF ZACATECAS**EL EDEN; COMPANIA MINERA y BENEFICIADORA****MEXICO**

Idle, owing to revolution. Mine at El Eden, Zacatecas, Mex. Francisco Llamasa, pres. and gen. mgr.; Enrique Gutierrez, sec.; Luis Colina, supt.

Inc. 1905, and reorganized 1907, in Mexico. Cap., 600,000 pesos; shares 100 pesos par.

Property: 102 hectares, is a silver-gold mine with incidental copper.

Development: by 8 shafts, deepest 210', and 2 tunnels aggregating 1,120' in length, with considerable underground workings, developing ores of gold, silver, copper, lead and zinc.

Equipment: includes 40-stamp mill with 2 Krupp tube mills, 6 Wilfley tables and 6 Johnson tables; company planned installing a cyanide plant, to treat a large amount of tailings accumulated, the dump being estimated to average 400 to 500 grams silver and 3 to 5 grams gold per metric ton.

ESMERALDA; NEGOCIACION MINERA.

MEXICO

Idle. Property: at Chalchihuites, Sombrerete, Zacatecas, Mex., includes the Anaconda, Esmeralda and La Luz mines, developed by shafts and tunnels, carrying argentiferous and auriferous lead and copper ores.

LEONORA y HUERTA; MINAS.

MEXICO

Office: care James M. Daniel, owner and gen. mgr., April 16, Aguascalientes, Mex. Mine near Villanueva, Zacatecas, Mex.

Property: 100 acres, with 500 acres miscellaneous lands, in the Jalapa district, said to show a fissure vein in porphyry, of 10' average width, carrying galena, argentite, melaconite and azurite, with clay gangue, and about 5% copper, 10% lead, 200 oz. silver and 29 milligrams gold per ton. Mine was opened in 1820, and reopened 1883.

Development: by shafts of 300' and 1,000', with about 1 mile of underground workings.

Equipment: includes steam power and a concentrator. Concentrates and smelting ores shipped, 75 miles, by pack train, to the Aguascalientes smelter, when operating. Presumably idle. No returns secured.

MAGISTRAL, S. A.; NEGOCIACION MINERA DEL.

MEXICO

Office and mine: Aptdo 22, Zacatecas, Zacatecas, Mex.

Officers: Dudley H. Norris, pres.; Chas. O. Gilbert, mgr. Company, a close corporation, is said to have paid for improvements from net earnings. Owns the Refugio de Magistral and San Roberto mines.

The San Roberto mine, about 300' deep, has iron ore carrying small values in copper, silver and gold, used for fluxing, and also has a little high-grade silver and silver-lead ore.

The Magistral mine carries chalcopryrite and galena, and ore is produced returning about 6% copper and up to 200 grams silver per metric ton.

Development: by a 900' tunnel and 2 shafts, 1 of 400' depth, the second, with 3 compartments, is to be sunk 1,500'.

Equipment: includes a 40-h. p. gasoline and 150-h. p. steam hoist, boiler plant, compressor, etc.

The reduction plant, at Magistral siding, on the Mexican Central line, connected with the mine by a narrow-gauge railway, includes a 50-ton sampling mill and a 200-ton smelter. Slags are highly silicious, and matte is sent for conversion to the Torreon smelter. Works treat about 2,000 tons of ore monthly, including a considerable amount of custom ore. About 150 men employed. No recent returns secured. Property practically idle owing to Mexican conditions.

NATIONAL SMELTING CO.

MEXICO

Properties said to be lost to company through the revolution in Mexico and a claim for indemnity has been filed with Dept. of State. Practically dead. See Vol. XI for description.

PROTECTORA y ANEXAS; COMPAÑIA MINERA LA.

MEXICO

San Salvador, Mazapil, Zacatecas, Mex. Percy A. Babb, pres. and gen. mgr.; J. L. Miranda, sec.

Inc. 1907, in Mexico. **Cap.**, 100,000 pesos; fully paid.

Property: 68 hectares, including La Protectora y Anexas and San Francisco mines carrying oxide ores, with copper, lead and zinc occurring as re-

placements in limestone. Low-grade ores average 2.5 to 5% and high-grade ores 12 to 19% copper. Mine has a depth of 100 meters with about 1,500 meters of workings.

Equipment: includes a 15-h. p. gasoline hoist. Was working with about 200 men, early 1913, and shipping around 250 tons of high-grade ore monthly. No recent reports received and presumably closed down.

SAN BERNABE y ANEXAS; COMPANIA MINERA.

MEXICO

Zacatecas, Zac.; Mex. C. A. Bentley, mgr., at last reports.

Property: 25 hectares, including La Confianza, El Faro and La Fama mines, west of the Malanoché mine, includes the oldest mine in Zacatecas, discovered about A. D. 1546, which was a considerable producer of silver. Property formerly was under option to an English company, but option was dropped after unwatering the old shaft. Ore is copper, associated with some lead, values being mainly in silver. Idle.

SAN BERNARDO MINING CO.

MEXICO

Is the Mexican incorporation of the Southern Sonora Development Co., controlled by the Sonora Central Mines Co.

SAN ROBERTO MINING CO.

MEXICO

Zacatecas, Zacatecas, Mex. C. A. Bentley, gen. mgr.

The mine, opened to depth of 300', shows copper, lead and zinc ores, occasionally assaying up to 30% copper with good gold and silver values. The mine has given a limited production of excellent ore.

In a letter entitled "C. A. Bentley vs. American Metal Co.," in Mining and Scientific Press of April 7, 1917, Otto Sussman, v. p., of the American Metal Co. contradicts a previous statement concerning the San Roberto Company. C. A. Bentley, acting for the San Roberto Mining Company, made a contract with H. A. Houser, of the Compañía Minera y Compradora de Metales, the latter to purchase 10,000 tons of zinc ore. Houser tried to sell this ore to the Compañía de Minerales y Metales Compañía Minera de Penoles, and the American Metal Co., but they refused it as the ore contained under 25% zinc. Houser had, it is said, no authority to act for these three concerns. Houser's company being financially irresponsible the suit against it was dismissed, apparently as his reward for testifying against the American Metal Co., showing evidence of complicity between Houser and Bentley. Eventually the American Metal Co. was adjudged responsible for the contract, with damages at \$60,000 to cover alleged profits that might have been made under the contract. Evidence showed no connection of the American Metal Co. in the contracts and the case has therefore been appealed.

SANTA ROSA MINING CO., LTD.

MEXICO

Subsidiary of the Exploration Co., Ltd.

Office: T. D. Dillans, 24 Lombard St., London, Eng, E. C.

Directors: R. T. Bayliss (chairman), S. A. Cloman, J. E. D. Ryder, J. H. M. Shaw and the Earl of Hardwicke.

Inc. Nov. 24, 1910, in England. **Cap.**, £150,000; shares £1 par; 100,007 issued. **Debentures:** £35,500.

Property: in the Mazapil district, Zacatecas, Mexico. Since 1913 the mill has not operated, owing to the revolution.

TRES SEÑORES MINING CO.

MEXICO

Mine: at San Pedro Ocampo, Zacatecas, Mex.

Property: includes La Providencia and La Poderosa mines, near San Pedro Ocampo, yielding ores that have given smelter returns of 10% copper, 3,234 grams silver and 120 grams gold per metric ton. Closed down at last report.

AFRICA

CAPE COLONY

CAPE COPPER CO., LTD.

CAPE COLONY

Secretary: P. J. Franks, 9 Queen St. Place, London, E. C., England.
Mine office: O'okiep, Little Namaqualand, Cape Province; James Crozier, gen. supt. **Works office:** Briton Ferry, Glamorganshire, Wales. T. Blair Reynolds, chairman; John Taylor, J. M. V. Money-Kent, Marcel Paisant, John E. Champney, directors; John Taylor & Sons, mgrs.; J. Crozier, supt. Cape Colony mine and Chas. Olden, supt. Rakha Hill mine, P. G. Timms, chief engr.; N. E. Moffatt, traffic mgr.; H. Phillips, smelter supt.; Dr. A. de W. Allan, chief surgeon.

Inc. April 30, 1888, as a reconstruction of Cape Copper Mining Co., Ltd., under the laws of Great Britain, capitalization £950,000, in 75,000 cumulative 6% preferred shares, of which 45,000 are issued and fully paid, and 400,000 ordinary shares, par £2; issued 360,000. Annual accounts are made up to April 30, at the Cape, and to August 31 in London and India, and are submitted in December.

Balance sheet (1916) showed assets of £1,632,160 of which estates, railways, jetties, mines, smelting works and machinery aggregated £895,320; stocks and supplies, £120,293; cash receivable and on hand, £63,056; investments in various government stocks, etc., £116,308; copper and metal in stock, £407,544. Profit and loss was £69,077. Profit and loss account showed mining costs, etc., of £104,745 and total profits from metals, interest, etc., £269,840; balance as carried down, £131,248 with that of 1915, £25,674 gave £156,923 as total balance. Of this £87,846 was paid as taxes and dividends.

Profits have ranged from a net loss of £6,493 17s. 9d. in 1902, owing to interruption of business through the Boer war, this being the only year in which no profit was earned, up to the maximum profit of £379,910 in 1907, with profits of £144,366 in 1908; £90,223 in 1909; £124,659 in 1910; £60,862 in 1911, £80,494 in 1912, £83,500 in 1913, £17,244 in 1914, £33,212 in 1915, £131,248 in 1916, giving a total net profit to Jan. 1, 1917 of £4,144,667, in addition to which the Cape Copper Mining Co., Ltd., paid dividends, 1864-88, of £1,324,375 representing £67 13s per share on original £10 shares, £8 paid in. The present company has paid dividends to Jan. 1, 1917, amounting to £3,036,750 on ordinary shares and £391,725 on preference shares.

On Jan. 1, 1918, 1s. 9.6d. on cum. pfd. shares, and 3s. on ord. shares will be paid.

Property: principal mines of the company are in Little Namaqualand, Cape Colony, lands including about 280 acres of freehold and a few leasehold tracts. The first mines were opened, 1856, by Phillips & King, and were taken over, 1860, by the predecessor of this company. Principal mines 1916, are the O'okiep, Nababeep South, Nababeep North and Narrap mines in Cape Colony; and the Rakha Hills mines in India, with a number of idle mines and prospects, among which is the Terra Nova mine in Newfoundland. Ore contains chalcopyrite, with limited quantities of bornite and chalcocite, intimately associated with pyrite. These irregular deposits of

massive pyritic ore are associated with basic igneous dikes, intrusive in granite and gneiss.

Cape Colony Mines.

The O'okiep mine, long the principal mine, has dwindling ore reserves, estimated, 1916, at only 6,000 long tons, though production has remained practically unchanged for some years and was 13,496 tons net dry weight of 11.22% copper tenor in the fiscal year 1916, containing 151,527 units. It is estimated that there are 120,000 tons of 4% copper ore at the surface. About 514' of drifting was done during 1916.

The NababEEP mine, 5 to 6 miles west of O'okiep, opened 1890, includes the NababEEP South, now the principal producer, and has reserves, estimated, April 30, 1916, at 120,000 tons of 5% ore, production for year ending that date being 70,677 long tons of ore assaying 3.7% copper, containing 261,827 units. Of this production 24,959 tons were from quarrying and open cuts. The returns of the previous year were 68,141 tons of 4.35% copper. The mine is developed by tunnels and a shaft.

The NababEEP North mine extracted 1,326 tons of 4.96% copper, principally from the capping, and containing 6,581 units of copper.

A summary of combined outputs from North and South mines showed an extraction of 72,003 tons, of average assay of 3.72% and containing 263,409 units of copper as compared with 69,798 tons assaying 4.41%, containing 307,909 units of copper for previous year. The average grade of mineral has decreased somewhat in value. Development work for year totaled about 1,560'.

The Narrap mine, about 1 mile east of the O'okiep East, with somewhat similar ore, yielded 4,494 long tons of 5.37% ore in 1916, containing 24,130 units of copper, as compared with 2,692 tons, assaying 4.79% the previous year since the close of the financial year operations have been suspended to effect economies because of the war. This property has an aerial tram, electric hoist and ore crusher. The Narrap South mine, opened to a depth of 120', is without important developments.

The Spektakel mine, 28 miles west of O'okiep, is an idle, old mine, having orebodies both in granite and basic intrusive rocks.

The Carolusberg mine, about 6 miles southeast of O'okiep, opened by tunnel, and the Carolusberg East mine, about 2 miles east of the Carolusberg, are both idle.

Other idle properties include the Flat mine, 4 miles north of NababEEP, which was reopened, 1907; the Kopperberg mine near the Carolusberg, about 5 miles southeast of O'okiep, and the Coetzee mine, which was abandoned and plant removed several years ago.

Electric power has been substituted for steam throughout the principal works, the central power station at the O'okiep mine having 2 suction gas engines, with the old steam plant held in reserve for emergencies.

Reduction works at the mines include smelters at O'okiep and NababEEP, the former closed down 1912, the ore from both mines being treated in the enlarged NababEEP plant, 1913. In 1916, there passed through the furnaces 91,207 tons of ore, slag and flue dust. Production of the smelter is matte of 48 to 50% copper tenor, shipped to the Briton Ferry works for resmelting and refining. For 1916 the average assay of the regulus from the two furnaces was 43.83% copper.

The company owns a 99-mile railway, with 16 miles of sidings, running from O'okiep to Port Nolloth, where there are docks, wharves, cranes, tugs and lighters for the receipt and dispatch of freight. The line is laid with 32, 37 and 50-lb. rails. Freight traffic for fiscal year ending 1916 was 91,250

long tons. The company also owns 4 tugs at Port Nolloth. A tram line connects the principal mines with the smelters. There are about 1,500 men employed at mines, smelters, docks, etc.

In addition to its mines in South Africa, the company has the Terra Nova mine, in Newfoundland, which produced 6,265 tons, assaying 2.41% copper and 37.23% sulphur. No output at present because of high freight rates: Ore reserves estimated at 10,630 tons. Properties in the United States, formerly held under option, were surrendered, 1910, but the company secured title to some claims in Alaska, on which no work is planned until a railway reaches the district.

Rakha Hills Mine—India.

The company has also taken a lease on the Rakha Hills, or Rajaoka property, at Surda, India, and spent £32,058 on its development. This mine shows an extensive belt of cupriferous schist, in blanket formation, with seams of copper ore of 2 to 6% tenor. Development is by several shafts, the main shaft showing 236,401 short tons of 4.12% copper developed and 43,372 tons at 2.93% probable ore; and the No. 4 shaft showing 72,013 tons of 3.74% copper developed and 4,423 tons of 2.51% copper as probable ore. In addition to this there are 36,939 tons of broken ore on surface averaging 3.23% copper, making a total ore reserve of 393,148 tons of about 3.89%. During 1910-12, a number of boreholes were drilled with a total of 9,700', proving the copper belt for nearly 1¼ miles. Development work to March, 1916, amounted to 10,829' in Main shaft section and 1,936 in No. 4 shaft, or a total of 12,765, an increase over 1915 of 366' of drifts. In addition to this there has been done 11,260' of winzes, raises, crosscuts, etc. The main shaft is 1,126' deep, the No. 4, 423'; No. 5, 328', and No. 6, 569'. The new construction plant has been completed and trial runs made. Entire mill was put into operation in Oct., 1916. The smelter plant is progressing rapidly. New equipment, such as transmission lines, steel head frame and equipment at Main shaft, compressor and power plants, etc., have been installed. Property is considered very promising.

Briton Ferry Smelter.

The Briton Ferry smelter, which is the largest in Wales, in addition to treating the company's own ores, does a general custom business, smelting the ores of the Namaqua Copper Co., Ltd., under contract, treating 13,879 long tons of Namaqua ore and 883 tons of Namaqua matte of 54% copper tenor in 1906. The Briton Ferry works are located on the Great Western and Rhondda railways, also having canal connection with Swansea. receiving ores mainly by rail. The works have revolving cylindrical calciners up to 80' in length, heated by gas, and four 70-ton blast furnaces, making matte. Ores are smelted, without calcining, in reverberatories, to a 76% white metal, which is refined by the Nichols direct method, by which some of the white metal is calcined and mixed with uncalcined white metal, the consequent reaction eliminating the remaining sulphur. Tilt Cove sulphide ores are burned in kilns for their sulphur contents, fumes going to an acid plant, which makes 30,000 tons of chamber acid yearly. The works have a double concentric chimney of steel and concrete and a telpherage plant for handling material. In 1906 the Briton Ferry works produced the equivalent of 10,212 long tons of fine copper, of which 733 tons were turned out as bluestone, and output was increased, 1909-10. The works include an electrolytic refinery, constructed 1912.

Production: of the African mines has been as follows: 8,960,000 lbs. fine copper in 1901; 6,061,000 lbs. in 1902; 10,371,200 lbs. in 1903; 12,264,000

lbs. in 1904; 11,256,000 lbs. in 1905; 8,825,600 lbs. in 1906; 9,475,200 lbs. in 1907; 10,035,200 lbs. in 1908; 10,404,800 lbs. in 1909; 9,867,200 lbs. in 1910. Later metal figures are not available, but in 1914-15 the ore output was 81,496 tons, and in 1915-16, 84,173 tons. In July, 1917, 4,346 tons of 3 to 6% ore yielded 360,640 lbs. copper. In August smelting was suspended through coke shortage.

The management has been criticized occasionally for not adopting the latest methods and machinery, but the circumstances of the case have precluded as rapid advances in this direction as would be warranted were the company mining enormous orebodies. The record of the Cape Copper Co., Ltd., as a steady dividend payer, for 40 years past, is perhaps the best answer to such criticisms, founded upon part misconception of the facts. The company issues full monthly reports to stockholders that are models, and could be imitated by other companies to the advantage of the investor.

NAMAQUA COPPER CO., LTD.

CAPE COLONY

Head office: A. W. Outram, sec., 3 Fenchurch St., London, E. C., England. **Mine office:** James Garland, Concordia, Cape Colony, South Africa.

Officers: William Rich, managing director; Thomas V. Anthony, H. von Berg, F. J. King, C. L. H. Loeffler, directors.

Inc. April 23, 1888, in England. **Cap.**, £200,000; shares £2 par; 94,331 issued.

Balance sheet for 1916 showed ore sales amounting to £249,111, of which £78,407 was profit, after writing off depreciation, etc. Dividends absorbed, £61,314. There was carried forward £16,241. Reserve fund was £70,000.

Dividends: since 1888 total 426%, including 25% for 1916.

Property: 680 acres at Concordia, Little Namaqualand, Cape Colony, South Africa, known as the Tweefontein, Wheal Julia, Henderson's and Hester Maria.

Development: in 1916 totaled 1,769'. Exploration in the Tweefontein was rather disappointing; the eastern section is being prospected. Results in the Wheal Julia and Henderson's were also not very encouraging.

Ore reserves: estimated at 51,264 tons (40,000 in Tweefontein), containing 6,630,000 lbs. of copper, or 6.5%, a decrease of 15,467 tons. Tailings in reserve of 3 to 5% tenor, amount to 59,000 tons.

Equipment: mining plant, sorting plant, mill and Elmore flotation plant, briquetting plant, precipitating tanks, smelter and power plant.

Production: in 1916 the smelter reduced 32,958 tons of mixed ore, etc., yielding 3,763,200 lbs. of copper.

GOLD COAST COLONY

ABBONTIAKOON MINES, LTD.

WEST AFRICA

Office: E. Price, sec., 19 St. Swithin's Lane, London, E. C., England.

Officers: E. Davis, chairman; W. A. Aikin, Lord Brabourne and the Earl of Verulam, directors. S. H. Ford, supt. engr.; Consolidated Gold Fields of South Africa, cons. engrs.

Inc. Feb. 24, 1909, in England. **Cap.**, £800,000; shares 10s. par; 1,273,601 issued.

Revenue in 1915 totaled £261,024, of which £51,490 was net profit. Adding previous balance there was available £66,889, of which £31,834 was distributed and £35,055 carried forward.

Dividends: in 1914, 20%; in 1915, 5%.

Property: 918 claims (1½ acres each) near Tarkwa, Wassau, Gold Coast Colony, West Africa.

Development: by 3,200' shaft. Reserves are given as 429,381 tons of \$10.20 gold ore.

Equipment: 25 stamps, tube-mills, and cyanide plant of 12,000-ton monthly capacity.

Production: in 1916 was 117,885 tons yielding £231,000. Costs are about \$6.50 per ton.

ABOSSO GOLD MINING CO., LTD.

WEST AFRICA

Office: 460 Salisbury House, London, E. C., England.

Directors: D. H. Bayldon, M. Attenborough, T. F. Dalglish, F. H. Hamilton and Sir J. S. Hay; E. W. Spencer, supt.

Inc. June 18, 1901, in England. **Cap.**, £400,000; shares £1 par; all issued.

Statement for year ending June 30, 1916, showed a profit of £25,024. A dividend absorbed £20,000. Adding previous balance, there was carried forward £35,646.

Dividends: since 1905 total 65%, 5% being paid in 1916.

Property: in the Wassau district, Gold Coast Colony, West Africa. Ore reserves are estimated at 237,280 tons, worth \$7.80 per ton.

Equipment: complete for mining, also 50 stamps, tube mill, grinding pans and cyanide plant.

Production: during the last financial year was £179,459 from 113,300 tons. Costs were \$6.14 per ton.

ASHANTI GOLDFIELDS CORPORATION, LTD. **WEST AFRICA**

Office: H. Morgan, sec., 6 Southhampton St., Holborn, London, E. C., England.

Directors: Earl of Bessborough (chairman), J. Colman, G. L. Johnston and C. W. Mann. J. S. Watkins, mgr.; W. R. Feldtmann, cons. engr.

Inc. May 25, 1897, in England. **Cap.**, £250,000; shares 4s par; 1,103,057 issued.

Statement for year ended June 30, 1916, shows a profit of £173,281, of which £154,428 was paid in dividends; £89,052 was carried forward. Reserve fund stands at £117,375.

Dividends: since 1900 total 752%, 50% being paid in 1916.

Property: 100 sq. miles at Obuasi, in Gold Coast Colony, West Africa. Mine is the largest producer in the region.

Geology: the Obuasi shoot occurs in disturbed ground, close to the intersection of two fissure planes. The normal fissure filling or vein formation is a brecciated graphitic schist, in places very friable. The main vein is a solid quartz body 1,000' long on some levels, and from 3 to 40' wide. The ore, owing to parallel streaks of graphite, has a banded structure. Some gold is free, the remainder being in pyrite and other sulphides. The Ayeinm shoot, in the same main fissure, is pear-shaped in horizontal section, being 700' long and from 4 to 60' wide. Gold content in both shoots is erratic.

Development: by shafts to 2,000' depth. Mining is rendered difficult by the weakness of the containing formation, the irregular and considerable width of the quartz, the flat pitch of the shoot and the graphitic selvedge on the footwall. Reserves at Sept. 30, 1916, were 436,600 tons, assaying \$24.90 per ton. Ore extraction costs \$2 and development \$1.50 per ton. Methods are described by H. I. Johnston in the Mining Magazine of Sept., 1917.

Equipment: complete for mining, with 50 stamps, 7 ball mills, Edwards' roasting furnaces, fine grinding and cyanide plant of 15,000 tons monthly capacity.

Production: in 1916, 136,994 tons yielded £475,958 at a cost of 44s 7d (\$10.70) per ton, including development and depreciation. Total output to date amounts to several millions.

KONGO

TANGANYIKA CONCESSIONS, LTD.

KONGO

Office: Friars House, New Broad St., London, E. C., Eng. **Mine offices:** Kambove, Katanga, Belgian Congo, and Kansanshi, Northwestern Rhodesia.

Officers: Tyndale White, chairman; Robt. Williams, managing director; G. C. Hutchinson, Lord Arthur Butler, T. P. Heyvaert, Thos. Honey, Sheffield Neave, and C. F. Rowsell, directors; L. Scotland, sec.; Robt. Williams & Co., mgrs. and engrs.

Inc. Jan. 20, 1899, in Great Britain. **Cap.**, £1,000,000. Original capitalization was £100,000, successively increased Dec. 1901, to £184,000, in 1902 to £194,000, in 1903 to £264,600, in April, 1905, to £450,000, in July, 1905, to £525,000, and in Nov., 1906, to present amount; shares £1 par; issued 980,098 to Dec. 31, 1916. Debentures £2,600,000 authorized, at 5%, in denominations of £8; outstanding 2,176,624 at Dec. 31, 1916. Col. Sir Howard Melliss, and Hon. Arthur Stanley, are trustees for the debenture holders. The debentures are redeemable at par Jan. 1, 1917, but owing to the war the Court granted until after it was over to pay interest, but coupons No. 16 to 19 have been paid.

The property of the company, Dec. 31, 1916, consisted of a 39.3% share interest in the Compagnie Union Minière du Haut-Katanga, amounting to 50,000 shares of £100 par and 48,000 dividend shares; 75% of the issued stock of the Rhodesia-Katanga Junction Railway & Mineral Co., Ltd., amounting to 500,750 ordinary £1 shares, 44,500 B 1s. shares, the Kansanshi copper mine having been sold to this company; 1,600 shares of £250 par in the Compagnie du Chemin de Fer du Katanga; £2,700,000 stock of Companhia do Caminho de Ferro de Benguela; 2,297 shares of £4 each of the Intertropical Anglo-Belgian Trading Co.; and £5,000 of the 3% debentures of the Rhodesia Railways, Ltd.

The Tanganyika Concessions, Ltd., has an arrangement with the Zambesia Exploring Co., Ltd., by which the latter is ready to finance the former until the company is independent. The Zambesia Co. has practically the same officers as the Tanganyika, and floated the latter, the former having a capitalization of £870,000, shares £1 par, with 686,963 shares issued, fully paid, and an authorized debenture issue of £250,000, secured by 100,000 shares of Tanganyika and £200,000 5% debentures of Benguela Railway Co. The Zambesia Exploring Co., Ltd., paid a 100% dividend Feb. 7, 1896, and for the year ending June 30, 1912, showed a profit of £13,468. The accounts for the year ending Sept. 30, 1912, submitted May, 1913, show a loss of £136,116, compared with loss of £226,787, for 15 months ending on like date 1911, both amounts being deducted for share premium account.

This company was formed to acquire from the British South Africa Co. a 2,000 sq. mile concession in Northern Rhodesia for a terminal and town site of the Cape to Cairo railway at the S. end of Lake Tanganyika; a 2-year exclusive right to prospect and locate for minerals in an area of 2,000 sq. miles N. of the Zambesi, and to locate 1,000 claims in British South African territory. For these concessions, the company gave £60,000 in fully paid shares, besides which the B. S. A. Co. retains a 35% interest in all mines. Having made important discoveries and located various mines in the borderland of the Belgian Congo, the Tanganyika sought and obtained another mineral concession, covering 60,000 sq. miles of the Belgian Congo region, known as the Katanga, and adjacent to the Rhodesian properties of the company. The

Special Committee of Katanga reserved 60% of the net profits, and received £30,000 in fully paid shares. An extension of this concession and an interest in the Benguella railway later increased to 90%, was acquired in July, 1902, for £10,000 in fully paid shares.

The mineral discoveries in the Belgian Congo cover a copper belt 200 miles long with over 100 known copper deposits; also a tin belt, 100 miles long, with workable deposits, also gold and iron mines and diamondiferous areas.

The Tanganyika Co. has sold its holdings to subsidiary companies controlled by it and thus becomes a parent holding company only. In the Belgian Congo, 72 large mining concessions were located, the company engineers estimating in 1908, that 5 of these claims showed 9,500,000 tons of 6.3 to 14% copper ore, most of which could be extracted by open cut; while on another group, the company estimated 1,500,000 tons of 13% copper tenor.

The copper interests of the Tanganyika Concessions, Ltd., consist of present almost exclusively of its holdings mentioned above in the Union Minière du Haut Katanga, (which see), and the Rhodesia-Katanga Junction Railway & Mineral Co., Ltd. (Kansanshi), and the Benguella Railway. The copper deposits and mines owned by the Union Minière were discovered by prospectors employed by Tanganyika Co., under terms of the concession from the Comité Special du Katanga. These deposits are scattered through a practically uninterrupted belt of country extending from the Rhodesian border in the S. E. corner of the Katanga region to the W. bank of the Lualaba river, a distance of 180 miles in a N. W. and W. direction. This copper belt is a region of rounded hills and steep sided valleys, 4,000 to 5,000' above sea level, the copper areas being bare, due to copper salts. The copper ores occur in sandstones and in schists, slates and limestone, the beds running W.-N. W. and dipping steeply. The ores are oxidized, malachite being the most abundant mineral associated with chrysocolla and azurite, while melaconite is found mixed with wad. The orebodies are lenses that vary from small deposits up to mammoth ones such as Kambove No. 2, said to be 3,000' long, 240 to 400' wide and to hold 10,000,000 tons of 15% copper ore to a depth of 100'.

The Star of the Congo mine, in the Belgian Congo, was the first to be reached by the railway extension from Broken Hill in Rhodesia and the first to be developed and worked. Development work at this mine comprises 20 shafts, a total of 1,250', about 3,000' of crosscutting and a main haulage tunnel open at each end, driven 1,500' through the deposit, at a depth of 80 to 90', or just above water level. This tunnel is equipped with rope haulage and a double track for ore trucks.

The deposit is being mined by opencuts, the ore after breaking, being milled down through winzes to the crosscuts below and hauled out through the main tunnel to the surface. The rich ore goes direct to the smelter, but the bulk is washed, sorted, and concentrated before it is sent to the furnace.

The Lubumbashi smelting works are 8 miles from the mine on the main railway line. The plant contains 5 water-jacket blast furnaces, smelting about 2,500 tons of copper ore monthly. Two more were ready by Aug., 1917.

Coke is now being regularly supplied at the rate of 1,500 tons a month from the Wankies coal mines in Rhodesia, a distance of 725 miles on the main railway. This coke costs about £6 per ton delivered at the smelter, the colliery's entire output being bought by the Union Minière up to the end of 1913. A battery of 22 coke ovens has been built at Lubumbashi works, which, at the end of 1913, will produce 1,200 tons of coke a month, costing about £4 a ton. The Wankies coal mines have contracted to supply the Union Minière with washed coal for 5 years at £6 6s. to £7 6s. a ton, with 2,000 tons

minimum and up to 5,000 tons a month. A second battery of 22 coke ovens is to be erected when the first is finished.

The Kambove mine is the largest and most important copper mine owned by the Union Minière. It is 100 miles N. W. of the Star of the Congo and is now reached by the railway and can ship its ores to the Lubumbashi smelter. A 2-compartment haulage tunnel has been driven from the surface through the deposit for 1,500', half through payable ore. The tunnel is equipped with rope haulage and a double track. There are 10 shafts from 100 to 50' deep to the level of this tunnel and 5 bore holes put down to about 100' below tunnel level with about 1,600' of crosscutting. Ore will be quarried and milled through the shafts, and hauled out through the tunnel. Management estimates 3,000,000 tons of 13.4% copper ore in sight above the tunnel level and a similar quantity of probable ore in the 100' below. The Kambove is situated 1,720 miles from the seaport of Beira, by rail, and is reported to be able to produce 500 tons of ore daily in 1913.

The Luiswichi and Luusha mines, 30 miles from the Star, have been developed recently and results being satisfactory, they will be equipped and worked, supplying ore to the Lubumbashi smelter.

On all the other deposits forming the copper belt varying amounts of prospecting and development work have formed the basis of estimates, some of which are as high as 300,000,000 tons of copper ore in sight over the whole copper belt.

The Union Minière company estimates 40,000,000 tons of 8% ore above water level in all the Katanga mines.

The Bukama tin belt of the Union Minière is an area in the Katanga containing tin deposits on which development work was commenced in 1913. The belt is near Bukama, on the navigable Lualaba-Congo route from the West Coast, and 210 miles from Kambove, with which place it is being connected by rail, and should be working its valuable ores by the end of 1914.

The Kansanshi mine, transferred in 1909 to the company's subsidiary, the Rhodesia-Katanga Junction Railway & Mineral Co., Ltd., lies at an elevation of 5,000', about 12 miles S. of the Congo-Zambesia divide, which forms the boundary between Rhodesia and the Belgian Congo. This property shows extensive remains of ancient opencut workings, there being trenches and pits for a distance of 6,000', which form 6 chains or lines of workings, in which the pits vary from 1 to 30' in width, 5 to 30' in depth and 300 to 1,300' in length.

The Kansanshi copper deposits consist of beds, 1 to 10' thick, of sandstone impregnated with copper and resting on limestone and schist. The sandstone is micaceous and fissile in places and more or less charged with malachite particles and flakes, the upper beds carrying malachite and chrysocolla, with occasional occurrences of azurite and melaconite, and some cuprite, with silicious gangue, and some manganese dioxide in the superficial portions. The gangue carries a little limonite, usually ochrous. Surface ores are said by John R. Farrell to show no evidence of having resulted from alteration of sulphides in place, the facts leading him to the opinion that the malachite was deposited from hot solutions, coursing in fissures. The ore is highly silicious.

The main ore bed, known as D reef, averages 8 to 10' thick, with 5 to 10' of sandstone impregnated with malachite on each wall of the vein; the ore as mined is said to average 18.7% copper with \$2 gold per long ton. Sulphide ores, with bornite and chalcopyrite associated with pyrite, show in the deeper workings, but the depth of the oxidized zone has not as yet been determined.

Development: includes 5 shafts, sunk in old open cuts, on beds 1 to 16'

thick. The main shaft, 300' depth, is on D reef, which averages 8 to 10' wide and has been opened for a distance of 1,000', on the 85' level, and a second level, at 134'. The E reef, of 2 to 3' width, and another reef of about 4' width, have been opened for nearly 500' on the 85' level. An 8' vein with limestone walls is reported to average 10.5% copper on the 200' level.

The Kansanshi mine produced up to May, 1913, 2,500 tons, or 5,600,000 lbs. of copper, smelted in a small blast furnace made at the mine and using charcoal as fuel. Transport of this cost about £6 per ton from Kansanshi to Baya, on the railroad.

The mine is being developed and a concentrating plant as well as extensive pumping machinery were installed in 1913. The property is 80 miles from the main railway and both ore and supplies are transported by traction engines.

The company's success in opening up a vast territory in Central Africa, building railways and developing great mining interests, has been largely due to its energetic managing director, whose unbounded optimism has carried the company over difficulties that would have swamped a more conservative management. The company has, however, paid a good price for these services, the contract, 1905-11, securing Mr. Williams 10% of the net profits of the company's assets representing profits. The financial part of the company's affairs have also been much criticized on the ground of excessive royalties exacted, amounting to 60% of the net output of the Belgian properties, while only 65% interest is owned by the company in the Rhodesian properties it has spent so much money in developing.

The company's subsidiaries are now producing at the rate of over 60,000,000 lbs. of copper yearly, at a reported cost of £28 per metric ton, at the works, or about 6.2c per lb., but it will be many years yet before the world will be flooded with the copper produced in Central Africa, as was feared when the company was first formed. While the early statements issued greatly exaggerated the present conditions, and the results of 13 years' work and the expenditure of \$33,000,000 have not yet brought the company to a dividend-paying stage, it has demonstrated the worth of the properties. Great credit must be given Mr. Williams for his energy and perseverance in bringing this great enterprise to its present condition. The company has heretofore given out little real information, especially about its financial affairs, but the tide having turned and the enterprise being now fairly under way, fuller reports will doubtless be given. The company still has the problem of treatment of the great silicious copper deposits to solve and the Benguela railroad to build, but these problems are not unsurmountable if money is available. Owing to the war, work on the railroad was suspended at kilometer 520 in 1915.

The remarkable development that has taken place in the Katanga copper country can be realized more fully perhaps when it is remembered that the European population at the Star and Elisabethville numbered 2 in 1907 and now number nearly 2,000, according to official returns from the Belgian Colonial office.

UNION MINIERE DU HAUT KATANGA

KONGO

Office: 3 Rue de La Chancellerie, Brussels, Belgium. Works at Elizabethville, Katanga, Belgian Congo.

Officers: Jean Jadot, chairman; Robt. Williams, vice-chairman; Baron de Moor, managing director; H. Buttgenbach; E. Francqui, J. Cornet, Lord Arthur Butler, Tyndale White, Sheffield Neave and C. F. Rowsell, directors; Geo. Velge, sec.

Inc. Oct. 28, 1906, in Congo Free State. **Cap.**, £400,000; shares £4 par; increased May 10, 1912, to £500,000 by issue of 25,000 new shares, fully paid.

There are also 125,000 dividend shares without par value. **Debentures:** £800,000 authorized, at 4½%; issued £600,000. Company is controlled, through half ownership each by Tanganyika Concessions, Ltd. and Société Générale de Belgique. Annual meeting, second Monday in July.

Property: company has a mining concession covering a copper belt of about 200 miles long, containing upwards of 100 copper outcrops; and a tin belt nearly 100 miles long. Both concessions are situated in the southern part of Katanga, north of Rhodesia, a rolling country with a healthy climate. Company also owns valuable water power rights and other mineral rights.

Development: at the end of 1917 five mines will be in operation, namely, the Star, Kambove, Luushia, Likasi and Chituru. Most of the smelting ore will be supplied by the Kambove at the rate of 25,000 tons per month. This mine will be worked as an open cut by steam shovels.

The probable quantity of ore above water level in all the Katanga mines has been estimated at 40,000,000 tons, averaging 8% copper.

Geology: the formation consists of beds of sandstone carrying malachite in the laminations and also impregnated with that mineral. These sandstones overlie and underlie quartzite containing nodules of malachite in irregular quantities, but sufficient to make this rock pay ore in a great many cases.

Equipment: includes 7 blast-furnaces of an average charge capacity of 300 tons.

Production: from 1911 to 1915, the copper output has been 35,800 metric tons; in 1916, 22,165 tons; and estimated for 1917 is 30,000 tons or 66,120,000 lbs. The ore smelted contains about 15% copper and the black copper produced carries 96% metal. Costs at the works amount to about £28 per metric ton, or say 6.2c per lb. The June, 1917, copper output was 5,246,948 lbs.; and for 10 months, 55,549,120 lbs.

The company's consulting engineer, Archer E. Wheeler, has been for over two years studying the treatment of the lower grade 7% silicious ores and a plant to utilize the water power and produce 50,000 tons of electrolytic copper per annum is now under consideration.

PORTUGUESE EAST AFRICA

MOZAMBIQUE CO. (COMPANHIA DE MOCAMBIQUE).

PORTUGUESE EAST AFRICA

S. H. Sharpe, act. sec., Thames House, Queen St. Place, London, E. C., England. **Head Office:** 10 Largo da Biblioteca, Publica, Lisbon, Portugal.

Inc. March 8, 1888, given royal charter Feb. 11, 1891, and reconstituted May 5, 1892. **Cap.**, £1,500,000; shares £1 par; issued and paid, £1,222,221. Paid a 5% dividend in 1911.

Company practically owns and exercises governmental functions over the whole of the land, mines and produce of 60,000 square miles in the central and richest part of Portuguese East Africa, adjoining Rhodesia. The Manicaland goldfield, or mining district, covers the main mineralized portions of the territory and lies within a radius of 16 miles about Macequece, the district being a part of the Umtali field of Rhodesia. It shows a belt of schists bounded north and south by granite with irregular intrusions of diorite largely altered to serpentine and traversed longitudinally by ledges of ferruginous quartzite paralleling the gold quartz reef. Copper ore occurs and is worked by the South African Copper Trust in the Edmundian mine. (See descriptions under that title.)

The company offers prospectors a 12-months' license for £1, with the right to locate (peg off) 10 claims of 100 meters square, which must be registered, and within 12 months thereafter opened by 66' of development work on a

group of 10 or less claims, or 6' 7" on each claim, or in lieu thereof pay 10s. (\$2.40) per claim for an inspection certificate good for 12 months. Claim rents, like those of the Transvaal and Rhodesia start the second year at 10s. (\$2.40) per claim and increase 50% each succeeding year. Royalties amount to 10% of the net profits, except for gold, for which a graduated scale from 1 to 4% is provided for production less than 800 oz. per month, and 10% for over that amount.

RHODESIA

ANTELOPE GOLD MINE (RHODESIA), LTD.

RHODESIA

Office: 8 Old Jewry, London, E. C.

Directors: J. C. Prinsep (chairman), F. Johnson, J. R. Mason, H. W. Morrison and H. L. Sapte. H. A. Piper, cons. engr.

Inc. Nov. 25, 1908, in England. **Cap.**, £400,000; shares 5s. par; 1,393,128 issued. Profit in 1915 was £19,877. Investments at cost are valued at £106,990.

Property: 170 claims, 1½ acres each, 60 miles S. of Bulawayo, Rhodesia. Reserves were estimated in Sept., 1916, at 110,987 tons, assaying \$10.10 per ton.

Development: by vertical and incline shaft 1,400' deep. **Equipment:** complete for mining, also 150-ton plant using 2 Krupp ball mills, 4 Edwards' furnaces, tube mill, 12 pans, and 2 filter presses.

Production: in 1916, gold worth £91,710 was extracted from 45,927 tons. Costs were \$8.60 per ton.

BRITISH SOUTH AFRICA CO., THE

RHODESIA

Head Office: 2 London Wall Bldgs., London E. C., Eng. A. P. Millar, asst. sec. **Administrator of Southern Rhodesia:** Sir D. Chaplin, Salisbury. **Administrator of Northern Rhodesia:** L. A. Wallace, Livingstone. **Res. mining eng.:** A. H. Ackerman, Bulawayo.

Board of Directors: Rt. Hon. Sir E. Jameson, Bart., C. B., pres.; R. Maguire, Esq.; Hon. Sir L. Michell, C. V. O.; Sir H. Birchenough, K. M. C. G.; Marquess of Winchester; Otto Beit, Esq.; H. W. Fox, Esq., M. P.; Baron E. B. d'Erlanger; D. O. Malcolm, Esq.; Br.-Gen. E. Baring, C. V. O.; Duke of Aberdeen.

Inc. Oct. 29, 1889. In Oct., 1911, the British South Africa Company's Mines Development Co., Ltd., was formed in order to acquire, explore and develop properties in Rhodesia and other parts of So. Africa. Present authorized capital is £9,000,000 in 9,000,000 shares of £1 each, having been increased at intervals from £1,100,000 in 1890; 8,937,324 shares are issued and fully paid. Bonds, -£1,250,000 5% mortgage debentures.

Lands: about 400,000 sq. miles. The company acquired: (a) from the Central Search Association, Ltd., the Rudd-Rhodes Concession, consisting of the mining rights over the territory of the King of Matebeleland; the Central Search Association being entitled to one-moiety of the net receipts, which right was subsequently merged in the United Concessions Co., Ltd., and capitalized in 1894 by the issue of 1,000,000 fully-paid shares of the company; (b) mining rights over the territory of the chiefs Khama and Gungunhana; (c) administrative power over the whole British sphere north of the Zambesi and west of Nyasaland; (d) rights of the African Lakes Co. (acquired in 1894); (e) and also through the Victoria Falls Power Co., in which this company holds a large interest, the right to develop electrical energy at Victoria Falls.

The company adopted the name "Rhodesia" to describe all the territories under the company's administration; the portion south of the Zambesi being described as Southern Rhodesia. Company controls Bwana M'Kubwa and several other important South African copper properties by ownership of a

large stock interest. Company is a gigantic corporation and is the owner of the mineral rights throughout the territory.

BWANA M'KUBWA COPPER MINING CO., LTD. RHODESIA

Office: T. Donald, 365 Salisbury House, London, E. C.

Directors: R. Littlejohn (chairman), E. H. Dunning, T. Huntington, A. Stewart, H. L. Stokes and C. H. Villiers.

Inc. March 16, 1910, in England. **Cap.**, £600,000; shares 10s. par; 925,053 issued.

Property: 450 claims, $1\frac{1}{2}$ acres each, containing the Bwana M'Kubwa mine, also other adjacent properties, 1,450 miles by rail from Beira, Portuguese East Africa, in Northern Rhodesia. Reserves are estimated at 23,000 tons of 10% copper ore, 3,000,000 tons of 4.5% and 1,200,000 tons of low-grade material. The war has interfered with work considerably. A 100-ton concentrator is working and a 100-ton leaching plant is to be erected.

CAM & MOTOR GOLD MINING CO., LTD. RHODESIA

Office: Palmerston House, London, E. C., Eng.

Officers: J. Weil, chairman; F. A. Govett, G. R. Lewis, I. Lewis, and S. Weil, directors. Robert Allen, gen. mgr.

Inc. Sept. 3, 1910, in England. **Cap.**, £617,500; shares £1 par. **Debentures:** £50,000 in 1914, redeemable at par Dec. 23, 1919. Accounts for year ended June 30, 1916, shows a profit of £8,562.

Property: 286 claims, $1\frac{1}{2}$ acres each, in the Hartley district of Southern Rhodesia. Ore reserves estimated at 577,281 tons, averaging \$9.76 per ton.

Equipment: complete with mill treating 15,000 tons per month.

Production: in 1916, was 162,922 tons yielding £219,374. Costs are \$6.25 per ton.

Is a good gold mine, but as the ore contains antimony and arsenic, treatment has been difficult.

FALCON MINES, LTD. RHODESIA

Office: Gold Fields Rhodesian Development Co., 8 Old Jewry, London, E. C., Eng.

Directors: Lieut. Col. F. Johnson, Chairman; J. Prinsep, vice-chairman, B. Vieira, W. F. Andrews, Maj. H. L. Sante, H. T. Brett, gen. mgr. Gold Field Rhodesian Development Co., cons. engr.

Inc. Feb. 26, 1910. **Cap.**, £600,000; shares £1 par; 400,000 shares issued and fully paid. **Cap.** originally £400,000, increased Aug., 1912, to provide for bond redemption. Bonds £300,000 authorized, 6%, £217,341 outstanding.

Accounts, June 30, 1916, showed operating expenses £335,138; operating profit, £195,688; loans, £119,975; receipts from ore sales, £530,826.

Property: acquired from the Falcon (Rhodesia) Development Co., Ltd., by Rhodesia Cons., Ltd. In Jan., 1911, the Athens mine was acquired. The mining property comprises 380 claims, 578 acres, farm lands near the Falcon mine, 500 acres adjoining the mine and 19 acres for machinery and water sites.

The orebodies are large, increasing from 17' in width on the 3rd. level to 50' on the 9th. level. Values also increase from 2.45% copper and \$3.68 gold per ton on the 3rd to $2\frac{3}{4}$ % copper and 6 dwt. gold on the 9th level. The shaft is being sunk to the 11th level, 1917. Report for year ending June 30, 1916, shows ore reserves, 742,228 tons sulphide ore and 119,838 tons oxidized ore.

Equipment: crushing plant, equipped with 3 jaw breakers and 4 trommels, separating the fine and coarse ores; sorted ore of $5\frac{1}{2}$ % copper content and 9% of total output is sent to furnaces. The mill, installed in 1915, has 36 Nissen stamps, tube mills, Dorr thickeners, vanners and a 9-compartment Mineral Separation flotation plant.

The smelter equipment includes 12 hemispherical blast roasting pots, two blast furnaces, each of 300 ton daily capacity, two 12,500 cu. ft. turbo blowers,

electric crane and 12 converters of 15 ton copper capacity. Copper is cast into bars of 360 lbs. containing 10 oz. gold and 20 oz. silver. The plan of treatment is similar to that of the standard plants in the United States. About 20,000 tons of ore treated per month.

See article "Ore Treatment at Falcon Mine," by H. R. Adams, *So. African Mng. Journ.*, Dec. 30, 1916, p. 421.

Production: during fiscal year, ending June 30, 1916, 160,837 tons of sulphide ore and 57,955 tons of oxidized ore was treated, yielding 3,477 tons of blister copper, which contained 3,411 tons copper, 38,569 oz. gold and 73,862 oz. silver. The working cost amounted to 30s.7d. per ton and the price received for blister copper was 48s. 6d.

GLOBE AND PHOENIX GOLD MINING CO., LTD. RHODESIA

Office: T. Priest, sec., 35 Old Jewry, London, E. C.

Directors: Earl Russell (chairman), J. D. Hope, J. E. Howard, F. A. Macquisten and H. Miller. T. Haddon, gen. mgr.

Inc. Oct. 18, 1895, in England. **Cap.**, £200,000; shares 5s. par; all issued.

Profit in 1915 was £181,492, £80,000 being paid in dividends. **Reserves are:** general, £76,312; gold, £26,175; and litigation, £102,000. The last mentioned was for the long suit with Amalgamated Properties of Rhodesia, which company sued the Globe & Phoenix for wrongful extraction of ore, but lost. The action cost £100,000. The 1916 profit was £250,000.

Dividends: total 1017%, 80% being paid in 1916.

Property: the largest gold producer in Rhodesia, 140 miles N. of Bulawayo.

Development: by incline shafts, 3,149' deep. Reserves early in 1915 were 189,200 tons, assaying \$29.40 per ton.

Equipment: complete, with 40-stamp mill, roasting and cyaniding plant.

Production: in 1916 was 102,473 oz. gold from 77,464 tons.

LONELY REEF GOLD MINING CO., LTD. RHODESIA

Office: A. D. Owen, 34 Bishopsgate, London, E. C.

Officers: C. F. Rowsell, chairman; W. F. Andrewes, G. R. Lewis, H. D. Lewis, I. Lewis and G. Pauling, directors. C. B. Kingston, gen. mgr.; S. H. Bought, mine mgr.

Inc. Jan. 13, 1910, in Rhodesia. **Cap.**, £325,000; shares £1 par; 271,007 issued.

Balance sheet for 1915 showed a profit of £60,973, with £18,922 forward from 1914, a total of £79,985. Dividends absorbed, £35,231. Balance forward to 1916 was £20,059.

Dividends: 10% in 1911; 30% in 1912; 30% in 1913; 20% in 1914; 15% in 1915; 20% in 1916.

Property: 234 claims, 1½ acres each, 40 miles N. of Bulawayo, Bubi district, Rhodesia.

Development: 1,500' incline shaft.

Ore reserves: estimated at 136,774 tons, worth \$18.10 per ton.

Equipment: 20 stamps, 3 tube-mills, and cyanide plant.

Production: in 1916 was £174,857 from 59,240 tons, giving a profit of £70,314. Costs are about \$8 per ton.

RHODESIA CHROME MINES, LTD. RHODESIA

Office: T. Donald, sec., 365 Salisbury House, London, E. C.

Directors: E. Davis, F. R. Harris, A. W. Jarvis, F. E. Lander, T. J. Seal and H. L. Stokes.

Inc. June 27, 1908. **Cap.**, £60,000; shares £1 par; 59,457 issued.

Dividends: 10% in 1911, 20% in 1912, 20% each in 1913 and 1914.

Property: 885 acres, in the Gwelo and Selukwe districts, Southern Rhodesia.

Production of chromic-iron ore:

Year	Tons	Value
1912.....	69,260	£154,600
1913.....	63,383	141,481
1914.....	48,207	107,612
1915.....	60,581	175,792

Warriner, cons. eng.; A. J. Brett, gen. mgr.; W. J. Pitchford and T. Simpson, joint mine mgrs.; and S. H. Pearce, reduction officer.

Inc. March 31, 1892, in England. **Cap.**, £1,000,000; shares 10s. par; 1,880,-212 issued.

Debentures: £1,000,000, 5% first mortgage authorized, £744,300 issued.

Profit in 1915 was £1,099,196, of which £611,069 was paid in dividends. Cash assets totaled £173,952.

Dividends: totaled 727% from 1898 to 1910; 120% in 1910; 110% in 1911, 1912 and 1913; 85% in 1914; 65% in 1915; 50% in 1916.

Property: 2,222 claims, 1½ acres each, in the Rand, Transvaal.

Development: by 13 shafts. Ore is hoisted through No. 5 and 7, which are connected by two main haulage levels.

Ore reserves: estimated at 9,938,000 tons, averaging \$6.25 gold per ton.

Equipment: immense mining and reduction plants, including 835 stamps, 26 tube-mills, sand and slime plants, capable of treating 240,000 tons per month.

Production: in 1916 was 2,666,000 tons, yielding gold worth £2,887,777, of which £815,620 was profit. Costs total, \$4 per ton.

EAST RAND PROPRIETARY MINES, LTD.

TRANSVAAL

Head office: Farrar Bldg., Johannesburg, Transvaal.

Directors: E. A. Wallers, chairman, J. P. Farrar, J. Friedlander, A. G. Gill, J. H. Jourdan, F. Raleigh, E. J. Renaud, F. G. C. E. Robellaz and H. R. Skinner. E. C. J. Meyer, gen. mgr.; W. T. Anderson, supt. engr.

Inc. May 6, 1893, in the Transvaal. **Cap.,** £2,514,000; shares £1 par; 2,445,897 issued.

Debentures: £1,500,000 authorized; £999,430 outstanding.

Company controls large interests in the Angelo, Cason, Cinderella, Driefontein Cons., New Blue Sky and New Comet companies, operating on the Rand.

During 1915 a net profit of £514,940 was made. Dividends absorbed £275,163; taxes and war levy, £66,198; debentures purchased, £108,760; carried forward £193,354.

Dividends: since 1903 total 350%; but from 1913 to 1916 they have dwindled from 25 to 5%.

Property: 4,515 claims, 1½ acres each, on the Rand, Transvaal.

Development: by numerous shafts and extensive workings. Reserves early in 1916 were estimated at 4,800,000 tons of \$6.40 and 9,800,000 tons of \$4.40 ore.

Equipment: full complement for mining; and 820 stamps, 25 tube-mills and cyanide plants.

Production: in 1916, 1,936,326 tons yielded £2,365,107. During the second quarter of 1917, 462,500 tons gave an average of \$5.15 per ton.

In August a profit of only £100 was made and in September a loss of £3,606, due to the native labor situation on the Rand.

In 1914 the directors considered that 20 years' profitable work was ahead of the company. Like several other great consolidations on the Rand, predicted estimates have not been realized for long; however, this is one of the world's greatest producers.

* Loss.

At the end of 1916, twelve of these mines had reserves totaling 39,975,-187 tons, varying from \$5.30 to \$9.20 per ton.

RANDFONTEIN CENTRAL GOLD MINING CO., LTD.

TRANSSVAAL

Office: W. H. Crawford, Box 2, Randfontein, Transvaal.

Directors: G. Imroth, S. B. Joel, J. Munro, J. C. K. Pollock, W. H. Robinson and N. J. Scholtz. D. H. Thacker, gen. mgr.; W. A. A. Hahn, chief surveyor.

Inc. March 26, 1907, in the Transvaal. **Cap.,** £4,500,000; shares £1 par; 4,343,700 issued. **Debentures:** £3,000,000 6% authorized, of which £2,734,900 are outstanding.

Revenue for 1916 was £2,835,892, of which £834,555 was operating profit. Debenture interest and redemption, taxes, development, etc., reduced this to £402,570.

Property: 2,296 claims, 1½ acres each, on the Rand, Transvaal.

Development: by 12 main shafts along the 7 miles of reef. New openings in 1916 totaled 112,026', including 2,151' of shaft sinking and 482,246 cu. ft. of bins, dumps and stations.

Reserves consist of 4,944,302 tons of \$7.80; 3,486,917 tons of \$4.60, and 3,268,654 tons of \$2.80 ore, a total of 11,699,873 tons. The last mentioned is unprofitable.

Equipment: extensive and modern, including mill of 1,000 stamps, 26 tube mills and cyanide plants.

Production: in 1916 was 680,983 oz. gold from 2,209,622 tons of ore, at a cost of \$4.24 per ton.

ROBINSON DEEP, LTD.

TRANSSVAAL

Offices: J. T. Bedborough, 8 Old Jewry, London, E. C.; and Consolidated Bldg., Johannesburg.

Officers: D. Christopherson, chairman; H. C. Boyd, F. L. Brown, C. Hely-Hutchinson, F. Raleigh, W. S. Smits and E. A. Wallers.

Inc. Dec. 31, 1915, in the Transvaal to acquire assets of Robinson Deep Gold Mining Co., Ltd. **Cap.**, £925,000, in 500,000 cumulative preference A shares of 1s each and 900,000 B shares of £1 each. All A shares and 681,807 B shares are issued credited as fully paid.

Dividends: 8s in 1916.

Property: 557 claims, 1½ acres each, on the Rand, Transvaal.

Development: by 2 shafts, and a new 7-compartment 4,500' shaft being sunk. Reserves are given as 1,849,000 tons, worth \$6.10 per ton, and 237,000 tons partly developed, assaying \$6.30 per ton.

Equipment: includes 300 stamps, 10 tube mills and cyanide plants.

Production: 632,000 tons in 1916 yielded £934,522, of which £306,688 was profit. Costs are about \$4.60 per ton.

ROOIBERG MINERALS DEVELOPMENT CO., LTD. TRANSVAAL

Office: J. H. Clark, 208 Salisbury House, London, E. C.

Directors: Wm. Dalrymple, chairman; W. H. Dawe, W. J. Gau, Wm. McCallum, John Munro, E. H. Read and J. Roy. E. R. Schoch, mgr.; E. J. Way, cons. engr.

Inc. May 19, 1908, in the Transvaal. **Cap.**, £180,000; shares £1 par; all issued.

Statement for year ended June 30, 1916, shows that out of a revenue of £117,252, £25,397 was profit. Dividends paid totaled £18,000.

Dividends: has paid total 104½% since 1910.

Property: tin claims in the Rustenburg district, Transvaal.

Development: by main shaft 243' deep. New openings in 1916 were 11,896', costing \$7.46 per ton; also 11,355' of surface prospecting. Reserves are estimated at 28,659 tons of 3.1% metallic tin.

Equipment: 10 stamps, tube mill and concentrators.

Production:

	Ore Treated, Tons	Tin, Per Cent Metal	Extraction, Per Cent	Metal Pro- duced, Tons	Cost per Ton
1915-16.....	36,460	3.02	77.95	707	\$12.10
1914-15.....	37,263	2.82	78.27	731	10.24
1913-14.....	40,643	3.18	78.81	887	11.46
1912-13.....	35,917	3.56	72.85	832	12.92

For the first half of 1917 there was treated 19,859 tons of ore, yielding 470 tons of 67% metallic tin concentrate and a profit of £17,755.

On a small capital this company is doing well and tin is likely to maintain a good price for many years to come.

SIMMER DEEP, LTD.

TRANSVAAL

Offices: J. T. Bedborough, 8 Old Jewry, London, E. C.; and Consolidated Gold Fields of South Africa, Johannesburg.

Officers: D. Christopherson, chairman; F. L. Brown, C. Hely-Hutchinson, E. J. Renaud and W. S. Smits; C. D. Leslie, supt. engr.; H. S. MacGregor, mine mgr.

Inc. Nov. 30, 1906, in the Transvaal. **Cap.**, £1,750,000; shares £1 par; 1,650,000 issued. **Debentures:** £755,000 5½% first mortgage, of which £740,000 issued.

Accounts for 1915 show a loss of £2,356 after paying £45,952 debenture interest and £9,848 sundries. Total reserve is £493,622.

Property: 1,035 deep-level claims, 1½ acres each, on the Rand, developed by 4 shafts, one being 3,161' deep on incline.

Reserves are estimated at 1,492,000 tons of \$4.50 ore, and 255,000 tons of partly developed ore worth \$4.47 per ton.

Equipment: includes two hundred and twenty 1,670-lb. stamps, 9 tube mills and cyanide plants.

Production: the 1916 output was £682,067 from 762,700 tons, giving £63,706 net. Costs are \$3.85 per ton.

This is one of the Rand's low-grade mines.

SIMMER & JACK PROPRIETARY MINES, LTD. TRANSVAAL

Office: J. T. Bedborough, 8 Old Jewry, London, E. C., England.

Directors: D. Christopherson (chairman), W. S. Smits, F. L. Brown, C. H. Barclay, C. Hely-Hutchinson. C. D. Leslie, supt. engr.; O. P. Powell, mgr.

Inc. 1887, in the Transvaal. **Cap.**, £3,000,000; shares £1 par; all issued.

Profit for the year ended June 30, 1916, was £275,857, of which £262,500 was paid in dividends. There was £92,234 carried forward.

Dividends: since 1889 total 370%.

Property: 624 claims, 1½ acres each, on the Rand, Transvaal.

Development: reserves are estimated at 1,935,000 tons of \$5.20 ore, a decrease of 220,000 tons. There is also 215,000 tons of \$4.40 partly developed ore. Waste sorted out is 3%.

Equipment: complete, with 320 stamps, 7 tube mills and cyanide plants.

Production: in 1916 was 210,970 oz. gold from 797,900 tons, at a cost of \$3.46 per ton.

VILLAGE MAIN REEF GOLD MINING CO., LTD. TRANSVAAL

Office: J. Bradshaw, sec., 8 Old Jewry, London, E. C., England.

Directors: M. A. Bramston (chairman), Pierre Buisson, F. J. Dormer, B. C. Hinman, H. F. Marriott, T. J. Milner and C. S. C. Watkins; H. C. Hilton, mgr.; H. S. Martin, cons. engr.

Inc. Nov. 28, 1890, in England. **Cap.**, £472,000; shares £1 par; all issued. Company has an interest in the Village Deep.

Accounts for 1916 show a revenue of £505,974, of which £480,979 was from gold. The profit was £106,508, after paying £322,661 for operations and £76,805 for taxes, etc. Dividends amounted to £113,000. The previous balance was £245,611; that carried forward to 1917 was £197,866.

Dividends: since 1898, total 825%, including 25% in 1916, equal to £3,785,143.

Property: 172 claims, 1½ acres each, on the Rand, Transvaal.

Development: during 1916, 473' of new work was done, 45% being in "reef." Reserves total 750,204 tons of \$6.60 ore.

Equipment: complete with 160 stamps, 6 tube mills and cyanide plants. At the sorting plant 14.3% is discarded, assaying 64c per ton.

Production: in 1916 was 333,885 tons of \$7.50 ore, yielding 115,749 oz. gold. Total extraction was 92.4% at a cost of 19s 2d (\$4.60) per ton.

The life of this mine is about 3 years, although it may develop more profitable ore.

ASIA

123A

ASIA

CHINA

WAH CHANG MINING & SMELTING CO., LTD.

CHINA

Head office: Changsha, China. **Other offices:** 51 Kiangse Road, Shanghai, China; Woolworth Bldg., New York; H. M. Newhall & Co., Newhall Bldg., San Francisco, and H. E. M. Bourke, 21 Great Winchester Street, London, E. C., Eng.

Officers: Y. H. Wang, pres.; H. Y. Liang, v. p. and chief engr.; K. C. Li, v. p. and New York mgr.; M. C. Wang, v. p.; N. F. Chu, v. p. and treas.; S. L. Tang, supt. and asst. treas.; K. K. Chang, sec.; T. W. Tseng, asst. sec.; D. C. Chow, Shanghai mgr.

Auditors: Y. G. Chow, M. H. Li and C. F. Tsai.

Directors: H. L. Shuan (chairman), H. Q. Liang, Q. Yang, C. T. Chow, D. W. Tang, P. Q. Yuen, H. K. Liang, L. C. Tsow and F. C. Chow.

Mr. Shuan (chairman) was ex-Premier of China during the time of President Yuan Shi Kai. He is wealthy, and owns a large porcelain factory and extensive lands in the Hunan province. Mr. Chu (v. p.) is a partner in the firm of Chu, Yin Koo Tang, the largest tea merchants in China, controlling practically the major part of the tea business in the north, east and west provinces.

Mr. Chow controls about 120 salt firms, extending over practically the whole of China, and enjoys a high reputation all over the country. He is the largest shareholder in the company. Mr. Tang is the brother of the Civil Governor of Hunan province, and is a large land-owner.

Mr. Yuen is the son of the former Viceroy of Canton, and is a large land-owner in Kiangse province.

History: The Wah Chang company was formed in 1898, under the name of Kiu-Tung Antimony Mining Co., which was the first antimony mining company in China. In 1908 it was reorganized, and obtained a patent for its antimony smelting process from the Chinese Government. In addition to this the company obtained a monopoly of the smelting of antimony in the province of Hunan, to extend over a period of 10 years as from 1908. It has since been extended for a period of 25 years. Under this monopoly, no company has the right to erect works in the province, unless the consent of the Wah Chang company is obtained. The patent granted extends over the whole of China. No figures are available, but we are assured that the finances of the company are very strong.

The main office is situated at Changsha, next to the antimony works, which extend over a large area, and includes in addition, a lead plant, warehouses, etc.

Property: the company owns the following:

Antimony mines: (1) the Yi-Yang mines, a good property with modern mining equipment. A light 25-mile railway will shortly be built to connect the mine with the river; (2) the An-Hua mines; and (3) the Lu-Lin mines.

Tin mines: the An-Yuen and Poo-Sha tin mines.

Tungsten mines: the Yao Kan Sian and Ton An tungsten mines.

Each mine is controlled by a subsidiary of the Wah Chang company.

Lead mines: the Tien For Tai lead mines.

Products: the principal product is the WCC antimony, with a guaranteed minimum purity of 99% Sb, but assaying 99.6% and over. Company also markets Chinese needle antimony, white oxide of antimony and antimony ore; tungsten concentrates, which assay 70% WO_3 and over; and lead and tin ores.

The antimony and the tungsten products are shipped all over the world. The lead product is entirely disposed of in China for domestic purposes, while the tin ore is obtained only in small quantities.

At the antimony works the Herrenschmidt process is used. This was described by K. C. Li in a paper prepared for the American Institute of Metals and reprinted in the E. & M. Journal of Oct. 20, 1917. The ore mined is low-grade. In 1915 and 1916 there was extracted from accumulated residue over 9,000 tons (20,160,000 lb.) of metal. The works treat custom ore.

This company is the largest antimony producer in the world and supplied 62% of American imports in 1916.

FEDERATED MALAY STATES

PAHANG CONSOLIDATED CO., LTD.

Office: A. Giffard, sec., Blomfield House, London Wall, London, E. C., Eng.

Directors: J. E. Champey, chairman; E. H. Finch, H. W. Thompson and H. Frisby, Jr. J. T. Marriner, mgr.

Inc. 1906. **Cap.,** £500,000 in 500,000 pfd. shares; £1 par and 1,600,000 common shares; 5s par.

Annual report for year ending July 31, 1916, shows £98,925 net profit, as compared with £103,963 in 1915.

Dividends: paid amounted to £68,155, being 12% on 100,000 pfd. and 15% on 374,370 common shares outstanding.

Property: consists of mining rights over 200 square miles in State of Malay. The main producers are the Willinks mine developed by 982' shaft and the Nicholson mine developed to depth of 1,348'. A number of new properties are under development and management estimates ore reserves at 350,000 tons, July, 1916.

Equipment: includes 50-stamp concentrating mill. Recent production, 1914-15, 160,000 tons, yielding 2,538 tons of tin concentrate; 1915-16, 162,200 tons, yielding 2,535 tons of tin concentrate.

INDIA

BALAGHAT GOLD MINING CO., LTD.

INDIA

Office: W. L. Bayley, 6 Queen St., London, E. C., Eng.

Directors: Lord Ribblesdale (chairman), Lord Glenconner, Sir D. Robertson, J. Taylor and R. Taylor. John Taylor & Sons, gen. mgrs.; W. Pritchard, supt.

Inc. Dec. 7, 1896. **Cap.,** £308,000, in 95,400 pfd. and 212,600 ord. shares of £1 par; all issued.

Dividends: total 132½% on pfd. shares from 1900 to 1907.

Property: 1,565 acres in the Kolar goldfield, State of Mysore, India. Has been a larger producer, but recent profits are small. Reserves in 1916 were estimated at 26,133 tons.

Production: in 1916, 28,476 tons of ore and 57,438 tons of tailing, yielded 17,725 oz. gold, worth \$360,000.

BURMA CORPORATION, LTD.

INDIA

Office: D. Anderson, 1 London Wall Bldgs., London, E. C., Eng. This company controls the Burma Mines, Ltd., which see.

BURMA MINES, LTD.

INDIA

Office: D. Anderson, 1 London Wall Bldgs., London, E. C., Eng.

Directors: Sir T. R. Wynee (chairman), R. G. Brown, J. M. Fells, A. F. Kuehn and C. S. Magennis. T. E. Mitchell, mgr.; Bewick, Moreing & Co., gen. mgrs.

Inc. March 6, 1906, in England. **Cap.**, £200,000; shares 4s par; 512,046 issued, of which 25,538 are fully paid, the remainder 2s paid. Debentures, £35,000 4%. In 1915 there was a loss of £17,427, out of an income of £323,570.

Property: 2,496 acres, including ancient mines at Bawdwin, Upper Burma, India.

Development: by 7,250' tunnel, vertical shaft and extensive workings. Reserves in 1916 were estimated at 3,240,000 tons, assaying 27% lead, 21% zinc and 25 oz. silver per ton.

Equipment: 60 miles of 24" gauge railway, 3 blast furnaces, 1,000-ton mill and other plant capable of handling 300,000 tons of ore yearly. Additions to the smelter and mill are underway.

Production: 18,975,000 lb. lead in 1914 and 30,289,000 lb. in 1915. This will be a large producer in 1918, everything being in its favor.

CHAMPION REEF GOLD MINING CO. OF INDIA, LTD.

INDIA

Office: F. H. Williams, 5 Queen St. Place, London, E. C., Eng.

Directors: J. Taylor, chairman; Lord Ribblesdale, v. c.; Lord Glenconner, Sir J. F. F. Horner, Sir J. D. Rees and E. Taylor. H. J. Gifford, mgr.; John Taylor & Sons, mgrs.

Inc. June 3, 1889, in England. **Cap.**, £260,000; shares 2s. 6d. par; all issued. Profit for the year ended Sept. 30, 1916, was £172,400, of which £140,000 was paid in dividends. The reserve fund amounts to £85,000.

Dividends: since 1893 total 1,923%, 40% being paid in 1915-16.

Property: 1,095 acres in the Kolar field, State of Mysore, India. This has been developed to a depth of over 3,000' by shafts and extensive workings. The lode is narrow, about 36", but persistent. Reserves are 375,991 tons, a decrease compared with 1915. Air-blasts are troublesome underground.

Equipment: complete modern mining plant, with 140-stamp, tube-mills, and cyanide plants. Native labor is employed.

Production: in 1915-16 was £497,329 gold from 194,311 tons of ore and 285,492 tons of tailing.

This is one of the world's great gold producers.

MYSORE GOLD MINING CO.

INDIA

Office: W. F. Garland, 5 Queen St. Place, London, E. C., Eng.

Directors: W. B. McTaggart, chairman; Lord Ribblesdale, v. c.; Lord Glenconner, M. F. Napier, Sir J. D. Rees, J. Taylor and R. Taylor. R. H. P. Bullen, supt.; John Taylor & Sons, mgrs.

Inc. July, 1880, in England. **Cap.**, £305,000; shares 10s. par; all issued. During 1915 the revenue was £880,168, of which £473,443 was profit, less £335,500 for dividends. The reserve fund is £150,000.

Dividends: total 3,100% to end of 1916.

Property: 3,051 acres at Kolar, State of Mysore, India.

Development: by shafts over 4,000' deep and extensive workings on a narrow lode. Reserves are placed at 1,044,000 tons.

Equipment: complete, with 210 stamps, tube-mills and cyanide plants.

Production:

	Ore (Tons)	Gold Yield (Oz.)
1916.....	307,023	198,258
1915.....	305,000	207,981

NUNDYDROOG COMPANY, LTD.

INDIA

Office: W. L. Bayley, 5 Queen St. Place, London, E. C., England.

Directors: W. B. McTaggart, chairman; P. C. C. Francis, V. H. Smith, J. Taylor and R. Taylor. C. H. Richards, supt.; John Taylor & Sons, mgrs.

Inc. April 20, 1893, in England. **Cap.**, £283,000; shares 10s. par; all issued.

Profit in 1915 was £143,896, of which £99,050 was distributed. £50,000 held as reserve fund.

Dividends: since 1888 total 900%.

Property: 1,497 acres at Kolar, State of Mysore, India

Development: by 5 main shafts. 3,251', 3,588', 3,612' and 3,704' deep, the fifth being 18' diam. and under construction.

Reserves are estimated at 210,500 tons.

Equipment: complete with 80 stamps and cyanide plant.

Production:

	Ore (Tons)	Gold Yield (Oz.)
1916.....	98,000	80,401
1915.....	94,000	82,822

OOREGUM GOLD MINING CO., LTD.

INDIA

Office: F. H. Williams, sec., 5 Queen St. Place, London, E. C., England.

Directors: M. Löw, chairman; Sir D. Robertson, Sir J. D. Rees, E. Taylor and J. Taylor. H. M. Cooke, supt.; John Taylor & Sons, mgr.

Inc. Oct. 25, 1880, in England. **Cap.**, £410,000; in 240,000 pfd. and 580,000 ord. 10s. shares.

Profit in 1915 was £174,831, of which £138,270 was paid in dividends.

Dividends: on previous capital 87s. on pfd. and 63s. 9d. on ord. shares, and on present capital 55s. 3d. on pfd., and 40s. 3d. on ord. shares.

Property: 931 acres at Kolar, State of Mysore, India.

Development: by vertical shafts, a 4,000' circular shaft being sunk. **Reserves** amounted to 367,625 tons in 1915.

Equipment: complete with 120-stamp mill and cyanide plant.

Production:

	Ore (Tons)	Gold Yield (Oz.)
1916.....	155,317	90,619
1915.....	153,266	86,643

Costs were \$6 per ton in 1915.

This company completes the important group in the Kolar field. All are supplied with hydro-electric power, generated 91 miles away and sold by the Mysore Government. In case of breakdown an auxiliary steam plant is available at the mines.

JAPAN

FUJITA COMPANY (GOMEI KWAISHA FUJITAGUMI) JAPAN

Office: 20 Dojima-Kitamachi Osaka, Japan. **Branch offices:** 6 Yama-shiro-cho, Kyobashi-ku, Tokio; 27 2-Chome, Nanzancho, Seoul, Korea; 292 Hokumonkogai, Daitotei, Taipei, Formosa.

Officers: Baron Heitaro Fujita, pres.; Tokujiro Fujita, v. p.; Hikosaburo Fujita, directors; Nakasuke Saka, gen. mgr.; Yotaro Takagi, Seiichi Saito,

Kurataro Suzuki, Otojiro Sasano, Kennosuke Tsujimoto, mgrs.; Seiichi Yamashita, min. and smel. supt.

Company was formed at Osaka in 1869 by the late Baron Denzaburo Fujita, father of the present president.

Cap., increased later to present figure of 6,000,000 yen, though the capital actually in operation amounts to more than 50,000,000 yen.

The company is also extensively engaged in forestry (Nam Heng rubber estate in Kota Tinggi, Johore State, Malay Peninsula, 6,000 acres; Hokkaido forest in northern island of Japan, 180,000 acres; Yawataya sawmill in Osaka, Nagakisawa sawmill near Kosaka mine, etc.), and agriculture (reclamation work at Kojima bay, near Okayama, Japan).

Mining is the most important branch, first begun in 1880. When metallic mining was started in Japan, the Fujita Company was among the first to take an active interest in it, and the company led the way in adopting the latest appliances then used in Europe and America. The total number of mining claims and that of the mines possessed by the company, in Japan, Korea, and Formosa, are 163 and 37, respectively. Some of them are being exploited, while 25 are being successfully worked. The total value of the mineral products of the company for 1916 amounted to 10,500,000 yen, including:

Gold, ounces.....	27,000
Silver, ounces.....	1,169,000
Copper, pounds.....	22,640,000
Lead, pounds.....	764,000
Zinc, pounds.....	672,000
Other ores, tons.....	7,063,000

Of silver, the company produces about 30% of the total yield of Japan; of copper, about 17%; and gold, 13%. The company employs 12,872 mine workmen, of whom 3,993 were underground and 8,167 on surface.

Kosaka Mine: situated at Kosaka-machi, Kazunogun, Rikuchu, in the extreme northern part of Hondo, the main island of Japan. The mine is about 10 miles from the Government railway. It was worked until 1897 as a silver mine, passing in 1881 to the present ownership. The Kosaka employed 6,500 hands in 1916.

Geology: country rock is brecciated porphyry tuff, ranging from a fine conglomerate to a coarse grit, of tertiary age, with a covering of volcanic ash and with intrusions of liparite and andesite. The orebodies constitute a fine example of metasomatic replacement occurring along the contact zone between the tuff or liparite and andesite, and is surrounded by the clay with dissemination of pyrite, but are shading imperceptibly into the liparite. There are 5 of these orebodies, of immense size, ranging from 20 to 270' thick, and proved for a length of a half-mile, while drills have shown the formation to continue to a depth of 1,700'. The area of deposit so far explored is 2,000' long, 800' wide; and 500' deep. There are three kinds of ores: a complex sulphide, pyrite both compact and loose, and silicious. They carry much barite.

Ore: all ores are more or less argentiferous, and the product is divided into 3 grades. The first grade is the complex sulphide, averaging 2.43% copper, 2.28% lead, 9.80% zinc, and 15.64% iron, with 7 oz. silver per ton, and from a trace to \$2 gold per ton, the gangue carrying 40 to 45% barium sulphate. The pyrite ore, the second grade, averages 2.34% copper, 0.47% lead, 3.15% zinc, and 26.83% iron. The silicious ore, the third, averages 1.27% copper, 0.26% lead, 1.48% zinc, and 19.44% iron.

Development: the Kosaka is mined through tunnels. The slicing and filling system is used, but underground mining was practically abandoned in

1908 for open-cut workings, similar to those of the Utah Copper Co. From 1,000 to 1,800 cu. yd. of overburden is removed daily, the entire overburden being estimated at about 4,000,000 cu. yd. Stripping is partly by hand labor and partly with drills, and with electric trolleys to remove waste.

The open pit is of funnel shape, about 1,000'x2,000' in size, with the sides terraced. Owing to extraction of ore by tunnel and open-out workings only about 500 h. p. is required at the mine.

Equipment: includes two 8-drill Leyner air compressors and one 12-drill compressor, and an electric pump on the 500' level.

The smelter, $1\frac{1}{4}$ miles from the mine, with electric rail connection, is of about 1,000 ton daily capacity. There are 6 pot roasters, 3 Brück-Kretschel briquetting machines, and several stamps used for briquetting fine ores. The percentage of fines is 35% of the raw ore. There are 10 open top water jacket blast furnaces, 7 of which are 24' long, and 4' wide at tuyere level; the others are smaller. One 15' furnace is used for matte concentration. Semi-pyritic smelting is employed, coke charged from the furnace top is about 1.5%, and powdered coal inserted through the tuyeres about 3% of the crude ore. The blast pressure is about 1 lb. About 25% limestone and 10% slag and matte to raw ore are used as fluxes. The average of all ores is only 2.5% copper, with small gold and silver contents. The grade of the first matte is 35%, and the second, 45%.

The converter plant has 2 stands, with 8 shells. There are 2 Brown-Boverie-Rateau blowers, a complete lining department, and 140-ton electric crane. Blister copper from the converter is refined electrolytically, the product being 99.95% copper. The slime from the electrolytic tanks is treated in two cupel furnaces. The monthly capacity of the electrolytic plant is 1,200 tons.

The electrolytic zinc refinery at the Kosaka mine was installed in 1915. There are 4 Herreshoff calcining furnaces, which were used before the matte calcining, one muffle furnace, and 5 Ding's magnetic separators. The daily production of electrolytic spelter is about one ton.

Power is all electric, the Kosaka installations aggregated 3,550 k.w. a.c. and also 220 k.w. d.c. for the mine, smelter, shops, and rail lines. It is generated by 4 water plants on the river Oyu, near the mine, also by a locomobile steam plant.

The Kosaka mine operates an electric trolley, with 9 miles of main line and branch lines, equipped with 35 locomotives and 400 three-ton ore cars. The lines reach all principal points at the mine, smelter, and shops, and connect with the Kosaka railway at the Kosaka depot. The Kosaka railway, which is 15 miles between Kosaka and Odate, connects with the Government railway at Odate.

Production: the annual output of the Kosaka has been as follows: 11,853 long tons of copper, 335 tons of lead, 1,017,200 oz. of silver, 26,667 oz. of gold, and 282 tons of zinc.

The Tokito dressing plant is 2 miles from the smelter, with aerial tram connection. Mixed ores from the branch mines of the Kosaka mine are dressed, the capacity being 100 tons per day.

Hanaoka Mine: in Kita-akita-gun, Akita Prefecture, Japan, owned by the Fujita Co. since 1915.

Ore: the deposit is massive and worked by filling methods. The ore contains chiefly copper and iron pyrites, galena, zinc blende, and gypsum. After hand picking, it is transported to the Kosaka smelter, 18 miles away.

Production: in 1916 was 62,335 tons, which contained 0.00006% gold, 0.003% silver, and 2.08% copper.

Omori Mine: situated in a mountainous region in the province of Iwami (Omori-machi, Nima-gun, Shimane-ken), in the northwest of

Hondo, near the coast of the Japan Sea. This mine is said to have been discovered some 600 years ago, and reopened in 1525. The mine once was highly productive, but was closed in 1872 by an earthquake and reopened in 1884 by the present company, which, after spending considerable capital, equipped the mine with a modern plant.

Geology: the district is composed of Tertiary tuffs and sandstone, interspersed with a great mass of andesite containing ore. There are five veins which have been produced by the fillings of the fissures with mineral solutions. The dip of veins varies from 80° to 70° N., with from 10" to 3' width. Ore exists in bands in the veins, its average width being 7", but it sometimes swells to 6'. Some of the veins are 2,000' long, composed principally of chalcopyrite, galena and zinc blende, containing gold and silver. Five of the veins—Sato, Honnakase, Nakase, Sanjio and Umanose—are now being worked. The ore contains 0.0014% gold, 0.056% silver, 7.75% copper and 0.8% lead.

Development: the veins are worked by stoping, and material is removed by adits and shafts. The ore, after being cobbled and picked, is mechanically dressed by breakers, rolls, trommels, jiggers, etc. The dressed ore, with the requisite quantity of limestone and coke, is smelted raw in an ordinary circular jacketed furnace. The matte formed from this semi-pyrite smelting is once more smelted, forming blister copper (98% Cu), containing 2.3% gold, 77.0% silver, and lead. This last operation is carried out according to the Japanese Mabuki process.

Production: the output was 1,041,933 lbs. of blister copper in 1914; 1,120,306 lbs. in 1915, and 1,002,590 lbs. in 1916. All blister copper from this mine is shipped to the Kosaka electrolytic refinery.

Oarasawa Mine: about 17 miles W. of Kurosawajiri station on the Government railway, to which a tramway has been constructed from the mine, is situated at Yuda-mura, Waga-gun, Iwateken (east district of Akita-ken, where is also the Kosaka mine). It was opened 33 years ago, passing in 1910 to the present ownership.

Geology: Country rocks are granite, tuff, and liparite of Tertiary age. Traversing these rocks, especially tuff, many veins in various widths from 6" to 6' occur, running nearly parallel in the strike of N. 35 to 60° E. and dipping N. W. at 60 to 70° . A few veins dip at the same angle as the former, but in the opposite direction. The gangue is principally quartz, and the veins carry mainly chalcopyrite and iron pyrite, also some oxides of copper.

At five miles W. from the Ōarasawa mine is the Unekura mine. This is a branch of the Ōarasawa at present. The district consists mainly of liparite and tuff of Tertiary age, and fissure veins are found in liparite and tuff. These can be classified into two general groups; the strike of one is N. 25° E., the other N. 85° E. The minerals contained in the ore are chalcopyrite and a little iron pyrite; the gangue is quartz.

Development: the veins of Ōarasawa and Unekura are worked by overhand stoping, and the material is removed by adits and shafts. The ore mined is mechanically dressed to 7.5% grade.

Production: is about 151,000 long tons of dressed ore yearly, plus 1,000 tons of purchased ore. The blast furnace process is generally similar to that at the Omori. Annual production of blister copper (anode) contains 98% copper, 0.0005% gold, 0.05% silver, is 1,650 long tons, which is transported to Kosaka refinery. About 1,000 men are employed, including branch mines.

Matsuoka Mine: situated at Yamada-mura, Okachi-gun, Akita-Ken, and three miles W. from Yuzawa station on the Government railway, to which a light railway has been laid from the mine. The mine was worked

in the eighteenth century by Shinen Sato, a famous economist, miner and metallurgist, to whom modern mining in Japan is greatly indebted. Since the end of 1906 the present company has operated the property.

Geology: country rocks are liparite and tuff of Tertiary age. Ore deposits consist of a network of veins in the upper part, but only a few veins in the lower part. The ore consists of chalcopyrite, galena, and zinc blende, gold, and silver; and assays 0.003% Au, 0.0085% Ag, and 0.95 % Cu. This is dressed to 0.006% Au, 0.015% Ag, and 2.3% Cu, and is transported by railway to Kosaka. Production was 15,000 tons of dressed ore in 1916.

Obiye Mine: near Okayama, Japan, was discovered a few hundred years ago, and was bought by the Fujita Co. at the end of 1913. It employs 500 men.

Geology: a paleozoic slate is intruded by an irregular "boss" of quartz porphyry, varying from 10' to 50' wide. Veins of chalcopyrite exist in the slate, enclosed by the quartz porphyry in such a manner that mining is carried on separately for each division, namely: Toba, Kurosaki, Kanasai, Saruhiki, Kinsei, Katsuragi, and Asahara, etc. The ores mined are hand picked into over 3.5% ore and 1.38% ore. Hand packing is done by women, whose wages are 27 sen (13 cents) per day.

Production: Up to the end of 1908 smelting was carried on at this mine, but is now done in Inu island, 13 miles E. of the mine (see Inujima smelter). The annual production was about 500,000 long tons of dressed copper ore containing 8.2% Cu and 0.003% Ag.

Zuiho Mine: Soon after Formosa came into the possession of Japan the Fujita Co. opened a gold mine in Zuiho, in 1895. The mine is 8 miles East of Keelung, in the northern end of the Island of Formosa, near the coast.

Geology: The mine and its vicinity consist of Tertiary formation, andesite alternating with a bed of sedimentary rocks. In the former there are several thin streaks of coal embedded between layers of sandstone and bituminous shale. On the contact zone between the Tertiary and andesite are the gold veins, which are common here to both rocks. The ore is silicious, and contains a small quantity of pyrite and other sulphides. Some of the ore, being rather clayey is difficult to classify.

Production: since 1914 the mine has been under sub-contract of Yen Yün-nien. In 1916, with an average of 291 employees, production was 64,024 tons of ore, yielding 4,791 oz. gold (including alluvial gold), and 1,857 oz. silver.

Inushima Copper Smelter: These works are situated on island Inu at the mouth of Kojima bay of the Inland sea of Seto, that is 2.5 miles in circumference. This plant is one of the large copper smelters in Japan. Ores from the company's own mines—Obiye, Nachi, Seto, Omidani, Minaki, and several mines in Korea, etc.—cupriferous pyrite from Chugoko district and the Provinces of Kii and Awa, are also brought here by junks.

Semi-pyrite smelting is employed. The first matte from the blast furnace contains 11 to 12% Cu, so that it is to be smelted again into a second matte of about 30% Cu, which is converted by the Mabuki furnaces of 20 stands into a blister copper containing 98% Cu, 0.0095% Au, and 0.2687% Ag. The smelting capacity is about 7,000 tons of ore, and 280 tons of blister copper per month. About half the blister copper is transported to the Kosaka refinery as anode. Production in 1916 was 3,330 tons of blister. About 400 men are employed at present.

Hirota Steel and Ferro-Alloy Works: Situated near Aizu, in Fukushima Prefecture. Owing to the war, Japan has suffered from the lack of some materials imported from foreign countries in ordinary times, and all ferro-alloys are among them. The company taking advantage of this opportunity, started

to produce these alloys and special steels. The works are operated by hydro-electric power, and are now producing ferro-silicon, ferro-manganese, ferro-chromium, ferro-tungsten, ferro-molybdenum, ferro-titanium, ferro-vanadium, silico-speigel of every description, and special kinds of high-speed steel, etc.

Most of the products are used in Japan by the navy and army arsenals, also by various engineering works, while some alloys are exported to Russia and other foreign countries.

Beside the above, the following mines are important producers:

Name	Annual Output		Copper, Per Cent	Average Content			Lead, Per Cent
	Long Tons	Ore		Silver, Per Cent	Zinc, Per Cent		
Kobyaku.....	18,000	Copper	4.2	0.0013

FUJITA MINING & SMELTING CO., LTD.

JAPAN

Inc. in Japan, with capital of ¥30,000,000 (\$15,000,000) to operate from Oct. 1, 1917, the mining and smelting department of the Fujita Company (Gomei Kwaisha Fujitagume), which see.

FURUKAWA GOMEI KAISHA (FURUKAWA & CO.)

JAPAN

Directors: Baron Toranosuke Furukawa, pres.; Rokusaburo Kondo, chief director; Masayuki Otagawa, Koji Inoue, Bunjiro Konda.

In 1875 the late Ichibei Furukawa established the Furukawa Copper Firm in Tokyo. He was very energetic, and devoted himself to developing and equipping the mines he had prospected. In 1903 the late Junkichi Furukawa, the son of the founder, succeeded his father and became president of the firm. In the same year the concern was reorganized into a company under the Japanese law. On his death, in 1906, Toranosuke Furukawa, his brother, succeeded him, and since then he has been president of the company.

The company has 11 offices, 4 copper works, and 25 mines, whose total area of concession is about 70,000 acres; 1,200 officials and 25,000 men are employed; the annual production is 35,000 tons of copper, 20,000 tons of copper wire and plate, 220,000 tons of copper ore, 1,200,000 tons of coal, and quantities of bullion, pig lead, silver ore, zinc ore, etc.

Head office: Yaesucho, Kojimachi-ku, Tokyo, Japan.

Branches:

Address:

Osaka Branch Office.....Ajikawa kamidori, Kita-ku, Osaka.

Moji Branch Office.....Hamamachi Moji.

Wakamatsu Branch Office....Kaigan dori, Wakamatsu, Fukuoka-ken.

Works:

Mizushima Smelter.....Mizushima Is., near Tamashima, Kojimagori,
 Okayama-ken.
 Amagasaki RefineryAmagasaki, near Osaka.
 Nikko Copper Works.....Nikko, Tochigi-ken.
 Honjo Copper Works.....Yanagiwara-cho, Honjo-ku, Tokyo.

Ashio Mines

These mines are in Ashio, Kamitsuga-gori, in Tochigi-ken, about 100 miles from Tokyo, connected by the Imperial Government Railroad and the Ashio Railroad. They are 11 miles W. of famous Nikko. Area of the concession is 4,000 acres.

Geology: the district consists mainly of paleozoic sediments and Tertiary liparite (rhyolite). The liparite forms a volcanic neck erupted through the paleozoic sedimentary rocks and is 2 miles in diameter. The ore deposit of Ashio occur in veins, most of which traverse the liparite. The strike or course of the veins is either N. 60° E. or N. 80° W. The veins of the first-named direction are called the 60° lodes, or the Yokomabu series, and the others the 100° lodes, or the Shinsei series. The mines have more than 200 veins, of which 40 of the Yokomabu series and 60 of the Shinsei series are now being worked. The most important veins of the first series are named as follows: Yokomabu, Kosei, Jimbo and Deai. The second series embraces the Shinsei, Eisei and Tengu. They intersect each other and form rhombic nets of veins. The lodes are generally 1 to 16' thick, 400 to 6,000' long, and generally have steep dips. The chief minerals are chalcopryrite and pyrite, with accessory amounts of zinc blende, arsenopyrite, galena and pyrrhotite. Bornite, chalcocite, cuprite, malachite, pisanite and sometimes azurite and native copper are found in the oxidized zone. The gangue minerals are found in small amount; clay and chlorite are common, quartz is also common, and calcite is found at deep workings. Native bismuth, bismuthnite, wolframite, fluorite, crystallized vivianite, ludlamite and apatite are rarely found.

Development: the mines have three main adits, namely: the Ariki, Kotaki and Tsudo, which are three miles apart.

The **A r i k i** adit is driven mainly along the strike of Yokomabu vein and is 10' high, 10' wide and about 8,000' long. It is an important level for transportation and drainage. The **K o t a k i** adit, whose portal is to the N.W. of the mine, is driven chiefly along the course of the Kosei and Tengu veins, and is connected with the Ariki tunnel. Both the Kotaki and Ariki tunnels are used as trunk haulage ways for underground transportation. The 6 levels below and the 12 levels above are within the reach of the Tsudo adit.

T s u d o adit: this adit is S. of the mine, on the bank of the Watarase river, 475' lower than the Ariki. This level was begun in 1885, and driven northward for 12,000'. More than 50 veins were cut in the tunnel, most of them still being profitably worked. The Tsudo tunnel is the main drainage and transportation way of the mine. It is 11' high and 13' wide. There are 12 mine levels below it, the lowest one 1,500' beneath the tunnel.

H o n k u c h i s h a f t: which is 6'x9', is a half mile from the portal of the Honkuchi tunnel, connects with the 10th level and extends down to the Ariki tunnel level. It is equipped with electric hoists.

Y o k o m a b u N o. 1, or first shaft, which is 6'x11' in the clear, is sunk on the Yokomabu vein at a point 4,600' from the portal of the Ariki adit, connecting at 457' below with the Tsudo level. There are 7 levels and many working faces that are now being profitably operated.

Y o k o m a b u N o. 2, or second shaft, which is 6'x18', is sunk on the same Yokomabu vein, at a place 2,500' from the Ariki adit. It taps the Tsudo adit at a depth of 410' and goes 100' below it. The shaft has 7 levels between the Ariki and Tsudo tunnels, and 6 levels below the Tsudo adit.

Y o k o m a b u N o. 3, or third shaft, 5'x12', is 1,900' from No. 1 Yokomabu and passes through Tsudo level at 466' below Ariki level, and reaches to the depth of 1,300', and more sinking is going on. A hoist is fitted up at the mouth of this shaft for the workings below Tsudo level. The **K o l a k i** shaft, 6'x14', is near the Kosei vein, 2,100' from the Kolaki adit, and it reaches Tsudo level at depth of 448'. No. 1 **K o s e i** shaft, 6'x18', near the Kosei vein, is along No. 23 vein, 2,600' W. from the Tsudo adit. It is 900' deep, and further sinking is in progress in 1917. There are 8 levels connecting with this shaft for the working of the Kosei, Kosei-maehi, Tengu, etc., veins. No. 2 Kosei shaft, 6'x18' and 660' deep, is 2,000' W. from No. 1, on the Kosei vein. There are several levels connecting with the shaft, which open up the eastern part of the vein. The **K o s e i - m a e h i** shaft, 6'x23', and sunk on the Kosei-maehi vein, is 1,500' deep below the Tsudo adit, but further sinking is in progress.

The vertical depth of the underground working places from the highest outcrop to the lowest level is as follows: Outcrop on Bizendate peak to Tsudo adit, 2,200'; below Tsudo adit, 1,500'; a total of 3,700'.

The aggregate length of drifts amounts to about 1,000,000', or 190 miles.

Overhand stoping is generally used, but also square set work. Each stope is 6' high, and more than 2½' wide, varying according to the thickness of the vein.

Waste Water from the precipitating tank for cement copper and the slimy water from the dressing plants are treated with milk-of-lime, after passing through slime setting ponds.

The smoke from all the furnaces is treated by Cottrell treaters. Ashio being in a very mountainous region, aerial tramways are widely used for transportation of timber, etc.

The total length is 25 miles. The Tanamura system is adopted in all lines.

Power is chiefly supplied from the Hosoo hydro-electric power plant (12 miles from Ashio) which was built in 1905, developing 10,000 h. p. The plant's capacity is now being doubled.

Production: this has increased gradually during the past 10 years as follows: 6,315 long tons in 1907; 7,191 in 1908; 7,526 in 1909; 7,453 in 1910; 7,932 in 1911; 8,470 in 1912; 10,428 in 1913; 12,204 in 1914; 11,624 in 1915; 14,816 (33,187,840 lbs.) in 1916.

Cost of Ashio copper is probably a little less than 10c per lb. finished.

Ani Copper Mines

(Annual production, 1,500 tons of copper.)

The Ani Copper Mines are at Ani, Kitaakita-gōri, on the western side of the Moriyoishi Mountain, in Akita-ken. The concession is over 4,600 acres, and is over 5 miles long.

Geology: rocks include tertiary tuff, tuffaceous shale, liparite, and andesite. Veins traverse the whole formation, there being two sets of veins, one running N. S. and the other E. W. The dip is generally steep, though a few of the N. S. lodes have a dip less than 40°. The E. W. lodes are cut by the N. S. lodes, which are sometimes brecciated veins, and occasionally have a clay filling. The E. W. lodes are numerous, though not thick nor long; while the N. S. lodes are big, though few in number.

The principal metallic minerals are chalcopyrite, associated with pyrite, some galena and zinc blende. The gangue or vein stuff is mainly quartz, but sometimes calcite and barite are found. The oxidized zone is deep, and contains bornite, chalcocite, native copper, etc.

Holes are drilled both by hand and machine drill. The drills used include the Ashio drill, Water-Leyner, Ingersoll-Sergeant, Sullivan, Flottmann, Little Wonder, and others. Air for drills is supplied by 3 air compressing plants at the Hanzon, Kotaki, and Tsūdō mines, each one equipped with 2 sets of Ingersoll-Rand compressors and synchronous motors, the former two being of 320 h. p. and the third 500 h. p.

For timbering, only rough, round logs are used. There are several forms of timbering used including legs and caps, saddle back, and polygonal sets. It is interesting to note that large excavated spaces such as the hoisting and pumping stations and chambers, each 40' wide, 25' high, are timbered with big logs.

Transportation: underground of ores, waste and supplies is by electric locomotives and electric hoists; the former in the Ariki-Kotaki adit, Tsudo adit and No. 4 and 8 levels below the Tsudo. The total length of electrically equipped trackage is 10 miles. All shafts are equipped with electric hoists. Total electric power used is 1,200 h. p.

The Ariki and the Kotaki levels drain the water coming from above and the remainder by the Tsudo adit. There are many kinds of pumps, including the Sulzer and Escher-Wyss turbine types. Total electric power used for pumping is 1,300 h. p.

All the machinery of the mines is driven by electricity, transmitted at 22,000 volts from the Hosoo hydro-electric power plant to five substations, where it is transformed down to 2,200 volts, again stepped down to 500 volts at underground substations.

Ore dressing: the mines have three concentration mills at Honzan, near the portal of the Ariki, Kotaki and Tsudo tunnels. Crude ore is sorted into two grades underground, one averages 12% copper, the other 0.8%. The daily output of crude ore for the three mills, is 250 long tons of 1st and 1,500 tons of 2nd grade. The former is selected mostly by hand, the latter is treated by jigs, tables and flotation. Concentrates from these mills amount to 300 tons of 12.5% grade daily.

Cement copper: is recovered from old workings and weathered rubbish. The daily production is 2½ tons of 66% copper, which is sent direct to the smelter.

Smelter: this is at Honzan, the eastern part of Ashio. The lumps and

finer from the concentrating mills being silicious, some basic ores and limestone is supplied from other places. About 105,000 tons of 12.5% product is treated annually, indicating a production of 13,000 tons of copper.

The lumps are charged raw to the blast furnace, the fines are reduced in reverberatory furnaces after roasting in 5 McDougall furnaces. The matte is bessemerized as usual.

There are four blast furnaces, 160"x42" at the tuyere level; the height from the center of the tuyeres to feed floor is 8½'. Blast is supplied by a Root No. 8 blower, also by turbo-blowers. Matte averages 40% copper. Slag assays silica, 39%; iron, 25%; lime, 19%; alumina, 9%, and copper, 9.2%.

The reverberatory furnace is 19'x110'. Waste heat is utilized by steam boilers. Matte is ladled into converters by an electric traveling crane.

There are 7 converters of the barrel type, 72" diam. and 100" in length. The tuyeres have Dyblie ball valves. Blast for the converters is produced by two turbo-compressors. Lining for converters is a decomposed rhyolite porphyry (liparite).

The converters produce more than 100,000 lbs. of blister copper daily. Blister is cast into 70 lb. ingots or anode plates, and carried to the Nikkō Copper Works by rail.

Analysis of the blister copper is as follows: copper, 99.077%; gold, 0.0003%; silver, 0.1065%; arsenic, 0.029%; bismuth, 0.006%; iron, 0.052%; sulphur, 0.028%, and selenium and tellurium, 0.038%.

Mining: there are many levels and shafts, including the Manaita, 10' wide, 7' high, and 8,000' long, the most important transportation and drainage level. Below this there are four levels at present. The Kanbun is 7' high, 4' wide, and 4,500' long. There are ten other levels above the Kanbun tunnel with intervals of 60' to 80', the lower five now being used. The Kosawa main shaft, 4'x14', is one of the blind shafts, which is sunk down to Maehi vein in Manaita level, and is 400' deep. It is equipped with hoists and pumps. The Chōmatsu crosscut opens nearly all of the chief veins in this mine. It is 7' high, 10' wide, and 1,000' long and is the most important transportation level. There are seven levels above and six below it.

The Sosuido level is the third below the Chōmatsu, and is 4' wide, 6' high, and 1,700' long. It is used for drainage only. The Kayakusa, 4'x14', is one of the blind shafts sunk to the Shinsei vein on the Chōmatsu level, and is 800' deep at present. The Koganehira level is the lowest for transportation and drainage, and is 7' high, 4' wide, and 1,500' long. The Motosawa level is 50' above the former, and is 6' high, 4' wide, and 3,000' long. There are 10 levels above the Koganehira, connected by winzes. The Amaike tunnel is cut through at the foot of the mountain range between the Kayakusa and Sammai valleys. It is the lowest level in the mine, and is 7' high, 8' wide and 9,000' long, with double tracks. During the driving the chief veins in Kosawa and Sammai were found. The Suidōkō adit is driven first as a crosscut; then, after proceeding along the Shōgorōhi vein, it cuts several other veins. It is 7' high, 8' wide and 6,600' long, and is the most important transportation and drainage level. There are 10 levels above it connected by winzes.

Treatment: the main concentration mill is at the Kosawa mine, and contains Hancock jigs, tables, and flotation plant. The 1% crude ore feed is concentrated to 10% Cu.

Ores: the dressed ore treated contains 40% silica and 10% copper. About 16,000 tons of ore are treated annually, yielding 1,500 tons of copper.

The fines and sands are briquetted or roasted in pots. The briquets, roasted ores, and raw material are reduced in 2 blast furnaces with limestone. Matte is blown to blister copper by the Japanese Mabuki hearth (7).

Blister copper, containing 98% copper and 0.11% silver, is sent to the Nikkō Copper Works and electrolytically refined,

Power is chiefly supplied from the Hitachihai hydro-electric power

station, which generates 1,000 h. p. There are also two small auxiliary plants. Another plant for supplying 2,000 h. p. is under construction.

Nagamatsu Copper Mines

(Annual production, 1,000 tons of copper.)

These extend over Shiraiwa-machi, Nishimurayama-gōri, and Okura-mura, Mogami-gōri, in Yamagata-ken, and are situated on the south of Mt. Gassan. The area of the concession is 1,300 acres.

Geology: the district consists of Tertiary, shale, tuff, and sandstone, with extensive intrusives of liparite and andesite. The ore deposit forms clay veins which traverse all the rocks and consists chiefly of chalcopryrite and pyrite; zinc blende and galena are frequently found; quartz and baryte are found occasionally.

Mining: there are many levels, of which the Ogiri and Chūgiri are the most important. The former is 5,000' long. The latter is 380' above the former, and is 4' wide, 6' high, and 2,500' long.

Treatment: dressing is done by hand and by mechanical means. Crude 1% copper ore is concentrated to 8.5% grade. The dressed ore averages 8.5% copper and is easily smelted. The fine concentrates are roasted in pots; raw lumps and roasted products are smelted into matte in blast furnaces. Matte is blown into blister at Mabuki. The blister contains 97% copper and 0.18% silver, and is sent to Nikkō Copper Works for refining.

Power: a hydro-electric power plant of 200 h. p. is at work.

Mizusawa Copper Mines

(Annual production, 500 tons of copper.)

These are in the village of Iwasaki-mura, Waga-gōri, in Iwate-ken. The area of concession is about 1,882 acres.

Geology: this district is composed of granite, tertiary tuff, and liparite. The important lodes are the Maehi, Okuhi, and Uwabanhi. They run mainly in the granite, with a N. 60° E. strike.

Principal minerals are chalcopryrite and pyrite; but occasionally galena and zinc blende are found in small quantities. The gangue is quartz, but is not abundant. Calcite is found in druses.

Mining: Tsūdō adit level, 500' long, is the lowest level and is used for transportation and drainage. No. 6, 1,400' long, is the main transportation level.

Treatment: is mechanical concentration. All machinery is driven by electricity.

The crude ore contains 1.2% copper, and concentrates 7.4%.

Smelting: the dressed ores are silicious, containing 7.4% copper. They are classified into lump ore, small ore, fines and slime. The last three are roasted in pots, the roasted fines and fine dust are briqueted. The raw lump briquets and roasted materials are smelted in the blast furnace, and the resulting matte is blown to blister copper by the Japanese Mabuki process. The blast furnace is rectangular and water-jacketed, 33"x66" at the tuyeres, and 10' 6" high; the diameter of the 8 tuyeres is 2½".

Otori Copper Mines

(Annual production, 500 tons of copper.)

These are in the village of Oizumi-mura, Higashitagawa-gōri, in Yamagata-ken. The area of the concession is 296 acres.

Geology: the ore deposit forms veins which traverse tertiary agglomeratic tuff and liparite. The Hompi is the main lode, and strikes E. W., and dips 80° N. It is 1' to 6' wide, and 2,500' long. Minerals are chalcopryrite and pyrite, and the gangue is quartz and rhodochrosite, both in small quantity.

Mining: Tsūdō adit is 1,600' long. The Ogiri level is 420' above it and is 1,200' long.

Treatment: concentration is mechanical. Crude ore carries 3.6% and the concentrates 8% copper.

Kawaiyama Mines

(Annual production, 500 tons of copper.)

These are situated in Ikumto-mura, Abu-gōri, in Yamaguchi-ken, 20 miles N. W. of Yamaguchi. The area of the concession is about 400 acres.

Geology: the deposit is a contact metamorphic one, which is found on both sides of quartz-porphry dyke erupted through paleozoic limestone. It is 1' to 30' thick, and consists of a mosaic of granite, hedenbergite, quartz, chalcopyrite, and occasionally zinc blende and galena.

Mining: there are five levels, of which the 4th is the longest, being 2,500' long. A shaft is 350' deep.

Treatment: the crude ore is sorted by hand. The quantity of dressed ore is 85% of the original run of mine.

Smelting: is done by blast furnaces and Mabuki hearths. The fineness of the blister is 95% copper, and 0.6 to 0.7% silver.

Kune Copper Mines

(Annual production, 170,000 tons of copper ore.)

These are in the village of Sakuma-mura, Iwata-gōri in Shizuoka-ken, and are situated on the eastern bank of the River Tenryū. The area of the concession is 3,000 acres. The mines have no concentrating mill and no reduction works, the pyritic ores being sold.

Geology: the formation is a graphitic schist and chlorite schist of the Algonkian system. The ore deposit consists of epigenetic beds of pyritic ores (copper 3-8%), which strike N. 35° E., and dip 30° to 60° N. W. The deposit contains six orebodies, the Okuhi orebody being the largest; it is 45' to 100' wide and 1,500' long on the strike, and 1,500' deep. The ore consists of pyrite and chalcopyrite with some pyrrhotite and compact granular texture. Quartz is sometimes found, and occasionally magnetite occurs in separate layers.

Mining: there are 14 levels, of which two are important. The Ogiri, 1,500' long, is a crosscut, and is the most important transportation level. The Tsudō adit, the lowest drainage level, is 400' below the former, and is a crosscut, for drainage and transportation. It is 9' wide, 8' high, and 3,000' long at present. A shaft, with cages, 500' below the Tsudō adit, is working at present; another shaft with skips is under construction.

Overhead stoping is followed. According to the thickness of the bed, the stoping is done in two ways: (1) stoping in the direction of the strike, which is employed in the working places, where the bed varies 4' to 8' thick; and (2) stoping in the horizontal direction at right angles to the strike, which is used generally in the thicker part of the bed.

The mines produce both basic pyritic copper ore, and silicious ore, and there is also a small output of cement copper. Annual production of pyritic ore amounts to 170,000 tons, averaging 4% copper.

Transportation: the ores from the sorting house are carried by a ropeway to bins built on the bank of the River Tenryū, and then are loaded on boats and carried to the Tenryū station of the Imperial Government Railway.

Power: 2,500 h. p. is generated by water at Toyone, 5 miles N. W. of the mines.

Furokura Copper Mines

(Annual production, 50,000 tons of copper ore.)

These are in the village of Oyu-mura, Kazuno-gōri, in Akitaken. The area of the concession is 2,322 acres.

Geology: the rocks in which the orebodies occur comprise tertiary tuff, shale, and andesite, cut by quartz veins that traverse all of the rocks. The Hompi vein is the master lode. It strikes N. 30° to 40° E., and dips steeply N. W. or S. E. The thickness varies from 1' to 12', and the known length is 5,000'. In the middle part of the Hompi vein, there is a branch called the Shijunehi vein, whose strike is N. 60° W., and dip 60° S. The chief

minerals are chalcopyrite and pyrite, and the vein stuff is quartz. Micaceous hematite occurs with the quartz, and sometimes calcite is found in the druse.

Mining: the Ogiri tunnel is driven along the strike of the Hompi vein; it is 5' wide, 7' high, and 5,000' long, and is the most important transportation and drainage level. The Kyūshichi tunnel, 260' above the former, is also driven on the Hompi vein for a distance of 5,000'. The Hosoji tunnel is 530' above the lowest or Ogiri level. All levels are connected by shafts and winzes. Stopping is practiced. Excavation is by hand drilling and by Leyner rock drill and Ingersoll stopers.

Treatment: high-grade ore is mostly screened and picked, and the low-grade ore is concentrated mechanically. The dressed ores treated are silicious, containing 5.5% copper. They are divided into lumps, grains, and sands, and are sent to the smelter of the Kosaka mines owned by Fujita & Co.

Power: gas engines of 600 h. p. are used, and a hydro-electric power plant of 1,300 h. p. is under construction.

The ores and all supplies are transported by aerial tram between the mines and the Kosaka property.

Kijo Gold Mine

(Annual production, 2,000 tons of lead containing gold.)

This mine is in Tōdō, Kijō-gun, Heianhoku-dō, in Chōsen (Korea). It is 27 miles N. E. from Sensen station of Chosen railway. All supplies are transported on horseback from the station. The concession covers 20,000 acres.

Geology: quartz veins are in gneiss, and number over 15, varying from 1' to 20'. The principal minerals are native gold and galena, with some zinc blende and a little argentite. Iron pyrite, arsenopyrite, and chalcopyrite occur as accessory minerals.

Mining: exploitation of the deposits began in 1912, and the work soon disclosed numerous commercial gold veins and gold-lead veins. Work is proceeding on a large scale.

Smelting: the mines have a small concentrating mill and blast furnaces for experimental work. Lead ingots, containing much gold, are produced, and sent to the Amagasaki refinery.

Innai Silver Mines

(Annual production 400,000 ounces of silver.)

These are in the town of Innai, Ogachi-gōri, in Akita-ken, and are within 3 miles of Innai station of the Imperial Government Railways. The area of the concession is over 2,613 acres.

Geology: the district consists of tertiary tuff, tuffaceous shale, and tuffaceous sandstone, as well as liparite and andesite, the latter two intruding the tertiary. The deposit consists of quartz veins that traverse all rocks.

Mining: the portal of the Sosuidō adit is near the concentrating mill; it is first a crosscut, and then a drift along the Hompi vein, the champion lode of the mines. It is 7,800' long, and is used for drainage and transportation.

No. 1 Yamaichi shaft, 4'x13', is 1,370' deep and develops the Hompi vein. It is equipped with an electric hoist. No. 2 Yamaichi is on the E. end of the Hompi vein, connects with the Sosuidō adit level at a depth of 300', but it has no connection with other levels.

Ore treatment: Crude ore is crushed by gravity stamps and concentrated on Wilfley tables. Concentrates and old tailings are treated by cyanidation. The former contains 1.09% (355 oz.) silver, and the latter 0.02% (6.5 oz.) silver. The cyanide plant was completed and about Aug., 1917, is expected to produce 400,000 oz. of silver annually.

Daira Lead Mines

(Annual production, 600 tons of lead, 5,000 tons of zinc ore.)

These are in the village of Fujikoto, in Yamaoto-gōri, Akita-ken. The mine is 17 miles from the Futatsui station of the Ou line of the Imperial Government Railway.

Geology: the rocks include Tertiary tuff, andesite, and liparite. The quartz vein carries mainly argentiferous galena, and zinc blende.

Mining: the deposit is reached by a tunnel driven along the vein.

Treatment: dressing is done by hand, mechanical crushing, screening, jigging, and flotation, and finally by an electro-magnetic separation. The lead ore is smelted here, and the zinc ore sold. The former is roasted in pots with limestone, and is reduced by charcoal in Mabuki hearths, and made into base bullion.

Power: a hydro-electric power plant of 400 h. p. is being erected.

A light railway connecting the mines and Futatsui station of the Government Railway is under construction.

Coal Mines

Following are the collieries and their outputs:

Name	Coal	Tons per Annum
Shiogashira, Shakanoo, Daini-Shakanoo.....	Bituminous	380,000
Shimoyamada	Anthracite	160,000
Shinshakanoo		60,000
Yoshima		500,000

Mizushima Smelter

This is a customs smelter, situated in the islet Mizushima, 5 miles S. E. of the Havour Tamashima, near Okayama City. It includes pot roasters, blast furnaces, and Mabuki hearths. The blister copper is sent to Nikkō Copper Works.

Production is 3,500 tons of copper per annum.

Amagasaki Refinery

This refinery is in the town of Amagasaki, near Osaka. Copper is refined in reverberatory furnaces. Lead ingots and silver bullion are also produced.

Annual production is 5,000 tons of refined copper, 2,000 tons of lead, and 10,000 oz. of silver bullion.

Nikkō Copper Works

The Nikkō works are at Kiyotaki, near Nikkō, and make electrolytic copper, copper wire, alloy wire, copper plates, etc.

Copper from Ashio and other mines is refined here. The plant consists of a tank house for the series system, and one for the multiple system, blue vitriol plant, refining furnaces, and slime house.

The wire plant has rolling mills for rods and plates, wire drawing mills, and brass foundry.

A hydro-electric power plant at Hosoo develops 10,000 h. p.

Annual production is 30,000 tons of electrolytic copper and copper wire; 1,500,000 oz. of bullion, etc.

Honjo Copper Works

These are at Yanagiwara-chō, Honjō-ku, Tōkyō. Copper and brass sheets are produced by the mills, which are driven by electric power.

Annual production is 500 tons of copper and brass sheet.

KUHARA MINING CO., LTD.**JAPAN**

Head office: Osaka, Japan; London office: I. Sato, 60 Mark Lane, E. C.; New York office: K. Hishida, 26 Cortlandt St.

Officers: F. Kuhara, pres.; Y. Ayukawa, and I. Saito, directors.

Inc. 1912, in Japan. Cap., 30,000,000 yen (\$15,000,000).

Report for half-year ended May 31, 1916, shows a credit balance of 2,927,974 yen after paying dividend. Reserve fund was 11,497,395 yen. The dividend for this period was 30%.

Property: originally owned by Kuhara Mining Office, includes copper, gold and silver mines, such as the Hitachi in Japan, and Kapson in Korea; also refineries at Saganoseki and Iyejuna.

Production: 2,500 to 3,000 tons of electrolytic copper, 9,000 to 10,000 oz. gold, 120,000 to 150,000 oz. silver, 75 to 100 tons copper sulphate, and 200 to 300 tons of zinc, per annum.

MITSUBISHI GOSHI-KAISHA**JAPAN**

Head office: Yaesucho Itchome, Kojimachi-ku, Tokyo, Japan. Branch offices and agencies: Osaka, Kobe, Kyoto, Nagasaki, Moji, Karatsu, Otaru, Nagoya, Ejiri, Yokohama, Tsuruga, Kure, Hakodate, Daihoku, and Muroan, in Japan; Shanghai, Hankow, Peking, Tientsin, Dairen and Hongkong, in China; Singapore, in Strait Settlements; Manila, in the Philippines; London, England; New York, in America; and Vladivostock, in Siberia.

Officers: Baron Koyata Iwasaki, pres.; Seijiro Sho, gen. mgr. gen. affairs dept.; Shinji Harada, gen. mgr. metal mg. dept.; Kusuyata Kimura, gen. mgr. coal mg. dept.; Sadaye Eguchi, gen. mgr. trading dept.; Shoichi Kirishima, gen. mgr. estate dept.; Manzo Kushida, gen. mgr. banking dept.; Taisuke Shiota, gen. mgr. shipbuilding and engineering dept.; Teizaburo Hori, gen. mgr. iron foundry dept.

Established, 1893. Cap., 15,000,000 yen.

The Mitsubishi is the foremost private enterprise in Japan, and a worthy memorial to its founder, the late Yataro Iwasaki. Its interests are varied, but are chiefly in mining, shipbuilding, and banking. The company is an important producer of gold, silver, copper, tin, tungsten ore, and coal, possessing 22 metal mines and 11 coal mines, which in 1916 yielded 1,430 kg. (45,760 oz.) gold, 27,605 kg. (883,360 oz.) silver, 30,619,497 lbs. copper, and 2,982,000 metric tons of coal.

Mitsubishi copper is marketed as electrolytic ingots branded with three diamonds, to insure identification, as it is considered to be unsurpassed in purity and electric conductivity. The larger part of the output is sold in the London market through the London branch.

Osarusawa Mines: about 14,534 acres, in Kazuno district, Akita prefecture, Japan. Shokichi Namura, mgr.; H. Abe, asst. mgr. The mines are ancient, having been opened in the 8th century, but were worked for gold only until about 1650, when copper ores were developed.

Geology: ore carries chalcocite, chalcopyrite, bornite, and a little native copper, associated with pyrite, and small quantities of sphalerite, galena and hematite. Occasionally native gold is found mixed with copper ores and in a quartz fahband, gold occurring mainly in the upper workings. Ores occur in a complicated system of interlacing fissure veins varying from less than 1' to over 10' thickness. Their dip is 15°, 45°, 75°; also in opposite directions. The average width is 3', and the copper content 3 to 4%; most of ore is also high in iron pyrite. The veins, which are persistent in strike, and workable to an average depth of 500', traverse tertiary shales and tuffs, with intrusive augite-andesite and liparite.

Development: is by 8 working shafts and 12 main tunnels, with upward of 17 miles of workings.

Equipment: includes electrical installations aggregating 1,140 h. p. Working forces average 2,400 persons. The reduction plant has two 40-ton water-jacket blast furnaces, with a 250-h. p. electric plant, turning out blister copper of 98% tenor, sent to the Osaka electric refinery.

During 1200 years of operation, these mines have produced immense quantities of copper, gold and silver. Recent production is as follows:

Year.	Gold ozs.	Silver ozs.	Copper lbs.
1913	320	32,740	4,647,486
1914	390	31,010	4,824,936
1915	550	29,950	4,161,426
1916	640	33,920	5,046,122

Ore production is 16,700 tons per month.

Arakawa Mine: about 2,100 acres, at Arakawa-mura, Sempoku district, Akita prefecture, Japan. Tokutaro Segawa, mgr. The mine is connected with Sakai station on the railway by a 7-mile tram.

Geology: country rocks are tertiary volcanic sediments and crystalline rock, including augite-andesite, liparite, and propylite, carrying 10 parallel veins in propylite, with strike approximately N. E. and S. W., and workable for 1,000' to 4,000' along their course. Ore consists of chalcopyrite and quartz with a little pyrite, galena, and blende. Oxide ores, mixed with sulphides, averaging about 2% copper, extend to 500' below the surface.

Development: by 5 shafts, 300' to 600' deep, and numerous tunnels. The deepest working is at 800' in the lower tunnel.

Equipment: includes 5 power houses, with aggregate of 4,000 h. p. About 1,400 persons are employed.

Production: is 5,000 tons of ore per month. Including the Hisaichi mine, the yield has been as follows:

Year.	Gold ozs.	Silver ozs.	Copper lbs.
1913	80	32,230	3,990,595
1914	50	34,520	3,755,182
1915	30	36,400	2,914,216
1916	75	28,000	2,391,087

Hisaichi Mine: about 926 acres at Nakagawa village, 5 miles S. E. of the Arakawa, with which it is geologically similar. There are 7 veins, the largest, known as Ugaisawa, of about 24' average width, carrying about 8' of payable ore, and occasionally branching into several smaller veins. The other workable veins range from 5' to 7' width. The ore averages 3% copper as chalcopyrite, with oxide ores, hematite, and lead and zinc sulphides, also a little gold and silver. There is a 500' shaft.

Equipment: includes water and electric power installations. Employees average 1,200.

Production: 2,000 tons of ore monthly, which is partly smelted locally.

Tsunatori Mine: a branch of the Arakawa, has an area of 1,240 acres, at Yokokawame-mura, Waga district, Iwate prefecture, Japan. Employees number 400. Output is 1,200 tons of ore monthly.

Production: since 1915, when the mine came into possession of this company, is as follows:

Year.	Gold ozs.	Silver ozs.	Copper lbs.
1915	110	230	25,010
1916	2,750	7,280	807,062

Omodani Mine: area 1,992 acres, at Kamianama-mura, Ono district, Ku-kui prefecture, Japan, 50 miles S. of the railway at Fukui, and 27 miles from Ono-machi.

This property, opened A. D. 1,350, has numerous small veins, none of which exceed 3' in width, impregnating sandstones and altered quartz porphyry. The ores carry bornite, chalcopyrite, sphalerite, and galena, all argentiferous, also some native silver. Four larger veins, up to 10' in width, showing low-grade ore, are also worked. Ores average about 6% copper and 72 oz. silver per ton.

Development: by a shaft with 5 levels, the longest 12,110', and all aggregating 58,380' in length, with 23,750' of track. Hydro-electric power is used. The working force is around 670 men.

Production: is 3,878 tons of ore per month. For the past 4 years the yield was:

Year.	Gold ozs.	Silver ozs.	Copper lbs.
1913	320	79,640	650,185
1914	600	103,960	915,116
1915	1,100	129,310	987,742
1916	800	116,600	1,115,646

Ikuno Mine: area 12,786 acres, at Ikuno Machi, Hyogo prefecture, Japan. Kinjiro Shimamura, mgr. The principal mines of this group are the Tasei, Kanagase, Akenobe and Kasei. There are 4 smaller ones.

Geology: the Tasei has a 14' main vein with numerous branches in quartz porphyry, altered andesite tertiary tuffs. The ores carry native gold and silver, together with chalcopryrite, galena, zinc-blende, and pyrite. This vein is notable for its silver content, and has been the mainstay of the mine for centuries, giving it the name of "Silver Mine of Ikuno."

Kanagase Mine: near the Tasei, has many veins in quartz trachyte, three of them being workable. The property is traversed by several andesite dikes, with fault dislocation of the veins along the dikes. The chief copper vein is 8' to 10', runs N. S., dips 60 to 80° E., and is 10,000' long. The ore carries native copper, bornite, chalcopryrite, and tetrahedrite. Two other veins now being worked are 3' to 9' thick, nearly vertical, minable for 2,000', and contain argentite, sphalerite, galena, ruby silver, and stibnite, besides copper sulphides.

The Akenobe mine has numerous copper and tin-bearing veins in Paleozoic slate, scattered along the Akenobe river. Eleven veins are worked, varying from 3' to 4' wide. Ores carry chalcopryrite, bornite, cassiterite, wolframite, and blende also.

The Kasei mine shows hornblende gneiss, cut by rhyolite and porphyry dikes with fissure veins carrying silver sulphides associated with chalcopryrite and native silver.

Equipment: includes steam, water, and electric power plant.

Production: copper is shipped in slabs carrying 96.83% copper, 0.0072% gold, and 0.4742% silver. Output for the past 4 years was as follows:

Year.	Gold ozs.	Silver ozs.	Copper lbs.	Tin lbs.
1913	3,200	258,900	3,870,311	41,072
1914	2,600	240,200	4,479,880	164,777
1915	2,110	223,200	5,219,481	684,069
1916	2,140	249,000	5,486,119	553,275

Kanayama mine, a dependent of the Ikuno, has 903 acres on the Island of Shikoku, across the Inland Sea, in the Kita district, an hour's run by steamer from Nagahama.

Workings show interbedded lens of cupriferous pyrite 6" to 10' thick in Archean schists. The bed is flat, workable for 3,000', and yields 1,000 tons of ore monthly, averaging 3.3% copper and 40% sulphur. This is sent to Ikuno. Output of sulphur was 5,640 tons in 1915, and 8,497 tons in 1916.

Yoshioka Mine: area 2,155,173 acres, at Fukiyamachi, a small town in Kawakami district, Okayama prefecture, 33 miles from Tatami, on the railway. Fusajiro Fukeda, mgr.

Geology: slates, sandstones, and phyllites are cut by porphyry and quartz porphyry. The ore deposit is divided into two, one part in the sedimentary beds, increasing in richness with depth; the other an impregnation in metamorphic slates in an igneous contact zone. The former shows veins of erratic width, in the form of a stockwerk. Ore is chiefly chalcopryrite, with some pyrite, arsenopryrite, pyrrhotite, galena, and blende with a quartz gangue, and averages 3 to 8% copper.

Development: the mine has a 360' shaft, with 9 levels, and a 375' blind shaft. Total openings amount to 28 miles. Employes average 2,700,

Production: 7,000 tons of ore monthly. The output for the past 4 years was as follows:

Year.	Gold ozs.	Silver ozs.	Copper lbs.
1913	130	61,250	1,519,989
1914	130	61,790	1,741,342
1915	130	64,500	1,608,555
1916	120	63,200	1,607,312

Makimine Mine: area 1,370 acres, in 4 lots, at Kitakata village, Higashi-Usuki district, Miyazaki prefecture, Japan. It is far away from railway lines, but in a well traveled region. It is accessible by steamer up the Gokase river to Tomi.

Geology: country rock is slate with interbedded sandstone, and a capping of lava from the Aso volcano. These rocks are cut by veins of small size, carrying lenticular ore shoots of pyrite, averaging 5% copper, the ore shading into pyrite and lievrite. There are 11 main veins, whose ore-bodies are from 10' to 20' wide, though averaging but 1' to 7', and are 30' to 300' long.

Development: is by tunnels at 50' to 60' intervals, with inclined winzes of 310' and 1,000', and a vertical 240' winze. Workings aggregate 23,300'.

Equipment: is hydro-electric. About 780 persons are employed.

Production: for past 4 years was as follows:

Year.	Gold ozs.	Silver ozs.	Copper lbs.
1913	615	6,430	1,515,903
1914	618	7,740	2,103,181
1915	627	8,100	2,415,395
1916	630	8,350	2,121,223

Takara Mine: area 1,659 acres, is at Takaramura, Yamanashi prefecture, a convenient situation to rail traffic.

Geology: formation of the country consists of Paleozoic slate and quartzite, intruded by diorite. The ore deposit occurs in the former, taking a massive structure and striking from E. to W., with a dip ranging N. 70° to 80° S. The ore produced is pyrite, which carries some copper.

Production: 18,000 tons of ore per year, which is marketed for sulphuric acid manufacture and the solution used in leaching. There are 150 people employed.

Okuyama Mine: area 2,000 acres, is at Minamikami Mura, Kamo district, Shizuoka prefecture. Ores occur as chalcopyrite. Working force averages 280, producing 7,000 tons of ore per year.

Osaka Metallurgical Works: are at Shinkawasaki-machi, Kita-ku, Osaka, adjoining the Imperial Mint. The works cover 12 acres and employ about 350 people. It includes 15 reverberatory furnaces, turning out anodes of 97 to 99% purity for conversion into electrolytic copper, cathodes assaying 99.89% copper, 0.0037% silver, 0.014% lead, 0.01% arsenic, and a trace of sulphur. Gold and silver slime yielded by electrolytic separation are washed and dried preparatory to roasting in a small muffle furnace. They are then leached with the waste solution of the refinery to dispose of the remaining copper, the residue being mixed with lead and cupelled. A new plant is under construction, and when completed, the refining capacity of the works will be doubled. Output for past 4 years is as follows:

Year.	Gold ozs.	Silver ozs.	Copper lbs.
1913	32,380	180,000	9,873,566
1914	21,890	161,630	9,191,560
1915	26,530	149,660	10,389,787
1916	14,800	216,660	11,954,755
		Copper sulphate, metric tons	Cathodes, metric tons
1913		1,089	119
1914		883	153
1915		959	143
1916		1,197	155

Production by all mines of the company since 1913 has been as follows:

Year.	Gold ozs.	Silver ozs.	Copper lbs.
1913	55,450	805,440	26,098,955
1914	49,300	821,000	27,135,547
1915	57,370	825,700	27,957,579
1916	45,700	883,300	30,619,497

The Mitsubishi is one of the 5 large mining companies operating in Japan, and, like the others, is exceptionally progressive. Success has not been won by the possession of mines of exceptional value, though the company has some excellent properties, but rather by the utilization of the most modern methods and appliances and in mining and metallurgy, directed by the best technical skill available.

MITSUI MINING CO., LTD.

JAPAN

Head office: No. 1 Surugacho, Nihombashi, Tokyo, Japan. New York office: 25 Madison Ave.

Directors: Gennosuke Mitsui, pres.; with Dr. Naoya Yamada, Kainchi Okamoto, Dr. Tamaki Makita, Genyeman Mitsui, and Dr. Takuma Dan. Board of auditors: Jutaro Mitsui, Tanojiro Ono, and Shogoro Hatano.

Cap., 20,000,000 yen, paid up.

Property: the Kamioka, Kushikino, Sano, Kaisen, and Kongo metal mines; the Iwanonobori, Kobui and Araodake sulphur mines; zinc refinery, by-product coke and gas power-plant and dye manufactory; and 8 coal mines, all in Japan.

Production: during 1915 the output of this company was 1,490 oz. gold, 295,800 oz. silver, 29,020 lbs. copper, 7,013,700 lbs. lead, 11,412,000 lbs. zinc, 1,230 lbs. bismuth, 21,800 lbs. arsenic, 2,360 lbs. tungsten ore and 13,863 metric tons of zinc ore.

KOREA (Chosen)

CHOSEN GOLD MINES, LTD.

KOREA

Mining and milling operations were abandoned at end of 1916.

Sec. and office: H. R. S. Aldon, Caxton House, Westminster, London, S. W., Eng. American representative: H. E. Collbran, 1002 First Natl. Bank Bldg., Denver, Colo. Korean representative: H. W. Davidson, Seoul, Chosen (Korea).

Directors: H. Collbran, chairman; F. B. Lawson, E. T. McCarthy, M. P. Sayce, A. H. Collbran and H. E. Collbran. A. R. Weigall, cons. engr.; H. S. Weigall, gen. mgr.; D. C. McEwen, metallurgist.

Inc. Feb. 28, 1912, in Great Britain. Cap., £74,400; shares £5 par; £62,310 issued.

Annual report for fiscal year ending June 30, 1915, shows: bullion in transit, £2,325; cash, £757; debtors, £150; debit, £759; acc'ts payable, £8,411.

Property: a concession over 750 acres, including the Kok Kang Kol Mine at Chung An, Chosen, Province of North Chung-Chung, Southern Korea. A royalty of 1% upon the gross value of the output is payable to the Korean government, also an annual mining land tax of about 30c. an acre for acreage actually in use.

Ore reserves: Dec. 31, 1915, estimated at 20,800 tons of \$6 ore, \$124,800.

Equipment: includes stamp mill and cyanide addition with 50 tons daily capacity.

ORIENTAL CONSOLIDATED MINING CO.

KOREA

Office: 15 Broad St., New York. Mines and works: Unsan district, Korea, Asia.

Officers: H. C. Perkins, pres.; Leigh Hunt, v. p.; Henry W. Bull, 2nd v. p.-treas.; L. T. Haggin, 3rd v. p.; with Ogden Mills, J. S. Fassett, Wm. F. Palmer and H. F. Meserve, directors. George Kennaby, sec.

Officers in Korea: Alf. Welhaven, gen. mgr.; Thos. W. Van Ess, asst. gen. mgr.; C. A. Crispin, auditor; E. S. Barstow, supt. of transportation; J. B. Lower, supt. of Tabowie, etc.; J. A. Vernon, asst. supt. of Chintui, etc.; E. H. Emerson, elec. engr.; W. H. Aldridge, mech. engr.; K. F. Hoefle, supt. of fuel and timber railway; W. D. Townsend, agent, Chemulpo.

Inc. Sept. 29, 1897, in West Virginia, to operate mining concessions in Korea. **Cap.**, \$5,000,000; outstanding \$4,293,900, and the balance is owned by the company; shares \$10 par. No bonded debt. Stock transferred and dividends paid at 15 Broad St., New York. Listed on London Stock Exchange.

Comparative general balance sheet (June 30):

Assets—	Mines & Prop.	Cash.	Supplies.	Misc.	Total.
1917	\$3,743,900	\$432,534	\$398,938	\$10,826	\$4,586,198
1916	3,893,900	401,490	381,922	13,774	4,691,088

*Deficit.

Dividends: in recent years, 1903, \$1.25; 1904, 1905 and 1906, \$1 each; 1907, 60c.; 1908, \$1.50; 1909, \$1.15; 1910, \$1; 1911, \$1.50; 1912, \$1; 1913 and 1914, \$1.50; 1915, \$2; 1916, \$1.50; 1917, \$1.50. Total dividends to June, 1917, \$7,723,950, equal to \$18 per share, or 180%.

Property: a number of gold mines in the Unsan district, in the northern part of Korea, ore occurring in veins.

Development: by tunnels and shafts; deepest workings 2,296'. New workings for year ending June 30, 1917, were 39,201'. Results at the Tabowie, Taracol, Chintui and Tongkol mines were satisfactory. The Charabowie is nearly exhausted. **Reserves** on July 1, 1917, were estimated as 840,000 tons, valued at \$4,593,800. Of this, the Tabowie contains 550,000 tons and the Taracol 220,000 tons. Mining costs totaled \$1.72 per ton, 7c. less than last year. The Tabowie mine is 2,296' deep. Extensive prospecting is carried on all the time on the concession.

Ores are treated in the company's 3 stamp mills, 200 stamps in all, and 2 cyanide plants. Power is electric, company having water-power, and buys excess required.

Production: (year ending June 30)

Year—	Tons Crushed	—Per Ton— Yield	Costs	Year—	Tons Crushed	—Per Ton— Yield	Costs
1909.....	296,417	\$4.80	\$2.72	1914.....	301,162	\$5.60	\$3.68
1910.....	320,707	4.40	2.43	1915.....	297,889	5.45	3.40
1911.....	344,097	4.37	2.45	1916.....	309,730	6.04	2.90
1912.....	323,703	4.76	2.68	1917.....	317,601	5.94	2.76
1913.....	313,701	5.19	3.25				

Total to June 30, 1917, was 4,462,598 tons, worth \$27,629,894, 26% of which was paid in dividends. The August, 1917, yield was \$112,850. Milling costs, 44c. per ton.

Company's operations are extensive and ably conducted. Ore is complex, recovery averaging 89.8%. Geological conditions are continually studied, and while one of the mines is almost exhausted, the others maintain ore reserves. Altogether a highly profitable concern, operating on low-grade ore at low cost. Results are given with commendable detail and frankness.

SEOUL MINING CO.

KOREA

Office: 1002 First National Bank Bldg., Denver, Colo. **Mine office:** Hol-Kol, Hwang-Hai, Korea.

Officers: H. Collbran, pres.; H. R. Bostwick, 1st v. p.; S. S. Sheldon, 2nd v. p.; H. E. Collbran, sec.-treas.; preceding, with A. H. Collbran, F. B. Lawson and A. Coors, directors. A. R. Weigall, gen. mgr.; J. S. Collbran, asst. gen. mgr.; W. T. Hall, supt. at Tul Mi Chung mine; R. Blamey, supt. of Suan mine; H. G. English, mech. supt.; B. V. Barton, supt. of prospecting; H. Maki, cons. elec. engr.; F. A. Oldis, aud.; F. F. Bostwick, purch. agt.

Inc. April 27, 1908, in Connecticut. **Cap.**, \$500,000; shares \$25 par; issued, 20,000 shares. Bankers' Trust Co. of New York, registrar. Annual meeting, third Monday in October.

Dividends: have been 25% in 1910; 50% yearly from 1911 to 1916, inclusive.

Statement submitted December, 1916, shows total earnings, \$1,836,340 for 1916; operating expenses were \$918,502, and profits, \$917,838. Cash balance at end of 1916 was \$766,302.

Property: a lease on the Suan concession, granted Nov. 4, 1905, to the Korean Syndicate, comprising a tract of land 13x20 miles in extent, about 52 miles from Pyeng-Yang. The concession carries full rights to examine, develop and operate all mines and deposits contained within the area covered by the grant. Company also has permission to cut timber and to use all the water required for mining, milling and other purposes from sources within, or adjacent to, the district. These privileges are given for a royalty of 1% on the gross value of the output of the mines. There is an additional annual tax of about 30 cts. per acre (50 sen for each 1,000 tsubo), on all land actually selected for mining operations, such selections to be made at any time before Feb. 1, 1916.

The rights in this concession are secured to the Seoul Mining Co. by an agreement made with the Korean Syndicate which provides for the payment of 8% royalty of the actual profits derived from the concession, clear of all depreciation charges.

Geology: property shows both granite and limestone, the principal ore-body, known as the "Collbran Contact," lying between limestone and a batholith of granitoid rock. Ores carry gold, copper, tungsten and bismuth, the gold seldom being visible and rarely in coarse condition. Silver is also present, alloyed with the gold to an appreciable percentage. The copper ores contain chalcopyrite, bornite and tetrahedrite, with a high gold content, of fair average, probably being about 1.2% copper and \$10 gold. The ore-bodies are irregular and in general parallel with the limestone-granite contact, connected more or less by generally well-defined fissures. The gangue is a highly silicious crystalline limestone, altered by contact action and containing a considerable amount of magnesia and alumina.

Development: by tunnels, drifts, winzes and raises, is about 90,000' in the Suan and Tul Mi Chung mines, also many thousands of feet in prospects. **Reserves:** in 1915 were estimated at 1,206,136 tons, worth \$15,014,376; and in 1916, 1,221,331 tons, valued at \$13,460,210, plus 2,300,000 tons in the Soctario deposit, containing 40c. gold, 0.95% copper, and 0.25% tungstic oxide.

Equipment: one 40-stamp mill of 10,000 tons monthly capacity, and one ball mill reducing 15,000 tons per month. The Tul Mi Chung mill includes a flotation plant. The Suan mill is used for treatment of the gold tungsten ore. Company's power plant, 50 miles distant, generates 2,000 k. w.

Ore reserves:	Tons.	Value p. t.	Total Value.	
1916	1,206,136	\$15,014,376	
1915	1,221,331	
1914	1,208,600	\$12.42	15,015,000	
1913	633,300	12.07	7,646,000	
1912	421,000	14.44	6,080,000	
1911	211,400	16.55	3,499,000	
Production:	Tons Ore.	Rec'y p. t.	Cost p. t.	Profit p. t.
1916	176,518	\$10.40	\$3.98	\$6.42
1915	108,078	9.05	3.94	5.11
1914	74,550	9.44	3.90	5.54
1913	71,535	9.39	4.13	5.26
1912	74,432	8.25	3.52	4.73
1911	70,229	7.83	3.01	4.82
1910	32,793	9.86	4.35	5.81

In 1917 the output averaged about \$130,000 per month in bullion and concentrate. This is a highly profitable company, directed by able technical men who have many problems to solve, not the least being the separation of gold, copper, and tungsten, upon which experiments have been under way for the past two years. Flotation is expected to make a good recovery. The Tul Mi Chung mill is now treating 460 tons daily of gold-copper ore and 1,000 tons is recommended, and if 80% of the gold, copper and tungsten can be extracted from the Soctario ore, a mill of 1,000 tons capacity will be erected. Over \$30,000 worth of bismuth is recovered yearly in concentrate. Company conducts extensive prospecting on its concession, following geologic examinations. Probably late in 1918 these properties will be producing at 3 times the present rate.

PHILIPPINE ISLANDS

The following is a complete list of all the metal mines in the Philippines. The **MINES HANDBOOK** has endeavored in vain to secure detailed information on these companies; the Benguet Cons. Mining Co. being the only company which supplied data on its operations.

Name	Address	Metal	Remarks

BENGUET CONS. MINING CO.**PHILIPPINE ISLANDS**

Address: Box 10, Baguio, Benguet Prov., P. I.

Officers: Chas. H. Sleeper, pres.; Chas. S. Cohn, sec.-treas.; with A. W. Beam, N. Leanco and M. Ossorio, directors. A. W. Beam, mgr.; C. M. Eye, supt.

Inc. 1901, in Philippine Islands. **Cap.**, 1,000,000 pesos; shares 1 peso; all outstanding. Financial report for 1916 shows gross earnings, 598,748 pesos; operating expenses, 224,219 pesos (including bullion tax and marketing of bullion); profit, 329,453 pesos. Dividends to July, 1917, total 22½% in 5 payments, beginning Sept., 1916.

Property: 12 claims, 6 patented, about 200 acres in the Antamok valley, about 7 miles from Baguio, shows a steeply dipping quartz vein containing pyrite with gold values of \$20 per ton. Orebodies large, one being reported to be 160' wide and one 500' long.

Development: to depth of 275' by tunnel, workings aggregating a mile in length.

Equipment: includes 10-stamp slime and cyanide mill with tube mill, ½-mile aerial tramway and hydro-electric power. The mill extraction is given as 86% of the gold values, silver not determined. Management estimates ore reserves of 30,000 tons, with about 18,000 tons blocked out.

Production: in 1916 amounted to 569,997 pesos from 13,000 oz. gold and 4,000 oz. silver, from 17,360 tons treated. Also, 22,688 pesos from slag.

Plans enlarging mill and equipment 1918.

SIAM**TONGKAH HARBOUR TIN DREDGING CO.**

Office: H. J. Wise, A. M. P. Chambers, Elizabeth St., Hobart, Tasmania. **Directors:** A. H. Ashbolt, chairman; F. Bond, H. G. Gray, H. Jones, M. Kennedy and K. J. Tok. E. T. Lewis, gen. mgr.

Inc. 1906, in Tasmania. **Cap.**, £250,000; shares £1 par; all issued.

Dividend: total 215% from 1909 to February, 1917.

Property: 5,350 acres in Tongkah harbor, Siam, of which about 500 acres have been dredged. Estimates place the dredgable material at 180,000,000 cu. yd., carrying 2 lbs. black tin per yard. Five boats are at work.

Production:

	Tin Oxide, 70% metal (tons)	Value
1913-14	1,126	£108,053
1914-15	1,262	123,260
1915-16	1,077	

Costs are about 9c and profits 11c per yard.

AUSTRALASIA

FROM THE PERSPECTIVE

AUSTRALASIA

AUSTRALASIA

(Includes the Commonwealth of Australia and Dominion of New Zealand.)

NEW SOUTH WALES

ABERCROMBIE COPPER MINES, LTD.

N. S. W.

Office: T. A. Day, sec., Winchester House, Old Broad St., London, E. C. **Directors:** C. J. McMahon, Hon. Sidney Smith, F. H. Aarons, J. T. Mail and Lt. Col. E. Robinson. A. E. Schroder, gen. mgr.

Inc. Sept. 29, 1916. **Cap.**, £30,000; shares 6s. par.

Company acquired for £10,000 the property and plant of the Lloyd Copper Co.

Lands: 853 acres, formerly known as the Burraga and Thompson's Creek mine, 1 mile from Burraga, in the Bathurst district, which is arid, and operations are suspended at uncomfortably frequent intervals from lack of water, though the mine has an 85,000,000-gal. storage tank holding about 9 months' water supply.

Ore carries slightly argentiferous chalcopyrite, with quartz gangue, occurring in fissure veins traversing acid diorite. The main vein has an ore shoot of about 700' length worked to depth of 750'. The vein ranges 3' to 8' in width, an average of about 5'. The ore is highly silicious and gave average returns 1907, of 2.36 copper. To the eastward is a fault cutting off the extension of the vein from the 1st to the 14th levels, but protracted search has shown a continuation of the vein, to the eastward of the fault, which has given a 300' horizontal downthrow, the discovery of the extension greatly improving the prospects of the property. The future of the mine apparently depends upon the eastern ground, as it is practically worked out between the Melbourne and Sydney faults. Ore reserves at end of 1912 were estimated at 120,000 tons of about 4% copper tenor.

Equipment: includes steam and electric power, with hoists. Buildings include necessary shops and mine structure. Fuel is hardwood, about 75 choppers being employed when the property is in operation, as fuel requirements are about 60,000 cords yearly. Much trouble is experienced from shortage of wood. A 9-mile tram line was built 1912, at a cost of about £20,000. About 500 men are employed, normally.

The reduction plant includes a concentrator and smelter, built 1901, at a cost of £32,000, overhauled and enlarged 1906 and again remodeled in 1917. Present equipment includes a 40-ton calcining furnace, 19'x48' over all, treating 40-ton charges of matte, and a reverberatory furnace, 23'x65' over all, hearth having an inside width of 20', with grate area of 6'x8', and 5 charging hoppers; 64% matte is made and shipped direct to the refinery. A Minerals Separation plant for froth flotation concentration was erected, 1913, and is reported treating 150,000 tons of accumulated tailings, May, 1917.

Production: from beginning of mining to the end of 1908, when operations ceased, the company smelted 389,221 long tons of ore, yielding 15,812 long tons of fine copper, largest production having been 2,947,200 lbs. in 1902. Production was resumed Jan., 1913, amounting to about 110 tons of ore daily, of which about 10 tons was 12% smelting ore and the balance was milled, yielding 18 tons of 14% copper concentrate. Production of blister copper resumed early in 1917.

AMALGAMATED ZINC (DE BAVAY'S), LTD.**N. S. W.**

Office: 360 Collins St., Melbourne, Australia. **London sec. and office:** C. Lloyd, 1 London Wall Bldgs., London, E. C.

Directors: Hon. W. L. Baillieu, chairman; A. J. F. deBavay, H. W. P. Clinton, M. Cohen, F. A. Govett, G. W. W. Mackinnon, W. S. Robinson, and J. L. Wharton. A. J. F. deBavay, cons. chemist and metallurgist; David Meredith, gen. mgr.; Edw. H. Shackell, sec.

Inc. 1909, in Australia. **Cap.**, £500,000; shares £1 par; all issued and fully paid.

Accounts are submitted semi-annually. Report for 1st half-year 1916 showed: assets over liabilities, £245,199, and a net operating profit of £71,008; and for 2nd half, assets over liabilities, £250,209, with net profit of £93,281.

Dividends: 5% in 1910; 20% in 1911; 27½% in 1912; 32½% in 1913; 10% in 1914; 45% in 1916. A dividend of 1s was paid in Feb. and May, 1917, making total disbursements to date, £750,000.

Company acquired the entire assets of the De Bavay Treatment Co., Ltd., and the patents of the Potter's Sulphide Ore Treatment, Ltd. To avoid litigation with the Minerals Separation, Ltd., the companies were merged into the Minerals Separation and De Bavays Processes Australia Proprietary, Ltd., capitalized at £300,000, shares £1 par, of which 101,750 shares were issued the Minerals Separation Ltd., and 83,250 the Amalgamated Zinc. The Amalgamated Zinc has the right to use all the Mineral Separation patents, but must pay the usual royalties.

Company also owns the following share interests: 119,250 shares Minerals Separation & De Bavay's Processes, Australia Pty., Ltd.; 1,500 shares Barrier Munitions Co. Pty., Ltd.; 502 shares Zinc Producers' Association Pty., Ltd. and 100,104 shares in Electrolytic Zinc Co. of Australia.

Amalgamated Zinc has no mines, but buys zinc-lead-silver tailings from the Broken Hill South, Broken Hill Proprietary Block 10, and North Broken Hill mines at Broken Hill, N. S. W. Material is treated in a flotation plant capable of handling 40,000 tons per month.

During 1916, 263,294 tons of tailings were treated, yielding 72,990 tons of zinc concentrate and 1,535 tons of lead concentrate. The former assays 48% zinc, 6% lead, and 8.8 oz. silver; latter 54% lead, 11% zinc, and 57 oz. silver per ton. Early in the war company's operations were seriously hampered by trouble in selling its products abroad. Much of its concentrate has since been reduced to metal in America.

BRITISH BROKEN HILL PROPRIETARY CO., LTD.**N. S. W.**

Office: F. H. Clark, Steamship Bldgs., Currie St., Adelaide, So. Australia.

Directors: J. S. S. Wimby, chairman; F. S. Saunders, A. Stewart and W. H. Woodhead. C. J. Emery, gen. mgr.; G. C. Klug, cons. engr.; R. Beal, mill supt.

Inc. Nov. 11, 1887, in England. **Cap.**, £339,000; in 315,000 ord. 1s. shares and 60,000 privileged 8s. shares; all issued.

Dividends: since 1897 total 204%, but have been irregular.

Property: 141 acres at Broken Hill, New South Wales. Reserves in 1916 amounted to 1,053,250 tons, assaying 13% lead, 6.6 oz. silver and 11.1% zinc.

Development: by shafts.

Equipment: complete for mining, also concentrating plant, using flotation (Minerals Separation and Lyster selective).

Production: the war has caused a suspension from August, 1914, to early in 1917. During 1913 the mill treated 204,374 tons of ore, yielding 41,296,640 lb. lead, 779,522 oz. silver and 5,873,280 lb. zinc.

BROKEN HILL PROPRIETARY CO., LTD.**N. S. W.**

Head office: F. M. Dickenson, 320 Collins St., Melbourne, Victoria, Australia. **Mine office.** Broken Hill, N. S. W.

Officers: D. E. McBryde, chairman; B. Kelly, v. c., with R. O. Blackwood, H. G. Darling, W. Jamieson, H. V. McKay and D. W. H. Patterson, directors. G. D. Delprat, gen. mgr.; E. J. Horwood, works mgr., at Broken

Hill; R. T. Slee, mine mgr.; D. Baker, steel works mgr.; J. A. Lindsay, chief engr.

Inc. Aug. 13, 1885, in Victoria, Australia. **Cap.**, £600,000; shares 8s. par; 1,181,006 issued. **Debentures:** £1,000,000—6% authorized; £940,000 outstanding.

Statement for half-year ended May 31, 1916, showed a revenue of £1,005,244 of which £243,559 was net profit. **Dividends** absorbed £118,100. **Assets** exceed liabilities by £629,294.

Dividends: total over £11,300,000, inclusive of shares in other companies distributed. From 1886 to 1889, each £2 share received 15s; in 1890 each £2 share received 10s and each 8s share 22s; from 1891 to 1913 each 8s share (960,000) received 55s, and from 1913 to 1916 each 8s (1,181,006) received 15s 6d. **Present rate** is 1s (24c) quarterly, equal to £236,201 per year.

Property: one of the leading lead-silver-zinc mines in the world, with a great past production, at Broken Hill, N. S. W.; also iron mines at Iron Knob, S. Australia.

Development: by shafts down to 1,300', huge open cuts and many miles of workings. **Ore reserves** amount to about 2,000,000 tons, carrying 14% lead, 8 oz. silver and 12% zinc. **Diamond drilling** was under way in August, 1917. **Tailings** on hand amount to 1,000,000 tons.

Equipment: at Broken Hill: power plant, hoists, compressors, tramways, crushing plants, 1,000-ton ore concentrator, flotation plant, etc.; at Port Pirie. So. Australia, up to June, 1915, company operated a large smelter with roasters, Huntington-Herberlein and Dwight-Lloyd sintering machines, briquet plant, blast furnaces and complete lead-silver refinery. This plant was transferred to the Broken Hill Associated Smelters Proprietary (which see) in June, 1915. At Iron Knob, Spencer's Gulf, So. Australia, company has mining plant for extraction of several million tons of 68% iron ore, which is shipped by boat to Newcastle, N. S. W.; at Bellambi, N. S. W., coke ovens, and at Port Waratah, near Newcastle, N. S. W., iron and steel works with an annual capacity of 170,000 tons. The last mentioned includes blast furnaces and rolling mills.

Production: has been irregular at Broken Hill on account of recent labor troubles. In July, 1917, the mill treated 9,214 tons of ore, the tailing plant treated 1,715 tons from dumps; the flotation plants were operated and all yielded 2,588 tons of lead concentrates and 7,530 tons of zinc concentrates.

BROKEN HILL PROPRIETARY BLOCK 14 CO., LTD. N. S. W.

Office: J. Brandon, 31 Queen St., Melbourne, Victoria, Australia.

Directors: A. Campbell, chairman; B. A. Moulden, V. J. Saddler and J. L. Wharton. F. V. Smith, gen. mgr.

Inc. Feb. 19, 1887, in Victoria. **Cap.**, £155,000, in 100,000 10% cum. pfd. 6s shares and 100,000 ord. 25s shares; all issued.

Dividends: 19s per share from 1896 to 1901, after which 30s on pfd. and 23s on ord. shares.

Property: at Broken Hill, N. S. W.; also a tungsten mine in N. S. W. Company has a mill, but the ore is sold to smelters at present. **Reserves** are estimated at 200,000 tons; but recent exploration has not been successful.

BROKEN HILL PROPRIETARY BLOCK 10 CO., LTD. N. S. W.

Office: J. Brandon, 31 Queen St., Melbourne, Victoria, Australia.

Directors: A. Campbell, chairman; C. Baillieu, W. Jardine, V. J. Saddler, C. Templeton. O. B. Ward, gen. mgr.

Inc. March 14, 1888, in Victoria. **Cap.**, £1,000,000; shares £10 par; all issued and £9 13s paid.

Dividends: from 1890, total £13 11s per share.

Property: at Broken Hill, N. S. W.; also at Zeehan, Tasmania, and on an island near New Guinea. The Broken Hill mine contains estimated reserves of 228,900 tons to a depth of 1,840'.

Production: from August, 1914, to May, 1916, the 500-ton mill was closed on account of war conditions. In the year ended Sept. 30, 1914, 86,592 tons of ore yielded concentrates containing 20,614,000 lbs. lead, 349,839 ozs. silver and 1,568,000 lbs. zinc.

BROKEN HILL SOUTH SILVER MINING CO.

N. S. W.

Head office: Collins House, Collins St., Melbourne, Victoria, Australia. Company owns interest in Broken Hill Ass'd Smelters' Prop. and Zinc Producers' Ass'n, Prop.

Directors: F. C. Howard, chairman; W. M. Hyndman, B. A. Moulden and Colin Fraser. W. E. Wainwright, mgr.

Inc. Oct. 11, 1893, in Victoria. **Cap.**, £200,000; shares £1 par; all issued; but 69,092 have only 9s 6d paid. **Debentures:** £250,000 6% authorized; £200,000 issued in bonds of £100.

Statements for 1916 show total revenue, £798,824, of which £481,754 was profit. Four dividends amounted to £240,000. Net cash assets were £587,607 at the end of 1916. During the first half of 1917 the profit was £248,234, of which £120,000 was distributed to shareholders. Cash assets increased to £712,698.

Dividends: since 1902 total £9 16s per share, or 980%. In 1917, to June, 12s, or 60%, was paid.

Property: 69 acres at Broken Hill, N. S. W.

Development: by shafts to 1,500' depth and extensive workings. During 1916, 10,712' of new work was done. All underground work is by contract. Ore reserves total 3,500,000 tons. On the 1,270' level, ore assays 14.8% lead, 10 oz. silver and 16% zinc.

Equipment: complete mining, also 8,000-ton per week concentrating mill and lead and zinc selective flotation plants of 2,000 tons per week capacity. New tailings is sold to the Amalgamated Zinc (De Bavay's) Company, and old dumps to the Zinc Corporation, which treat these in their flotation plants, at the rate of 170,000 and 40,000 tons per year, respectively. Commercial tailings on hand total over 1,300,000 tons. Lead concentrate is smelted by the Broken Hill Associated Smelters at Port Pirie, So. Australia.

Production: in 1916 was 244,990 tons of ore carrying 14% lead, 6.6 oz. silver and 13.5% zinc; also 44,635 tons concentrate carrying 60% lead, 22.5 ozs. silver and 9.8% zinc.

During the first half of 1917, 122,240 tons were treated. Costs are \$6.64 per ton, much above normal on account of war and labor troubles. There are 1,245 men employed.

COBAR-GLADSTONE MINING CO.

N. S. W.

Mine office: Wrightville, Robinson Co., N. S. W., Australia. Mine is opened by a 400' vertical shaft and makes weekly shipments of 35 tons of concentrates to the E. R. & S. Co. smelter at Port Kembla, assaying from 20 to 23% copper.

Equipment: includes rolls, jig and concentrating tables.

ELECTROLYTIC ZINC CO. OF AUSTRALIA PROP., LTD.

N. S. W.

Controlled by Amalgamated Zinc (De Bavay's) Ltd.

Office: E. H. Shackell, 360 Collins St., Melbourne, Victoria. **Directors:** W. L. Baillieu, M. Cohen, A. J. F. deBavay, and S. C. Magennis.

Inc. May, 1916, in Victoria. **Cap.**, £1,000,000; shares £1 par.

Works have been erected in Tasmama for the electrolytic treatment of zinc concentrate from Broken Hill, and production of high-grade spelter. The first unit treating 10 tons daily is at work. Hydro-electric power will be used at one plant.

GREAT COBAR, LIMITED

N. S. W.

Head office: 4b Fredericks Place, Old Jewry, London, E. C., England.

Mine office: Cobar, N. S. W., Australia.

Officers: Sir John Taverner, chairman; C. H. Wayte, W. P. Wethered, directors; E. H. Taylor, mgr.

Inc. May 22, 1906, in England. **Cap.**, £1,000,000, in 200,000 shares of

£5 each; 186,542 issued. Also 6% first mortgage debentures totaling £750,000, of which £667,300 are outstanding.

Property: copper mines, smelters, coal mines, coke works and refining plant, at Cobar and other parts of New South Wales. The price paid the Great Cobar Copper Mining Syndicate, which had operated profitably for years, was £800,000 cash, £55,000 in paid-up shares, and £151,000 in cash, shares, or debentures. Several well-known engineers examined the Cobar mine.

A new shaft was sunk to 1,540', and new 1,200-ton smelter erected. In 1913 reserves were estimated at 2,705,161 tons, 2,081,735 tons of which contained 2.5% copper. In that year, the yield was 13,016,640 lbs. copper, 27,136 oz. gold, and 127,542 oz. silver.

Many troubles arose in the mine and plant and in April, 1914, operations ceased and receivers (A. F. Whinney in England and W. H. Fletcher in Australia) were appointed. An independent report was made, which gave 3 years' ore opened. At £65 per ton for copper, the profit would be £88,800, and if no more ore were found, the plant might realize £63,700. The total profit of £152,500 would yield debenture-holders 23%. To enable the new scheme to be worked out. £62,000 was borrowed from debenture-holders, and £40,000 from the New South Wales Government. Net proceeds in 1916, 1917 and 1918 go to certificate-holders on certain terms.

Mining and smelting were resumed during 1917 under the new arrangement.

Production: from 1876 to 1906, inclusive, the Great Cobar mine yielded 1,592,895 long tons of ore, returning 138,593,280 lbs. fine copper. Production, under the former ownership, was 7,000,000 to 9,000,000 lbs. copper yearly, having been 9,027,200 lbs. fine copper in 1906; and production by present company was about 10,000,000 lbs. in 1907; 10,586,240 lbs. copper, 64,949 oz. silver and 13,002 oz. gold in 1908; 12,762,080 lbs. copper, 83,208 oz. silver and 14,452 oz. gold in 1909; 13,847,680 lbs. copper, 107,932 oz. silver and 21,524 oz. gold in 1910. Production for the year ending June 30, 1912, was 339,494 tons of ore from the company's own mines and 88,924 tons of custom ore, producing 15,089,760 lbs. copper, 178,938 oz. silver and 37,696 oz. gold.

From recent results it would seem as if an error was made in original estimates of the mine, the new smelter was unsuitable, and the capitalization was too heavy. The original owners (or lessees) made large profits prior to the new company taking hold. Cobar may yet turn out better than expected.

MT. BOPPY GOLD MINING CO.

N. S. W.

Office: W. F. Garland, sec., 5 and 6 Queen St. Place, London, E. C., England. **Mine office:** c/o J. Negus, supt., Mount Boppy, N. S. W., Australia.

Officers: S. F. Hoffnung-Goldsmid, chairman, with P. D. Henderson, B. J. Levenson, V. H. Smith, E. Taylor, and R. Taylor, directors.

Inc. Nov. 24, 1899, in England. **Cap.**, £151,000, in 30,000 pfd. and 121,000 ord. shares at £1 par. Pfd. shares entitled to first cumulative dividend of 10% per annum, plus share in ordinary profits; after 100% has been paid they rank as common.

Balance sheet for 1915 shows profit of £26,937. Dividend absorbed £10,550.

Dividends: were 5% in 1901, 6¼% in 1902, 35% in 1903, 40% in 1904, 47½% in 1905, 45% in 1906, 47½% in 1907, 47½% in 1908, 27½% in 1909, 35% in 1910, 20% in 1911, nil in 1912 and 1913, 7½% in 1914, 5% in 1915.

Property: 344 acres in Cobar district of New South Wales.

Ore reserves: at end of 1915 were estimated as 215,956 tons containing \$8.50 gold per ton; also 100,000 tons in shaft-pillars and 300,000 tons of residue.

Equipment: complete, with 40-stamp mill and cyanide plant.

Production: in 1916, 79,526 tons, yielding £119,508. Costs are 22s. 5d. (\$5.38) per ton.

Company can make substantial profits for some time to come; it is the largest gold producer in New South Wales.

NORTH BROKEN HILL, LTD.

N. S. W.

Offices: G. Weir, sec., 36 Collins House, Melbourne, Victoria; Broken Hill, New South Wales; and E. Habben, Palmerston House, London, E. C.

Directors: W. M. Hyndman, chairman; M. H. Baillieu, W. L. Baillieu, T. B. Birkbeck, A. Campbell and H. Sheppard.

Inc. Dec. 4, 1912, in Victoria, Australia. **Cap.**, £600,000; shares £1 par; all issued. **Debentures:** £250,000 6% authorized; £200,000 issued.

Accounts for half-year ended Dec. 31, 1916, show a net profit of £164,203, of which £120,000 was distributed. **Cash assets** show surplus of £422,103.

Dividends: 30% in 1913, 25% in 1914, 25% in 1915, 40% in 1916.

Property: 452 acres at Broken Hill, New South Wales.

Development: by 3 shafts, deepest 1,470'.

Ore reserves: above 1,400' are estimated at 2,850,000 tons.

Equipment: complete with concentrating plant. **Tailings** sold to Amalgamated Zinc (De Bavays) for treatment by flotation.

Production: in 6 months ended Dec. 31, 1916, mill treated 117,190 tons of ore, yielding 23,123 tons of concentrate assaying 60.6% lead, 20.6 oz. silver and 8.6% zinc. **Costs** were \$5.20 per ton. In June, 1917, the weekly output was 4,700 tons of ore, averaging 16.3% lead, 8.2 oz. silver and 13.6% zinc.

This is one of Australia's most profitable lead mines.

SULPHIDE CORPORATION

N. S. W.

Office: C. R. Fisher, sec., Finsbury House, London, E. C., England.

Mine office: Broken Hill, N. S. W., Australia.

Officers: Earl of Kintore, chairman; Hon. V. Gibbs, F. A. Keating, G. M. Reid and A. Williamson, directors. C. F. Courtney, gen. mgr.; J. Hebbard, mine mgr.; F. H. Evans, mgr. of smelter in N. S. W.; J. C. Moulden, mgr. zinc works in England.

Inc. Oct. 29, 1895, in England. **Cap.**, £1,050,000; 600,000 pfd. shares at £1 par and 600,000 ord. at 15s. par. **Statement** for year ended June 30, 1916, showed a net profit of £391,404, of which £315,000 was distributed in dividends. **Reserve fund** was £172,000 and accumulated profit account £324,867.

Dividends: since 1898 total 232% on pfd. and 205% on ord. shares; in 1915-16, 30% on each class of shares was paid.

Property: a large lead-silver-zinc mine at Broken Hill, N. S. W.

Development: by shafts and extensive openings. **Reserves** amount to 1,858,200 tons.

Equipment: complete mining and 1,000-ton milling plants at the mine, lead smelter at Cockle Creek, N. S. W., and zinc works at Seaton Carew, Durham, England. **Company** is a pioneer in flotation processes.

Production: during the last financial year, the concentrator yielded 37,503 tons of concentrate containing 64.4% lead, 38.1 oz. silver and 8.7% zinc; also 56,773 tons of concentrate assaying 47.5% zinc, 13.6 oz. silver and 6.3% lead.

ZINC CORPORATION, LTD.

N. S. W.

Head office: F. A. Crew, 20 Copthall Ave., London, E. C., England.

Works office: Broken Hill, N. S. W., Australia.

Directors: F. A. Govett, chairman; J. A. Agnew, H. W. P. Clinton, W. J. L. Loring, W. C. C. Romaine, R. W. Skepwith, T. White and T. J. Hoover. **Bewick-Moreing & Co.**, gen. mgrs.; C. G. Hylton, supt.

Inc. July 8, 1911, in Victoria, Australia. **Cap.**, £575,000, in 245,692 pfd. £1 and 658,616 com. 10s. shares. **Company** is interested in the Broken Hill Smelters Associated Proprietary, Zinc Producers Association Proprietary and Barrier South, Ltd.

Statement for year 1915 showed a profit of £140,640 plus £98,883 brought forward. **Dividends** absorbed £94,080.

Dividends: 15% on pfd. and 10% on ord. in 1911; 37½% and 35% in 1912; 35% and 30% in 1913; 20% and nil in 1914; 25 and 10% in 1915; 10% on pfd. in January, 1917.

Company buys tailings from other Broken Hill mines and treats them in a flotation plant, also operates the South Blocks mine and mill.

Development: by 1,069' and 1,548' vertical shafts and considerable openings. Reserves at last accounts were 1,504,211 tons, containing 14.8% lead, 2.5 oz. silver and 9.2% zinc.

Equipment: is complete and modern. The mill uses rolls and concentrators; while at the flotation plant is a highly developed system including Minerals Separation process and the Lyster and Horwood selective processes.

Production: since the war started, and due to labor troubles, operations have been erratic. In 1916 the zinc plant treated 200,510 tons of tailings, and the lead plant 136,901 tons of ore, both yielding 37,376 tons of 66% lead and 45,464 tons of 48% zinc concentrates.

Company is an important zinc and lead producer.

QUEENSLAND

CORELLA COPPER CO. (N. L.)

QUEENSLAND

Registered office: 360-366 Collins St., Melbourne. **Mine office:** Rosebud mine, via Ballara, Cloncurry, North Queensland.

Officers: J. L. Wharton, chairman; F. G. Hughes, Alfred Tolhurst, directors. J. W. Moule, gen. mgr. E. H. Shackell, mgr.

Profit in working account for half year ending Oct. 31, 1916, was £8,134, net profit was £6,378, giving total balance of £7,561, after deducting £3,000 for general taxation reserve, £648 for depreciation and £3,800 for equalization reserve, £113 was carried forward. Surplus of liquid assets on Oct. 31, 1916, was £8,039. Total liquid assets were £39,440, including products on hand £28,624, cash £1,778, supplies £8,110. Total liquid liabilities were £31,400, which included bank overdraft, £22,014.

Property: 85 acres in the vicinity of Duck Creek, including the Rosebud, Secret, Galah, Northern outcrop and Parrot mines, all of which have shafts from 25' to 200' deep. The ore reserves of the company are reported as 15,300 tons. Development work amounted to about 450' for the year.

Production: during 1916, 13,556 tons were treated by the smelter, yielding 1,545 tons of matte which contained 1,533,200 lbs. of fine copper and 505 oz. of gold.

Equipment: a small smelter with reverberatory matting furnace and necessary mine equipment.

Owing to unfavorable mining developments, Government shut down the mine, Aug., 1917.

GREAT FITZROY MINES, LTD.

QUEENSLAND

Head office: Collins House, Melbourne, Victoria.

Officers: J. L. Wharton, chairman; P. Charley, G. P. Doolette, C. B. Jessop, W. J. Loring, directors; T. E. Smith, sec., 20 Copthall Ave., London, E. C.

Inc. 1912, in Victoria, Australia. **Cap.**, £225,000, in 900,000 shares of 5s. (\$1.25) each.

Property: 275 acres of gold-copper claims at Mt. Chalmers, Queensland, containing 442,409 tons of 2.73% copper and \$2.27 gold ore; also the Laloki mine on the island of New Guinea, estimated to contain 319,000 tons of 4.6% copper and \$2.50 gold ore. The Laloki mine is reported under option for £40,000 to 1918.

Equipment: 200-ton smelter, sintering plant, 200-ton flotation plant, sold in 1916 to satisfy debenture-holders. In 1913-14, when the mine closed on account of the low price of copper, 22,698 tons of ore smelted direct, and 12,995 tons of concentrate smelted from 64,457 tons milled, yielded 4,323,200 lbs. copper, 8,842 oz. gold, and 22,038 oz. silver.

One of the real causes of the shut-down is the difficulty in treating

Fitzroy ore. A suitable flux has been found, and operations may be resumed.

HAMPDEN CLONCURRY COPPER MINES, LTD. QUEENSLAND

Office: E. H. Shackell, Collins House, Melbourne, Australia. **London office:** E. Habben, sec., Palmerston House, London, England.

Directors: J. L. Wharton, chairman; W. L. Baillicu, F. G. Hughes, H. F. C. Keats, W. Orr, H. H. Schlapp. **London directors:** W. D. Reid, G. W. W. Mackinnon and G. W. Staples. **E. Huntley**, gen. mgr., Friesland, via Cloncurry, No. Queensland. **D. Wentworth**, metallurgist.

Inc. July 31, 1909, in Australia, as a reorganization of a company of same name. **Cap.**, £400,000; shares £1 par; 350,000 issued.

Nct profits for year ended Aug. 31, 1916, were £285,789; and half-year ended March 1, 1917, £64,540.

Dividends: in 1913, 40%; 1914, nil; 1915, 20%; 1916, 40%, and 1917, 20% for half-year. Total to date is £402,500.

Company owns 4,000 shares of the Electrolytic Ref. & Sm. Co. of Australia, Ltd., and 15,000 shares of Metal Mfrs. stock. Latter company is building works at Port Kembla, New South Wales.

Property: over 450 acres in the Cloncurry mining district, North Queensland. Mines are connected by 2' gauge railway with the Cloncurry Copper Mines, Ltd.

Ore: copper, gold, silver. **Ore reserves:** estimated, March, 1917, at 284,200 tons containing 20,108 tons of copper.

Equipment: includes 375-ton smelter and converter. Management considering the erection of a Minerals Separation plant.

Production: for year ended Aug. 31, 1916, was 104,479 tons smelted, yielding 16,856,000 lbs. copper, 59,119 oz. silver, and 2,234 oz. gold. In the half year ended March 1, 1917, the smelter reduced 46,443 tons of ore, yielding 6,948,480 lbs. copper, 23,418 oz. silver, and 1,028 oz. gold.

Is a small though profitable copper mine.

IRVINEBANK MINING CO., LTD.

QUEENSLAND

Office: J. H. Reid, managing director, 18 Bridge St., Sydney, N. S. W. **Works office:** Irvinebank, Queensland.

Property: company owns tin mines and tin concentrating works at Irvinebank, Koorboora and Watsonville; copper mines at Watsonville and wolfram mines and mill at Mt. Carbine, all in North Queensland. The tin smelter includes a reverberatory furnace and is the only tin works in the State.

MANY PEAKS COPPER MINING CO., LTD.

QUEENSLAND

Office: J. D. Murray, sec., East St., Mt. Morgan, Queensland.

Inc. 1906, in Queensland. **Cap.**, 81,640 shares, 6d. (12c) par, originally 2,041 shares £1 par, changed in 1911 to present amount.

Company owns a cupriferous pyrite deposit from which the Mt. Morgan G. M. Co. draws its supply of fluxing material at a royalty of 2s 6d (60c) per ton. The lease calls for not less than 25,000 tons annually.

Receipts for year ending June 30, 1917, amounted to £6,222, plus credits of £2,535, making £8,757. Of this £6,803 was distributed in dividends. Cash on hand was £1,165 at end of the term.

Dividends: total £52,641 in 9 years to 1916, equal to 562% for the first 3 years and 2,016% for the remainder.

Property: 320 acres, well timbered, on terminus of Boyne Valley railway. The property shows promising gossan outcrops, carrying occasional small quantities of copper ore, with a vein up to 90' in width, oxidized to some little depth, but apparently having no secondary sulphides, the zone of oxidation being succeeded by chalcopyrite of about 3.5% copper tenor. Development is exclusively by 3 tunnels, the main tunnel being on the 470' level, with 3 levels above, at 100' intervals, these and the main tunnel being driven nearly due south from a gully near the northern end of the property. The walls are somewhat treacherous and require careful attention. A winze opens the deposit to 570' depth. The ore is very pyritic and is all used by the Mt. Morgan company as a flux. Its copper content is about 1½%. Reserves are about 1,000,000 tons.

Production: in the year ended May 31, 1917, was 49,774 tons, making 464,682 tons in 10 years, on which royalties totaled £58,085.

This is probably the only way such a property could be profitably handled and the figures are certainly interesting.

MOUNT CUTHBERT, N. L.

QUEENSLAND

Office: W. B. Arnold, sec., 39 Queen St., Melbourne, Australia. **British office:** Edwin Habben, sec., Palmerston House, London, E. C., Eng. **Mine office:** Mount Cuthbert, Queensland.

Officers: P. Pigott, chairman; Robert Philp, T. P. Power, F. E. Power, John G. Robertson and J. Forsyth, directors. R. W. Powell, mine mgr.; Jos. Armstrong, metallurgist; W. H. Corbould, cons. engr.

Inc. February 21, 1907, in Victoria, Australia. **Cap.**, £240,000; shares £1 par. Reorganized Oct., 1909 and Aug., 1916, in Victoria. Capital increased to £300,000; shares £1 par; 241,000 issued. Original debentures outstanding, £55,500. At the reconstruction in Aug., 1916, £50,000 prior-lien debentures were created to secure creditors; these debentures expired in Sept., 1917.

Property: 553 acres at Mount Cuthbert in the Cloncurry district, 70 miles from Cloncurry, Queensland.

Geology: there are several orebodies in schistose formation, of which seven under development range from 2' to 18' wide. Outcrops are traceable through the various sections. Ore exposed by development is estimated to average 8% copper. Ore shows azurite, melaconite, glance, cuprite and copper pyrite, with some bornite in depth.

Ore reserves: estimated at 149,000 tons, containing 24,000,000 lbs. copper.

Equipment: includes 200-ton smelter, started in March, 1917. Power is supplied by 2 generators, 320 h. p., direct-coupled to Belliss & Morcom engine; high-speed vertical air compressor; Acme blowers for blast furnace; compound-steam blowing engine for converters, steam supplied by 2 large Babcock & Wilcox boilers. Water is piped for 6½ miles. The Cuthbert and Kalkadoon mines have equipment to mine at a depth of 2,000'. The government railway from Cloncurry runs to Mount Cuthbert and sidings have been built to connect with several of company's mines.

Production: to June 30, 1917, 22,667 tons of ore have been smelted, yielding 3,556,000 lbs. copper. Of this, 13,815 tons were treated at Mount Elliott, the remainder at Mount Cuthbert smelter.

MOUNT ELLIOTT, LIMITED

QUEENSLAND

Officer: F. G. Hughes, Collins House, Collins St., Melbourne, Australia; E. Habben, Palmerston House, London, E. C., England; Mt. Elliott, Selwyn, North Queensland.

Officers: H. J. Hill, chairman; W. Clark, H. Dessoudeix, E. H. Dunning, R. H. Henning, W. D. Reid, G. deC. deVenancourt, W. L. Baillieu, directors. L. E. Nicolson, mgr.; W. H. Corbould, cons. engr.

Inc. June 14, 1907, in England. **Cap.**, £1,250,000; shares £5 par; 237,518; issued.

Balance sheet for year ending June 30, 1916, shows a profit of £29,938; balance carried forward, £31,200.

Dividends: 10% in 1910-11, 15% in 1911-12, 27½% in 1912-13; 5% in 1913-14; none since.

Property: 173 acres, 160 miles N. W. of Cloncurry, Queensland, Australia.

Development: by shafts.

Ore reserves: July, 1916, were estimated as 715,000 tons containing 71,456,000 lbs. copper.

Equipment: complete, with 500-ton smelter, recently remodeled.

Production: high-grade (10%) ore was shipped years ago, after which smelter was erected, but operated very irregularly. New plant started in June, 1917, and is treating custom ore. In 1915-16, 11,842 tons of ore yielded 4,518,000 lbs. copper, 2,612 oz. gold, and 4,753 oz. silver.

Property should make good profits.

MOUNT MORGAN GOLD MINING CO., LTD. QUEENSLAND

Offices: E. W. Moran, sec., Mt. Morgan, Queensland; S. W. Thornton, sec., 118 Pitt St., Sydney, New South Wales; T. H. Williams, sec., 125 William St., Melbourne, Victoria; E. Habben, sec., Palmerston House, Old Broad St., London, E. C., England.

Directors: (Australia) R. G. Casey, chairman; Kelso King, J. L. Whar-ton, J. M. Mall, John Sanderson. W. L. Baillieu, K. deL. Cudmore, R. S. Archer, H. Perrier, D. W. Jackson. (England) C. S. Cockburn, chairman, and W. F. D'Arcy. A. A. Boyd, gen. mgr.

Inc. Oct. 1, 1886, in Queensland. **Cap.**, £1,000,000; shares £1 par; fully issued and fully paid.

Balance sheet for year ended May 27, 1917, showed total revenue of £1,301,377; expenditure, including development and depreciation, £992,172; profit, £309,205; dividends, £250,000; and balance forward, including previous balance, £95,986. Cash assets total £522,108.

Dividends: paid quarterly, have ranged from a minimum of 8d., at the beginning, 1886, to a maximum of £1 2s., in 1889. To end of 1916 the company had paid about 825% in dividends, which were 6s. yearly, 1892-97; 6s. 6d. in 1898; 7s. yearly 1899-1900; 5s. 10d. in 1901; 5s. 9d. in 1902; 3s. yearly 1903-06; 4s. 3d. yearly 1907-08; 4s. yearly 1909-13; 3s. in 1914; 4s. in 1915; 5s. in 1916, while 1s. was paid in Aug., 1917. Dividends total £8,-879,167, or about \$43,000,000.

Property: 90 acres perpetual leasehold, and 640 acres freehold; also flux quarries, pyrite deposits (Many Peaks mine), coal beds, and magnesite deposits.

Company has a large interest in the Electrolytic Refining & Smelting Co. of Australia, Ltd., which refines Mt. Morgan and custom copper and in the recently organized Metal Manufacturers, Ltd., which is to make copper products from Australian metal. Mt. Morgan is about 25 miles west of Rockhampton, and the mine has been, since 1890, one of the greatest gold producers of the world.

Geology: the Mount Morgan gold deposit proved to be the silicious gossan of a great copper deposit. As the ore showed increased copper content at depth the company wisely began extensive diamond-drilling, which proved an immense tonnage of copper ore. The mine has been operated as 2 connected mines, the upper section being worked open-cut. The oxidized ores were exhausted in 1910, and only sulphide ores are now mined. The sulphide gold ore is known locally as 'mundic', being an auriferous and slightly cupriferous pyrite.

Development: is done through 2 principal shafts, known as the Main shaft, of 1,050' depth, and the Lynda incline shaft, about 1,500' deep. Underground ore extraction is from the 360' to 950' levels. Depleted stopes are filled with waste, on the pigstye system, some of the stopes being of great size. New openings in the half-year ended Nov. 30, 1916, totaled 768', which does not seem extensive, but when the character of the deposit is considered such footage is considerable.

Reserves at above date were given as 4,176,795 tons, averaging 2.59% copper and \$6.17 gold per ton. This includes smelting and concentrating ores.

Equipment: this is now very complete, having undergone great changes in the past 3 years. Buildings include necessary shops, offices and warehouses, the mine, mills, smelter and power plant occupying a single site. At the portal of the Lynda tunnel there is a 30'x100' change-house, having shower-baths and 504 lockers. In connection with the power plant there is a firewood storage area of 5,000 tons' capacity, at the west works, with rail connection, and a Government railway connecting Mt. Morgan with the Dawson coal mines.

The district being arid, extensive dams have been built for water storage, there being 7 dams, of which 5, in commission, have an aggregate capacity of 387,000,000 gal., No. 7 holding 270,000,000 gal.

Gold ore was treated in the mills until 1912 by dry crushing and chlorinating in open vats. Some of the tailing is now being retreated.

Company has a large smelting plant, the outcome of many changes in the original works. The present blast furnaces, converters, rotary-furnaces, pot-sintering plant, etc., have been erected during and since 1914. In the last financial year there was reduced 278,380 tons of charge, including 41,452 tons of Many Peaks pyritic ore and 42,197 tons of concentrate.

A concentrating plant, using jigs, tables and flotation, was erected in 1916. A recent half-year shows 79,217 tons of 2.19% copper and \$5.59 gold ore treated, yielding 22,694 tons of 7.04% copper and \$15.24 gold concentrate, giving 91.84% recovery of the copper and 78.11% of the gold. About 25% of the concentrate was saved by flotation, and was nearly 7 times as high in copper as the table product, 20.47% against 3.16%.

Production: in year 1916-17 amounted to 18,014,080 lbs. copper and 98,950 oz. gold. During June, 1917, the yield was 1,370,880 lbs. copper and 8,615 oz. gold, valued at £115,960. Costs are \$13.84 per ton of ore mined, which seem somewhat high.

Mt. Morgan may now said to be fairly on its feet again, after many troubles underground, in the smelter, power-plant and labor, and should continue increased dividends for many years. To Sept., 1917, distributions total nearly £9,000,000.

MUNGANA MINING CO., LTD.

QUEENSLAND

Office: 31 Queen St., Melbourne, Aus. **British office:** Palmerston House, Old Broad St., London, E. C., Eng. **Mine office:** Mungana, North Queensland, Aus.

Officers: V. J. Saddler and John L. Wharton, directors; John Brandon, sec.; Edwin Habben, London sec.

Inc. April 1, 1912, in Queensland, as successor of Mungana (Chillagoe) Mining Co., Ltd. **Cap.,** £150,000; shares 6s. par; fully issued and fully paid. Shares are listed on the London, Melbourne, Sydney and Adelaide stock exchanges. Annual meeting, in July.

Property: 286 acres, held by 6 leases for 50 years from Jan., 1898, at annual rental of £1 per acre, about 10 miles west of Chillagoe, in the Walsh and Tinaroo district. Property includes the Girofla and Lady Jane mines, showing "cave" or replacement deposits of lead and copper ore mostly oxidized in limestone of Middle Devonian age, alongside of crystalline schists.

The 7 orebodies known occur along an E.-W. direction and are nearly vertical. Two deposits are worked, the largest, the Girofla, being 70' wide and 200' long, and averaging 1% copper, 12% lead, 7% zinc, and 9 oz. silver per ton.

Development: consists of the 823' Girofla, 460' Saddler, 330' Saddler No. 2, 150' Dorothy, 200' Dorothy No. 2, and 200' Calumet shafts.

The Girofla mine, worked continuously since 1900, has a good surface showing, with a large orebody in limestone. Development is by a large open-cut, stripped to depth of 50', and a working shaft 823' deep. The mine shows considerable ore assaying up to 8% in copper tenor, but is primarily a silver-lead mine, values in order named being in silver, lead and copper. A new lens of high-grade ore 60'x100' was cut on the 710' level in Sept., 1913. Reserves estimated at 115,782 tons blocked out for stoping. Timbering is by square sets, and the mine is very wet, giving considerable trouble at times.

Equipment: includes 500-h. p. steam and 35-h. p. electric plant, 2 hoists good for 1,000', 15-drill air-compressor, and 16 buildings.

The Lady Jane mine has met with a series of misfortunes, losing its old main shaft through drawing, this being replaced by the Saddler shaft, with 4 compartments, sunk to depth of 426'. A fire broke out 1909, and continues burning, and the mine was flooded up to the 250' point. Reserves are estimated as 48,213 tons. The property is served by the Chillagoe to Mareeba railway.

Production: gross output to end of March, 1913, amounts to 237,885 tons of ore yielding 23,102,977 lbs. fine copper, 2,628,800 oz. silver and 35,144 tons pig lead. Latest production: 16,356 tons of ore, yielding 620,480

lbs. copper, 4,146,240 lbs. lead, and 107,956 oz. silver in 1913-1914.

The Mungana mines suspended operations at the time of the closing down of the Chillagoe smelter, March, 1914, and there seems little immediate prospect of work being resumed.

SCOTTISH GYMPIE GOLD MINES, LTD.

QUEENSLAND

Head office: Dunlop & Murray, secs., 188 St. Vincent St., Glasgow, Scotland. **Mine office:** Mary St., Gympie, Queensland, Australia.

Officers: G. B. Hoggan, chairman; R. G. Campbell, J. B. Hilliard, A. Robertson and W. Walker, directors. D. E. Reid, gen. mgr.; J. Harris, mine mgr.

Inc. June 11, 1902, in Scotland. **Cap.**, £700,000; shares £1 par; 660,000 issued.

Profit of £7,275 was made in year 1915-16, of which £4,125 was paid as a dividend. Balance forward was £6,375.

Dividends: since 1898, total about £6 2s. per share; £5 8s. to 1902, since when profits have been small. The total to July, 1917, is £603,212.

Property: 126 acres, at Gympie, Queensland. Reserves estimated at 1,000,000 tons.

Equipment: necessary for treatment of about 9,000 tons per month.

Production: in year 1915-16, 83,800 tons of ore and 27,950 tons of tailing cyanided for \$6.44 per ton. In August, 1917, 8,600 tons of ore and 3,400 tons of tailing yielded \$6.77 per ton. Costs are about \$4.70 per ton.

Property has been a large producer, but now makes little profit. Geologic conditions at Gympie are peculiar, and the district is dull at present.

SOUTH AUSTRALIA

BROKEN HILL ASSOCIATED SM. PROPRIETARY, LTD.

S. A.

Office: H. L. Shackell, sec., 360 Collins St., Melbourne, Victoria, Australia.

Directors: W. L. Baillieu, chairman; C. Fraser, F. C. Howard, B. Kelly, D. E. McBryde, W. S. Robinson; W. Robertson, gen. mgr.; G. C. Riddell and G. Rigg, cons. engrs., at lead and zinc works; H. W. Leavens, J. Jobson and J. Winter, supts. at smelters.

Inc. May 7, 1915, in South Australia. **Cap.**, £1,000,000; shares £1 par; 700,000 shares issued and held by the Broken Hill Proprietary (£200,000), Broken Hill South Silver M. Co. (£200,000), North Broken Hill (£200,000) and Zinc Corporation (£100,000).

Works: extensive lead smelter of the Broken Hill Proprietary Co. at Port Pirie (said to be the largest in the world), So. Australia, was purchased by this company for £300,000 cash and 200,000 shares. The plant includes railroads, blast furnaces of 6,000-ton per week capacity on 60% lead concentrate, roasting furnaces, Dwight-Lloyd and H. H. sintering machines, 3,000 ton per week lead refinery, 200-ton per week spelter works, limestone quarries in So. Australia and coke works at Bellambi, N. S. W. The ore supply for these works comes from 8 Broken Hill companies, also from outside sources. The smelter can produce 150,000 tons of lead, 5,000 tons spelter, and 6,500,000 oz. silver per year. The coke plant makes 100,000 tons yearly. Antimonial lead, assay lead, litharge, zinc dust, lino metal and bar and granulated silver are made.

MT. LYELL CONSOLS WALLAROO COPPER MINES, N. L.

S. A.

Reorganized as New Lyell Consols Copper Mine, which see.

NEW LYELL CONSOLS COPPER MINE, N. L.

S. A.

(Formerly Mt. Lyell Consols Wallaroo Copper Mines, N. L.).

Address: T. Rollason, sec., 31 Queen St., Melbourne, Aus. London secretary, Arnold W. Goodfellow, 17 Coleman St., London, E. C., England.

Mine office: Kadina, Daly Co., So. Australia. J. A. Wauchope, gen. mgr., T. C. Dunster, chairman; S. Cherry, George Dunham and Cecil Bain, directors.

Inc. Nov. 20, 1911, as a reconstruction of Mount Lyell Consols Copper Mines, N. L. **Cap.**, £250,000; shares 10s. par; issued, 350,000 shares.

Operations were suspended on account of the War for 2½ years, until

March, 1917. Enough money is being remitted from London to continue development, and ore shipments will soon be resumed.

Lands: 150 acres, leasehold, including the Wallaroo Central mine, 70 acres, adjacent to the Wallaroo mine. Property shows schists and slates carrying numerous parallel veins including the famous Wallaroo Blue lode.

Development: by a 260' shaft, showing 2 lodes of 18' and 7' average width, carrying ore with about 6% copper and \$8 gold per ton. Shaft is being sunk to 350'.

Equipment: includes 250-h. p. steam plant with hoist, compressor, mine pump, and necessary mine buildings.

WALLAROO & MOONTA MINING & SMELTING CO., LTD. S. A.

Head office: Steamship Bldg., Currie St., Adelaide, S. A. **Mine offices:** Wallaroo and Moonta, S. A. **Works office:** Port Wallaroo, S. A.

Directors: Sir J. L. Stirling, (chairman); Simpson Newland, F. H. Downer, J. R. Corpe and J. R. Baker. H. L. Hancock, gen. mgr.; F. G. Murdock, sec.

Inc. 1889, in South Australia. **Cap.**, £400,000; shares £2 par; 160,000 issued.

Statement for 1916 shows total revenue of £852,670 and a net profit of £231,505, of which £120,000 was paid in dividends. Cash assets at the end of the year were £250,851. In Jan., 1917, £20,000 was distributed.

Dividends: to Feb., 1917, total £2,454,254, of which £836,000 had been paid by the present company, the remainder by the old Moonta and Wallaroo companies.

Property: the Wallaroo mines at Kadina and the Moonta mines, 3,010 acres, at Moonta, S. A., which have yielded 689,812,480 lbs. copper valued at £18,086,900 to the end of 1916.

Geology: Bull. 6, of the Geological Survey of South Australia, 1917, by R. L. Jack, states that the Wallaroo lodes traverse schistose rocks of sedimentary origin; while the Moonta lodes are found in a mass of hard and brittle feldspar-porphry, or in an igneous schist formed by selective crushing of the feldspar-porphry. Minerals at Wallaroo are chalcopryrite, pyrite, pyrrhotite, with a little galena, blende, and gold; at Moonta, chalcopryrite, bornite, chalcocite, pyrite, a little gold and silver, etc. During the past 9 years copper content averaged 3.85%.

Development: at Wallaroo the main lode has been opened for a length of over 3,400' and a depth of 2,900'; at Moonta the main lode extends for 3,840' and a depth of 2,520'. During 1916 new openings, including 1,170' of diamond drilling, totaled 9,057'. Total openings in the Wallaroo mines amount to 38 miles. and in the Moonta mines to 40 miles.

Equipment: includes electric power plant, steam plants, complete mining and pumping plants, ore sorting and concentrating works, tailing, leaching plant, smelter, sulphuric acid and bluestone plants, electrolytic refinery, etc.

Production: 1,758,038 tons of 15% ore (sorted) up to 1909, after which, to 1917, 415,103 tons of dressed ore, yielding a total of 689,812,480 lbs. copper. In 1916 there was 251,078 tons of 3.05% ore handled, dressed to 67,754 tons of smelting grade. The metal output from ore and concentration plant was 19,248,320 lbs. copper, 3,100 oz. gold, and 3,014 oz. silver; also 6,930 tons of sulphuric acid. The average price received was £113 3s. per ton (24.24c per lb.) and cost £80 7s. per ton (17.22c per lb.), against £78 9s. 5d. (16.82c per lb.), and £55 9s. 1d. (12c per lb.) in 1915. Costs from 1909 to 1916 were fairly steady at about 11 or 12c per pound. About 2,000 men are employed.

This is one of the great copper companies of Australia.

TASMANIA

BRISEIS TIN AND GENERAL MINING CO., LTD. TASMANIA

Office: T. P. Husband, Royal Bank Chambers, Collins St., Melbourne, Victoria, Australia.

Directors (in London): F. S. E. Drury, chairman; W. Clark, and H. W. Lake; (in Melbourne): Sir A. J. Peacock and F. G. Hughes. L. C. Clark, gen. mgr.; D. Currie, cons. engr.

Inc. Nov. 25, 1899, in England. **Cap.**, £600,000; shares £1 par; all issued.

In 1915 a profit of £20,007 was made. Dividends total 74% in 11 years.

Property: alluvial tin claims of 180 acres at Derby, Dorset Co., Tasmania; also alluvial gold claims of 2,112 acres in N. E. Victoria.

Equipment: complete with ditches and hydraulic gear at the tin mine and 4 dredges at the gold property.

Production:

Year	Tin, pounds	Gold, ounces
1914	311,160	6,015
1915	611,520	5,125
1916	1,046,080	5,538

**ELECTROLYTIC ZINC CO. OF AUSTRALIA
PROPRIETARY, LTD.**

TASMANIA

See same title under New South Wales.

MT. BISCHOFF TIN MINING CO.

TASMANIA

Office: H. Ritchie, sec., 51 George St., Launceston, Tasmania. **Mine office:** Waratah, Tas., Australia.

Officers: F. K. Fairthorne, chairman; S. Eardley-Wilmot, A. Evans, F. P. Hart, E. M. King, L. G. Thompson, J. B. Waldron, Jr., directors; J. D. Millen, mine mgr.; F. B. Jackson, smelter mgr.

Inc. 1872, in Tasmania. **Cap.**, £60,000; shares £5 par; all issued, 4,400 fully paid, and 7,600 £1 paid-up, making paid-up capital £29,600.

Balance sheet for half-year June, 1916, showed profit of £7,278, of which £4,500 was distributed. Balance forward was £86,918.

Dividends: to June, 1916, total £205 (\$984) per share.

Property: tin-bearing lands at Waratah, West Coast region of Tasmania. **Ore reserves:** estimated at 1,616,000 tons of ore, mostly low grade, but profitable. Mining in this wet region is by open-cut methods.

Equipment: includes complete mining plant, electric railway, power-plant, concentrating mill and smelter at Launceston, which also treats custom ore.

Production: for half-year ended June, 1916, 1,539 tons of concentrate yielding 1,060 tons (2,374,400 lbs.) of metallic tin, 160 tons (358,400 lbs.) coming from company's mines.

Mt. Bischoff is one of the world's greatest tin mines, and has made very high returns on a small capital.

MOUNT LYELL MINING & RAILWAY CO., LTD.

TASMANIA

Office: Collins House, Melbourne, Australia. **British office:** Palmerston House, Old Broad St., London, E. C., Eng. **Operating and works office:** Queenstown, Tasmania. **Mine office:** Gormanston, Tasmania. **Bowes Kelly,** chairman; Lindsay Tulloch, Colin Templeton, W. Jamieson and P. C. Holmes Hunt, directors. **London directors:** A. Williamson, chairman; Sir John A. Cockburn, K. C. M. G., John Ball and W. Douglas Reid; D. G. Lumsden, sec.; W. G. Moss, asst. sec.; Edwin Habben, London sec.; Robt. C. Sticht, gen. mgr.; Basil Sawyer, local supt.; B. Stafford Bird, Tasmanian agt.; Robt. P. Roberts, chief metallurgist; R. M. Murray, mine supt.; E. Carus Driffield, railway supt.; G. F. Jakins, asst. engr.; G. W. Wright, mech. engr.; Thos. W. Haynes, business mgr. of chemical works.

Inc. Aug. 11, 1903, in Victoria, as a merger of a former company of the same name, with the North Mount Lyell Copper Co., Ltd. **Cap.**, £1,300,000, shares £1 par; issued £1,289,195. Debentures of the former North Mount Lyell, £140,000, at 5%, were retired 1908, leaving the company without bonded debt.

Half-yearly meeting, May; annual meeting, November.

Profit for fiscal year ending Sept. 30, 1916, was £139,002. Balance of liquid assets was £443,674, March 31, 1916, and £433,087, Sept. 30, 1916.

Dividends: have been as follows: £150,000 in 1904, £195,000 in 1905, £345,000 in 1906, £330,000 in 1907, £210,000 in 1908, £210,000 in 1909,

£180,000 in 1910, £75,000 in 1911 and 1912, £80,424 in 1913. £64,460 in 1914, £145,034 in 1915, £209,494 in 1916; total £2,269,412.

Former company paid dividends of £996,574, giving total dividends, to end of 1916 of £3,265,986. In June, 1917, there was distributed £80,574.

The operations of the company are very extensive, including the mining and smelting of copper ore in Tasmania, the mining of pyrite in Tasmania, with the manufacture of acid and superphosphates in the states of Victoria and Western Australia, and the manufacture of coke in New South Wales. The methods employed in the various works of the company are of a notably high technical order.

Property: 2,124 acres, inclusive of 5 consolidated claims, leased for 21 and 30-year periods, and 565 acres of mill and smelter sites, in the Mt. Lyell district, with mineral lands in other parts of Tasmania where prospecting and mining work is in progress.

The principal mining operations are in the Mt. Lyell district, on the west coast of Tasmania, at a distance of about 14 miles in an air line from the port of Strahan, on Macquarie harbor. The Mt. Lyell pyritic orebody was discovered 1883, but its value for copper was not recognized. Actual mining was begun 1882. Other mines in the same district were unsuccessful and the value of the North Mt. Lyell mine was recognized in 1897, but it was not profitable until it was merged in the present company, 1903. Owing to the silicious nature of the No. Lyell ore, neither concentration nor smelting was successful and the undertaking was a failure financially after the expenditure of about £800,000. The amalgamation of the 2 mines, effected 1903, gave a single magnificent property, the pyritic ore of the Mt. Lyell and the silicious ore of the North Mt. Lyell being natural smelting complements.

Geology: rocks of the Mt. Lyell mine are hydro-mica schist, conglomerate, quartzite and sandstone, with mineralization occurring along a schist-conglomerate contact that is a crush-zone formed by an overthrust fault. The orebody is a huge lenticular mass, measuring 270' wide by 660' long, on the 4th level, with an ascertained depth of 685'. This lens originally contained 6,500,000 long tons of ore, about two-thirds of which has been extracted. The average ore at present carries 0.53% copper, 1.25 oz. silver and 0.04 oz. gold per ton. The ore is a very clean, slightly cupriferous pyrite, carrying only about 6% silica, 2% alumina and 2.5% barium sulphate, with a little zinc and a trace of lead.

The copper occurs as chalcopyrite and tetrahedrite, disseminated through the pyrite. One end of the orebody carried an enrichment, persisting from surface to the bottom of the lens, consisting of a mixture of chalcopyrite and bornite, with a little chalcocite, and in 1894 this part of the mine yielded 850 tons of this ore, enriched by stromeyerite up to a tenor of 21% copper, 1,010 oz. silver and 0.1 oz. gold per long ton, this bonanza deposit netting the old company £105,000 in London, which sum, together with the report on the property from the late Dr. Edw. Dyer Peters, afforded the necessary stimulus to finance the original company.

Development: since 1892, by a system of tunnels, crosscuts, and contour drifts encircling the orebody, in 8 levels, but the 5 upper levels have been obliterated by an enormous open cut, from which the ore is extracted in a series of benches with simultaneous removal of overlying or underlying country rock. The ultimate bottom of the quarry is No. 5 level, 450' from surface; below this level only underground-extraction is feasible. A vertical blind shaft connects the 5th level with the 3 levels below, and all are accessible from surface by an incline hoisting shaft, which also serves the open cut. Underground development beneath the pit was begun actively early in 1909, giving a productive capacity of 800 to 1,000 long tons of ore daily, from open-cast and underground workings combined. In the underground workings ore is stoped in large sections and depleted stopes filled with waste rock from the capping previously removed. The pit has a traveling crane and is electrically lighted. The removal of the schist and conglomerate overburden is nearing completion and the finished work will give about 2,000,000

cu. yds. of capping removed, to render available 1,070,000 cu. yds. of ore. It was estimated, Sept. 30, 1916, that the Mt. Lyell proper had ore reserves of 1,726,485 long tons available for extraction, having an estimated average assay of 0.53% copper, 1.96 oz. silver and 0.04 oz. gold per ton. For the half year ending Mar. 31, 1917, the Mt. Lyell mine shipped 84,755 long tons of ore, averaging 0.45% copper, 1.03 oz. silver and 0.04 oz. gold per ton. The mine output is about 700 tons of pyrite ore daily, mostly from the 3 underground levels, the 3 lower benches of the opencut supplying a minor amount.

The South Mt. Lyell orebody is a lens of the same character as the big orebody of the Mt. Lyell, though much smaller, and not outcropping at surface, being opened from the Mt. Lyell mine and practically a part of that mine.

Equipment: the incline shaft at the Mt. Lyell, which raises all ore from the mine, has a 200-h. p. electric hoist, capacity 600 tons in 8 hours, taking current from the reduction works power-plant by a 1½-mile special line. Hoisting is by self-dumping skips. At this mine there are three 300-h. p. motor-driven compressors with a combined capacity of 3,600 cu. ft of free air per minute to 80 lbs pressure per sq. inch, and the air supply is diverted, when required, to the North Mt. Lyell mine by means of a 6,000' pipe line. A triplex pump, capacity 100 gal. per min., lifts all the water requiring discharge.

Geology: The North Lyell mine carries ore as disseminations in highly quartzose-schist, in the vicinity of a conglomerate contact, the schistose ore shoots occurring as pipes, or columns, of irregular cross-section, in the recesses of the highly-contorted contact surface of the conglomerate. Copper contents are mainly in bornite, but there are limited quantities of chalcopyrite and chalcocite, associated with small amounts of pyrite, and there are no deleterious elements. The North Lyell ore averages, as broken, about 6% copper and 1.33 oz. silver per long ton, with a trace of gold, the gangue averaging about 66% silica, 7% iron and 7.5 to 11% alumina. The North Lyell has a number of closely associated but distinct orebodies, the 2 largest being the Main and New Development orebodies. The Main orebody outcropped at surface, and has a vertical dip with depth proven to 1,000'. The New Development orebody connects with the Main orebody on the 400' level, descending at a very sharp pitch, and carries disseminated bornite of good average grade on the 1,200' level, which is the deepest working of the mine. The character of the ore remains unchanged down to the lowest level opened, except that perhaps chalcocite is increasing with depth.

Development: consists of tunnels of 850' and 1,080', and 3 shafts, the Main of 1,200', the Auxiliary of 800', and a blind shaft from the 800' level. Lower levels are opened at 150' and 100' intervals. Stopping is in progress on all levels from the 700 to 1,200', inclusive, and is heaviest on the 1,000' level. Filling for depleted stopes is brought from surface by means of 2 main waste passes, and run to place through branch passes. For 6 months ending Mar. 31, 1917, the North Lyell produced 45,755 tons of ore, with average assays of 6.59% copper, 1.40 oz. silver, and 0.008 gold per ton.

In Sept., 1916, ore reserves were estimated at 1,083,211 long tons of an average assay value of 6% copper, 1.33 oz. silver and 0.005 oz. gold. The North Lyell has developed wonderfully well and it is evident that the property has excellent prospects of further considerable orebodies, while the ore is persistent to the greatest depth yet reached and high in copper tenor and, although too silicious for straight smelting, blends with the pyritic ore of the Mt. Lyell in an ideal smelter charge. The daily output of the mine averages 400 tons.

Equipment: North Lyell shaft has a 150-h. p. electric hoist, good for 1,500' depth, and the plant includes a 20-drill air compressor, driven by a 350-h. p. motor. The mine water, which is very acid, is lifted by 3-throw electric pumps of 100 gal. per min. capacity.

The Lyell Tharsis mine, formerly considered worked out, was acquired by the company some years ago and is worked for ore of the same mineralogical character as that of the North Lyell, though very much lower in grade.

The South Tharsis and Royal Tharsis mines are idle. The South Tharsis mine was worked opencast for a time, and the Royal Tharsis has been developed for underground working by an incline shaft. These properties carry chalcopyrite and pyrite, disseminated sparingly in schist, and the ore, of very low average grade, though not amenable to ordinary wet concentration, will be mined at some future time for flotation concentration.

Other mines: an important property purchased by the company in 1912 was that formerly owned by the Mt. Lyell Comstock Mining Co., Ltd. Total area of leases 339 acres. The southernmost sections are contiguous to the North Mt. Lyell leases and contain the northern extensions of the orebodies in the latter, which give them a special value to the company. The deposit worked by the former owners is, however, remote from this locality, being 6 miles, by steam train, from the reduction works. The mine has been recently reopened by the company and is worked on a steadily increasing scale for concentration by flotation. The deposit here occurs on the same line of contact of schist and conglomerate as the other properties in the district and the character of the ore is similar to that of the North Mt. Lyell mine, though more basic, while the ore in the southernmost sections is, of course, identical with that of the North Mt. Lyell orebodies themselves.

Near the reduction plant there are quarries of silica and limestone which are used for flux.

General equipment: company has sawmills for furnishing mine timber and lumber for general building purposes.

A 1½-mile aerial tram transports 750 tons daily from the Mt. Lyell mine to the smelter. There also is a 4,500' incline surface tram, operating cars in counterbalance, connecting with a ¾-mile steam railway.

The company owns 2 railway lines; a 22-mile line connects the reduction works at Queenstown with the seaport of Strahan, giving rail connections with all parts of the State. The second line connects Gormanston with Kelly Basin, near the head of Macquarie harbor, 25 miles from Strahan. The company's private narrow-gauge line has about 7 miles of track, connecting the mines and works.

An extensive hydro-electric plant at Lake Margaret supplies power for all purposes, and superseded a large steam plant.

The reduction works are at Queenstown, on the Queen river, 1½ to 2½ miles from the mines. No. 1 smelter has been dismantled for some years. No. 2 smelter has four 54x210" blast furnaces, with cast-iron water jackets of solid construction, suitable for pyrite smelting. The furnaces have special mechanical feeders and hydraulic lifts.

The first successful pyritic smelting ever accomplished was done in this plant, in 1896, under direction of Robert Sticht. The method has been greatly improved since then.

The charge, averaging 2.5% copper, is brought to a matte of 40 to 50% copper. Slags average about 0.33% copper, 32 to 38% silica, 42 to 52% iron protoxide and about 4% calcium oxide.

The percentage of coke was formerly as low as 1% but is now 3 to 5% in consequence of a reduction of the iron sulphide contents of the ore and an increase of the zinc and lead.

The furnaces have a stationary rectangular forehearth, supplemented by smaller rectangular forehearths, from which the slag flows into a stream of water for granulation. Granulated slag is distributed over the slag dump by centrifugal pumps or alternately by electric bucket elevator. Blast is supplied to furnaces by 4 motor-driven centrifugal blowers, with 25,000 cu. ft. of free air capacity at from 72 to 96 oz. per sq. in. pressure. Matte tapped from the main forehearth is allowed to cool before conversion, the conversion of matte direct from the blast furnaces being subject to local difficulties that have not yet been overcome.

The 75-ton converter plant has 2 remelting furnaces, with 6 stands, and 14 shells of the Stahlmann type, each 60x96". Converter blast is furnished by 2 electrically-driven centrifugal compressors, each of 3,500 cu. ft of free air capacity to 12 lbs. per sq. in. Motors are of 250 h. p. Concentrates and flue dust are treated by the Dwight-Lloyd process.

The final product is blister copper averaging 98.83% copper, about 80 oz. silver and 1.5 oz. gold per long ton, the silver contents having declined about 20% and the gold contents about 40% in recent years. For many years, until the end of 1910, blister copper was sent to Baltimore for electrolytic refining, but now goes to the Port Kembla works in New South Wales.

Company owns 3 acid and fertilizer plants, all having Herreshoff calciners sulphur burners and the ordinary chamber process for making sulphuric acid. Crude phosphate rock is secured from Ocean and Christmas Islands. The products of these plants include a variety of superphosphates and commercial fertilizers, demand for which is rapidly increasing in Australia. The raw material for acid is furnished by the Tasmanian mine, Spanish pyrites and sulphur from Japan and Italy. Unfortunately, it is commercially impracticable to utilize the sulphurous acid fumes from the Mt. Lyell smelter, because of the high freight rates, either in carrying the acid away from Mt. Lyell, or bringing in the crude phosphate rock.

The superphosphate works are in Victoria, South and Western Australia.

The company employs about 1,700 men in Tasmania, in addition to considerable forces at the fertilizer plants. About 850 men are employed at the mines, 150 on the railways, and 700 at the reduction works.

Although the average of all ores and concentrates smelted is only about 2.5% copper, and the pyritic ore now mined from the Mt. Lyell mine proper barely exceeds a copper content of one-half of 1%, the cost-sheet makes an excellent showing. Mt. Lyell pyritic ore, won opencast, cost about 3s. 6d. per long ton, inclusive of the charge of 2s. for removal of overburden, and cost of ore extracted from underground workings does not exceed 6s. (\$1.44) per long ton. Ore mined from the North Mt. Lyell costs about 14s. (\$3.36) per long ton and constitutes about one-third of the total ore tonnage.

Costs: average cost of mining, smelting, and converting, from 1896 to 1903, was \$5.48 per ton, and by this company for 6 years ending 1909 the total mining and smelting cost per ton was \$3.56, a figure that reflects great credit upon an efficient manager and staff. For the half-year ending Mar. 30, 1916, costs were \$6 per long ton. Recent advances are due to increased underground work and cost of supplies.

Production: since the organization of the present company in 1903, average production has been 408,000 long tons yearly, while the production of blister copper has averaged 8,550 long tons. Including the production of the old company, from 1896 to Aug. 11, 1903, the total production by the company, to Mar. 31, 1917, was 6,633,972 tons of ore yielding 148,817 tons of fine copper, 11,841,771 oz. of silver, and 349,215 oz. gold. Of the ore tonnage, Mt. Lyell contributed 4,743,098 tons, North Lyell 1,536,418 tons, Lyell Comstock 18,563 tons, concentrates 4,336 tons, purchased ore 167,459 tons, and metalliferous fluxes 170,476 tons.

A flotation plant was completed in Sept., 1916 and to April, 1917, 5,503 tons of 3.04% copper, 0.19 oz. silver, and 0.03 oz. gold ore from the Lyell Comstock, and 1,458 tons of 3.06% copper ore from North Lyell were treated. Concentrates assayed 8.97% copper. Recoveries were 89.11% copper, 74.26% silver, and 67.34% gold.

In the half-year ended Mar. 31, 1917, the smelter reduced a total of 131,679 tons of charge, yielding 6,720,000 lbs. copper, 3,952 oz. gold, and 149,829 oz. silver.

The Mt. Lyell enterprise has had to contend with a series of grave financial, mining and metallurgical problems, all solved with skill and success. A serious handicap is the heavy rainfall, averaging 110" yearly,

hampering a mine worked by open cuts. Furthermore, two-thirds of the ore averages even lower in copper-contents than the leanest of the successful native copper mines of the Lake Superior district, which, for 2 generations, have been treating the lowest grade copper ore in the world, until this unenviable, but highly creditable distinction, passed to the Mt. Lyell. The management is excellent, in all departments, and the success of the company is due to an effective combination of financial ability with high-technical skill.

VICTORIA

BENDIGO AMALGAMATED GOLDFIELDS

VICTORIA

Office: Bendigo, Victoria, Australia.

Property: this company was organized in 1917 to consolidate a number of old producers in the center of the Bendigo Goldfield (which has yielded over 18,000,000 oz. since 1850), explore them systematically by new openings and diamond-drilling, and equip them, if warranted, with modern plant. Operations are concentrated at a number of central points.

Development: in Sept., 1917, work was under way to a depth of 1,947' in the Garden Gully shaft, 1,018' in the Unity, 1,264' in the Carlisle, 1,501' in the Cornish, 2,040' in Koch's, 1,127' in the Northern, 2,380' in the Virginia, 1,225' in the Nelson, and 1,326' in the Extended Hustlers. Generally, recent results have been fair.

Production: in August, 1917, was 6,694 tons of ore, yielding from 11s. (\$2.64) to 47s. (\$11.28) per ton; also 5,905 tons yielding from 8s. (\$1.92) to 18s. (\$4.32) per ton. In the second half of August the gold output was 1,774 oz., worth about \$32,000.

Many schemes have been tried to resurrect this great goldfield and probably if this one does not, a rapid decline will set in.

WESTERN AUSTRALIA

ASSOCIATED GOLD MINES OF WESTERN AUSTRALIA, LTD.

WESTERN AUSTRALIA

Office: R. Davidson, sec., 20 Copthall Ave., London, E.C., England.
Mine office: Kalgoorlie, W. A.

Directors: H. B. Hooper, chairman; B. Brookman, A. H. Collier, F. H. Hamilton, E. Hooper, H. Landau and E. T. McCarthy. D. F. McAulay, gen. mgr.

Inc. Dec. 19, 1894, in England. **Cap.**, £500,000; shares £1 par; 495,364 issued. Company is largely interested in the North Thompson, Huronian Belt and Keeley mines in Ontario, Canada.

During the year ended March 31, 1917, a profit of £5,544 was made, from a revenue of £124,611.

Dividends: from 1898 to 1909 totaled 150%. In 1913 and 1914 2½% each were paid, and nothing since.

Property: 52 acres in the "Golden Mile," Kalgoorlie, W. A. It has produced a large amount of gold, especially from 1898 to 1904.

Development: by vertical shaft 2,200' and extensive workings. Reserves are difficult to estimate. Ore is a sulpho-telluride.

Equipment: complete mining, also 350-ton plant using crushers, ball mills, roasters, pans, cyaniding equipment and filter presses.

Production: now at a low point, the year ended March 31, 1917, yielding £124,611 from 93,430 tons.

GOLDEN HORSESHOE ESTATES CO., LTD. WEST. AUSTRALIA

Office: A. Swanne, Salisbury House, London, E.C., England.

Directors: Sir J. S. Purcell, chairman; R. E. Bucknall, Earl of Kenmore, C. L. H. Loeffler, A. Reitlinger and E. P. Jones. J. W. Sutherland, gen. mgr.

Inc. Feb. 28, 1899, in England. **Cap.**, £1,500,000; shares £5 par; all issued. **Debentures:** £43,800 of 6% outstanding.

In 1915 a profit of £95,818 was made, dividends absorbing £82,500.

Dividends: since 1899 total 48s. 6d. per share.

Property: 24 acres of producing ground and 85 acres of other areas on the "Golden Mile," Kalgoorlie, W. A.

Development: by 2,242 and 3,114' vertical shafts and extensive workings. Reserves at end of 1915 were 704,359 tons of \$9.20 ore, which is a sulpho-telluride.

Equipment: complete modern mining machinery, including compressors, hoists, crushing plants, 170 stamps, tube mills, concentrators and cyanide plants.

Production: in 1916, 162,316 tons yielded gold worth £345,529.

This is one of Australia's big mines and has a great past record.

GREAT BOULDER PERSEVERANCE GOLD MINING CO., LTD.

WESTERN AUSTRALIA

Office: C. F. Bell, 607 Salisbury House, London, E.C., England.

Directors: P. Bright, chairman; G. S. Borwick, E. Hooper, Sir J. F. F. Horner, A. Reitlinger and W. J. Wilson.

Inc. Aug. 17, 1895, in England. **Cap.**, £1,500,000; shares £1 par; 1,400,007 issued.

Dividends: from 1897 to 1912 total £3 18s. per share on old and new companies, mostly before 1904. Since 1906 only 4s. per share.

Property: 24 acres on the "Golden Mile," Kalgoorlie, W. A.

Development: by shafts 2,230' deep. Reserves in 1915 were placed at 544,474 tons of \$5.28 and 317,480 tons of probable \$5.04 ore, which is a sulpho-telluride.

Equipment: complete and modern, with 8 ball mills, 6 roasting furnaces, 2 tube mills, 12 grinding pans, cyanide plant, and filter presses, capable of treating 650 tons per day.

Production:

	1916	1915
Ore, tons.....	194,106	239,514
Gold yield.....	£204,643	£247,470

Costs are about \$4.50 per ton.

Mine has been a great producer, but during 1917, it operated at a loss and in October it was decided to close the mine down.

GREAT BOULDER PROPRIETARY GOLD MINES, LTD.

WESTERN AUSTRALIA

Office: J. Edwards, 80 Bishopsgate, London, E.C., England.

Directors: Sir G. P. Doolette, chairman; A. Joshua, G. North and J. Waddington. Richard Hamilton, gen. mgr.

Inc. June 20, 1894, in England. **Cap.**, £175,000; shares 2s. par; all issued.

Statement for 1915 shows a revenue of £583,367, of which £314,933 was profit. Dividends amounted to £262,500. The reserve fund is £60,000.

Dividends: total 1,582% from 1895, to the end of 1917.

Property: 85 acres on the "Golden Mile," Kalgoorlie, W. A.

Development: by vertical shafts, 2,844, 2,879 and 2,000' deep, with extensive workings. Reserves at end of 1915 were placed at 494,564 tons, averaging \$15 per ton. Exploration at depth has not been successful, as the main lode passed into the Golden Horseshoe mine adjoining at about 1,800' depth.

Equipment: complete and modern, with 600-ton dry crushing and roasting plant. Ore is a sulpho-telluride.

Production:

	1916	1915	1914
Ore, tons.....	176,787	195,524	190,117
Gold yield.....	£525,168	£583,367	£563,959

Costs are about \$6.50 per ton.

This is one of the most regular gold producers and dividend-payers known, and is ably directed.

IVANHOE GOLD CORPORATION, LTD. WESTERN AUSTRALIA

Head office: London Wall Bldgs., London, E.C. **Mine office:** Kalgoorlie, Western Australia.

Officers: F. A. Govett, chairman; with H. W. P. Clinton, A. H. Collier, G. A. Touche and T. White, directors; C. Lloyd, sec. J. McDermott, gen. mgr.; Bewick Moreing & Co., cons. engrs.

Registered: Oct. 14, 1897, in London. **Cap.**, £1,000,000; shares £5 par.

Production: in 1916, 238,514 tons treated yielding £381,984; profit was £115,984. Costs totaled 21s. 9d. (\$5.22) per ton. Dividends in 1916, 7s. 6d. (\$1.80) per share, totaling £105,000. No dividends missed since 1898; 24s. (\$5.76) being paid in 6 different years. The reserve fund is £140,000.

Property: 95 acres in the "Golden Mile," Kalgoorlie, W. A., the best mine in the group at present.

Development: by 3,800' main vertical shaft with levels opened to this depth. Exploration by drilling and sinking is kept well ahead and valuable geological data are secured. Ore reserves are estimated at 1,026,000 tons, averaging 36s. 11d. (\$8.86) per ton.

Equipment: plant for mining and treating 700 tons daily, including cyanide works.

Property has a profitable future for several years and is managed with excellent technical knowledge.

KALGURLI GOLD MINES, LTD. WESTERN AUSTRALIA

Office: F. H. Carlton, 7 Crosby Square, London, E.C., England.

Directors: C. M. C. Roberts, chairman; P. F. Dietz, E. Hooper and C. S. Stafford. R. S. Black, gen. mgr.

Inc. June 14, 1895, in England. **Cap.**, £120,000; shares £1 par; all issued.

Profit for year ended June 30, 1916, was £45,947, of which £45,000 was distributed. Investments were valued at £53,436 and reserves £18,534.

Dividends: total 1,300%.

Property: 18 acres on the "Golden Mile," Kalgoorlie, W. A.

Development: by 1,900' shaft. The lode in this mine is of peculiar shape and below 1,800' left the quartz-diorite and entered a calc-schist zone, where the gold content is low. Drilling has failed to reveal other shoots of sulpho-telluride ore.

Equipment: complete with 350-ton dry crushing and a roasting plant.

Production:

	1916	1915
Ore, tons.....	119,180	125,990
Gold yield.....	£194,795	£249,878

Costs are around \$5 per ton.

On a small capital and with excellent management this property has done remarkably well.

SONS OF GWALIA, LTD. WESTERN AUSTRALIA

Office: E. A. Pears, sec., 20 Copthall Ave., London, E.C., England.

Mine office: Leonora, Western Australia.

Directors: D. Richards, chairman and managing; J. Barry, G. P. Doollette, C. A. Moreing and T. W. Wellsted. Bewick, Moreing & Co., gen. mgrs.; W. A. McLeod, supt.

Inc. Jan. 7, 1898, in England. **Cap.**, £350,000; shares £1 par; 325,000 issued.

In 1916 the net profit was £39,890, of which £40,625 was paid in dividends; £740 carried forward.

Dividends since 1900 total 63s. per share; 2s. 6d. being paid in 1916.

Property: 863 acres near Leonora, Western Australia. A highly profitable mine throughout its life.

Development: by incline shaft 3,500' deep. Ore reserves are over 600,000 tons.

Equipment: complete mining and milling, with suction gas power plant. Mill includes 50 stamps, concentrators, pans, tube mills and cyanide plant.

Production: in 1916 was 158,956 tons, yielding 54,837 oz. gold, worth £232,924. Costs were \$4.18 per ton.

SOUTH KALGURLI CONSOLIDATED, LTD. WEST. AUSTRALIA

Office: W. Bramall, sec., 529 Salisbury House, London, E.C., England.
Mine office: Kalgoorlie, Western Australia.

Directors: A. H. Marker, chairman; J. H. Birtwistle, J. Cutcliffe, W. St. D. Griffith, C. T. Hilder, C. B. Jessop and W. W. Slater. J. M. Embleton, gen. mgr.

Inc. March 11, 1913, in England, as a consolidation of the South Kalgurli Gold Mines and Hainault Gold Mine companies. **Cap.**, £150,000; shares 10s. par; 250,007 issued.

For year ended March 31, 1916, the net profit was £16,335, plus £706 brought forward. Dividends absorbed £12,500. The sum of £4,541 was carried forward. Cash assets amounted to £38,700. In 1916-17 the profit was only \$4,050, yielding a dividend of £3,125.

Dividends: 5% in 1913-14, 7½% in 1914-15, 10% in 1915-16 and 2½% in 1916-17.

Property: 36 acres in the "Golden Mile" of Kalgoorlie, Western Australia. Claims have been productive since 1896.

Development: by vertical shafts 1,000' and 1,800' deep. Reserves, March 31, 1916, totaled 157,617 tons of \$6.14 ore and 89,095 of \$5.90 probable ore. A year later the reserve was 133,221 tons of \$5.75 ore.

Equipment: complete mining and milling plants electrically driven, the latter including crushers, ball mills, roasting furnaces, grinding pans, cyaniding apparatus and filter presses.

Production: during 21 months ended Dec. 31, 1916, 199,640 tons of ore yielded gold worth £243,710. Costs are \$5.48 per ton.

This gold mine has been a profitable producer for years, but apparently dividends will be few and far between in the future.

YUANMI GOLD MINES, LTD. WESTERN AUSTRALIA

Office: G. G. Hay, 1 London Wall Bldgs., London, E.C., England.
Mine office: L. B. Williams, mgr., Yuanmi, Western Australia.

Directors: J. H. Cordner-James, chairman; with Theodore J. Hoover and G. G. Hay.

Inc. April 27, 1911, in England. **Cap.**, £350,000; shares £1 par.

Earnings for year ended June 30, 1917, were £72,429; and mine expenditures, £65,596; compared with £77,865 and £70,143 in 1915-16.

Dividends: were 12½% in 1912-13, 5% in 1913-14 and none since.

Property: 218 acres in the East Murchison goldfield, W. A. Ore is a sulphide and reserves are estimated at 46,481 tons averaging 58s. 1d. (\$13.94) per ton.

Development: by 680' incline shaft, and considerable openings.

Equipment: 80-ton plant, including ball mill, roasters and cyanide plant. To treat the oxide ore, company originally had a 10-stamp mill and cyanide plant.

Recent results have not been of encouraging character.

NEW CALEDONIA

CHROME CO., LTD.

NEW CALEDONIA

Office: H. W. C. Dermer, 19 St. Swithin's Lane, London, E.C., England.

Directors: E. Davis, chairman; F. J. Burt, J. Kitchin, F. E. Lander, and F. M. Singer.

Inc. Feb. 1, 1911, in England. **Cap.**, £190,000; shares £1 par; all issued. **Debentures:** £86,460, 5% outstanding. In 1915 the profit was £18,809, less £9,500 for dividends. £11,395 was carried forward.

Dividends: 5% in 1913, 10% in 1914, 10% in 1915.

Property: Chrome mines, near Port Pagoumène, New Caledonia, via Australia.

Production: 61,416 tons in 1914, 62,585 tons in 1915 and 35,303 tons in 1916.

NEW ZEALAND

CONSOLIDATED GOLD FIELDS OF NEW ZEALAND, LTD. N. Z.

Office: F. J. Cox, 20 Copthall Ave., London., E.C., England.

Directors: Sir W. B. Percival, chairman; L. Ehrlich, A. L. Foster, G. A. Jones, E. T. McCarthy and L. Welstead. V. Hartog, gen. mgr.; R. Burley, mine supt.

Inc. Feb. 22, 1896, in England. Cap., £300,000; shares £1 par; 250,000 issued. Company holds 91,324 shares in the Blackwater Mines and Progress Mines companies.

In 1915 a profit of £23,722 was made. Dividends to 1911 totaled 18s. 6d.

Property: the Wealth of Nations mine at Reef-ton, South Island, N. Z. This, with the Blackwater and Progress mines, are in the same district. They are fully equipped with mining and treatment plants.

Production: the three may be summarized as under for 1916:

Mine	Tons	Gold Yield	Profit	Costs	Dividends Total
Blackwater	40,247	£80,565	£35,528	\$4.80	65%
Progress	26,780	31,405	4,065	4.80	119
Wealth of Nations	25,844	41,577	18,045	4.40	92

TALISMAN CONSOLIDATED, LTD.**NEW ZEALAND**

Head office: Auckland, New Zealand.

Officers: A. W. Blanchard, M. Casey, R. B. Jackson, C. P. Knight, J. Smith and T. S. Weston, directors. Bewick, Moreing & Co., gen. mgrs.; H. Stansfield, mgr.

Inc. Sept. 14, 1916, in New Zealand, to acquire English company of similar name, inc. in 1904. Cap., £345,000; shares £1 par; all issued.

Dividends: since 1905 total 67s. per share.

Property: 668 acres at Karangahake, N. Z., in mountainous country.

Development: by tunnels and shafts. Reserves are difficult to estimate, but are high grade, \$24 per ton.

Equipment: complete mining plant, aerial trams, 50 stamps, 3 tube mills and cyanide plant.

Production: In 1916 the yield of silver and gold was £83,227 from 16,935 tons, giving a profit of £22,260.

WAIHI GOLD MINING CO., LTD.**NEW ZEALAND**

Offices: H. Akers, Coronation House, Lloyds Ave., London, E.C., England, and Waihi, N. Z.

Officers: A. M. Mitchison, chairman; H. E. Beddington, W. Bristow, E. J. Brutton, W. B. Percival, directors; with S. T. George and Charles Rhodes in New Zealand. E. G. Banks, supt.; W. P. Gauvain, asst. supt.; J. L. Gilmour, mine mgr.; H. P. Barry and R. E. Williams, cons. engrs.

Inc. Dec. 7, 1887, in England. Cap., £500,000; shares £1 par; 495,907 issued.

Balance sheet for 1915 shows a gross profit of £160,858, from which was deducted £99,181 for dividends, £24,965 for taxes, £21,840 for depreciation, etc.; £13,277 was carried forward. Reserve fund amounts to £90,000.

Dividends: since 1893 total £11 10s. per £1 share, the highest being 18s. in 1909, and the last four years paying 4s. each.

Property: 518 acres of mining claims, 3 large millsites, extensive timber lands, power sites, etc., at Waihi and adjacent areas, New Zealand. Mine has had an interesting history; was one of the first in the world to use cyanide; and has produced over £6,000,000 of gold and silver.

Development: by 4 shafts, deepest over 1,300'; two are equipped with large electric and Cornish pumping plants. Reserves estimated at 1,479,948 tons, 673,896 being in pillars and arches.

Equipment: extensive mining plant, 6-mile railway, 50-mile transmission line from power plant on Waikato river, one 40-stamp, one 90-stamp, and one 200-stamp mill driven by water and electricity; also sand, slime, and concentrate cyanide plants.

Production: in 1916 was £327,506 from 194,231 tons. Ore yields silver and gold in the proportion of about 5 to 1.

WAIHI GRAND JUNCTION GOLD CO., LTD. NEW ZEALAND

Office: S. Leah, 10 Throgmorton St., London, E.C., England.

Directors: H. D. Bishopp, chairman, G. H. Earle, S. Lee, and H. J. Rothwell. W. McConachie, mine mgr.

Inc. Dec. 29, 1897, in England. **Cap.**, £400,000; shares £1 par; 384,375 issued.

Statement for 1915 shows a profit of £39,344, of which £38,437 was paid in dividends. Cash was £43,943; investments, £59,668; reserve, £30,000; accounts payable, £12,807. Since 1910 company has paid 50% in dividends.

Property: 280 acres of mining land, and a timber area, at Waihi, New Zealand.

Development: since about 1893 this has been under way to cut an extension of the Waihi company's lodes, which were not found until a depth of under 500'. Considerable water was encountered. The main shaft is 1,336' deep. Reserves are given as 136,400 tons.

Equipment: complete power and mining plants, with 60-stamp mill, 10 tube mills and cyanide plant.

Production: in 1916 about 115,000 tons yielded gold and silver valued at £194,461.

CENTRAL AMERICA

CENTRAL AMERICA

CENTRAL AMERICA

COSTA RICA

ABANGAREZ GOLD FIELDS OF COSTA RICA COSTA RICA

17 Battery Place, New York City. **Mine office:** Abangarez, Costa Rica. **Officers:** Minor C. Keith, pres.; A. W. Preston, v. p.; H. M. Keith, treas.; E. W. Ong, sec.; E. S. Hyde, asst. treas.; directors, M. C. Keith, E. W. Ong, B. W. Palmer, A. W. Preston, J. F. Tilden (and, 131 State St., Boston, Mass.).

Inc. Sept. 8, 1899, in Del. **Cap.,** \$4,000,000 Com. and \$1,000,000 6% cumulative Pfd.; outstanding, \$3,880,000 Com. and \$1,000,000 Pfd.; par \$25. **Transfer agt.:** Old Colony Trust Co., Boston; registrar, American Trust Co., Boston. No dividends on Pfd. since May, 1911, when semi-annual dividend of 3% was paid. Annual meeting, 3d Monday in Dec. Listed on Boston Stock Exchange.

Funded debt: \$374,000 1-year 6% gold notes; dated May 1, 1915; due May 1, 1916; int. payable May and Nov. 1st, at company's office. Coupon \$50, \$100, \$500, and \$1,000. Issued in exchange for \$353,300 1-year 6% notes due May 1, 1915, callable at par and interest on any interest date on 4 weeks' notice; \$476,000 2-year convertible 6% notes; dated May 1, 1914, due May 1, 1916, int. payable May and Nov. 1st, at company's office. Coupon \$100, \$500, and \$1,000. Convertible at maturity at option of holder into Com. stock. Issued to retire \$461,200 3-year 6% notes which matured May 1, 1915.

Balance sheet for year ending Dec. 31, 1916, shows assets \$6,452,165, which includes cost of property, \$3,519,833; mine equipment, \$1,506,309; supplies, \$159,265; cash, \$119,288; bullion, \$124,354; accounts and notes receivable, \$38,876; profit and loss, \$977,474. Liabilities include notes payable, \$1,333,426; current liabilities, \$158,063; compared with \$240,570 in 1915. **Income account for 1916** shows: surplus from operations, \$244,951, compared with deficit of \$9,244 in 1915; interest charges, \$79,562; surplus for the year, \$165,389, as compared with deficit of \$87,789 in 1915. Total deficit Dec. 31, 1916, \$977,474, as compared with \$1,006,369 the previous year.

Property: Company acquired the properties of the Guanacaste Syn. and the Guacimal Expl. Co. After obtaining possession of three-fifths of the capital stock of the Costa Rica Esperanza Mng. Co. in exchange for land, the Abangarez Co., Dec., 31, 1909, acquired the balance of the stock by giving one share of Abangarez and \$1.87 in cash for each share of Costa Rica Esperanza. Owns mining properties in full operation covering 118 sq. miles in the province of Guanacaste, Costa Rica, C. A. The ore developed at Majica Creek on the Tres Hermanos Lode is transported by aerial tramway to the Abangarez mill. Also owns a power plant in the Guacimal River, 12 miles from the mill.

Production:

Year	Tons Milled	Cost Per Ton			Total (a)	Prod. (b)	Earn (b)	Int.
		Mng.	Mlg.	C'yg.				Chgs. (b)
1916.....	50,221	\$4.08	\$0.71	\$1.36	\$8.48	\$13.35	\$4.87	\$1.58
1915.....	25,262	4.33	0.84	1.60	8.18	7.82	d0.36	3.11
1914.....	37,742	4.47	0.58	1.39	7.89	5.27	d2.62	2.00
1913.....	69,346	4.92	0.64	1.70	8.68	8.36	d0.32	1.00
1912.....	50,011	9.11	1.07	2.28	14.71	12.14	d2.57	0.94
1911.....	42,514	10.06	1.61	2.38	16.98	21.84	4.86	0.42

(a) includes cost of production, administration and marketing.

(b) per ton. (d) deficit.

In view of the company's financial condition and conditions in general, an arrangement has been made with J. N. Popham, who has been successful in the management of a neighboring mining property, to undertake the operation of the company's property. He is to furnish all necessary capital for carrying on operations. As compensation he will receive 10% of the net profits over and above operating and development expenses. Company reserves the right to withdraw from agreement upon due notice. Since Mr. Popham assumed charge there has been a gradual but fairly constant improvement in the output of the mine. Net earnings from operations for 1916 amounted to \$244,951.

AGUACATE MINES INC.

COSTA RICA

Office: c/o White Investing Co., Room 2503, 55 Liberty St., New York City. Mine office: San Mateo, Costa Rica. Persefer G. Spilsbury, gen. mgr.; Robt. McGarraugh, gen. supt.

Officers: W. W. White, pres.; E. Gibbon Spilsbury, v. p.; W. Foster White, treas.; Edgar H. Woodward, asst. treas. and sec.

Inc. 1907, in Maine. Cap., \$8,000,000; \$3,999,630 outstanding and \$4,000,370 in hands of trustees for benefit of company. Listed on New York Curb.

Property: the Quebrada Honda mine, carries gold ore in fissure veins $2\frac{1}{2}'$ to $3'$ wide, with ores that average \$9 per ton value recovered. The orebody is 1,500' long, developed down to the 900' level.

Development: by tunnel and a shaft below the 700' level. On the Black vein, the deepest workings are on the 850' level, opened 1917, for 200' in length and stoping started, ore being hoisted to 700', the main tunnel level. Shaft sunk to 925' level and station cut 1917. The 700' tunnel is the working or haulage level, the mill being near its portal. Company's report of July 17, 1915, is said to state that original estimates of tonnage and values, must be reduced as development has shown that the vein has pinched in places, reducing the size of the ore in reserve.

Cyanide mill handles 2,000 tons per month. Company made a profit of about \$25,000 in 1916.

COSTA RICA MANGANESE & MINING CO.

COSTA RICA

Address: A. M. Yonge, mgr., Playarcal, Costa Rica, C. A., or American Manganese Manufacturing Co., Dunbar, Pa.

Property: on the Nicoya peninsula, province of Guanacaste, Costa Rica, in a region difficult of access and with bad climate. Described in the Eng. & Mng. Journal of Oct. 27, 1917.

Geology: outcrops are of basic volcanic rock and of highly metamorphosed sedimentaries. The former is porphyritic in structure. Weathering and erosion has left considerable high-grade manganese float in water-courses. Ore is found near the contact of the volcanic and sedimentaries. There are 3 grades; (1) 53 to 58% Mn., (2) 50% Mn. and 6% SiO₂ and (3) high silica ore which can be mined with purer ore to make it marketable.

Development: a large area shows the deposit to be from 1 to 30' thick. To produce a ton of 50% ore, costs are placed at \$2.

Equipment: steam tramway, loading pier on the coast and 3 ore steamers delivering at Baltimore, or Philadelphia.

HONDURAS

NEW YORK & HONDURAS ROSARIO MINING CO.

Office: 17 Battery Place, New York. Mine office: San Juancito, Honduras, C. A.

Officers: W. S. Valentine, pres.; Sidney Abenheim, v. p.; J. M. De Hart, 2nd v. p.; Ernest Schernikow, sec.-treas.; J. Perlman, asst. sec. Directors: Sidney Abenheim, Lewis L. Clarke, J. C. F. Jacoby, M. F. Soto, Ambrose G. Todd, W. S. Valentine, H. A. Guess, I. Heidell, W. C. Langley, P. R. Weiler and W. L. Saunders. Executive Committee: Lewis L. Clarke, chairman; Sidney Abenheim, J. C. F. Jacoby, Ambrose G. Todd and H. A. Guess; F. H. Minard, cons. engr.; A. R. Gordon, mgr.

Inc. Nov., 1880, in New York. Cap., \$2,000,000; shares \$10 par; all issued. Stock is listed on the New York Curb.

Dividends: to May 1, 1917, total \$4,290,000. Payments in 1916 amounted to 20% or \$400,000. American Exchange Nat'l Bank, New York, registrar. U. S. Mortgage & Trust Co., New York, transfer agents.

Income Account:

	Income	Expenses	Net Income	Reserve Fund	Net Surplus
1916.....	\$1,566,173	\$970,080	\$596,093	\$135,983	\$460,110
1915.....	1,200,743	847,276	353,466	117,324	236,142

Balance sheet: for 1916 shows assets totaling \$3,514,674, including property and plant, \$2,308,444; bullion in transit, \$353,116; cash, \$85,515; current assets, \$664,076; and investments, \$103,521. Liabilities included \$257,499 accounts payable. The surplus totaled \$1,050,620, after deduction of dividends, \$400,000.

Property: owns 25 sq. miles of mineral-bearing land, including the Rosario mine, at San Juancito, Honduras, C. A., and prospecting rights over 400 sq. miles of territory on Chile Mountain.

Development: at the Rosario mine in 1916 amounted to 12,638' as against 13,000' in 1915. This mine has about 20 mineral-bearing veins, which have been or are now being worked. The Rosario was the main producer in 1916, the ore coming from above the lower 200' and above the upper 200' levels. This vein will be an important producer in 1917. The San Joaquin vein can continue to supply large quantities of ore. The South San Miguel has proved a splendid orebody, and was almost unknown a year ago. It is to be explored to the south, also in the upper 550' and below the upper 250' levels. North San Miguel-Concepcion is nearing its end as a large producer. The Colonia and Capitana produced over 8,000 tons each. The former will continue as a good producer; the latter is almost worked out within its known limits.

Geological investigations of the entire zone, as well as surrounding country, were concluded in 1916. Electric haulage on the Pena Blanca and lower 650' levels was very satisfactory, and another locomotive added.

Two crosscuts are being driven—the Pena Blanca-Esperanza, beginning at the S. E. end of the Esperanza No. 3 and running in a S. W. direction to develop the southern territory, and the Pena Blanca Southwest crosscut, starting at the juncture of the Southwest and Jucuara veins in Block 84 and planned to reach Jucuara gulch. When this connection is made, additional water power and cheap timber will be obtainable from the western side of the mountain. This crosscut was 2,226' long Dec. 31, 1916, with 600' to go. Rock passed through was not favorable for ore deposition. The Esperanza crosscut opened some ore, which is being developed.

The company spent 37,871 pesos for prospecting and development on the Chile Mountain Concession without very promising results. Three gold-silver veins showing low-grade values did not persist at depth and work was stopped.

Ore reserves: estimated by the management, Jan. 1, 1917, at 312,143 tons, valued at \$9.51 per ton, gross value of \$2,970,698 (U. S. currency), as compared with 343,716 tons at \$9.76, gross value, \$3,353,098 at end of 1915.

Equipment: includes electric compressors, air-drills, 350-ton stamp mill, cyanide plant, 1,200-h. p. hydro-electric plant and hoists. The company maintains a school and hospital.

A ball mill and Dorr thickener tank, added in 1916, are expected to increase the milling capacity to about 400 tons.

Total bullion production 1882-1916 was \$22,726,082 (U. S. currency).

Recent Production:

	Crushed Tons Ore	% Extr.	Silver Oz.	Gold Oz.	U. S. Cur. Value

One peso equals 46.5 cents U. S. currency.

Company has decided to erect a 50-ton mill using flotation at its Sabanagrande mine, 40 miles W. of the Rosario mine.

Is a well managed concern and with silver at 1917 high prices, large profits should be made.

NICARAGUA**BABILONIA GOLD MINES, LTD. (LA LIBERTAD)**

Address: Mills Bldg., San Francisco, Cal. Mine at La Libertad, Nicaragua, C. A. J. V. Lake, mgr.

Inc. in London, June 9, 1911, as Sierra Guaranty Syndicate, changed Dec. 1911 to present title. **Cap.**, £200,000 shares; £1 par; 170,007 issued, fully paid; 150,007 shares held by Lake View & Oroya Ex., Ltd.

Property: 3 gold claims, Crimea, Babilonia and Santa Maria, at La Libertad, Chontales district, Nicaragua. Has 60-ton stamp mill and cyanide plant.

Development work in progress, 1917, and crosscut started from shaft at 120' depth.

Production: for 1914, 7,675 tons milled and 5,294 cyanided, yielded £21,155. In 1915, 9,586 tons milled, yielded £37,152, giving a profit on years' operation of £25, after writing off £3,000 for depreciation. Reserves estimated end of 1916 as worth £85,326.

COCO RIVER MINING CO.**NICARAGUA**

Office: 50 Broad St., New York.

Officers: J. G. Turrif, pres.; H. A. Currie, v. p.; Gordon D. Bruce, sec.-treas.; A. A. Holland, managing director. J. A. Calder, J. T. Brown and J. H. Lamont, directors.

Inc. in Delaware. **Cap.**, \$1,000,000; \$1 par; 500,000 issued. U. S. Corporation Co., 36 Nassau St., N. Y. City, registrar and transfer agent.

Property: 175 acres in Cabo Gracias district, Nic., C. A., 60 miles inland and 3 miles from navigable river, via Cabo Gracias.

Ore: free milling gold quartz said to average \$5 per ton., including all developed oxidized ore.

Equipment: costing \$125,000, includes 200-ton mill "of ironwood and mahogany," electric motors, etc. A report by A. A. Holland, mining engineer, is said to give 2,000,000 tons blocked out and 4,000,000 partially blocked out.

Company plans installation of 300-h. p. hydro-electric plant on Coco River and to enlarge mill to 500-tons daily capacity, addition of cyanide mill and disintegrator.

Management expects to make a 95% extraction less \$1 a ton for all costs, leaving a profit of \$1,875 daily when treating 500 tons. Costs seem to be figured very low.

EDEN MINING CO.**NICARAGUA**

Controlled through ownership of 55% of capital stock, by Tonopah Mining Co., of Nevada.

Office: 572 Bullitt Bldg., Philadelphia, Pa., and Bluefields, Nicaragua, C. A.

Officers: J. S. Austin, pres.; J. H. Whiteman, v. p.; P. S. Bickmore, sec.; C. A. Higbee, treas. **Directors:** J. S. Austin, J. H. Whiteman, C. A. Higbee, Chas. R. Miller, C. A. Daniel, Henry D. Moore, Samuel Bell, Jr., Geo. S. Munson and Wm. I. Forbes. J. L. Phillips, gen. supt.

Inc. Nov. 24, 1914, in Delaware. **Cap.**, \$1,000,000, all outstanding; shares

\$1 par, non-assessable. Company office, transfer office, Fourth St. National Bank, Philadelphia, registrar. Annual meeting, 1st Wednesday in May.

Property: 9 square miles in the Pis Pis mining district, a remote part of Nicaragua, C. A. Only a comparatively small amount of development and construction of power and milling plants has been done; not yet operating or treating ore. Net average value of ore reported to be \$12 to \$15 gold per ton, with mining and milling costs estimated under \$6 per ton.

Development: mainly by tunnels.

First unit of the mill with a daily capacity of 150 tons, in operation 1917, and a shipment of 1,161 oz. gold ore was made in June. A wireless plant was installed 1917, to communicate with outside world. Electric power obtained from the hydro-electric plant of the Tunkey Trans. & Power Co., which was organized to acquire and operate the power plant, railroad and river transportation. The entire stock of that company is owned by the Eden Mining Co.

TUNKEY MINING CO.

NICARAGUA

A subsidiary of the Tonopah Mining Co. of Nevada.

SALVADOR

BUTTERS DIVISADERO CO.

SALVADOR

Office: 625 Market St., San Francisco, Cal. **Mine office:** Divisadero, Dpto. Morazan, Salvador, C. A.

Officers: Chas. Butters, pres.; Chas. W. Slack, v. p.; Sidney M. Stone, sec.-treas., with Chauncy S. Goodrich and Sydney A. Cloman, directors. R. R. Leslie, supt.

Inc. Jan. 23, 1905, in California. **Cap.**, \$750,000; shares \$5 par; all issued. Annual meeting 2nd Monday in April. Owns gold-silver mines at Divisadero, Dpto. Morazan, Salvador, C. A.

BUTTERS SALVADOR MINES, LTD.

SALVADOR

Office: 51 Commercial Union Bldg., St. James St., Montreal, Que.

Officers: Chas. Butters, pres.; D. J. Pullinger, v. p.; J. J. Meagher, sec.; with J. Johnstone, directors.

Inc. Nov. 9, 1912, in Canada. **Cap.**, \$750,000; shares \$5 par; all issued. In voluntary liquidation, October, 1917.

COMACARAN GOLD MINING CO.

SALVADOR

Address: Don Emilio Gonzalez, res. mgr., El Harmiguero, Rep. del Salvador, C. A. **Gen. office:** Ciudad, Salvador, R. del Salvador.

Officers: Benj. Gonzales, pres.; Gustave Vides, v. p.; Lucio Quiñones, sec.-treas., above are directors. G. A. Swanquist, supt.

Inc. 1909, in Salvador. **Cap.**, \$500,000; shares \$100 par. Semi-annual meeting in January and June.

Gross earnings for 1916 reported at \$245,920, and \$308,694 for 6 months ending July, 1917. Two dividends have been paid to date.

Property: 3 mines, Gallardo, Harmiguero and Guadalupe, 550 acres mineral land and 12,000 acres timber and agricultural land. Ore occurs in fissure veins in andesite, averaging \$7-\$8 in gold and silver.

The ore of Harmiguero is a very hard quartz carrying silver sulphide. The gold bearing Gallardo ore is soft and friable, and carries calcite; the Guadalupe ore carries gold, is soft, highly oxidized, contains iron and manganese and slimes heavily. The ore from all three mines is conveyed by aerial tram to the mill.

Development: by about 37,200' of workings, including 2 shafts, 464' and 344' deep and a 250' tunnel.

Equipment: includes steam power, hoist, 3 compressors, tramway and a 180-ton cyanidation mill, making an extraction of 92%.

Production: in 1914, 30,483 tons; 1915, 49,430 tons; 1916, 40,976 tons, with total output to date of 150,000 tons.

Management plans installing electric power in 1917.

SAN SEBASTIAN MINE**SALVADOR**

Address: Gustave Scogland, supt., via La Union, Department of La Union, Salvador, Central America.

Property: 30 miles N. of La Union, San Salvador.

Geology: fully described by C. Erb Wuensch in Mining and Scientific Press of Sept. 8, 1917. Deposit consists of contact fissure veins carrying gold-bearing pyrite. Veins occur at contact between a quartz monzonite porphyry dike and the surrounding eruptives, which are basalt capped by trachyte. No ore has been developed below 700' depth, where the ore is erratic in rich pockets. At 800' there is general impoverishment.

Development: by 800' shaft, with 1,800' drainage tunnel 30' below, and 30 miles of workings. Work proceeds at 100 points, and 2,000' of work is done monthly.

Production: 3,500 tons milled each month. Total output is approximately \$15,000,000.

Deposit is unusual and although there are practically no reserves, exhaustion cannot be predicted.

EUROPE

EUROPE

GREAT BRITAIN

AFRICAN ORE CONCENTRATION SYNDICATE, LTD. ENGLAND

Secretary and office: J. A. Stocker, 701 Salisbury House, London, E. C., England. A. S. Elmore, Walter McDermott and C. Pakeman, directors.

Inc. June, 1905. Cap., £12,000; shares £1 par; issued and fully paid.

Company has patents for the treatment and concentration of ores and has erected plants at the Transvaal Consolidated Land & Exploration Co., and Namaqua Copper Co.'s properties in South Africa.

DOLCOATH MINE, LTD.

ENGLAND

Office: R. A. Thomas, mgr., Camborne, Cornwall.

Directors: F. Harvey, chairman; O. Wethered, H. C. Godfrey, J. M. Holman, F. A. Robinson and F. W. Thomas.

Inc., July 15, 1895, in England. Cap., £350,000; shares £1 par, all issued.

Dividends: since 1896 total 135%. None have been paid since 1913.

Property: a well known tin producer in Cornwall. From 1700 to 1799, it was worked for copper and from 1799 to 1867 yielded copper, tin, arsenic, silver, and cobalt, valued at £3,234,693.

Equipment: includes machinery for the present 3,000' shaft, 16 Holman pneumatic stamps, concentrators and Elmore flotation plant.

Production:

	Ore Treated tons	Black Tin (tons) (70% metal)	Costs per ton
1916.....	79,347	1076	\$6.52
1915.....	82,967	1187	6.36
1914.....	105,302	1439	5.80

EAST POOL AGAR, LTD.

ENGLAND

Office: G. F. Maynard, sec., Carn Brea, Cornwall.

Directors: H. W. Rogers, chairman, J. H. Bain, J. M. Holman, J. C. Gardner, W. J. Loring and C. A. Moreing. Bewick, Moreing & Co., gen. mgrs.

Inc. Jan. 11, 1913, in England. Cap., £100,000; shares £1 par; 92,155 issued.

The net profit for 1916 was £22,485, of which £9,116 was paid in dividends.

Dividends: 10% in 1916.

Property: a lease of 42 years on 2 mines that were worked from 1834 to 1912 at Illogan, Cornwall.

Development: in 1916 amounted to 4,501'; besides 189' of diamond drilling. On the 1,440' level, for a length of 39' and 5½' width the vein assayed 55 lb. black tin and wolfram per ton and for 185' and 6' width assayed 10.8 lb. Other openings at this depth were satisfactory. Reserves are being maintained.

Equipment: includes 10 Holman pneumatic stamps, 5 tube mills, 32 concentrators, slime plant, magnetic separators.

Production: in 1916, 81,395 tons treated, 9 stamps averaging 26.1 tons per day each. Ore averaged 21.95 lb. metallic tin per ton, of which 72.9% was extracted. Recovery was 1,411,000 lb. tin, 100 tons wolfram, 527 tons of arsenic and 237,400 lb. copper.

MINERALS SEPARATION, LTD.**ENGLAND****Sec. and officers:** A. O. Williams, 62 London Wall, E. C., England.**Directors:** J. Ballot, chairman and managing director; J. H. Curle, F. L. Gibbs, Dr. S. Gregory, H. A. Krohn, W. W. Webster.**Inc.** in 1903 to carry on metallurgical operations. **Cap.**, £50,000; shares £1 par; all issued and fully paid.**Annual report:** for 1915, submitted Dec. 28, 1916, shows a profit of £22,302; balance forward, £55,014; cash, £19,463; investments, £83,343; creditors, £14,827; debtors, £22,995; share premium account, £19,944.

The chief assets of the company are a number of patents (said to be over 50) for flotation processes and machines for recovery of concentrates from silver and lead, zinc, copper, and other ores. The use of flotation has been as great an advance in the treatment of zinc and copper ores as the cyanide process has been for gold ores. United States, Canadian, and Mexican Minerals Separation patents are owned by Minerals Separation North American Corporation, which see.

ORE CONCENTRATION CO. (1905), LTD.**ENGLAND****(Elmore Process Co.)****Office:** 701 Salisbury House, London, Eng. **Managing directors:** Alex. Stanley Elmore, chairman, and F. E. Elmore; Walter McDermott and B. C. Hinman, directors. J. A. Stecker, sec.**Inc.** Nov. 18, 1905, in Great Britain. **Cap.**, 230,000 ord. shares of £1 each, 224,544 issued, and 20,000 pfd. of £1 each, 8,795 issued.

Company owns the Elmore patents in certain parts of the world, for concentration of ores by the use of oil, and has installed plants at low grade copper properties in many parts of the world.

TINCROFT MINES, LTD.**ENGLAND****Office:** Wm. Thomas, mgr., Carn Brea, Cornwall. F. E. Martin, sec.**Directors:** Jas. Wickett, chairman; T. R. Bolitho, J. Gilbert and H. Bolitho.**Inc.** May 20, 1900, in England. **Cap.**, £37,000, in 50,000 priority and 100,000 ord. 5s shares, of which 38,607 and 96,953, respectively, are issued. **Debentures:** £30,000 authorized, of which £10,000 have been issued.

Statement for 1916 shows earnings from ore sales of £77,846. Operations cost £72,844. Deducting "lord's royalties", (owners), etc., there was a loss of £1,191 for the year. Since 1900 profits and losses have been very erratic, but about balanced one another.

Dividends: priority shares received 10% in 1907, 5% in 1912 and 1913.**Property:** 142 acres at Carn Brea, Cornwall, shows a lode, 3' to 15' wide, dipping 60°, and opened to a depth of 1,248' in granite. Ore carries arsenic, copper, tin and wolfram. Reserves are about 80,000 tons.**Equipment:** includes beam hoist, 2 Cornish pumps, motor driven Ingersoll-Rand compressor and 200-ton dressing plant.**Production:**

	Ore Treated	Arsenic tons	Copper lbs.	Tin lbs.	Wolfram tons	Yield p. t. ore	Cost p. t. ore
1916.....	57,500	663	197,120	1,155,840	44	\$6.48	\$6.06
1915.....	59,000	538	67,200	1,361,920	39	5.22	5.04
1914.....	59,000	467	107,520	1,375,360	19	5.08	5.32

GERMANY**MANSFELD COPPERSCHIST MINING CO.****GERMANY****(MANSFELD'SCHE KUPFERSCHIEFERBAUENDE GEW.)****Mine office:** Eisleben, Prussian Saxony, Germany.**Officers** (at last accounts): Dr. Dittrich, Dr. Lehmann, Dr. Lengnick, E. Kreuser, Br. Windisch and I. J. Tobias, executive committee; Bergrat Dr. Vogelsang, gen. mgr.; Rudolph Franks, gen. smelter supt.; Herr Ludwig, gen. mgr. and supt.**Inc.** 1852, as a consolidation of numerous independent operators, and reorganized, April 10, 1876, under laws of Prussia. **Cap.**, 69,120 shares, apparently without assigned value.

Dividends: have been 90 marks per share in 1900; 45 in 1901; 15 in 1902; 40 in 1903; 40 in 1904; 80 in 1905; 120 in 1906; 70 in 1907; nothing in 1908 and 1909; 10 in 1910; 15 in 1911; 45 marks in 1912; no information available since.

Treasury shares to the amount of 2,000,000 marks, and a new issue of 5,000,000 marks, were authorized 1908, to provide for the deepening of shafts, rebuilding and enlarging of the electric plants at the Krughütte and Kupferkammer works, construction of new copper and brass works at Hettstedt, and other improvements.

Forces employed are upwards of 22,000 men, and exclusive of the Westfalen coal mines, averaged 19,735 men 1912, of whom about 70% were employed at the mines and 13% at the smelters.

Property: is extensive, including besides the Mansfeld copper mine, large coal mines in Westphalia, and a potash bed near Wansleben, opened by 1 shaft, which has been in operation since 1903. Landed holdings also include considerable tracts of forest.

The coal mines at Langendreer, near Hamm, Westfalen, include several adjoining mines, with 4 operating shafts, and in connection is a coke plant of about 225,000 metric tons yearly capacity, production averaging about 2,500 metric tons of coal and coke daily. There are 2 crushing plants, 1 near Walzwerke and the other at Rothenberg.

The Mansfeld mine was opened A. D. 1199, was immensely profitable during the fourteenth and fifteenth centuries, but the industry nearly suffered extinction during the Thirty Years' War. Activity was resumed in 1671, when the right of working the mines was declared free, this resulting in the building up of a great number of small independent operators. The present company was first formed 1852, as a consolidation of the various small mine operators and smelters, and the merging of many small interests has resulted in a nearly seventeenfold increase of production, from 1,179 metric tons fine copper and 6,489 kilograms silver in 1852.

Geology: The principal orebody of the Mansfeld mines is the kupferschiefer, a fine-grained bituminous shale, lying nearly horizontal, having a dip of about 5° only, with average thickness of 1', of which only 8" are workable, but covering several hundred square miles. The principal ore is slightly argentiferous chalcopyrite, bornite and chalcocite, occurring as speiss, disseminated in very fine grains through the kupferschiefer. Lying just under the kupferschiefer is an arenaceous shale, carrying chalcopyrite. There also is a slightly cupriferous limestone bed, known as the Dachberg. The kupferschiefer carries 2.9 to 10% copper, and ores smelted average 2.5 to 3% copper and 0.015 to 0.020% silver.

The mine has been modernized in methods and equipment since the beginning of the 20th century. Owing to the great age and extent of the old workings, the headings usually were 2 to 4 kilometers from the shafts, hence the actual mining was done under considerable disadvantages, the thinness of the bed and the great extent of the workings rendering it necessary for miners to work on their sides, stomachs or backs, as in coal mines, wearing boards upon their trunks and thighs, in order to protect themselves from the rock floors. Recent mining operations are through a row of 6 deep-level hoisting shafts, intersecting the kupferschiefer at depths of 300 to 600 meters. Three other shafts reach the seam at still greater depths, and 2 of these also intersect a bed of excellent carnalite. These shafts are all circular, 6 meters in diameter, with a lining of brick, backed by concrete. Many of the scores of old shafts which average about 400 meters in depth, are used for ventilation, safety and raising water. The principal new shafts are the Hohenthal, at Helbra, the Herman, at Helfta, and the Paul, at Helmsdorf. All new shafts have steel headframes. Underground haulage, formerly done by horses has been supplanted by electric locomotives, in the newer workings. Ore is hand-sorted on reaching surface, and waste rock, including considerable limestone, is used for underground filling.

Water from the entire mine is drained to the Hohenthal, Ernst and Niewandth shafts, whence it is raised by steam and electric pumps to the main adit, 150 meters below surface.

Equipment: is very complete. The shafts have mainly cross-compound steam hoists, with conical drums for deep winding, but the Hermann and Paul shafts and the newer exploratory shafts have electric hoists employing the Ilgner system of balancing. All hoisting is done by double-deck cages, raising 4 trucks. Electric power is used extensively and increasingly, and this is developed mainly from gas installations, with power stations at the Krughütte and Kupferkammer reduction plants.

The company maintains independent machine shops, capable of repairing or building any mining or pumping machinery in use, and also has extensive smithies and wood-working shops.

The Krughütte gas power station has two 1,300-h. p. units, the blast furnaces being connected with 2 parallel gas trunks, taking blast gases to a purifier house, where there are Zschokke and Theisen centrifugal washers, through which the gas passes, and is then dried by passing through a Theisen vapor separator, going thence to a gasometer of 500 cubic metres capacity, from whence it is drawn, as required, to two 1,300-h. p. Ochelhäuser gas engines, direct-connected to a Siemens-Schuckert 3-phase alternator of revolving field type. Current is transmitted to various works at 3,000 to 10,000 volts, and there stepped down for use.

Transportation is by railway lines and a number of Otto aerial trams, the Hermann mine having a 7-kilometer electric aerial tram.

The Mansfeld has numerous reduction plants, including 2 smelters for raw ores, 2 roasting smelters with acid plants, 2 matte smelting works, and a desilverizing plant, the various works having a total of 13 reverberatory furnaces.

The method of reduction is by heap roasting, and calcining in shaft furnaces. Roast heaps are built about 1,000 meters long, 6.5 meters broad at the bottom and 3.5 meters broad at the top, and 2 meters high. The only fuel used is a little brushwood, at the edges and bottoms of heaps, and each heap is roasted about 4 weeks. If the ore carries any fines, these are screened, briquetted and added to the roast heaps. Roasting reduces the ore 7 to 10% in weight, and is more for the elimination of carbon dioxide and bituminous matter than to throw off sulphur, the latter running only 2 to 3% in the raw ore, while the bituminous matter ranges 10 to 17%, and carbon dioxide 7 to 13%. There are 2 roast stalls near the shafts, and at the furnaces the first-fusion product is a matte carrying 40% copper and 0.25% silver. This matte is broken up and roasted in 2 calcining kilns, and the roasted matte, with the addition of 5 to 10% raw matte, is smelted in reverberatory furnaces to white metal carrying 74 to 75% copper and 0.45 to 0.50% silver. The slags from the white metal carry 4 to 6% copper and are returned to the shaft furnaces. Slag is utilized extensively for the manufacture of slag brick and paving blocks. The white metal is ground in Krupp ball mills and sent to the Saigerhütte refinery.

The Kochhütte, at Helbra, is the principal smelter, treating about three-fifths of the total production. There are 8 furnaces, 1 held in reserve, of circular shaft type, using cold blast.

The Krughütte treats about two-fifths of the total production. This plant, at Eisleben, near the mines, has 6 furnaces, 1 being held as a spare, of circular shaft type, with forehearths, using cold blast.

The Eckardthütte, at Leimbach, has 4 copper furnaces of circular shaft type, using cold blast. This plant also has 1 lead stack, producing silver and lead matte, and makes a little nickel speiss from resmelted fine dust. In connection with the Eckardthütte is an acid plant having 72 kilns and 5 lead acid chambers, using the chamber process of acid making.

The Kupferkammerhütte, at Hettstedt, has 3 furnaces of circular shaft type, but, unlike the other plants, employs a hot blast to some extent. The acid plant at the Kupferkammerhütte has 82 kilns and 6 lead acid chambers, turning out 50 metric tons of 50° Beaumé sulphuric acid weekly.

The Gottesbelohnungshütte is one of the smaller and less modern smelters, equipment consisting of 13 small reverberatory furnaces, 17 roasting furnaces and 2 small furnaces for refining slags.

The Saigerhütte is mainly a refinery, including a desilverizing plant, operating on the Zervogel process, which roasts the matte and retains the silver as a sulphate which is dissolved in water and the solution run over metallic copper, which precipitates the silver, the cement silver so secured being pressed and resmelted to metal 999 fine. The final furnaces product, after the extraction of the silver, is blister copper of 99.7 to 99.8% tenor.

Production: which was only 5,865,898 lbs. in 1867, increased to 15,230,287 lbs. in 1877, to 29,176,000 lbs. in 1887, and 40,230,400 lbs. in 1897. Recent production has been as follows: 42,500,278 lbs. in 1903; 41,629,349 lbs. in 1904; 43,824,141 lbs. in 1905; 40,108,000 lbs. in 1906; 38,822,000 lbs. in 1907; 39,686,800 lbs. in 1908; 41,891,400 lbs. in 1909; 44,769,800 lbs. in 1910; 45,955,600 lbs. in 1911; 45,188,600 lbs. in 1912. Production in 1912 was secured from 873,305 metric tons of cupriferous material smelted. Estimates place the 1915 yield as 44,100,000 lbs., and in 1916, 59,000,000 lbs.

The Mansfield is handled with high technical skill, and its orebodies, by reason of their vast extent, are among the largest known.

SAXON TIN & WOLFRAM MINING CO., LTD. **GERMANY**

Office: H. W. Chappell, 65 London Wall, London, E. C.

Directors: O. J. Stannard, chairman; W. B. Dick, A. Jourdan, A. H. Wethered.

Inc. March 1, 1913, in England. **Cap.**, £60,000, in 30,000 6% pfd. £1 and 300,000 ord. 2s shares, all issued.

Property: the Vereingt-Zwitterfeld Fundgrube tin and wolfram mine of 44 acres in the Saxon Erzgebirge, 37 miles from Dresden, Germany.

Reserves: as mine filling, dumps, etc., amount to over 250,000 tons. In 1913, 62 tons of concentrate was recovered from 7,048 tons of ore. A 200-ton mill was started late in 1913. No recent returns are available on account of the war.

GREECE

ANGLO-GREEK MAGNESITE CO., LTD.

Office: J. D. Henderson, 24 Finsbury Square, London, E. C., England.

Directors: C. F. Colville, chairman; J. McLaren, W. G. Waldron and J. Hogg, gen. mgr.

Inc. Aug. 21, 1902, in Eng. **Cap.**, £125,250 in 50,000 7% cum. pfd., 74,000 £1 ord. and 25,000 1s dfd. shares.

In 1915, profit was £49,359, of which dividends absorbed £21,310. There was £18,512 carried forward. The reserve fund was £32,000 and depreciation account, £66,064.

Dividends: 7% each year on pfd. shares; total on ord. shares since 1904 is 116% and 425% on dfd. shares since 1911, the 1915 distribution being 300%.

Property: 5,000 acres on the island of Eubea, Greece, mostly magnesite bearing.

Production: is not given, but operations must be highly profitable, judging by profits. Much of the ore comes to the United States in normal times.

ITALY

LIBIOLA COPPER MINING CO., LTD.

ITALY

Office: Bishopsgate House, 80 Bishopsgate, London, E. C., Eng. **Mine office:** Sestri Levante, Genoa, Liguria, Italy.

Officers: T. V. Anthony, chairman; H. Hubert James and Albert Straube, directors; C. J. Whitaker, sec.; Robert H. Cravens, mine mgr.

Inc. Jan., 1867, in Great Britain, and reconstructed 1888. **Cap.**, £252,000; shares, £5 par. Paid dividends of 2s 6d in 1903; 3s 6d in 1904; 3s 6d in

1905; 2s 6d in 1907; 2s in 1908; 1s 6d in 1909; 1s 6d in 1910; 2s in 1911; 3s in 1912; 2s 6d in 1913; 1s 6d in 1913; 1s 6d in 1915; 1s 6d in 1916; with total dividends of £5 12s 9d.

Property is worked through a subsidiary company, organized under laws of Italy.

Property: 4 claims, leasehold, 1,000 hectares, also a half-hectare mill site, including the Libiola mine, in the Carrara district. The mine, worked by the Romans, and reopened 1867, has about 10 miles of workings. The property has veins of good average size in serpentine and diabase carrying a little malachite in the upper workings, but mainly chalcopyrite associated with pyrite, ores estimated by management to average 3.45% copper and 45.03% sulphur, with 64,440 tons of ore blocked out for stoping at the end of 1916.

Equipment: includes a 150-h. p. steam plant, 60-h. p. electric plant and a 30-h. p. hydraulic plant, with 90-h. p. used at the mine and 150-h. p. at the mill. There is 1 hoist, and 2 air compressors of 12 drills aggregate capacity. The mine has a machine shop, smithy and carpenter shop, all of stone, and there is a sawmill, with band saws.

The mill, covering 550 square meters, is built of reinforced concrete and stone, and has a daily capacity of 180 tons.

Production: was 19,643 tons of ore in 1916, of which about 8% was copper ore averaging 5.64%, production of fine copper being about 210,132 lbs. The company is well managed and by careful handling the property, though small and by no means rich, is made to return satisfactory profits.

NORWAY

AAMDALS KOBBERVERK.

Formerly owned by the Mandak Elektrolytiske Kobbervaerk.

Address: Telemarken, Norway. N. A. Nielsen, Christiania, chairman; H. D. Dahll, managing director.

Property: about 3,000 acres, at Foldal, Norway, carrying considerable producer for nearly three centuries. The ore is low grade, carrying chalcopyrite and bornite, averaging about 2% copper, with a gangue of slate and quartz.

The new concentrating works built in 1915, consist of coarse-sorting house, crusher, jigs and tables. Concentrates produced contain about 25% copper.

Production, 1916, amounted to 900 tons concentrates, equivalent to 225 tons copper.

DUNDERLAND IRON ORE CO., LTD.

NORWAY

Office: F. C. Heley, 4 Copthall Ave., London, E. C., Eng.

Inc. April 22, 1902, in England. **Cap.,** £450,000 **Bonds** £250,000 prior lien, in £25, £50, £100 and £500 bonds.

Property: concession of several square miles, 35 miles from Mo, W. coast of Norway. Iron ore available is about 80,000,000 tons, averaging 39%. A plant is to be erected to dress this ore, as the Edison process is unsuitable.

FOLDAL COPPER & SULPHUR CO., LTD.

NORWAY

Office: 7 St. Michael's Alley, Cornhill, London, E. C., England. **Mine Mgr. and office:** W. H. Lund, Foldal, Lille-Elvedal, Norway.

Directors: Sidney St. J. Steadman, chairman; Walter Gardner, Edw. T. McCarthy, Geo. Schuster, M. S. Stutchbury and J. C. Williamson; W. A. Carlyle, cons. engr.; D. N. Forbes, sec.

Inc. Jan. 27, 1906, in Great Britain. **Cap.,** originally £350,000; shares £1 par, in £150,000 preferred and £200,000 deferred stock. Company re-organized in 1914 and capitalization reduced to £185,000; shares £1 par; 28,000 shares issued, Dec. 31, 1915.

Balance sheet: for year ending Dec. 31, 1915, issued Nov., 1916, includes: Assets—mining properties, £60,000; equipment, £52,479; ore stocks, £17,405; provisions and livestock, £16,006; debtors, £19,669; cash, £18,478. Liabilities—capital stock, £28,000; mortgages and liens, £155,074;

creditors and credit balances, £21,911. Net receipts from ore sales amounted to £8,808. Operations for the year showed a loss of £1,610, with a total debit to date, £18,712.

Property: about 3,000 acres, at Foldal, Norway, carrying considerable timber, and including 5 old mines, known as the Juliana Marie, Knutshovd, Foldal, Grev, Moltke and Grimsdal, worked for about 150 years. Mine, opened mainly by tunnels, shows a vein of about 12' average width, carrying massive cupriferous pyrite, with only traces of arsenic, vein giving indication of persistence. Ore estimated to average about 2% copper and 46% sulphur. Property also has some ore of high copper tenor.

Development: during 1915 amounted to 5,385', compared with 6,328' in 1914. The main shaft was sunk to the 6th level, but exploratory work on this and the 5th and 7th levels did not fulfill expectations of the management.

Equipment: includes an excellent mining plant, installed at a cost of £105,000, and company has expended about £22,000 for substantial mine buildings. A large waterfall, on the Einuna river, held under a 25-year lease, subject to renewal, at annual rental of £25, has been improved with a hydro-electric power station. Good wagon roads have been built.

A 22-mile Pohlig aerial tram, which is one of the longest in the world, built at a cost of £38,412, runs from the mines to the Lille-Elvedal railway, and has a capacity of 40 metric tons per hour. Miscellaneous improvements include a telephone line, and a quay at Trondhjem, for ore shipments.

The tonnage of clean ore shipped from the mine to the railway was:—

Year		Tons		Copper, %		Sulphur
1910	58,558	1.93	46.31
1911	48,832	1.96	45.84
1912	45,334	1.99	46.38
1913	38,579	1.85	44.79
1914	40,457	1.84	44.87
1915	58,400	1.81	44.33

Property considered promising and management good.

ORKLA GRUBE-AKTIEBOLAG

NORWAY

Address: N. E. Lenander, mgr., or V. B. Lange, LökkensVerk, Norway.

Directors: Marcus Wallenberg, pres.; Th. Fearnley, v. p.; with Aug. Nachmanson, N. E. Lenander, Yohs Schwabroch, Odd Klingenberg and F. M. Treschow.

Inc. Oct., 1904, in Norway. **Cap.**, 16,000,000 kroner (\$4,160,000); shares 180 kroner (\$46.80) par.

Dividends of 7% are paid.

Property: at Meldalen, Norway. Deposits are lenses in gabbro. Ore is a cupriferous iron pyrite, carrying 2% copper and 42 to 44% sulphur. The mine is opened by 1 incline and 2 vertical shafts to 1,300' depth.

Equipment: five 1,200-h. p. electric hoists, four 1,400-h. p. compressors, two 130-h. p. pumps and a mill of 500,000 tons annual capacity.

Production: in 1915 was 180,000 tons, and in 1916, 100,000 tons.

ROSTVANGEN AKTIESELSKABET

NORWAY

Head office: Skippergaten 19, Christiania, Norway. **Mine office:** Rostvangen, via Tonset, Norway.

Directors: Johan Didrichsen, chairman; V. Koren, managing director. B. Bredesen, mgr.

Inc. May 18, 1908, in Norway.

Mine: is connected with the Kristiania-Trondhjem railway by an aerial tramway.

Production (annually): 40,000 tons of pyrite containing an average of 2.5% copper and 45% sulphur.

PORTUGAL

MASON & BARRY, LTD.**PORTUGAL**

Office: 87 Cannon St., London, E.C., Eng. Mine office: Pomarac, Alemtejo, Portugal. Jas. Francis Mason, chairman; D. H. Barry, deputy chairman; Edw. O. Barry, managing director; preceding officers, Henry E. Beddington and Francis Ricardo, directors; Philip O'D. Greene, sec.; Wm. Neville, resident administrator.

Inc. June, 1878, in Great Britain and reorganized June 2, 1892. Cap., £210,000; shares £1 par; issued, £185,172.

Net profits were £68,325 in 1906; £66,135 in 1907; £56,701 in 1908; £30,934 in 1909; £65,458 in 1910; £64,546 in 1911; £85,665 in 1912; £76,211 in 1913; £31,338 in 1914; £59,737 in 1915; £99,167 in 1916.

Balance sheet for 1916 shows profit of £99,167, of which £83,327 was distributed, equal to 45%. Amount forwarded to 1917 was £36,138, inclusive of balance from 1915.

Dividends: paid regularly since organization, ranging from 2s. to 13s. per share. Recent dividends have been as follows: 13s. in 1901, 11s. in 1902, 7s. in 1903, 7s. in 1904, 7s. in 1905, 7s. in 1906, 6s. in 1907, 6s. in 1908, 5s. in 1909, 6s. in 1910, 6s. in 1911, 7s. in 1912, 7s. in 1913, 3s. in 1914, 6s. in 1915, 9s. in 1916; all less income tax. Total to date, £1,453,592, plus return of capital £740,688.

The company has a staff pension fund.

Company was formed to acquire the lease on the San Domingos copper and sulphur mine at Mertola, Portugal, just over the border of Spain, and in the same belt of pyrite deposits as the Rio Tinto, Tharsis and others. The mine had then been worked since 1858.

The report for 1916 shows that 193,127 tons of pyrite was mined, and that the shipments of raw and washed ore were 202,176 tons. No details are given as to the production of copper or as to the nature of the ore mined and shipped.

Lands are held by lease for a 50-year term, ending Oct., 1958. The property originally was opened and worked extensively by the Romans. Development is by several shafts, deepest level being at 300 meters from surface. A mineral zone of about 200' width, and proven length of 2,000', carries lenses of cupriferous pyrite averaging slightly under 1% copper and about 50% sulphur, the principal values being in sulphur rather than in copper. With increasing depth copper values have decreased slowly but steadily.

Ore reserves: were 6,400,000 long tons at the end of 1916.

Ore is leached for copper values on the same general plan as at the Rio Tinto and at end of 1916 there were 480,000 tons in stock containing 1,400 tons of fine copper. Metal from precipitate in 1916 was 906 tons. Sulphur ore is shipped to various works in Europe and America for burning.

The company owns a railway to Pomarao, a tide-water port on the Rio Guadiana, where there is a shipping pier and tugs.

Production: maximum was 8,353,229 lbs. fine copper in 1901, and recent production has been as follows: 6,605,750 lbs. in 1904, 6,088,320 lbs. in 1905, 5,519,360 lbs. in 1906, 5,871,040 lbs. in 1907, 6,186,880 lbs. in 1908, 5,299,840 lbs. in 1909, 6,619,200 lbs. in 1910, 6,545,280 lbs. in 1911, 7,923,120 lbs. in 1912; 202,176 tons ore in 1916.

Apparently the day of the San Domingos has passed as an important copper producer, but the property, which has a long and honorable record of production, is carefully managed and is made to yield good profits from its sulphur ores.

RUSSIA

CAUCASUS COPPER CO.

Office: R. G. Jordan, 81 Palmerston House, London, E.C., England.

Directors: J. Colquhoun, chairman; M. Grancini, Viscount Grimston, E. B. Lockhart.

Inc. Oct. 4, 1900, in England. Cap., £1,000,000; shares £1 par; 513,500 issued. Debentures: £42,620 of 5%.

Property: near Dzansul, Caucasus, southern Russia. In 1912 reserves were estimated at 3,600,000 tons of 3.1% copper ore. In 1914 the Turkish army took possession, but was ejected 5 months later.

The mine has a 1,000-ton mill using flotation. In 1913-14 the yield was about 8,900,000 lbs. copper.

FINNISH-AMERICAN MINING CO.**FINLAND**

Office: Calumet State Bank, Calumet, Mich. Operating office: Fennia Bldg., Helsingfors, Finland. Mine offices: Kisko, Abó, Finland and Joensuu, Kupio, Finland.

Officers: Dr. Aartavara, pres.; Edw. Ulseth, first vice-pres.; Jacob E. Saari, second vice-pres.; Akseli Rauanheimo, sec.; Chas. O. Jackola, asst. sec.; J. H. Jasberg, treas.; Oscar J. Larson, counsel; preceding officers, John Saari and Chas. J. Wickstrom, directors.

Inc. Dec., 1906, in Minnesota. Cap., \$750,000, shares \$1 par, as successor of Sampo Mining & Development Co.

Property: 4 groups, bought of the Fiskars Aktiebolag, including mineral rights, without royalty, to all ores and minerals except iron ore, for the entire estate of about 90 sq. miles and an additional tract, adjoining the Orijarvi mine, was bought, 1910, from the same company. Property has both water and rail transportation. Is now idle.

The Orijarvi mine, about 50 miles from Helsingfors, which is the principal property, was opened A. D., 1757, and mining was continued without interruption until 1875. The property is popularly credited with an output of \$5,000,000 in copper and silver. The Orijarvi shows slight surface indications of the large orebodies below; these lying in silicious limestone near an intrusive quartz-diorite contact, ore being chalcopyrite, sphalerite and occasional galena, all more or less auriferous and argentiferous, associated with pyrrhotite. The Orijarvi tract is a parallelogram of approximately 2 by 5 miles, and the old mine was opened very peculiarly, by a series of truncated conical caves, with apexes at surface, openings gradually increasing in diameter with depth, there being no drifting. The old workings show stopes up to 60' wide. Diamond-drill borings, with 8 holes, have shown the orebodies to continue beneath the bottom of the old workings. The mine has 9 shafts, deepest 500', with levels at 100' intervals. The old stockpile carried upwards of 30,000 tons of zinc and lead ores discarded from previous operations, but probably of present value, as a zinc smelter could be built at a reasonable cost if shipping were found impracticable. Equipment at the Orijarvi includes a steam plant with a good modern hoist and air compressor.

The Illijarvi mine, 3 sq. miles, bought 1909, adjoins the Orijarvi. The old workings, about one-half mile from the Orijarvi mine, show a well mineralized vein, carrying silicious chalcopyrite, similar to that of the Orijarvi, but with higher gold values.

The Hokka and Kykka mines are included in the mineral claims taken up in 1909 near the Illijarvi. The Hokka mine, carrying a continuation of the Orijarvi orebody, was opened 1850, and has two 125' shafts, developing slightly argentiferous and auriferous chalcopyrite of good average tenor, with quartz gangue. The company has made 650' of new openings on this property. The Kykka shows conditions much similar to the Hokka.

The Bröðthorp mine, 4 miles from the Orijarvi, in the parish of Johja, near Skuru, has an area of 20 sq. miles, with mineral rights to the entire

tract, save for iron ore. The Brödthorp, carrying a contact deposit between diorite and quartzite, has a 100' shaft showing complex mixture of copper, lead and zinc sulphides, zinc predominating. The Brödthorp shows numerous ancient pits and trenches, with 1 shaft of about 125' depth.

The Kerkela mine, in the parish of Enare, Finnish Lapland, about 100 miles from a railroad, has a fissure vein carrying free-milling gold ore, of good average assay tenor. The company also has options on iron properties in northern Finland, carrying magnetic ore assaying up to 69.5% iron.

The Orijarvi mine is 10 miles from the state railroad at Turku, but the management plans building a private line, of either 5 or 10 miles, to a seaport, the longer route having a wharf at its terminus. The millsite is on Lake Orijarvi, 5 miles from the Orijarvi mine, and mill is now erected.

About 75 men were employed, at wages of 50 to 80c per day, labor being abundant, good and cheap.

Local prejudice, taking the form of legal obstruction, increased and annoying taxation and innumerable petty interferences has hindered operations, discouraged the company's backers and caused a lack of confidence in the company's ability to carry out its plans. After having spent \$250,000 and demonstrated that the property could be made a success, the company was forced to suspend operations and is now both idle and out of funds.

IRTYSH CORPORATION, LTD.

RUSSIA

Office: J. P. B. Webster, 7 Gracechurch St., London, E.C., England.

Directors: L. Urquhart, chairman; B. G. Brown, A. A. Davidoff, D. P. Mitchell, C. A. R. Scott and Baron V. V. Meller-Zakomelsky. H. H. Knox, cons. engr.

Inc. Nov. 27, 1914, in England. Cap., £2,000,000; shares £1 par. Debentures: £1,000,000—6% authorized, £500,000 issued; bonds £20 and £100 each. This company acquired the whole capital of the two Russian companies, the Ridder Mining and Kirgiz Mining. It was promoted by the Russo-Asiatic Corporation, which see.

Property: the Ridder and other zinc-lead-copper mines in the Altai region, Western Siberia. The company also owns a coal mine producing 75,000 tons yearly.

Development: in March, 1916, reserves were estimated at 945,000 tons assaying 31.2% zinc, 18.1% lead, 1.5% copper, 9.7 oz. silver and 0.47 oz. gold; also 2,229,000 tons of concentrating ore containing 6.7% zinc, 3.5% lead, 0.5% copper, 1.7 oz. silver and 0.7 oz. gold per ton.

Equipment: concentrating mill, of 200,000 ton per annum capacity, power plant, coke plant, zinc distillation plant of 20 blocks of retorts (6 finished), lead smelter, refinery and accessories, 143-mile railway, 8 river steamers with barges.

The ore is mined and treated at the Ridder property, carried 63 miles by rail, 430 miles by river, again 80 miles by rail to the colliery and smelters.

When in full operation this great property will add considerably to the world's metal output.

KYSHTIM CORPORATION, LTD.

RUSSIA

Head office: 7 Gracechurch St., London, E. C., England. Operating office: Nevsky Prospect 1, Petrograd, Russia. Mine office: Kyshtim, Perm, Russia.

Officers: C. J. C. Scott, chairman; L. Urquhart, mng. director; R. G. Brown, V. V. Meller-Zakemelsky, D. P. Mitchell, S. Polak, T. B. Reynolds and A. J. H. Smith, directors; J. P. B. Webster, sec.

Inc. Oct. 29, 1908, in Great Britain, to acquire the entire share capital of the Kyshtim Mining Works, a Russian corporation. Technical officers of this company are P. A. Ivanoff, managing director; R. G. Brown, cons. eng., and F. J. Jones, advisory eng. in Russia. Cap., £1,260,000; shares £1 par; 1,254,240 issued and fully paid. Debentures authorized: £650,000 at 6%, of which £13,300 are outstanding, the balance having been converted or redeemed into fully-paid shares at £2 10s. each.

Dividends: initial dividend paid in Dec., 1912, equal to 5%, total in 1912, 22½%; 25% in 1913, 5% in 1914, 10% in 1915 (paid in Nov., 1916, and calculating on normal rate of exchange for the ruble.)

Balance-sheet for year ended Jan. 13, 1916, submitted Nov. 16, 1916, on account of the war, shows a profit of £111,278, which with previous balance, made available £257,064. After paying dividend of £83,616, and taxes £37,029, the balance for 1916-17 was £136,419. The Kyshtim Mining Works in 1915 had a gross trading profit of 4,397,445 rubles, of which 219,872 rubles was placed to reserve, 1,947,760 rubles to depreciation, leaving 2,229,813 rubles net. Out of this taxes are estimated at 760,000 rubles, and 1,067,623 rubles was reserved for loss in exchange. The war has greatly affected the finances of this great copper producer.

Property: 2,198 sq. miles, or 1,406,700 acres, the mineral lands covering 189,000 acres, the remainder being farm and forest areas, all situated in the Government of Perm, southern Urals, Russia. The copper mines are 36 miles from Kyshtim, connected by company's own line to the Government railroad. The iron mines are of importance, and the timber is used for fuel and mining purposes, also sold to the public.

Principal copper mines are the Amerikansky, Ivanoff, Kaniukoff, Smirnoff and Tissoff. Ore reserves in these are given as 3,148,000 tons, averaging 2.75% copper, an increase of 845,000 for the year.

Geology: as described by A. W. Stickney, the pyritic ore deposits of Kyshtim are compact, dense, massive aggregate of granular pyrite, barite, and quartz, carrying irregular blotches, streaks, and minute grains of chalcopyrite, sphalerite, and tennantite. The evidence indicates that the ore is the result of the metasomatic replacement of alternating bands of a sheared and broken schist by a rather fine-grained, cracked, and broken pyrite, anhydrous barite, and quartz. This granular aggregate contained considerable open interstitial space, which was later filled by contemporaneous chalcopyrite, sphalerite, and tennantite. Tennantite probably also marks a slightly-later stage in the primary mineralization, and with it are contemporaneously associated chalcopyrite and quartz of a second generation. The paragenesis of the sulphide minerals is one of decreasing iron and increasing copper content. The orebodies, as viewed in a vertical section, normally show four distinct, roughly horizontal and parallel zones. From the outcrop downward they may be designated as: (1) the gossan zone, which extends from the surface to a maximum depth of 60'; (2) the zone of loose baritic sand, extending from the bottom of the gossan to a maximum depth of 150', the greater part of which lies beneath the level of the ground-water; (3) the loose, leached sulphides, which reach from the bottom of the baritic sand to a maximum depth of 180', where they gradually pass into (4) the underlying, firm, massive, mainly unaltered sulphide ore. Downward enrichment of secondary sulphide does not occur in the form of a shallow, well developed, commercially important, horizontal zone, typical of many other localities, but has taken place to a relatively slight degree along the immediate walls, especially the hanging wall, to the greatest depth yet attained in exploration, which is 600' below the ground-water level.

Equipment: complete mine plants, also smelter at Karavash capable of producing 10,000 tons of copper yearly. There are 3 blast-furnaces of 400-ton capacity each, 1 reverberatory-furnace for fines and flue-dust and a large gas, regenerative-type reverberatory for fine ore. Company has an electrolytic refinery at Kyshtim, where it also treats blister copper from other companies.

Production: 1914, about 16,726,000 lbs. monthly; 1915, 18,229,000 lbs., 1916, 14,780,000 lbs. and in 1917, about 1,000,000 lbs. Gold and silver yield is considerable.

LENA GOLDFIELDS, LTD.

RUSSIA

Head office: 441 Salisbury House, London, E.C., England. Agency: Russian Mining Corporation, Ltd., Nevsky 19, Petrograd, Russia.

Officers: Lord Harris, chairman; A. Wischenegradski, vice-chairman;

with I. H. Amory, F. W. Baker, G. Benenson, L. Hoskyns and A. Poutiloff, directors; H. Richards, sec.; C. W. Purington, cons. eng.

Inc. July 10, 1908, in England. **Cap.** £1,405,000; shares, £1 par; 1,158,297 issued. Company holds 55.25% of capital of the Lena Gold Mining Co. (Lenskoie), the operating company in Russia. Ruble exchange and share-holdings make the financial situation complicated.

Balance-sheet for year ended Sept. 30, 1916,—presented 9 months later on account of the war,—shows a revenue of £1,050,730, including balance from previous year, £613,872; sale of Lenskoie shares, £245,635; Lenskoie dividend, £50,071; loans and interest, £38,554; and repayment of advances by Lenskoie, £102,598. Expenditure included advances to Lenskoie, £32,877; dividends, etc., £159,651; re-payment on account loan, £37,000; and purchase of Russian 5% Treasury bills, £663,219. This left a cash balance of £157,983.

Dividends: were 20% in 1909-10, 30% in 1910-11, 20% in 1911-12, nil in 1912-13, 5% in 1913-14, 1¼ rubles per share in 1914-15, paid in April, 1916.

Gross profit of the Lenskoie company in 1915-16 was £954,191. Of this a 12% dividend absorbed £209,524.

Property: gold placers worked since 1863, yielding over \$100,000,000. Four groups totaling 62,476 acres in Irkutsk province of Siberia.

Development: for many years operations were on somewhat primitive lines, but modern methods are gradually being introduced, including prospecting by drilling, underground drift mining, hydraulicking, dredging, and winter washing of gravel; also improved sluices, riffles, jigs and clean-up accessories. There are 7,000 men and 800 horses employed, which great number the engineers are trying to reduce considerably.

Ore reserves are enormous. Drifting material is estimated at 1,395,412 cu. yd., with over 7,000,000 cu. yd. possible; and dredging material 48,520,000 cu. yd., plus 275,000,000 cu. yd. possible. The drift ground averages \$8.60 per yd.; the dredging ground 37c.

Production: in 1915-16, there was washed 788,942 cu. yd. of gravel, yielding £1,503,736; of this 753,240 cu. yd. yielded \$9.56 per yd. Cost is about \$3 per yd., but owing to unsettled conditions, nothing definite is given. Costs are decreasing through improved methods.

Is an immense project, with a long life and is in a transition stage from primitive to modern methods of extraction and treatment. Engineers find themselves handicapped by old prejudices, complex finance, indifferent labor, severe winter climate and distance from sources of supplies; yet management is gradually overcoming these obstacles. Alaskan methods should be applicable in Siberia, and these are being tried, especially as gravel yields up to \$9 per yd.

ORSK GOLDFIELDS, LTD.

RUSSIA

Office: 65 Broad St. Ave., London, E. C., England. Thos. Mallinson, sec.

Directors: G. W. W. Mackinnon, A. C. Abrahams, Edw. Hooper, Wm. Goldie and J. C. Williamson. G. L. Nelson, gen. mgr. Hooper, Speak & Co., cons. engrs.

Total income for year ending Jan., 1916, was £105,611; expenditures, £51,323 in Siberia; London expenses, int., depreciation, etc., £24,460; net profit, £26,944.

Dividends: two paid in 1916, totaling £16,827.

Operates two gold dredges in Siberia. Treated 784,552 cu. yds. of gravel from May-Dec., 1915, yielding 975,913 rubles, of which 195,536 rubles came from leasers' work.

RUSSIAN MINING CORPORATION, LTD.

RUSSIA

Office: Henry Richards, sec., 441 Salisbury House, London, E.C., England.

Directors: F. W. Baker, H. D. Boyle, A. B. Haig, Walter McDermott, Baron A. de Gunzburg. Advisory engineer in Russia, A. Gernet; J. P. Hutchins, cons. engr.

Inc. Jan 6. 1911 in England. **Cap.** £250,000; shares £1 par; 245,250 issued.

Property: two mining concessions in the Altai region of western Siberia, the Zmeinogorsk of 12,292 sq. miles and the Zyrianovsk of 21,195 sq. miles. Minerals have been mined here from early times and records show an output of 45,550,000 oz. silver, 30,000 tons of copper and 500,000 tons of lead up to 1866. The Zmeinogorsk mines produced silver and lead with some copper; records placing the yield at 30,000,000 oz. silver and considerable lead up to 1855. The copper district yielded 25,500 tons of copper, 7,000 tons of lead and 3,100,000 oz. silver. The Zyrianovsk property has a series of lenses of complex ores; those developed, are estimated to contain 500,000 tons, assaying 23% zinc, 11% lead, 2.6% copper, 19 oz. silver and 0.35 oz. gold per ton. The war has greatly hindered exploration, but the Byelousovsk copper mine on the Zmeinogorsk concession promises well, drilling showing 3 to 6.7% copper ore for 20' in width. To develop the Zyrianovsk, a Russian company will be organized as soon as possible. Transportation is much easier than in other mining regions of Siberia.

RUSSO-ASIATIC CORPORATION, LTD.

RUSSIA

Office: J. P. B. Webster, 7 Gracechurch St., London, E.C., England.

Is an exploration company acquiring and developing mining properties in Russia. In 1914 it formed the Irtysk Corporation, Ltd. (which see), to operate the Ridder Concession and Ekibastus coal field.

SISSERT COMPANY, LTD., THE

RUSSIA

Office: 1 Broad Street Place, London, E.C., England.

Officers: J. B. Dale (chairman), W. Selkirk, C. Benenson, H. Guedalla, A. Kiaer, directors. N. C. Stines, resident eng.; E. J. Carlyle, metallurgical eng.

Inc. June 26, 1912. **Cap.** £1,000,000; shares £1 par; issued 755,000 shares, fully paid. Paid a dividend of 5% in 1913 and 1914. Shares are listed on the London Stock Exchange. An option expiring two years after peace, on 166,000 shares treasury stock has been granted. Title to property is held through the Sissert Mining District Co., Ltd., registered in Russia, which the company controls through ownership of entire share capital.

Property: about 340,000 acres, held under a perpetual lease, in the Urals, 30 miles S. of Ekaterinburg, on the Ekaterinburg-Cheliabinsk railway. The property includes many old copper, gold, and iron mines, and extensive forests, the principal copper properties being Degtiarsky, also the Poleskoy and Gumeshevsky mines, which have been worked since 1727, and the Syselsky, opened in 1906. There are also about 100 iron mines, yielding limonite ore of 40 to 53% iron content, with other mines yielding chrome and manganese. Iron ore reserves are estimated at 6,000,000 tons. The annual output of iron ore is 40,000 tons.

Development: the Syselsky copper mine is opened by 3 shafts, deepest 245', showing ore of about 5% copper tenor. Mine has a plant with a productive capacity of 1,500 tons per annum, making its copper at a cost of about 10c per lb. Ore reserves are estimated at 70,000 tons of 4¼% ore.

The Gumeshevsky and Polefskoy mines, discovered in 1716, have been operated almost continuously since 1727. These mines are about 500' deep, and up to 1870 produced a total of about 63,500,000 lbs. fine copper, though only oxidized ore was mined. The orebody is a contact deposit, genetically related to augitic rocks, and lying between limestone and augitic biotite syenites, the oxidized are occurring in a decomposed irony and calcareous clay belt, fully 2 miles in length and about 1,000' wide. The sulphide ores carry chalcopyrite in lenses of garnet-magnetite rock. The old ore dumps at the Gumeshevsky, consisting of clay material with fine ore that escaped hand-picking in earlier operations, are now being worked with excellent results. They still contain 500,000 tons. The ore is leached at the rate of 80,000 tons yearly.

Old slag dumps at Polefskoy are also to be reworked. These dumps, estimated at 640,000 tons, are said to contain 1% copper, about 75% of which is thought to be recoverable by pyritic smelting.

Fifty drill holes at the Degtiarsky mine showed 3,530,000 tons of 2.77% copper ore, with 3s. (72c) gold and silver. The orebody is about 10,000' long, 5,800' being fully proved. Over 5,000,000 tons is ultimately expected. Two shafts to 150', with laterals, confirm drilling results.

At the Staro Poldnefskoy and Kadnakofsky iron mines the surface is a true gossan and the underlying sulphide is certain to be copper bearing and of commercial value.

In the Krilatofsky mine, 6 miles from the Degtiarsky, are gold quartz veins in granitic schist. Reserves to 280' are estimated at 371,000 tons of 13s. 3d. (\$3.18), and 227,000 tons of 10s. 6d. (\$2.52) per ton ore. In the Blagoveshensky, near Sissert, is considerable 20s. (\$4.80) gold ore. These ores will be used as a flux, in reducing the copper ores.

The Degtiarsky and Susselsky mines also contain several million tons of iron pyrite.

From the Bgorshinsky and Isyhks mines a large quantity of coal is available.

Production: 40,000 tons of iron ore, 17,500 tons of pig iron, 10,000 tons of pyrite and some coal.

SPASSKY COPPER MINE, LTD.

SIBERIA

Office: J. A. Clark, mgr. and sec., 60 London Wall, London, E.C., England.

Directors: A. Fell, chairman; Ernest Carnot, v. c., J. B. Depelley, F. H. Hamilton, E. W. Parker and F. G. C. E. Robellaz. H. C. Bayldon, gen. mgr., at Spassky Zavod, Akmolinsk, Siberia; C. J. Hall, smelter supt.; C. Farmer, mine supt. of Spassky; J. R. Horsley, mgr. at Atbasar; E. T. McCarthy, cons. eng. Henry Puzly, mgr., Miasnitzokaia 17, Moscow, Russia.

Inc. July 9, 1904, in Great Britain. **Cap.**, £1,250,000; shares £1 par; 978,940 issued.

Statement for 1915, published Nov., 1916, showed a net profit of £126,453 earned in Siberia. This, and the previous balance is being used in the business. The remittance of funds from Russia is not permitted, so money will accumulate there. The rate of exchange is very unfavorable, £15 in Moscow realizing only £10 in London. These conditions will probably remain so until after the war. Assets included cash, £162,316; supplies, £159,256; and metals, etc., £163,039. Creditors, etc., amounted to £100,202.

Dividends: 15% in 1910, 17½% in 1911, 25% in 1912, 10% in 1914, declared in Oct., 1915. Further dividends postponed on account of the war.

Property: in the Kirghiz Steppes, in 2 main groups, about 300 miles apart, 250 and 500 miles, respectively, from the nearest point on the Trans-Siberian railway. After the war the government is to construct a line that will pass near the mines.

The Spassky group, comprising about 100 sq. miles, in the Akmolinsk district, includes the Yuspenssky copper mine and the Karagandy and Saran coal mines; also lands carrying iron and limestone.

Geology: the Yuspenssky mine has a network of veins at and near the contact of slate and arcose sandstone, in sedimentaries, of Permian age. The 2 main veins, known as the Annensky and Vladimir, or Yuspenssky, are about 200' apart and substantially parallel, and it is thought they may join at depth. Principal development is on the Annensky vein, which is 10 to 60' in width, carrying a hanging-wall paystreak of massive chalcocite, succeeded by bornite, largely massive, with silicious gangue, followed by small quantities of chalcopyrite and occasional tetrahedrite, the vein growing gradually leaner in copper toward the footwall, which is imperfectly defined and carries low-grade copper impregnations. The gangue is mainly quartz and barite, and the ore is estimated by the company to average 12 to 20% copper. The upper workings show some native copper, cuprite, azurite and malachite. The mine was gouged for rich ore by the former owners, who left a large amount of low-grade material unstopped.

Development: the Yuspenssky mine is opened by 3 shafts, the Annesky being 700' deep. Chalcopyrite is taking the place of bornite in the enrichment zone, while the mineral contents are becoming more evenly distributed. Reserves at the end of 1915 were 10,000 tons of 19% and 429,475 tons of 7.8% ore. Considerable diamond drilling was done in 1915 and 1916, with fair results.

Equipment: includes 900-h. p. steam plant, hoists, compressors, pumps, 150-ton concentrator and smelter, 26-mile railway and quarters for employes. During 1915-16 heavy supplies were transported by a portable 10-mile line, which is relaid in front of the train.

The Karagandy coal mine, 24 miles from the Spassky smelter, is developing well and produced 90,215 tons in 1913, 80,901 in 1914 and 63,984 in 1915.

The Atbasar group, 28½ sq. miles, 250 miles N. E. of Djousalie, the nearest station on the Orenburg-Tashkent railway, includes the Kresto, Pokrofsky, Annensky and Nadiozhdenski mines, and a coal area of about 9 sq. miles, 65 miles from the mines.

Geology: the Atbasar shows sedimentary sandstones, shales and conglomerates, on a plateau of about 20 sq. miles, lying about 70' above the level of the district, carrying numerous outcrops of malachite, and at depths of 50 to 70' from surface, are found sandstone beds mainly 18" to 8' thick and of 3' estimated average thickness, carrying bornite, claimed to average about 13% copper.

Development: work at Atbasar is under way and reserves were estimated at 543,900 tons of 10.7% ore.

Equipment: includes new mining machinery, buildings and smelter of 6,500-ton capacity of copper per annum, this being erected between the coal and copper mines.

Production at Spassky:

Year	Ore, tons	Copper, pounds
1906		1,865,690
1907		3,552,570
1908		3,838,235
1909	15,551	3,675,840
1910	19,647	5,540,160
1911	31,302	6,401,920
1912	28,315	8,955,520
1913 (15 months)	43,591	14,000,000
1914	20,697	10,490,000
1915	20,847	7,728,000

VERK ISETZ CORPORATION

RUSSIA

Address: Kalata, Ural district, Russia.

Property: the Kalata mines, 145 miles N. of Kyshtim, eastern Urals, Russia, opened early in the last century mainly for pyrite for acid manufacturing.

Geology: copper-bearing schists similar to those worked by the Kysh-tim and Sissert companies. Ore is a heavy sulphide, with bonds of magnetite in the pyrite. Silica content is only 2% other minerals being 2.3% copper, 43.5% iron and 50% sulphur.

Development: on the 406', 455' and 560' levels the main shoot is 560' long and 84' wide, yielding 3,000 tons of ore per foot of vertical depth. This ore is nearly solid pyrite. Timbering must be done soon after extracting ore. Slag is used for filling stopes. The deepest of the 3 shafts is 770'. Mining in 1915 cost \$1.80 per ton.

Equipment: electric hoist with 3½ ton skips, coarse crushing plant, compressors and smelter designed by F. W. Draper. The latter consists of two blast-furnaces, 287" by 56", producing a 12.5 to 13.5% copper matte, two 12' Great Falls type converters, turbo-blowers, refinery and 3,000 kw. power plant. In 1915 there was reduced 169,760 tons of charge, equal to 530 long tons daily. Fuel consumption was 1.66% of the charge, or 2.49% of the ore, practically pyrite smelting. Slags contained 0.33% copper.

SPAIN

ARAMO COPPER MINES, LTD.

Office: 2 Metal Exchange Bldg., London, E. C., England. **Mine office:** Pola de Lena, Asturias, Spain.

Officers: A. van Straalen, E. R. Merton, H. Gardner and L. Corvilain, directors; C. W. Aston Key, sec.

Inc. July 3, 1897, in Great Britain. **Cap.**, £40,000, shares £10 par.

Property: the Aramo copper and cobalt mine, bought for £20,000 in full-paid shares. No accounts are made public. Idle some years owing to litigation terminated in 1914 in company's favor. Resumption of operations since then, delayed by European war.

CALA; SOCIEDAD ANONIMA MINAS DE**SPAIN**

Office: Estacion S. 2d, Bilbao, Spain. **Mine office:** Cala, Santa Olalla, Huelva, Spain.

Officers: Don Enrique Areilza, pres.; Don Jose del Castano, Bilbao, v. p.; Don Ernesto Bengoa, sec.; Don Juan de Areito, managing director.

Inc. Aug. 31, 1900, in Spain. **Cap.**, 15,000,000 pesetas shares (acciones) and 7,000,000 obligaciones.

Accounts for 1916, show a current balance of 143,240 pesetas and expenditures of 175,573 pesetas for construction account; 185,540 pts. for interest on bonds; 98,198 pts. for interest on accounts and 50,000 pts. loaned to Coto Teular Co., leaving a balance of 30,050 pts. Total expenditures to date amount to 5,803,317 pts., for mine account, and 14,914,332 pts. for railway account. Total for all accounts, 31,153,638 pts.

Property: a group of 8 mines, 345 hectares, at Cala, near de Pena and Rio Tinto mines, carrying extensive bodies of magnetic iron ore and cupriferous pyrite. Company owns and operates a 97-kilometer railroad from the mines to San Juan del Aznalfarache, on the Guadalquivir river, in the adjoining province of Sevilla. The mill and reduction works were installed in 1917.

Production: for 1916 was 23,973 tons of ore. Shipments were 12,669 tons crude ore; 7,346 tons calcined ore, 1,010 copper mineral, the total value being 286,536 pesetas.

CAMPANARIO; SOCIÉTÉ DES MINES DE CUIVRE DE**SPAIN**

Address: Anatole Olivier, sec., 5 Rue du Helder, Paris, France. **Mine office:** Valverde del Camino, Huelva, Spain. Baron A. de Dietrich, chairman; Charles Chalupt, T. H. Bustos, Max Lyon and Jules Strap, directors; Arthur Marshall, gen. mgr.

Inc. Dec. 20, 1906, in France. **Cap.**, f5,000,000; shares f500 par.

Property: seven hundred hectares, including 6 old mines, and actually having about 250,000 tons of cupriferous pyrite in sight.

Equipment: includes an elaborate and extensive surface plant.

Production: about 40,000 tons of pyrites annually, ore being first treated by lixiviation and cementation to recover its copper content and residue sold for its sulphur.

CASTILLO DE LAS GUARDAS; SOC. ESPANOLA DEL**SPAIN**

Office: Apartade 12, San Sebastian, Spain. **Mine office:** Castillo de las Guardas, Sevilla, Spain.

Officers: Edmond Delage, chairman; Julie Astoreca, sec.; Enrique Largillier, managing director, with Louis de Beauce, Georges Therel, Henri Mayeussier, Henri Th. Cury, Henri J. Lesage, Leon Luzeret, Alejandro Gandarias, Juna de Santisteban, Agustin Yza, Fernando Merino, Manuel Fernandez Balbuena, directors. Francisco Zarraga, manager; Manuel Fernandez Balbuena, engr.

Inc. July 12, 1901, in Spain. **Cap.**, 7,500,000 pesetas, increased later to 10,000,000 pesetas; shares 500 pesetas par; issued 9,000,000 pesetas. Annual meeting in March.

Property: 240 hectares, 23 kilometers from Zalamea la Real, having a 15½ kilometer private railway, known as the Ferrocarril de Minas Castillo

y Empalme Ronquillo, connecting at Estacion Ronquillo with the Ferrocarril Sevilla y Cala.

Mine shows granite-porphyry and diabase, carrying 5 orebodies, one of which under development, has a lens of 40 meters width and 220 meters length, proven for depth of 165 meters, carrying cupriferous pyrite averaging about 1.5% copper, 0.5% lead, 0.13% zinc and occasionally up to 2 oz. silver and 4 grams gold per metric ton. Mine was discovered 1843, and worked in a small way, until taken over by the present company, 1901.

Development: by the following shafts: Menesses, 142 meters; Don Pablo, 142 meters; Malacate, 100 meters; Colorado, 110 meters; Dos de Mayo, 40 meters; Remedies, 42 meters.

Equipment: includes a 683-h. p. steam and electric plant, with two 200-h. p. hoists, good for 140 meters each, 250-h. p. air compressor.

The company owns 353 buildings, with stone shops, also maintains separate schools for boys and girls, a hospital for workmen and their families, and a town hall.

CORDOBA COPPER CO., LTD.

SPAIN

Office: 56 Queen Place, London, E. C., England. **Mine office:** Estación de Cerro Muriano, Sevilla, Spain.

Officers: Edgar Taylor, chairman; Hugh F. Marriatt, Lieut. Col. C. H. Villiers, Lord Vaux of Harrowden, Richard E. Carr, J. E. Champney, directors; F. H. Williams, sec.; John Taylor & Sons, mgrs.; J. Hocking, mine supt.

Inc. Aug. 5, 1908, in Great Britain. **Cap.**, £200,000; shares 5s par; all issued, and fully paid. Company is a consolidation of the Cerro Muriano Mines, Ltd., and North Cerro Muriano Copper Mines, Ltd.

For year ending Dec. 31, 1911, profits were £14,899; for 1912, £39,405; 1913, £83,321; 1914, a loss of £4,203; in 1915 profits were £10,677; and in 1916, £45,665.

Dividends: in 1912, 20%; in 1913, 20%; in 1914 and 1915, nil; in 1916, 10%.

Balance sheets for 1916 shows: total assets of £259,266, including £68,700, cash, war loans, treasury bills, etc.; total liabilities showed profit and loss, £27,789; reserve account, £20,000 and current liabilities of £11,476. Revenue account gave £208,549 as the total, which included £203,338 for sales of blister copper, £365 for lead ore sales, and £807 copper on hand.

Property: 469 hectares, 10 miles northeast of Cordoba, in the south of Spain, held under perpetual lease from the crown. Property is reached by the Andalusian railway. Mines show old workings, dating from the Roman era, extending to a depth of 400', notwithstanding a heavy flow of water. There are 6 large and several small veins in mica-schist, diorite and quartzite, carrying chalcopyrite and pyrite, with gangue of calcite, quartz and country rock, the ground being soft, requiring the filling of stopes with waste. Veins are reported to have widths of 12' to 40', with proven lengths as follows: Calavera, 1,635'; Excelsior, 635'; Lorenzo, 4,575'; Isabel, 5,550'; Cerro Muriano, 8,500'. Some ore taken from the old Roman workings assayed 28 to 34% copper.

Development: by four main shafts—The Santa Victoria, bottomed in the footwall at 726'; the San Rafael, 1,571'; the San Arturo, 1,115'; the Esperanza, 201'; the Eastern, 1,539'; the Excelsior, 850'; the Lorenzo, 869', and the Isabel, 620'. Development work for year 1916 totaled 6,821', including 260' of shaft sinking. The San Rafael shaft, 300 meters from the Santa Victoria, shows a vein of 5 to 13 meters width with the better portions worked out by the Romans. Ore reserves were estimated, Dec. 31, 1916, at 142,914 long tons, averaging 2.39% copper. Development work at the mine was considerably retarded by the amount of water in the mine due to unusually heavy rains, 290,755 tons of water having been baled besides that raised by the pumps.

About half of the product is treated by the mill and half by the smelter. The mill has 6 units of the Murex magnetic separation process which treat the re-crushed jig middlings, other flotation processes being unsuitable

owing to the presence of calcite. In 1916 Murex plant treated 14,599 tons of re-ground jig middlings and tailings, averaging 1.34% copper and produced 1,374 tons concentrates, averaging 10.6% copper, with a 74% recovery.

The smelter includes a calcining plant and a converter plant. The blast furnace blown in Aug., 1908, is in blast only alternate months, its capacity being double that of the mine. The smelter treated 35,105 tons, which included 8,220 tons of picked ore and concentrates, 9,360 tons of sintered ore, 1,625 tons of briquetted ore, and 31 tons of purchased ore, the rest being flux. Produced 3,675 tons of 46.4% matte, in 1916, that gave 1,746 tons of blister copper.

Production: in 1916 the mine output was 95,947 tons of 2.18% copper content. After sorting, 84,800 tons of 2.47% copper content were treated in the milling, concentrating and smelting works. The concentrator treated 48,727 tons of 1.57% ore, which yielded 4,798 tons of 9% concentrates, and 14,599 tons of middlings assaying 1.34% copper. The recovery for the Murex and concentrating plants was 75% as compared with 70.7% of a year ago.

Production, in 1916, was 1,746 tons of blister copper. Reserves are estimated at 142,914 tons of 2.39% copper ore. Present production about 300,000 lbs. copper a month. This property is one of the largest and most interesting of the old Hispana-Roman mines and was famous before the Christian era for the high quality of copper and brass produced from its ore, but was entirely idle for 2,000 years, until reopened, 1903, by the predecessors of the present company.

ESPERANZA COPPER & SULPHUR CO., LTD.

SPAIN

Office: 65 London Wall, London, E. C., England. **Mine office:** Zalamea La Real, Huelva, Spain.

Officers: T. D. Lawther, sec. and managing director; Alex. McNab, G. Mure Ritchie, chairman; preceding are directors.

Inc. Feb. 14, 1906, in Great Britain, as successor of Spanish Minerals Development Co., Ltd. **Cap.**, £330,000; shares £1 par; fully issued, fully paid.

Net earnings were £27,553 in 1908; £19,961 in 1909; £14,754 in 1910; £29,562 in 1911; £32,730 in 1912; £14,647 in 1913; £8,412 in 1914; £23,499 in 1915; £50,277 in 1916.

Dividends: 5% in 1908; 5% in 1909; 2% in 1910; 3% in 1911; 5% in 1912; 10% in 1916.

Property: the Esperanza group, 1,833 acres, including 833 acres of mining rights, 55 miles from the port of Huelva. Holdings include the Esperanza, Nueva Esperanza, Angostura, Forzosa and Santo Tomás mines. Some of these properties were worked in very ancient times, mainly on a small scale, showing characteristic narrow Roman shafts, with foot holes alternately, on either side, for ingress and egress of miners.

The Angostura mine had 231,000 tons ore reserves, Jan., 1917.

The Esperanza and Forzosa mines had 507,000 tons ore reserves, Jan., 1917.

Neuva Esperanza yielded 1,029 tons in 1912, 107 in 1913, and 534 in 1914. Development of Neuva Esperanza, San Daniel, and Forzosa properties by diamond drilling, shaft sinking and crosscutting, is in progress without definite results reported to January, 1917.

Total ore reserves at end of 1916 estimated at 738,000 tons.

Equipment: includes two leaching plants dealing with mine liquors and making 98 tons of copper in 1913; 82 tons in 1914; 135 in 1915, and 127 in 1916.

Company has a private narrow-gauge electric line connecting with the Buitron railroad. The power plant consists of 4 Premier gas engine units, each with a suitable gas producer plant, with electric generators, the plant giving economical and satisfactory service.

Production: begun July, 1906, has been as follows: 20,421 long tons of ore in 1906; 54,276 tons in 1907; 87,894 tons in 1908; 103,140 tons in 1909; 112,143 tons in 1910; 108,650 tons in 1911; 97,681 tons in 1912; 95,897 tons in 1913; 111,457 tons in 1914; 86,288 tons in 1915, and 108,725 tons in 1916.

Company produces no metallic copper directly from its ore, but the copper contents of the pyrite shipped amounts to about 23,000,000 lbs. yearly.

Property considered excellent, management good and dividends assured for years to come. War prices have doubled the company's profits despite greatly increased costs.

HUELVA COPPER & SULPHUR MINES, LTD.

SPAIN

Office: C. Forbes, sec., 6 Old Jewry, London, E.C., England. French office: 31 Rue Lafayette, Paris, France. Mine office: Almonaster, Huelva, Spain.

Directors: P. Lyttleton Gell, chairman; H. Gaillochet, v. c.; G. Dyckhoff, E. Choppy, P. E. de Caplane, G. Chanlaire, J. Roux-Brahic, H. Bon-donneau and Comte C. de Leusse; L. Delafosse, mgr.; H. F. Collins, cons. engr.

Inc. Oct. 28, 1903, in Great Britain. **Cap.**, £400,000; increased 1907 to £600,000, but reduced again in July, 1912, to £420,000; 279,139 shares issued and fully paid. Company is a reconstruction of the Huelva Central Copper Mining Co., Ltd.

Revenue from ore and metal in 1915-16 was £177,692, of which £2,130 was profit, after writing off £26,000 for depreciation and £9,491 for development.

No dividends have been paid since Oct., 1907, when 5% was distributed.

Property: the Cueva de la Mora and Monte Romero mines, comprising 246 hectares (507 acres) and other properties of 650 hectares, lying between the Rio Tinto and Tharsis properties, Huelva, Spain. The total area in 1916 was 3,400 hectares. Lands are favorably located and are traversed by the Olivargas and Juliana rivers. The company is reforesting its lands with pine and eucalyptus.

The Monte Romero is the principal mine, and the Corta San Alberto and Angelita mines have reserves of smelting and sulphur ores, but need development. The Corta ore is low-grade, but in large deposits and the mine is estimated to contain 5,000,000 long tons of cupriferous pyrite, averaging 1.7% copper. The San Alberto mine, opened by shaft, has produced a little ore of good average grade. The Monte Romero carries ore of 1 to 5% copper tenor, but some of the ore is higher in zinc. Mine has a full equipment, including a haulage plant and large ore bunkers. Ore reserves at June 30, 1916, were placed at 63,000 tons; also 305,271 tons of 0.7% ore on the cementation heaps. A new pyrite smelter commenced work in March, 1914.

The company has built a complete town for its workmen, numbering about 1,200 men, the town having a normal population of about 5,000. The company's buildings include schools and hospitals, with necessary mine structures. Transportation is by a 13-kilometer railway, connecting with the Zafra y Huelva line.

Production: was 5,563 tons of cupriferous pyrite in 1905; 20,523 tons in 1906; 34,905 tons in 1907; 48,511 tons of ore and 67 tons of cement copper in 1908. Production of fine copper is estimated at 175,000 lbs. in 1905; 600,000 lbs. in 1906; 1,000,000 lbs. in 1907; 1,350,000 lbs. in 1908; 25,000 tons of 5% ore shipped and 45,000 tons sent to cementation plant in 1909; and in 1915-16, 61,730 tons smelted yielded 3,828,160 lbs. of copper.

PENA COPPER MINES, LTD.

SPAIN

Sec. and office: Ernest Johnston, 295/7 Salisbury House, London, E. C., Eng. Mines office: Nerva, Huelva, Spain.

Directors: C. C. D'Anvers, chairman; M. Paisant, A. Harter, C. A. Massaouti, R. G. Levy, E. Porgès and Horace Barrett.

Henrique Schreck, gen. mgr., Peña Mines, Huelva, Spain.

Inc. Sept. 19, 1900, in Great Britain. **Cap.**, £750,000; shares £1 par; £537,600 issued.

Dividends: 1903, 5%; 1904, 5%; 1905, 4%; 1906, 7½%; 1907-1914, nil; 1915, 6%; 1916, 6%; 1917, 7½%.

The accounts for 1916 show a net profit of £64,933, out of which £31,248 was paid as dividend. The remainder was added to the balance in hand, which now stands at £59,837.

Company was formed in London in 1900 to acquire a copper and sulphur mine in the south of Spain that had, for two or three years previously, been worked by a Belgian company. Small dividends were paid from 1903 to 1906, but subsequently condition became less favorable. About six years ago the contract with the Rio Tinto company in connection with railway transport to the coast was terminated, and an independent branch railway to the mine was constructed. During the period of building, deliveries of ore were suspended. The railway was opened in 1914, and since that time the position of the company has steadily improved. Report for 1916 shows that 161,283 tons of ore was raised, as compared with 122,120 tons in 1915; of this amount 53,729 tons was added to the leaching floors, and 107,554 tons was placed for export. The deliveries during the year were 30,766 tons of cupreous ore, 67,527 tons of non-cupreous ore, and 112,145 tons of washed ore. The yield of copper precipitate contained 598 tons of fine copper.

Property: 1,724 acres, the Pena del Hierro group of 17 old mines, 2 miles N. E. of the Rio Tinto mine. Ore extraction is by open quarry work, the over-burden being stripped.

Production:

Year.	Tons. mined.	Ore shipped, tons.	Copper recov'd, tons.	Ore on dumps, tons.
1910	132,559	144,810	1,017	529,938
1911	131,367	124,323	1,004	500,714
1912	84,698	80,844	793	511,704
1913	68,759	5,734	703	580,802
1914	58,832	31,028	597	613,645
1915	122,120	140,616	607	589,956

RIO TINTO CO., LTD.

SPAIN

Secretary and offices: J. Gordon Macleod, 3 Lombard St., London, E.C., England. **Mine,** at Rio Tinto, Huelva, Spain. **Works office:** Port Talbot, South Wales.

Officers: Chas. Wm. Fielding, chairman; Rt. Hon. Earl of Denbigh, and John M. Macdonald, directors; Turquand, Youngs & Co., auditors; Walter J. Browning, mine mgr.

Inc. March 29, 1873, in Great Britain. **Cap.,** £3,500,000; increased, November, 1905, from £3,250,000, shares £5 par, in £1,625,000 cumulative 5% preference shares and £1,875,000 ordinary shares, fully issued and paid. The new issue of 50,000 ordinary shares, par £5, was sold to shareholders at £63 per share, netting the company £3,150,000, for the redemption of an outstanding bond issue of £2,989,740, at 4%, which was fully retired. Transfer form, common; fee, 2s. 6d.; warrants to bearer are issued in denominations of 1, 5, 10 and 25 shares, fee 1s. per warrant, fee for conversion into registered shares, 2s. 6d. per certificate. Stock Exchange settlement; all shares quoted in the official list. Fiscal year ends with the calendar year; accounts are issued in April, and an interim semi-yearly report is issued in October. Dividends are payable in Paris by the Société Générale, 29 Boulevard Haussmann.

Accounts for 1916 showed a gross profit on sales of £2,198,092, compared with £1,292,260 in 1915, and a net profit of £2,145,830. Balance forward, after paying £1,862,500 in dividends, was £283,330.

Dividends: were begun 1879, and have been paid continuously, varying greatly, according to net earnings. Dividends on the old ordinary shares, of £10 par, 1879 to 1896, ranged from 6s. in 1886 to 38s. in 1896. On the present ordinary shares of £5 par, dividends have ranged from 40% in 1897 to 110% in 1906. Dividends were small at first, because the company was seriously handicapped by 3 different sets of mortgage bonds, bearing 5% interest. In 1895 the mortgage debt was consolidated into a single issue of £3,600,000 first mortgage debentures, bearing 4% interest, with a sinking

fund and semi-annual redemption, which would have extinguished the mortgage in 1919, but, by the issue of new share capital November, 1905, floated at the tremendous premium of 1,160%, the company placed itself in an impregnable financial position, the credit for this able stroke of finance having been due mainly to Mr. Fielding. Recent dividends on ordinary shares have been as follows: £3 12s. 6d., or 72½%, for 1901; £2 10s., or 50%, for 1902; £3 10s., or 70%, for 1903; £3 10s., or 70%, for 1904; £4, or 80%, for 1905; £5 10s., or 110%, for 1906; £4 7s. 6d., or 87½%, for 1907; £2 15s., or 55%, for 1908; £3, or 60%, for 1909, with an interim dividend of £2 10s. for 1910; £2 12s. 6d., for 1911; £4 10s. in 1912; £3 15s. in 1913; £1 15s. in 1914; £2 15s. in 1915; £4 15s. for ordinary and 5s. for preferred in 1916; and £2 5s. in 1917 to June. The company has a reserve fund of £500,000, of which £400,000 are invested in consols and £100,000 are in choice selected shares.

Property: 16,000 acres, freehold, of which 4,710 acres were secured from the Spanish Government. Mining operations are conducted in an area of practically 5 sq. miles.

Statement for 1916 shows assets totaling £6,520,537, represented by equipment, £2,977,527; ore in process, £1,150,004; stores in Spain, £498,132; sundry trade debtors, £594,195; staff provident fund, £148,304; war loan, £337,586; and cash, £781,637.

History: Rio Tinto is the Methuselah of all known mines. The first semi-authentic account of the mines dates from the eleventh century before Christ, when the Phœnicians traded in copper made from its ores. Carthage, that vigorous young offspring of Tyre, succeeded to the hegemony of the Iberian mines, and worked the Rio Tinto mines extensively for several centuries, being displaced, in turn, by the Romans, after the repulse of the second Punic invasion, and the total overthrow of the Carthaginian power. The Rio Tinto was worked by the Romans for centuries upon a very considerable scale, and after the decadence of the Roman power the mines were operated in a very crude way by the Goths. Again the fortunes of war gave the Iberian peninsula to new masters and the Moors in turn were owners and operators of this great copper deposit. Following the expulsion of the Moors from southern Spain by Ferdinand and Isabella the mines fell into the hands of the Spanish and were reopened by them very early in the sixteenth century. The Spaniards, while among the world's best miners, and the pioneers of silver and gold mining in both North and South America, never paid close attention to copper or iron, and, even at home the Rio Tinto, although the property of the Spanish Crown, was worked, during its most successful periods, by foreigners, as it is to this day.

In the seventeenth century the mine became a considerable producer, under the management of a Swedish engineer named Wolters, and after his death did fairly well under the direction of a French metallurgist named Tiquet. In the eighteenth century the mine was leased from the crown by a company of English adventurers, of whom the leading spirit was Lady Maria Theresa Herbert. During the chaotic period of the French invasion, early in the nineteenth century, the mine was abandoned, and, after being reopened, 1812, by the Spanish Crown, was worked in a small way only. For the next 60 years the mine was under the management of various lessees, until sold outright in 1873 to Matheson & Co., of London, for 92,800,000 pesetas, that firm organizing the present company, which has proven one of the most profitable mining corporations in existence.

The relics of the mining and smelting operations of the ancients are large, numerous and remarkable. The late Don Gonzalo Tarin, who was consulting engineer of the company and was closely connected with the mine for 40 years, beginning 1867, in his very able work, "Memorias," estimated the quantity of scoria remaining from ancient smelting operations, whether Roman or Phœnician, or both, at no less than thirty million metric tons, and his acquaintance with the property and its history and his opportunities of estimating and verifying these figures were perhaps better than those of any other man. Lying above slag piles left by the Phœnicians is a

10' bed of alluvium, on top of which are the Carthago-Roman slags. The smelting practice of the Romans apparently was very good, the slags left by them being as clean as those produced to-day. It is possible, however, that some of the copper left in the old slags has been leached out; during some 2,000 years of partial exposure to the elements, but it is the opinion of Señor Tarín that the slags were resmelted, in which case the latest modern metallurgical practice is but a repetition of the methods employed around the beginning of the Christian era.

The only remains of ancient mining tools and machinery that have been found at the Rio Tinto are 3 oak water-wheels, an oak ladder and some oak pitwork, with several bronze rims of kibbles, which presumably were of wickerwork. The iron tools undoubtedly have turned to rust in 2 milleniums, oak proving more enduring than iron. There also are many potsherds, including fragments of miners' lamps of the well-known classic pattern, and Roman coins are unearthed occasionally.

The Roman system of mining, so far as can be judged from the evidence offered by the Rio Tinto, was to cut narrow seams and slab off the ore in large masses, either by wedging or by the agency of quicklime tamped into the crevices and then wetted, and possibly both methods were used, these being the systems most generally employed previous to the adoption of gunpowder for blasting. The richer veins were followed persistently and the ancients were good judges of values, as has been learned by many a modern mining company that has reopened ore mines in Spain and Italy, in the hope of finding that much high-grade ore was left unmined. The Rio Tinto was not worked out because the deposit was too vast, but the rich ores of the secondary zone of enrichment were quite effectually extracted in all the old workings.

The Rio Tinto is situated in a rugged district, in a spur of the Sierra Andevallo, though the hills sometimes are held to be a spur of the Sierra Aracena, which itself is a branch of the famous Sierra Morena. The Rio Tinto, however, is separated from the Sierra Andevallo, which is some 12 miles distant, by the rivers Odiel and Járroma, and the mines are 51 miles by rail from the seaport of Huelva, in the province of that name, lying in the extreme southwestern corner of Spain, near the Portuguese boundary.

Geology: orebodies of the Rio Tinto occur in mammoth lenses, with clay-slate on the S. and porphyry to the N., and are surmounted by large masses of iron-ore gasson. The deposit has been leached to a depth of 100' where the zone of secondary enrichment begins, continuing to an average depth of 300'. Diamond-drill borings have shown untouched orebodies carrying upwards of 130,000,000 long tons of ore, giving sufficient reserves for about 60 years' production, and it is unlikely that the full extent of the orebodies available has been proven. The ore is of 2 classes, by far the larger part being slightly cupriferous pyrite, used largely in the manufacture of sulphuric acid, the second class consisting of copper sulphides disseminated in a silicified porphyry gangue. For removal of overburden there are 14 steam shovels, the largest having dippers of 4 cu. yds. capacity, and about 2,000,000 cu. meters of overburden is removed yearly, though this figure has been considerably exceeded in some years under exceptional requirements.

The ore produced is graded in 3 classes: (1) smelting ore carrying 4 to 6% copper; (2) export ore about 3.5% copper, and 45 to 50% sulphur; (3) leaching ore has 1.5 to 2% copper only. The average amount of copper contained in the ores treated has ranged from 1.5% copper, in 1876, the first year of production by the present company, to 3.234% in 1884. The output of the mine for 1912 was 2,406,969 tons carrying 2.18% copper. Tonnage was gradually increased for the last 5 years but the copper content has varied and is now higher than it has been for 2 years past. The ores carry an average of 1.5 oz. silver per long ton, with traces of gold, and considerable silver is saved, by the Claudet process, at the smelter. About one-third of the total production is exported for sulphur contents, about one-third

smelted, and the balance either leached or sent abroad. The ores average 4 to 5% copper in the zone of secondary enrichment, and with depth decline gradually in value, until at about 1,000' depth the average copper tenor is only about 1.25%. The main orebody is cupriferous pyrite, carrying copper in the form of minute grains of chalcocite and chalcopyrite. Owing to the ore being unusually rich in sulphur the shipping ores of the Rio Tinto are in good demand, and in addition to supplying various British works the company exported washed sulphur ore in large quantities to Germany, France, Belgium, and a number of acid works in the United States. The reserve heaps at the mine are estimated to carry about 150,000 long tons fine copper.

Development: Rio Tinto has 3 mineral zones, carrying a succession of lenses, these being known as the South or Nerva lode, the San Dionisio or Middle lode and the North lode, in addition to which there are 2 smaller detached lenses adjacent to the North lode, which also are being worked opencast. There are 5 different mines, of which 4 are worked opencast and 1 underground. The underground mine is worked pillar-and-stall, with levels at intervals of 12½ meters, levels being opened 4 meters high and the entire floor divided into galleries and crosscuts of 4x4 meters, leaving pillars of 6x6 meters, which is not an entirely satisfactory method of extraction, leaving as it does more ore in the pillars than is mined.

The San Dionisio mine, the westernmost and deepest of the group, has a shaft of nearly 1,200' depth. The work of changing over the San Dionisio for opencast extraction was begun 1907, and completed 1911. The overburden, consisting principally of porphyry and slate, was removed by steam shovels and carried through tunnels on the different levels, similar work being done on the South lode opencast extension. Ore will be mined by steam shovels to as great a depth as practicable, below which it will be necessary to hoist by shafts to the lowest tunnel level. The San Dionisio is likely to be the chief source of ore supply for several decades to come and work has been planned systematically for 10 years in advance.

Most of the ore mined is hauled out through tunnels without the need of shafts or engines. The lowest tunnel now in use for the 2 main lodes, the South and Dionisio, has not proven deep enough and management plans driving a new tunnel, 200' below the present one, which will be 3 miles long, and will require 3 to 4 years for completion.

Wherever possible mining has been done by open pit workings which have the great advantage of giving complete extraction of the ore, and also are more economical in tonnage costs in the long run, though requiring enormous initial expenditures for the removal of overburden. Fortunately, the financial resources of the company permit the outlay of vast sums, the principal of which will not be repaid for many years, but which eventually will be returned in full with very handsome interest. The possibility of using the caving system for underground mining was considered, but an adverse decision was reached. Timber is scarce and high-priced. The depth of the largest pit is about 600' and beyond the great pit the immense orebodies are worked by drift-stopps, the capping being blasted and sent down the shafts to fill and hold the ground as the ore is removed. Steam shovels recently have replaced manual labor to a considerable extent in opencast ore extraction.

Equipment: a central electric power plant, installed 1908, replaced a number of uneconomical steam installations. The mining equipment is adequate, but owing to extraction being mainly opencast the Rio Tinto lacks the powerful and spectacular mining machinery found at many other great copper properties, through no lack of enterprise, but owing to the company's fortunate position in requiring the minimum of such costly machinery.

Below the main pit are the roast yards, leaching bed, precipitation plant and smelter. The methods of leaching are described at length in the chapter on hydrometallurgy, in this volume. The average rainfall of the Sierra

Morena, 1873-1905, was 28" yearly, but there are protracted seasons of drought, alternating occasionally with heavy rainfalls, hence extensive water storage is necessary, and there are large dams for this purpose, the last having been built 1907. The ore leached is no longer calcined, the copper becoming soluble by natural weathering, assisted by systematic sprinkling. About 7,000,000 gal. of leach-water, strongly charged with copper sulphate, are treated daily in the various lixiviation plants, yielding cascara, or copper precipitate.

The smelter at the mine, built 1902, with American equipment throughout, treats a large proportion of ore on the ground, including considerable ore of a grade formerly leached. The smelter has two 42"x160" elliptical water-jacket cupolas, 23' 4" over all in height, with charging doors 10' above the bottoms, which are detachable and mounted on wheels. Each furnace has 8 water jackets and 2 charging doors, ore and fuel being charged alternately. The furnaces have continuous discharge into 30-ton settlers, 12' in diameter and 40" high, which have continuous slag discharge. Furnace product is low-grade matte, of 29 to 34% copper tenor, taken in 8-ton ladles by electric traveling cranes to the converter department, where there are 6 stands, rotated hydraulically from a pulpit. Shells, 80"x120", of horizontal barrel type, with spherical valves and 12 tuyeres each, are in 2 parts for convenience in lining, and are double-lined with a 4" external course of fire brick, rarely replaced, and an inner section, 22" to 26" thick, of ground silica and low-grade quartzose copper ores, with 10% of clay for a binder. When newly lined the shells have a capacity of only 3 to 4 tons each, increasing to about 8 tons when the inner linings are nearly burned out. The smelter product is converter bars, of 98 to 99% copper tenor.

There are 5 towns for employes built on the property of the Rio Tinto, and a large number of new dwellings were erected, 1909-10, to replace those destroyed, early 1908, by subsidence of the workings of the South lode. Further attention was being paid to sociological conditions of employes in 1916.

The Rio Tinto employs about 15,000 men, in Spain, of which about 60 are British, earning average wages of 15 reals, equal to about 60 cts. per day of 8 and 9 hours. There is no Sunday work, and the men are paid daily. The population of the dual mining township of Rio Tinto-Nerva is about 30,000, and that of the port of Huelva 25,000, hence it is estimated that the Rio Tinto Co., Ltd., is the direct source of support of 50,000 people in Spain and indirectly supports perhaps half as many more in Spain, England and upon the Continent.

In October, 1913, miners went on strike which only lasted a month, so that the output was not seriously curtailed.

The mines are connected with the seaport of Huelva by the Rio Tinto-Huelva railway, a narrow-gauge line of 87 kilometers length, built 1873 by the company and slightly lengthened, 1908. This line does a general freight and passenger business, in addition to handling the company's heavy traffic. Huelva is built on the site of the old Phœnician city of Onoba, at the junction of the Tinto and Odiel rivers, known to the Phœnicians and Carthaginians as the Urium and Anas. The company has extensive railway terminals and wharves at the city.

The Welsh reduction plant at Port Talbot, South Wales, is a modern smelter of good design and equipment, receiving material by sea from Spain, and having direct rail connection with the Great Western railway. Electric power is used throughout and there are 2 Temperley electric transporters for carrying bags of precipitate and bars into the ore sheds. The Port Talbot works have five 30-ton refining furnaces, top-charged by cars operated electrically with side-slag discharge. Slags from the reverberatories, carrying 4 to 6% copper, are resmelted in a water-jacket blast furnace.

Production: 1876-1916, was 20,000,000 tons of pyrites shipped, and 40,000,000 tons of ore treated locally, a total of about 60,000,000 long tons, this ore

yielding about 730,000 long tons fine copper. No production figures are available since 1913, on account of war reasons, but considering strikes and temporarily reduced yields, these figures are approximately correct. In 1913 there was shipped 652,168 tons of pyrite, while 1,207,403 tons of 2.19% ore was treated at the mines. This total of 1,859,571 tons compares with 2,406,969 tons in 1912; respective copper outputs were 44,978,880 and 57,395,520 lbs.

Average cost, formerly about 7 cts. per lb., now is only 6 cts. per lb. of finished copper, after deducting revenues from sulphur sold and miscellaneous sources. The management of the company is first rate both technically and financially, and the mine itself, after 3,000 years of production, requires no commendation.

SAN MIGUEL COPPER MINES, LTD.

SPAIN

Office: E. Johnston, sec., 295 Salisbury House, London, E. C., Eng.
 Mine office: Almonaster, Huelva, Spain.

Officers: C. C. D'Anvers, chairman; H. Barrett, A. Harter, R. B. Levy, M. Paisant, E. Porges and C. A. Massaouti, directors; J. E. Allen, con. eng.

Inc. Oct. 12, 1904, in Great Britain. Cap., £150,000, shares £1 par; increased, November, 1908, to £200,000; fully issued and fully paid. A former debenture issue of £75,000, at 6%, was redeemed, 1905. Dividends were 18¾% in 1906, 7½% in 1912, 7½% in 1913, and 5% in 1914.

Accounts for 1915 show a profit of £2,072, but deducting £3,907 for mine development charges, there was a loss of £1,835. Previous balance, including reserve, was £35,258, and owing to over-valuation of ore dumps, this was reduced to £1,910.

Property: 1,900 acres, including the San Miguel and adjoining mines containing cupriferous pyrites. The property was worked for some years by Sociedad Miniera de San Miguel de Huelva, a Portuguese company, until taken over in 1904 by the present owners. In 1907 the opencast levels of the mine caved, since which time production has been limited to underground ore extraction. The mine has ore reserves, estimated, 1912, at 700,000 long tons, and in addition there are about 450,000 tons of partly leached ore on surface, in heaps. Underground ore reserves are estimated at 2.5% copper tenor.

The company owns a 12-mile private railway, built at a cost of £40,000, from Almonaster to El Cerro, connecting at the latter point with the Ferrocarril Zafra y Huelva.

Production: 1,612,800 lbs. copper in 1904, 978,880 lbs. in 1906, 797,440 lbs. in 1907, 1,124,480 lbs. in 1908, 1,438,080 lbs. in 1909, 1,635,200 lbs. in 1910, 1,729,280 lbs. in 1911, 1,422,400 lbs. in 1912, 1,379,840 lbs. in 1913, 952,000 lbs. in 1914; 1,252,160 lbs. in 1915.

In 1915 the mine produced 26,834 tons of ore, of which 13,077 tons were exported, and 13,757 tons added to heaps for leaching. In 10 years the mine has produced 590,000 tons of ore.

THARSIS SULPHUR & COPPER CO., LTD.

SPAIN

Head office: George Reid, sec., 136 W. George St., Glasgow, Scotland.
 Mine office: Huelva, Spain. Works in Great Britain: Hebburn-on-Tyne, Willington Quay, Cardiff; and Glasgow.

Directors: Lord Glenconner, chairman; L. Oscar Schmidt, René Millet, Albert J. J. Messéan, Hugh Brown, F. Alexis Ducoing, Sir Herbert E. Maxwell, S. C. Hogarth; W. P. Rutherford, Jr., man. director.

Inc. Oct. 27, 1866, in Great Britain. Cap., £300,000, since increased by amalgamation with other companies and the issue of new capital, to £1,250,000. Shares £2 par, fully paid.

Dividends: begun 1868, have been paid since without the lapse of a single year, and have averaged 18½% per annum. To the end of 1916 they aggregated 925⅓%, amounting to the magnificent total of £10,477,182, putting this company well to the front among the profitable mines of the world.

In addition to dividend disbursements, the company has written off sums aggregating £2,600,114, and on Dec. 31, 1916, had £811,444 in cash and securities. Net profits of operations have ranged from a minimum of £27,052 in 1868, to a maximum of £478,878 in 1899, with £162,743 in 1909, £161,211 in 1910, £188,140 in 1911, £253,066 in 1912, £246,727 in 1913, £156,310 in 1914, £103,291 in 1915, and £199,150 in 1916.

Property: company owns a number of cupreous and iron pyrite mines in the province of Huelva, Spain, some of which were worked in ancient times by the Romans, and possibly by the Phœnicians before them.

At the present time its supplies of ore are principally drawn from the Calañas, or La Zarza, mine, from which 389,197 tons of sulphur ore were extracted in 1916. This mine has been systematically developed at depth, and many million tons of ore are now awaiting extraction. The depth of the orebody is still undetermined.

In the earlier years of the company, the Tharsis group of mines was its principal source of supply, but the richer ores of that property becoming exhausted, the Calañas mine became the mainstay of the company's prosperity. Now that the demand for sulphur is increasing, the company during the last few years has been preparing on a large scale for the renewal of extraction from the Tharsis group. The Tharsis mines still contain many million tons of pyrite, of low copper but high sulphur contents, and the company will shortly be in a position to again supply large quantities annually from that source. In order to cope with the large anticipated increase in the traffic, an extension of the company's pier at Huelva has been authorized by the Spanish Government.

The company also owns the Almagrera and Lagunazo mines, both within a few miles from the Tharsis group.

The Tharsis group is connected with the port of Huelva by the company's railway, 29 miles long, from which a branch line, 18 miles, runs to the Calañas mine; and when the new pier extension is completed, the company will be in an exceptionally good position as regards shipping facilities.

The company's iron pyrite, containing 48 to 50% sulphur, is shipped all over the world for its sulphur content, but its cupreous pyrite is principally shipped to Great Britain and Ireland, where, after the sulphur has been extracted by the acid-makers, the residue, or cinder, is forwarded to the company's works for the extraction of the copper by the wet process and the preparation of the iron residue for the market. A small quantity of silver and gold is also recovered at the copper extraction works.

Owing to the low copper content of the ore now being worked, the company's production of refined copper is much reduced, having fallen from 13,544 tons (30,258,560 lbs.) in 1884 to 3,712 tons (8,314,880 lbs.), in 1916.

UNITED ALKALI CO., LTD.

SPAIN

Office: Cunard Bldg., Liverpool, Eng. **Mine office:** Valverde del Camino, Huelva, Spain. **Works office:** St. Helens, Lancashire, Eng.

Officers: Max Muspratt, chairman; E. Mount, sec.; J. H. Cresswell, gen. mgr.; C. Kaesmacher, asst. mgr.; Alex. Hill & Stewart, cons. engrs.

Inc. in Great Britain. Cap., £6,550,000. Net earnings were £584,809 in 1915, from which £118,714 was disbursed for interest on debentures.

The company is primarily a chemical and manufacturing corporation, copper mining being merely a small branch of its business, which embraces 46 subsidiary works and corporations, some of the plants of very great size. The company has its principal works at St. Helens, Runcorn, Flint, Widnes and Glasgow, making extensive use of Spanish and Portuguese pyrites, which are burned for sulphur, after which the cinder remaining is leached for copper.

The company's copper properties in Spain include the Sotiel Coronada mines; also the Castillo del Buitron mines, held under lease from the Cia. Anonima de Buitron, and Tinto and Santa Rosa mines, all in the province of Huelva. These properties show typical Huelvan slates, carrying lenticular contact deposits between slate and porphyry, having a generally N.-W. strike, with dip from 30° to vertical, carrying cupriferous pyrite.

The Sotiel Coronada mine, 666 hectares, produces cupriferous pyrite ores and cement copper equivalent to an annual output of about 1,000,000 lbs. fine copper.

Extraction is by underground and opencut operations, and mining is by overhand stoping, with dry walling and rock filling for depleted stopes. All pyritic ore above 1.5% copper is exported, the low-grade ores being leached at the mine, and washed sulphur ore exported.

The Castillo del Buitron property is a group of 4 concessions, 47 acres, at Zalamea La Real, and includes La Poderosa group of 6 hectares, adjoining, and the Concepción mine of 6 hectares, at Almonáster. The Castillo del Buitron group has 2 principal lenses of ore, these being the Levante, with a length of 150 meters, but of decidedly irregular outline, and the Poniente, about 200 meters long. Production of this group averages 1,500,000 lbs. fine copper yearly.

The Tinto & Santa Rosa group includes La Santa Rosa and El Tinto mines, having a combined area of 141 hectares, at Zalamea La Real. The Santa Rosa mine has 2 parallel lenses, with 7 levels opened, and the Tinto mine has ores said to average about 1.5% copper and 46% sulphur. The group has 9 shafts, and was estimated 1908, by the Spanish Government, to have 1,500,000 metric tons of ore developed. Production from this group was 38,005 long tons of pyrite and 803 long tons of cement copper, 1905, and 58,181 metric tons of ore in 1908, and present production is estimated at about 2,000,000 lbs. fine copper yearly.

The company controls the Ferrocarril del Buitron of 42" gauge, of 79 kilometers length, running from Castillo del Buitron to Huelva, equipped with 18 locomotives.

Production: from Spanish mines was 180,000 metric tons of cupriferous pyrite and 1,000 tons of copper precipitate in 1916. The company formerly was a large purchaser of iron pyrites, but now supplies its own requirements in the main.

SWEDEN

ALTENS KOBBERGRUBER

SWEDEN

Idle since 1908. **Office:** care of Sulitelma Aktiebolag, Helsingborg, Sweden.

Property: 339 claims, also a 60-acre mill site and 2,000 acres miscellaneous lands. This is the northernmost copper mine in the world, lying near North Cape, in 70° N. latitude. The mine is 300 miles from rail, but only 300' from the sea.

Geology: Post-silurian schists and slates have been penetrated by dioritic greenstone, showing about 75 orebodies in diorite, and also as impregnations in dolomitic strata. The veins have a generally N.-N. W. strike, fissures in diorite dipping at about 30°, and dolomitic layers at about 60°. About 20 strong veins and many small ones are under development, former ranging 1 to 3 meters in average width, and traceable 50 to 2,000 meters. The various veins average about 1.25% copper, ores occurring as chalcocite, bornite, and chalcopyrite disseminated in pyrite.

Development: by numerous tunnels, of which the Sture is 650 meters and the Jeramalm 415 meters long, also 6 shafts, deepest 100 meters. The mine has several miles of workings. It was opened in 1825, closed in 1878 and reopened in 1895 by present owner.

Production: in 1907 was 25,000 metric tons of ore yielding 1,050 tons of matte and 600 tons of 48% sulphur ore, producing 625,000 lbs. fine copper.

LAKE COPPER PROPRIETARY CO., LTD.**SWEDEN****Office:** J. Lamb, sec., 85 London Wall, London, Eng.**Directors:** Col. Lynch-Staunton, chairman; R. C. Lambert and S. W. Millard; James Swinburne, cons. elec. engr.**Inc.** March 19, 1906. **Cap.**, £500,000; 298,000 of £1 par and 40,000 of 1s. par; issued, £225,000 in £1 shares, £2,000 in 1s. shares. **Debentures:** £500,000, 6%, issued June, 1912; repayable in yearly drawings between December, 1922-1932; issued, £90,420.**Company** paid £200,000 cash for all the shares of the Lake Copper Grufoors Aktiebolaget, owning 1,500 acres of mining leases.**Property:** the Stora Strand and Vingnas mines, about 90 miles N. of Gothenburg, Sweden. **Orebody** on the Stora Strand has been proven for over 10 miles in length and to 800' depth and carries copper-silver-gold values. **Reserves** estimated at 100,000 tons of ore. Ore occurs in a copper slate bed and averages about 2% copper.**Development:** by 13 shafts on the Stora Strand and 4 on the Vingnas.

Should be a profitable producer when fully equipped.

SOUTH AMERICA

SOUTH AMERICA

ARGENTINE

FAMATINA CO., LTD.

ARGENTINE

The company's property is vested in a receiver and manager, appointed June 27, 1913, on behalf of the prior lien and other debenture holders.

Office: 638 Salisbury House, London, E. C., Eng. **Directors:** Wm. Parker, D. H. Bayldon and G. E. Stephenson. F. F. Fuller, sec.

Company is a reconstruction of the Famatina Development Corporation, Ltd.

Inc. June, 1912. **Cap.**, £800,000 shares 10s. par; 1,523,489 issued and fully paid, of which 1,126,165 are credited 7s. paid. Bonds authorized, £200,000 6%, of which £151,500 are issued.

Property: 850 acres, in 4 groups, in the Mexicana district of the Sierra Famatina range, province of Rioja, Argentine Republic, including the 6 principal mines of the district, the Upulungos group, Mellizas group, Compania group and San Pedro group. These lands lie at an elevation of 15,000' and are very difficult of access and transport.

The company has inherited a troublesome problem and a tendency to financial as well as mining troubles. Fresh capital was put into the company in 1912, with the understanding that the property would be profitable as soon as smelting was resumed. The new manager, Mr. Parker, stated, May, 1913, that the assay value of the ore had been overestimated and that the ore extracted is lower grade than previously reported. The smelter is not yet complete nor running smoothly, and the finances of the company are in a bad way, the £20,000 guaranteed by the big stockholders having been spent and the directors seeking further funds. Mines regarded as good, but company overcapitalized.

BOLIVA

ARAMAYO FRANCKE MINES, LTD.

BOLIVIA

Office: 148½ Fenchurch St., London, E. C., Eng. **Mine office:** Tupiza, Potosi, Bolivia.

Directors: F. A. Aramayo, chairman and managing director; Bernard Dale, L. A. Kensington, Robt. G. Ribon and F. J. Torromé. M. Roberts, mgr.; H. F. Ingo, sec.

Inc. Oct. 17, 1906, as Aramayo Francke & Co., Ltd. **Cap.** £600,000; shares £1 par; £597,090 outstanding. Name of company changed to present title, Jan., 1911.

Annual report for fiscal year ending May 31, 1916, shows: net profit, £167,559, as compared with £3,504 in 1915 and £135,764 in 1914.

Dividends: 6d in 1909; 1s 6d in 1910; 2s in 1911; 3s in 1911-12; 3s 6d in 1912-13; 2s in 1913-14; 1s 6d in 1914-15; 3s in 1915-16; 3s in 1916-17.

Property: consists of the consolidated mining rights over the mountain group of Chorolque, 817 hectares, containing mainly tin, bismuth and wolfram; the concentration works of Santa Barbara, Santa Elena and Sala-Sala; the establishments of Cotani, with its mines; the Quechisla smelter; the mines at Tasna, covering 1,460 hectares, with concentrator and smelter at Buen-Retiro; the mines at Churquini, Chocaya, 81½ hectares, the estates of Quechisla and Atocha and the concentrating plant at Asllani, besides other mining rights of lesser importance.

Production: for fiscal year ending May 31, 1916, amounted to 2,094 tons black tin, 148 tons wolfram, 35.86 tons copper and 110,000 oz. silver.

COROCORO DE BOLIVIA, COMPANIA BOLIVIA

Office: Santiago de Chile. **Mine office:** Coro Coro, La Paz, Bolivia.

Inc. April 23, 1873, in Bolivia. **Cap.**, 1,025,000 bolivianos.

Property: 500 hectares; is the largest copper mine in Bolivia, employing about 1,000 men. Mine 530 meters deep, is opened on steeply inclined sandstone and conglomerate strata carrying native copper, and rarely native silver, with occasional cuprite and chalcocite.

Devolpment: by six vertical shafts timbered with Oregon pine 8"x10", and equipped with electrical hoists ranging from 50 h. p. to 180 h. p. The ore when mined is soft, and even when dry is so weak that it disintegrates in the hand. The copper is between the grains of sand so that grinding in the usual sense is not necessary. Two 12"x18" jaw crushers will disintegrate 1,000 tons in 10 hours. Jigs obtain 95% of the total mill recovery. Capacity of present mill is 200 to 250 tons of ore per day with heads assaying 2% to 3% copper.

Equipment: 1,250-h. p. Diesel engine and a mill, the product of which is exported as copper mineral, production ranging 800 to 1,200 quintals of 46 kilos. monthly, of "barillas de cobre" of about 85% average copper tenor, estimated by the Bolivian government to cost 7.8 bolivianos per quintal. Copper sulphide, as chalcocite, is exported as crude ore at the rate of 1,500 metric tons monthly of 18% copper.

COROCORO UNITED COPPER MINES, LTD. BOLIVIA

Registered office: 151 Finsbury Pavement House, London, E. C., England. **Main office:** 7 Rue des Italiens, Paris, France. **Mine office:** Coro Coro, La Paz, Bolivia.

Officers: Baron René de Batz, chairman; G. T. Crane, E. F. Harrington, J. L. Barber, A. Berthín, Noël Berthín, H. M. Kersey, C. Portalis, L. Monnier, and L. Charbonnel, directors; G. B. Wolfe, sec. in London; Roger Léo, sec. in Paris.

Inc. Aug. 6, 1909, in Great Britain. **Cap.** £700,000, shares £1 par; issued, £673,607, fully paid. Company took over the properties of J. K. Child & Co., Ltd.; Sucesión Noël Berthín; Compañía Sud Americana de Cobre de Corocoro, and Carreras Hermanos.

Accounts to July 1, 1916, showed: net profit of £172,243; £4,617 was written off for development and £47,752 for mines and buildings; balance forward was £180,542; dividends amounted to £73,484; £35,445 carried forward. The reserve is given as £70,000.

Property: 515 hectares at 12,000' elevation, in the Coro Coro district in central Bolivia. The principal mines are the Vizcachani, Santa Rosa and the Guallatiri, the first named formerly owned by J. K. Child & Co., the second by Carreras Bros., and the third by the Noël Berthín estate. The copper is found native in several beds of sandstone interstratified with reddish and brownish shale. The ore-bearing beds occur in 2 series, separated by a strong fault; the beds to the east of this fault are known as ramos and dip east, the copper-bearing strata being succeeded by a considerable thickness of red slates capped by green slates and limestone overlaid in turn by red clay and brown sandstone. The beds west of the fault are known as vetas, or veins, and are much harder than the copper-bearing ramos. The mineralization is not uniform and the native copper occurs in particles scarcely visible to the naked eye, as well as in grains, plates, threads and sometimes flat masses weighing several hundred pounds. The main fault, known as Dorado vein, is also mineralized and is now the main producer of the company, yielding sulphides and arsenides of copper. It is supposed that this fault was the feeding fissure whose solutions spread into the sandstone and was precipitated by organic matter.

The mine workings have not yet crosscut very far into the series, but show at least 4 ramos and 6 vetas, the 4 ramos being divided into 7 cuerpas, or beds, and the 6 veins into 10 to 14 beds. Some of these beds have 7 to 8

meters of homogeneous ore, the White Ramos being 30 meters wide on the 10th level of the Vizcachani shaft, of which 8 meters are mined as ores. The beds average 10 meters workable thickness with an average content of $3\frac{1}{2}\%$.

The district is extremely arid, without timber, and almost without shrubs, and extensive use is made of local fuel, which is taquia. Taquia is used for firing boilers and also for drying and roasting ores and in the past even was used for smelting.

Work was recently started on the croppings of several beds where the mineralization appears in the shape of sulphides. These sulphides, after hand-sorting, are bagged and shipped. Company is erecting a flotation plant for the concentration of the ores; the starting capacity being 125 tons daily.

The mine openings in the conglomerate strata stand fairly well, though with some crushing, and levels average 25 meters apart. Winzes are inclined, with steps cut. Little timbering is used, except for shafts, owing to its great cost, timber being imported mainly from North America, and the workings are secured principally by the poteo or dry-walling system. Steel is used for arching lateral workings.

The property is divided into 4 operating units, principal and active sections being the Corocoro and the Guallatiri. The Corocoro has a vertical shaft 330 meters deep, equipped with a steam plant, and ore-sorting and crushing plant. The Guallatiri has shafts of 180 and 350 meters.

The ore is treated in 3 mills of 70 tons to 100 tons daily capacity, making a product known as barilla, or crude copper mineral, of 80 to 88% copper tenor, which is shipped to Europe for refining.

Production: in 1912 was 4,100,000 lbs. fine copper; in 1913, 3,784,000 lbs.; in 1914, 4,150,000; in 1915, 7,166,000; in 1916, 11,300,000 lbs.

An electrical power plant of 500 k. w., in which alternators are driven by semi-Diesel engines, has been erected, and a further increase of 300 k. w. is contemplated.

Property, reported to have been under option to Messmore Kendall, J. D. Ryan, Chas. Sabin et al. in Feb., 1916, was relinquished. Price was reported to be £1,350,000.

Owing to the remote and almost inaccessible location of these mines, past production has been small, compared with possibilities, but the company is making progress and output is steadily increasing. The property is considered decidedly promising.

OLLA DE ORO (BOLIVIA) GOLD MINE

BOLIVIA

Office: 33 St. Swithin's Lane, London, E. C., Eng. **Directors:** A. F. Martin, chairman; R. R. Harris and W. E. Hall. **E. T. Roe**, sec. **I. G. Preumont**, mgr., La Paz, Bolivia.

Inc. Aug. 18, 1909, in England. **Cap.**, £40,000; shares £1 par; all issued.

Dividends: 5% in 1913; $6\frac{1}{4}\%$ in 1914.

Property: 5 groups. 302 pertenencias, 720 acres, on the Umabamba river, La Paz, Bolivia, carrying gold ore in quartz veins in slate and quartzite. Vein is 2-6' wide and ore averages about $\frac{1}{2}$ oz. gold per ton with a little silver.

Development: by several tunnels, longest 800'.

Ore reserves: estimated at 35,000 tons in sight with 9,600 tons broken ore in stopes.

Equipment: includes mining plant and a mill with 140-h. p. turbine, 2 Hardinge ball and 2 pebble mills, compressor, electric power and tram lines. Plant capable of treating over 100 tons daily. Over 85% of the values are saved by amalgamation.

Production: owing to loss of mill was but 9,920 tons in 1914; 21,426 tons in 1915; yielding 4,949 oz. gold. In 1916 various lawsuits involving title to company's claims have been decided in its favor.

Company has had severe hardships to combat, cloudbursts wrecking the mill in December, 1912, and again in March, 1914, so that both mining

and milling operations were transferred to a new site. Ore value for 1915 decreased to 0.3 of an ounce gold for 5' width.

PORCO TIN MINES, LTD.

BOLIVIA

Office: H. F. Ingo, 148½ Fenchurch St., London, E. C.

Directors: E. Hooper, chairman; J. Edwards, L. A. Kensington and J. Macandrew. H. A. Lewis, gen. mgr.; M. Roberts, cons. engr. Avelino Aramayo & Co., general agents in England.

Inc. Sept. 27, 1912, in England. Cap. £140,000; shares, £1 par; 120,075 issued. Debentures: £19,900, 6%.

Property: 400 acres, 25 miles from Potosi, Bolivia. Mines were worked in the 16th century for silver, but are now worked for tin. The district is mountainous, up to 17,000' at one point, and was described in the Engineering & Mining Journal, Feb. 24, 1917, by J. T. Singewald, Jr., and B. LeRoy Miller.

Geology: two mountains, Apo Porco and Huaya Porco, consist of igneous material. The Porco company is working the tin deposits in the former. Country rock is agglomerate, tuff and quartz porphyry. The two former contain shale fragments. The San José vein is a shattered zone consisting of heavy pyrite, with low tin values and 8 oz. silver per ton. One shoot is 500' long and 6½' wide. Another is up to 170' long and 8' wide, assaying 3% tin.

Development: by tunnels, open cuts and drifts. Reserves in 1915 were 261,500 tons of 2% metallic tin ore.

Equipment: includes 2½ miles aerial tram and a water-power driven 100-ton mill, which includes 2 ball mills, screens, jigs, Wilfley tables, Huntington mill, classifiers, Humboldt tables, buddles, etc. The tailing is to be cyanided for the silver.

Production: mill feed averages 2½% tin and 12 oz. silver per ton. In 1915, the yield, 168,000 lbs. of tin, and 443,500 lbs. in 1916.

BRAZIL

ITABIRA IRON ORE CO., LTD.

BRAZIL

Office: C. F. Levick, 81 Gracechurch St., London, E. C.

Directors: S. Baldwin, I. H. Benn, P. M. Gotto, A. E. Harris, T. H. C. Levick, J. W. B. Pease and F. A. E. Samuelson. G. H. Robinson, engr.

Inc. March 31, 1911, in England. Cap., £2,000,000, in 500,000 pfd. and 1,500,000 ord. £1 shares of which 359,438 and 1,158,474 are issued.

Property: 18,271 acres in the Province of Minas Geraes, Brazil. Ore reserves are estimated at 100,000,000 tons of hematite, assaying 69% iron. A royalty of 6d. (12c.) per ton is payable to the B. H. Syndicate, Ltd., the previous owners.

OURO PRETO GOLD MINES OF BRAZIL, LTD.

BRAZIL

Office: G. H. Wells, 5 Queen St. Place, London, E. C.

Directors: J. Taylor, chairman; E. Beer, M. Paisant, R. Taylor and E. F. H. de Wael. A. J. Bensusan, mgr.; John Taylor & Sons, mgrs.

Inc. July 10, 1914 (originally Jan. 31, 1884), in England. Cap., £100,000, in 60,000 10% non-cumulative pfd. and 40,000 ordinary £1 shares, of which 12,212 and 39,422 are issued respectively. Profit in 1915 was £9,545, against £7,402 in 1914.

Property: a concession of 3½ sq. miles in the province of Nunias Geraes, Brazil, including the Passagem mine, which had reserves estimated at 74,700 tons at the end of 1915.

Equipment: includes 80-stamp mill and cyanide plant. Ore is somewhat refractory, containing arsenic. During 1915, 85,400 tons yielded 30,203 oz. gold and in 1916 about 28,000 oz. gold were extracted.

ST. JOHN DEL REY MINING CO., LTD.

BRAZIL

Office: F. V. Steward, Finsbury House, Blomfield St., London, E. C., Eng. Mine office: G. Chalmers, supt., Morro Velho, Minas Geraes, Brazil.

Officers: H. P. Harris, chairman; J. R. Remnant, E. A. Goulding, H. LeRoy Lewis and C. F. W. Kup, directors.

Inc. 1830, in England. **Cap.**, authorized, £800,000, in 600,000 ordinary, 100,000 preference, and 100,000 second preference shares of £1. Issued, £646,265, in 546,265 ordinary and 100,000 preference shares, fully paid. In 1891 capital was increased from £252,000 to £432,000; in 1893 to £462,000, in 1895 to £500,000, in 1895 to £600,000, in 1904 to £700,000, and in 1910 to £800,000. Preference shares are entitled to a non-cumulative dividend of 10% (paid free of income tax in December and June), and to priority for capital, without further participation. Second preference shares will be entitled to a non-cumulative dividend of 10%, and to priority for capital over ordinary shares, without further participation.

Statement for year ended Feb. 28, 1917, shows income from gold and silver, etc., £450,280, and expenses, £291,096, leaving a profit of £159,184, less London charges and taxes, £39,749, or £132,637 net. Dividends absorbed £67,780. Balance forward to 1917-'18 was £4,057. Company has reserve fund of £90,000, and investments of £127,005.

Dividends: from 1842 to 1867, £896,500 on ordinary shares; since then these shares received a total of 320% to 1910, after which 10% per annum. Preference dividends are paid in June and December. Last dividend on both classes of shares paid June, 1917, amounting to £40,808.

Property: the Morro Velho and Cuiaba gold mines and iron deposits in State of Minas Geraes, Brazil. Considered the oldest and deepest modern mine in the world, as work has been continued since 1830, and workings are 5,900' deep vertical.

Development: amounts to about 4,000' yearly. Below No. 20 level, 5,900' deep, there has been opened 844' of lode. Temperature on this level is 102° for the air and 108° for the rock. Reserves are estimated at 5½ years for the mill, which in 1916-'17 treated 187,400 tons.

Equipment: complete mine, mill and power plants. Treatment is by 130 stamps, 7 tube-mills, concentrators, roasting furnaces, cyanidation and filters. Aerial trams are used to advantage. Company operates a store, hotel, medical department, electric railway, farm, and eucalyptus plantation. Power is generated by water at cost of 2.62c. per h. p. day.

Production: in 1916 was 187,400 tons of \$12.06 ore. The recovery was 95.72% at cost of \$7.20 per ton.

CHILE

ANDES COPPER CO.

CHILE

Office: 42 Broadway, New York City.

Officers: L. D. Ricketts, pres.; Wm. Braden and C. F. Kelley, v. pres.; A. H. Melin, treas., with John D. Ryan, B. B. Thayer, W. D. Thornton, Messmore Kendall and T. Wolfson, directors. D. B. Hennessy, sec.

Inc. Jan. 20, 1916, in Delaware. **Cap.**, \$50,000,000; shares \$25 par.

Will acquire and develop mineral, timber and railroad lands in Potrerillas district, Chile.

ANDES COPPER MINING CO.

CHILE

Office: 42 Broadway, New York City.

Officers: L. D. Ricketts, pres.; Wm. Braden, v. p.; C. F. Kelley, v. p.; A. H. Melin, treas., with John D. Ryan, B. B. Thayer and Messmore Kendall, directors. D. B. Hennessy, sec.

Inc. Jan. 20, 1916, in Delaware. **Cap.**, \$50,000,000; shares, \$100 par.

Property: a very large tract of ground at Potrerillas, Chile, held by the Anaconda Copper Mining Co. under option and drilled by that company. This work is reported to have shown the existence of a very large tonnage, over 50,000,000 tons, it is said, carrying 1.67% copper. The property is now being extensively developed and prepared for operation. Will

acquire and develop mineral, timber and railroad lands in Chile (Potrerillas district).

ANDES EXPLORATION CO. OF MAINE

CHILE

Controlled by Anaconda Copper Mining Co.

Address: 42 Broadway, New York City. B. B. Thayer, pres.; Wm. Braden, mgr., Santiago, Chile. Company is engaged in exploratory work and has not yet published a report.

BRADEN COPPER MINES CO.

CHILE

Controlled by Kennecott Copper Corp.

Office: 120 Broadway, New York.

Directors: Wm. Braden, Messmore Kendall, Stephen Birch, Saml. J. Clarke, Thos. Cochran, Edm. A. Guggenheim, Harry F. Guggenheim, Wm. P. Hamilton, Henry O. Havemeyer, Seward Prosser, W. C. Potter.

Inc. May 26, 1909, in Delaware. Cap., \$10,000,000, shares \$5 par; increased 1911 to \$14,000,000, non-assessable; issued \$12,953,530 to Dec. 31, 1916.

Bonds: authorized \$20,000,000 issue of 15-year 6% sinking fund gold bonds, non-convertible, due Feb. 1, 1931. Issued \$15,000,000. For the purchase of this last issue a minimum of \$1,000,000 per annum will be applied, payments being made semi-annually, starting Feb. 1, 1917.

Owens entire capital stock and bond issue of the Braden Copper Co., the Braden Copper Mines Co. being purely a holding company. Farmers Loan & Trust Co., New York, registrar. Annual meeting, fourth Monday in June.

In Dec., 1915, offer was made by the Kennecott Copper Corp. to purchase the stock of the company, payment to be made in Kennecott Copper Corp. stock. As an alternative any stockholder had the privilege of receiving \$15 in cash for each share of the Braden Copper Mines Co. As a result of this offer the K. C. Corp. now owns 99% of the stock of the company, which, based on the market value of K. C. Corp. stock at the time the offer was made, cost the K. C. Corp. \$42,281,300.

Combined statement of income and surplus accounts for Braden Copper Mines Co. and Braden Copper Co., for year ending Dec. 31, 1916, shows income from copper production, \$12,648,111; operating expenses, \$5,057,655; net operating profit, \$7,590,455; interest and misc. income, \$385,495; taxes, misc. charges and interest on Braden Copper Mines Co. bonds, \$1,029,786; net income, \$6,945,765. Net surplus, \$5,478,704, of which amount \$4,605,272 is cash and certificates of deposit.

Braden Copper Co.

Operating officials: S. S. Sorenson, gen. mgr.; L. E. Grant, asst. gen. mgr.; O. L. Myers, gen. aud.; H. R. Graham, mine supt.; R. E. Douglass, mill supt.; W. J. Turner, smelter supt.; Jas. Chambers, supt. of railroad; B. T. Colley, mgr. Welfare Dept.; J. K. MacGowan, purch. agt.

Consulting engineers: Fred Hellmann, mining; E. A. Cappelen Smith, metallurgical; H. A. Guess, milling; P. H. Thomas, electrical; S. B. Williamson, construction; H. E. Skougor, designing engr.

Inc. June 18, 1904, in Maine, and name changed to present title, Aug. 9, 1904. Cap., \$2,332,030 shares \$10 par, non-assessable; fully issued. Company is protocolized in Chile. Is controlled, through ownership of entire stock issue, by Braden Copper Mines Co. Has a \$4,000,000 issue of 6% first-mortgage convertible bonds. Annual meeting, 4th Tuesday in July.

Property: 174 claims, about 2,362 acres, including 16 acres at Rancagua for railroad yards, etc. Mines are reached from Valparaiso by the Chilean State railroad, 158 miles to Rancagua, and from that point by company's narrow-gauge railway, 43 miles to the smelter and mill and 1½ miles farther to the mines. The elevation is 7,700 to 9,000', the mine being in a very rugged region on a part of the main range of the Andes.

During 1916, company purchased four new tracts of land. The largest covering 10,000 acres of mountain land, is the new tailings site and will hold 200 million tons of tailings. It is 8 miles from the mill and together with the dam, will cost \$1,200,000, but will not be ready until July, 1918.

Another purchase of 40,000 acres surrounding the mine puts all the company's works, including the new smelter under construction at Caltones, on the company's own land and carries smoke easements on adjacent tracts.

The third purchase was for sundry lots of land and water rights needed for the new power plant on the Pangal river and a right of way for the power line. The fourth piece of land is in Rancagua, adjoining the company's present ground.

Geology: all the rocks are igneous and the rock at the mine is an andesite surrounding a plug of tuff which fills the throat and crater of a volcano. This light gray tuff is no longer loose and friable, but cemented into a hard concrete-like mass. The ore deposit is unique, being a volcanic vent of nearly circular section 4,000' across and filled by tuff and an agglomerate of rounded boulders of all sizes. The crater rim is surrounded by highly fractured and brecciated andesite, the fractures being mineralized around the circumference. The ore zone has been further fractured by porphyry dikes, which occasionally cut into the tuff.

The orebodies occur around, but outside the rim of the crater, in the andesite at, or near, its contact with the tuff. The ore consists of shattered andesite, often finely brecciated near the tuff contact, the copper minerals the tuff, but in the andesite the grade becomes lower, passing from breccia filling the cracks and openings. The orebodies are limited on one side by the tuff, but in the andesite the grade becomes lower, passing from breccia to fractured rock and fading out in the more blocky country rock. The fractures in the rock range from a mere film of sulphide ore up to 3 to 4" of mixed bornite and chalcopyrite, mainly the latter. The orebodies dip at 70° toward the center of the crater. Five distinct orebodies have been proven, and four, the Fortuna, Teniente, Centinela and Bornite, are being worked. All are marked by strong outcrop stained with copper minerals. The zone of oxidation is shallow, ranging from a few feet to 150' in depth, and as the property carries mainly disseminated ore, the management holds to the belief, with strong reason, that values will carry to great depth.

The mine is nearly circular in form, following the outside of a nearly vertical plug or tuff which is slightly conical with its base uppermost. The ore has been followed and partly developed on one horizon right around the circle. On the one half is the Fortuna, on the other the Teniente main orebodies.

The Fortuna orebody is typical of all the deposits. It is lens-shaped in horizontal section, is developed for 3,000' in length and has a maximum width of 260'. It has been well developed on all the levels; below the 4th little increase can be expected, as the rock has tightened and ore is lower grade. The lowest tunnel, No. 4, is 1,425' below the outcrop. The copper occurs as bornite and chalcopyrite, associated with ankerite and quartz. The Fortuna orebody is the principal one in point of development. The shrinkage stoping system, similar to that employed at the Ray Cons., is used. Stopes are carried up 7 metres wide, with 5-metre pillars. The topography of the country is such that shafts are unnecessary; all ore can be taken out through tunnels, and, even though parts of the mine are very wet, pumps are not required.

Development: by 5 tunnels; No. 4 and No. 5 are haulage ways at present. The Fortuna was gophered extensively, by former owners, for high-grade ore, which was followed and extracted wherever found. Average grade of Fortuna ore is lower than in El Teniente mine. Workings show copper sulphides and occasional metallic copper throughout the brecciated material for depth of 2,000'.

The Teniente orebody, whose outcrop is supposed to be in the crater of the old volcano, shows high-grade ore at the surface in bunches and stringers. It is the largest and most important orebody, having a length, on Teniente No. 1 level, of 4,800', and an average width of 300'. The depth as taken in computing ore averages about 840'. It is in this orebody that the greatest increase of tonnage is to be expected. It is much the largest of the orebodies and, with the exception of the small Bornite orebody, the richest. Its size and value have only been proved in the last few years, and stoping operations are just beginning.

No. 1 Teniente level and No. 2 Fortuna level have been extended along the tuff contact entirely around the crater, $2\frac{1}{2}$ miles. The Teniente is the oldest mine of the district, having been worked by the Spaniards for the high-grade ore in the small veins.

The Centinela orebody is being mined above Teniente No. 3 level and will probably extend below it. The Bornite orebody is practically worked out above the 4th level. Mining is being done between the 4th and 5th levels. The orebody is rich, but small, and no great extension in depth is looked for. Regimiento No. 2 orebody lies beyond the Fortuna, is lower grade and its size has not yet been determined.

Development: in 1916 totaled 51,230', exclusive of stope preparation, or nearly 10 miles. In addition there was driven 3,509' of the new electric railroad tunnel.

Ore reserves: estimated Nov. 17, 1916, by Fred Hellman, consulting engineer of the company, as: 131,680,000 tons of positive ore carrying 2.4% copper, 88,000,000 tons of probable ore carrying 1.89% copper, or a total of 219,680,000 tons, averaging 2.19% copper, as compared with 86,445,616 tons of 2.88% ore estimated Jan., 1915. These figures show an increase in positive ore of 65,454,410 tons with corresponding increase in copper contents of 1,213,288 tons.

Electric power is used throughout and generated at the hydro-electric plant on the Cachapoal river by four 2,000 k. w. Pelton wheels and generators, developing 10,000 k. w.; a fifth vertical Francis turbine with generator is being installed which will increase the total capacity to 15,000 k. w. Power is delivered to mine and mill at Sewell over a 16-mile 33,000-volt transmission line.

For serving increased capacity planned (10,000 tons of ore per day), an additional hydro-electric power plant is under construction on the Pangal river, 6 miles from the Cachapoal power plant, which will develop a total of 15,000 k. w. by three Pelton impulse wheels and generators. A new transmission line is being erected between these two power stations; a new and second transmission line having already been installed between Cachapoal and Sewell, carrying current at 66,000 volts for the new smelter at Caltones and mill and mine at Sewell.

The motor-driven aerial tram of 2,630 meters length, with 550 meters drop and 1,000 tons daily capacity connecting the mine and mill, now called Sewell, was formerly used for ore transportation, but is now in use as a store delivery system. The main line, of 2,000 meters length, runs from the mill to the central transfer station, where connection is had with a 1,000-meter line to El Teniente mine and a 500-meter line to La Fortuna mine. An electric tram line covered with snow sheds its entire length, owing to drifting snow and numerous snowslides, connecting the lowest level No. 5 of the mine with the coarse ore bins at the mill, handles the ore, capacity 5,000 tons daily.

The new concentrator has 3 sections of 1,200 tons, nominal capacity, each; the coarse ore goes from bins to gyratory crushers, to two 72"x20" rolls, to four 48" Symons disc crushers, to rolls, to 3,000-ton fine-ore bins for delivery to Marcy mills and thence to mill itself.

Concentration is effected by 4 impact screens, 2 sets of rolls, 4 trommels, 6 Wilfley tables, 8 Hardinge mills, 2 Yeatman classifiers, 8 conical settling tanks, 6 Wilfley tables, 16 conical settling tanks, 6 Hardinge mills,

automatic samplers for concentrate and tail rolls and storage bins. The concentrator has a capacity of 5,000 tons daily, though it averaged but 3,723 in 1916. An enlargement of the mill begun in 1916, will give it a capacity of 10,000 tons daily.

The experimental leaching plant was in operation during the year 1915, testing the process for extraction of copper from concentrate; believed that process might be successfully carried out on a commercial scale, but cost of plant would be large and, at the present time, not advisable.

A 20-ton sulphuric acid plant provides the acid required in the flotation plant. Wilfley table concentrates are roasted in a Wedge 7-hearth furnace, the feed carrying from 6% to 7% moisture, 16% copper, 13.6% silica, 28.6% iron, and 33.3% sulphur. Hearth temperatures, from 1 to 7, respectively, in degrees Centigrade are 380, 460, 600, 750, 790, 680, 630. The furnace shaft makes one revolution in 3 minutes 20 seconds, and 12 h. p. is required to operate the furnace when treating 35 tons of concentrates per 24 hours. The calcine contains about 2% sulphur.

The lead chambers are four in number, each with a volume of 46,750 cu. ft., and formed of timber framing and $\frac{1}{8}$ -in. lead sheets. The following table gives certain data on chamber operations:

Chamber No.	Temperature, Deg. C.	Color of Gas	Deg. Baume of Drip
1	80	Gray	51-52
2	75	Light gray	50-51
3	60	Slightly yellow	49-50
4	48	Pale yellow	46-48

The daily production of chamber acid is from 23 to 24 tons at 66 deg. Be. Five tons produced in the Glover tower bring the total to 28 or 29 tons per day. The plant has been in operation since March, 1913.

A smelter is now in operation at Sewell. This plant, with blast furnaces, converters and refinery, was completed during the latter half of 1911. Since that time several improvements have been made, the most important being the addition of nodulizing kilns. These are similar to the kilns used in the manufacture of Portland cement. The 4th and 5th are largest ones installed, 8' in dia. and 100' long. Speed of kilns about 1 r.p.m. Heat is applied by an oil burner at discharge end. By feeding nodules instead of raw concentrates the furnace capacity has been almost doubled, due to absence of water in the charge. Coke consumption was practically cut in two.

The smelter equipment at present consists of 14 storage bins for concentrates, lime, coke, etc.; 4 sinter grates, with a daily capacity of 50 tons concentrates, roasted to 40 tons; 5 nodulizing kilns, with daily capacity for the first 3 installed of 215 tons concentrates, roasted to 180 tons; 2 blast furnaces, one being 48"x240" and the other 48"x600". Daily capacity is 300 tons raw concentrates, or 600 tons nodulized concentrates; 3 Pierce-Smith basic-lined converters, two having 33 tuyères, the other 17 tuyères; 1 copper casting apparatus. The power plant at the smelter includes 1 Nordberg 2-cyl. engine for converter air supply, capacity 10,000 cu. ft. air per min., at 13 lbs. pressure, rope driven, by a 600-h. p. motor; 1 No. 9 Connorsville blower, capacity 20,000 cu. ft. air per min., at 3 lbs. pressure, belt driven, by a 250-h. p. motor, 1 Rateau-Battu-Smoot turbo-blower, for blast furnace supply, direct connected to an 800-h. p. motor, capacity 39,000 cu. ft. per min., at 3 lbs. pressure; 1 Ingersoll-Rand, Imperial type 10, compressor. Another turbo-blower is being erected. This is for converter air supply and will be direct connected to a 1,700 h. p. motor, capacity 24,000 cu. ft. air per min., at 13 lbs. pressure.

A new smelter is now under construction at Caletones, about 5 miles from Sewell, from where the concentrate will be conveyed by a Trenton Bleichert tramway system to the smelter which is intended to handle 1,000 tons of concentrate from the 10,000-ton mill now under construction at Sewell.

General summary of smelter operations:

	Per day
Tons of concentrates treated.....	350
Tons of coke consumed.....	60
Tons of fuel oil consumed.....	10
Tons of matte converted.....	150
Tons of copper produced.....	60
Number of men employed.....	350
Electric energy used, 1,500 h. p.	

The experimental Minerals Separation Co.'s flotation plant proved so successful that a 3,000 ton plant, to treat the entire slime product was built and is now in operation. It consists of 8 standard M. S. units that treat the tonnage handled by the 3 mill sections. Extraction is over 77%, and it is expected an 80% extraction will be obtained with the completion of the air cell installation. Daily production of all concentrates is about 350 tons. Average assay is: copper, 19%; iron, 23%; sulphur, 28%; lime, 2%; silica, 17%; alumina, 8%.

The complete works, including the concentrators, leaching plant and smelter, are planned to eventually treat 10,000 tons of ore daily, estimated to average 2.50% copper, at a cost, estimated by the management, of 7½¢ per lb. laid down in New York.

Production is estimated at 3,000,000 lbs. fine copper in 1908; 7,500,000 lbs. in 1909; 9,000,000 lbs. in 1910; 9,500,000 lbs. in 1912, and 18,098,000 in 1913.

Production:

	Tons.	%	% Rec.	Ratio	% Cu.	% Rec.	Net prod.	Cost cts.
	Milled.	Cu.	Mill.	Conc.	Cncts.	Smelter.	Lbs. Cu.	per lb.
1916	1,362,629	2.12	75.07	42,153,270	8.03
1915 (a).....	1,106,420	2.09	74.92	11.29	17.68	94.49	32,733,576	8.78
1914	900,299	2.12	28,304,092	

(a) For year ending Oct. 31, 1915; 35,444,000 lbs. for calendar year 1915.

Production of blister copper for 9 months ending Sept. 30, 1917, estimated at 46,954,000 lbs.

Average price for copper sold in 1916 was 26.35¢ per lb.

Although operations at the Braden property have not yet fulfilled the expectations of its sponsors, it is believed that the treatment problems are now solved and with the completion of plant extensions and of the new smelter at Caletones, under construction in 1917, that the profits will be enormous. Known ore reserves will last 35 years on a 10,000 tons a day basis and the extent of the orebodies is as yet only partially known.

CALAMA: COMPANIA DE MINAS Y FUNDICION DE, CHILE

Reorganized 1913 as Compania Miñera de Calama. In August, 1916, property was sold to the Chile Copper Co., which see.

CATEMOU: SOCIETE DES MINES DE CUIVRE DE, CHILE

Main office: 50 Boulevard de la Senne, Brussels, Belgium. Office: 5 Rue du Helder, Paris, France. Operating and works office: Estacion Chagres, Aconcagua, Chile. A. W. Lehman, gen. mgr.

Officers: Eugène Renevey, chairman; Max Lyon, managing director; Georges Renevey, Jean Renevey, Félix Adam, Robert de la Bouglise and Robert Franklin, directors; Joseph Wouters, sec.

Inc. June 2, 1899, in Belgium. Cap., f55,000,000; shares f500 par; divided into 10,000 preference shares at 8%, and 35,000 ordinary shares; non-assessable. Debentures, f2,500,000 5% bonds. Annual meeting, last Friday in June.

Dividends: 4% in 1910, 5% in 1911, 6% in 1912, 6% in 1914, 8% in 1915, 12% in 1916.

Lands: 155 claims, with sundry miscellaneous tracts held in fee and under government concessions, including the Finca de Nilhue, total hold-

ings of 30,000 acres, in the districts of Putaendo, Los Andes, Melipilla, La Ligua, Quillota and El Nilhue. Property includes numerous mines in Catémou, Melon and elsewhere, with quarries of fluxing material. The Finca de Nilhue carries a stock of 1,200 cattle, for transport and food, and is a valuable factor in reducing costs.

The local management reports that ores carry an average of 4% copper, and 2 oz. silver per ton. Veins carry the usual oxidized ores in a comparatively shallow surface zone, succeeded by chalcocite, bornite and chalcopyrite.

Los Mantos, or Mantos Rojos, mine, opened 1820, has country rocks of sandstone and limestone, with eruptive dikes traversing the sedimentaries, there being 2 blanket veins, of 5 to 7' thickness, composed of calcareous matter impregnated mainly with bornite, but having a little chalcopyrite and occasional gray copper, ore ranging 3 to 4.5% copper, 1% lead, 2% zinc and 30 grams silver per metric ton. The oxidation zone has been eroded, leaving only sulphide ores. These blanket veins have been worked on a considerable scale since 1835, and the ore, while low in grade, is especially suitable for fluxing purposes.

Development: exclusively by tunnels, having a vertical depth of about 50 meters and length of about 1,200 meters, with ore reserves developed for 3 to 4 years extraction. The mine produces no water, and walls stand excellently without timbering. Work is generally by contract, according to tonnage produced, miners being paid 5 to 7 pesos per metric ton for ore won. Only about 8% of the ore broken is discarded as waste, and ore is concentrated by flotation or smelted direct. Ore is taken to the smelter by a 1,580-meter aerial tram, with drop of 750 meters, having 500-kg. buckets. Cables last 2 years and guide cables last 5 years.

In 1916, Los Mantos mine employed 500 men, producing monthly 2,000 to 5,000 tons of ore of 4% copper tenor.

El Soldado mine, one of the Nogales group, and the greatest distance from the smelter, being in the Commune of Melon, on the Calera é Cabildo railway, was opened 1841. This property has 15 known veins, of 5' to 7' average width, carrying mainly copper sulphides, with quartz gangue. Several veins carry oxidized copper ores, with gangue of aluminous silicates, the series of veins having an approximately N.S. strike, with dip of 45° east, between trachyte and feldspar-porphry. The series of veins is faulted, frequently with throws of 1 to 2 meters, and there is another series of dikes and veins crossing at approximately right angles to the dip, but with parallel strike, the dikes being partly decomposed porphyry, carrying occasional oxidized ores and aluminous silicates. These veins have been worked extensively in the past, showing many antigua openings and ore averages 5 to 6% in copper tenor.

Development: mainly by tunnels, greatest vertical depth obtained being 80 meters and old workings are about 150 meters in length. This mine shows some immense chambers, one being called the Cathedral, in recognition of its vast size. In 1916 production was about 600 metric tons of high-grade ore monthly, secured with an average force of 150 men. Transportation is by wagon at a cost of 3 to 4 pesos per ton. An aerial tram is planned.

La Union group includes the Restauradora, San José and Vieja mines, producing about 40 metric tons daily of 3 to 4% copper ore, mainly used for fluxing and secured with an average force of 150 men.

Miscellaneous mines include El Nilhue mine, in the department of Putaendo, opened 1886; Las Maquinas de Catému mine, in the department of Putaendo, opened in 1870; La Esmeralda mine, opened 1860; La Constanancia and La Democracia mines, 10 kilometers from the smelter, carrying blanket veins, and La Marquesa, Malva, Tabourina, Caracoles, Almendro y Pleito and other properties, in various stages of development, some of considerable promise.

The mines and works have telegraph and telephone communication.

Forces, 1916, averaged 1,200 men, with the high average wages of 5 pesos for underground workmen, and 4 pesos for surface labor.

Reduction works: include 2 smelters, each with converter plants, with aggregate capacity of 400 to 500 metric tons of ore daily, one situated at La Poza, 12 kilometers from Chagres Station and the second near the Chagres Station on the Andes railroad. The concentrating plant by flotation process is located close to La Poza smelter. These works are equipped mainly with American machinery.

La Poza smelter, of 300-tons daily capacity, has 2 old 75-ton rectangular water-jacket blast furnaces, and new blast furnaces of 36"x96" and 35"x84" dimensions at the tuyéres, turning out 50% matte. The converter department has five 57x77" shells, with 12 tuyéres each, of the Copper Queen type, turning out cakes carrying 99.7% copper and 40 oz. silver per ton. There is a 40-ton briquetting plant and the converter department has a quartz mill. Power is furnished by a 165-h. p. Pelton water wheel and a 175-h. p. engine. Furnace blast is supplied by No. 6 Connersville blowers and converter blast is furnished by a Riedler air-compressor, with capacity to reduce 20,000 cu. ft. of free air per minute to 15 lbs. pressure. Fuel is coke, one ton of coke smelting 6 tons of ore, ores treated being highly silicious, with slags averaging 0.4 to 0.5% copper. In 1912 La Poza smelter treated 51,000 metric tons of ore, of 6% average tenor, obtaining therefrom 3,000 metric tons fine copper. Employs 90 men at average wages of 3.5 pesos daily.

The converting plant at Chagres smelter consists of a large horizontal Peirce-Smith machine.

El Cobre del Melon smelter, 16 kilometers from Estacion del Melon, on the Calera & Cabildo railway has a 36x84" and 36x120" Allis-Chalmers cylindrical water-jacket blast furnace and converters. Ores smelted at this plant carry excess of silica and alumina and are deficient in sulphur, necessitating the free use of low grade cupriferous pyrite and limestone, for fluxing. Fuel is very expensive, coke costing 70 pesos per metric ton, and English coal 60 pesos per ton. one ton of fuel smelting about 3.5 tons of ore. Equipment includes a Pelton water-wheel, 60-h. p. locomotive and No. 6 Green blower. A reverberatory furnace 17'x55' has been lately installed. A 4-kilometer aerial tram is proposed to the Nogales group.

Production: was 3,379,947 lbs. fine copper in 1907; 4,060,873 lbs. in 1908; 4,073,761 lbs. in 1909; 4,920,500 lbs. in 1910; 4,660,000 lbs. in 1911; 6,960,000 lbs. in 1912; 5,843,250 lbs. in 1913; 7,878,465 lbs. in 1914; 7,210,350 lbs. in 1915; 11,082,330 lbs. in 1916. Property is estimated by company to have, with further improvements, a productive capacity of 10,000,000 lbs. fine copper yearly.

Management is good.

CENTRAL CHILI COPPER CO., LTD.

CHILE

Address: W. A. Habberfield, sec., 15 Angel Court, London, E. C., England. **Mine and works office:** Panulcillo, Ovalle, Coquimbo, Chile. B. Schiff, gen. mgr at mines; Eugene A. J. Goldsmid, chairman and joint managing director; B. C. Hinman, joint managing director; H. L. Bromhead, Andre Goldsmid, directors; R. L. Lee, smelter supt.; A. H. Morrill, mine supt.

Inc. organized June, 1894, as a reconstruction of the Panulcillo Copper Co., Ltd., and reorganized, Jan., 1898. **Cap.**, increased Nov., 1905, to £400,000, shares £1 par; issued, £312,468.

Inc. Jan. 11, 1898, and is second reconstruction of the Panulcillo Copper Co., Ltd., registered Jan. 5, 1864, and first reconstructed as the Central Chile Copper Co., Ltd., in June, 1894. **Cap.**, £400,000, shares £1 par; 312,468 shares issued and fully paid. Increased from £300,000 to present amount in Nov., 1905, 30,000 new shares being offered to shareholders at par; the guarantors received an option on 26,954 shares at par for 6 months, on 25,000 for 12 months at 22s. 6d. and on 25,000 for 18 months at 25s.

Balance sheet: Dec. 31, 1915, total assets £325,833, including £240,227, plant

and equipment; £43,124 stocks of regulus, ore, etc.; £26,163 cash and war bonds. Working account showed revenue of £238,725 from metals, and £160,575 as mining, purchased ore and smelting expense. Profit for year was £37,086. Profit and loss account showed total of £37,291; debit balance of £27,874 for 1914; depreciation £4,128; with £704 credit balance. Dividends were 6d. April 10, 1900; 6d. Jan. 22, 1901; 1s. May 31, 1907. Net earnings on working account were £10,932 in 1905; £24,913 in 1906; £12,684 in 1907; 1908 gave a net loss of £12,616; 1909 a net profit of £6,712; 1910 a profit of £7,954; 1911 a profit of £2,191; 1912 a profit of £22,124; 1913 a profit of £8,113; 1914 a loss of £5,598; 1915 a profit of £37,086.

Property: includes mines at Panulcillo, 25 kilometers northeast of Ovalle, and mines in the vicinity of Nisñile. The Panulcillo group, area 56 hectares, includes the Panulcillo Alto and San Gregorio mines.

Development: principally by the 1,000-meter San Gregorio tunnel. Ore is mainly chalcopryrite, associated with pyrite, in limestone gangue, with some commercial production of malachite, azurite and chalcocite. During the year 477.5 meters of development work and 266 meters of diamond drilling were done.

The Cocinera and Inagotable mines, are at Ferro Negro.

In the Tambillos group work was paralyzed by the war.

Holdings were increased, 1915, by acquisition of 6 claims, 21 hectares; 5 near Panulcillo, and one at Tambillos.

Equipment: the 400-ton smelter, connected with the Panulcillo Alto mine by tram, is 76 kilometers from Coquimbo. This plant does a considerable custom business, employing about 250 men, at average wages of 3.68 pesos daily. Equipment includes 3 calciners, 2 reverberatory furnaces, and one 46x180" and three 42x84" blast furnaces. Pending the construction of a converter plant matte is shipped. Slags are hauled in cars to the dump. There is also a crusher, and in connection are a machine shop and a good laboratory. The smelter treats silicate custom ores, company's sulphides furnishing flux. Matte is crushed and exported to New York for smelting. In 1915 company smelted 32,063 tons of its own ore, averaging 2½% copper and 27,826 tons of 8.13% copper of purchased ore, all of which contained 2,737 tons of fine copper, 44,700 troy oz. of silver and 1,233 troy oz. gold.

Production: fine copper, 1913, 2,274 tons; 1914, 2,491 tons; 1915, 2,737 tons; 1916, to Sept., 2,006 tons.

CHANARAL: SOCIÉTÉ DES MINES ET USINES

DE CUIVRE DE.

CHILE

Office: 94 Rue de la Victoire, Paris, France. **Mine and works office:** Chañaral, Atacama, Chile.

Officers: Eugène Renevey, chairman; preceding officer, D. Bethmont, A. DuBois, A. Delattre, Georges Renevey and R. de La Bouglise, directors.

Inc. July 17, 1906, in France. **Cap.** 6,000,000 frs.; increased 1910, to 7,000,000 frs.; shares, 500 frs. par.

Lands: 925 hectares, including 244 mines, mining claims, the more important being Los Pozos, Las Animas, Cerro Negro, at distances of 25 to 55 kilometers from the smelter at Chañaral, with which the mines are connected by rail. Property includes lands bought, 1906, of Besa y Ca., and of Las Animas Copper Mining & Smelting Co., Ltd., 1909. Lands are desert and water is scarce. The mine water carries salts and should be distilled for domestic uses.

Las Animas deposit consists of a system of 3 veins with parallel strike and dip of 70°, in wall rock of syenite, traceable 2 kilometers. Average width of the 3 veins is about 5', with ore occurring mainly in vertical shoots sometimes 100' in depth. Oxidized ores, to depth of 150 meters, are succeeded by sulphides, mainly with chalcopryrite, and some cupriferous pyrite. Gangue is silicious, or calcareous, or both. Ore shipped to smelter averages 4 to 5% copper. The mine is opened by 4 shafts, three of which are used for hoisting. The fourth shaft is used at present for pumping. Depths of shafts vary up to 550 meters. The shafts are equipped with two steam

hoists and a Diesel engine hoist. Compressed air is used for drilling, pumping and sub-hoisting.

The Los Pozos deposit has 2 parallel orebodies which outcrop for several kilometers in porphyry and syenite, one having a silicious and the other a ferruginous gangue. Width of orebodies has not been determined; cross-cuts, 70 meters long, still show mineralized headings and indicate large deposits of the porphyry type. The mine has been opened by a tunnel 300 meters long and 90 meters below the outcrop, by a 600-meter drift and by numerous cross-cuts. The mine is being developed by a system of raises, winzes and sub-levels, leaving the pillars to be mined later if filling can be done.

The mine is equipped with a compressed air plant, using a Diesel engine.

El Manto Verde mine at Los Pozos, 25 kilometers from Las Animas, has 2 parallel orebodies in porphyry and syenite, 1 carrying oxidized ores of about 6% average copper tenor, there being no sulphides, though chalcopryrite is found in the Laura mine, nearby. There are shafts of 80 meters and 195 meters depth, latter having its first 65 meters vertical and balance at 50°, and there also is a tunnel. The mine has extensive and erratic old workings and shows large bodies of low-grade ore, somewhat refractory.

In addition to the foregoing mines, which are the principal properties, there is La Descubridora mine, formerly an important producer, abandoned at depth of 650 meters; the Andacollo mine, with ore averaging about 12.6%; the San Agustin, with 3.5% ore, and the Manto Atacama, with 3% ore. With further development the properties of this company can furnish a sufficient variety of ores to permit proper furnace mixtures.

The Cerro-Negro deposit has one orebody with ferruginous gangue, but in other respects it is similar to that of the Los Posas. Rich ores only, 10% or better, are mined because of heavy cost of transportation due to the distance of 50 kilometers from mine to smelter. Company expects to build a railroad. In the meantime some development work will be done.

The company owns numerous other claims in the districts of Sierra-Aspera, El Salado and Pueblo Hundido, some of which are valuable and are reserved for the future.

The smelter is located at the harbor of Chañaral. It has four water-jacket furnaces, one of 100, one of 80 and two of 50 tons.⁸ There are two converter stands. Converter shells are 1.68 meters in diameter and 2 meters in length. The basic process is used with excellent results in spite of small size of converters. Air at 10 lbs., is delivered to the converters by a two-cylinder direct connected, double expansion, Walker compressor.

Electric power is delivered throughout the plant, using alternating three-phase, 220 volts and 50-cycle current.

The product of the smelter is bar copper averaging 99 to 99½% copper and containing about 60 grams gold and 150 grams silver per metric ton.

The company owns a shipping pier and lighters. Property is considered valuable and management good.

CHILE COPPER CO.

CHILE

Office: 120 Broadway, New York.

Officers: Daniel Guggenheim, pres.; Albert C. Burrage, v. p.; Murry Guggenheim, v. p.; H. F. Guggenheim, v. p.; C. K. Lipman, sec.; preceding with Isaac Guggenheim, S. R. Guggenheim, William Loeb, Jr., John N. Steele, Albert C. Burrage, Jr., Russell Burrage, Chas. D. Burrage, E. A. Guggenheim, H. R. Wagner, E. A. Cappelen Smith, W. C. Potter, directors. W. E. Bennett, asst. sec.; L. Fredrick, treas.; D. A. Crockett, transfer agent, 149 Broadway, New York City.

Inc. April 16, 1913, in Delaware. Cap., \$110,000,000; shares \$25 par; issued, 3,800,000; 600,000 shares held in treasury for conversion of \$15,000,000 7% gold bonds. Shares are listed on the New York stock exchange. Company owns entire issued capital stock of the Chile Exploration Co. of New Jersey.

Chile Exploration Co.

Office: 120 Broadway, New York. **Mine office:** Chuquicamata, Chile. Same directorate as Chile Copper Co. **Operating officials:** H. C. Bellinger, gen. mgr.; E. E. Barker, mine supt.

Inc. Jan. 11, 1912, in New Jersey. **Cap.,** \$1,000,000; shares \$100 par; entire stock issue owned by Chile Copper Co.

Combined statement showed: total assets \$128,853,360; including \$117,922,464 for property, construction, equipment and development; \$4,172,031 for materials, supplies, merchandise and items in transit; \$1,833,956 for deferred and receivable accounts; \$4,438,027 for copper in transit and in process; cash, \$486,880. After deducting \$146,173, deficit of 1915, from undivided profits, the surplus for 1916 was \$1,790,218.

Combined income account showed: \$10,558,724 from 41,305,477 lbs. of copper at 25.56c. gross price, delivered; and operating expenses, \$6,425,022; net operating income \$4,133,702, and other income \$39,346; interest, \$1,463,676; depreciation, \$772,981; balance undivided profits, \$1,936,391.

Property: the copper deposits of Chuquicamata, province of Antofagasta, Chile, the largest known in the world, form the crest of a low ridge some distance from the main range of the Andes, 9,600' elevation above sea level. Chuquicamata is about 85 miles E. of the Pacific Ocean on a branch of the Antofagasta & Bolivia Railway, 163 miles from Antofagasta. The company owns 693 claims, about 9,592 acres, 1,914 acres mineral land, 3,822 acres comprising the plant site, 328 acres acquired for waste dump purposes and 3,528 acres covering limestone, iron ore, salt and sulphur deposits.

The outcrop of the orebody is 8,000' long, with an average width of 554'. The maximum length of orebody, as proven up to present time, is about 7,000' with a maximum width of 1,800'. Ten holes have been put down to a depth of over 1,000'; one of these, in August, 1915, had reached a depth of 1,685', and was in 1.70% ore at that point. Sixty holes put down had an average depth of 681.8'. Small veins of rich ore cut through the mass, but the average of the entire deposit is estimated at 2.12% copper. The copper in the oxidized area occurs in the form of brochantite, a mixture of copper sulphate and copper hydrate, known as a subsulphate of copper. There is also a small amount of atacamite and chalcantite, or natural blue vitriol.

The drill holes show that the oxidized minerals change in depth to sulphides, notably chalcocite, bornite and chalcopyrite. About two-thirds of the ore developed carries brochantite (a basic copper sulphate containing 56% copper) and the balance copper sulphides. The underlying sulphide ore, practically all ore below 400' from surface, can be treated in the customary way by water concentration and direct smelting. This will be work of the future. At present the company is devoting its attention to the sulphate part of the orebody, the mining of which will be done by steam and electric shovels.

In August, 1916, the company acquired the holdings of the Compañía Minera de Calama for \$1,508,368. The property included an important adjacent group of mines; an antiquated smelter at Calama, 14 miles from Chuquicamata; considerable amount of land at Calama, some with water rights; a water-power concession near Calama; a group of copper claims near El Abra, 28 miles from Chuquicamata on a branch of the A. & B. railroad. The mines are located on two vein systems known as the Panizo-Rosario del Llamo and the Poderosa-San Felipe systems. These have yielded considerable amounts of about 16% to 18% copper. The veins, up to 45' wide, are strong and persistent, and the ores in the upper levels are oxides of copper, brochantite principally, mixed with chalcocite. In the lower levels the ore is chalcocite and enargite. The dumps of the property are reported to have sufficient copper content to repay purchase price.

Ore reserves: estimated by Fred Hellmann, consulting engineer, at the end of 1916, as 354,700,000 tons positive ore, averaging 2.18% copper and 345,300,000 tons probable ore, averaging 2.12% copper.

Treatment: the reduction plant, $2\frac{1}{2}$ miles from the mine, which started operations May 18, 1915, has a capacity of 10,000 tons a day. The extension of the plant to 27,000 tons per day has been started and it is estimated that the plant will be operating on the increased capacity within the next three years. Copper is recovered by a leaching process, the ore being peculiarly amenable to treatment by this method. Careful study of the problem by E. A. Cappelen Smith showed that the ore gives little or no slime, and is readily soluble in an 8 or 9% solution of cold sulphuric acid. As it contains no arsenic, antimony or bismuth, the solution is not fouled by repeated use.

The ore is subjected to crushing in two 84"x60" jaw crushers, 3 No. 10 gyratory crushers, six 48" horizontal and 24-48" vertical Symons disc crushers, to $\frac{3}{8}$ " size. It is then distributed to mastic-lined, concrete vats, of which there are six, 110' wide, 150' long and 17.5' high, each with a capacity of 10,000 tons of ore. Tanks are built of reinforced concrete, lined with mastic $1\frac{1}{2}$ " thick. The leaching process requires approximately 6 days for the complete cycle, 1 day for filling the tank, 2 days for leaching, 2 days for washing and draining and 1 day for discharging. The pregnant solution is drawn off into solution tanks and the leached residue taken from the vats by clamshell buckets, operated on a traveling bridge, transferred to cars, and piled on the waste dump. The copper solution, before electrolysis, is dechloridized by agitation with finely divided copper. The chlorine is precipitated by this method in the form of cuprous chloride, which is removed from the solution in settling tanks. This cuprous chloride is dissolved in brine and passed over scrap iron where the copper is precipitated in a finely divided condition, suitable for dechloridizing more solution.

The clear solution overflowing from the Dorr thickeners goes to the electrolytic tank house where it is electrolyzed, using ordinary copper cathode starting sheets and insoluble anodes made of Duriron. The electrolytic refinery consists of 510 electrolytic tanks, 19' long, $3\frac{1}{2}$ ' wide and 4' 10" deep, made of concrete and lined with mastic. Of the 510 tanks, 30 are used for making cathode starting sheets, and 480 for electrolytic deposition of copper from solution. The solution enters the head tank of the system containing about 5% copper and $2\frac{1}{2}\%$ -3% free acid and leaves the last tank containing about 1-5% copper and 8-9% free acid.

Power for operating the reduction plant is generated at Tocopilla on the Pacific Coast by four 10,000 k.v.a., 53,300 h. p. total, steam turbines, served by oil-fired steam boilers. A 110,000-volt, 3-phase, 50-cycle, 87-mile steel tower transmission line connects this plant with Chuquicamata. A large part of the delivered power is utilized for electrolytic purposes, through 7 2,500-k. w. motor-generators, which convert 5,000-volt alternating current into 250-volt direct current.

There is now being designed and purchased additional electrical machinery to increase the power-house capacity to 115,000 k. w. (153,300 h. p.) by adding three 25,000 k. w. turbo-generators. A new 135,000-volt transmission line and 16 3,480-k. w. rotary converters are also being added, the latter being used to provide the necessary 250-volt direct current. Large extensions and improvements in the applications of electric power are in progress.

Estimates made by Mr. Yeatman of cost per ton of ore, on a basis of 10,000 tons per day of 2% ore are as follows:

Mining and transportation to mill.....	\$0.50
Crushing, leaching and electrolytic precipitation.....	1.086
Transport of copper to port, port charges and ins.....	0.115
Freight to Europe and selling commission.....	0.214
Depreciation and contingencies.....	0.191

Total.....\$2.106

Transportation of copper and supplies being difficult, Chile Exploration and Braden Copper, early in 1916, jointly purchased two steamers, the

Sherman for \$790,000, and the Republic for \$825,000, to trade between Chile and New York. The Chile Steamship Co. and Sherman Steamship Co. were formed to operate these vessels. The revenue from general carrying business soon repaid the purchase price and the owners were offered \$1,250,000 each for them, but refused. J. K. MacGowan is president of both steamship companies.

Production:

Year	Ore Treated, Tons	Copper, Per Cent.	Extraction, Per Cent.	Copper. Pounds	Cost at Plant, Cents Per Pound	Total Cost, Cents Per Pound
1917	224,926**	1.79**	80.70**	62,498,000*	8.06**	11.31**
1916	1,742,748	1.74	77.15	41,306,000	11.75	15.46
1915†	625,394	1.71	66.87	10,944,000	16.34	18.55

* 9 months. ** April, 1917. † 7½ months.

Transportation and insurance rates are abnormal, being 2 cents per pound above those prior to the war.

Estimated annual production of copper on a basis of 10,000 tons per day is 120,000,000 lbs. refined copper, while the extension under way to 27,000 tons capacity will produce 324,000,000 pounds. The extension is expected to be complete by April, 1919. The estimated cost of production per pound of refined copper is 6 cents, including delivery in New York, Hamburg, Germany, or England.

Company's reports, while brief, are ample; and are profusely illustrated with plans and photographs.

NALTAGUA: SOCIÉTÉ DES MINES DE CUIVRE DE CHILE

Main office: 5 rue du Helder, Paris, France. Mine office: El Monte, Chile.

Officers: Baron Emmanuel Leonino, chairman; Max Lyon, managing director, 83 Avenue du Bois de Boulogne, Paris; J. de Bethmann, A. Boscher, Chas. Chalupt, A. de Dietrich, P. Keller, A. de Mun, Jorge Matte, A. de Montureux, G. Renevey and B. de Senevas, directors; Henri Blanc, mgr.; Henry Salomon, sec.; Count Bernard de Saint-Seine, cons. engr.; C. Lehmann, asst. mgr.; Pretot, Fontaine & Co., Valparaiso, purch. agts.; Ledoux & Co., New York, chemist-assayer.

Inc. Jan. 26, 1907, in France. **Cap.**, f10,000,000, in 100,000 shares, par value f100. Bonds or debentures authorized, f3,000,000, with 5% interest. Total assessments to date, f3,000,000. Net profits in 1909-10, f36,000; in 1910-11, f195,000; in 1911-12, f595,000; in 1912-13, f603,689; in 1913-14, f318,442; in 1914-15, f716,811; in 1915-16, f2,043,429, giving a total of f4,408,371. Interest on bonds paid and drawn bonds repaid. Fiscal year ends June 30.

Dividends: paid 1913-14, f300,000; 1915-16, f500,000.

Property: formerly held by the Compañía Minera de Naltagua, comprises 195 pertenencias of mineral lands and the Naltagua farm with a total of nearly 2,000 acres.

Geology: claims show a succession of parallel mantos, or blanket-veins, some in limestone and some in porphyry. These bedding-veins have a known length of about 10 kilometers and are said to average 3% copper. Development was begun July 1, 1907, and the 10 years' work amounts to about 9 miles. The principal mines are the Vacas, San Ramon, Los Ranchos, Carmen Alto, Venus, Consuelo, Trinidad.

Development: San Ramon, so far the principal producer of the company, has a 3' to 10' vein averaging 7½%, running N. and S., carrying oxidized ores to 65' depth succeeded by bornite, changing downward into disseminated chalcopyrite. The ore carries 1.5 to 4.5% copper as mined, and is self-fluxing, requiring only a little pyrite to give a 50% matte. The mine is developed by tunnels with backs of about 50 meters. Underground work-

ings aggregated 1,200 meters July, 1912. Mining costs at this mine are 18 pesos per metric ton for ore delivered at the smelter.

Las Vacas mine, near San Ramon, has somewhat similar but leaner ore, though the bed is not so thick, and has a calcareous gangue.

Ranchos mine includes the Gato, in which a 6' vein of 4% ore in porphyry had been opened for stoping in 1913.

Carmen Alto mines have a large amount of ore blocked out in 2 veins which will be mined when a 700-meter tunnel is completed, connecting the district with the railway.

Equipment: owing to development being by tunnel only, mines have no hoists. There are several Ingersoll-Rand compressors. The company plans a 2,000-h. p. hydro-electric plant on the Rio Maipo. There is abundant wood on the Naltagua ranch.

Transportation equipment includes several aerial trams and a private railway. The aerial tram from El Monte to San Antonio, where the tower station is located, is 5,600 meters in length, with 22 towers, of 22 meters maximum height, on concrete foundations, having greatest span of 386 meters. An incline tram, at San Antonio, connecting with the lower station of the aerial tram, is 300 meters long, at an incline of 30°, having a double line of rails. A 2½-kilometer railway connects the incline tram with the private rail system, which has a total length of 25 kilometers. Equipment includes 6 locomotives, with 2, 3 and 5-ton ore cars.

The 300-ton smelter at Naltagua, in the valley of the Rio Maipo, adjacent to the Rio Mapocho, 70 kilometers by river to the coast, and 225 kilometers to Valparaiso, with a freight rate of 6 pesos per ton to the latter point. The smelter was blown in 1909. Equipment includes two 40"x160" blast-furnaces. Slags, assaying about 0.4% copper, are granulated, and sluiced to the dump by water.

Two 17'x55' reverberatory furnaces of the Anaconda type were blown in recently.

The converter department has 3 stands, with 9 shells of the Copper Queen barrel type, an electric traveling crane with a hydraulic accumulator for rotating the shells and a large Pierce-Smith basic converter.

The smelter power plant includes 770-kw. engines, 4 Connersville blowers and a 200-kw. air-compressor for converter blast. The boiler plant has five 200-h. p. boilers, three 300-h. p. boilers and a 30-meter steel stack.

Works were described by F. A. Sundt in Mexican Mining Journal for October, 1914, and by Mark R. Lamb in Engineering and Mining Journal for Oct. 28, 1916.

About 1,500 men are employed at the mines and works, with average wages of 5 pesos at the mines and 6 pesos at the smelter.

Production: has been as follows: 293,209 lbs. in 1908-09; 2,253,090 lbs. in 1909-10; 2,486,772 lbs. in 1910-11; 4,082,892 lbs. in 1911-12; 4,703,005 lbs. in 1912-13; 5,659,356 lbs. in 1913-14; 6,504,004 lbs. in 1914-15; 9,417,692 lbs. in 1915-16. Above figures are for Chile bars assaying 99.1% copper.

PODEROSA MINING CO., LTD.

CHILE

Office: F. W. Bishop, sec., 145 Dashwood House, New Broad St., London, E. C., Eng. Operating office: Casilla 855, Antofagasta, Chile. Mine office: Collahuasi, Tarapacá, Chile.

Directors: Chas. Fearn, chairman; L. W. Harris, V. Echeverria and W. J. Barnett. J. H. Ivey, mgr.

Inc. Nov. 27, 1908, in Great Britain. **Cap.** £500,000, shares £5 par; fully issued and fully paid.

Accounts for 1916 show total income of £119,738, of which £67,699 was profit. Investments amount to £80,870; cash, £20,892; and supplies, £12,940.

Dividends: 5% in 1909; 10% in 1916; nothing between.

Property: 37 contiguous claims, 185 hectares, or 457 acres, including the Poderosa, which is the principal producer, and the San Carlos, Rosario, Condor and other mines. The lands lie at an extreme elevation of 15,400',

among the rounded peaks on the western edge of the Bolivian plateau, a region above the timber line, and barren of vegetation, with the exception of yareta, which constitutes the fuel of the district. Copper mines were worked in this district during the era of Spanish dominion, and previously by the Indians, as evidenced by remains of ancient furnaces, fragments of matte, scoria and tools left in old workings. Development of the mines was begun 1903, and regular ore shipments were begun January, 1906.

Geology: the property shows the Poderosa, or main vein, a fissure without visible outcrop, lying alongside a diorite dike intrusive in dacite. The vein lies under the dike, but in places departs from it. It has numerous branches and parallel fissures. A fault with a horizontal shift of 50' to 100', lessening downward, separates the vein in 3 portions, worked in the Poderosa and San Carlos mines, respectively. The ore occurs in shoots, and carries 8 to 60% copper and 6 to 8 oz. silver.

The Poderosa mine has several shafts, with a winze to 1,300' depth. Early in 1916 a change took place in the character of the lode and over a width of 5' the average copper content was 10%. Another good shoot was also opened. In June, 1917, it was reported that results at No. 10 had not justified expectations, but No. 6, 7, 8 and 9 were promising. Reserves were considered enough for a year's work in 1917. Dumps contain 137,000 tons of 3.5% ore.

Equipment: includes power plant, ore-sorting plant, concentrator, etc.

Production: in 1916 was 4,747 tons of 26.8% ore. The mill treated 4,726 tons of 6.8% ore, yielding 550 tons of 32.9% concentrate. In 1910 the mine yielded 10,902,080 lbs.; in 1911, 6,419,372 lbs.; in 1912, 5,077,204 lbs.

COLOMBIA

BREITUNG MINES CORP. OF DELAWARE

COLOMBIA

New York Office: 11 Pine St.

Officers: E. N. Breitung, pres.; Max Breitung, v. p.; Wm. A. Hamilton, sec.-treas. The foregoing and E. L. Bayliss, A. C. Ludlum, New York; J. P. Hodgson, Bisbee, Ariz.; S. R. Kaufman, Marquette, Mich.; J. M. Satterfield, Dover, Del.; H. M. McIntosh, Chicago, Ill., directors.

Inc. June, 1912, in Delaware, as a holding company: (1) To acquire an interest in, or the entire capital stock of, paying companies owning extensive ore bodies of precious or semi-precious metals requiring only better management or more capital to largely increase their earnings; (2) to buy or co-operate with owners of similar ore bodies of demonstrated extent and values requiring funds for adequate equipment; (3) to acquire by purchase, lease or option mineral lands and prospects which have been sufficiently explored or where geological conditions warrant expectations of large returns.

Cap., authorized, \$10,000,000; outstanding Dec. 31, 1915, \$1,127,790; par, \$5.00. No bonds. Transfer agent, U. S. Corporation Co., New York. Registrar, Bankers' Trust Co., New York. Annual meeting, last Monday in December.

Property: owns all the capital stock of the Marquette Magdalena Co., a New York corporation protocolized in the Republic of Colombia, S. A. Now idle because of European war.

Office: J. J. Truran, sec., 184 Gresham House, London, E. C., Eng.
Mine office: La Salado, Colombia.

Directors: S. W. Stephens, chairman; T. H. Alexander, H. P. Harris, Hon. R. W. H. O'Neill, R. C. Lyall, T. H. Alexander. A. N. Mackay, mine supt.

Inc. July 18, 1911.

Property: mining rights over 12 sq. miles and surface rights over 40

sq. miles in Colombia, S. A. The Silencio mine is the main producer. Recent development has been on the 14th and 15th levels. Company also owns an interest in the newly formed Marmajito Mines, Ltd., owning adjoining properties.

Ore reserves: June, 1916, estimated at 42,200 tons.

Equipment: includes reduction plant, with 10-stamp mill and cyanide plant.

Production: in 1915, 25,971 tons, yielding 26,938 oz. gold; 1916, 25,484 tons, yielding 22,358 oz. gold.

PATO MINES (COLOMBIA), LTD.

COLOMBIA

Office: Henry Richards, sec., 441 Salisbury House, London Wall, London, E. C., Eng. **Mine office:** Apartado 104, Barranquilla, Colombia.

Directors: Fred W. Baker, chairman; F. D. Behrend, H. S. Derby, A. Stanley Elmore, T. J. Hoover and H. C. Porter. W. A. Prichard, mine supt. **Inc.** Oct. 5, 1909. **Cap.,** £100,000; shares, £1 par; all outstanding.

Financial statement for year ending Sept. 30, 1916, showed: assets, £438,584, which includes, property, £100,000; Nechi Mines (Colombia), Ltd., holdings (14,000 shares, 10s. each), £18,653; cash, £16,268. Liabilities include: sundry creditors, £12,746; profit and loss, £136,499. Net profit for the year amounted to £74,894. Net receipts from gold shipments totaled £144,648.

Property: the Pato area still undredged is estimated at 529 acres and is calculated to contain 22,419,490 cu. yds. of \$5,347,638 net value. The Nechi property is estimated to contain 6,855,900 cu. yds. of \$4,372,128 net value.

The above properties lie in an oval basin cut through by the Nechi River and surrounded by crystalline rocks; within the basin are flat tables of gravel deposits whose clay is red or blue and contains beds of peat or brown coal. The gravel benches grow richer in depth and deep drilling has been recommended.

Equipment: includes hydro-electric power plant, an 8½ cu. ft. dredge, ice plant and repair shops.

Production: in 1916, 1,484,721 cu. yds. were dredged, as compared with 1,308,470 for the previous year, the gross value of the gold recovered being \$719,493, averaging 48.5c. per cu. yd., against \$618,884, averaging 47.3c. for the previous year. The field operating cost for the year averaged 12.46c. per yd., as compared with 11.4c. for 1915.

ECUADOR

SOUTH AMERICAN DEVELOPMENT CO.

ECUADOR

Address: Paul C. Schraps, Apartado 655, Guayaquil, Ecuador.

Property: gold mine in the Zaruma district, El Oro province, Ecuador. The nearest town is Portovelo. Transportation of supplies is difficult and expensive, being \$85 to \$95 per ton from New York. A 90' head-frame costing \$10,100 was recently erected at main shaft. This mine contributes nearly all the gold produced in Ecuador. Veins are in fine grained diorite and are often 15' wide. Extensive faulting is evident. Ore treated is a mixture of quartz and calcite, with 10% by weight of sulphides.

Equipment: includes water-power, hoist, compressor, stamp mill and counter current decantation cyanide plant. Reconstruction of the power canal was described by Paul C. Schraps in the Engineering and Mining Journal of Nov. 10, 1917.

ZARUMA MINING CORPORATION, LTD.

ECUADOR

Office: J. C. Stamfer, 156 Palace Chambers, London, S. W., Eng.

Directors: J. Rey, chairman; C. Brault, P. J. E. E. Chambost, A. E. Lund, E. Saladin and J. Vielle.

Inc. Jan. 31, 1913, in England. **Cap.,** £120,000, in 110,000 pfd. £1 and 200,000 dfd. 1s. shares; 90,000 of former and all of latter issued.

Property: 1,838 acres in the Zaruma district, Ecuador. In the Caridad

lode is estimated 90,000 tons of £12 gold-silver-copper-lead ore and in the Christina 61,000 tons of £10 ore.

PERU

BACKUS Y JOHNSTON DEL PERU; SOC. MIN.

PERU

Main office: 134 Plateros de San Pedro, Lima, Peru.

Officers: A. J. Bennett, pres.; R. R. Sturrock, v. p., with D. C. Babbitt, T. P. Jones and B. A. Simpson, directors. N. B. Roper, smelter supt.; A. S. Howie, supt. Morococha mines; J. A. Irving, supt. Casapalca mines.

Inc. May 1, 1917, in Peru. **Cap.**, £480,000; shares, £1 par, fully paid. Company purchased practically entire holdings of the Backus & Johnston Co., a New Jersey corporation, fully described Vol. XI.

Property: consists of several large groups of copper-silver mines.

Casapalca Mines: the principal mines in this district are the Carlos Francisco, Upper and Lower, the Cuarenta, Corina and Chuquichucho. The first named is developed by an adit, equipped with electric haulage, about 5,000' long, which cuts the vein at a depth of about 2,500' below the outcrop. The vein is being worked along a length of 7,500' from the adit level, and from adits about 1,200' and higher above the main adit. Ore from the upper workings is sent to smelter over a 4,500' aerial tramway. The output from the upper and lower workings of Carlos Francisco is 2,500 tons per month, averaging 2% copper and 40 oz. silver, including concentrates. The other three mines are still in an early stage of development, and their combined output is at present only about 700 tons of ore, running about the same grade as that from Carlos Francisco.

Morococha Mines: the company relies principally upon the Morococha district for its copper ores, the chief sources of supply being the Huilla, Natividad, Churruca, Isabel, Alicia, Favorita, Alapampa, Ombra, San Luis, Pacchapata, La Vieja, Manuelita, and the mines of the Cia. Santa Clara, Cia. Minera de Pesares and of the Cia. Blanc. All of these mines are operated by the company either on account of ownership, by partnership arrangements or on lease. The completion of the power plant at Bellavista in 1913, the arrangement for the rental of further power, with a consequently more complete installation of compressors and machine drills, and the driving of three drainage tunnels have resulted in much lower mining costs and in a much more extensive exploitation of the properties.

The Natividad, the deepest shaft of the district, is 250' below the drainage tunnel level—a total of 750'; and to provide for the deeper development of this and of the other mines of the district it is proposed, in conjunction with other miners of the district, to sink a large central shaft to a depth 500' below the level of the drainage tunnels and to install a pumping plant capable of handling 10,000 gallons per minute. The ore from the Morococha district is transported to the smelter, distant 32 kilometers, over the Peruvian Central Railway, which has a branch line 14 kilometers long running from Ticlio on the main line to Morococha.

Production at present is at the rate of 12,000 tons per month, averaging 7% copper and 10 oz. silver, but this will be raised to 16,000 tons as soon as the additions to the smelter are completed.

Smelter: the smelter and concentrating plants are situated at Casapalca on the main line of the Peruvian Central Railway, 154 kilometers from the port of Callao, at an altitude of 13,700'. The company is operating at present two blast furnaces and three 96"x150" horizontal barrel type basic converters, but an additional blast furnace as well as a fourth converter are now being installed. The sintering plant consists of 20 roasting pots of 10 tons' daily capacity each, and of two Dwight-Lloyd sintering machines. Flue dust is briquetted and returned to furnaces. The smelter handles a considerable quantity of custom ore, and the company has always prided itself on its friendly relations with the independent miners of the district. In 1916 the smelter treated 175,000 dry tons ore, the production, in the form

of blister copper, being 19,395,000 lbs. fine copper, 3,262,500 oz. fine silver and 3,587 oz. gold. The additions at present under way will give the plant an increased capacity of about 50%.

Concentrating plant: low grade ores from the Casapalca mines are concentrated in a 200-ton mill adjoining the smelter, equipped with a No. 5 gyratory crusher, 2 primary ball mills, one regrinding ball mill, 2 Hancock jigs, 4 Overstrom tables and 5 single-deck and 2 double-deck Deister tables. Mill slime is dewatered in a 30' Dorr thickener and filter-pressed.

The main power plant, situated on the Rio Rimac, 4 miles below the smelter, contains two 800-kw. generators driven by Pelton wheels, transmission being at 10,000 volts. At the smelter there are two 150-kw. and one 125-kw. generators, also driven by Pelton wheels. Air is furnished as follows: for the furnaces, by one 118-cu. ft. and one 200-cu. ft. Connersville blowers, both driven by Pelton wheels, and by one motor-driven turbo-blower of 24,000 cu. ft. capacity; for the sintering pots, by 3 small rotary blowers of the Connersville type; for the converters, by a 14,000 cu. ft. Nordberg blowing engine, direct-driven by a synchronous motor; for the Casapalca mines, by 3 motor-driven Ingersoll-Rand air compressors with a combined capacity of 5,000 cu. ft. free air p. m.

CERRO DE PASCO COPPER CORPORATION

PERU

Office: 15 Broad St., New York.

Officers: L. T. Haggin, pres.; Edward H. Clark, v. p.; H. Esk Moller, sec.-treas.

Inc. Oct. 28, 1915, in New York, succeeding the Cerro de Pasco Copper Investment Co. **Cap.**, \$1,000,000; shares, without par value; 782,000 shares issued; 218,000 in treasury for conversion of \$10,000,000 10-yr. 6% convertible Gold Bonds, dated Nov. 1, 1915; int. payable May and Nov. 1. Bonds convertible at option of holder after 2 years into stock at \$30 per share. Bonds subject to redemption at option of company, on 90 days' notice, on any semi-annual interest date after 2 years at \$105, plus interest. Stock listed on New York Curb.

First published annual report showed income in 1916 of \$3,670,000 from its subsidiary companies, and dividends paid of \$2,666,664; bond interest of \$700,000; administration expenses, etc., \$119,312, and a balance surplus of \$187,552. Balance sheet, Dec. 31, 1916, showed cash, \$391,652, and investments in its three subsidiaries, \$29,519,120. Consolidated balance sheet gave assets as \$39,857,905; including current assets, \$10,540,228; current liabilities of \$3,035,782, and surplus of \$14,472,123. Current assets included cash on hand, \$2,549,544; bullion, \$3,147,520 and accounts receivable, \$1,441,615.

Earnings applicable to dividends in 1917 were estimated at \$9,000,000, taxes paid.

Dividends: during 1916 company received \$1,285,000 from the Cerro de Pasco M. Co., \$285,000 from the Cerro de Pasco R. Co. and \$1,850,000 from the Morococha M. Co., a total of \$3,420,000. Out of this there was paid \$300,000 to shareholders of first named company, \$300,000 to the second and \$1,850,000 to the third. Distributions are at the rate of \$1 per quarter. In 1917, \$4 per share was paid plus extras totaling \$1.75 per share.

Owns all outstanding stock of Cerro de Pasco Mining Co. and all of the Morococha Mining Co., and \$2,850,000 of the \$3,000,000 capital of the Cerro de Pasco Railway Co.

Cerro de Pasco Mining Co.

Office: No. 15 Broad St., New York. Peruvian general office: Lima, Peru. **Mine office:** Cerro de Pasco, Junin, Peru. **Works office:** La Fundición, Tiñahuarca, Junin, Peru.

Officers: L. T. Haggin, pres.; Edward H. Clark, v. p.; H. Esk Moller, sec.-treas.; W. J. Hamilton, gen. mgr., Lima.

Inc. June 6, 1902, in New Jersey. **Cap.**, \$10,000,000, all issued. Owns the entire stock issue of the Cerro de Pasco Railway Co., and is controlled, through stock ownership, by Cerro de Pasco Copper Corp. Estate of J. B. Haggin is said to hold about 40% of the total investment.

Property: over 940 claims, and 70,000 acres miscellaneous lands in the Morococha and Yauli districts and about 400 acres of land that includes three-fourths of the rich Cerro de Pasco district, with a smelter site and extensive coal tracts north of Cerro de Pasco.

Cerro de Pasco lies 14,300' above sea level, rendering physical labor very fatiguing. The population of the town is about 6,000, of whom only a small percentage are white. The region is bleak and all food and supplies must be brought in from considerable distances. The year has but 2 periods, the wet and dry, the former from November to April. Both are said to be bleak and exceedingly disagreeable. Snow and hail fall at any time, summer or winter, but rarely remain on the ground as long as 48 hours, even in winter. The fluctuation between mean summer and winter temperature is about 20° F. only, less than the daily variation.

Silver was discovered at Cerro de Pasco in 1630, and the mines produced, to the close of the nineteenth century, about 450,000,000 oz., from 40,000,000 tons of silver and copper ore, nearly all extracted by hand work and carried 3 to 6 miles on the backs of llamas, to primitive smelters, whence the silver bullion was transported by llamas 200 miles to Lima, until 1870, when a railroad was completed to Oroya. Formerly only the copper ores of 25 to 40% copper were shipped.

Geology: authorities disagree as to the geology of the district, but over an area a mile wide and nearly 2 miles long, nearly every claim carries ore, proving Cerro de Pasco one of the richest mineral fields of the globe. The orebodies outcrop prominently, as crestones, or ridges, and carry gold, silver, copper, lead, zinc and cobalt. The oxidized zone carries considerable gold, running as high as 1 to 2 oz. per ton, occurring in rich but erratic shoots. The high silver values usually extend to about 100' depth only, occasionally running up to thousands of ounces per ton, followed by rich silver-copper ores, which in turn, at a little greater depth, are succeeded by ore low in silver but richer in copper, the copper ores being estimated to have averaged 15 to 30 oz. per ton in the old workings. Primary ores below the water level contain bornite and chalcopyrite, associated with pyrite, tetrahedrite, arsenopyrite and sphalerite, containing little silver and only traces of gold. There are occasional veins of high-grade silver-lead ores, with others carrying up to 8% zinc; practically all the copper ores are bismuthiferous, hence refractory in reduction. The ores carry about 35% silica and 14 to 30% iron, the excess of silica requiring considerable limestone for fluxing.

Development: includes hundreds of old mine workings, some opened to 300' depth, though the majority not over 100' deep. The surface of the property shows scores of tajos, big pits resulting from the caving in of old open cast workings, some of these being 300' deep. The property lies in a basin, and the mines are very wet, especially below a depth of 400'. The Rumiallana drainage tunnel, begun April, 1877, by Henry Meiggs, was completed 1907, by the Compañía Empresa Socavonera del Cerro de Pasco, with which a financial arrangement was made, through a 5% stock interest given in the Cerro de Pasco Copper Co., obviating the payment of the 20% royalty to which the former company was legally entitled.

The present company has disregarded old workings and opened a new mine, by 2 tunnels, of about 2 miles length each, and 5 new shafts. The Diamante, Peña Blanca, Carmen and Noruega 2-compartment shafts have 4 levels opened, and are bottomed at 410'. The 4-compartment Esperanza shaft is planned to do the hoisting for the entire mine and the shops and power plant are near this shaft. Waste is used for filling, timber being very expensive, and used only for lining shafts and timbering important tunnels. The mines are equipped with powerful pumps. Estimates of ore in sight vary from 2,000,000 to 75,000,000 tons, the latter figure being excessive, and not countenanced by the management. Reserves of ore blocked out are said to be kept 4 years ahead of smelter consumption, these including first-grade ore of 8 to 10% copper tenor, with good silver values, and second grade ore, of uncertain copper tenor, though probably workable in the main.

The reduction works, at La Fundición, near Tiñahuarea, 9 miles from the mines, are connected therewith by rail. All buildings are of steel frames, covered with corrugated iron. The plant treats a small quantity of custom ores and has a sampling mill with crushers, rolls and chain-bucket elevators. The works are terraced throughout, permitting the handling of material by gravity, and are built on the unit plan, so that their capacity may be doubled or, if desired, quadrupled at later date.

The furnace building has twelve 2,000-ton flat-bottomed steel ore bins, filled from railroad tracks above, and loading into charging cars ran alongside, that are drawn by small locomotives on a narrow-gauge track running on either side of each furnace, 2 cars constituting a charge. There are five 56"x180" water-jacketed blast furnaces of about 300 tons actual daily capacity each. Slag is granulated by running water. The smelter building has a steel stack, 220' high and 20' in diameter. There are three 60' reverberatory furnaces and fourteen 18' six-hearth McDougal calcining furnaces. Six Dwight-Lloyd sintering machines were added in 1913.

The converter department, in a separate building, has 4 Pierce-Smith basic lined converters. Product of the converter is 99% blister copper, in cakes, shipped to Baltimore for refining.

The power plant includes a boiler house with sixteen 250-h. p. Babcock & Wilcox boilers, and an engine house, latter having a 600-h. p. Nordberg cross-compound engine, direct-connected to a 440-k. w. Westinghouse generator; two 475-h. p. Nordberg engines, direct-connected to two 250-k. w. generators; a 750-k. w. Westinghouse alternator and dynamo and 2 smaller dynamos furnishing electric power and light. There are 3 No. 11 Connersville blowers, driven by a Nordberg cross-compound engine, a large Nordberg air compressor for converter blast, and an air compressor for the pneumatic operation of furnace doors, etc. The power plant is practically duplicated, as a precaution against accidents.

A 12,000-h. p. hydro-electric plant was completed in 1913 and will greatly help the company's operations. The plant has a 10½-mile ditch and pipe line with a fall of 750', delivering 200 second-feet of water to 6 Pelton wheels connected in sets of 2 with three 3,000-k. w. dynamos. The transmission line is 70 miles long and will serve both Cerro de Pasco and Morococha. The entire plant cost \$1,000,000.

The adoption of electric power has greatly relieved the fuel situation and made the company practically independent of foreign coke.

The company furnishes its own fuel, owning extensive beds of bituminous coal, of rather indifferent average quality, though with some coal of coking grade. The principal coal mines are at Goyllarisquisca, Quishuarcancha and Vincuscancha. A branch line of the railway to Goyllarisquisca is 21 miles long, to Quishuarcancha 11 miles, the Vincuscancha coal mine being about midway. The coke plant near the smelter has seventy 75-ton beehive ovens, making a satisfactory coke for blast furnace use, no coke being imported. The coal contains 50 to 60% fixed carbon, 20% volatile matter and about 13% ash, with considerable sulphur.

The company's brick plant has proven an important success, as imported brick of all kinds are very costly, and the local plant turns out fire and silica brick of very fine quality, from clays found in the mines, and common building brick are made from a clay pit near the Vincuscancha mine. This plant also makes tile and tile pipe. A limestone quarry, 12 miles from the works, furnishes flux.

The Cerro de Pasco Railway: owned by the company and operated under a government concession, has a main line of 83 miles, running from Cerro de Pasca to Oroya, where connection is made with the Central Railway of Peru, which runs thence 130 miles to Callaó, the latter line being one of the most notable in the world, having cost \$43,000,000 and gaining nearly 3 miles vertical elevation, reaching the highest altitude of any railroad on the globe, after surmounting almost incredible obstacles, having an average grade of 2.5%, with no less than 37 tunnels, including the Galera tunnel of 1 kilometer length which cuts through a ridge of the Andes. The Cerro de

Pasco railway has a branch to the coal fields, and, with all spurs, sidings and yards, has about 135 miles of standard-gauge track, laid with 70-lb. rails. The main line has an average grade of 1.5%, with a maximum grade of 3%, and cost upward of \$2,000,000. Equipment includes 13 locomotives, in addition to 6 light switching engines at the smelter, and 59 steel ore and coal gondolas, with a total of 247 forty-ton cars, rolling stock being of the best American manufacture. The railroad is on a paying basis.

The company has 2 hotels, one for native and one for American labor, and maintains a clubhouse with bowling alley, swimming pool, gymnasium, etc., which is a social center and aids greatly in keeping the American workmen and their families contented. The company also furnishes facilities for riding and hunting. Although the altitude is very high, people of normal good health find no difficulty in living comfortably in the rarified air of Cerro de Pasco. Wages range from \$2.50 to \$4 per day for white labor, and 60 to 75c per day for native common labor, the latter being tractable, and, for some purposes, fairly efficient. Up to \$2, and even \$2.50 per day, is paid the native timberman. The company employs about 2,200 men at the copper mines, 1,500 men at the smelter, 1,000 at the Goyllarisquisca coal mine, 400 at the Vincuscancha coal mine, and 200 at the Quishuarcancha coal mine.

Production: 3,389,787 lbs. copper in 1906; 20,258,689 lbs. in 1907; 23,646,921 lbs. in 1908; 30,327,423 lbs. in 1909; 34,713,012 lbs. in 1910; 48,600,926 lbs. in 1911; 45,272,000 lbs. in 1912; 43,856,000 lbs. in 1913; 40,753,000 lbs. in 1914; 61,000,000 lbs. in 1915; 71,452,000 lbs. in 1916, and in 1917, to November, 61,625,000 lbs., the October yield being 9,050,000 lbs.

The Cerro de Pasco is undoubtedly the most expensive copper proposition ever developed, the total investment to date being nearly \$25,000,000. Many serious discouragements were met in the earlier days, but overcome, and sufficient progress has been made to justify terming the property a success. The ores are refractory and the great altitude of the smelter, which is 14,300' above sea-level, coupled with inefficient native labor, have given rise to an exceedingly complex and tiresome problem in ore reduction. Estimating cost of production at 8c per lb. and annual output at 70,000,000 lbs., earnings per share of the Cerro de Pasco Copper Corporation would be \$4.20 on a 14c, \$8.40 on a 20c and \$12.60 on a 26c copper market.

Morococha Mining Co.

Office: 15 Broad St., New York, and Morococha, Junin, Peru.

Officers: E. H. Clark, pres.; L. T. Haggin, v. p.; H. Esk Moller, sec.-treas.; H. Kingsmill, mng. supt.

Inc. 1908 in New Jersey. **Cap.**, \$10,000,000. Company is a subsidiary, formed by the New York interests of the Cerro de Pasco Co., prior to the settlement of litigation with the Socavon del Cerro de Pasco.

Property: the Gertrudis, San Francisco and San Miguel mines and a one-half interest in the Natividad mine, which is owned jointly with the Backus & Johnston Co.

The Mina Gertrudis, opened 1897, on the Cerro San Marcello, shortly west of Lake Morococha, shows 3 limestone beds with ore impregnations following the bedding planes; vein has strike of N. 51° E. and nearly vertical dip. It averages about 2 meters in width, with a paystreak of 60 cm. to 1 meter, carrying gray copper and chalcopryite averaging about 14% copper and 1,000 grams silver per metric ton, balance of vein carrynig about 5% copper and 300 grams silver per metric ton. The mine has a 12-meter shaft, but is developed mainly by a tunnel, just above the level of Lake Morococha, mining through winzes sunk from short crosscuts in the hanging. Ore is hand-cobbed at the portal of the tunnel.

The Natividad mine is opened to about 300 meters depth, developing a vein about 4' wide, carrying ore averaging about 14% copper and 14 to 70 oz. silver per ton. A new tunnel, planned to be 750 meters long, is being driven under the old workings.

The Mina San Miguel is developed by the Copaycocha and Vulcano tunnels, lower of about 500 meters length, and ore is mainly enargite, with some tetrahedrite and tennantite; associated with pyrite. Mine was opened 1894, and in 10 years produced from ore averaging about 20% copper and 333 grams silver per metric ton, 6,476,400 kgs. fine copper and 10,794 kgs. fine silver.

The San Francisco is opened by a 4,000' tunnel, completed in March, 1916, known as the Carlos Reynaldo adit.

Production is gradually increasing and the ore is sold to and smelted by the Cerro de Pasco Mng. Co. Production is approximately 20,000,000 lbs. per year. In 1915 company furnished $\frac{1}{3}$ of the output of Cerro de Pasco Mng. Co.

FERROBAMBA, LTD.

PERU

Office: F. F. Fuller, sec., 638 Salisbury House, London, E. C., Eng.
Operating office: Arequipa, Peru. Mine office: Ferrobamba, Catobanbos, Apurimac, Peru.

Directors: A. C. Burrage, chairman; A. C. Adams, T. C. J. Burgess, W. H. W. Bliss, C. D. Burrage, H. W. Brown and A. Solomon.

Inc. Nov. 5, 1909, in Great Britain. Cap., £150,000; 60,000 priority shares, 10s. par; issued, 36,658; 120,000 ordinary shares, £1 par, fully issued. Is registered in Peru.

The Ferrobamba property is one of the great copper deposits of the world. It is in central Peru at an elevation of 13,000' above the sea and about 45 miles west of Cusco, the terminus of the Southern railway, 500 miles from Mollendo, the seaport. The 207 claims are in 10 groups, covering 2,255 acres, all in the Ferrobamba district, Cotobamba province, Apurimac department, Peru. The deposits show oxidized ores of copper at the surface, underlain by sulphides largely bornite, and can be worked by steam shovels.

Property: includes valuable water-right concessions, from which it is planned to develop hydro-electric power, the rivers being fed by the melting snows of the Andes. The concessions include water rights to the Rio Chalhahuacho and several affluents, and application has been made for similar rights on the Rio Apurimac, about 25 miles in an air line from Ferrobamba No. 1. Including the last named concession, the available water power is rated at 120,000 h. p.

For purposes of development the property has been divided into 5 zones, or groups, known as Ferrobamba No. 1, Ferrobamba No. 2, Katanga, Charcas and Bonanza. Conditions are much the same at these different properties and it is thought that all can be worked opencast.

Ferrobamba No. 1, which includes Ferrobamba Nos. 1, 4 and 5, with area of 900 acres, has been the site of the principal development. This property shows an enormous mass of garnet rock, apparently of contact metamorphic origin, rocks being hornblende-biotite-granite and limestone altered into wollastonite by contact metamorphism for a remarkable distance, in many places up to 3,000' from any recognized igneous contact. Ferrobamba No. 1 is stated to carry 34 hectares of known copper ground, this area having a combined east and west length of 2,300', and north and south length of 1,640'; is estimated by the management to carry ore of payable tenor to a depth of 200', the contents being calculated by the management at 27,635,700 cu. yds., or approximately 12,000,000 tons of ore. Development is by a 100' shaft in chalcopryite and bornite ore assaying 6% copper, 3 oz. silver and 9 grains gold per ton. There is also a tunnel, used for a powder magazine, showing ore assaying 4.5 to 9% copper, and samples, at 2-meter intervals, for 100 meters, averaged 5.8% copper, 3 oz. silver and 9 grains gold per ton. Copper values, so far as determined by prospecting, are quite uniform, the average values of 3 oz. silver and 9 grains gold per long ton being remarkably constant. Churn drilling with Keystone drills in progress, from 1910 to 1912, together with underground

work in 15 tunnels and the shafts, has proved up 6,000,000 tons of ore averaging 3.7% copper and 1.3% sulphur.

Ferrobamba Nos. 2 and 3, 300 acres, constitute the Sulfobamba mine. Development to January, 1913, has proven 778,000 tons of ore carrying 2.25% copper, with 6.75% sulphur and 532,000 tons too low grade to work.

The Katanga or Reina de Cobre mine, area 300 acres, is estimated by Mr. Vautin as likely to rival Ferrobamba No. 1 in tonnage, though but little work has been done thereon. Surface ores, chalcopyrite and bornite, have given assays of 2 to 7% copper, 2 to 4 oz. silver and 8 to 16 grams gold per long ton.

The Charcas, which is the fourth group, is small, having an area of only about 35 acres. Mr. Vautin reports an orebody of 100 meters width and 800 meters length, carrying exclusively chalcopyrite, associated with pyrite, suitable for open cast workings, the whole visible face of a bluff of ore assaying up to 24% copper, with an average of 5% copper, 3 oz. silver and 9 grams gold per ton.

The Bonanza claims Nos. 1, 2 and 3, area 420 acres, lying 9 miles south of Ferrobamba No. 1, constitute the fifth group, known as the Bonanza mine. Surface conditions apparently are much the same as at the other properties, but no mining has been undertaken.

Development: in 1912 comprised 8,300' of tunnel or adit work and continuous operation of 2 churn drills.

It is stated that the oxidized surface ores as well as the sulphides are amenable to concentration. Extensive testing is reported to have shown that the ore concentrates 11 into 1 with 74% recovery of the product being a mixture of sulphide and oxidized minerals with 30% copper. Considering recent work by Arizona companies, this seems reasonable, and as the property can be worked by steam shovels, the deposit is workable. The discovery of iron-copper-sulphide ores in deposits 9 miles west of the mines, supplies a much needed source of sulphur. Property has been examined and reported on by Frank Klepetko and W. H. Wiley. In June, 1913, the property was closed down awaiting railway transportation and the company is exploring properties in the Chumbivilcas district, nearer the railway, held under option.

The company gave an option to Albert C. Burrage, of Boston, in 1911, providing for a new company, to be organized in New Jersey, capitalization of \$7,000,000, shares \$5 par, such new corporation to give to the Ferrobamba, Ltd., 420,000 shares, or \$2,100,000 in stock, and £250,000 cash, the balance of 730,000 shares, or \$3,650,000, to be subscribed, at par, for working capital, the cash part of the consideration, £250,000, to be payable in 4 equal annual installments, secured by mortgage debentures. This option was not exercised.

Making all due allowances for optimistic estimates, it is obvious that the Ferrobamba is a property of exceptional promise, with good prospects of making a very large low-grade mine, if adequately financed and skillfully managed.

MOROCCOCHA MINING CO.

PERU

Entire stock issued owned by Cerro de Pasco Corporation, and property described under that title.

CUBA

METAL MINES OF THE REPUBLIC

The following active mines are grouped by States:

Pinar del Rio

Asiento Viejo (copper).
El Brujo (copper).
Buena Vista Mining Co. (copper).
Cía. Minera de Cobre de Pinar del Rio y San Juan (copper).
Constancia (copper).
Francisco Mining Co. (copper).
Matahambre (copper).
Mercedita (copper).
San Gumersindo (copper).
Cía. Minera Occidental de Cuba (copper).

Matanzas

Jack (Chrome-iron).

Santa Clara

Carlota (copper and sulphur).
Mercedes (iron and copper).

Oriente

Cauto Mining Co. (manganese).
Cía. Mercantil de Credito (manganese and copper).
Cuba Copper Co. (copper).
Cuban Mining Co. (manganese).
Juragua Iron Co. (iron ore).
Ponupo Manganese Co. (manganese).
Spanish American Iron Co. (iron ore).

CUBA COPPER CO.

CUBA

Office: 2401-60 Wall St., New York. Mine office: El Cobre, Santiago de Cuba.

Officers: Benj. B. Lawrence, pres.; Colgate Hoyt, v. p.; I. W. Hunter, sec.; W. T. C. Carpenter, treas.; Edw. H. Emerson, gen. mgr.; Edw. B. Nagel, supt.

Inc. Jan. 5, 1907, in West Virginia, as successor of El Cobre Mines. Cap., \$2,000,000; shares \$100 par; in \$1,500,000 non-cumulative 6% preferred and \$500,000 common stock. Annual meeting, 1st Tuesday in March. Property being operated, in 1916, by the Cuba Leasing Co., a temporary organization arranged for financial purposes with same management as the Cuba Copper Co. Offices with Beer Sondheimer Co., 61 Broadway, New York.

History: was the first copper mine in the new world worked by white men; opened A. D. 1532 by the Spanish, the first copper from El Cobre mines having been used for casting Spanish cannon. Properties were taken over, about 1832, by a Hispano-English company, and ore was shipped to Swansea for reduction. The custom-house records of Santiago are said to show exports of 610,210 tons of ore, 1851-69, valued at \$50,186,225, probably

in depreciated Spanish currency, the ore assaying from 12.69% upwards, and probably averaging about 16% in copper tenor. In 1844 El Cobre railway was built, the Queen of Spain being the principal shareholder. The property shows the remains of an old stamp mill. During the revolt of 1868-1878, the big Cornish pump was burned, flooding the mines, which remained idle until taken over, 1902, by the predecessor of this company. Immediately after the Spanish-American war, the property was denounced by F. D. Pagliuchi and financed by Wm. Astor Chandler and associates, who had much trouble handling the great amount of water and in opening up the orebodies.

The mine was finally unwatered in April, 1916, and the bottom level 1,120' deep found to show unoxidized chalcopyrite ore, averaging 8% copper in substantial widths, besides a large amount of low-grade ore amenable to flotation treatment.

Lands: 8 miles west of Santiago bay, show a mineralized zone of 200' width, traceable 6,500', carrying 3 parallel veins with much altered intervening rock. The mine is in a hill of rhyolite tuff agglomerate, of variable texture and appearance; the nearby hills are limestone, and diorite occurs to the south. The veins are confined to the rhyolite, only 2 are worked, the main or principal one being also called the South or "Middle" vein. The veins run E. to a fault which throws them 350' to the north. Ore occurs in pockets and shoots up to 80' across, in a vein of breccia, lying against a fault plane or mud slip. The gangue is altered rock and quartz. The ore contains much anhydrite and gypsum at 640' depth and below. Ore carries chalcopyrite, associated with pyrite, in a quartz gangue, the grains of chalcopyrite frequently being coated with covellite. Ore occurs in lenticular shoots. The oxidized zone is of 50 to 75' depth only, succeeded by sulphide ores averaging 4 to 5% in copper tenor, without either gold or silver in important quantities.

In the mine workings the oxidized ore extends deeper, and is underlain by semi-oxidized or tarnished ore, which gave much trouble in flotation work. The deeper ore is fresh chalcopyrite with pyrite.

Development: old workings were extensive, including some 40 shafts, with numerous remains of hoists and boilers. The 4 deepest shafts were about 1,000' each, with 17 miles of workings, timbered mainly with mahogany. The mine was found in bad shape, requiring heavy retimbering, as many of the old stopes, up to 20' and 30' in width, had caved. During the rainy season the mine makes 500 to 1,200 gals. per minute of strongly acid water, requiring pumps of bronze, with lead or wood-lined pipes. The mine has pumps with a combined capacity of 5,000 gals. per minute. Water from the mine was formerly run over scrap iron, producing considerable cement copper, but this has been discontinued, owing to cost and because the mine water formerly carrying 400 grams copper per ton now carries only 50.

The present company has sunk a 1,000' shaft at the footwall of the north vein and crosscut 400' S. to the vein. From this level winzes extend down to 1,300' in depth. Exploration consists in drifting along the vein with crosscuts at intervals to the hanging-wall.

El Cobre railroad, 9 miles long, connects the mine with Punta Sal, on Santiago harbor, and is equipped with 2 locomotives and 40 cars.

The reduction plant at Cobre includes a 600-ton concentrator with 4 largest size Hardinge mills for grinding the ore for the 700-ton flotation plant. Forces are about 450 men. Concentrates of about 16% copper tenor are shipped for smelting to the United States.

In this plant, "the ore is crushed dry by rolls, screened through 8-mesh and conveyed to the storage-bin. Four Hardinge and two ordinary tube-mills are fed from the storage-bin by individual Challenge feeders to insure equal distribution and regular feed, as the ratio of oil to ore is most important. Cresylic acid, carbolic acid, Mexican crude, and light asphalt oil are fed into the tube-mills by special machines. Grinding is done on a thick pulp, 25 to 30% moisture, until 65% will pass 60-mesh. The pulp

goes to the M. S. box without classification or re-grinding. Fourteen stirrers with 13 spitz-boxes are used. Direct concentrate is taken from as many boxes as show a good concentrate, the poorer froth being returned to the first box. Number of boxes treated varies with this and is changed by the operator who judges by eye. All the coarse tailing is roughed over Wilfleys to recover the coarse pyrite carrying copper. Caustic soda and fuel-oil are added as needed in the stirring-boxes. The various concentrates go to the classifier, the coarser product passing direct to the bins with about 8% moisture. The overflow is thickened and drained by an Oliver filter, giving about 20% moisture. The plant handles 600 tons per day and gives about 85% extraction of the insoluble copper in a 3% feed. It is interesting to note that with El Cobre ores using a cold neutral solution wood-products have not given any satisfaction. The concentrate carries 16% copper, 35% iron, 40% sulphur, and 9% silica." (Mng. Sci. Press, Jan. 22, 1916.)

Production: company is now milling about 600 tons of 3% ore daily. Property produces about 2,000,000 lbs. copper annually. (See "Mining in Oriente Province, Cuba," by Jos. T. Singewald and B. L. Miller, Eng. & Mng. Jour., April 1, 1916.)

LOS CERROS COPPER CO.

CUBA

Idle. Office: Blackstone Bldg., Cleveland, Ohio.

Officers: W. I. Boardman, pres.; W. C. Watkins, v. p.; Sherman C. Dalbey, sec.; W. E. Rees, treas.; Col. D. H. Pond, gen. mgr.

Inc. Aug. 12, 1905, in Arizona. **Cap.**, \$500,000; shares \$100 par.

Property: 2 claims, 100 acres, also 1,500 miscellaneous lands, near Fomento, Prov. de Sta. Clara, Cuba, opened by 3 shallow shafts and 5 tunnels, longest 250', showing ore assaying 10% copper, 20 to 25% zinc, 20% sulphur and 30% silica, with gold and silver values. Zinc apparently decreases at depth. The vein has a 12' to 15' gossan outcrop along its strike. Property is an antigua last operated in 1750. The ore though mostly low-grade and zinciferous can be concentrated and property is considered worthy of further development under competent direction.

MATAHAMBRE MINE

CUBA

Manuel Luciano Díaz, owner, Apartado 1795, Havana, Cuba.

Property: 8 kilometers from port of Santa Lucia, in province of Pinar del Rio, Western Cuba.

Geology: most orebodies in the region so far disclosed are found in shattered slates or shales in the foothills W. of the Sierra.

Development: to 1,000' depth. Reserves reported as sufficient for seven years' output. Exploration being continued. About 1,500 employed.

Production: began in Dec., 1913, and by April, 1914, company had shipped over 8,000 tons ore, averaging 18% copper and 1.5 oz. silver per ton. In 1914 nearly 6,000,000 lbs. copper were shipped. In 1915 production was about 40,000 tons of 12% ore; in 1916, 80,000 tons.

Concentrator to treat second-class ore being erected, 1917.

PONUPO MANGANESE CO.

CUBA

Offices: 71 Broadway, New York and Santiago de Cuba, Cuba.

Directors: Chas. F. Rand, pres.-treas., New York; Pedro Aguilera, v. p., Santiago de Cuba; Chas. F. Smith, sec.

Inc. in New Jersey. **Cap.**, \$30,000; shares \$100 par; all outstanding. Gross earnings in 1915, \$567,800, of which \$315,748 was from iron ore sales. Operating expenses in 1915, \$250,568.

Property: company owns iron, manganese and copper mines, the iron mines being the only ones operated at present. They are worked as open quarries.

Production: in 1915, 72,387 tons ore, assaying 60% iron, silica 10%, phosphorus 0.015%. Average value ore shipped, \$4.44 in the U. S.

WEST INDIES MINES DEVELOPMENT CO.

CUBA

Address: 25 Broad St., New York.

Property: the Constancia and other copper mines near Viñales, Western

Cuba, and north of the Matahambre mine. M. Paetzold, Austrian consul at Habana, controls mines.

HAYTI AND SANTO DOMINGO

BLANTON COPPER MINING SYNDICATE

Office: The Bourse Bldg., Philadelphia, Pa. **Mine office:** Bucaro, San Cristobal, Santo Domingo.

Officers: E. J. Hedden, pres.; H. A. Smith, sec.; J. B. Thom, treas., with M. W. O'Boyer, A. D. Blackinton, J. F. Wilt, directors. F. T. Eddingfield, mgr., Santo Domingo; Otto Peterson, supt.

Inc. Feb. 16, 1910, in Delaware. **Cap.**, \$500,000; shares \$25 par; non-assessable; \$360,000 outstanding. Authorized bond issue. \$400,000; \$180,000 outstanding. Annual meeting, 1st Monday in January. Total receipts from ore sales, from October, 1915 to July 15, 1916, amounted to \$45,193, or net cash, \$32,440, for 857 tons selected ore, the ore averaging 12.4% copper and \$1.60 in gold and silver. Shipments from January-July, 1917, totaled 231 tons of 12.78% copper ore. This ore is handsorted about 10 into 1. Property examined and reported on by the following Mining Engineers: F. Lynwood Garrison, Thos. F. Donnelly, Henry D. Adams, and F. T. Eddyfield.

Property: 1,700 acres, held under government concession, including the Bucaro mine, on the Rio Nigua, 27 miles west of San Domingo, bought of San Christobal Mining Co. Property shows orebodies in limestone, near a porphyry contact, one orebody in the Bucaro mine carrying chalcopyrite, bornite and chalcocite, all auriferous and argentiferous.

Development: by tunnels, the work aggregating 3,500' in 1917. Company reports 35,000 tons ore blocked out and that property is near the profitable stage. The Ferdinand vein opened for 200' on No. 1 level is said to average 16' of 4% ore for 150', and has 25,000 tons nearly probable ore. The Santiago vein appears to be 40' to 80' wide and assays $\frac{1}{2}\%$ - $1\frac{1}{2}\%$ copper for levels 130' apart along 200' drift.

A 100-ton mill is to be erected and water power 7,000' from the mine, is said to be capable of development.

COPPER IN AMERICA

By WALTER HARVEY WEED

AN ADDRESS DELIVERED AT THE PAN-AMERICAN CONGRESS AT
WASHINGTON, D. C., 1916.*

Fifty years is but a brief span in the history of mankind yet it comprises practically the entire period in which copper has become and been an important factor in American industry and life.

Although the metal was known and used by the American Indians before the advent of Columbus and small deposits of the metal were worked by the early settlers, copper mining was an insignificant industry for the first 350 years after America was discovered. The history of copper mining in America can be fittingly divided into several periods. The first is the Colonial period, which in effect lasted until 1845 when the second, or Lake Superior period, began. In 1883 the Arizona and Montana mines began production ushering in a bonanza period in which very rich ores were mined, continuing with a gradual exhaustion of these extremely rich ores and a corresponding betterment in concentration and smelting methods until the advent of the present porphyry-copper period in 1904. These porphyry deposits have almost dominated the field since that time, though their total production is only equal to that of the Butte mines.

The colonial history of copper mining in America dates from 1632, when the metal was discovered at the pyrite deposits of Massachusetts, but the first copper mine in the United States was opened at Granby, Conn., in 1705. In 1709 a copper mining company was incorporated to work the copper ores near New Haven and in 1719 the deposits beneath the trap sheets of New Jersey, near New York City, were mined. The chief producer up to 1840 was, however, the Vermont copper mine at Ely in that State.

In 1844 the Lake Superior mines were opened and in 1849 dividend payments started and North American copper mining became an important industry. About this time the mines of Maryland were worked and in 1850 the Ducktown, Tenn., deposits were discovered and the rich black copper ores of the secondary enrichment zone were mined and shipped. Upon exhaustion of these rich ores, commercial failure attended all attempts to work the primary sulphides until such work was stopped by the Civil War.

In the British provinces copper was found on the Newfoundland coast in the early history of this, the oldest British colony in America, but it was not until 1865 that mining worthy of the name began. In Canada, the Bruce mines, opened in 1846, still await development, but important copper mining dates from the opening of the Sudbury deposits in 1886.

In Mexico copper mining and smelting were carried on by the Aztec races previous to the Spanish conquest, but modern mining dates from 1870 when the Boleo mines of Lower California were opened by the Rothschild interests.

In the past half century the economic rôle played by copper has changed from that of the tool of the savage, the domestic utensil and humble currency of the Roman, as well as its glorified use in art as bronze, to the indispensable metal of modern industry and twentieth century warfare. Its extraction from the earth's crust is a basic industry and

* Proceeding—Vol. VIII, section VII, Washington, 1917. p. 416.

like agriculture is of benefit to all for each pound added to the world's store is an actual contribution to the world's real wealth. In electrical uses, for alloys in particular for anti-friction metals and for brass, it is indispensable and has no substitutes. It is not too much to say that without it our cities would be dark, our streets quiet, our trains idle and shops closed.

The development of both the present day necessities and conveniences has been so rapid since 1880 that it is difficult to realize how important a part the metal has played in America.

Geographical Occurrence

The geographical distribution of copper ores in commercial quantities is quite different from the geographic occurrence of copper minerals. The latter are found in Newfoundland, in all the eastern provinces of Canada and in all but our southernmost and prairie States. Throughout this continental area there is a marked association of copper ores and either existing or planed down mountain sections. The Appalachian Mountain region from Alabama northward, like the Michigan Peninsula, is known to have furnished native copper to the Indians before the advent of Columbus, while in 10 relatively level States, including Florida and much of the central Mississippi Valley region, no copper minerals occur. Westward practically every mountain uplift contains copper minerals.

Ore deposits of copper, worked, working or workable, are less widespread. The Ducktown, Tenn., deposits are now the only important producers in the entire Appalachian region from Nova Scotia to Alabama. The Vermont copper mine at Ely; Ore Knob, N. C.; the Gossan lead of Virginia, once our most noted producers, have long been shut down. Sherbrooke in Quebec and Sudbury, Ontario, with the Michigan mines are practically the only active properties east of the Rocky Mountain Province.

Copper deposits occur throughout the entire length of the Rocky Mountain region, from Alaska through Canada, the United States and Mexico to the Isthmus of Panama. This region, the backbone of the Continent, with the Great Basin province and Pacific Coast section, includes the greatest ore bodies of the continent now being worked, yielding three quarters of the North American copper output. Throughout the arid desert region of New Mexico, Arizona and Nevada, every mountain range contains deposits of copper ore, most of them perhaps a reserve for future generations when new methods and economies, or advanced prices may make the working of such deposits profitable. The coastal region of Alaska and British Columbia contains three or four important producers and many, very many, undeveloped properties, but the greatest mines to-day are in the interior of the continent, from the Boundary and Rossland districts of Canada and the Butte mines of Montana southward.

At the present time there are but eight important copper producing States in the Union; Tennessee, Michigan, Montana, Utah, Nevada, Arizona, New Mexico, California, besides our great isolated territory, Alaska. Three other States, Colorado, Idaho, and Oregon are of minor importance as producers.

A similar association of copper deposits and geographic conditions prevails in South America, where the copper deposits are confined to the Andean Cordillera from Colombia south to the Straits of Magellan and to the lesser mountain uplifts which form the eastern border of the continent in Venezuela, Brazil and southward to the southerly tip of the continent owned by Argentine. This geographical association has been found

to be world wide and is as significant of geological conditions as of geographical relationships.

Though copper is so widespread in its geographical distribution, the world's supply of this metal comes from a few great deposits. There are less than 400 mines in the entire world producing as much as 100,000 pounds, or 50 tons of copper a year, an output normally worth about \$14,000. In the whole of North America there are but 21 really important copper producing districts; four of them in Canada; Sudbury, Rossland, the boundary district, and Maple Bay; one in Alaska; four in Mexico; and the balance in the United States, namely, Ducktown, Tenn.; the Michigan Peninsula; Butte, Mont.; Bingham, Utah; Ely, Nev.; Bisbee, Ariz.; Clifton-Morenci, Globe-Miami, and Ray in Arizona; Santa Rita in New Mexico; Shasta County, Cal., and possibly, Yerington, Nev., comprise the entire list.

Political Economy

The political effect of the copper mining industry has been most important. The Michigan Copper Range was a wilderness of swamp and forest until the discovery of its nuggets and of huge masses of the native metal led to its settlement. At first sailing vessels and then steamships brought supplies and took away copper from a region that was snowbound and inaccessible during the half of the year in which Lake Superior was not navigable. The growing industry induced railway lines to build into this remote section of the United States, opening up a great extent of new country which after having supplied the entire United States with cheap pine lumber is now slowly but surely filling up with hardy farmers. The Copper Range itself now supports a population of over 100,000 people and its towns and settlements may well serve as a model for other mining camps.

In Nevada the Ely region, once the home of a few ranchers and its grass-grown hills the grazing ground for great herds of cattle, its nearest railway 70 miles distant, is now well settled, with its own railway line and steam shovels taking out 3,500 tons of ore a day, carried 20 miles to a mill and smelter plant. The mine payroll supports several busy, thriving towns containing about 8,000 people.

In Southern Arizona where the one transcontinental railway traversed the desert and had but scanty business throughout its course, the copper industry has built up new towns and branch lines, and induced the settlement of every spot where water is found. To-day the entire State feels the throbbing energy of the copper mines and smelters and the money paid for supplies and wages enriches in one way or another every home of the entire commonwealth. The copper industry has been the immediate and direct cause of the building of a new transcontinental line, bringing coal and supplies both for mining and for general use. Bisbee, Globe, Miami, Douglas, Clifton, and Morenci contain one-quarter of the population of the State, pay half its taxes, and support directly or indirectly over half the citizens of this our newest State.

An excellent illustration of the great influence copper mining has had on our national life is seen in Montana. Its copper output comes but from one place, Butte, a city of 70,000 people with four transcontinental railroads and four great electric power lines, bringing 40,000 electric horsepower to its mines. A monthly payroll of \$1,800,000, distributed to some 8,000 workers, results in a yearly output of metals worth \$78,639,000. A sister city, Anaconda, with 12,000 people, 27 miles distant, was built for and is supported by the reduction works where the Butte ores are treated.

Both cities are the market for enormous amounts of timber, coal, powder, and other supplies, thus giving employment to double the number actually engaged in mine work. The five railways handle 193,000 cars of freight, equal to 5,485 trains a year, carrying 8,640,000 tons. At Anaconda the reduction works, which cost \$15,000,000, treat 12,000 tons of ore, consume 2,300 tons of limestone, 500 tons of coke, and 550 tons of coal per day. Some 80,000 out of a total population of 400,000 are directly affected, one company alone, the Anaconda, employing 16,000 people and spending an average of \$30,000,000 a year in the State. These figures show the influence that an area 1½ miles long and one-half mile wide has upon the political economy of the State and indeed of the entire Nation.

That copper mining and copper production have increased wonderfully in the past 10 years is very generally known, but just how rapidly this increase has come about is not so well recognized. Statistics show so rapid an expansion of the industry that a copper famine has been predicted as likely to come in the near future. Without burdening the members of this Congress with production tables, it may be stated that in the first 10 years of the past century the world's production was only 91,000 long tons. This was increased by 5.5 per cent in the next 10 years, 40 per cent in the succeeding 10 years, 61 per cent the next decade, and reached a decennial increase of 99 per cent in the years 1881-1890. The average increase was 77.83 per cent for the last 20 years of the nineteenth century. In the United States a production of 650 tons in 1850, or of 37,650 tons for the decade following, had grown to a yearly output of 10,000 tons in 1867, 21,000 in 1877, and 81,017 tons in 1887, as Montana and Arizona both started production in 1883.

By 1897 the production had grown to 220,571 tons, almost doubled in 1908. The following year a full billion pounds of copper were produced and for 1915 that figure will seem small. An annual increase of 7 per cent in production is usually accepted as correct.

If these figures are plotted to scale with the years as abscissas and the production figures as ordinates, it will be seen that the production runs upward at so startling a rate as to justify the fear of a copper famine. My belief that this fear is unfounded is based on a knowledge of the immensity of the reserves of low-grade copper bearing material which can be called ore in the near future when improved and new methods of treatment, now being tried out, will lower working and reduction costs. Methods now actually in use on a commercial scale in experimental plants at Anaconda and at Butte, Mont., at Morenci and Miami, Ariz., in Michigan, and in other camps, make it certain that one per cent sulphide ore will some day be profitably handled, provided, of course, that the price of the metal stays at or above its normal average of 14 cents per pound.

It used to be said that it takes \$1,000,000 and 10 years' time to make a copper mine, but nowadays it takes 10 times that amount and half the time to make a really big producer. Should the Chuquicamata property in Chile and the Tanganyika mines of Africa fulfill their owners' expectations, the average decennial increase of 50 per cent will be taken care of for a while at least. The former property will in time treat even more than the mammoth daily tonnage of the Utah Copper Co.

About half of the American copper output goes abroad, much of it to England, whose copper mines, once regarded as the largest in the world, now yield but a scanty 150 tons a year. Germany, in later years our largest customer, and who is now using up her hoarded purchases in warfare, has already, we are told, bargained for new supplies to be

delivered when peace comes again. In fact not a nation of the Old World, save Spain and Portugal, produces copper enough for its own uses. The same is true of Asia. If hydroelectrical development, with its consequent expansion of industry, advances as rapidly abroad in the 10 years to come as it has done in the last decade, America's surplus copper will be as badly needed for peaceful uses as it is now for war munitions.

Prices

As is usual in most industries, increasing use and demand have been met by increasing production, which responds to increased price. This has been followed by gradually decreasing price, whose low average stimulates further increase in consumption. The history of copper prices conforms in general to this experience. The average price of Lake Superior copper from 1845 to 1910 was 14.19 cents per pound, but this figure does not tell the whole truth. Not only did prices vary wildly during that time, but the purchasing power of a dollar in 1845 and even in 1860 was nearly double that of to-day, so that a price of 24 cents in the early history of the country is quite different from 24 cents to-day. During our Civil War the price rose to a maximum of 55 cents per pound, averaging 47 cents for the year 1864. In the next year the price dropped 9 cents, 5 cents more the following year, with a further decrease of 9 cents in the succeeding 12 months. It rose again to 35½ cents in 1872, and showed a gradual decline in the next score of years, reaching a minimum of 9 cents in June, 1894. This is the lowest price yet reached by the metal.

In this connection it might be well to add that making no allowances for failures, but considering only the successful mines of the Lake Superior district, the actual cost of production of a pound of copper throughout a period of 65 years was 10.63 cents per pound and the companies have shown a dividend record equal to 3.56 cents per pound. With the advent of the porphyry coppers as producers, this record of low cost has been beaten, but it is safe to say that the average cost per pound of copper at all operating mines is to-day not much less than 10 cents per pound. A careful consideration of sales statistics and prices for the past 35 years when plotted shows that the average price of copper has been practically 14 cents. As both high and low prices are usually for relatively limited amounts of the metal, any average based upon these figures alone would be misleading. Yet even a geometrical average is merely a scientific guess as applied to the future since supply and demand must necessarily govern the price. If prices go down, the high cost producer must close down its mines. A rich company may produce the metal at a loss for a short period in order to keep its plant operating and its staff intact, but such operations are, of course, merely temporary. To tell the future price of the metal requires not only a knowledge of European conditions only known to a few, but also a consideration of the cost of production by the big producers and a forecast of interest rates for the years to come when surplus copper may be stored in periods of trade depression. There are, in fact, so many variable factors that the problem is almost hopeless if more than an estimate is desired. It is certain that the present high prices seriously curtail ordinary uses and teach consumers to turn to less desirable though usable substitutes. For many purposes sheet copper and copper coatings are used instead of solid metal, and in a multitude of small ways people are learning to do without copper and will continue to so do even when the metal prices fall. Fortunately, the electrical industries utilize more than one-half of

the total amount of copper consumed in America. For such purposes copper must be used whatever its price may be, the amount being only limited by the demand for electrical machinery and copper wires. A standard price of 15 cents a pound would be a boon to producers and consumers alike, and if our country would but stabilize the market, as was done abroad for zinc, this price, fair to all, could be maintained. Under pre-war conditions only the Europeans reaped the benefit of our lowest prices, owing to their ability and determination to combine against American producers.

Geology

As the metal combines with great facility with 36 other elements, it forms several hundred minerals, most of which are found in America. Notwithstanding this bewildering array of copper-bearing mineral species, many of them of wonderful beauty, the minerals of commercial importance are relatively few and in North America include a half dozen sulphides and as many ore minerals in the oxidized deposits of the metal. Contrasted with the rest of the world, American copper deposits are notable for the size and abundance of the native copper ores, and secondly, for the abundance and richness of copper glance ores. Bornite is common as an ore mineral and enargite, the sulpharsenide of copper, comparatively rare in other continents, is found in great abundance in Montana deposits. Gray copper, though a common ore mineral, is more characteristic of silver deposits than those of copper. Chalcopyrite, the usual and commonest copper ore mineral of European and, in fact, of most copper deposits outside of America, is of minor importance in most American copper districts outside of Tennessee, Ontario, and California. Oxidized ores rich in copper are characteristic of the shallow workings of the mines in Arizona and Mexico, where arid conditions prevail.

Probably 58 per cent of the American copper production comes from chalcocite ores, 7 per cent from enargite ores, 20 per cent from native copper ores, and the balance from the chalcopyrite ores of Nacozari, Sudbury, California, and Tennessee.

At present one may safely say that all the great deposits with promising outcrops have been discovered. It is, nevertheless, true that no two men will agree as to what is promising, and with increased experience certain minor hitherto overlooked characters become significant and indicative of good ore bodies below. Perhaps when these signs are correctly read, further great deposits will be found and opened up. At present, indeed, it looks as if all the really great deposits, readily recognizable as such, have been found and opened. It is certainly true that the big mining companies find it more and more difficult to get new mines that are up to their standard of size or rich enough for purchase.

Prof. Richards has aptly said: "It is a great thing to have a thousand million dollars worth of copper, but to the real geologist there is more satisfaction in knowing how the copper got there." Not many years ago the study of ore deposition was looked down upon by many scientists as a commercialization of science and the study a prostitution of one's talent. Our petrographers were formerly more interested in describing new rock species or writing technical descriptions of thin sections of rocks than in observing the obscure and more difficult phases of rock alteration by mineral-bearing solutions. To-day chemists, physicists, and the various specialists in geology realize that the complex problems presented by the study of ore deposits are worthy of a scientist's best efforts. Perhaps the best example of this is the study of the Clifton-Morenci district by Lindgren. In many cases the physiographer, paleontologist,

petrographer, and stratigraphic geologist are all needed and the chemists and physicists must be called upon for help.

The occurrence of copper minerals with particular rock types has been observed throughout the entire world. Early works on mining advised the reader to search for copper ores in the crystalline schists, the oldest, or supposedly oldest, rocks of mountainous regions. Increasing knowledge has shown that while copper deposits are found in nearly every kind of rock, most of the productive deposits now known are in igneous rocks and especially those of relatively late geologic age. Experience proves that metalliferous deposits are very frequently found in or near bodies of intrusive rocks. Practically all the dark-colored, basic, igneous rocks, including the traps, basalts, and other more distinctly ferromagnesian varieties contain copper. This has been established by reliable analysis, and further research has shown that the dark, iron magnesian silicates of such rock contain most, if not all, the copper. Similar analytical work indicates that on the contrary the silicious, igneous rocks, such as the granites, porphyries, and alaskites contain very little if any copper. The Hawaiian basalt is reported to average 0.18 per cent copper, with some samples carrying as much as 9.6 pounds per ton. The trap rocks of the Michigan Copper Range average 0.02 per cent, or four-tenths of a pound of copper per ton; the relatively basic Butte granite averages only 0.006 per cent.

Despite this well-known favoritism of copper for the basic rocks there are but two out of the many copper deposits of Pan America which occur in rocks of this character, namely, the native copper ores of Michigan and the nickel-copper deposits found in norite at Sudbury, Canada. The greater number of workable copper deposits of the American Continents are not only found in the relatively acid or silicious igneous rocks, but are genetically connected with them and appear to derive their copper content from such rocks. That this is the case is established by abundant and competent evidence. It is apparently strange that this should be so. The reason why is not generally understood, though it is equally important from the commercial as well as the scientific point of view. An explanation suggested is that the metal is well distributed in small quantities throughout the basic rock, but that only in exceptional cases has the cooling of such rocks been slow enough to permit of the segregation of the sulphides into separate masses through magmatic segregation. Such appears to be the case at Sudbury, Ontario, whose ores are in part simply basic rock containing unusually large amounts of chalcopyrite and pyrrhotite concentrated in the cooling magma and gathered along the margin of the mass. In the silicious rocks, on the other hand, fractional differentiation and crystallization have concentrated copper, together with boron, fluorine and water in the mother liquor, or residual quotient of the acidic magma. This part is still liquid, while the greater portion of the mass has solidified. This final product, which is also the most highly silicious, often corresponding to alaskite, appears to contain a relatively large amount of copper. Emanations from such material deposit copper ores associated with boron, fluorine, and often tourmaline.

In the scientific study of ore deposits America has, I believe, the foremost position. In Canada, the United States, and Mexico, close detailed study along the lines first used by King at the Comstock mines of Nevada, has built up a fund of information of inestimable value, since mining exposures are but ephemeral in character. This study has naturally been largely devoted to copper deposits which offer peculiar advantages for observation because of their varied mode of occurrence, easily recognizable minerals and of the chemical and physical properties of the metal.

The copper deposits of the continent present a very wide variety of types, though the really workable deposits are practically of but eight kinds and may be designated as the Sudbury, Tennessee, Michigan, Butte, Bisbee, Boleo, Shasta, and Ray types. To describe them even briefly would lengthen this paper beyond the time allotted. Though so varied in genesis, the practical miner would feel warranted in grouping them as pyritic lenses, limestone replacements, vein deposits, bedded veins, and last, but in tonnage much the greatest, the blanket deposits of the so-called porphyry, or disseminated ores.

Lenticular deposits of pyritic ore were for a long period the world's chief source of supply; Rio Tinto, Spain, and Mount Lyell, Tasmania, are well-known foreign examples, and Sudbury, Ducktown, and the Shasta deposits would all fall within this division of the miners' classifications, though each has a different genesis. Limestone replacements are always genetically connected with igneous rocks and the accompanying metamorphic action, but as generally understood they form a distinct group which includes the Bisbee deposits, the Kennecott, Alaska, deposits and many others of lesser magnitude.

The Michigan native copper ores stand practically alone as impregnations of conglomerate beds and of the porous parts of interbedded, basaltic lava flows, fractured by movements along bedding planes. The study of these deposits carried on for so many years has not yet solved the mystery of the concentration of the metal in ore shoots, although it has shown the very wide spread occurrence of the metal, indicating that this peninsula has a reserve of low grade material possibly workable in the future that is greater than that of any other known locality in the world.

Vein mining is best exemplified in the great deposits of Butte, Mont., where quartz pyrite replacements of sheeted granitic rock carry immense bodies of glance and enargite ores, not only in the quartz vein matter but in the crushed, softened, and highly altered granitic rock. In the slightly later fault veins, similar ores occur in well defined shoots, separated by altered granitic material reduced to soft clay and breccia by attrition and fault movement, and it is notable that such ore shoots do not outcrop, nor come within several hundred feet of the present surface.

The limestone replacement deposits are but a phase of ore deposition accompanying or following igneous intrusion. They are usually found to be connected with disseminations and veins as parts of one ore bearing complex, but their great commercial importance warrants giving them separate mention.

The disseminated deposits, often called "porphyry" deposits, form a distinct class and one of great commercial importance. These deposits all occur in altered, usually granular acidic rocks or the schist bordering such intrusive masses. The deposits are blanketlike in form with a capping of valueless leached material from 50 to 300 feet thick. The ore bodies themselves are from 50 to 600 feet thick and of irregular but extensive area, that at Ray, Ariz., for example, covering 205 acres. Development shows that there is a gradual decrease in the percentage of copper in the ore downward, from 2 per cent or 3 per cent near the top of the ore blanket, to 1.3 per cent or even less at the lower limit of the enrichment. The transition to lean primary mineralization is often sharp, and within a few feet one may pass from the chalcocite ore to a relatively fresh rock peppered with tiny particles of pyrite and probably some chalcopyrite, the rock averaging about 0.5 per cent of copper. At the Miami field near Globe nearly 142,189,120 tons of ore have been developed by churn drilling and by underground work. At Ely, Nev., the

deposit contains 95,157,543 tons, and at Ray, Ariz., 103,373,226 have been blocked out, while at Bingham, Utah, the enormous total of 369,845,558 tons of ore has been blocked out. At the last-named camp 35,000 tons a day are mined, the ore carrying less than 1.5 per cent copper with 36 cents in gold and about 12 cents in silver per ton; all these great ore bodies are the result of oxidization, leaching and reprecipitation of copper in a process generally known as secondary enrichment or secondary sulphide enrichment. The recognition of this process has been of direct practical benefit to the mining world and has done much to give geology a standing with the practical mining men. Though based upon chemical and physical factors its field study is geological work and its development due to geologists.

Secondary enrichment is the phenomena of sulphide formation from sulphates derived from the oxidization of lean sulphide ores. It is directly due to the formation of solutions in which copper is carried downward and precipitated by contact with pyritic material below. The process was first noted in copper deposits being named and described by the writer in 1899 and in 1900 by Emmons and Van Hise. It has been so generally established as true by mining operations that there is danger of its being applied where it has not taken place. Commercially secondary enrichment is not merely important but is often the determining factor between a payable mine and a worthless one. Scientifically it has stimulated investigation in chemical laboratories and by the aid of microscope, and has led to an amount of real research work that is not only of practical value but which is building up stone by stone a structure which, even if never completed, will endure as truth itself and will represent the science of mining geology.

In the light of our present knowledge, the adjective secondary is objectionable, for our richest copper ores are often Tertiary and even Quaternary in character. The copper ores lend themselves more readily to a study of enrichment processes than those of any other metal, for copper is not only readily soluble and in such state forms new compounds with great facility, but it also occurs in a wide variety of minerals, more so than any other metal. The bright color of its commoner oxidized minerals and the brilliant luster and tints of its sulphides make it an ideal material to study with the reflecting microscope.

We now know that the secondary sulphide ore so generally understood to be the product of secondary sulphide enrichment must be distinguished from a similar ore due to other processes and from primary chalcocite. The secondary enrichment processes as generally understood are but a phase or feature of oxidation, sulphide enrichment being contrasted with oxide enrichment, a term including the formation of the carbonates, oxides, and other oxidized ores of copper. A second and equally important form of sulphide enrichment discovered and enunciated several years ago, but apparently overlooked by many students, is an enrichment by ascending and probably heated waters. It is only since the metallographic microscope has been applied to the study of ores that the many changes and replacements of one mineral by another with gradual enrichment of the ore could be satisfactorily studied. This work is yet under way and its results not yet conclusive, but enough is known to be certain that pyrite is altered to chalcocite by descending copper sulphate waters and that this is the characteristic mineral of secondary enrichment deposits. Its development is dependent upon rainfall and climate, water level, associated minerals, rock texture and fracture. It is notable that the deposits of positively known primary origin consist of the copper-

iron sulphides, bornite and chalcopyrite; those of secondarily enriched ores mainly of chalcocite and covellite.

The enrichment of ore bodies through the action of uprising thermal waters, whether of magmatic derivation or otherwise, is a feature to which attention was called by the writer some years ago. Recent studies of Butte ores have shown that enargite is a primary mineral, altering to bornite and this in turn to glance. Such enrichment is secondary just as truly as that due to oxidation and the reaction of descending waters on pyritic material, yet these ores are deep seated and appear at depths of over 3,000 feet in the Butte mines.

This activity of thoughtful men along the various lines of research involved in a study of copper deposits and technology has naturally led to the formulation of theories of ore genesis. The generally accepted view to-day seems to be that most copper deposits are derived from igneous magmas and that such masses of molten matter within the earth's crust have given off sulphide emanations, such emanations being emitted both during and after intrusion—that is, before, during, and after consolidation. Chemical and physical work in recent years indicates that such mineralization took place under great gaseous and hydrostatic pressure, forming a zone of contact metamorphism about the igneous mass and proceeding outward in fractures to form veins. As stated by Lindgren, we know the result, but as yet know but little of the physical condition or chemical character of the mineralizing vapors and gases. To the writer the theory of genesis proposed by Spurr and illustrated by the ore occurrences at the Dolores mine, San Luis Potosi, Mexico, appears to be the most acceptable and reasonable explanation of the phenomena of ore occurrence yet advanced. It explains the orderly zonal arrangement of the various metallic ores about an igneous center as due to the agency of highly heated solutions under great pressure coming from a supposedly deep igneous hearth or center of magmatic differentiation and rising through already consolidated granitic rock. According to this theory the copper ores are deposited nearest the igneous center, zinc-lead ores next, and gold-silver ores in the outer zone, with transitions connecting each zone. With a deep-seated center these concentric zones would form shells and bring about an orderly, vertical distribution of different metallic ores in mineral veins. This conception is not entirely new, for it is well illustrated by the figures and descriptions of the Cornish copper and tin mines given by Collins and others. It is essentially the zonal theory suggested by Sales for the ores of Butte, Mont., and extended to cover the borders of the great area of granitic rock known as the boulder batholith. It does not explain the origin of the great sulphide ore bodies of Shasta, Cal., which some observers think are segregations out of an alaskite shell lying over a less silicious batholith.

Investigation of copper deposits has perhaps involved no greater scientific activity and research in physics, chemistry, and geology than that devoted to the technology of copper, but the commercial importance of the latter work has undoubtedly overshadowed its scientific worth. Indeed until very recent years investigators in the employ of vast industrial enterprises, such as smelters, copper refineries, and the testing laboratories of the great consumers of the metal, have not been given authority to make public their researches. There is now a broader view of such work and a spirit of reciprocity which will, it is certain, save much duplication of research and enable many a student to take up a line of work where another left off.

The technology of the metal shows truly wonderful changes in the

smelting industry in the past 40 years or less which have passed since copper became an important factor in American life and industry. These advances in treatment of ore and metal have resulted in lower costs, which in turn permitted mining lower-grade ores, making available great deposits hitherto valueless. It is to the metallurgists and mill men, the chemists, and mechanical engineers to whom we really owe the greatly increased copper production of recent years. It is these men who have lowered its price, thus permitting the development of the trolley, telephone, electric light, and power industries of to-day, not to mention the myriad lesser uses to which the metal is put. Thus engineering chemistry, not geology, nor simply mining and mechanical engineering, has been the mainspring of the copper movement.

In the milling of the ores, ore dressing, as it is properly called, Mr. Richards and others have applied scientific methods and study and have brought this branch upon a firm, rational basis. Concentration is to-day no longer the haphazard or empirical science it formerly was. Recently froth flotation, in which the heavy ore minerals are floated off and the lighter valueless ones sink, has solved the slime loss, that nightmare of former years. Indeed it has done more than this, for the process has made it possible to treat certain ores hitherto valueless and to handle material formerly thrown over the dump, run off as tailings, or in many properties left underground.

In copper smelting the changes have been most radical. The evolution of the mammoth blast furnace of to-day from the rectangular stone and brick furnace of half a century ago has been brought about by the introduction, first, of water-cooled tuyeres used to carry the blast into the zone of melting and then of water-backed iron plates to replace the stone and brick lining of the smelting zone. The soapstone and brick furnaces of Ducktown, Tenn., handled only 10 to 12 tons of ore per day and had a blast period of six to eight weeks. This type was replaced in the early eighties by iron and steel water-jacketed furnaces. These "black copper" furnaces proved immensely successful while the supply of rich oxide ores from Arizona and the bonanza glance ores of other places lasted. During this period America became, as Peters puts it, "a school of practical metallurgy whose students, unlike those of Germany and the European continent generally, were unhampered by tradition, theory, or study." These practical men soon saw the necessity of employing chemists to make careful analysis and studies of slags, fluxes, and fuel, and our modern American metallurgy began. The invention of the external forehearth for the cleaner separation of matte and slag was the first notable result of this work. Then came the increased size of furnaces, the introduction of bessemerizing and, in 1904 or 1905, the successful introduction of pyritic smelting, attempted 10 or more years before, but not commercially profitable. In the majority of our reduction works part pyritic smelting is used in most blast furnaces.

The size of the blast furnaces has kept on increasing until at Anaconda furnaces handling 400 tons a day and having a smelting zone 56 inches wide by 180 inches long have had their ends removed and stacks connected, making great furnaces 87 feet long and having a daily charge of 3,000 tons of lump ore. In reverberatory practice the furnaces have also increased in size and efficiency. Furnaces 118 feet long are no longer a novelty, and charging from the top has corrected corrosion and made the furnace so efficient that once more our furnace men are talking as if the blast furnace was destined to go into the scrap heap. In this era of change the hitherto wasted heat of the furnace is now

everywhere utilized to make steam. The contact process has made the gases, which once poured out of the stacks to kill the vegetation of whole counties, a great source of revenue at certain favored localities. The sulphuric acid made from these gases is now used in manufacturing fertilizers, thus repaying agriculture for the damage formerly done by the fumes. Science has done more, for the Cottrell process now clears the smelter smoke of its metallic dust by electrical current, much as the dust and haze of a summer day is cleared away by the lightning flashes of a thunderstorm, though without the accompanying rain. The resulting product or dust is successfully utilized in making arsenic, bismuth, and other useful products. Electrolytic refining, experimentally proven in 1847, first successfully applied in Wales in 1869, did not become a really important factor in the copper world until it was introduced in America in 1883, since which time it has grown in importance, until now 80 per cent of the American production is electrolytic copper.

When so much has been done in a brief period of less than half a century and many brilliant minds are now working on the problems of the industry, no one but a dreamer can foresee the future. As copper mining has developed great communities and been a pioneer in the settlement of our far West, once shown on our school geographies as the great American Desert, one may hope and confidently expect similar results in Mexico, Peru, Bolivia, Ecuador, and Chile, countries as rich, or richer, than our own in this metal and all destined for great places in the future history of the Americas.

29 Broadway New York City

ADDENDA

EL PASO CONSOLIDATED GOLD MNG. CO.

(Material omitted from description in body of book)

Property: 70½ acres in the Cripple Creek mining district, including Elkton and Tornado mines developed by three shafts to a depth of 1,350'. Has been a prominent operator for a great many years. For geology of the Cripple Creek district, see 16th Ann. Rept. of Colo.; also U. S. G. S. Bull. 260, 1915, pp. 85-98. Orebodies occur at vein intersections in vicinity of phonolite dikes.

In 1915, after careful investigation it was found by a new management that very little ore was in sight and it was mostly low-grade; that during 1914-15 the company had made no profits, had exhausted its treasury surplus, was about \$70,000 in debt and doing business largely upon credit; that general expenses amounted to \$1,500 per month and mining operations were being run at a loss of \$3,000 to \$4,000 per month.

Development: work in 1916 totaled 7,498', without discovering any additional orebodies of value. Management states that the prospects of finding merchantable ore below the 1,000' level do not warrant further exploration work and that therefore, since Jan., 1917, company has confined itself strictly to leasing.

Fifteen sets of leasers operating, 1917, shipping 500 tons \$20 ore per month.

Production: in 1916 amounted to 9,622 tons by the company and 10,511 tons by lessees, having gross value of \$104,405 and \$175,279, respectively.

In March, 1917, the "Independent Stockholders Committee" was formed with W. M. Downing, chairman; K. Macdermid, vice-chairman, and C. J. Starke, sec., for the purpose of changing the management of the company. The committee asserts that the El Paso mine has been worked for the benefit of the Golden Cycle Mng. & Red'n Co., and that if a flotation mill had been built, company could have mined its large reserves of low-grade ores, instead of sending only the high-grade to the Golden Cycle mill.

Committee also charges that the present management has shipped over 30,000 tons of El Paso ore to the Golden Cycle mill, averaging \$8-\$11 a ton, on which treatment charges of \$4 and sorting charge of \$1 were paid, whereas, if a flotation mill had been built, the company might have treated its ores at \$1 a ton and made a handsome profit.

Report on property by Louis S. Noble, sent out in 1917, is far from encouraging and unless some radical changes are made, stockholders will never receive another dividend.

Management is considering the advisability of a flotation mill and also of a cyaniding mill for treatment of the dump and low-grade ore in the mine.

FOSTER SUPERHEATERS
FOR STEAM AND AIR

are essential to economical operation of steam plants and air hoists. They make steam do 12% to 33% more work, or the same amount of work can be done with 10% to 25% less steam in turbines, engines and pumps.

Water eliminated from steam lines, erosion of turbine blades avoided; size of steam pipes and valves reduced.

WIRE ROPE AND AERIAL WIRE ROPE TRAMWAYS

The Wire Rope cost for heavy hoisting,
hauling, dredging, etc., can be minimized
by the use of

"HERCULES"

(REG. U. S. PAT. OFF.)

RED-STRAND WIRE ROPE

because HERCULES rope combines strength,
elasticity, toughness and flexibility in just
the correct proportions for maximum wire
rope service.

Leschen Aerial Wire Rope Tramways
provide efficient means of ore transportation
